night blindness (nīt blīnd'nēs) [A.S. *neahht*, night, + *blind*, without sight]. Absence of or defective vision in the dark. **SYN:** *nyctalopia, nyctophthalmos*.

ETIOI. Due to lack of visual purple in the rods or its slowness in regenerating after exposure to light. May result from vitamin A deficiency or hereditary factors

Nightingale, Florence (nīt'in-gāl). Originator of modern nursing.

N. oath or pledge. "I solemnly pledge myself before God and in the presence of this assembly to pass my life in purity and to practice my profession faithfully. I will abstain from whatever is deleterious and mischievous, and will not take or knowingly administer any harmful drug. I will do all in my power to elevate the standard of my profession, and I will hold in confidence all personal matters committed to my keeping, and all family affairs coming to my knowledge in the practice of my calling. With loyalty will I endeavor to aid the physician in his work and devote myself to the welfare of those committed to my care."

nightmare (nīt'mār) [" + *mara*, incubus]. A bad dream accompanied by great fear and a feeling of suffocation, once believed to be caused by a female monster or spirit that sat upon the dreamer.

SYN: *oneirodynia*. SEE: *antephtaltic*.
nightshade (nīt'shād) [A.S. *nihtscada*]. Any of the species of *Solanum*. SEE: *atropine*, *belladonna*.

night sweat (nīt swēt) [A.S. *neahst*, night, + *swat*, sweat]. Profuse sweating during sleep at night.

Often an early sign of disease with intermittent temperature. In children, it occurs in rickets, in debilitated states and in those with a tendency toward tuberculosis. Patient should be rubbed down, sponged, and changed into dry clothing.

night terrors (nīt tēr'ērs) [“ + L *terror*, state of fear]. Form of nightmare in children causing them to awaken in terror, screaming.

Fear continues for a period after the return to consciousness. SYN *pavor nocturnus*.

night vision. SYN *scotopic vision*. The ability to see at night or in light of low intensity. Results from dark adaptation in which pupil dilates, visual purple increases and intensity threshold of the retina is lowered.

nightwalking (nīt'wau'king) [“ + *wealc*, to revolve]. State in which individual walks about habitually while sleeping. SYN *somnambulism*.

nigra (nī'grā) [L *black*]. Mass of gray matter bet the dorsal and pedal parts of the crus cerebri. SYN. *substantia nigra*.

nigri-, nigro- [L] Combining forms meaning *pert.* to blackness.

nigricans (nī'grī-kāns) [L] Blackened.

nigrities (nī-grīsh'ī-ēz) [L *blackness*]. Blackness, black pigmentation.

n. linguae. A black pigmentation of the tongue. SYN: *glossophytia*.

NIH. ABBR. for National Institute of Health.

nihilism (nī'fī-lizm) [L *nihi*, nothing, + G. *ismos*, state of] 1 Disbelief in beneficial properties of medicine. 2 Psy. A delusion that everything is unreal.

Nikolsky's sign (nī-kol'skī). Condition of the external layer of the skin in which it can be rubbed off by slight friction or injury.

ninth cranial nerve. Glossopharyngeal nerve. SEE *Appendix*, *cranial nerves*.

niobium (nī-ō-be-um) A chemical element. SYMS. Nb. Atomic weight 92.91. Formerly called *columbium*.

nipablepsia (nīf'ā-blēp'sī-ā) [G. *nīpha*, snow, + *ablepsia*, blindness]. Blindness caused by light glare on snow.

niphotyphlosis (nīf'ō-tīf-iō'sis) [“ + *typhlosis*, blindness]. Snow blindness. SYN: *nipablepsia*.

nipple (nīp'l) [earlier *neble*, *nible*, possibly diminutive from AS *neb*, a little protuberance]. 1. The protuberance in each breast from which, in the female, the lactiferous ducts discharge. SYN: *mammilla*, *papilla*, *teat*. 2. Artificial

substitute for female n. to be used on a nursing bottle.

The nipple contains erectile tissue and is surrounded by a pink or brownish area called the areola. It is supplied with a row of small sebaceous glands around its base called Montgomery's follicles, which secrete an oily substance to keep it supple.

NP. During pregnancy, they should be washed well with soap and water and dried with a rough towel. Excessively dry nipples may be massaged with cold cream or lanolin. Cracked and sore nipples result from misuse of the nipple due to the baby's chewing.

Retracted nipples are caused by deficiency of muscle tissue or flattening of the erectile tissue, and are lower than the surrounding area.

RS *acromastitis*, *halo*, *mammary*, *mammulation*, *Paget's disease of n.*, *thelalgia*, *thelitis*.

n., crafer. SEE *n retracted*

n. line. SYN *mammary line*. A vertical line passing through the nipple.

n., retracted. N whose tip lies below level of mammary gland.

n. shield. Mechanical device to protect the nipple during lactation period.

nirvanin (nīr-van'en). Colorless, soluble, crystalline local anesthetic, less toxic than cocaine.

Nissi's bodies or granules (nis'el) SYN *tigroid bodies*. Chromophil substance in the form of granules found in the cell bodies and dendrites of neurons but lacking in the axon and axon hillock. They are stained selectively by toluidin and other basic aniline dyes. They consist principally of the ribose type of nucleic acid and nucleoprotein.

Their physiologic significance is uncertain. They are concerned with active protein and metabolism and their condition varies with physiologic and pathologic conditions. In fatigue and certain pathologic states they may dissolve and disappear, a phenomenon called *chromatolysis*.

nisis (nī'sūs) (pl *nīsūs*) [L. effort]. 1. An effort or struggle. 2. The desire for coitus on the part of certain animals in the spring. 3. Contraction of the muscles of the abdomen and diaphragm in the expulsion of the feces or urine.

n. formativus. The effort of fertilized ovum to take on the characteristics of the species from which it is derived.

nīt (nīt) [AS *hnutl*]. The egg of a louse or any other parasitic insect. SEE: *pediculosis*.

niter (nī'ter) [G *nitron*, soda]. 1. Saltpeter, potassium nitrate. 2. A salt or ester of nitric acid.

niton (nī'ton) Inert gas in radium emanation. SYMS. Nt. At. wt.: 222.4. SYN: *radon*.

nitrate (nī'trāt) [G. *nitron*, soda]. A salt of nitric acid.

nitrated [G *nitron*, soda]. Combined with nitric acid or a nitrate.

nitration [G. *nitron*, soda]. Combination with nitric acid or a nitrate.

nitro (nī'ter) [G *nitron*, soda]. 1. A salt or ester of nitric acid. 2. Potassium nitrate. SYN *niter*.

nitric acid. HNO₃. A colorless, corrosive, poisonous liquid in concentrated form, employed as a caustic and disinfectant in treatment of venereal ulcers, poisoned wounds, and esp. the bites of rabid animals. It is widely used in industries and in chemical laboratories.

NIPPLE.

a. Nipple; b. Montgomery's follicles; c. primary areola; d. secondary areola.

POISONING: SYM. Are essentially same as those produced by sulfuric acid. Pain, burning, vomiting, thirst and shock, except that stains become intensely yellow.

TREATMENT: Dilute with large volumes of water. Neutralize with weak alkalies, as magnesia, sodasuds, baking soda and chalk. Follow by soothing drinks. **SYN:** *aqua fortis*.

n. a., fuming. Combination of nitric acid which emits fumes of a choking nature. **See** *fumes*.

nitrification (nī'trī-fī-kā'shūn) [*G. nitron, soda, + L. facere, to make*]. The process by which the nitrogen of ammonia or other compounds is oxidized to nitric or nitrous acid or their salts (nitrates, nitrites). Takes place continually in the soil through the action of nitrifying bacteria.

nitrifying (nī'trī-fī'ing [*G. nitron, soda, + facere, to make*]) The process of nitrification, *q. v.*

n. bacteria. Bacteria which induce nitrification. Include the nitrite bacteria (*Nitrosomas*) which convert ammonia to nitrites and nitrate bacteria (*Nitrobacter*) which convert nitrites to nitrates.

nitrite (nī'trīl, nī'trīl) An organic compound in which the nitrogen of ammonia exists with all 3 of the hydrogen atoms displaced.

nitrite (nī'trite) [*G. nitron, salt*]. A salt of nitrous acid. In med., nitrites dilate blood vessels, reduce blood pressure, and depress motor centers of the spinal cord. They also act as antispasmodics. Principal nitrites used are amyl, ethyl, potassium, and sodium nitrite, *q. v.*

nitritoid (nī'trī-toyd) [*" + eidos, resemblance*]. Resembling a nitrite.

n. crisis. A syndrome resembling symptoms produced by the use of a nitrite, usually occurring after arsenamine injection.

nitrituria (nī-trī-tū'ri-ā) [*" + ouron, urine*]. Nitrites or nitrates present in the urine.

nitro-, nitr- [*G.*]. Combining form denoting (a) combination with nitrogen, (b) presence of the group NO₂.

nitrofurazone (nī-trō-fu'rā-zōn). A synthetic antibiotic for topical application in some skin diseases and in preparation for skin grafting. **SYN.** *furacin*.

nitrogen (nī'rō-jen) [*" + gennan, to produce*]. **SYMS** N. A colorless, odorless, tasteless, gaseous element occurring free in the atmosphere, forming 4/5 of its volume. Atomic weight, 14.008.

One of the important elements in all proteins essential to plant and animal life for tissue building. Nitrogen is generally found in organic nature only in the form of compounds, as ammonia, nitrites, and nitrates which are transformed by plants into proteins, and being consumed by animals, are converted into animal proteins of the blood and tissues.

RS: azotation, azote, azotification, azotized.

n. balance. The difference between intake and outgo of nitrogen. If intake is greater, a *positive balance* exists; if less there is a *negative balance*. **See:** *n. equilibrium*.

n. cycle. The return of nitrogen from animal life to the soil, from which plants derive their supply, and in turn its return to animal life through plants taken as food.

n. dioxide. N₂O, a poisonous gas produced by decomposition of nitric acid.

n. equilibrium. Condition during which nitrogen excreted in the urine equals amt. taken in by the body in the food.

n. fixation. Conversion of atmospheric nitrogen into nitrates through the action of bacteria in the soil.

n. lag. Time required after a given protein is ingested until an equal amt. of nitrogen is excreted in the urine as that ingested.

n. monoxide. Nitrous oxide.

n. mustard. A term embracing certain therapeutic mustard compounds. Three are in use HN₂, R48, and TEM (triethylene melamine). Used in Hodgkin's disease, lymphosarcoma, giant follicular lymphoblastoma, chronic lymphoid and myeloid leukemia, rheumatoid arthritis, and nephritis.

n., nonprotein. A nitrogenous component of the blood that is not a protein.

nitrogenous (nī-troj'ēn-ūs) [*G. nitron, soda, + gennan, to produce*]. Pert. to or containing nitrogen.

Foods which contain nitrogen are the proteins; those which do not contain nitrogen are the fats and carbohydrates. The retention of nitrogenous products in the blood is marked in kidney diseases.

nitroglycerin (nī'trō-glīs'ēr-in) [*" + glycerin*]. Any nitrate of glycerol, specifically the trinitrate, a heavy, oily, explosive, colorless liquid obtained by treating glycerol with nitric and sulfuric acids.

Uses: Explosive constituent of dynamite and in medicine it has the action of nitrites and is a vasodilator.

nitromuriatic acid (nī'trō-mū-ri-at'ik) [*" + L. muraticus, briny*]. A mixture of 1 part nitric and 3 parts hydrochloric acid used in commercial industries because it dissolves all the metals including platinum and gold.

Poisoning: SYM. Same as those of nitric acid poisoning. **TREATMENT.** Same. **SYN:** *aqua regia*.

nitrous (nī'trūs) [*G. nitron, soda*]. Containing nitrogen in its lowest valency.

n. oxide. N₂O. Colorless, sweet-tasting gas with pleasing smell causing temporary general anesthesia when inhaled.

It is usually used in dentistry and minor surgery and before ether or chloroform.

It is not toxic or inflammable. It is given in a mixture of 90% nitrous oxide gas and 10% oxygen. If used with ether it may be inflammable. The patient may easily be asphyxiated if it is not administered properly.

Signs: Deep signs of nitrous oxide anesthesia are a slight increase in respirations, some dyspnea, cyanosis becomes deeper, eyeballs are fixed, either upward or downward. There is muscu-

Nonprotein Nitrogenous Constituents of Whole Blood

Total nonprotein nitrogen	25-30 mg. per 100 cc.
Urea nitrogen	12-15 mg. per 100 cc.
Uric acid	2-4 mg. per 100 cc.
Creatinine	1-3 mg. per 100 cc.

lar rigidity, cyanosis increases to a grayish pallor, pupils become fixed in a dilated form, and respirations become paralyzed.

ACTION: Slightly stimulating to cardiac and respiratory systems, lowers body temperature, raises blood pressure, and has no irritating effects on the glands or kidneys. It has very little effect on body chemistry. Nitrous oxide is a favorable anesthetic when complete relaxation is not required. Gas anesthesia is never induced for brain surgery. Nitrous oxide and oxygen are always safe when properly used in a mixture, but nitrous oxide is dangerous when used without oxygen.

CONTRAINDICATIONS: Not to be given in advanced conditions of anemia, in hypertension of 180 or above, hypotension of 80 or below, decompensated heart lesions, obesity, diabetes, dyspnea, alcoholism, or in advanced pulmonary tuberculosis.

HYPERANESTHESIA FROM The patient should be given oxygen under pressure, the rectum should be dilated and respiratory stimulation administered. Carbon dioxide may also be given.

In labor it is given alone or with ether or ethylene.

SYN: laughing gas.

N. L. N. E. Abbr. National League of Nursing Education.

N. N. R. Abbr. for New and Nonofficial Remedies, the title of a book published by the American Medical Association, listing and describing the articles that stand accepted by the Council on Pharmacy and Chemistry of the A. M. A.

These include simple nonproprietary and nonofficial substances sufficiently important for inclusion, and simple pharmaceutical preparations which are believed to be useful to physicians.

No. Abbr. L. numero, to the number of.

N₂O. Nitrous oxide.

N₂O₃. Nitrogen trioxide.

N₂O₅. Nitrogen pentoxide.

Noble's enema. One dram of turpentine mixed well with glycerin, 2 ounces; mix 3 ounces of magnesium sulfate with 4 ounces of water, and pour the 2 mixtures together.

Nocardia. A genus of aerobic fungi belonging to the family Actinomycetaceae.

N. asteroides. Species responsible for pulmonary and systemic forms of nocardiosis, *q.v.*

nocardiosis. Pathologic condition resulting from infection by *N. asteroides* or other species of *Nocardia*. Usually occurs first as a pulmonary infection which may metastasize, resulting in abscesses in the skin, brain, or other organs. May also give rise to fungus tumors (mycetomas) which occur most frequently in lower extremities. Severe and rapidly fatal pyemia may occur. Nocardiosis is indistinguishable from actinomycosis. Diagnosis is made only by identification of organism.

noceptive (no'ál-sep'tív). [*L. nocere, to hurt, + ceptus, receiving*]. Pert. to pain.

n. impulses. Impulses giving rise to sensations of pain.

n. reflex. A reflex initiated by painful stimuli.

noception (nó'ál-pér-sép'shūn) [*" + perceptio, apprehension*]. The perception by the nerve centers of injurious influences or painful stimuli.

Nect. [*L.*]. Abbr. for night.

noctalbuminuria (nok'tal-bū-mīn-ū'rī-ā)

[*L. nox, noct-, night, + albumen, white of egg, + G. ouron, urine*]. Excess of albumin voided in urine at night. **SYN** *nyctalbuminuria*.

noctambulism (nók-tám'bū-ílzm) [*" + ambulare, to walk, + G. ismos, state of*]. Sleep walking. **SYN** *somnambulism*.

noctiphobia (nók'tí-fō-bī-ā) [*" + G. phobos, fear*]. Fear of the night and darkness. **SYN** *nyctophobia*.

nocturia (nók-tū'rī-ā) [*" + G. ouron, urine*]. Urination, esp excessive, during the night. **SYN** *nycturia*. **SEE** *enuresis*.

nocturnal [*L. nocturnus, at night*]. Pert to or occurring in the night. **OPP.** *diurnal*. **SEE** "nyct-" words.

n. enuresis.* Urinary incontinence during sleep at night. **SYN** *bedwetting*.

no'cuous. Noxious, injurious, harmful. **nodal** (nó'dál) [*L. nodus, knot*]. Pert. to a protuberance.

n. points. One of 2 points situated on axis of a lens that any incident ray sent through 1 will produce a parallel emergent ray sent through the other.

n. rhythm. Cardiac rhythm with origin at auriculoventricular node.

nodding (nód'ing) [*origin uncertain*]. Quick inclination of the head downward. **SYN** *nutation*.

n. spasm. Nodding of the head due to spasm of the sternomastoid muscles. **SYN** *salaam convulsion*.

node (nód) [*L. nodus, knot*]. 1 A knot, knob, protuberance or swelling. 2 A constricted region. 3 A small rounded organ or structure.

n., atrioventricular. **SYN:** *A-V node*. A tangled mass of Purkinje fibers located in lower part of interatrial septum from which the atrioventricular bundle (b of His) arises.

n., A-V. Abbr. for atrioventricular node, *q.v.*

n's., Bouchard's. N's. on 2nd joints of the fingers, in gastric dilatation.

n's., Féréol's. N's. that are subcutaneous and seen in acute rheumatism.

n's., Haygarth's. Swelling of joints in arthritis deformans.

n's., Heberden's. N. on fingers seen in hypertrophic arthritis.

n. Hensen's. **SYN** *Hensen's knot*, *primitive knot*. A mass of rapidly proliferating cells at ant. end of primitive streak of embryo.

n., hemolymph. Hemal node, *q.v.*

n., Keith and Flack's. Sinoauricular node.

n., lymph. Mass of lymphoid tissue along the course of lymphatic vessels.

n's., Meynet's. Those in capsules of joints and tendons in rheumatism.

n's., Parrot's. Osteophytes around ant. fontanel seen in hereditary syphilis.

n., plectric. Node on the hair shaft seen in piedra.

n's. of Ranvier. Constrictions of the myelin sheath of a myelinated nerve fiber.

n., sentinel. A signal node, *q.v.*

n., signal. **SYN** *Virchow's node*, *Virchow's signal node*. Enlargement of one of the supraclavicular lymph nodes. Usually indicative of primary carcinoma of thoracic or abdominal organs.

n., singer's. Small white node which develops on vocal cords. **SEE:** *chorditis nodosa*.

n., sinoatrial. **SYN:** *S-A node*. N in wall of rt. atrium near entrance of sup vena cava, consisting of dense network of Purkinje fibers. Source of impulses initiating heart beat. Also called *pacemaker* of the heart.

n., sinoauricular. Sinoatrial node, *q.v.*

n., sinus. Sinoatrial node. *q.v.*

n., syphilitic. Circumscribed swelling at end of long bones due to congenital syphilis. Sensitive and painful during inflammation, esp. at night. **See:** *Parrot's n.*

nodose (nô'dôs) [L. *nodosus*, knotted]. Swollen or knottlike at intervals; marked by nodes or projections.

nodosity (nô-dôs'i-ti) [L. *nodositās*, a knot]. 1. A protuberance or knot. 2. Condition of having nodes.

nodular (nod'ü-lär) [L. *nodulus*, a little knot]. Containing or resembling nodules.

nodule (nod'ül) [L. *nodulus*, a small knot]. 1. A small node. 2. A small aggregation of cells. **See:** *chälarosis*, *ciadosporiasis*.

n.'s, aggregate. A group of solitary lymph nodes. **Ex:** Peyer's patches of small intestine.

n.'s, agminated. Aggregate nodules, *q.v.*

n., Albin's. N's on free edges of auriculoventricular valves in infants.

n.'s., Arantius's. Central fibrous tubercles in segments of semilunar valves. **SYN:** *corpora Arantii*.

n., Aschoff's. N found in myocardium, a characteristic lesion of rheumatic fever.

n. of cerebellum. **See:** *nodulus*.

n.'s, cortical. Lymph nodules located in cortex of a lymph node.

n.'s., Gamma. Yellowish-brown ones in the spleen in certain enlargements. **SYN:** *tabac n's.*

n.'s, juxta-articular. **SYN:** *Jeanselmé's n's*. N's in subcutaneous tissue around joints seen in syphilis, yaws, and other treponemal diseases.

n., lymph. A mass of densely packed lymphocytes forming the structural unit of lymphatic tissue. Each contains a germinal center where new lymphocytes are formed.

n., lymphatic, lymphoid. A lymph nodule, *q.v.*

n.'s., Morgagni. **See:** *n's. of Arantius*.

n., Schmorl's. N formed by herniation of nucleus pulposus of intervertebral disc.

n. of semilunar valve. **See:** *n's. of Arantius*.

n.'s, siderotic. Small brown n's, seen in spleen and other organs, consisting of necrotic tissue encrusted by iron salts.

n., solitary. An isolated nodule of lymphatic tissue such as occurs in mucous membranes.

n.'s, typhoid. N's characteristic of typhoid fever found in the liver.

nodulus (nod'ü-lüs) (pl. *noduli*) [L.]. Nodule.

n. of cerebellum. The anterior portion of the vermis.

nodus (nô'düs) [L.]. Node.

noematachograph (nô-ê'mä-tak'ô-gräfi) [G. *noëma*, understanding, + *tachus*, swift, + *graphein*, to write]. Device for recording time taken in mental activity.

noematachometer (nô-ê'mä-tak-om'ê-ër) [+ " + *metron*, measure]. Device for measurement of the time taken in a simple perception. **SYN:** *noematachograph*.

Noeuchi's test (no-goo'tshe). 1. Skin test for syphilis. A few drops of Luetin are injected beneath the skin. A positive result appears within 1 day, increases in size, and lasts several days. This test is more constant in tertiary syphilis

and in latent forms than the Wassermann reaction.

2. A modified Wassermann test for syphilis. Extracts of animal heart muscle, as antigen, human corpuscles, complement serum from guinea pigs and hemolytic amboceptor from rabbits are materials used in it. Results are based on amt. of inhibition of hemolysis.

3. A test for general paresis as shown by the globulin content of spinal fluid when mixed with butyric acid and normal sodium hydroxide solution.

noise (noyz) [O.Fr. *noise*, strife, brawl; possibly derived from G. *nausea*, seasickness]. Sound of any sort, usually a loud, harsh one. **See:** *odynacusis*.

noli-me-tangere (nô'li-mê-tan'jê-rê) [L. touch me not]. Cancerous ulcer, generally of the face, which eats away bone and soft tissue.

noma (nô'mä) [G. *nomē*, a spreading]. A gangrenous progressive condition, generally found in children, spreading from the mucous membrane of the cheek or gum to the cutaneous surface. **SYN:** *cancrum oris*, *stomatitis*, *gangrenous*.

n. pudendi, n. vulvae. A similar condition affecting the labia majora.

nomadism [G. *nomas*, roaming about]. **PSY:** Impulse to wander.

nomenclature (nô'mên-klä'chur) [L. *nomēnclatura*, a name calling]. System of technical or scientific names. **SYN:** *terminology*.

nomogram (nôm'ô-gram) [G. *nomos*, law, + *gramma*, a mark]. Representation by graphs, diagrams or charts of the relationship bet. numerical variables.

nomography (nô-mog'rä-fi) [G. *nomographia*, a writing of laws]. A graphic representation of the relation bet. numerical variables.

nomotopic (nôm-ô-töp'ik) [G. *nomos*, law, + *topos*, place]. Occurring at the normal site.

non- [L.] Prefix denoting *not*, *negation*.

nona-, non-. [L.] Prefix meaning *ninth*.

nona (nô'nä) [L. *nonus*, ninth]. Acute or chronic infectious disease of central nervous system. **SYN:** *encephalitis lethargica*, *sleeping sickness*.

nonan (nô'nän) [L. *nonus*, ninth]. Having increased symptoms or reappearing every 9th day, as the paroxysms of malaria.

non compos mentis (nôn kôm'pôs mên'tis) [L.]. Not of sound mind.

nonconductor (nôn'kôn-dük'tör) [L. *non*, not, + *con*, with, + *ductor*, a leader]. A substance that does not conduct or conducts with difficulty heat, sound, or electricity.

Strictly speaking, there is no perfect nonconductor. On the application of a sufficiently high voltage, current may be caused to flow through materials usually spoken of as nonconductors. **SYN:** *insulator*.

non'disjunction. 1. The condition in which one or more pair of homologous chromosomes fail to separate following synapsis. 2. Term also applied to failure of daughter chromosomes to separate during mitosis.

nonelectrolyte (non'e-lek'tro-lit) [L. *non*, not, + *electron*, amber, + *lytos*, dissolved]. A nonconducting solution.

nonigravida. **SYN:** *nonipara*. *q.v.*

nonipara (nô-nip'ä-rä) [L. *nonus*, ninth, + *parere*, to bring forth]. A woman who has given birth 9 times.

nonlaxative diet. Low residue diet* with boiled milk and toasted crackers. No strained oatmeal, vegetable juice, or

fruit juice given. Fats and concentrated sweets are restricted

nonpolar (nōn-pō'lē'r) [L. *non*, not + *pōlus*, a pole]. Not having separate poles; sharing electrons

n. compound. One formed by the sharing of electrons.

nonprotein [L. *non*, not + G. *prōtos*, first]. Any substance not a protein

n. nitrogen. 1 A nitrogenous constituent of blood that is not a protein. 2 Sum of all nonprotein nitrogen in the blood. See *nitrogen*.

non repeat [L.] Do not repeat.

nonrestraint (nōn-rē-strānt') [L. *non*, not, + *rē*, back, + *stringere*, to bind back]. Treatment of the insane without using mechanical restraint

nonseptate (nōn-sēp'tāt) ["" + *septum*, a partition]. Having no dividing walls

nonsexual (nōn-sēk'shu-āl) ["" + *sexus*, sex]. Without sex. Syn *asexual*

nontoxic (nōn-tōks'tik) ["" + G. *toxikon*, poison]. Not poisonous or productive of poison

nonunion (nōn-ūn'yūn) [L. *non*, not, + *unio*, oneness]. Failure of bone fragments to knit together

no'nus [L.]. 1 Ninth. 2 Hypoglossal or ninth cranial nerve

nonviable (nōn-vi'ā-bl) [L. *non*, not, + *vīa*, life]. Incapable of life or of living

nookeptia (nō-ō-klep'ti-ā) [G. *nous*, mind, + *kleptin*, to steal]. An obsession that one's thoughts are being stolen by others

noöpsyche (no'ō-si-ke) ["" + *psychē*, soul]. Reasoning or intellectual processes

N. O. P. H. N. Abbr. National Organization for Public Health Nursing.

norepinephrine (nor-ēp'i-nēf'rīn) A hormone produced by the adrenal medulla similar in chemical and pharmacologic properties to epinephrine but differing in possessing an N-methyl group

norm (norm) [L. *norma*, rule]. A type or standard pattern

nor'ma [L. rule]. A view or aspect, esp. with reference to the skull

n. anterior. N facialis or frontalis.

n. basilaris. N inferior or ventralis.

View of underneath surface of skull.

n. facialis. View directed towards the face

n. frontalis. N facialis, *q v*

n. inferior. View of underneath surface of the skull

n. lateralis. View as seen from the side; a profile view

n. occipitalis. View as seen from behind

n. sagittalis. View as seen in sagittal section.

n. superior. N verticalis, *q v*.

n. ventralis. View of inferior surface of skull

n. verticalis. View of skull as seen from above

normal (nor'māl) [L. *norma*, rule]. 1. Standard; performing proper functions; natural; regular. 2 Biol. Not affected by experimental treatment, occurring naturally and not because of a disease or experimentation. 3. Psy: (a) Free from mental disorder; (b) of average development or intelligence. 4. Chem: A term used to describe a solution so made that 1 liter contains 1 gram equivalent of the solute.

In the case of acids and bases formed by univalent radicals, a normal solution is the same as molar, as in the case of HCl. In the case of H₂SO₄, however, the normal solution would be half as

strong as the molar, and in the case of H₃PO₄, it would be one-third.

n. body temperature. 98.6° F.

n. pulse. 72-80 beats per minute.

n. respiration. 16-24 per minute

n. salt. Syn *neutral salt*. An ionic compound containing no replaceable hydrogen or hydroxyl ions.

n. solution. 1 Solution containing 1 Gm., molecular weight, of dissolved substance divided by the hydrogen equivalent of the substance per liter of solution. 2 A sol which neutralizes an equal volume of a normal solution of any base or acid

n. values. See Table of Physiological Standards, Average Normal. See *appendix*

normalization (nōr-māl-i-zā'shūn) [L. *norma*, rule]. Modification or reduction to normal

normergic (norm-ēr'jīk). Reacting or pertaining to that which reacts in a normal manner

normoblast (nor'mō-blāst) [L. *norma*, rule, + G. *blastos*, germ]. A nucleated red blood corpuscle similar in size to an ordinary erythrocyte

normochromasia (nōr'mō-kro-mā'zi-ā) ["" + G. *chrōma*, color]. Average staining capacity in a cell or tissue

nor'mochro'mia. Blood possessing normal color and hemoglobin content

normocyte (nor'mō-sit) ["" + G. *kytos*, cell]. An average-sized red blood corpuscle. Syn *erythrocyte*

normocytosis (nor'mō-si-tō'sis) ["" + "" + -*ōsis*, condition]. A normal state of the corpuscular elements of the blood

normoglycemia (nor'mō-gli-sē'mi-ā) ["" + G. *glykus*, sweet, + *aima*, blood]. Normal state of sugar content of the blood

normoglycemia (nor'mō-gli-sē'mi-ā) ["" + "" + *aima*, blood]. Having a normal amount of sugar in the blood.

normoorthocytosis (nor'mō-or'thō-si-tō'sis) [L. *norma*, rule, + G. *orthos*, correct, + *kytos*, cell, + -*ōsis*, increase]. Increase in the blood of the number of leukocytes, but with normal proportion of the different varieties

normoskeocytosis (nor'mō-skē'ō-si-tō'sis) ["" + *skaios*, left, + *kytos*, cell, + -*ōsis*, condition]. Normal number of the leukocytes of the blood with deviation* to the left, i e., with immature forms present

normostenuria (nor'mō-sthēn-ū'rī-ā) [L. *norma*, rule + G. *sthenos*, strength, + *ouron*, urine]. Urination of normal amount and specific gravity.

normotonic (nor'mō-ton'ik) ["" + G. *tonos*, tension]. 1 Having normal muscular tonus. 2 One who has normal muscle tonus

normotopia (nor'mō-tō'pī-ā) ["" + G. *topos*, place]. Situation in the regular place.

normotopic (nor'mō-top'ik) ["" + *topos*, place]. In the right location; pert. to the normal situation

normovolemia (nor'mō-vō-lē'mi-ā) ["" + *volūmen*, volume, + G. *aima*, blood]. Normal state of blood volume.

Norwegian itch. Severe form of scabies marked by pustules and crusts, seen usually in leprosy.

nose (nōz) [A.S. *nosu*]. Projection in center of face; the organ of olfaction and the entrance which warms, moistens and filters the air for the respiratory tract. Syn *nasus*, *organon olfactus*. *Av. n.* The external portion of the nose is a triangle of cartilage and bone covered with skin and lined with mu-

NOSE.

Nasal cavity, showing its structural arrangement, blood, and nerve supply. Above: 1. Incisor canal 2. Little Kesselbach triangle. 3. Crista galli 4. Olfactory bulb. 5. Sphenoid sinus 6. Rosenmueller's fossa 7. Pharyngeal orifice of eustachian tube. 8. Soft palate. Below: 1. Hard palate 2. Septal or medial crest of maxillary bone. 3. Columella 4. Medial crus of major alar cartilage 5. Septal cartilage. 6. Nasal bone 7. Perpendicular plate of ethmoid 8. Cribriform plate of ethmoid. 9. Rostrum of sphenoid 10. Vomer 11. Septal or medial crest of palatine bone

eous membrane. Internally, a septum divides nose into 2 chambers. Each chamber contains 3 meatuses which are found underneath the corresponding turbinates. Orifices of frontal, ant. ethmoid and maxillary sinuses are in middle meatus. Orifices of post. ethmoids and sphenoids are in sup meatus.

Sinuses, Communicating Ethmoidal, frontal, maxillary, sphenoidal

Nerves Facial, olfactory, ophthalmic and maxillary.

Blood Supply: Ext and int. maxillary arteries from the ext. carotid and ethmoidal artery from the int. carotid

EXAMINATION OF Note shape, size, color, state of the alae nasi, discharge, interference with respiration, evidences of injury, deflected or perforated septum, enlarged turbinates, and tenderness over frontal and maxillary sinuses.

DRAG: **COLOR:** Chronic red n. Dilated capillaries the result of alcoholism, lupus erythematosus, acne rosacea, pus-

tules, boils and digestive disorders. **ULCERATION, SUPERFICIAL:** Tuberculous ulcer, epithelioma, syphilis. **SIZE AND SHAPE:** Broad and Coarse Cretinism, myxedema, acromegaly **Sunken:** Syphilis or injury. **Pinched with Small Nares:** Hypertrophied adenoid tissue or chronic obstructions; also tumors **DISCHARGES:** **Inoffensive watery discharge** Present in nasal catarrh, early stages of measles, hay fever, acute irritation of lining membranes. **Offensive discharges:** Nasopharyngeal diphtheria, lupus, local infection, impacted foreign bodies, caries, rhinitis, glands, syphilitic infection.

FOREIGN BODY IN THE NOSE: **SYM:** Irritation of nose resulting in coughing or watery or purulent discharge. Occasionally pain and obstruction of nose. If not recognized immediately it often causes a foul discharge on the affected side of the nose. There may be obstruction to breathing in 1 nostril. If the foreign body is very small, symptoms may be absent.

TREATMENT Vigorous blowing of the nose is dangerous as it may spread infection to the various cavities and sinuses about the nose or to the ear. Do not attempt to fish the body out with a hairpin or other object, as this often results in pushing the body into the throat and it may drop into the larynx or trachea. Attempts to dislodge may cause it to slip further in the nose or down the throat, from where it occasionally drops into the windpipe. Foreign bodies in the nose rarely need emergency measures. Instill a drop or 2 of oil (such as mineral oil) into the affected nostrils and take the patient to a physician.

n., bridge of. Sup. portion of ext. nose formed by union of the two nasal bones.

n., hammer. Rhinophyma, *q.v.*

n., saddle. Nose with depressed bridge seen in tertiary syphilis due to gummatous destruction of septal supporting structure, and following operations which are complicated by suppurative and destruction of supporting framework.

nose, words pert. to: agger nasi, ala nasi; alinasal, anosmic, aporrhinos, apotaxis; bulb, olfactory, bulla ethmoidalis, choana narium, columella nasi, epistaxis, hypoeosmia, naris, "nas-" words, nostril, parosmia; rhinalgia, rhinitis, "rhino-" words, septum, sinus, accessory; sinusitis, smell, vestibule, vibrissae, vomer, xeromyxetaria.

nosebleed (nōz'blēd) [*A.S. nosu, nose, + blēdan, to bleed*]. Hemorrhage from nose. *SYN. epistaxis.*

nosema (no-sē'mā) [*G. nosēma, disease*]. 1. Aliment (nosema) or disease. 2. A genus of Microsporidia.

noso- [*G.*] Combining form meaning *pert. to disease*.

nosochthonography (nos'ok-thon-og'rā-flī) [*G. nosos, disease, + chithōn, caith, + graphein, to write*]. Study of geography of diseases, medical geography. *SYN. nosogeography.*

nosocomium (nōs'ō-kō-mī-ūm) [*" + kōmein, to care for*]. A hospital or infirmary.

nosode (nos'ōd) [*" + eidos, appearance*]. A bacterial vaccine used in treatment of the disease of which it is the causative agent.

nosogenesis, nosogeny (nos'ō-jēn'ē-sīs, nos-ōj'en-ī) [*" + gennan, to produce*]. The development and progress of a disease.

nosogeography (nos'ō-jē-og'rā-flī) [*" + gē, earth, + graphein, to write*]. Study of medical geography. *SYN. nosochthonography.*

nosography (no-sog'rā-flī) [*" + graphein, to write*]. The description of a disease.

nosohemia (nōs'ō-hē'mī-ā) [*G. nosos, disease, + haima, blood*]. Disease of the blood.

nosology (no-sol'o-jī) [*" + logos, disease*]. The science of description, or the classification of diseases.

nosomania (nōs'ō-mā'nī-ā) [*" + mania, madness*]. 1. The delusion that one is diseased. 2. Morbid fear of disease.

nosomycosis (nos'ō-mī-kō'sīs) [*" + mykēs, fungus, + -ōsis*]. Any disease caused by a parasitic fungus or Schizomycete.

nosonomy (nos-on'ō-mī) [*" + nomos, law*]. The science of disease classification.

nosophobia (nōs'ō-fō'bī-ā) [*G. nosos, disease, + phobos, fear*]. Abnormal aversion to illness, or to a particular affection.

nosophyte (nōs'ō-fit). A disease-causing plant microorganism.

nosopoletic (nō'sō-poy-ē'tīk) [*" + polein, to form*]. Producing or causing disease.

Nosopsyllus (nō'sōp-sē'lūs) A genus of fleas belonging to the order Siphonaptera.

N. fasciatus. A species of rat fleas sometimes responsible for transmission of plague.

nosotherapy (nos'ō-ther-ā-plī) [*" + therapeia, treatment*]. Treatment of a disease by voluntarily introducing another microorganism into the body.

nosotrophy (nos-ō'trō-ī) [*G. nosos, disease, + trophē, nourishment*]. Nursing care and feeding of the sick.

nos'otrophic. Directed against the symptoms or effects of a disease. *SEE etiotropic.*

nostalgia (nos-tal'jī-ā) [*G. nostos, a return home, + algos, pain*]. Homesickness. *SEE camatophobia.*

nostomania (nos'tō-mā'nī-ā) [*" + mania, madness*]. Nostalgia* verging on insanity.

nos'tril [*A.S. nosu, nose, + thryl, a hole*]. One of the external apertures of the nose. *SYN. naris. SEE nose.*

n. reflex. Reduction of opening of naris on affected side in lung disease in proportion to lessened alveolar air capacity on affected side.

nostrum (nōs'trūm) [*L. our*]. A patent or a quack remedy.

notal (nō'tāl) [*G. nōton, back*]. Concerning the back. *SYN. dorsal.*

notalgia (nō-tal'jī-ā) [*" + algos, pain*]. Painful condition of the back. *SYN. dorsalgia.*

notch (nōtsh) [*A.S. notel*]. A rather deep indentation or narrow gap in the edge of a part. *SYN. incisura.*

n., acetabular. Notch in inferior border of acetabulum.

n., aortic. One in phrygogram from rebound at aortic valve closure.

n., cardiac. Concavity on ant. border of left lung into which the heart projects.

n., cerebellar, ant. and post. A deep notch separating the hemispheres of the cerebellum.

n., clavicular. One at the upper angle of the sternum with which the clavicle articulates.

n., costal. One of seven pairs of indentations on lateral surfaces of the sternum, for articulation with costal cartilages.

n., cotyloid. *SEE acetabular n.*

n., ethmoidal. N. separating the two orbital portions of frontal bone.

n., frontal. N. on supraorbital arch which transmits frontal artery and nerve.

n., greater sciatic. Large n. on post. border of hip bone between post. iliac spine and spine of ischium.

n., interclavicular. A rounded one at top of manubrium of sternum, bet. surfaces articulating with the clavicles.

n., jugular (of occipital bone). One which forms the post. and middle portions of jugular foramen.

n., jugular (of sternum). N. upper surface of manubrium between the two clavicular notches.

n., lesser sciatic. N. immediately below spine of ischium on post. border of hip bone. Converted into a foramen by the sacrotuberous ligament.

n., mandibular. N. on sup. border of ramus of mandible separating coronoid and condyloid processes.

n., nasal. 1. Deep notch on ant. surface of maxilla and forming lat. border

of piriform aperture. 2 N. bet. int. angular processes of frontal bone

n., pancreatic. N on lateral surface of head of pancreas for sup mesenteric artery and vein. It separates uncinate process of head from remaining portion.

n., radial. N on lat. surface of coronoid process of ulna for receiving circumference of head of radius

n. of Rivinus. Tympanic notch, *q.v.*

n., scapular. A deep n on sup. border of scapula. Transmits suprascapular nerve

n., sclatic. SEE *greater or lesser sciatic n.*

n., semilunar. N on ant. aspect of proximal end of ulna for articulation with trochlea of humerus

n., sphenopalatine. N bet orbital and sphenoidal processes of palatine bone.

n., suprasternal. Jugular n of the sternum, *q.v.*

n., tentorial. N in free border of tentorium cerebelli through which brain-stem passes

n., thyroid. Deep n on sup. border of thyroid cartilage of larynx separating the two laminae

n., tympanic. SYN *N of Rivinus* N in sup. portion of the tympanic ring

n., ulnar. N on distal end of radius for receiving head of ulna

n., umbilical. N. on ant. border of liver where it is crossed by falciform ligament

n., vertebral. Concavity on inf. surface of root of vertebral arch. When two vertebrae are in position, the notches form the *intervertebral foramina*

note (nót) [*L. nota*, a mark]. A sound of definite pitch.

n. blindness. Inability to recognize musical notes, due to a central lesion.

notencephalocoele (nó'tên-sef'al-ô-sêl) [*G. nôtôn*, back, + *egkephalos*, brain, + *kêif*, hernia]. Protrusion of brain substance at the back of the head.

notifiable diseases. The laws of the various states require that certain diseases when existing shall be reported to the local health authorities, such as a Board of Health. A fine may be levied for not doing so. Among the diseases generally required to be reported are. All communicable or contagious diseases, such as smallpox, scarlet fever, relapsing fever; diphtheria or membranous croup; enteric fevers, such as typhoid fever; erysipelas; puerperal pyrexia and sepsis; cholera; typhus; cerebrospinal fever; acute anterior poliomyelitis, polioencephalitis; encephalitis lethargica, tuberculosis; dysentery; pneumonia; epidemic diarrhoea; chickenpox; gonorrhoea; syphilis. SEE *quarantine*, *reportable diseases*.

notochord (nó'tô-kord) [*G. nôtôn*, back, + *chordê*, cord]. A rod of cells lying dorsal to intestine and extending from ant. to post. end which forms axial skeleton in embryos of all Chordates. In vertebrates it is replaced partially or completely by centra of vertebrae. A remnant persists in man as a portion of nucleus pulposus of intervertebral disc.

no'togen'esis. Development of the notochord.

noomenal (nú'mé-nál) [*G. noomenon*, a thing perceived]. Pert. to rational intuition opposed to sensual perception.

noomenon (nú'mé-nôn) [*G. noomenon*, a thing perceived]. An object of rational apprehension as opposed to perception.

nourishment (nú'rish-mént) [*L. nutrire*, to nurse]. 1. Act of nourishing or of being

nourished. 2. Sustenance, nutriment. SEE *trophic*, *trophic center*.

novasuroi (nô-vás'u-rôl) SEE *merbaphen*.

novatropine (nov-at'rô-pén) The methyl bromide of the alkaloid homatropine, less active and less toxic than atropine.

USES: Chiefly in gastrointestinal spasms.

DOSEAGE 1/24 gr. (25 mg.).

novocain (nô'vô-kân) A commercial brand of procaine hydrochloride, USP. The noxious principle in novocain is supposed to have been eliminated in procaine

DANGERS OF NOVOCAIN. Lowers blood pressure, produces convulsions accompanied by complete dilatation of the pupils, hallucinations, delusions and death. For all cocaine preparations, the barbituric preparations act as an antidote, causing a relaxation of the muscles and lowering brain tension. They act as a buffer for novocain poisoning and should always be given preoperatively before giving novocain.

DOSEAGE *Infiltr*, 4 gr (0.25 Gm.), *instill.*, 1½ gr. (0.1 Gm.).

noxa (noks'â) (pl. *noxae*) [*L.* injury]. Anything harmful to health.

noxious (nok'shus) [*L. noxius*, injurious]. Harmful, not wholesome

NPH insulin. Abbr. for *neutral-protamine-Hagedorn insulin* SEE *insulin*, *NPH*.

NPN. Abbr. for *nonprotein nitrogen* n-rays. Rays discovered by Blondiot in 1903 making certain bodies luminous.

Nt. SYMB: for *niton*

nubecula (nû-bek'û-lâ) [*L.* little cloud].

Cloudiness of the cornea or the urine

nubile (nû'bîl) [*L.* nubere, to marry].

Pert. to a girl who has attained puberty and who is thus able to marry.

nubility (nû'bîl'î-tî) [*L.* nubere, to marry].

Marriageableness, said of female at puberty, the final state of sex development.

nucha (nu'kâ) [*L.*]. Nape of neck.

nuchal (nu'kal) [*L.* *nucha*, back of neck].

Pert. to the neck or *nucha*.

Nuck's canal or diverticulum (nook). An anomalous peritoneal pouch extending for a variable distance into the labium

Homologous to processus vaginalis of the male

nuclear (nú'klê-âr) [*L.* *nucleus*, a kernel].

Resembling or concerning a nucleus.

n. arc. Region of equator of crystalline lens where cells undergo transition into lens fibers. Also called *nuclear zone*, *lens vortex*

n. sap. SYN: *karyolymph* Liquid of a cell nucleus found within the mesh-work

nuclease (nú'klê-âs) [*L.* *nucleus*, kernel, + *ase*, enzyme]. Any enzymes in animals and plants which facilitate hydrolysis of nuclein and nucleic acids

nucleate (nú'klê-ât) [*L.* *nucleatus*, having a kernel]. 1. Having a nucleus. 2. To form a nucleus. 3. A salt or ester of nucleic acid.

nucleic acid. SYN: *nucleinic acid*. One of an important group of substances found in cells, esp. the nuclei. They have a complex chemical structure being formed of sugars (pentoses) phosphoric acid, and nitrogen bases (purines and pyrimidines). Most important are *desoxyribonucleic acid*, *ribonucleic acid*, and *tuberculinic acid*, *q.v.*

nuclein (nú'klê-in) [*L.* *nucleus*, a kernel].

A normal chemical constituent of a cell nucleus, a colorless, shapeless substance obtained by hydrolysis of nucleoproteins or cells containing nucleic acid and proteins rich in phosphorus.

n. bases. SYN: *xanthine bases*. Bases formed from decomposition of nuclein. Ex: adenine, guanine, xanthine, hypoxanthine.

n. therapy. The use of nuclein derived from various glands and blood serum in the treatment of disease. Said to increase white bloodcell formation and thus increase resistance to infection.

nucleinase. SYN: *nuclease*, *q.v.*

nucleo- [L] Pertaining to a nucleus.

nucleoalbumin (nū'klē-ō-āl-bū'min) [L. *nucleus*, kernel, + *albus*, white] A comp. of nucleic acid and albumin.

nucleoalbuminuria (nū'klē-ō-āl-bū'mi-nū-ri-ā) [L. *nucleus*, kernel, + *albus*, white, + *G. ouron*, urine]. Nucleoalbumin found in urine.

nucleoalbumose (nū'klē-ō-āl-bū-mōs) ["" + *albus*, white]. Partly hydrated nucleoalbumin found in the urine of patients with osteomalacia.

nucleofugal (nū-klē-ōi'fū-gāl) ["" + *fugere*, to flee]. Moving from a nucleus in the cell.

nucleohiston(e) (nū'klē-ō-his'ton, -tōn) ["" + *istos*, tissue] A substance in leukocytes, lymph and thymus glands, composed of nuclein and histone.

nucleoid (nū'klē-ōyd) ["" + *G. eidos*, resemblance] Resembling a nucleus.

nucleolar (nū-klē-ō-lār) [L. *nucleolus*, a little kernel] Pert. to a nucleolus.

n. organizer or n. zone. SEE: *SAT-zone*.

nucleoform (nū-klē-ō-li-form) ["" + *forma*, shape]. Like a nucleolus.

nucleolin (nū-klē-ō-lin) [L. *nucleolus*, little kernel]. The substance composing the nucleolus.

nucleolus (nū-klē-ō-lūs) (pl. *nucleoli*) [L. little kernel]. A spherical body within the cell nucleus.

n., chromatin. A false nucleolus, *q.v.*

n., false. Dense bodies of chromatin found on chromonemata. Called *chromocenter*, *karyosome*.

n., true. A plasmosome, *q.v.*

nucleomicrosome (nū'klē-ō-mī'krō-sōm) [L. *nucleus*, kernel, + *G. mikros*, tiny, + *sōma*, body]. Any 1 of the minute granules making a nucleoplasmic fiber.

nucleopetal (nū-klē-ōp'ēt-āl) ["" + *petere*, to seek]. Seeking or moving toward the nucleus. Ex: movement of a male pronucleus toward the female pronucleus.

nucleoplas'mic. Pert. to nucleoplasm.

n. index. ASNA. NP. The ratio of nuclear volume to cytoplasmic volume, expressed thus

$$NP = \frac{\text{vol. of nucleus}}{\text{vol. of cell} - \text{vol. of nucleus}}$$

nucleoprotein (nū'klē-ō-prō'tē-in) ["" + *G. prótos*, first]. The combination of 1 of the proteins with nucleic acid to form a conjugated protein found in cell nuclei.

nucleoreticulum (nū'klē-ō-rē-tīk'ū-lūm) ["" + *reticulum*, network]. Any mesh framework in a nucleus.

nucleosidase (nū'klē-ō-sī'dās) An enzyme that catalyzes the hydrolysis of nucleosides.

nucleoside. A glycoside formed by the union of a purine or pyrimidine base with a sugar (pentose).

nucleospindle (nū'klē-ō-spin'dl) ["" + A.S. *spīnel*]. Spindle-shaped body occurring in karyokinesis.

nucleotidase (nū'klē-ō-tī'dās) An enzyme (nucleophosphatase), which splits phosphoric acid from nucleotides leaving a nucleoside.

nucleotide (nū'klē-ō-tīd) [L. *nucleus*, kernel]. SYN: *mononucleotide*. A comp.

formed of phosphoric acid, a sugar, and a base (purine or pyrimidine). They constitute the structural unit of nucleic acid.

nucleotoxin ["" + *G. toxikon*, poison]. A toxin acting upon or produced by cell nuclei.

nucleus (nū'klē-ūs) (pl. *nuclei*) [L. little kernel]. 1. A central point about which matter is gathered, as in a calculus.

2. The vital body in the protoplasm of a cell, the essential agent in growth, metabolism, reproduction and transmission of characteristics of a cell. SEE: *cell structure*.

3. A group of nerve cells or mass of gray matter in the central nervous system, esp. the brain.

4. CHEM. Heavy central atomic particle in which most of the mass and total positive electric charge are concentrated.

n., abducent. A gray n., the origin of abducent nerve, on floor of 4th ventricle, behind trigeminal n.

n. ambigua. BNA. N. of the glossopharyngeal and vagus nerves in medulla oblongata. Lies in lateral half of reticular formation.

n., amygdaleid. N. projecting into inf. cornua of lat. ventricle. Constitutes part of basal ganglia.

n., angular. SYN: *Bechterew's n.* The sup. vestibular nucleus.

n., ant., of thalamus. N. located in rostral part of thalamus. Receives fibers of mammillothalamic tract.

n., arcuate. 1 N. located on basal aspect of pyramid of medulla. 2 The posteromedial ventral n. of the thalamus. Also called *semilunar n.*

n., auditory. Nest of nerve cells where auditory nerves arise.

n. of von Bechterew. The sup. vestibular nucleus, *q.v.*

n. of Burdach. The nucleus cuneatus, *q.v.*

n., caudate. A comma-shaped mass of gray matter forming part of the corpus striatum. Constitutes part of the basal ganglia.

n., central, of thalamus. SYN: *centromedian n.* A group of nuclei in middle part of thalamus.

n., centromedian. SYN: *N. of Luys*. The central nucleus of the thalamus, *q.v.*

n., cerebellar. One of the nuclei of the cerebellum. *n. fastigii*, *n. emboliformis*, *n. globosus*, and *n. dentatus*.

n., cochlear, dorsal. N. in medulla oblongata lying dorsal to restiform body. Receives fibers of cochlear nerve. SEE: *nucleus, cochlear, ventral*.

n., cochlear, ventral. N. in medulla oblongata lying anterior and lateral to restiform body. Receives fibers from cochlear nerve. SEE: *nucleus, cochlear, dorsal*.

n., cornucommissural, posterior. A column of cells extending entire length of spinal cord lying along medial border of post. column near post. gray commissure.

n., cuneate. N. in inf. portion of medulla oblongata in which fibers of the fasciculus cuneatus terminate.

n., Deltzer's. Lateral vestibular nucleus, *q.v.*

n., dentate. SYN: *N. dentatus*. Large convoluted mass of gray matter in lateral portion of cerebellum. It is folded so as to enclose some of the central white matter. Gives rise to fibers of the sup. cerebellar peduncle.

n., dorsal, of spinal cord. SYN: *Clarke's column*. A column of gray

matter lying at base of dorsal horn of gray matter and extending from 7th cervical to 3rd lumbar segments. Cells give rise to fibers of the dorsal spinocerebellar tract.

n., dorsal motor, of vagus. A column of cells in medulla oblongata lying lateral to hypoglossal nucleus. Its cells give rise to most of efferent fibers of vagus nerve.

n., dorsal sensory, of vagus. N lying lateral to dorsal motor nucleus of vagus. Receives fibers of solitary tract.

n., ectoblastic. One in cells of the epiblast.

n., Edinger-Westfall. N of midbrain located dorsomedially to oculomotor nucleus. Gives rise to visceral efferent fibers terminating in ciliary ganglion, axons from which innervate ciliary muscle and sphincter iridis.

n., emboliform. N of cerebellum lying between dentate and globose nuclei. Receives axons of Purkinje cells and sends efferent fibers into brachium conjunctivum.

n., facial motor. N in medulla oblongata in floor of 4th ventricle giving rise to efferent fibers of facial nerve.

n., fastigial. N in medullary portion of cerebellum. Receives afferent fibers from vestibular nerve and sup vestibular nucleus. Afferent fibers form fasciculus uncinate and fastiglobular tract.

n., funiculi gracilis. BNA. Elongated mass of gray matter in dorsal pyramid of medulla oblongata.

n., germinal. N resulting from union of male and female pronuclei.

n., globose. N of the cerebellum located medial to the emboliform nucleus.

n., gracilis. N in medulla oblongata in which fibers of the fasciculus gracilis terminate.

n., habenular. N on the diencephalon located in the habenular trigone. Functions as an olfactory correlation center.

n., hypoglossal. An elongated mass of gray matter in the medulla oblongata in floor of 4th ventricle. Gives rise to motor fibers of hypoglossal nerve.

n., hypothalamic. One of the nuclei occurring in four groups found in hypothalamus. Includes the following nuclei: dorsomedial, intercalatus, lateral, mammillary (lateral and medial), paraventricular, posterior, supraoptic, tubular, ventromedial. Cells of these nuclei, esp the supraoptic and paraventricular, in addition to serving a neural function are secretory and produce the vasopressor, oxytocic, and antidiuretic principles of the hypophysis. These hormones pass through efferent fibers of the infundibular stalk to the pars nervosa (post lobe) of the hypophysis where they are stored and liberated.

n., interpeduncular. N. of the midbrain near sup border of pons. Receives fibers of the habenulopeduncular tract.

n., interstitial, of Cajal. N in sup. portion of midbrain. Receives fibers from vestibular nuclei, basal ganglia, and occipital regions of cerebral cortex. Efferent fibers pass to ipsi- and contralateral fasciculi and interstitiospinal tracts.

n., intraventricular. SEE: *n., candate.*

n., lenticular. One of the n forming part of the basal ganglia of the cerebrum. Consists of *globus pallidus* and

putamen. With the caudate nucleus, it forms the *corpus striatum*.

n., lentis. N of crystalline lens.

n., mother. One that divides into 2 or more parts called *daughter nuclei*.

n., motor. N giving rise to motor fibers of a nerve.

n., motor, of trigeminal nerve. N in medulla oblongata near 1st margin of sup part of 4th ventricle. Gives rise to motor fibers of trigeminal nerve.

n., oculomotor. N in central gray matter of midbrain lying below rostral end of cerebral aqueduct.

n., olivary, inferior. A large convoluted mass of cells lying in ventral part of medulla oblongata and forming part of the reticular system. Gives rise to fibers of the olivocerebellar tract.

n., olivary, superior. A small n located in mid-lateral tegmental region of pons. Receives fibers from ventral cochlear nucleus.

n., of origin. N giving rise to fibers of a nerve or nerve tract.

n., paraventricular. N of hypothalamus lying in supraoptic portion. Its axons with those of supraoptic n form supraoptichypophyseal tract. SEE: *nucleus, hypothalamic*.

n., pontine (pontile). One of several groups of nerve cells located in the pons. Receives afferent fibers from cerebral cortex; efferent fibers pass through brachium pontis to cerebellum.

n., pulposus. A gelatinous mass in center of an intervertebral disk, remains of the notochord.

n., pyramidal. Band of gray matter near olivary n. in the medulla.

n., quintus. Trigeminal nerve nucleus.

n., red. Large oval pigmented mass in upper portion of midbrain and extending upward into subthalamus. Receives fibers from cerebral cortex and cerebellum; efferent fibers give rise to rubrospinal tracts.

n., reticular. A column of neurons in spinal cord in basal zone of posterior gray column.

n., ruber. BNA. Mass of red colored gray matter in crus cerebri close to optic thalamus.

n., salivatory, inferior. N located in pons near level of dorsal motor nucleus of the vagus. Gives rise to preganglionic parasympathetic fibers which pass to otic ganglion via hypoglossal nerve. Impulses regulate secretion of parotid gland.

n., salivatory, superior. An ill-defined N in pons lying dorsomedial to facial nucleus. Gives rise to preganglionic parasympathetic fibers passing through chorda tympani and lingual nerve to submaxillary ganglion. Impulses regulate secretion of submaxillary and sublingual glands.

n., segmentation. N of zygote formed by fusion of male and female pronuclei.

n., sensory. A nucleus of termination, *q v.*

n., sensory, of trigeminal. A group of nuclei in pons and medulla oblongata consisting of *spinal nucleus* which extends inferiorly into spinal cord, the *main nucleus* lying dorsal and lateral to motor nucleus, and the *mesencephalic nucleus* lying in lateral wall of 4th ventricle.

n., subthalamical. SEE: *n. hypothalamic*.

n., supraoptic. N of the hypothalamus lying above rostral ends of optic tracts and lateral to optic chiasma. SEE: *nucleus, hypothalamic*.

n. of termination. N. in which fibers of a nerve or nerve tract terminate

n., thalamic. Any of the nuclei of the thalamus. Include a large number belonging to the following groups *anterior*, *n. of midline*, *medial*, *lateral*, and *posterior* n.

n., vesicular. N. having deeply staining membranes and pale center

n., vestibular. One of four nuclei in medulla oblongata in which fibers of vestibular nerve terminate. Include *medial* (Schwalbe's), *superior* (Bechterew's), *lateral* (Deiters') and *descending* (spinal)

n., vitelline. One formed by union of male and female pronuclei within the vitellus

n., white. Central white substance of corpus dentatum of olive

nude (nüd) [L *nudare*, to strip] 1 Bare; naked, unclothed 2 An unclothed body.

nudi- [L]. Combining form denoting *uncovered*, *naked*.

nud'ism. 1 In psychiatry, morbid desire to remove clothing 2 The cult or practice of living in a nude condition

nudomania (nü-dö-ma'ní-ä) [L. *nudäre*, to strip, + G. *mania*, madness]. Abnormal desire to be nude

nudophobia (nü-dö-fí-ä) ["" + G. *phobos*, fear] Abnormal fear of being unclothed. See *gymnophobia*.

Nuel's space (nü'él) S in organ of Corti between outer pillar and outer phalangeal cells (Deiters's cells)

Nuhn's gland (noon) Mucous gland on each side of frenum of the tongue. Syn. *Blandin's gland*.

nullipara (nü-lí-pá-rä) [L. *nullus*, none, + *parere*, to bear]. A woman who has borne no children

nulliparity (nü-lí-part-í-tí) ["" + *parère*, to bear]. Condition of not having given birth to a child

nulliparous (nü-lí-pá-r-üs) ["" + *parère*, to bear] Never having borne a child

numb (nüm) [A S. *numen*, taken] 1 Insensible, lacking in feeling as from cold 2 Deadened or lacking in power to move as *numb* with cold

number (nüm'bér) [L. *numerus*, number]. 1 A total of units 2 A symbol graphically representing an arithmetical sum

RS *mean*, *median*, *modality*, *mode*, *numeral*.

numbness (nüm'nēs) [A S. *numen*, taken]. Lack of sensation in a part, esp from cold. See *narcohypnia*, *obdormition*

numeral (nüm'mér-äl) [L. *numerus*, number]. 1. Denoting or pert. to a number. 2 A word or figure expressing a number.

num'miform, **num'mular** [L. *nummus*, a coin, + *forma*, shape]. 1. Coin-shaped, said of some mucous sputum. 2. Arranged like a stack of coins.

nummulation [L. *nummus*, a coin]. The formation of a coin-shaped mass.

numnation (nün-ä'shün) [Arabic *num*, letter N]. Frequent and abnormal use of the n sound

supercaine (nup'er-kän) A white powder or crystals manufactured from cinchoninic acid.

Uses: As a local anesthetic of prolonged action. More toxic than cocaine.

nurse (ners) [L. *nutrix*, a nurse]. One who cares for the sick or wounded, esp. a registered nurse. See: *nutrix*.

n., charge. One in charge of a single hospital ward.

n., community; n., district. A visiting nurse.

n., dry. An infant's nurse who does not suckle the child.

n., general duty. One not specializing.

n., graduate. One who is a graduate of an accredited school of nursing.

n., head. A supervisor at the head of a hospital nursing staff

n., health. A community nurse.

n., practical. One with experience in nursing but who is not a graduate of a school of nursing

n., private. A nurse in charge of a single patient.

n., private duty. One not a member of a hospital staff who is called in to care for an individual patient in the hospital

n., probationer. One under observation in a nursing school before being admitted as a student

n., public health. A graduate nurse employed by a Board of Health

n., registered. A graduate nurse who has been registered and legally licensed to practice by state authority

n., school. A registered nurse whose duties are to supplement the work of the physician in medical inspection of pupils.

n., scrub. N who is a member of an operating team being surgically clean in order to be able to assist the surgeon

n., special. A private nurse taking special care of one patient or one who specializes in the care of certain types of patients

n., student. A girl who is enrolled in a school of nursing

n., trained. A registered nurse.

n., visiting. A registered nurse, employed by an association to care for the sick poor in their homes

n., wet. A woman who gives suck to infants of others

nurse (neis) [L. *nutrix*, a nurse]. 1 To feed an infant at the breast. 2 To care for an invalid 3 To care for a young child 4 To suckle.

nurses' contracture. Tetany sometimes seen in nurses

nurs'ing [L. *nutrix*, nurse]. 1. Scientific care of the sick by a graduate, registered nurse 2 Loosely applied to any care of the sick 3 Suckling at the female breast, as an infant 4 Lactation.

nutatio (nü-tä'shün) [L. *nutatio*, a nodding]. Nodding, as of the head.

n. of sacrum. Partial rotation of the sacrum on its transverse axis to give greater space for passage of the fetus.

nutrient (nü'trí-ént) 1 Food that supplies the body with its necessary elements 2 Nourishing

Those containing carbon are *organic* food nutrients. Organic food nutrients may or may not contain nitrogen. Nutrients used for body fuel are fat, proteins and carbohydrates. Energy is obtained by the oxidation of certain food nutrients

RS: *calory*, *carbohydrate*, *fat*, *food*, *mineral*, *nitrogen*, *pabulum*, *protein*.

nutriment (nü'trí-mént) [L. *nutrimentum*, nourishment]. That which nourishes; nutritious substance.

nutriology (nü'trí-ol'-í-lí) [L. *nutrire*, to nourish, + G. *logos*, study]. The science of use of foods in diet and therapy.

nutrition (nü'trí'shün) [L. *nutritio*, a feeding]. The sum total of the processes involved in the taking in and utilization of food substances by which growth, repair, and maintenance of activities in the body as a whole in any of its parts are accomplished. Includes ingestion, digestion, absorption and metabolism (assimilation).

Nutrients are stored by the body in various forms, and drawn upon when the food intake is not sufficient in the following order: usable gases, water as needed; body carbohydrates, such as sugar or glycogen, lactic acid and then the fats are utilized, large globules of neutral fat, and the fats that bear a relation to other fats, as glycogen does to sugar.

These are not easily utilized and harmful results, or a too large consumption of fats may induce acidosis. The albumins and proteins are then consumed, and if this continues death ensues.

nutritional (nū-trīsh'ūn-āl) [L. *nutritio*, a feeding] Rel. to nutrition

nutritious (nū-trīsh'ūs) [L. *nutritus*, feeding] Affording nutriment. **SYN.** nutritive.

nutritive (nū-trī-tīv) [L. *nutritus*]. Pert. to the process of assimilating food, having the property of nourishing

n. enema. One of predigested foods to give sustenance to a patient unable to take nourishment in the usual way. **See enema**

nutritory (nū-trī-tō'rī) [L. *nutritorius*, nutritive] Nutritive, nourishing

nux vomica (nūks vom'ī-ka) A poisonous seed from an East Indian tree, containing several alkaloids, the principal ones being brucine and strychnine, *q.v.* **USP.** Dose: 1½ m. (0.1 g.)

nyctaluminuria (nik-'tāl-bū-'min-ū'rī-ā) [G. *nyx*, *nykt-*, night, + L. *albus*, white, + G. *ouron*, urine] A cyclic albuminuria occurring at night. **SYN.** noctalbuminuria

nyctalgia (nik-'tāl-'jī-ā) [' + *algos*, pain]. Pain during the night

nyctalopia (nik-'tāl-lō-'pī-ā) [' + *alao*, blind, + *ops*, eye] 1 A condition in which person cannot see well in a faint light or at night. Seen in retinitis pigmentosa and in the Laurence-Biedl syndrome, and also as a result of secondary atrophy of the optic nerve. **SYN.** night blindness 2 Incorrectly, having better sight at night or in semi-darkness than by day, night vision. **See hemeralopia.**

nyctamblyopia (nik-'tam-blō-'pī-ā) [' + *amblyop-*, poor sight] Poor vision at night without visible eye changes.

nyctaphonia (nik-'tā-fō'nī-ā) [' + *a-*, priv. + *phōnē*, voice]. Hysterical loss of voice during the night

nycterine (nik-'tēr-in) [G. *nyx*, *nykt-*, night] 1. Taking place at night 2. Obscure

nycthemerus (nik-'them-'ē-rūs) [G. *nychthemeros*] 1 Space of a day and a night 2 Pert. to a night and day. **SYN:** *ephemeral*.

nycthemeral (nik-'to-hē-'mer-al) [' + *ēmeraa*, day] Rel. to both day and night.

nyctophilia (nik-'to-nī-'fī-ā) [' + *philein*, to love] A predilection for darkness or for night. **SYN.** *scotophilia*.

nyctophobia (nik-'tō-fō-'bī-ā) [G. *nyx*, night, + *phobos*, fear] Abnormal dread of the night, or of darkness

nyctophonia (nik-'tō-fō'nī-ā) [' + *phōnē*, voice]. Hysterical loss of voice only during the day.

nyctotyphlosis (nik-'tō-tīf-lō-'sīs) [' + *typhlosis*, blindness]. Poor vision at night. **SYN.** *night blindness*, *nyctalopia*.

nycturia (nik-'tū'rī-ā) [' + *ouron*, urine]. Urination, esp. excessive, during the night. **SYN:** *nocturia*. **See enuresis.**

nygma (nīg'mā) [G. *nygma*, a puncture]. A puncture wound.

nympha (pl. *nymphae*) [G. *nymphē*, a maiden]. One of the labia minora, the small folds of mucous membrane forming the inner lips of the vulva.

So called from the nymphs, or goddesses of the fountain. **SYN:** *labium minus pudendi*.

n. pendulae. Stretched pendulous nymphae.

nymphectomy (nīm-fēk'tō-mī) [' + *ek-*, *tomē*, excision] Excision of hypertrophied nymphae

nymphitis (nīm-fī'tīs) [' + *-itis*, inflammation]. Inflamed condition of the nymphae

nymphocaruncular sulcus (nīm'fō-kār-ūn'-ku-lār) [' + L. *caruncula*, little mass of flesh] The depression bet the hymen and the labium minus, on either side

nymphohymenal sulcus (nīm'fō-hī'mēn-āl) [' + *ymēn*, membrane] Trench bet. labium minus and the hymen on either side.

nympholepsy (nīm'fō-lēp-sī) [' + *lēpsia*, a seizure] 1. Frenzied ecstasy usually erotic in nature 2. Operative removal of the nymphae.

nymphomania (nīm'fō-mā'nī-ā) [' + *mania*, madness] Abnormally excessive sexual desire in the female. **SYN.** *furor femininus*, *furor uterinus*. **See satyriasis.**

nymphomaniac (nīm'fō-mā'nī-āk) [G. *nymphē*, maiden, + *mania*, madness]. 1 Woman who is afflicted with excessive sexual desire 2. Marked by excessive sexual desire.

nymphoncus (nīm-fon'kūs) [' + *ogkos*, a swelling]. Swelling or tumor of the nymphae

nymphotomy (nīm-fot'tō-mī) [' + *tomē*, a cutting] 1. Removal of the nymphae. **SYN.** *nymphectomy* 2. Incision into a nympha 3. Removal of the clitoris

nystagmic (nīst-ag'mīk) [G. *nystazein*, to nod] Rel. to or suffering from condition of involuntary eyeball movements.

nystagmiform (nīst-tāg'mī-form) [G. *nystazein*, to nod, + L. *forma*, shape] Like or resembling nystagmus

nystagmograph (nīst-tāg-mō-grāf) [' + *graphein*, to write] Apparatus for recording the oscillations of the eyeball in nystagmus.

nystagmoid (nīst-tāg'moyd) [' + *eidōs*, resemblance]. Similar to, or resembling nystagmus

nystagmus (nīst-tāg'mūs) [G. *nystazein*, to nod] Constant involuntary movement of the eyeball.

Etiol. (1) Congenital, seen in bilateral amblyopia (2) Occupational, as in miners and train dispatchers (3) Labyrinthine irritability. (4) Nervous diseases

n., aural. N due to disorder in the labyrinth of the ear

n., jerk. Rhythmic n. *q.v.*

n., labyrinthine. N due to disease of the labyrinthine vestibular apparatus

n., lateral. Horizontal movement of eyes from side to side.

n., miner's. N occurring in those who work in comparative darkness for long periods of time

n., optokinetic. A rhythmic jerk nystagmus occurring when one is watching from a moving object

n., oscillating. N. in which irregular, oscillatory movements occur. Also called *pendular n.*

n. rhythmic. **SYN.** *jerk nystagmus*. N in which the eyes move slowly in one direction and then are jerked back.

n., rotatory. Rotation of the eyes about the visual axis

n., vertical. Up and down ocular movements

n., vestibular. That due to ear disturbances.

Nysten's law (nī'stēn). Rigor mortis begins with muscles of mastication and progresses down the body affecting legs and feet last. SEE *rigor mortis*.

nyxis (niks'is) [G. *nyxis*, a pricking]. Puncture or piercing. SYN: *paracentesis*.

O. Symb of oxygen and abbr. for various terms, as *oculus*, eye, *octavius*, pint.

o-. Abbr for *ortho-*, most commonly used in chemical terminology.

O₂. Symb for the two eyes.

O₃. Symb for ozone

oakum (ô'kûm) [A.S. *âcumba*, tow]. Loose fiber obtained by unravelling old hemp ropes, used occasionally as a surgical dressing

oarialgia (ô'âr-i-âl'ji-â) [G. *ôarion*, little egg, + *algos*, pain]. Ovarian pain. SYN: *ovaralgia*.

oalic (ô-a'rik) [G. *ôarion*, little egg]. Pert to an ovary SYN *ovarian*

oario-, **oari-** [G.] Prefix pert to the ovary.

oariopathy (ô'âr-i-op'âth-i) [G. *ôarion*, little egg, + *pathos*, disease]. Any disease of the ovary.

oariotomy (ô'âr-i-ot'ô-mî) ['' + *tomê*, incision] Incision into an ovary or surgical removal of a tumor or the ovary itself. SYN *ovariotomy*.

oaritis (ô-â-ri'tis) ['' + *-itis*, inflammation]. Inflamed condition of an ovary. SYN *ovaritis*.

ovarium (ô-â-ri-um) (pl *ovaria*) [L., from G *ôarion*, little egg] An ovary. SYN: *ovarium*.

oasis (ô-â'sis) (pl. *ôasêes*) [G *oasis*, a dry spot] Area of healthy tissue surrounded by a diseased portion

oat (ôt) [A.S. *dte*, oat] Grain or seed of a cereal grass used as an article of diet

oatmeal (ôt'mêl) ['' + *melu*, meal] Comp: Cellulose heavy. Rich in fats and lecithins.

AVERAGE SERVING 20 Gm. Pro. 3.2, Fat 1.4, Carbo 13.5

VITAMINS A - to +, B + +, E +
ASH CONST Ca 0.069, Mg 0.110, K 0.344, Na 0.062, P 0.392, Cl 0.069, S 0.202, Fe 0.0038

An acid forming food. Potential acidity, 12 cc per 100 Gm., or 3 cc. per 100 calories

ACTION Stimulating, laxative, fattening and nutritive

ob- [L.]. Combining form meaning *forwards, against, in the way of*.

O. B. Abbr for *obstetrics*.

obcordate (ôb-kor'dât) [L. *ob*, against, + *cor*, cord-, heart]. Inversely heart-shaped

obdormition (ôb-dor-mîsh'ûn) ['' + *dormire*, to sleep] Numbness followed by tingling in a limb produced by pressure of the nerve trunk supplying it.

Limb is commonly referred to as being asleep

obduction (ôb-duk'shûn) ['' + *ducere*, to lead] Scientific inspection of a dead body to learn pathological conditions and cause of death. SYN: *autopsy*, *necropsy*.

obellion (ô-bê'lli-ôn) [G *obelos*, split] A craniometric point on the sagittal suture bet. the 2 parietal foramina.

obese (ô-bês') [L. *obesus*, fat]. Extremely fat. SYN: *corpulent*.

obesity (ô-bê'si-ti) [L. *obesitas*, corpulence]. Abnormal amount of fat on the body. SYN: *adiposity*, *corpulence*, *poly-sarcia*.

Term usually not employed unless individual is from 20-30% over average weight for his age, sex and height. There are 2 general classifications, *exogenous*, that caused by excessive food intake, and *endogenous*, that caused by some abnormality within the body, endocrine, nervous, or due to faulty salt and water metabolism

ENDOCRINE CAUSES: (1) Hypothyroidism, producing a decreased metabolic rate and insufficient energy output to balance the caloric intake, not a very frequent cause, (2) adrenal hyperfunction, apparently causing exaggerated metabolism, (3) pituitary dysfunction, in which there is lack of regulation of fat metabolism, and (4) testicular and ovarian hypofunction, the most important of the endocrine factors causing obesity.

The second of the endogenous factors, nervous abnormality, has been determined by recent investigations which point to a central nervous lesion as being responsible for adiposity. The question of how it affects weight regulation is still problematical. The third endogenous cause is defective salt and water metabolism, which leads to retention of fluid in the tissues

ETIOLOG. Sex, obesity being more frequent in the female; race; climate; heredity, and occupation. Common in middle life

TREATMENT: (1) Prophylaxis, in children of families with a tendency to obesity, in the form of moderate dieting and exercise, (2) dieting, (3) organotherapy, consisting of the administration of thyroid, pituitary or ovarian extracts, (4) dinitrophenol, a very dangerous and toxic metabolic stimulant causing cataracts and in some cases death, and (5) benzedrine sulfate in combination with a relatively low calory diet. Benzedrine stimulates nervous energy, produces a sense of well being, and reduces the desire for food. When used in cases of obesity with hypertension, it has caused a lowering of the blood pressure

Diet should be below maintenance requirements so far as energy units are concerned and must be provided with all other essential nutrients. Maintenance requirements are based on what the average weight should be. 1000-1200 calories per day is a slow reduction regimen, 600-800 calories is more rapid, but examination should be made in the 600-800 calory diet for the presence of acetone, and all essential nutrients must be included. Acidosis may result, as body fat may overbalance necessary glucose for the oxidation of fat

DIET: The average basic diet is 1000 calories a day, consisting of 90 Gm. of carbohydrate, 75 Gm. of protein, and 38 Gm. of fat. Vegetables and fruits low in carbohydrates, skimmed milk, cottage cheese twice a week in place of meat, eggs, lean meat and vitamin concentrates, if extended for any length of time. Avoid concentrated carbohydrates, fats, whole grain cereals only sparingly.

RS: carbohydrate, emaciation, fat, height, protein, starch, sugar, vitamin, weight.

o., endogenous. O. caused by some abnormality within the body, endocrine, nervous, or due to faulty salt and water metabolism.

o., exogenous. O. due to excessive intake of food.

o., hypothalamic. O. resulting from dysfunction of hypothalamus, esp. the appetite-regulating center

obex (ô'béks) [L. a band]. A thin, crescent-shaped band of tissue covering the calamus scriptorius at the point of convergence of nervous tissue at the caudal end of 4th ventricle.

obfuscation (ôb-fús-ká'shún) [L. *obfuscare*, to darken]. 1. Clouding or dimming, as of the cornea. 2. Mental confusion.

object [L. *objectum*, a thing thrown before]. That which is visible or tangible to the senses.

o. blindness. Affection in which brain fails to recognize things seen correctly by eyes. **See.** *apraxia*.

o. choice. Selection of love object decided by a fixation developed in pregenital stage.

o. libido. Love or interest expressed external to oneself upon persons, objects, causes. **See.** *anacletic choice*.

o. symbolism. A concept formed, or an emotion incited by seeing an object, as in ideas like *heart of stone*, the brow of a hill, the *lap* or *bosom of nature*, etc

objective (ôb-jek'tiv) [L. *objectivus*, pert. to something thrown before]. 1. Perceptible to other persons, said of symptoms. 2. Directed toward external things. 3. The lens of a microscope which is closest to the object

o. symptoms. Those apparent to physical means of diagnosis

obligate (ôb'li-gât) [L. *obligare*, to bind to]. 1. To make necessary or to require. 2. Compulsory, bound

o., aerobic. A microbe that must have oxygen in order to live.

o., anaerobic. A microorganism that lives only without oxygen.

o. parasite. One that can exist only at the expense of another plant or organism

oblique (ôb-lêk') [L. *obliquus*, slanting]. Slanting; diagonal.

o. muscles. Two muscles of the eye; also 2 in the abdomen and 2 muscles of the atlas.

obliquimeter (ôb-lik-wim'ët-ër) [° + G. *metron*, measure] Apparatus for indicating the angle of the pelvic brim with the upright body.

obliquity (ôb-lik-wi-ti) [L. *obliquus*, slanting] The state of being oblique

o., Litzmann's. Inclining of the fetal head until the post. parietal bone presents to the uterine canal.

o., Nägele's. Presentation of the fetal head with ant. parietal bone toward the uterine canal with oblique biparietal diameter in relation to the pelvic brim.

o., Roederer's. Presentation of fetal head with occiput at pelvic brim.

obliquus (ôb-lik'wûs) [L. *slanting*]. A name applied to several muscles. **See:** *Table of Muscles in Appendix*.

o. reflex. Contraction of ext. obliquus muscle in toto on application of stimulus to skin of thigh below Poupert's ligament.

obliteration (ôb-lit'ër-â'shûn) [L. *oblitterare*, to deface]. Extinction or complete

occlusion of a part by means of surgery, degeneration or disease.

oblongata (ôb'lon-ga'tâ) [L. *ob*, before, + *longus*, long]. The medulla oblongata: the cylindrical extension of the spinal cord as it enters the brain, about an inch long, reaching to the pons, and forming part of base of 4th ventricle.

obmutescence (ôb-mû-tes'êns) [L. *obmutescere*, to become dumb]. Loss of vocal power. **Syn** *aphonia*.

obnubilation (ôb-nû-bil-â'shûn) [L. *obnubilare*, to befog or darken]. An impaired or confused state of mind

obscure (ôb-skur') [L. *obscurus*, dark]. Hidden, indistinct, as the cause of a condition

observerscope (ob-ser'ver-skôp). Type of endoscope having 2 branches, so that 2 persons can inspect the same place simultaneously.

obsession. An uncontrollable desire to dwell on an idea or an emotion, or to perform a specific act.

It is not uncommon among normal persons, but if not banished may become all compelling and developing into a "compulsion neurosis." A dominating condition in certain psychoses

o's., impulsive. Those accompanied by action. They sometimes become manias.

o's., inhibitory. O's accompanied by impediments to action. They represent the phobias, *q v*.

obsessional neuro'sis. A psychoneurosis marked by obsessions controlling the behavior of the individual. **Syn** *compulsion neurosis*.

obstetric, obstetrical (ôb-stet'rik, -ri-kâl) [L. *obstetrix*, a midwife, from *obstare*, to stand before]. Pert to obstetrics or midwifery.

o. forceps. Instrument used to facilitate delivery of the fetus

obstetrician (ôb-stet'rik-sh'ân) [L. *obstetrix*, -trix, a midwife]. A physician or one who treats women during pregnancy and parturition

obstetrics (ôb-stet'riks) [L. *obstetrix*, a midwife] Scientific management of women during pregnancy, childbirth and the puerperium.

RS childbirth, labor, maenautics, maneuver, midwife, parturition, pregnancy.

obstipation (ôb-stîp-â'shûn) [L. *obstipare*, to stop up]. 1. The act or condition of obstructing. 2. Obstinate or extreme constipation due to an obstruction.

obstruction (ôb-struk'shûn) [L. *obstructus*, built up before]. 1. Blocking of a structure that prevents it from functioning normally. 2. A thing that impedes; an obstacle.

o., intestinal. Blockage of the lumen of the intestine **See** *intestinal o.*

obstruent (ôb-strû-ênt) [L. *obstruens*, blocking]. 1. Blocking up. 2. That

After Sears.

DIAGRAM ILLUSTRATING TYPES OF OBSTRUCTION.

1. Foreign body in the lumen.
2. Disease of the duct wall.
3. Pressure from outside.

which closes a normal passage in the body, an astringent.

obtund (ób-túnd') [L. *obtundere*, to beat against] To dull or blunt, as sensitivity or pain.

obtundent (ób-tún'dént) [L. *obtundere*, to beat against]. 1. Deadening sensibility of a part, or reducing irritability, soothing. 2. A soothing remedy.

obturation (ób-tú-rá'shun) [L. *obturare*, to stop up]. Closure of a passage or opening.

obturator (ób-tú-rá'tor) [L. *obturare*, to stop up]. 1. Anything that obstructs or closes a cavity or opening. 2. Rel. to the o membrane. 3. Bridge for spanning the gap in the cleft palate.

o. **foramen**. The one in the anterior part of the os innominatum bet. pubis and ischium.

o. **membrane**. The sturdy one occluding the o. foramen.

o. **muscles**. Two muscles on each side in the pelvic region which rotate the thighs outward. See *Table of Muscles in Appendix, posas for illustration*.

obtus (ób-tus') [L. *obtus* blunted]. 1. Not pointed or acute, dull or blunt. 2. Stupid, dull mentally.

obtusio (ób-tú'zhun) [L. *obtusio*, from *obtundere*, to beat against]. Blunting or weakening of normal sensation, as in certain diseases.

occipital (ók-síp'i-tál) [L. *occiput*, back of head]. Concerning the back part of the head.

o. **bone**. Bone in lower back part of skull bet. the parietal and temporal bones.

o. **lobe**. Post lobe of the cerebral hemisphere which is shaped like a 3-sided pyramid.

occipitalis (ók-síp'i-tá'lis) [L. *pert.* to back of head]. The posterior portion of the occipitofrontalis muscle at back of the head.

occipito- [L.]. Combining form showing relationship bet. the occiput and another part.

occiput (ók'si-pút) [L.]. The back part of the skull.

occlude (ók-klúd') [L. *occludere*, to shut up]. To close up, obstruct or join together, as the masticatory surfaces of the teeth.

occlus'al. Pertaining to the closure of an opening.

o. **surface**. The masticating surface of a tooth.

occlusion (ók-klú'zhun) [L. *occlusio*, a closing up]. 1. The closure, or state of being closed, of a passage. *SYN imperforation*. May be acquired or congenital.

2. Adsorption of gas by a substance which doesn't thereby lose its characteristic property.

3. Relation of the teeth when the jaws are closed.

oc'cult [L. *occultus*, hidden]. Obscure; hidden, as a hemorrhage.

o. **blood**. Blood in such minute quantity that it can only be recognized by microscope or chemical means.

occupation neuro'sis. A functional disorder of a part, caused by certain occupations, as writer's cramp.

occupational therapy. Treatment based on utilization of activities calculated to encourage the physically or mentally disabled patient to contribute to his own recovery. On the request of the patient's physician a registered occupational therapist selects and directs the patient's activities.

ochlesis (ók-lé'sis) [G. *ochlêsis*, a crowding] Any disease caused by conditions of overcrowding.

ochlophobia (ók-lo-fó'b'i-á) [G. *ochlos*, crowd, + *phobos*, fear]. Abnormal dread of crowds or populated places.

ochrodemia (ók-kío-der'mi-á) [G. *ochros*, pale yellow, + *derma*, skin]. A yellow state of the skin.

ochrometer (ók-krom'é-tér) [G. *ochros*, palor, + *metron*, measure]. Device for estimating the capillary blood pressure by compression of a finger until its skin becomes blanched.

ochronosis, ochronosus (ók-kío-nó'sis, -sús) [G. *ochros*, yellow, + *nosos*, disease]. A rare condition marked by dark pigmentation of the ligaments, cartilage, fibrous tissues, skin and urine.

octa-, octo- [G.]. Combining forms meaning eight.

octan (ók'tán) [G. *októ*, eight]. Reappearing on every 8th day, as a fever.

octane (ók'tán) [G. *októ*, eight]. A hydrocarbon of the paraffin series $CH_4 - (CH_2)_8 - CH_3$.

octarius (ók-ta'ri-ús) [L.]. Pint.

octavalent (ók'tá-vá'lént) [G. *októ*, eight, + L. *valere*, to have power]. Having a valence of 8.

octipara (ók-típ'á-rá) ['' + L. *parêre*, to bear]. A woman who has given birth to 8 children.

octaroon (ók-tó-roon') [G. *októ*, eight]. One who has one-eighth negro blood and seven-eighths white blood, progeny of a white person and a quadroon.

ocular (ók'ú-lár) [L. *oculus*, eye]. 1. Concerning the eye or vision. 2. Eyepiece of a microscope.

oculist (ók'ú-list) [L. *oculus*, eye]. A specialist in diseases of the eye.

oculocephalogyric reflex (ók'ú-ló-séf'-á-lo-gi'rik) Associated movements of eye, head and body in focalizing vision upon an object.

oculogyration (ók'ú-ló-jí-rá'shun) [L. *oculus*, eye, + G. *gyros*, circle]. Motions of the eyeball.

oculogyric (ók'ú-ló-jí-rik) ['' + G. *gyros*, circle]. Producing or concerning movements of the eye.

oculomotor (ók'ú-ló-mó'tor) ['' + *motor*, mover]. Rel. to eye movements. *SYN: oculogyric*.

o. **nerve**. The 3rd cranial nerve. *FUNCT*: Primarily motor but contains proprioceptive fibers. *ORIGIN*: Medial surface of cerebral peduncle of mid-brain. *COMPONENTS*: General somatic efferent, general visceral efferent, and general somatic afferent fibers. *DISTR*: All extrinsic muscles of eye except ext. rectus and sup oblique; levator palpebrae superioris of eyelid; ciliary muscle, sphincter muscle of iris.

SEE: cranial nerves Table of Cranial Nerves, Appendix

oculomotorius (ók'ú-ló-mó-tor'i-ús) [L.]. The oculomotor or 3rd cranial nerve.

The *motor oculi* of the eye.

FUNCT: Motor. Supplies 5 of the 7 eye muscles.

ORIGIN: Floor, aqueductus cerebri.

DISTR: All eye muscles except ext. rectus and sup oblique. *SEE: cranial nerves*.

oculomycosis (ók'ú-ló-mí-kó'sis) [L. *oculus*, eye, + G. *mykê*, fungus, + *osis*]. Any disease of the eye or its parts caused by a fungus.

oculonasal (ók'ú-ló-ná'sal) ['' + *nasus*, nose]. Concerning both eye and nose.

oculoreaction (ók'ú-ló-ré-ak'shun) ['' + *rê*, back, + *actus*, acting]. A reaction

in the eye, upon the instillation of toxins of tuberculosis and typhoid.

More severe in persons suffering from the disease

oculogyomatic (ok'û-lô-zî-gô-mat'k) ["" + *G. zygon*, yoke]. Pert. to the eye and zygoma

o. line. Line bet. inner canthus of eye and cheek supposedly indicating neural disorders

oculus (ok'û-lûs) [L | Eye

o. caesius. Glaucoma

o. dexter. The right eye. Abbr. O.D.

o. lacrimans. Epiphora. *q. v.*

o. sinister. The left eye. Abbr. O.S.

o. uterque. Each eye. Abbr. O.U.

O. D. Abbr. for *oculus dexter*, right eye.

odaxismus (o-daks-ez'mûs) [G. *odaxêsmos*, a biting]. The biting of the tongue, lip or cheek during an epileptic attack

odaxetic (o-dâks-ët'k) [G. *odaxêsmos*, a biting]. Producing a stinging or itching sensation.

Oddi's sphincter (ôd'dî). A contraction at the opening of the common bile duct at the ampulla of Vater.

odogenesis (ô-dô-jên'é-sis) [G. *odos*, path, + *genesis*, formation]. The re-establishment of connections bet. the divided ends of a nerve by nerve process attraction. SYN *neurocladism*.

odontagra (ô-dôn-tâg'râ) [G. *odous*, *odont-*, tooth, + *agra*, seizure]. Toothache, esp. when originating from gout.

odontalgia (ô-dôn-tâl'jî-â) ["" + *algos*, pain]. Toothache. SYN *odontodynia*.

o. phantom. Pain felt in the area from which a tooth has been pulled

odontatroph (ô-dôn-tât'rô-fî) ["" + *atrophia*, atrophy]. Imperfect development of the tooth.

odontectomy (ô-dôn-tek'tô-mî) ["" + *ektomê*, excision]. Surgical removal of a tooth

odonterism (ô-dôn'têr-lzm) ["" + *erismos*, quarrel]. Chattering of the teeth

odontia (ô-dôn'shî-â) [G. *odous*, *odont-*, tooth]. 1. Pain in a tooth. SYN *odontalgia*. 2. Condition or abnormality of the teeth.

o. deformis. Deformed condition of the teeth

o. Incrustans. Accumulation of tartar on the teeth

odontiasis (ô-dôn-tî'âs-ls) ["" + *iasis*, disease]. 1. Cutting of the teeth. SYN *dentition*, *teething*. 2. Disease caused by teething

odontitis (ô-dôn-tî'tîs) ["" + *-itis*, inflammation]. Inflammation of a tooth

odonto-, odont- [G.]. Combining form meaning tooth.

odontoblast (ô-dôn'tô-blâst) [G. *odous*, *odont-*, tooth, + *blastos*, germ]. One of the cells forming the surface layer of the dental papilla which is responsible for the formation of the dentine of a tooth. After a tooth is formed, the odontoblasts line the pulp cavity and continue to produce dentine for years after the tooth has erupted. From their distal ends Tomes' fibers extend to the periphery of the dentine

odontoblastoma. A blastoma composed principally of odontoblasts.

odontobothrion (ô-dôn'tô-bôth'ri-ôn) ["" + *bothrion*, pit]. Socket of a tooth.

odon'tobôthri'tis. Inflammation of the socket of a tooth

odontocela. An alveolodental cyst.

odontochirurgical (ô-dôn'tô-kî-rur'jî-kâl). Pert. to dental surgery

odontoclasia (ô-dôn-tôk'âs-ls). 1. The breaking or fracture of a tooth 2. Resorption of a tooth or a portion of it.

odon'to-clast. A cell which brings about

the absorption of the roots of deciduous teeth

odontodynia (ô-dôn'tô-dîn'tî-â) ["" + *odynê*, pain]. Toothache. SYN *odontalgia*.

odontogenesis, odontogeny (ô-dôn'tô-jên'é-sis, -tôj'ên-l) ["" + *genesis*, production]. The origin and formation of the teeth.

odontoid (ô-dôn'tôyd) ["" + *eidos*, resemblance]. Toothlike.

o. process. The toothlike projection from upper surface of the body of the 2nd cervical vertebrae

odon'tolth. The accretion of a calcareous substance on the teeth, tartar

odontologist. A dentist or dental surgeon

odontology (ô-dôn-tôl'ô-jî) ["" + *logos*, study]. The science of dealing with the teeth and their care. SYN *dentistry*.

odontoma (ô-dôn-tô'mâ) [G. *odous*, *odont-*, tooth, + *-oma*, tumor]. Tumor of a tooth or of the dental tissue

o. coronary. Bony tumor at crown of a tooth

o. follicular. Bony shell in gums below tooth margin, usually after 2nd dentition.

Eniol. Excessive number of dental follicles

SYN Crepitating to pressure. They often contain 1 or more teeth. SYN: *cyst*, *dentigerous*.

o. radicular. Bony tumor at root of a tooth.

odontonecrosis (ô-dôn'tô-nêkrô'sis) ["" + *nekros*, dead, + *-osis*, intensive]. Decay or gangrene of a tooth

odontopathy (ô-dôn-top'âth-l) ["" + *patos*, disease]. Any disease of the teeth.

odontophobia (ô-dôn'tô-fôbî-â) ["" + *phobos*, fear]. 1. Abnormal aversion to the sight of teeth. 2. Abnormal fear of dental surgery

odontopierosis (ô-dôn'tô-plê-rô'sis) [G. *odous*, *odont-*, tooth, + *pleiosis*, filling]. The filling of a dental cavity

odontoprisia (ô-dôn'tô-prî'sis) ["" + *prisis*, sawing]. Grinding of the teeth

odontorrhagia (ô-dôn'tô-râ'jî-â) ["" + *regnuna*, to burst forth]. Hemorrhage from a tooth socket following extraction.

odontorthosis (ô-dôn'tôr-thô'sis) ["" + *orthos*, straight]. Operation of straightening irregular teeth

odontosis (ô-dôn-tô'sis) ["" + *-osis*, intensive]. 1. Development of teeth. 2. Eruption of teeth.

odontotherapy (ô-dôn'tô-ther'â-pî) ["" + *therapeia*, treatment]. Care of diseased teeth

odontotripsis (ô-dôn'tô-trîp'sis) ["" + *tripsis*, a rubbing]. Natural abrasion of the teeth

odontotripsy (ô-dôn-tô-trî-plî) ["" + *trypan*, to bore]. Drilling of a tooth

odor (ô'der) [L. smell]. 1. That quality of a substance which renders it perceptible to sense of smell. 2. Any smell, esp. a sweet scent. 3. Any sensation of sense of smell.

Each odoriferous substance causes its own sensation. Odors have been classed as (a) pure odors, (b) those mixed with sensations from the mucous membrane, (c) those mixed with the sensation of taste.

PURE ODORS These are aromatic, burning, fragrant, fetid, or nauseating, and repulsive odors.

Another classification is *spicy*, *flowery*, *fruity*, *resinous*, *foul*, *scorched*.

RS: *antibromic*, "*brom-*" words, *capric*, *deodorant*, *effluvium* *osmolagnia*, *osphresiolagnia*, *pungent*, *smell*.

odoriferous (ô'der-îf'ê-rûs) [¹ + *ferre*, to bear]. Bearing scent, having an odor; fragrant, perfumed.

odorimetry. The measurement of the ability of a substance to induce olfactory sensations.

odorous (ô'dor-us) [L. *odor*, smell]. Having an odor, scent or fragrance.

odynacusis (ô-din-â-kû'sis) [G. *odynê*, pain, + *akusis*, hearing]. A condition in which noises cause pain in the ear.

odynometer (ô-din-om'êt-êr) [¹ + *metron*, measure]. Device for measuring pain.

odynophagia (ô-din-ô-fâ'ji-â) [¹ + *phagein*, to eat]. Pain upon swallowing.

odynophobia (ô'din-ô-fô'bi-â) [¹ + *phobos*, fear]. Abnormal dread of pain.

odynopoeia (ô'din-ô-pê-â) [¹ + *poiein*, to make]. Induction of labor pains.

Oedipus complex (ê'dî-pûs) Abnormally intense love of the child for parent of the opposite sex retained in adulthood.

Usually involves jealous dislike of the other parent. Most commonly love of a boy for his mother. *See* **complex**.

Oertel's terrain cure (er'tel). Graduated exercise, mountain climbing, diet, and reduction of fluids for heart cases, obesity, circulatory diseases, etc.

Oesophagostomum. A genus of nematodes belonging to the suborder Strongylata.

O. aplostomum. The nodular worm of monkeys. Occasionally infests man.

official. Said of medicines authorized as standard in the U. S. Pharmacopeia, and in the National Formulary.

official (ôf'îs'in-âl) [L. *officina*, shop]. Regularly kept in a druggist's stock. *See* **magistral**.

-OH. Hydroxyl group.

ohm (ôm) Practical unit of resistance, the resistance through which a difference of potential of 1 volt will produce a current of 1 ampere.

The international or legal ohm is the resistance offered by a column of mercury 106.3 cm. long, 14.45 Gm. in mass, and of constant cross section at 0° C.

-oid [G.] Suffix meaning *having the form of*, or *likeness of*, as **ovoid**.

oidiomycetes (ô-id'î-ô-mî-sê'tês) [*Oidium* + G. *mykês*, fungus]. A group of fungi including the *Oidium*.

oidiomycosis (ô-id'î-ô-mî-kô'sis) [*Oidium* + G. *mykês*, fungus, + *-ôsis*]. Disease due to infection by an *Oidium*.

Oidium (ô-id'î-ûm) [G. *ôion*, egg]. A genus of fungi, now called *Candida*, *q. v.*

O. albicans. A microscopic fungus that causes thrush.

olkomania (oy-kô-mâ'ni-â) [G. *oikos*, house + *mania*, madness]. Nervous disorder induced by unhappy home surroundings.

olikephobia (oy'kô-fô'bi-â). Morbid dislike of the home. *SYN*: **ecomania**.

oil (oyl) [L. *oleum*]. A greasy liquid not miscible with water, usually obtained from a mineral, vegetable or animal source.

According to character, oils are subdivided principally as *fixed* or *fatty*, and *volatile* or *essential*.

Ex: Fixed—Castor oil, olive oil, cod-liver oil. Volatile—Oils of mustard, peppermint, rose.

RB: **oleaginous**, **oleate**, **oleic**, **olein**, **oleum**, **unctuous**.

ointment (oynt'ment) [Fr. *oignement*]. A fatty, soft substance having antiseptic or healing properties.

Its base is usually vaseline, lard or lanolin to which the medicament is added. Applied on linen. It should be spread from the center outwards, so

that edges are completely covered. *SYN*: *salve*, *unguent*.

okra (ô'kra). **AVERAGE SERVING**: 50 Gm. **Pro**. 0.8, **Fat** 0.1, **Carbo** 2.00. **VITAMINS**: A++, B++, C+. **ASH CONST**: Ca 0.071, Mg 0.010, K 0.035, Na 0.043, P 0.019, Fe 0.006. **No calcium or sulfur**.

ol. Abbr. for **oleum**, oil.

O. L. A. Abbr. for *L. occipito laevo anterior*, fetal presentation with the occiput toward the maternal left acetabulum.

old age. Human life after 70 years.

DISEASES COMMON TO Aortic, **apoplexy**, **bronchopneumonia**, **chronic bronchitis**, **cancer**, **cerebral disorders**, **emphysema**, **myocarditis**, **prostatic**, **senile dementia**.

olea (ô'le-â) [L. oils, olive]. 1. L. for olive. 2. Pl. of **oleum**, oils.

oleaginous (ô-lê-â'jî-nûs) [L. *oleaginus*, oily]. Greasy, oily, unctuous.

oleate (ô'lê-ât) [L. *oleatum*]. 1. Any salt of oleic acid. 2. Salt of oleic acid dissolved in an excess of the acid.

oleatum (ô-lê-at'ûm) [L.] Preparation made by dissolving metallic salts or alkaloids in oleic acid. *SYN* **oleate**, 2.

olecranal (ô-lêk'rân-âl) [G. *olekranon*, elbow]. Concerning the olecranon.

olecranoarthritis (ô-lêk'rân-ar-thrî'tis) [G. *olekranon*, elbow, + *arthron*, joint, + *-itis*, inflammation]. Inflamed condition of the elbow joint.

olecranoarthrocace (ô-lêk'rân-ar-throk'â-sê) [¹ + *kakê*, badness]. Tuberculous ulceration of the elbow joint.

olecranoarthropathy (ô-lêk'rân-ar-throp'âth-i) [¹ + *pathos*, disease]. Any disease of the elbow joint.

olecranoid (ô-lêk'rân-oyd) [¹ + *eidos*, resemblance]. Similar to the olecranon.

olecranon (ô-lêk'rân-ôn, ô'lê-krân'ôn) [G. *elbow*]. BNA. A large process of the ulna projecting behind the elbow joint of glyceryl found in nearly all fixed oils and forming the bony prominence of the elbow.

OLECRANON.

1. Radius. 2. Humerus. 3. Olecranon.
4. Ulna.

FRACTURE OF: Prevent spasm of triceps muscle to avoid separation of fragments. Latter may have to be wired.

TREATMENT: Similar to that for fracture of patella, *q. v.* *See*: **skeleton**.

oleic (ô-lê'îk) [L. *oleum*, oil]. Derived from or pert. to oil.

o. acid. A colorless, oily liquid prepared from fats, the salts of which are **oleates**. Formula $C_{18}H_{34}O_2$.

olein (ô'le-în) [L. *oleum*, oil]. An oleate and fats, an important part of oils. SYN: *triolin*.

oleo- [L.]. Combining form meaning oil.
oleoarthrosis (ô'le-ô-ar-thrô'sis) [L. *oleum*, oil, + G. *arthron*, joint, + -ôsis]. Therapeutic introduction of oil into a joint.

oleoinfusion (ô'le-ô-în-fû'zhûn) [' + *in*, into, + *fusus*, poured]. Combination of a drug and oil.

oleomargarine (ô'le-ô-mar'jâ-rên) [' + *margarine*]. Artificial butter from fats of beef, soy bean, cottonseed, etc.

oleoresin (ô'le-o-rez'in) [' + *resina*, resin]. Extract of plant containing resinous substance and oil, prepared by dissolving the crude drug in ether, acetone or alcohol.

oleosaccharum (ô-lê-ô-sak'âr-ûm) [' + G. *sakcharon*, sugar]. A substance compounded of sugar and volatile oil.

oleotherapy (ô'le-ô-ther'â-pl) [' + G. *therapcia*, treatment]. Therapeutic injection of oil. SYN: *eleotherapy*.

oleothorax (ô-lê-ô-thô'râks) [' + G. *thorax*, chest]. Therapeutic injection of oil into the pleural cavity.

oleum (ô'lê-ûm) [L.] Oil.

o. morrhuae. Cod-liver oil.

o. percomorphum. Mixture of oils from livers of various members of order Percomorphi. More potent than cod-liver oil in Vitamins A and D.

o. ricini. Castor oil.

olfactie (ôl-fâk'ti) [L. *olfacere*, to smell]. Unit of smell, the threshold of stimulation for an odor.

olfaction (ôl-fâk'shûn) [L. *olfacere*, to smell]. The sense of smell. Smelling.

olfactive (ôl-fâk'tiv) [L. *olfacere*, to smell]. Pert. to the sense of smell. SYN: *olfactory*.

olfactology (ôl-fâk-tôl'ô-lj) [' + G. *logos*, study]. Scientific investigation of sense of smell.

olfactometer (ôl-fâk-tom'et-ër) [' + G. *metron*, measure]. Apparatus for testing the power of the sense of smell.

olfactory (ôl-fâk'tô-ri) [L. *olfacere*, to smell]. Pert. to smell.

o. area. A in the hippocampal convolution. Ant. portion of the callosal gyrus and the uncus. Also called *anterior perforated substance*.

o. bulb. Enlarged ant. extremity of the o. tract.

o. cortex. SYN: *archicortex* (*allocortex*). Portion of the cerebral cortex concerned with the olfactory sense. Includes the pyriform lobe and the hippocampal formation.

o. lobe. A cranial lobe projecting from ant. lower part of each cerebral hemisphere.

o. membrane. M in upper part of nasal cavity which contains olfactory receptors.

o. nerves. The first pair of cranial nerves supplying the nasal olfactory mucosa. Consist of delicate bundles of unmyelinated fibers, the *fila olfactoria*, which pass through cribriform plate and terminate in olfactory glomeruli of olfactory bulb. The fila are central processes of bipolar receptor neurons of olfactory mucous membrane.

o. organ. The nose.

o. striae. Three bands of fibers, lateral, intermediate and medial which form the roots of the olfactory tract.

o. tract. Band of fibers extending posteriorly from o. bulb to ant. perforated substance. Here it enlarges and divides into the olfactory striae.

o. trigone. Small triangular area between lateral and medial olfactory striae.

o. tubercle. An elevation at rostral end of ant. perforated substance. Well developed in lower mammals, rudimentary in man.

oligemia (ol-ig-e'mi-â) [G. *oligos*, little, + *aima*, blood]. Deficient amount of blood in the body. SYN: *oligoemia*.

oligergasia (ol-l-gêr-gâ'si-â) [' + *ergasia*, work]. Psychic disorder from deficiency due to imperfect development.

olighidria (ôl-l-gid'ri-â). Deficient perspiration.

olighydria (ôl-l-gid'ri-â) [G. *oligos*, little, + *ydor*, water]. Deficiency of body fluids.

oligo- [G.]. Combining form meaning small or, in the plural sense, few.

oligochoilia (ol-ig-ô-kô'lli-â) [G. *oligos*, little, + *cholê*, bile]. Lack of bile.

oligochromemia (ol'ig-ô-krô-mê'mi-â) [' + *chroma*, color, + *aima*, blood]. Lack of sufficient hemoglobin in the blood.

oligochylia (ol-l-gô-ki'lli-â) [' + *chylus*, juice]. Deficiency of chyle.

oligochymia (ol-ig-ô-ki'mi-â) [' + *chymos*, juice]. Deficiency of chyme.

oligocystic (ol-l-gô-sist'ik) [' + *kystis*, a bladder]. Having just a few cysts, as a tumor.

oligocythemia (ol'l-gô-si-thê'mi-â) [' + *kytos*, cell, + *aima*, blood]. Deficiency in number of red blood corpuscles.

oligocytosis (ol'l-gô-si-tô'sis) [' + -ôsis, intensive]. Deficiency of red blood corpuscles. SYN: *oligocythemia*.

oligodactylia (ol-l-gô-dâk-til'i-â) [' + *daktylos*, digit]. Subnormal number of fingers or toes.

oligodendrocyte. Neuroglial cells having few and delicate processes.

oligodendroglia (ol'l-gô-den-drog'lli-â) [' + *dendron*, a tree, + *glia*, glue]. Adventitial cells found in central nervous system, with characteristic vinelike processes. SYN: *mesoglia*.

oligodendrogloma (ol'l-gô-dên-drô-gli-ô-mâ) A malignant tumor occurring principally in the cerebrum, consisting mostly of oligodendrocytes. Calcification frequently occurs.

oligodipsia (ol-l-gô-dip'si-â) [G. *oligos*, few, + *dipsa*, thirst]. Abnormal lack of desire for fluids.

oligodynamic (ôl'l-gô-di-nâm'ik) [' + *dynamis*, power]. Effective in a small quantity.

oligoerythrocythemia (ol'l-gô-er'ith-rô-si-thê'mi-â) [' + *erythros*, red, + *kytos*, cell, + *aima*, blood]. Deficiency of hemoglobin or red blood corpuscles.

oligogalactia (ol'l-gô-gâ-lâk'ti-â) [' + *gala*, *galakt-*, milk]. Deficient milk secretion.

oligogenics (ol-l-gô-jên'iks) [' + *gennan*, to produce]. Limitation of the number of offspring by artificial mediums such as contraceptives. SYN: *birth control*.

oligoheemia (ol'l-gô-hê'mi-â) [' + *aima*, blood]. Insufficiency of blood in the body. SYN: *oligemia*.

oligohydramnios (ol'ig-ô-hi-dram'ni-ôs) [' + *ydor*, water, + *amnion*, amnion]. Abnormally small amount of amniotic fluid.

oligohydrruria (ol'l-gô-hi-drû'ri-â) [G. *oligos*, few, + *ydor*, water, + *ouron*, urine]. Highly concentrated urine.

oligoleukocythemia (ol'l-gô-lû-kô-si-thê'mi-â) [' + *leukos*, white, + *kytos*, cell, + *aima*, blood]. Reduction in leukocytic content of blood. SYN: *leukopenia*.

oligomania (ol-l-gô-mâ'ni-â) [' + *mania*,

madness]. Insanity involving only a few mental faculties.

oligomastigatē (ol-i-gō-mas'tī-gāt) [' + mastix, mastig-, whip]. Characterized by 2 flagella

oligomenorrhea (ol'ig-ō-mēn-ō-rē-ā) [' + mēn, month, + roia, flow]. Scanty or infrequent menstrual flow.

oligopepsia (ol-i-gō-pēp'sī-ā) [' + pēpsis, digestion]. Insufficient digestive tone.

oligophosphaturia (ol'i-gō-fōs-fāt-ū-rī-ā) [' + phosphas, phosphate, + ouron, urine]. Scanty amount of phosphates in the urine

oligophrenia (ol'ig-ō-frē-nī-ā) [G *oligos*, few, + phrēn, mind]. Mental deficiency due to faulty development. SYN. *imbecility*.

oligoplasma (ol'ig-ō-plāz-mī-ā) [' + plasmos, a thing formed]. Insufficient amt of blood plasma

oligopnea (ol-i-gō-pnē-ā) [' + pnoia, breath]. Infrequent respiration. SYN: *hypopnea*.

Respiration shallow or abnormally deep, rate as slow as 6-10 per minute. Usually accompanied by slow pulse, although high in some conditions

Etiol. Cerebral compression, meningeal or pontine hemorrhage, cerebral or cerebellar tumors, abscess, gumma of meninges, osteoma of cranium, some forms of meningitis, trauma of brain, drug poisoning, shock, constitutional diseases, etc

oligoposy (ol-i-gōp'ō-sī) [' + posis, drink]. Insufficient use of liquids in the diet SYN *oligoposia*.

oligoptyalism (ol-i-gō-ptī-ā-īlzm) [' + pty- alion, saliva]. Insufficient secretion of saliva. SYN *oligosialia*.

oliguria (ol-i-gō-rī-ā) [G *oliguria*, apathy]. A form of melancholia in which there is apathy toward things and people.

oligosialia (ol'i-gō-sī-ā-lī-ā) [G. *oligos*, few, + sialon, saliva]. Scanty salivary secretion SYN *oligoptyalism*.

oligospermia (ōl'i-gō-spēr'mī-ā) [' + sperma, seed]. Paucity of spermatozoa in seminal fluid.

It may be temporary or permanent. SEE *aspermatism*.

oligotrichia (ol-i-gō-trīk'ī-ā). Scantiness of hair

oligotrophy (ol-i-gō-trō-fī) [' + trophē, nourishment]. Inadequate nutrition.

oliguresis (ol-i-g-ū-rē'sis) [' + ourēsis, urination]. Scantiness of urine; infrequent urination

oliguria (ol-i-g-ū-rī-ā) [' + ouron, urine]. Diminished amt and frequency of urination.

Etiol. Seen after profuse perspiration, bleeding, and diarrhea. Also in retention of urine due to brain disease, drug poisoning, deep coma

oliva (ō-lī-vā) [L. *olive*]. BNA. An olive-shaped gray body behind the ant. pyramid of the medulla oblongata. SEE *olivary body*.

olivary [L. *oliva*, olive]. Shaped like an olive; oval.

o. body. SYN: *oliva*, *inf. olivary nucleus*, *inf. olive*. A rounded mass located in anterolateral portion of the medulla oblongata. Consists of a convoluted sheet of gray matter enclosing white matter

olive. AVERAGE SERVING (green) · 25 Gm. PRO. 0.3, Fat 6.9, Carbo. 2.9. AVERAGE SERVING (ripe) · 20 Gm. PRO. 0.3, Fat 5.0, Carbo. 0.8. ASH (green): Ca 0.122, Mg 0.002, K 1.526, Na 0.128, P 0.014, Cl 0.004, S 0.027, Fe 0.0029. VITAMINS

(green): A++· A base-forming food. Alkalinity, 45 cc. per 100 Gm

olive (ōl'iv) [L. *oliva*, olive]. *Oliva*, BNA.

o., accessory. SYN: *accessory olivary nucleus, dorsal and medial* Two masses of gray matter lying adjacent to the inferior olive.

o., inferior. Olivary body

o., superior. The superior olivary nucleus, *q v*

-ology [G.] Suffix meaning science of, knowledge, study of.

olophonia (ol-ō-fōn'ī-ā) [G. *oloos*, destroyed, + *phōnē*, voice]. Malformation of vocal organs with resulting unnatural speech.

Olshausen's sign (ōls'hōw-zēn). If a tumor ant. to uterus is found in an unmarried woman it will probably be a dermoid* cyst.

-oma [G.]. Suffix denoting a tumor.

omagra (ō-mag'rā) [G. *ōmos*, shoulder, + *agra*, seizure]. Attack of gout in the shoulder.

omalgia (ō-mal'jī-ā) [' + *algos*, pain]. Neuralgia of shoulder

omarthrits (ō-mar-thrīt'is) [' + *arthron*, joint, + *-itis*, inflammation]. Inflamed condition of the shoulder joint.

Ombredanne's mask (ōm-brā-dāhn'). Mask for ether administration in exact dosage

ombrophobia (ōm-brō-fō'bī-ā) [G. *ombros*, rain, + *phobos*, fear]. Fear and anxiety induced by storms, threatening clouds, or rain.

ombrophore (ōm'brō-fōr) [' + *phoros*, a carrier]. Portable apparatus for administering shower baths

omental (ō-mēn'tāl) [L. *omentum*, covering]. Pert to the omentum, the peritoneal fold supporting the viscera

o. bursa. SYN: *lesser peritoneal sac*. A cavity within the layers of peritoneum forming the great omentum. Its opening into the main peritoneal cavity is the *epiploic foramen* (*foramen of Winslow*)

omentectomy (ō-mēn-tēk'tō-mī) [' + G *ektomē*, excision]. Surgical removal of a portion of the omentum

omentitis (ō-mēn-tī'tis) [' + G *-itis*, inflammation]. Inflamed condition of omentum.

omentopexy (ō-mēn'tō-pēks'ī) [' + *pēxis*, fixation]. Fixation of the omentum to the abdominal wall.

omentorrhaphy (ō-mēn-tor'rā-fī) [' + G. *raphē*, a sewing]. Suture of the omentum.

omentosplenopexy (ō-mēn'tō-splē'no-pēks'ī) [' + G *splēn*, spleen, + *pēxis*, fixation]. Fixation of the spleen and omentum. Omentopexy and splenopexy

omentotomy (ō-mēn-tof'ō-mī) [' + G. *tomē*, incision]. Surgery of the omentum.

omentum (ō-mēn'tum) (pl *omenta*) [L. a covering]. A double fold of peritoneum attached to the stomach and connecting it with certain of the abdominal viscera. It contains a cavity, the *omental bursa* (lesser peritoneal cavity).

The omenta are the *great o.* or *gastrocolic*, and the *lesser*, or *gastrohepatic o.*

PALPATION OF. Cancerous and tubercular enlargements are distinguished by the fact that they extend across the abdomen; and cannot be traced backward; they do not ascend behind the ribs; are rough, hard, and uneven.

RS: *abdomen, caul, epiploon, kidney, ovary, spleen.*

o., great. Portion of the o. suspended from greater curvature of the stomach

and covering the intestines like an apron. It dips in among the folds of the intestines and is attached to the transverse colon and mesocolon.

It contains fat and aids in keeping the intestines warm, and preventing friction. It also aids in localizing infections. SYN: *epiploon minus*.

o., lesser. It passes from the lesser curvature of stomach to transverse fissure of the liver. SYN: *epiploon minus*.

STOMACH AND LESSER OMENTUM.

A. Pylorus B. Duodenum C. Lesser omentum D. Portal vein. E. Left gastric artery F. Cardiac part. G. Fundus H. Body.

omitis (ō-mī'tis) [G. *ōmos*, shoulder, + *-itis*, inflammation]. Inflamed condition of the shoulder.

omni- (om-nī) [L.] Prefix meaning *all*.

omnipotence of thought. PSY. Infantile concept of reality whereby one expects his wishes to be instantly accomplished, as a child that gains its objectives through crying, comes to believe in his own omnipotence because of a parent's surrender to his demands.

omnivorous (ōm-nīv'ō-rūs) [L. *omnis*, all, + *vorāre*, to eat greedily]. Living on all kinds of food.

omo- [G.] Combining form meaning *shoulder or pert to the shoulder*.

omodynia (ō-mō-dīn'ī-ā) [G. *ōmos*, shoulder, + *odynē*, pain]. Pain of the shoulder.

omohyoid (ō-mō-hī'oyd) ["" + *yoidēs*, y-shaped]. 1 Concerning the scapula and the hyoid bone. 2 Muscle attached to the hyoid bone and the scapula. SEE: *Table of Muscles in Appendix*.

omophagia (ō-mō-fā'jī-ā) [G. *ōmos*, raw, + *phagēin*, to eat]. The custom of eating foods raw, esp. flesh.

omphal-, omphalo- [G.] Combining form relating to the navel.

omphalectomy (ōm-fāl-ek'tō-mī) [G. *omphalos*, navel, + *ektomē*, excision]. Surgical removal of the umbilicus.

omphalic (om-fāl'ik) [G. *omphalikos*, pert. to the navel]. Concerning the umbilicus.

omphalitis (ōm-fāl'ītis) [G. *omphalos*, navel, + *itis*, inflammation]. Inflamed condition of the navel.

omphalocele (ōm-fāl'ō-sēl) [G. *omphalos*, navel, + *kēlē*, hernia]. Hernia of the navel. SEE: *hernia*.

omphalomesenteric (om'fal-ō-mēs-ēn-ter'ik) ["" + *mesenterion*, mesentery]. Concerning the umbilicus and mesentery.

omphalocous (om-fal-on'kūs) ["" + *ogkos*, tumor]. Umbilical tumor or swelling.

omphalephlebitis (ōm'fāl-ō-fē-bītis) ["" + *phleps*, vein, + *-itis*, inflammation]. Inflamed condition of umbilical veins.

omphalorrhagia (ōm'fāl-ōr-rā'jī-ā) ["" + *regnumai*, to burst forth]. Umbilical hemorrhage.

omphalorrhea (om-fal-or-ē'ā) ["" + *roia*, flow]. Discharge of lymph at the navel.

omphalorrhexis (om-fal-or-rēks'is) ["" + *rexis*, rupture]. Rupture of the navel.

omphalos (om'fāl-ōs) [G. navel]. Umbilicus. SYN *navel*.

omphalosotor (om-fal-ō-sō'tor) [G. *omphalos*, navel, + *sōtēr*, preserver]. Device used in replacing the prolapsed umbilical cord at childbirth.

omphalospinous (om-fal-ō-spī'nūs) ["" + *L. spina*, thorn]. Concerning the navel and the ant. sup. spine of the ilium.

omphalotomy (om-fāl-ōt'ō-mī) ["" + *tomē*, incision]. Division of umbilical cord at birth.

DRESSING. Cotton gauze, borated calendula powder.

omphalotripsy (om'fāl-ō-trīp'sī) ["" + *tripsis*, a rubbing]. Severing of the umbilical cord by a crushing method.

onanism (ō'nān-izm) Coitus interruptus,* so named because it was practiced by the Biblical character Onan, but the term is used also, erroneously, to designate masturbation, *q v*.

onanist (ō'nān-īst) One who practices coitus interruptus or, erroneously, masturbation.

Onanoff's reflex (ōn-āh-nōf') Contraction of bulbocavernosus muscle resulting from compression of glans penis.

Onchocerca (ōng-kō-ser'kā) [G. *ogkos*, hook, + *kēkos*, tail]. A genus of filarial worms. They live in subcutaneous and connective tissues and are usually enclosed in fibrous cysts or nodules.

O. volvulus. A species of O. which infests man, frequently invading the tissues of the eye. Transmitted by species of the blackfly, *Simulium*.

onchocerciasis (ōng-kō-ser-ki'ās-īs) ["" + *-iasis*, infestation]. Condition produced by infestation with 1 of the species of *Onchocerca*. SYN *onchocercosis*.

oncogenesis (ōng-kō-jēn'ē-sīs) [G. *ogkos*, mass]. Tumor formation and development.

oncogenous (ōng-kō-jēn'ūs) ["" + *gennan*, to produce]. Forming or producing tumors.

oncograph (ōng-kō-grāf) ["" + *graphein*, to write]. Device attached to oncometer for making record of the internal organs' size.

oncology (ōng-kōl'ō-jī) ["" + *logos*, study]. The branch of medicine dealing with tumors.

oncolysis (ōng-kōl'ī-sīs) ["" + *lysis*, dissolution]. The absorption or dissolution of tumor cells.

oncolytic (ōng-kō-īl'īk) ["" + *lysis*, dissolution]. Destructive to tumor cells.

oncoma (ōng-kō'mā) [G. *ogkōma*, a swelling]. A tumor or swelling.

Term is no longer commonly used.

oncometer (ōng-kōm'ēt-ēr) [G. *ogkos*, mass, + *metron*, measure]. Apparatus for measurement of variations in size of internal organs. SEE *plethysmograph*.

oncosis (ōng-kō'sīs) ["" + *-osis*, intensive]. 1. A condition characterized by the development of tumors. 2. A swelling or tumor.

oncosphere (ōng-kō-sfēr) [G. *ogkos*, hook, + *sphaira*, sphere]. Embryonic stage of a tapeworm in which it has hooks.

oncothlipsis (ōng-kō-thlīp'sīs) [G. *ogkos*, tumor + *thlipsis*, pressure]. Pressure due to presence of a tumor.

oncotic (ōng-kōt'ik) [G. *ogkos*, tumor].

Concerning, caused, or marked by swelling.

oncofomy (ōng-kot'ō-mī) [+ *tomē*, incision]. The operation of cutting into a tumor, abscess, or boil

oncotropic (ōng-kō-trop'ik) [+ *tropos*, a turning]. Possessing special attraction for tumor cells. **SYN** *tumoraftin*.

oneiric (ō-nī'rīk) [G. *oneiros*, dream] Resembling, rel. to, or accompanied by dreams

oneirism (ō-nī'rīzīm) [+ *ismos*, state of]. A condition of cerebral automatism resembling the prolongation of a dream after waking

oneirodynia (ō-nī-rō-dīn'ī-ā) [+ *odynē*, pain] Painful dreaming, nightmare *

o. *activa*. Walking while sleeping. **SYN** *somnambulism*

o. *gravans*. A bad dream. **SYN**: *nightmare*.

oneirology (ō-nī-rōl'ō-jī) [+ *logos*, study of] The scientific aspect of dreams.

oneiroscopy (ō-nī-rōs'kō-pl) [+ *skopein*, to examine] Analysis of dreams in the diagnosis of the individual's mental state.

oniomania (ō-nī-ō-mā'nī-ā) [G. *ōnios*, for sale, + *mania*, madness] A psychoneurotic symbolism evidenced by an abnormal urge to spend money

onion (ūn'yūn) [L. *unio*, onion] **AVERAGE SERVING** (white) 50 Gm Pro 0.8, Fat 0.2, Carbo 4.0 VITAMINS A-- to +, B+, C++, G, ASH CONST Ca 0.034, Mg 0.016, K 0.178, Na 0.016, P 0.045, Cl 0.021, S 0.070, Fe 0.0006 A base forming food, alkalinity, 15 cc per 100 Gm., or 3 l cc. per 100 cal Action Appetizer and stimulant to gastric tract Onions cause flatulence and irritability, although boiling reduces this tendency

oniric (ō-nī'rīk) [G. *oneiros*, dream]. Concerning a dream. **SYN** *oneiric*.

onirism (ō-nī'rīzīm) [+ *ismos*, state]. Dreamlike hallucination in a waking state. **SYN** *oneirism*

onkinocoele (ōng-kin'ō-sēl) [G. *oikos*, mass, + *is*, in-, fiber, + *kelē*, swelling] Inflammation, with swelling, of a tendon sheath

onomatology (ōn-ō-mā-tol'ō-jī) [G. *onoma*, name, + *logos*, study]. Science of names. **SYN** *nomenclature*, *terminology*.

onomatomania (ōn-ō-mā-tō-mā'nī-ā) [+ *mania*, madness] An abnormal or morbid impulse to dwell upon and repeat certain words, their imagined hidden meanings and significance, or to try to recall frantically a particular word.

onomatophobia (ōn-ō-mā-tō-fōb'ī-ā) [+ *phobos*, fear] Condition in which there is abnormal fear of hearing a certain name or word, because of an imaginary dreadful meaning attached to it

onomatopoeisis (ōn-ō-mā-tō-poy-ē'sīs) [+ *poiein*, to make] Imitation of natural sounds by the use of created, usually meaningless, imitative words and sounds

onto- [G.] Combining form, being.

ontogenesis (ōn'tō-jēn'ē-sīs) [G. *ōn*, ont-, being, + *genesis*, formation]. Origin and development of the individual. **SYN**: *ontogeny*

ontogeny (ōn-toj'ēn-ī) [+ *gennan*, to produce] 1 The history of the development of an individual

onychia. Pain in the nails

o. *nervosa*. **SYN**: *hyperesthesia unquium* Extreme sensitivity of nails.

onychatrophia (ōn'ī-kā-trōf'ī-ā) [G. *onyx*, *onych-*, nail, + *a-*, priv. + *trophē*,

nourishment]. Wasting away of the nails.

onychchauxis (ōn'ī-kaw'ksīs) [+ *auxein*, to increase]. Hypertrophy of the nails.

onychchia (ōn-īk'ī-ā) [G. *onyx*, *onych-*, nail]. Inflammation of the nail bed with suppurative and, frequently, loss of the nail. **SYN** *onychitis*. **SEX**: *paronychia*.

o. *craquele*. Fragility of nails

o. *lateralis*. Suppuration of tissues in the area lateral to fingernail

o. *maligna*. Type in debilitated persons in which there is fetid ulceration and loss of the nail

o. *parasitica*. Any parasitic disease of the nails

o. *punctata*. Condition in which a nail possesses small punctiform depressions

onychitis (ōn-īk'ītīs) [+ *-itis*, inflammation] Inflammation of the nail bed. **SYN** *onychchia*.

onychocryptosis (ōn'ī-kō-krīp-tō'sīs) [+ *kryptein*, to conceal] Ingrowing of the toenail

onychograph (ōn-īk'ō-grāf) [+ *graphein*, to write] Device for making record of capillary blood pressure under the fingernails

onychogryposis (ōn'ī-kō-grī-pō'sīs) [+ *gryposis*, a curving] Abnormal growth of the nails with inward curvature.

onychoid (ōn'ī-koyd) [+ *eidos*, resemblance] Similar to a nail, esp. a fingernail.

onycholysis (ōn-ī-kol'ī-sīs) [+ *lysis*, destruction] Loosening or detachment of the nail from the nail bed

onychoma (ōn-ī-kō'mā) [G. *onyx*, *onych-*, nail, + *ōma*, tumor] Tumor of the nail or the nail bed

onychomalacia (ōn'ī-kō-mā-lā'sī-ā) [+ *malakia*, softening] Unnatural softening of the nails. **SEE** *halonychia*.

onychomycosis (ōn'ī-kō-mī-kō'sīs) [+ *mykēs*, fungus, + *-ōsis*]. Disease of the nails due to a parasitic fungus

onychonusus (ōn-ī-kon'ō-sūs) [+ *nosos*, disease]. Any disease of the nails.

onychopathy (ōn-ī-kop'āth-ī) [+ *pathos*, disease] Any disease of the nails. **SYN** *onychonusus*

onychophagy (ōn-ī-kof'ā-jī) [+ *phagein*, to eat] The practice of nail biting

onychophosis (ōn-īk'ō-fō'sīs) [+ *yphē*, web] Accumulation of horny layers of epidermis under the toenail

onychophyma (ōn'ī-kō-fī'mā) [G. *onyx*, *onycho*, nail, + *phyma*, a growth]. Painful degeneration of the nail with hypertrophy

onychoptosis (ōn-īk'ōp-tō'sīs) [+ *ptōsis*, a falling] Dropping off of the nails

onychorrhaxis (ōn'ī-kō-rēk'sīs) [+ *rēxis*, a rupture] Nail splitting

onychosis (ōn-ī-kō'sīs) [+ *-ōsis*, disease]. Any diseased condition of the nails. **SYN** *onychopathy*.

onychotomy (ōn-ī-kot'ō-mī) [+ *tomē*, incision] Surgical incision of a fingernail or toenail

onychotrophy (ōn-ī-kōt-rō-fī) [+ *trophē*, nourishment] Nourishment of the nails.

onyx (ōn'īks) [G. *onyx*, nail]. 1. A finger- or toenail 2. Pus collection bet. the corneal layers of the eye

onyxis (ōn-īk'sīs) [G. *onyx*, nail]. Ingrowing of the nails.

onyxitis (ōn-īk-sītīs) [+ *-itis*, inflammation]. Inflamed condition of matrix of a nail, with suppurative and loss of the nail. **SYN**: *onychchia*.

oö- [G.]. Combining form denoting an

egg, or the *primordial cell* that develops into an ovule.

oöcyesis (ô'ô-si-ê'sis) [+ + *kyêsis*, pregnancy]. Ectopic pregnancy in the ovary.

oöcyst (ô'ô-sist) [G. *öon*, egg, + *kystis*, bladder]. The encysted form of a fertilized gamete (zygote) occurring in certain Sporozoa. *SYN* *ookinete*

oöcyte (ô'ô-sit) [+ + *kytos*, cell]. The early or primitive ovum before it has developed completely

o., *primary*. Cell at end of growth period of oögonium and before 1st maturation division has occurred

o., *secondary*. The larger of two cells resulting from first maturation division.

Sex *body, polar*
oögenesis (ô'ô-jên-ê'sis) [+ + *genesis*, formation]. Formation and development of the ovum

oögonium (ô'ô-gô-ni-üm) (pl. *oögonia*) [+ + *gonê*, generation] 1 The primordial cell from which an oöcyte originates. 2 Descendant of primordial cell from which the oöcyte arises

oökinesis (ô'ô-kin-ê'sis) [G. *öon*, egg, + *kinesis*, movement] Mitotic phenomena taking place within an ovum during maturation and fertilization

o'ökin'ete. An elongated motile zygote occurring in the life cycle of certain sporozoan parasites, esp. *Plasmodium*. It penetrates stomach wall of a mosquito and gives rise to an oöcyst

oöphor. [G.] Form indicating ovary

oöphoralgia (ô'ôf-ô-ra'lji-ä) [G. *öon*, egg, + *phoros*, bearing, + *algos*, pain]. Neuralgic pain in an ovary

oöphorauxæ (ô'ôf-ô-rawks'ê) [+ + + *auxein*, to increase] Ovarian enlargement

oöphorectomy (ô'ôf-ô-rêk'tô-mi) [+ + + *ektomê*, excision]. Excision of an ovary. *SYN* *ovaricectomy*.

oöphoritis (ô'ôf-ô-ri'tis) [+ + + *-itis*, inflammation]. Inflamed condition of the ovary. *SYN* *ovaritis*, *q.v.*

o., *follicular*. Inflammation of the graafian follicles

oöphorocystosis (ô'ôf-ô-rô-sis-tô'sis) [+ + + *kystis*, cyst, + *-osis*]. Development of an ovarian cyst

oöphorohysterectomy (ô'ôf-ô-rô-his-têr-êk'tô-mi) [+ + + *ystera*, uterus, + *ektomê*, excision]. Surgical removal of the uterus and ovaries. *SYN* *oöthecohysterectomy*.

oöphoroma (ô'ôf-ô-rô'mä) [+ + + *-oma*, tumor] Malignant ovarian tumor.

oöphoromania (ô'ôf-ô-rô-mä-ni-ä) [+ + + *mania*, madness] Insanity arising from an ovarian disease

oöphoron (ô'ôf-ô-rôn) [+ + *phoros*, bearing]. An ovary. *SYN* *oötheca*.

oöphoropathy (ô'ôf-ô-rô-pä-thi) Any pathologic condition of the ovary.

oöphoropeliopexy (ô'ôf-ô-rô-pe-li-ô-pêk-si) [+ + + *pêlos*, pelvis, + *pêxis*, fixation]. Suture of a displaced ovary to the pelvic wall

oöphoropexy (ô'ôf-ô-rô-pêk'si) [G. *öon* + *phoros*, bearing, + *pêxis*, fixation]. Fixation of a displaced ovary. *SYN* *oöphoropeliopexy*.

oöphorosalingectomy (ô'ôf-ô-rô-säl-pîn-jêk'tô-mi) [+ + + *salpigz*, tube, + *ektomê*, excision]. Excision of an oviduct and ovary. *POSITION* Dorsal.

oöphorosalingitis (ô'ôf-ô-rô-säl-pîn-jî-tis) Inflammation of the ovary and oviduct

oöphorostomy (ô'ôf-ô-rô-sô-tô-mi) [+ + + *stoma*, opening] Creation of artificial opening into ovarian cyst for drainage.

oöphorrhagia (ô'ôf-ô-ra-jî-ä) [+ + +

rêgnunai, to burst forth]. Hemorrhage from an ovulatory site severe enough to cause clinical symptoms or signs.

oöphorrhaphy (ô'ôf-ô-rä-f) [+ + + *raphê*, a sewing]. Suture of a displaced ovary to the pelvic wall

oöplasm (ô'ô-pläsm). The cytoplasm of an ovum

oöperm (ô'ô-spêrm) [+ + *sperma*, seed]. The cell formed by union of the spermatozoon with the ovum, the fertilized ovum.

Oöspora (ô-ös'pô-rä). *SYN*: for *Nocardia*, *q.v.*

oötheca (ô-o-thê'kä) [G. *oöthêkê*, ovary]. An ovary

oöthecohysterectomy (ô-o-thê'kö-his-têr-êk'tô-mi) [+ + *ystera*, uterus, + *ektomê*, excision] Excision of the uterus and ovaries

oötherapy (ô'ô-ther-ä-pi) [G. *öon*, egg, + *therapeia*, treatment] Treatment with ovarian substance

opacity (ô-päs'i-ti) [L. *opacitas*, darkness] 1. Darkness, shading from light. 2. Lack of transparency 3. Mental dullness

opaque (ô-päk') [L. *opacus*, dark] 1. Dark 2. Not transparent 3. Stupid

open (ô-pên) [A.S.] 1. Not shut 2. Uncovered, exposed, as to air 3. To make an aperture in, as to open a boil. 4. Interrupted, said of an electric circuit, when current cannot pass

operable (ôp'êr-ä-bl) [L. *operari*, to work]. 1. Practicable 2. Admitting of treatment by operation with reasonable expectation of cure

operate (ôp'êr-ät) [L. *operatus*, worked] 1. To perform an excision or incision or to make a suture on the body or any of its organs or parts to restore health. 2. To produce an effect, as a drug

operation (ôp'êr-ä'shün) [L. *operatio*, a working] 1. The act of operating. 2. A surgical procedure to restore health. 3. Action of a drug

PREPARATION FOR

Abdominal Shave entire abdomen and pubic hair. Cleanse umbilicus

Anal and perineal Shave genital area. *Arm*: Shave axilla, and from shoulder to below elbow.

Breast Shave axilla and well around the breast. If radical operation, also chest from sternum to spine, and from costal margin to clavicle.

Cerebellar. In males and children, shave the whole head and back of neck to scapulae; in females, back of head from above ears down to scapulae

Cerebral. Shave entire head unless otherwise ordered.

Chest Shave from median line to median line, including back

Elbow Shave from middle of upper arm to fingers, also axilla.

Forearm Shave from hand to shoulder.

Hernia Shave genital area and lower abdomen to umbilicus; also down front of thighs to middle of thighs.

Knee Shave from thigh to foot.

Kidney Shave from scapula to sacrum, and spine to ant. median line.

Leg Shave from thigh to ankle.

Neck, lateral Shave 2 inches behind ear on side indicated; cheek in males.

Rectal *SEX*: *abdominal*.

Spine Shave entire back if necessary. **Thigh** Shave from groin to foot; also genital area.

Thyroid Shave lower neck in front if necessary.

SEE: Name of operation, in alphabetical order.

o., home. PREPARATION FOR: In private houses a room should be selected that is least frequented. Often kitchen is best for the purpose. Carpets, curtains, and all unnecessary furniture should be removed.

If time permits, the disinfection of the empty room should be commenced by fumigating with sulfur dioxide for 12 hours. Burn 3 pounds of sulfur for every 1000 cubic feet of air space in the room. The sulfur must be burned in an iron kettle placed in a wash tub partly filled with water, and doors and windows should be tightly closed to prevent escape.

After the expiration of 12 hours, or if time does not permit fumigation, ceilings, doors, floors, windows, etc., and all objects in the room must be scrubbed with hot soda solution to be followed by scrubbing with a solution of corrosive sublimate, 1/1000, or carbolic acid, 5%. Color the solutions to prevent accidents.

The microbes floating in the air should be precipitated by moisture in form of steam or spray, by so doing the air is purified and the microbes become attached to the moist floor, which should be kept moist till operation is finished. For cleaning the wallpaper Von Esmarch has recommended rubbing with soft bread.

When possible, room should be prepared the day before the operation, and doors and windows closed. The kitchen table can be converted into an operating table that will answer every purpose by placing upon it a blanket properly folded and covering the same with a clean sheet. The kitchen stove does excellent service in sterilizing everything that can be sterilized by heat, wash basins, pans, water, instruments, etc.

Napkins and towels that are to be used during operation should be boiled for 5 minutes in soda solution. Sterile water, hot and cold, and saline solution must be kept in readiness, as well as sterile vessels for use during operation.

For major operations temperature of room should be kept at not less than 75° F., and warm blankets, bottles filled with hot water, or warm bricks must be kept in readiness. A hypodermic syringe, strychnine tablets, capsules of nitrite of amyl, alcoholic stimulants, ether and chloroform must be kept within easy reach of the anesthetizer. Brushes for hand and surface disinfection must be rendered sterile by exposing them to live steam for 30 minutes, or boiling in soda solution for from 5 to 10 minutes.

Should gowns not be on hand, night shirts are excellent substitutes, and in absence of these, clean sheets wrapped about body, with towels for the arms secured with safety pins, answer admirably.

Nurse should wear cotton dress and over it an aseptic gown. Hair and beard of operator and assistants may be covered with aseptic gauze. Antiseptic solution should be within easy reach, if hands become bloody or contaminated. SEE: laparotomy.

o., ablative. O. in which a part is removed.

o., capital. A grave or serious operation; one in which life is endangered.

o., exploratory. O. performed for diagnostic purposes.

o., major. One involving danger to life.

o., minor. O. not serious or risking life.

o., plastic. O. for reconstruction and repair of surface structures.

o., radical. O. performed to effect complete cure.

o., reconstructive. O. to repair a loss or defect.

o., subtotal. One in which not quite all of the organ is removed, as subtotal removal of thyroid gland.

operative (op'er-ā-tiv) [L. *operativus*, working]. 1 Effective, active. 2 Pert. to or brought about by an operation. 3. A drug that is acting.

o. procedure. A surgical operation.

opercular (ō-pur'kü-lär) [L. *operculum*, a cover]. Concerning a covering.

operculum (ō-pur'kü-lüm) (pl. *opercula*) [L. a covering]. 1 Any covering. 2. Plug of mucus which fills up the opening of the cervix upon impregnation. 3. BNA. Convolutions covering the island of Reil.

ophiasis (ō-fī'ās-is) [G. *ophis*, snake]. Baldness occurring in winding streaks upon the head.

ophidiophobia (ō-fid'ī-ō-fō'bī-ā) [G. *ophidion*, snake, + *phobos*, fear]. Abnormal fear of snakes.

ophidism (ō'fid-izm) [G. *ophis*, snake, + *ismos*, condition]. Poisoning from snake bite.

ophiothemia (ō'fī-ō-tōk-sē'mī-ā) [+ *toxikon*, poison, + *aima*, blood]. Poisoning due to venom injected by a snake.

ophiothoxin (ō-fī-ō-tōk'sin) [+ *toxikon*, poison]. A poison in cobra venom.

ophritis, ophryitis (ō-fī'tis, -rē-fī'tis) [G. *ophrys*, eyebrow, + *-itis*, inflammation]. Inflammation of the eyebrow.

ophryon (ō'frē-on) [G. *ophrys*, eyebrow]. Meeting point of the facial median line with a transverse line across the forehead's narrowest portion.

ophthalmagra (ōf-thāl-māg'rā) [G. *ophthalmos*, eye, + *agra*, seizure]. Gouty or rheumatic inflammation of the eye, with pain.

ophthalmalgia (ōf-thāl-māl'jī-ā) [+ *algos*, pain]. Pain in the eye.

ophthalmatrophy (ōf-thāl-māt'rō-fī) [+ *atrophia*, a wasting]. Atrophy of eyeball.

ophthalmectomy (ōf-thāl-mēk'tō-mī) [+ *ektomē*, excision]. Excision of an eye.

DRESSING. Antiseptic gauze, iodoform, rubber drainage tube, bichloride solution, 1:5000.

POSITION: Dorsal

ophthalmia (ōf-thāl'mī-ā) [G. *ophthalmos*, eye]. Severe inflammation of the eye, usually including the conjunctiva.

o., catarrhal. Conjunctivitis of a severe, frequently purulent, form.

o., Egyptian. Granular conjunctivitis. SYN: *trachoma*.

o., gonorrheal. Severe, purulent form due to infection with gonococcus.

o., granular. Severe purulent conjunctivitis with formation of granules on the eyelids. SYN: *trachoma*.

o., metastatic. Sympathetic inflammation of the choroid due to pyemia or metastasis.

o., migratory. SEE: *sympathetic o. neonatorum*. Severe purulent conjunctivitis in the newborn.

Error. Infection with gonococcus responsible for great majority of cases. Condition causes about 25% of all blindness in children.

PROPHYLAXIS: Introduction of a few drops of a silver salt into each eye at birth.

o., neuromyalytic. One resulting from injury or disease involving semilunar ganglion or branches of trigeminal nerve supplying eyeball

o., phlyctenular. Vesicular formations on epithelium of conjunctiva or cornea

o., purulent. Purulent inflammation of eye, usually due to gonococcus

o., scrofulous. See *phlyctenular o.*

o., spring. Conjunctivitis in the spring of the year, usually an allergic reaction to tree pollen

o., sympathetic. Serous uveitis in one eye caused by some disorder in the other eye

Sym. Photophobia, lacrimation, pain, deposits on post surface of cornea. Exudate appears in pupillary area with post. synechia, seclusion pupillae, secondary atrophy with blindness

TREATMENT Removal of exciting eye early in the disease Atropine, heat, salicylates, potassium iodide

o., varicose. O. seen in varicose veins of the conjunctiva

ophthalmiatrics (ôf-thăl-mi-at'riks) [G. *ophthalmos*, eye, + *iatreia*, treatment] The treatment of eye diseases

ophthalmic (ôf-thăl-mik) [G. *ophthalmos*, eye]. Pert to the eye

o. nerve. A branch of the trigeminal or trifacial nerve (5th cranial n.). It is sensory and its branches are the lacrimal, frontal, and nasociliary, etc.

ophthalmitis (ôf-thăl-mi'tis) [" + *-itis*, inflammation]. Inflamed condition of the eye.

ophthalmo- [G.]. Combining form *pert. to the eye*.

ophthalmoblennorrhoea (ôf-thăl'mô-blên-ôr-rê-ä) [G. *ophthalmos*, eye, + *blenna*, mucus, + *roia*, flow]. Purulent inflammation of the eye or conjunctiva, usually due to the gonococcus.

ophthalmocoele (ôf-thăl'mô-sêl) [" + *kêlê*, swelling]. Abnormal protrusion of the eyeballs. **Syn** *exophthalmos*.

ophthalmocopia (ôf-thăl'mô-kô-pi-ä) [" + *kopos*, fatigue] Ocular fatigue, eye-strain **Syn** *asthenopia*, *q.v.*

ophthalmodesmitis (ôf-thăl'mô-dês-mi'tis) [" + *desmos*, ligament, + *-itis*, inflammation]. Inflammation of tendons of the eye.

ophthalmodiagnosis (ôf-thăl'mô-di-äg-nô-sis) [" + *dia*, through, + *gnôsis*, knowledge]. Diagnosis of eye conditions by means of the ophthalmoreaction.*

ophthalmodynia (ôf-thăl'mô-din'i-ä) [" + *odynê*, pain]. Pain in the eye. **Syn:** *ophthalmalgia*.

ophthalmofunduscope (ôf-thăl'mô-fûnd-ô-skôp) [G. *ophthalmos*, eye, + *L. fundus*, base, + *G. skopein*, to examine]. Apparatus used in examining the fundus of the eye.

ophthalmography (ôf-thăl'mô-grä-f-i) [" + *graphein*, to write]. Description of the eye.

ophthalmogyric (ôf-thăl'mô-j'i'rik) [" + *gyros*, circle]. Causing or concerning ocular movements. **Syn** *oculogyric*.

ophthalmolith (ôf-thăl'mô-lith) [" + *lithos*, stone]. A calculus of the lacrimal duct.

ophthalmologist (ôf-thăl'mô-lô-jist) [G. *ophthalmos*, eye, + *logos*, study]. A graduate physician who specializes in the treatment of disorders of the eye; an oculist.

ophthalmology (ôf-thăl'mô-lô-j-i) [" +

logos, study]. The science dealing with the eye and its diseases.

ophthalmomalacia (ôf-thăl'mô-mäl-a'si-ä) [" + *malacia*, softening]. Shrinkage or softness of eye.

ophthalmometer (ôf-thăl'môm-ët-ër) [G. *ophthalmos*, eye, + *metron*, measure]. Instrument for making measurements of corneal astigmatism.

ophthalmometry (ôf-thăl'môm-ët-i) [" + *metron*, measure]. Measurement of the ocular defects and refractive powers

ophthalmomycosis (ôf-thăl'mô-mi-kô'sis) [" + *mykês*, fungus, + *-osis*]. Any fungous disease of the eye

ophthalmomyitis (ôf-thăl'mô-mi-i'tis) [" + *mys*, *my-*, muscle, + *-itis*, inflammation]. Inflammation of the ocular muscles.

ophthalmomyositis (ôf-thăl'mô-mi-ô-si'tis) [" + " + *-itis*, inflammation]. Inflamed condition of the eye muscles. **Syn** *ophthalmomyitis*

ophthalmomyotomy (ôf-thăl'mô-mi-ot-ô-mi) [" + " + *tome*, incision]. Surgical section of the muscles of the eyes

ophthalmoneuritis (ôf-thăl'mô-nû-ri'tis) [" + *neuron*, snaw, + *-itis*, inflammation]. Inflamed condition of the optic nerve

ophthalmopathy (ôf-thăl'môp-ä-thi) [G. *ophthalmos*, eye, + *pathos*, disease]. Any eye disease

ophthalmophlebectomy (ôf-thăl'mô-fê-bôt-ô-mi) [" + *phleps*, *phleb-*, vein, + *tomé*, incision]. Incision of the eye to overcome congestion of conjunctival veins

ophthalmophthisis (ôf-thăl'môf'this-is) [" + *phthisis*, a wasting]. Softening or shrinking of the eyeball. **Syn** *phthisis bulbi*.

ophthalmoplasty (ôf-thăl'mô-pläs'ti) [" + *plassein*, to form]. Ocular plastic surgery.

ophthalmoplegia (ôf-thăl'mô-plê'ji-ä) [" + *plege*, stroke]. Paralysis of ocular muscles.

o. externa. Paralysis of extraocular muscles.

o. interna. Paralysis of intraocular muscles.

o. nuclear. O. due to lesion of nuclei of origin of the ocular motor nerves

o. partialis. Paralysis of not all of ocular muscles.

o. progressiva. Form in which all muscles become involved slowly.

o. totalis. Paralysis of both internal and external ocular muscles.

ophthalmoptosis (ôf-thăl'môp-tô'sis) [" + *ptôsis*, a drooping]. Protrusion of the eyeball. **Syn** *exophthalmos*.

ophthalmoreaction (ôf-thăl'mô-rê-ä-k'-shûn) [" + *L. rê*, back, + *actus*, acted]. Reaction of the conjunctiva resulting on instillation of a drop of tuberculin or typhoid fever toxin into the eye of persons suffering from the diseases

ophthalmorrhagia (ôf-thăl'mô-rä'ji-ä) [G. *ophthalmos*, eye, + *rêgnunai*, to break forth]. Ocular hemorrhage.

ophthalmorrhea (ôf-thăl'mô-rê-ä) [G. *ophthalmos*, eye, + *roia*, flow]. Discharge of watery or purulent matter from the eye

ophthalmorrhesis (ôf-thăl'mô-rêks'is) [" + *rêxis*, rupture]. Rupture of an eyeball.

ophthalmoscope (ôf-thăl'mô-skôp) [" + *skopein*, to examine]. Instrument for examining interior of the eye.

ophthalmoscopy (ôf-thăl'môskô-pi) [" + *skopein*, to examine]. The examination of the interior of the eye.

- o., direct.** Examination in which image in interior of eye is upright.
- o., indirect.** Examination in which image in interior of eye is inverted.
- ophthalmospasm** (ôf-thăl'mô-spăzm). Spasm of ocular muscles
- ophthalmostat** (ôf-thăl'mô-stăt) [“ + *statos*, standing] Instrument used to hold the eye still during an operation.
- ophthalmostatometer** (ôf-thăl'mô-stăt-ôm'êt-ër) [“ + “ + *metron*, measure]. Instrument for ascertaining position of eyes
- ophthalmosynchysis** (ôf-thăl'mô-sîn'ki-sis). Effusion into one of the cavities of the eye
- ophthalmothermometer** (ôf-thăl'mô-thêr-môm'êt-ër) [G. *ophthalmos*, eye, + *therme*, heat, + *metron*, measure] Instrument for determining local temperature in eye diseases
- ophthalmotonometer** (ôf-thăl'mô-tô-nôm'-êt-ër) [“ + *tonos*, tension, + *metron*, measure] Instrument for determining tension within globe of eye.
- ophthalmotoxin** (ôf-thăl'mô-tôks'în) [“ + *toxikon*, poison] Cytotoxin derived on injection of emulsions of the ciliary body.
- ophthalmotrope** (ôf-thăl'mô-trôp) [“ + *tropê*, a turning] Instrument for showing the movements of the ocular muscles.
- ophthalmotropometer** (ôf-thăl'mô-tro-pôm'êt-ër) [“ + “ + *metron*, measure]. Instrument for measuring the eye movements.
- ophthalmovascular** (ôf-thăl'mô-văs'kûl-ar) Pertaining to blood vessels of eye
- opiate** (ôp'i-ăt) [G. *opion*, poppy juice]. 1. A drug derived from opium. 2. A drug inducing sleep. 3. To deaden, to put to sleep.
- They include the bromides. The principal opiates are opium and its derivatives, such as morphine. They are all habit-forming.
- NP:** Given only under a doctor's orders. When possible patient should not know the nature of the drug given. Otherwise, warn patient of its dangers unless given by a physician
- Opiates should be kept separate from other drugs and guarded from patient. Physician prescribing narcotics must have his own registry number, and place it on every narcotic prescription. A prescription for an opiate cannot be refilled. A new one must be written by the physician
- o. abstinence syndrome.** Symptoms induced by withdrawal of opiate from an addict. In a mild addict, they are restlessness, depression, and mild dis-

turbances in functioning of autonomic nervous system. In a strong addict, an acute illness develops, lasting several days. Emotional reactions may be pronounced

- o. addiction.** Periodic and chronic intoxication induced by reported use of an opiate
- opiomania** (ôp'i-ô-mă'nî-ă) [“ + *mania*, madness]. Morbid addiction to use of opium or its derivatives.
- oplophagism** (ô-pi-ôf'ă-jizm) [“ + *phagēin*, to eat, + *ismos*, condition]. Addiction to the use of opium, esp. the eating of it.
- opisthenar** (ô-pis'the-nâr) [G. *opisthen*, behind, + *thenar*, palm]. Back of the hand.
- opisthion** (ô-pis'thî-ôn) [G. *opisthion*, rear] Craniometric point at middle of lower border of foramen magnum
- opistho-, opisth-** [G.]. Combining form meaning backward, behind.
- opisthognathism** (ôp'is-thôg'nă-thîzm) [G. *opisthen*, behind, + *gnathos*, jaw, + *ismos*, state of] Skull abnormality marked by a receding lower jaw
- opisthoporeia** (ô-pis'thō-pō-rî'ă) [G. *opisthen*, behind, + *poreia*, a walking]. Involuntary walking backward due to loss of motor control.
- opisthorchiasis** (ô-pls'thor-kî'ă-sis) Infestation of the liver by flukes of the genus *Opisthorchis*
- Opisthorchis** (ô-pis'thor'kis) [G. *opisthen*, behind, + *orchis*, testicle] A genus of parasitic flukes belonging to the family Opisthorchiidae
- O. felinus.** A species of flukes parasitic in carnivores (dogs, cats, foxes). Occasionally infest man.
- O. sinensis.** Syn for *Clonorchis sinensis*, a common liver fluke in man, esp in the Far East
- opisthotic** (ôp'is-thôt'ik) [“ + *ous*, ot-, ear]. Located behind the ear or in the int. ear.
- opisthotonos** (ôp'is-thôt'ô-nôs) [“ + *tonos*, tension]. An arched position of the body with feet and head on the floor caused by a tetanic spasm.
- Seen in severe cases of meningitis and tetanus. **See:** *emprosthotonos*, *pleurothotonus*, *posture*.
- opium** (ôp'i-ûm) [G. *opion*, poppy juice]. USP. The dried juice obtained from the unripe capsule of the poppy. *Papaver somniferum*. It contains a number of alkaloids such as morphine, heroin, dihydromorphinone, metapon, dihydrocodeinone, eukodol, and codeine.
- Action.** Opium is a narcotic, soporific, and astringent. It relieves pain and discomfort and induces a deep sleep.

OPISTHOTONOS.

Uses: (1) As a sedative in forms of indigestion and diarrhea. (2) It diminishes the secretions of bronchial tubes and relieves spasm; given to suppress ineffective coughing. Caution indicated because it is a respiratory depressant. (3) Also a heart depressant, but is administered in some heart cases to produce sleep and so improve condition of heart by relieving fatigue. It slows the pulse. (4) Sedative to the nervous system; promotes rest and sleep by relieving excitability and fear. It relieves pain. (5) Applied locally will relieve pain; therefore used in liniments and plasters, and as a preparation of gall and opium ointment in treatment of painful hemorrhoids. Inhibits all secretions of the body except perspiration, which it increases. It also contracts the pupils, even in small doses.

Dosage Opium: 1 gr (0.06 Gm). Tr. opium (laudanum) 10 ml (0.6 cc) Tr. opium camphorated (paregoric): Adult, 1 dram (4 cc).

POISONING **Sym** Excitement that may pass unnoticed as characteristic symptoms develop. Drowsiness, limpness and flaccidity of muscles, sleep, passing on to stupor and coma. Pupil contracted to pinpoint size. Reflexes abolished. Pulse slow and weak at first; later irregular and sometimes quick and running. Respirations depressed, sometimes as slow as 8 or 10 a minute, and with coma become stertorous. Temperature is subnormal, skin cold and covered with sweat. The face becomes livid and, unless treated successfully, patient will die of asphyxia.

TREATMENT First, send for a doctor; in the meantime, administer emetics, such as mustard and water, or better, wash out the stomach with a solution of potassium permanganate (1:3000). A pint should be left in the stomach. Caffeine is probably the best physiological antidote, and may be given as such, or in the form of coffee, by mouth or rectum. Other measures to keep person awake are the use of ammonia by mouth and inhalation; atropine, strychnine, or camphor by needle, cold water to the head and face exercise, artificial respiration, etc. Apomorphine hydrochloride, being a powerful hypnotic, should not be used as the emetic for opium poisoning except in cases of extreme urgency that are seen early. In emptying the stomach, it is best to use a stomach tube as emetics may be much delayed in their action due to the depressing effect on the vomiting center by the absorbed narcotic. Inhalations of oxygen are of unquestionable benefit in many cases. Strychnine by hypodermic has been highly recommended. Note breathing and, if very slow, promote by intermittent artificial respiration, keep covered with blankets and apply hot water bottles; keep skin dry by continually wiping the deposit of perspiration from it.

opiumism (ô'pî-ûm-izm) [G. *opion*, poppy juice, + *ismos*, state of]. 1. Addiction to use of opium. 2. Physical condition resulting from overuse of opium.

opo- [G.]. Prefix meaning *derived from juice*.

Oppenheim's disease (ôp'ên-hîm). A rare congenital disorder marked by atony of entire bodily musculature. **Syn** *amyotonia congenita*.

oppliation (ôp'pî-lâ'shûn) [L. *opplâtio*, a closure]. 1. An obstruction. 2. Act or state of being obstructed. 3. Constipation.

oppliative (ôp'pî-lâ-tîv) [L. *opplâre*, to stop up]. 1. Closing the pores. 2. Constipating. 3. Obstructive. 4. A constipating agent.

opponens (op-pô-néns) [L. placed against]. Opposing, a term applied to muscles of hand or foot by which 1 of the lateral digits may be opposed to 1 of the other digits. **See** *Table of Muscles in Appendix*.

opposition (ôp-pô-sî'shûn) [L. *oppositio*, a placing against]. Refusal of certain psychopaths to accept suggestions or directions because of retardation,* preoccupation with bizarre concepts, or from fear of the results.

In dementia precox not only do they oppose suggestions, but perform acts directly opposite to those suggested. **See** *negativism*.

opsialgia (ôp-sî-al'jî-â) [G. *ôps*, face, + *algos*, pain]. Neuralgic pain of the face.

opsinogenous (ôp-sîn-ôj'ên-ûs) [' + *genesis*, to produce]. Capable of forming opsonins.

opsiometer (ôp-sî-ôm'êt-êr) [G. *ôpsis*, vision, + *metron*, measure]. Apparatus for the measurement of vision. **Syn** *optometer*.

opsionosis (ôp'sî-ô-nô'sîs) A disease or disorder of the eye or vision.

opsiuria (ôp-sî-ûr'î-â) [G. *ôpson*, food, + *ouron*, urine]. Condition in which excretion of urine is more rapid during fasting than after a meal.

opsomania (ôp-sô-mâ-nî-â) [G. *ôpson*, a dainty, + *mania*, madness]. Morbid desire for some special article of food.

opsonic (ôp-sôn'ik) [G. *ôpsonem*, to prepare food for]. Pert to opsonins or their use in therapy.

o. index. A measure of the resistance of a patient to bacterial invasion.

Determined by the ratio bet the number of bacteria destroyed and ingested by the leukocytes in normal blood serum, as compared with the number ingested by leukocytes under the influence of the patient's own serum.

A special technic is followed. The white corpuscles are fixed, stained, and examined under the microscope. The number of germs in 100 leukocytes are counted. The total is then divided by 100, showing the patient's phagocytic index. This is divided by average from normal blood serum and result is the opsonic index.

opsonification (ôp-sôn'î-fî-kâ'shûn) [' + L. *facere*, to make]. Effect of opsonins in rendering cells or bacteria phagocytized more readily.

opsonin (op'sô-nîn) [G. *ôpsonem*, to prepare food for]. Substance in blood serum which acts upon microorganisms and other cells, making them more attractive to phagocytes.

Some opsonins are formed as the result of special stimuli as specifics for certain species of bacteria. They do not make any appreciable change in bac-

teria or kill them, but unite with them. They are also formed for other elements, such as the red blood corpuscles.

The amt. of opsonin in the blood can be increased by immunization

opsonization (ôp-sôn-i-zâ'shun) [G. *opsonem*, to prepare food for]. Action of opsonins in making cells or bacteria more attractive to phagocytes. SYN: *opsonification*.

opsonins (ôp'sôn-îz) [G. *opsônein*, to prepare food for]. To render more attractive to phagocytes.

opsonocytaphagic (ôp'sôn-o-sî-tô-fâ'jik) ["" + *kytos*, cell, + *phagein*, to eat]. Pert. to phagocytic action of blood when serum opsonins are present.

opsonometry (ôp-sô-nôm-ê't-rî) ["" + G. *metron*, measure]. Estimation of amt of opsonins in the blood serum. SEE *opsonic index*.

opsonophilia (ôp-sôn-ô-fil'î-â) ["" + *philin*, to love]. Attraction for opsonins

opsonophilic ["" + *philein*, to love]. Attractive to opsonins

opsonotherapy (ôp-sôn-ô-thêr'â-pî) ["" + *therapeia*, treatment]. Treatment by stimulation of a specific opsonin with bacterial vaccines. SYN *vaccine therapy*.

optesthesia (ôp-tês-thê'zî-â) [G. *optikos*, pert. to the eye, + *aisthêsis*, sensation]. Visual sensibility; perception of visual stimuli.

optic (ôp'tik) [G. *optikos*, pert. to the eye]. Pert. to the eye or the sight

o. *chiasm*, o. *commisure*. The crossing of the optic nerve fibers in the brain.

o. *disk*. Area in retina for entrance of optic nerve; the blind spot

o. *foramen*. Groove for optic nerve and ophthalmic artery at the orbit's apex.

o. *nerve*. Second cranial n. FUNCT. Special sense of sight. ORIG. Lateral geniculate body of thalamus via optic tract and optic chiasma DIST. Retina

o. *papilla*. SEE *optic disk*.

o. *tract*. Fibers of optic nerve which continue beyond optic chiasma, most of which terminate in lateral geniculate body of thalamus. Some continue to sup. colliculus of midbrain, others enter hypothalamus and terminate in supra-optic and medial nuclei

optical (ôp'tî-kâl) [G. *optikos*, pert. to the eye]. Pert. to vision or the eye or optics

o. *activity*. CHEM. The property of rotating the plane of polarized light

Measurement of this property is called polarimetry, and is useful in the determination of optically active substances like dextrose. Particularly the sugars are classified according to this criterion.

Optical activity in a substance can be detected by placing it bet. polarizing and analyzing prisms.

optician (ôp-tîsh'ân) [G. *optikos*, pert. to the eye]. 1. One who makes optical apparatus. 2. One skilled in the grinding of lenses and fitting glasses

o., *dispensing*. One who deals in and retails spectacles and ophthalmic lenses.

optico- [G.]. Combining form meaning relating to the eye or vision.

optociliary (ôp'tî-kô-sî'lî-âr-î) [G. *optikos*, pert. to the eye, + L. *ciliaris*, pert. to eyelash]. Concerning the optic and ciliary nerves.

optocupillary (ôp'tî-kô-pû'plî-âr-î) ["" + L. *pupilla*, pupil]. Concerning optic nerve and the pupil.

optics (ôp'tiks) [L. *optikos*, pert. to vision]. The science dealing with light and its relation to vision.

optimum (ôp'tîm-ûm) (pl. *optima*) [L. *optimus*, best]. The condition which is most conducive to favorable activity.

o. *temperature*. That t. which is most suitable for development of bacterial cultures [sion or eye.

opto- [G.]. Combining form meaning vi-
optogram (ôp'tô-grâm) [G. *optos*, seen, + *gramma*, mark]. Image of ext. object fixed on the retina by photochemical bleaching action of light on the visual purple.

optometer (ôp-tôm-ê't-êr) ["" + *metron*, measure]. Instrument for measurement of the eye's refractive power.

optometrist (ôp-tôm-ê't-rîst) ["" + *metron*, measure]. Person who measures the eye's refractive powers and fits glasses to correct ocular defects

optometry (ôp-tôm-ê't-rî) ["" + *metron*, measure]. Measurement of the visual refractive power and correction of visual defects with eyeglasses.

optomyometer (ôp'tô-mî-om-ê't-êr) ["" + *mys*, *my-*, muscle, + *metron*, a measure]. Instrument for determining strength of the muscles of the eye

optophone (ôp'tô-fôn) ["" + *phônê*, voice]. Instrument converting light energy into sound energy. Used by the blind.

optostriate (ôp-tô-strî-ât) ["" + L. *striatus*, grooved]. Concerning the optic thalamus and the corpus striatum.

ora (ô'ra) [L.]. Plural of os, mouth.

ora (ô'râ) [L.]. A border or margin.

o. *serrata retinae*. Notched ant edge of sensory portion of retina

orad (ô'râd) [L. *os*, *or-*, mouth, + *ad*, toward]. Toward the mouth or oral region.

oral (ô'râl) [L. *os*, *or-*, mouth]. Concerning the mouth

orale (ô-râ'le) Point on hard palate in midsagittal plane where lines drawn tangent to lingual margins of alveoli of medial incisor teeth intersect

orology (ô-râl'ô-jî) ["" + G. *logos*, study of]. 1. The science of oral hygiene. 2. Study of diseases of the mouth.

orange (ô'rênj) [Persian *nârang*, orange]. Contains citric acid, sugar and considerable cellulose. AVERAGE SERVING 100 Gm. Pro. 0.8, Fat 0.2, Carbo 11.6 VITAMINS: A— to ++, B+, C++ + +, G++.

ASH CONST. Ca 0.045, Mg 0.012, K 0.177, Na 0.012, P 0.021, Cl 0.006, S 0.011, Fe 0.0002.

o. *juice*. AVERAGE SERVING 120 Gm. Pro. 0.7, Carbo. 15.7 VITAMINS: A+ to ++, B+, C++ + +. ASH CONST. Ca 0.029, Mg 0.011, K 0.182, Na 0.008, P 0.016, Cl 0.003, S 0.008, Fe 0.0002.

ACTION: Similar to that of lemons, q.v. Somewhat laxative although claimed to be constipating in some forms of intestinal disorders. A good mineralizer. SEE *fruit*, *lemon*, *lime*.

orbicular (ôr-blî'û-lâr) [L. *orbiculus*, a small circle]. Circular.

o. *bone*. Ossicle frequently becoming attached to the incus. SYN: *os orbiculare* SEE: o. *process*

o. *muscle*. Muscle about an opening.

o. *process*. End of long process of the incus. SYN: *lenticular process*.

orbicularis (ôr-blî'û-lâr'is) [L. *orbiculus*, little circle]. Muscle surrounding an orifice, a sphincter muscle.

o. *ciliaris*. SYN: *ciliary ring*. The ciliary muscles of the eye.

o. *oculi*. Muscle encircling the opening of orbit of the eye.

o. *oris*. Circular muscle surrounding the mouth.

o. *palpebrarum*. SEE: o. *oculi*.

orbit (or'bit) [L. *orbita*, track]. The bony pyramid-shaped cavity of the skull which holds the eyeball. It is pierced posteriorly by the *optic foramen*, which transmits the optic nerve and ophthalmic artery, the *sup* and *inf orbital fissures*, and several foramina.

It is formed by the frontal, malar, ethmoid, maxillary, lacrimal, sphenoid, and palatine bones.

orbita (or'bit-ā) (pl. *orbitae*) [L. wheel track]. BNA. Latin term for orbit.

orbital (or'bi-tāl) [L. *orbita*, track]. Concerning the orbit.

orbitale (or-bi-tā'le) [L. *orbita*, track]. Lowest point on lower orbital margin.

orbitotomy (or-bit-ōt'ō-mī) [+ G. *tomē*, incision]. Surgical incision into the orbit.

orchiectomy (ōr-kē-tō'mī) [G. *orchis*, testicle, + *ektomē*, excision]. Surgical removal of a testicle.

DRESSINGS, ETC. Small drainage tube, sterilized gauze, borosalicilic acid powder, 4:1. SYN. *orchidectomy*.

orchioplasty (or-kē-ō-plās'tī) [+ *plasma*, to form]. Plastic repair work of the scrotum.

orchialgia (or-kī-āl'jī-ā) [+ *algos*, pain]. Pain in the testes. SYN. *orchidodynia*.

orchic (or'kik) [G. *orchis*, testicle]. Concerning the testicle.

orchichorea (or-kī-kō-rē-ā) [+ *chorea*, a dance]. Involuntary jerking movements of the testicles.

orchidalgia (or-kī-dāl'jī-ā) [G. *orchis*, orchid-, testicle, + *algos*, pain]. Neuralgia in the testicles. SYN. *orchialgia*.

orchidectomy (ōr-kid-ēkt'ō-mī) [+ *ektomē*, excision]. Removal of a testicle surgically. SYN: *orchiectomy*.

orchido- [G.]. Combining form, meaning testicle.

orchidocele (or-kī-dō-sēl) [G. *orchis*, orchid-, testicle, + *kēlē*, hernia]. Scrotal hernia.

orchidocelioplasty (ōr-kīd-ō-sēl'ī-ō-plās'tī) [+ *kōilia*, belly, + *plassein*, to form]. Surgical transfer of an undescended testicle to the abdominal cavity.

orchidoneus (ōr-kī-dōng'kūs) [+ *ogkos*, mass]. A neoplasm of the testicle.

orchidopexy (or-kīd-ō-pēks'ī) [+ *pēxis*, fixation]. Surgical transfer of an imperfectly descended testicle into the scrotum and suturing it there.

orchidoplasty (ōr-kīd-ō-plās'tī) [+ *plassein*, to form]. Operative transfer of an undescended testicle to the scrotum.

orchidoptosis (ōr-kīd-ōp-tō'sis) [+ *ptōsis*, a falling]. Drooping of the testicle.

orchidotomy (ōr-kīd-ōt'ō-mī) [G. *orchis*, orchid-, testicle, + *tomē*, incision]. Incision into the testes.

orchietomy (ōr-kī-ēkt'ō-mī) [+ *ektomē*, excision]. Surgical excision of a testicle. SEE *castration*.

orchiencephaloma (or-kī-ēn-sef-ā-lō'mā) [+ *egkephalos*, brain, + *ōma*, tumor]. Tumor of brainlike substance in the testicle. SEE *orchiomyeloma*.

orchiepididymitis (or-kī-ep'īdīd-ī-mī'tīs) [+ *epi*, upon, + *didymos*, testis, + *-itis*, inflammation]. Inflamed condition of a testicle and epididymis.

orchiocele (or-kī-ō-sēl) [+ *kēlē*, mass]. 1. Scrotal hernia. SYN. *orchidocele*. 2. A tumor of the testicle.

orchidodynia (ōr-kī-ō-dīn'ī-ā) [+ *odynē*, pain]. Testicular pain. SYN: *orchialgia*, *orchidalgia*.

orchiomyeloma (or-kī-ō-mī-ē-lō'mā) [G. *orchis*, testicle, + *myelos*, marrow, + *ōma*, tumor]. Tumor of the testicle composed of marrowlike cells.

orchioncus (ōr-kī-ōng'kūs) [+ *ogkos*, tumor]. Neoplasm of the testicle. SYN: *orchidoneus*.

orchioneuralgia (or-kī-ō-nū-rāl'jī-ā) [+ *neuron*, sinew, + *algos*, pain]. Neuralgia of the testicles. SYN. *orchialgia*.

orchlopathy (ōr-kī-ōp'āth-ī) [+ *pathos*, disease]. Any diseased condition of the testes.

orchlopexy (or-kī-ō-peks'ī) [+ *pēxis*, fixation]. The suturing of an undescended testicle in the scrotum. SYN: *orchidopexy*, *orchiorrhaphy*.

orchloplasty (or-kī-ō-plās'tī) [+ *plassein*, to form]. Plastic repair of the testicle.

orchiorrhaphy (ōr-kī-ōr'rā-fī) [+ *raphē*, a sewing]. The suturing of an undescended testicle to surrounding tissue in the scrotum. SYN. *orchidopexy*, *orchlopexy*.

orchiosceoce (or-kī-ōs'kē-ō-sēl) [+ *osché*, scrotum, + *kēlē*, hernia]. Scrotal hernia with enlargement or tumor of testicle.

orchioscirrhosis (or-kī-ō-skēr'rōs) [G. *orchis*, testicle, + *skirros*, hard]. Testicular hardening due to tumor formation.

orchis (ōr'kis) [G.]. A testicle.

orchitic (or-kī'tik) [G. *orchis*, testicle, + *-itis*, inflammation]. Concerning or caused by orchitis.

orchitis (ōr-kī'tis) [+ *-itis*, inflammation]. Inflammation of a testis due to trauma, metastasis, mumps, or infection elsewhere in the body.

SYM. Swelling, severe pain, possibly gangrene, chills, fever, vomiting, hiccough, delirium. May end in atrophy of organ.

TREATMENT. In mumps, prevention by confining patient to bed first 8 days, locally by immobilization of organ and ice cap.

For acute pain, relief of tension by incision of tunica albuginea, after exposure of organ through scrotal incision, to prevent gangrene. Orchidectomy in suppurative forms, referable to kidney, evidenced by pain increased by exercise, tenderness, frequent urination.

Palliative treatment is orthopedic training in proper posture, etc., improvement in general vitality, combating psychasthenia by overfeeding, massage, hygiene, etc., abdominal support.

o., **gonorrhoeal**. O due to gonococcus.

o., **metastatic**. O due to infection from organisms in blood stream.

o., **syphilitic**. SYM. Begins painlessly in body of gland as a rule, apt to be bilateral, causes dense, irregular, knotty induration, but not much increase in size.

o., **tuberculous**. Form generally arising in the epididymis. It may be accompanied by formation of chronic sinuses, and destruction of tissues.

SYM. Little or no pain. Begins as hard, irregular enlargement at lower and post. aspect of gland, gradually increasing, sometimes extends along vas deferens. Later whole gland undergoes caseous degeneration.

TREATMENT. If unilateral, castration; if bilateral, palliative and symptomatic treatment until evidence of complete destruction. Sinuses and abscesses cured and treated antiseptically, general health improved.

orchitolytic (or-kī-ō-lī'tik) [G. *orchis*, testicle, + *lysis*, destruction]. Destructive to testicular tissue.

orchotomy (ōr-kōt'ō-mī) [+ *tomē*, in-

cision]. 1. Incision into a testicle. 2. Erroneously, excision of the testes. **SYN:** *orchectomy*.

orcin, orcinol (or'sin, -ol). Antiseptic derived from lichens, used in skin disorders.

orderly (or'dér-lí) [L *ordō*, order]. Male attendant in a hospital, other than doctors or interns, responsible for care or preparation of male patients.

They shave male patients preparatory to operation, catheterize them, and assist nurses in lifting.

orexigenic (ô-rék-sí-jén'ík) [G *orexis*, appetite, + *gennan*, to produce]. Stimulating the appetite.

oreximania (ô-rék-sí-mā'ní-ā) [I' + *mania*, madness]. Abnormal desire for food.

organ (or'gān) [G *organon*, organ]. A part of the body having a special function.

Most organs are in pairs. Any 1 organ may be extirpated and the remaining 1 will perform all necessary functions peculiar to it. Even the right half of the brain may be removed without being fatal. From one-third to two-fifths of some organs may be removed without interference with their functions.

RS *carreau*, name of each in alphabetical order, *viscus*.

o., accessory. One having a subordinate function.

o., acoustic. **SEE** *o. of Corti*.

o. of Corti. Terminal acoustic apparatus in the cochlea. **SEE** *Claudius' cell, ear*.

o., enamel. A knoblike thickening which develops on dental lamina which gives rise to a double-walled, cup-shaped organ that encloses the dental papilla. It functions in the shaping of the tooth and the formation of enamel.

o., end. The specialized termination of a sensory nerve fiber which serves as a receptor. May be nonencapsulated or encapsulated.

o., endocrine. An organ yielding internal secretions. **SEE** *endocrine*.

o., excretory. An organ which is concerned with the excretion of waste products from the body.

o's. of generation. The reproductive organs, external and internal. **SEE** *genitalia, male and female*.

o. of Girdles. A small body on the spermatic cord, above the epididymis. **SYN** *paradidymis*.

o., Golgi's. **SYN** *neurotendinous spindle*, Golgi's corpuscle. A spindle-shaped structure at junction of a muscle and tendon. Functions as a receptor for proprioceptive sense.

o., gustatory. A taste bud.

o. of Jacobson. **SYN** *vomeronasal organ*. A blind tubular sac which develops in medial wall of nasal cavity; becomes a functional olfactory organ in lower animals but degenerates or remains rudimentary in man.

o., reproductive. Any organ concerned with the production of offspring. Includes the *primary organs* (testes and ovaries) and *accessory structures* (all glands or ducts concerned with reproduction).

o. of Ruffini. **SYN** *corpuscle of Ruffini*.

Average Size, Weight and Capacity of Various Organs and Parts of the Body

Name	Size	Weight	Capacity
Bladder	5 x 3 x 5 in.		½ to 1 pt.
Esophagus	8 to 9 in.		
Fallopian tubes	4 in. long, 1/16 in. diameter		
Gallbladder	3 to 4 in. long, 1 in. wide		
Heart	5 x 3½ x 2½ in.	8 to 12 oz.	8 to 10 dr. 4-6 oz. in each ventricle.
Intestines—Duodenum	8 to 10 in. long		
Intestines—Jejunum	8 ft. long		
Intestines—Ileum	12 ft. long		
Intestines—Cecum	2 x 3 in. pouch		
Intestines—Vermiform appendix	3 to 6 in. long		
Intestines—Colon	4 to 6 ft. long		1 gal.
Intestines—Rectum	6 to 8 in. long		
Kidney	4 x 2½ x 1½ in.	4 to 6 oz.	
Lung—Three right lobes		22 oz.	
Lung—Two left lobes		20 oz.	
Liver	12 x 6 x 3 in.	3 to 5 lb.	
Ovaries	1½ x ¾ x ½ in.	½ oz. each.	
Prostate Gland	1 x 1½ x ¾ in.	¾ oz.	
Pharynx	4½ in. long.		
Pancreas	7 x 2 x 1 in.	2 to 4 oz.	
Spleen	5 x 3 x 2 in.	6 to 10 oz.	
Stomach	12 x 4 in.	4 to 5 oz.	3 pt.
Spinal cord	17 to 18 in. long.	1 to 1½ oz.	
Suprarenal Capsule	1½ to 2 in. long.	1 to 2 dr.	
Thoracic duct	18 to 20 in. long.		
Trachea	4 to 5 in. long, ¾-in. diameter.		
Thyroid gland	3 in. long.	1 to 2 oz.	
Thymus gland	2 x 1½ in. long.	½ oz.	
Testes	1-in. diameter, 1½ in. long.	6 to 8 dr. each.	
Uterus	3 x 2 x 1 in.	1 to 3 oz.	
Ureter	12 to 16 in.		
Urethra—Male	8 to 9 in. long.		
Urethra—Female	1½ in. long.		

fini. Sensory receptor of warmth located principally at tips of fingers.

o., sense. A sensory receptor. A structure consisting of specialized sensory nerve endings which are capable of reacting to a stimulus, (an environmental change) by giving rise to nerve impulses which pass through afferent nerves to the central nervous system. These impulses may give rise to sensations or reflexly bring about responses in the body.

o., sex. A reproductive organ
o., special sense. The eye, ear, and organs of smell and taste

o., vomeronasal. SEE *Jacobson's o.*
o., Weber's. Residual prostatic pouch in the male, the remains of the mulierian ducts

o's. of *Zuckerkindl*. A pair of o's, appearing in the embryo and persisting until shortly after birth. Located under anterior surface of abdominal aorta.

organelle. SYN *organoid*. A specialized part of a cell which performs a definite function. Ex mitochondria, Golgi apparatus, plastids.

organic (or-gân'ik) [G. *organon*, organ] 1 Pert. to an organ or organs. 2 Structural. 3 Pert. to or derived from animal or vegetable forms of life.

o., acid. Any acid containing the carboxyl group. Ex acetic, formic, lactic, and all fatty acids.

o., chemist. Branch dealing with carbon compounds.

o., disease. A disease associated with observable or detectable changes in the organs or tissues of the body.

o., psychoses. PSY A general term applied to those psychoses induced by structural brain changes.

In general, a character change is manifested in behavior and disposition. The patient is less stable than before emotional instability, irritability and anger outbursts being frequent. His attention fluctuates widely, gradually he deteriorates, early or later, memory, comprehension, ideation, and orientation become defective.

Etiol. Alcohol, narcotics, trauma, syphilis, drugs, poisons, chronic infections, encephalitis, brain tumors among many others.

o., sensation. One which arises from the organs of the body.

Muscles, joints, and tendons give us a sense of position and movement, without touching anything. This sense is also given by the internal ear. A sense of hunger and thirst may arise from the alimentary system. The circulatory, urinary, respiratory, and sexual systems also stimulate sensations.

organism (or-gân-izm) [G. *organon*, organ, + *ismos*, condition]. A living thing, plant or animal. May be unicellular (bacteria, yeasts, protozoa) or multicellular (all complex organisms including man).

organization (or-gân-l-zâ'shûn) [G. *organon*, organ] 1 Process of correlating. 2. Systematic arrangement. 3 That which is organized, an organism.

o., center. 1. A group of cells in an embryo which through evocators induces the development of another structure. 2. A region in an ovum which is responsible for the mode of development of the fertilized ovum.

organize (or-gân-lz) [G. *organon*, organ]. 1. To correlate or systematize. 2. To furnish with organs.

organogenesis, organogeny (or-gân-ô-jen'-ê-sis, -ô-jên-l) [+ *gennan*, to produce].

The formation and development of body organs from embryonic tissues.

organography (or-gân-og'râ-fî) [+ *graphein*, to write]. The description of the body organs.

organoid. An organelle, *q.v.*
organoleptic (or-gân-ô-lep'tik) [+ *lêp-sis*, a seizure]. 1. Affecting an organ, esp. the organs of special sense. 2. Susceptible to sensory impressions.

organology (or-gân-ol'-ô-lî) [+ *logos*, study]. The science dealing with the body organs.

organon (or-gân-ôn) [G. & L. *organon*] An organ.

o., auditus. BNA Organ of hearing.

o., gustus. BNA Organ of taste.

o., olfactus. BNA Organ of smell.

o., spirale. BNA Spiral organ in the cochlea. SYN *organ of Corti*.

o., visus. BNA The organ of sight.

o., vomeronasale. BNA Canal opening into nasal septum. SYN *Jacobson's organ*.

organopexia (or-gân-ô-pêk'si-â) [G. *organon*, organ, + *pêxis*, fixation] Surgical fixation of an organ that is detached from its proper position.

organoscopy (or-gân-ô-skô-plî) [+ *skopein*, to examine] Examination of the internal organs of the body.

organotherapy (or-gân-ô-thêr'â-plî) [+ *therapeia*, treatment]. The treatment of disease by preparations of the endocrine glands of animals, or by extracts made from the same.

organotrope, organotropic (or-gân-ô-trôp, -trôp'ik) [+ *tropos*, a turning] Having affinity for tissues, noting substances acting on the organs of the body.

orgasm (or-gâm) [G. *orgazō*, to swell, to lust]. A state of paroxysmal emotional excitement, esp that which occurs at the climax of sexual intercourse. In the male it is accompanied by the ejaculation of semen.

oridine (or'î-dên). The calcium salt of iodized fatty acids containing 23-25% organic iodine.

Uses: A more easily tolerated form of Dosage: 1/6 gr. (10 mg.) iodine.

oriental sore. An ulcerating, chronic, nodular skin lesion prevalent in the Orient and the tropics, due to parasites of the genus *Leishmania*.

orientation (or'î-ên-lâ'shûn) [L. *oriens*, the east] Ability to comprehend and to adjust one's self in an environment with regard to time, location, and identity of persons. [psychoses.]

Partially or completely absent in some **orifice** (or'î-fis) [L. *orificium*] Mouth, entrance or outlet to any aperture.

o., anal. The anus.

o., atrioventricular. The opening between the atrium and the ventricle on each side of the heart.

o., auriculoventricular. The atrioventricular orifice, *q.v.*

o., cardiac. Opening of esophagus into stomach.

o., mitral. Opening between atrium and ventricle.

o., pyloric. Opening from stomach into the duodenum. SEE *pylorus*.

o., ureteric. Opening of ureter into bladder.

o., urethral, external. Ext. opening of the urethra. In male, located at tip of glans penis; in female, located anterior to vaginal opening.

o., urethral, internal. Opening from which urethra makes its exit from bladder.

orificial (or-î-fî'shî-â) [L. *orificium*, outlet]. Pert. to or forming an orifice.

officialist (or-'fīsh-'āl-'ist) [L. *officium*, outlet]. One who practices official surgery in the treatment of disease.

origin (or-'ī-'jīn) [L. *origo*, beginning]. 1. The source of anything, a starting point. 2. The beginning of a nerve. 3. The more fixed attachment of a muscle.

o., deep, ental. The region within the brain where the fibers comprising a cranial nerve terminate.

o., superficial, ectal. Point where a cranial nerve makes its exit from the brain.

orinase (or-'ī-'nās) Proprietary brand of tolbutamide (1-butyl-3-p-tolylsulfonurea). An antidiabetes agent used in treatment of diabetes mellitus. Administered orally.

Ornithodoros. A genus of ticks belonging to the family Argasidae, which infest mammals including man. Several species serve as transmitters of the causative agents of disease including spotted fever, tick fever, Q fever, tularemia, Russian encephalitis, and relapsing fever.

ornithosis (or-'nī-'tho-'sis). A virus disease of birds, communicated to man. The causative agent closely resembles the virus of psittacosis.

orodagnosis (or-'ō-'dī-'āg-'nō-'sis) [G. *oros*, serum, + *dia*, through, + *gnōsis*, knowledge]. Diagnosis by using serums or serum reactions.

orolingual (ō-'rō-'līng-'wāl) [L. *os*, or-, mouth, + *lingua*, tongue]. Concerning the mouth and tongue.

oronasal (ō-'rō-'nā-'zāl) [" + *nasus*, nose]. Concerning the mouth and nose.

oropharynx (ō-'rō-'far-'īngks) [" + G. *pharynx*, pharynx]. Portion of pharynx between the soft palate and hyoid bone.

orthopathy (ō-'rō-'thēr-'ā-'pl) [" + G. *therapeia*, treatment]. 1. Treatment of disease with serums. SYN. *serotherapy*. 2. Use of whey in treatment.

Oroya fever. SYN. *verruca peruana*, *bartonellosis*, *Carrion's disease*. An acute infectious disease endemic in Peru and other S. A. countries. Caused by *Bartonella bacilliformis* and transmitted by sandflies (*Phlebotomus*). SYN. *intermittent fever*; *pernicious anemia*; and *pains in joints*, *long bones*, and *head*.

orthology (or-'rō-'ō-'lī) [" + *logos*, study]. The study of serums and their reactions. SYN. *serology*.

orrhomenitis (or-'rō-'men-'īn-'jī-'tis) [" + *ménigz*, membrane, + *-itis*, inflammation]. Inflammation of a serous membrane.

orrhoreaction (or-'rō-'rē-'āk-'shūn) [" + L. *rē*, back, + *actus*, acted]. A reaction from injection of serum.

orrhorrhea (or-'rō-'rē-'ā) [" + *roia*, flow]. 1. A flow of serum. 2. A watery discharge. SYN: *seriflux*.

orthotherapy (or-'rō-'thēr-'ā-'pl) [" + *therapeia*, treatment]. 1. Serum therapy. 2. Whey cure.

ortho- [G.]. Combining form meaning *straight*, *correct*.

orthocephalic (or-'thō-'sē-'fāl-'īk) [" + *kephalē*, head]. Noting a head with a height-length index bet. 70 and 75.

orthochorea (or-'thō-'kō-'rē-'ā) [" + *chorea*, dance]. Movements of chorea in erect posture.

orthochromatic (or-'thō-'krō-'mat-'īk) [" + *chrōma*, color]. Having normal color.

orthochromophil (or-'thō-'krō-'mō-'fīl) [" + *philein*, to love]. Staining normally with neutral dyes.

orthocrasia (or-'thō-'krā-'sī-'ā) [" + *krasis*,

temperament]. Condition in which the body reacts normally to drugs, proteins and treatment in general.

orthodiagraph (or-'thō-'dī-'ā-'grāf) [" + *dia* through, + *graphein*, to write]. An instrument for accurately recording the outlines and positions of organs or foreign bodies as seen by radiographic apparatus.

orthodysita. The division of podiatry which deals with the correction of deviated toes; the prevention and correction of deformities of the fingers or toes.

orthodontia (or-'thō-'don-'shl-'ā) [" + *odous*, *odont-*, tooth]. Division of dentistry dealing with prevention and correction of irregularities of the teeth.

orthoform (or-'thō-'form) Proprietary name of a topical anesthetic (ortho-caine).

orthogenesis (or-'thō-'jén-'ē'sis) [G. *orthos*, straight, + *genesis*, development]. A biological principle that variations in an animal species begin to assume a definite direction, resulting in evolution of a new type, irrespective of ext. factors. SEE *kinetic system*.

orthognathous (or-'thō-'nā-'thūs) [" + *gnathos*, jaw]. Having straight jaws with a gnathic index of 97.9 or less.

orthograde (or-'thō-'grād) [" + L. *gradus*, a step]. Walking with the body vertical or upright.

orthometer (or-'thom-'ēt-'ēr) [" + *metron*, measure]. Device for determining the degree of protrusion of the eyes.

orthopedia (or-'thō-'pē-'dī-'ā) [" + *pais*, paid-, child]. Prevention or correction of deformities. SYN. *orthopedics*.

orthopedic (*orthopaedic*) (or-'thō-'pē-'dīk) [" + *pais*, paid-, child]. Concerning orthopedics, prevention or correction of deformities.

o., surgery. Surgical prevention and correction of deformities.

orthopedics (*orthopaedics*) (or-'thō-'pē-'dīks) [G. *orthos*, straight, + *pais*, paid-, child]. Branch of medical science that deals with treatment of disorders involving locomotor structures of the body, esp. the skeleton, joints, muscles and fascia. Term formerly applied to treatment of deformities in children.

orthopedist (or-'thō-'pē-'dīst) [G. *orthos*, straight, + *pais*, paid-, child]. A specialist in orthopedics.

orthopercussion (or-'thō-'pēr-'kūsh-'ōn) [" + L. *percussio*, a striking through]. Percussion with the distal phalanx of the percussing finger held perpendicularly to the surface percussed.

orthophoria (or-'thō-'fō-'rī-'ā) [G. *orthos*, straight, + *pherein*, to bear]. Parallelism of visual axes, the normal muscle balance.

orthophrenia (or-'thō-'frē-'nī-'ā) [" + *phrēn*, mind]. The normal mental state of one who shares his emotional life with the family or a group.

orthopnea (or-'thōp-'nē-'ā) [" + *pnein*, to breathe]. Respiratory condition in which breathing is possible only when person sits or stands in erect position.

Error. Seen in grave cardiac diseases, bronchial and cardiac asthma, edema of lungs, severe emphysema, pneumonia, angina pectoris, spasmodic croup, aneurysm or tumor pressing down on pneumogastric nerve.

Syn: Respiratory rate, slow or rapid; sitting or standing posture necessary; muscles of respiration forcibly used; patient feels necessity of bracing himself in order to breathe. Anxious expres-

sion, face cyanosed. Struggle to inhale and exhale.

RS: *dyspnea, hyperpnea, hypopnea, oligopnea, posture, respiration.*

orthopraxy (or'thō-prāk-sī) [+ *prasein*, to make]. Correction and prevention of deformities by mechanical means. SYN *orthopedics*.

orthopsychiatry (or'thō-sī-kī'ā-trī) [+ *psychē*, soul, + *iatreia*, treatment]. The study and treatment of conduct disorders, esp. in the young.

orthoptic (or-thōp'tik) [G. *orthos*, straight, + *optikos*, pert. to vision]. Pertaining to normal binocular vision.

o. *training*. Eye muscle exercises for the purpose of correcting squint; orthoptics

orthoptics. The science of correcting defects in binocular vision resulting from defects in optic musculature or faulty visual habits

orthoröntgenography (or'thō-rēnt-gēn-og'rā-fī) [+ *roentgen*, + G. *graphein*, to write]. Measurement of size and position of internal organs accurately, using radiographic apparatus. SEE *orthodiagraph*.

orthoscope (or'thō-skōp) [G. *orthos*, straight, + *skopein*, to examine]. Instrument for examining the eyes through a layer of water.

orthoscopic (or'thō-skōp'ik) [+ *skopein*, to examine] 1 Having correct vision. 2 Seen without distortion. 3. Made to correct optical distortion.

orthoscopy (or-thōs-kō-pī) [+ *skopein*, to examine]. Ocular examination with an orthoscope

orthosis. The straightening or correction of a deformity

orthostatic (or'thō-stāt-ik) [+ *statos*, standing]. Concerning an erect position.

orthostatism (or'thō-stāt-izm) [+ *statos*, condition]. An upright standing position of the body.

orthotast (or'thō-tāst) [+ *tassein*, to arrange]. Instrument for straightening bone curvatures.

orthotonos, orthotonus (or-thōt'ō-nos, -nūs) [+ *tonos*, tension]. Tetanic spasm marked by rigidity of the body in a straight line. SEE: *Illus, O-20*.

orthuria (orth-ū'rī-ā) [+ *ouron*, urine]. Average frequency of urination.

oryzenin (ō-rī'zēn-in) [G. *oryza*, rice] A glutenin obtained from rice.

O. S., o. s. Abbr. for L. *oculus sinister*, left eye.

Os. Symb for *osmium*.

os (ōs) (pl. *ōra*) [L.]. Mouth, opening.

o. *uteri*. Mouth of the uterus.

o. *uteri externum*. The opening of cervical canal of uterus into the vagina.

o. *uteri internum*. The internal opening of the cervical canal into the uterus.

o. *ventriculi*. The cardia of the stomach

os (ōs) (pl. *ossa*) [L.]. Bone.

o. *calcis*. Heel bone. SYN: *calcaneum*.

o. *coxae*. Hip bone.

o. *hamatum*. Hooked bone in second row of carpus. SYN: *unciform bone*.

o. *hyoideum*. U-shaped bone at the base of the tongue. The hyoid bone.

o. *illum*. The ilium.

o. *innominatum*. SEE: o. *coxae*.

o. *magnum*. SYN: *capitate* A carpal bone, the third in the second distal row.

o. *orbiculare*. Tiny bone in the ear which usually becomes attached to the incus, forming the lenticular process

o. *peroneum*. Bone occasionally found in tendon of peroneus longus muscle

o. *planum*. 1. Flat bone. 2. Orbital plate of ethmoid bone

o. *pubis*. The public bone

o. *scaphoides*. SEE *scaphoid*

o. *trigonum*. Bone which develops from an extra center of ossification along post. surface of talus.

o. *unguis*. Lacrimal bone

o. *vesalianum*. Bone which develops from ossification of the post tubercle of the fifth metatarsal

osazone (ō'sā-zōn, ō'sā-zōn'). Any of a series of compounds resulting from heating sugars with acetic acid and phenylhydrazine.

oscedo (os-sē'dō) [L yawning] 1 Yawning 2 White spots on the mucosa of the mouth SYN *aphthae*.

oscheal (os'kē-āl) [G *oscheon*, scrotum]. Concerning the scrotum

oscheio-, oscheo- [G]. Combining forms meaning the scrotum.

oscheitis (ōs-kē-ī'tis) [G. *oscheon*, scrotum, + *-itis*, inflammation]. Inflamed condition of the scrotum.

oschecele (os'kē-ō-sēl) [+ *kēlē*, swelling]. 1. A scrotal swelling or tumor. 2. Scrotal hernia. SYN *oscheoma*.

oscheohydrocele (os'kē-ō-hī'drō-sēl) [+ *ydōr*, water, + *kēlē*, hernial]. Collection of fluid in the sac of a scrotal hernia

oscheolith (os'kē-ō-lith) [+ *lithos*, stone]. A concretion in the scrotal sebaceous glands.

oscheoma (ōs-kē-ō-mā) [+ *-ōma*, tumor]. Scrotal tumor. SYN: *oscheoncus*.

oscheoncus (ōs-kē-ōn'kūs) [+ *ogkos*, tumor]. A tumor of the scrotum.

oscheoplasty (os'kē-ō-plās-tī) [+ *plasein*, to form]. Plastic surgical repair of the scrotum

oschitis (os-kī'tis) [G. *oscheon*, scrotum, + *-itis*, inflammation]. Inflamed condition of the scrotum. SYN: *oscheitis*.

oscillation (ōs'sil-ā'shūn) [L. *oscillāre*, to swing]. A swinging, pendulumlike movement; a vibration.

oscillogram (os'il-ō-grām) [+ G. *gramma*, a mark]. Record made by the oscillograph.

ORTHOTONOS.

oscillograph (ôs'il-lô-grăf) ["" + *G. graphēin*, to write]. Machine for recording electric vibrations, as of the heart or blood pressure.

oscillometer (ôs'il-om'ēt-ēr) ["" + *G. metron*, measure]. Machine to measure oscillations.

oscillometry (ôs'il-om'ēt-trī) ["" + *G. metron*, measure]. The measurement of oscillations with a machine.

oscilloscope (ôs'il'ô-skôp) ["" + *G. skopein*, to examine]. An instrument for making visible the presence or the nature and form of oscillations or irregularities of an electric current.

Oscinidae. SYN *Chloropidae*. The eye flies. A family of small hairless flies which includes the genera *Hippelates*, *Siphunculina*, and *Oscinis*. They are serious pests and transmit a number of infectious diseases.

oscitation (ôs-i-ta'shūn) [L. *oscitare*, to yawn]. Yawning, gaping.

osculation. 1 The union of two vessels or structures by their mouths. 2 Kissing.

osculum (os'ku-lūm) [L. a little mouth]. Any tiny aperture or pore.

-ose. Chemical suffix indicating (a) the presence of carbohydrates, as *glucose*, (b) primary alteration product of a protein, as *proteose*.

-osis (G.) Suffix denoting *caused by, state of, disease, intense*.

Ossler-Weber-Rendu disease. SEE *tela-angiectas*, *a. hereditary hemorrhagic*.

Ossler's disease (ôs'lēr). Rare disease of the blood in which the red cells are increased in number, the spleen becomes enlarged, and cyanosis is usually present. SYN *erythremia*, *polycythemia*.

osmate. A salt of osmic acid.

osmatic (ôz-măt'ik) [G. *osmaein*, to smell]. Having a keen sense of smell.

osmesis (ôz-mēs'is) [G. *osmesis*, smelling]. The sense of smell, act of smelling.

osmesthesia (ôz-mēs-thē'zī-ā) [G. *osmē*, smell, + *aisthēsis*, sensation]. Olfactory sensibility, power of perceiving and distinguishing odors.

osmic acid (ôz'mik) [G. *osmē*, smell]. 1. Volatile, colorless compound formed by heating osmium in air. 2. Compound of osmium trioxide and water ($H_2O_5O_3$).

osmicate (ôz'mī-kăt) [G. *osmē*, smell]. To impregnate or stain with osmic acid.

osmics (ôz'miks) [G. *osmē*, smell]. The science of odors.

osmidrosis (ôz-mīd-rô'sis) ["" + *idrôsis*, perspiration]. Condition in which perspiration has a very strong odor. SYN: *bromidrosis*.

osmium (ôz'mī-ūm) [G. *osmē*, smell]. SYMS Os A metallic element, at wt. 190.2, at. no. 76.

osmo- (G.). Combining form 1. (osme) odor or smell, and 2 (osmos) threat or push. 3. Pertaining to osmosis.

osmodysporia (ôz-mô-dis-fô'ri-ā) ["" + *dys*, bad, + *pherein*, to bear]. Abnormal dislike of certain odors.

osmolagnia (ôz-mô-lăg'nī-ā) [G. *osmē*, a smell, + *lagnēia*, lust]. Erotic satisfaction derived from odors, usually of the body.

osmology (ôz-môl'ô-jī) ["" + *logos*, study]. 1. The study of odors. SYN: *osphres-*

ology. 2 [G. *ôsmos*, a thrusting]. Study of osmosis.

osmometer (ôz-môm'ēt-ēr) [G. *osmē*, smell, + *metron*, measure]. 1. Device for measuring acuity of sense of smell.

2 [G. *ôsmos*, a pushing]. A device for measuring osmotic pressure.

osmonosology (ôz'mô-nô-sôl'ô-jī) [G. *osmē*, smell, + *nosos*, disease, + *logos*, study]. Branch of medicine dealing with diseases of the organs of smell.

osmophobia. Morbid fear of odors.

osmose (ôz'môs) [G. *ôsmos*, a thrusting]. 1. To subject to osmosis. 2. To undergo osmosis.

osmosis (ôz-mô'sis) ["" + *-ôsis*, intensive]. The passage of solvent through a partition separating solutions of different concentrations.

The solvent, usually water, passes through the membrane from the region of lower concentration to that of a higher concentration thus tending to equalize the concentrations of the two solutions.

Osmosis in which the solvent passes into a vessel or into a cell is called *endosmosis*, that in which the solvent passes from within outward is called *exosmosis*.

The rate of osmosis is dependent primarily upon (1) difference in osmotic pressures of the solutions on the two sides of a membrane, (2) the permeability of the membrane, (3) electric potential across the membrane and charge upon walls of the pores in it.

Liquid of low pressure always passes through membrane to liquid of higher pressure until both are equal.

RS *absorption, dialysis, diffusion, di-osmosis, hypotonic, isotonic*.

osmotic (ôz-môt'ik) [G. *ôsmos*, a thrusting]. Pertaining to osmosis.

o. pressure. 1 The pressure which develops when two solutions of different concentrations are separated by a semipermeable membrane. 2 The pressure which would be developed if a solution were enclosed in a membrane impermeable to all solutes present and surrounded by pure solvent.

Osmotic pressure varies with concentration of the solution and with temperature increasing with an increase of each. Animal cells have an osmotic pressure approximately equal to that of the circulating fluid, the blood. For human blood cells, this is approximately 7.2 atmospheres or the pressure exerted by a 0.9% sodium chloride solution. Solutions exerting this osmotic pressure are said to be *isotonic* or *isosmotic*. Stronger solutions which cause cells to shrink are *hypertonic*, weaker solutions which cause cells to swell are *hypotonic*.

osphresiolagnia (ôs-frē'zī-lô-lăg'nī-ā) [G. *osphrēsis*, smell, + *lagnēia*, lust]. Excitement of an erotic nature aroused by odors.

osphresiology (ôs-frē-zī-ôl'ô-jī) ["" + *logos*, study]. Science of odors and the sense of smell. SYN: *osmology*.

osphresiometer (ôs-frē-zī-ôm'ēt-ēr) ["" + *metron*, measure]. Apparatus for measuring the acuteness of the sense of smell. SYN: *osmometer*, 1.

osphresis (ôs-frê'sis) [G. *osphrêsis*, smell]. The sense of smell. SYN. *olfaction*.

osphretic (ôs-fret'ik) [G. *osphrêsis*, smell]. Concerning the sense of smell. SYN: *olfactory*.

osphus (ôs'fús) [G. *osphys*, loin]. Loin.

osphyalgia (ôs-fi-al'ji-â) [" + *algos*, pain]. Pain of the loins or hips. SEE: *lumbago*, *sciatica*.

osphyitis (ôs-fi-'tis) [" + *-itis*, inflammation]. Inflammation in the lumbar region.

osphyomyelitis (ôs'fi-ô-mi-êl-'tis) [" + *myelos*, marrow, + *-itis*, inflammation]. Inflamed condition of the lumbar region of the spinal cord.

os pubis (ôs pû'bis) [L *os*, bone, + *pubis*, pubes]. A bone that in adult life unites the innominate or hip bone with the ilium and ischium to form the pelvis. Irregular shape, divided into a horizontal, ascending, and descending ramus. The outer extremity constitutes approximately one-fifth of the acetabulum. The inner unites in middle line with corresponding part of the bone of opp. side, forming the symphysis pubis.

ossa (ôs'â) (sing *os*). Bones

osselin (ôs'ê-lin) [L *ossa*, bones] The organic substance of bones. SYN *ostein*.

osseous (ôs'ê-ûs) [L. *osseus*, bony] Bone-like; concerning bones. SYN *bony*.

ossicle (ôs'ikl) [L. *ossiculum*, little bone]. Any small bone, as 1 of the 3 bones of the ear, the *malleus*, *incus*, or *stapes*.

ossicula (ôs'ik-û-lâ) [L *pl*]. Little bones.

ossiculectomy (ôs'ik-û-lêk'tô-mi) [L. *ossiculum*, little bone, + G *ektomê*, excision]. Excision of an ossicle, especially one of the ear.

ossiculectomy (ôs'ik-û-lôt'ô-mi) [" + G. *tomê*, incision]. Surgical incision of 1 or more of the ossicles of the ear.

ossiculum (ôs'ik-û-lûm) [L] Tiny bone, esp. 1 of the 3 in the middle ear.

ossiferous (ôs-if'êr-ûs) [L. *os*, bone, + *ferre*, to bear]. Composed of, or forming bone or bony tissue.

ossific (ôs-if'ik) [" + *facere*, to make]. Producing or becoming bone.

ossification (ôs'if-ik-â'shûn) [" + *facere*, to make]. 1. Formation of bone substance. 2. Conversion into bone. SEE: *center*, *epiotic*, *centrosclerosis*.

o., endochondral. SYN. *intracartilaginous o.* The formation of bone in cartilage as in formation of long bones. It involves (1) the destruction and removal of cartilage and (2) the formation of osseous tissue in space occupied by the cartilage.

o., intramembranous. The formation of bone in or underneath a fibrous membrane, such as occurs in formation of the cranial bones.

o., pathologic. Formation of bone in abnormal sites or abnormal development of bone.

ossifurcance. Osteolysis or softening of bone.

ossiform. Resembling bone.

ossify (ôs'f-i) [" + *facere*, to make]. To turn into bone.

ostalgia (ôs-tâl'ji-â) [G. *osteon*, bone, + *algos*, pain]. Pain in a bone. SYN: *osteodynia*.

osteal. Pert. to bone.

osteallosis (ôs'tê-âl-'lô-sis). A change in the substance of bone.

osteobrosis (ôs'tê-ân-â-brô'sis) [" + *anabrosis*, eating up]. Wasting away of bone.

osteogenesis (ôs'tê-ân-â-jên'ê-sis) [" +

anagenesis, reproduction]. Regeneration or re-formation of bone.

osteoarthritis (ôs'tê-âr-thrî'tis) [" + *arthron*, joint, + *-itis*, inflammation]. Inflamed condition of bones and joints.

osteothrombosis (ôs'tê-âr-thrôt'ô-mi) [" + *thrombosis*, clotting]. Surgical excision of the articular end of a bone.

osteotomy, **osteectomy** (ôs-têk'tô-mi, -tê-êk'tô-mi) [" + *ektomê*, excision]. Surgical excision of a bone or a portion of one.

osteotopia (ôs'tê-êk-tô-pl-â) [" + *ek*, out, + *topos*, place]. Dislocation of a bone.

osteitis (ôs-tê-'tis) [" + *-itis*, inflammation]. Inflammation of a bone.

o., condensing. O in which the marrow cavity becomes filled with osseous tissue. Bone becomes denser and heavier.

o., deformans. Chronic form with thickening and hypertrophy of the long bones and deformity of the flat bones.

o., slow and insidious in onset. Pain in lower limbs, esp the tibia. Frequent fractures. Waddling gait. Skull becomes enlarged, so that the face appears small and triangular in shape with the head pushed forward. Stature shortens. Occurs only in adults.

TREATMENT. Constitutional and palliative. SYN: *Paget's disease*.

o., fibrosa cystica. SYN. *von Recklinghausen's disease*, *hyperparathyroidism*. A condition resulting from overactivity of the parathyroid gland, with resulting disturbances in calcium and phosphorus metabolism. Characterized by decalcification and softening of bone, nephrolithiasis, and elevation of blood calcium and lowering of blood phosphorus. Cysts often multiple, and tumors may develop.

o., gummatous. Chronic o associated with syphilis and characterized by the formation of gummas.

o., rarefying. SYN: *osteoporosis*. Form in which the bone tissue becomes cancellated.

o., sclerosing. SEE *o., condensing*.

ostembryon (ôs-têm'brî-ôn) A fetus which has become ossified.

ostemia (ôs-tê-mi-â) [G. *osteon*, bone, + *aima*, blood] Congestion of blood in a bone.

ostempyema (ôs-têm-pl-ê'sis) [" + *em-pyema*, suppuration]. Purulent inflammation within a bone.

osteo- [G.]. Combining form meaning bone.

osteoneurysm (ôs'tê-ô-an'û-rîzm) [G. *osteon*, bone, + *aneurysma*, a widening]. Aneurysm, or dilatation of a blood vessel filled with clotted blood, occurring within a bone.

osteoarthritis (ôs'tê-ô-âr-thrî'tis) [G. *osteon*, bone, + *arthron*, joint, + *-itis*, inflammation]. SYN: *degenerative joint disease*, *hypertrophic arthritis*. A chronic disease involving the joints, esp those bearing weight. Characterized by destruction of articular cartilage, overgrowth of bone with lipping and spur formation, and impaired functioning.

osteoarthropathy (ôs'tê-ô-âr-thrôp'â-thî) [G. *osteon*, bone, + *arthron*, joint, + *pathos*, disease]. Any disease involving the joints.

o., hypertrophic pulmonary. An affection characterized by enlargement of distal phalanges of fingers and toes and a thickening of their distal ends, accompanied by a peculiar curving of

nails. Wrist and interphalangeal joints may become enlarged as well as distal ends of tibia and fibula and the jaw.

Error: Found in pulmonary tuberculosis, chronic bronchitis, bronchiectasis, congenital heart disease, and chronic cardiac affections.

osteosarctotomy (ôs'tê-ô-ar-throt'ô-mî) [' + + *tome*, incision] Excision of joint end of a bone. **Syn:** *osteosarctrotony*.

osteoblast (ôs'tê-ô-blást) [G. *osteon*, bone, + *blastos*, germ] A cell of mesodermal origin which is concerned with the formation of bone.

osteocampsia (ôs'tê-ô-kâmp'sî-â) [' + + *kampein*, to bend] Curvature of a bone, as in osteomalacia.

osteocarcinoma (ôs'tê-ô-kâr-sîn-ô'mâ) [' + *karkinos*, crab cancer, + *-oma*, tumor] 1 Osteoma and carcinoma combined. 2 Carcinoma of a bone.

ostecephaloma (ôs'tê-ô-sêf-â-îô'mâ) [' + *kephale*, head, + *-oma*, tumor] Encephaloma, a malignant neoplasm of brainlike texture in a bone.

osteochondritis (ôs'tê-ô-kôn-drit'is) [' + *chondros*, cartilage, + *-itis*, inflammation] 1 Inflammation of bone and cartilage. 2 Inflammatory condition in which calcification is defective, with a layer of soft, yellowish-white tissue forming bet. the cartilaginous and calcified parts of a rib.

o. deformans juvenile. **Syn:** *Legg-Calve-Perthes disease, coxa plana*. Chronic inflammation of head of femur in childhood resulting in atrophy and shortening of neck of femur and wide, flat head.

o. dissecans. Condition affecting a joint in which a fragment of cartilage and its underlying bone becomes detached from articular surface. Occurs commonly in the knee joint.

osteochondroma (ôs'tê-ô-kôn-drô'mâ) [' + + *-oma*, tumor] Tumor composed of both cartilaginous and bony substance.

osteoclasia, osteoclasia (ôs'tê-ô-klâ'zî-â, -ôk'lâ-sis) [G. *osteon*, bone, + *klasis*, a breaking] 1 Fracture of a bone, surgically, to remedy a deformity. 2 Bony tissue destruction.

osteoclast (ôs'tê-ô-klâst) [' + *klan*, to break]. 1. Device for fracturing bones for therapeutic purposes. 2 Giant, multinuclear cell* found in depressions on the surface of a bone causing entire resorption of bone substance.

These depressions are called *Howship's lacunae*. The bone appears eroded or as if gnawed.

osteocope (ôs'tê-ô-kôp) [' + *kopos*, pain]. Severe pain of the bone, esp. at night, usually symptomatic of syphilis.

osteocopic (ôs'tê-ô-kôp'ik) [' + *kopos*, pain] Concerning pain in the bone.

osteocranium (ôs'tê-ô-krâ'nî-ûm) [G. *osteon*, bone, + *kranion*, skull]. The portion of the cranium formed of membrane bones in contrast to that formed of cartilage (chondrocranium).

osteocystoma (ôs'tê-ô-sis-tô'mâ) [' + *kystis*, a bladder, + *-oma*, tumor]. Cystic tumor of a bone.

osteodermis (ôs'tê-ô-dêr'mî-â) [G. *osteon*, bone, + *derma*, skin] The formation of bony structure in the skin.

osteodynia (ôs'tê-ô-dîn'î-â) [G. *osteon*, bone, + *odynê*, pain]. Persistent pain in a bone. **Syn:** *ostealgia*.

osteodystrophia (ôs'tê-ô-dis-trô'fî-â) [' + *dys*, ill, + *trophê*, nourishment]. Defective bone development.

o. deformans. **Syn:** *ostetis deformans, q.v.*

osteopiphysis (ôs'tê-ô-êp-if'is-is) [' + *epi*, upon, + *physis*, growth]. A small piece of bone which later becomes attached to the larger one.

osteofibroma (ôs'tê-ô-fî-brô'mâ) [' + *L. fibra*, fiber, + *G. -oma*, tumor]. Tumor of bony and fibrous tissues. **Syn:** *fibro-osteoma*.

osteogen (ôs'tê-ô-jên) [' + *gennan*, to produce]. Substance of the inner periosteal layer from which bone is formed.

osteogenesis, osteogeny (ôs'tê-ô-jên'ê-sis, -ôj'ê-nî) [' + *gennan*, to produce]. Formation and development of bone taking place in connective tissue or in cartilage. **Ossification**.

o. imperfecta. A congenital bone disease causing the bones to fracture easily.

osteogen'ic. Pertaining to osteogenesis.

osteography (ôs'tê-og'raf-i) [G. *osteon*, bone, + *graphein*, to write]. Descriptive treatise on the bones.

osteohalisteresis (ôs'tê-ô-hâl-is-têr'ê-sis) [' + *ais*, salt, + *sterein*, to deprive]. Deficiency of the mineral constituents in bone causing softening.

osteoid (ôs'tê-ôyd) [' + *eidos*, resemblance] 1. Resembling bone. 2 A bone tumor.

o. sarcoma. A rapidly forming sarcoma with bone tissue in it. **Syn:** *osteosarcoma*.

osteology (ôs'tê-ol'ôj-i) [' + *logos*, study]. The science of structure and function of bones.

osteolysis (ôs'tê-ol'is-is) [' + *lysis*, dissolution]. Softening and destruction of bone, as in *caries*.

osteoma (ôs'tê-ô'mâ) (pl. *osteomata*) [' + *-oma*, tumor]. 1 A bony tumor, a hard tumor of bone-like structure developing on a bone, and sometimes on other structures.

o., cancellous. One that is soft and spongy. Its thin and delicate trabeculae enclose large medullary spaces similar to cancellous bone.

o., cavalryman's. Bony outgrowth of femur at the insertion of the adductor femoris longus.

o. dentale. A hard, bony outgrowth from the jawbone.

o. durum. A tumor composed of hard bony tissue.

o. medullare. An osteoma containing medullary spaces.

o., osteoid. A benign tumor of bone composed of sheets of osteoid tissue partially calcified and ossified.

o. spongiosum. Soft, spongy tumor in bone.

osteomalacia (ôs'tê-ô-mâl-â-sî-â) [' + *malakia*, softening]. Softening of the bones. **Syn:** *malacosteon, mollities ossium*.

A disease marked by increasing softness of the bones, so that they become flexible and brittle and cause deformities. It is attended with rheumatic pains. The limbs, spine, thorax, and pelvis esp. are affected; anemia and signs of deficiency disease present, the patient becomes weak, and finally dies from exhaustion. It occurs chiefly in adults.

Error: Deficiency or loss of calcium salts; vitamin D deficiency.

osteomalacic (ôs'tê-ô-mâl-â-sîk) [G. *osteon*, bone, + *malakia*, softening]. Concerning or characterized by softening of the bone.

osteomatoid (ôs'tê-ô-mâ-toyd) [' + *-oma*, tumor, + *eidos*, resemblance]. Resembling a tumor of bone tissue.

osteometry (ôs'tê-om'ê-trî) [' + *metron*,

measure]. The study of the measurement of bones

osteomyelitis (ôs'tê-ô-mî-êl-î'tis) [G. *osteon*, bone, + *myelos*, marrow, + *-itis*, inflammation]. Inflammation of bone marrow, or of the bone and marrow.

SYM. Pain over affected part, fever, sweats, leukocytosis, overlying muscles usually rigid, skin inflamed, pain on pressure over affected part. Suppuration may occur.

TREATMENT. Prompt and adequate doses of antibiotics. Sedation for pain and anxiety. Aspiration of abscess. Blood transfusions and saline infusions. Immobilization of affected extremity. Foods and liquids by mouth. Surgery if abscess persists.

o., hemorrhagic. Bone marrow inflammation with cyst formation.

osteon (ôs'tê-on'kûs) [+ *ogkos*, tumor] A bone tumor. **SYN** *osteosarcoma*, *osteoma*

osteonecrosis (ôs'tê-ô-nê-kro'sis) [G. *osteon*, bone, + *nekrosis*, death] Death of bone tissue in mass

osteoneuralgia (ôs'tê-ô-nû-ral'jî-â) [+ *neuron*, nerve, + *algos*, pain]. Pain of a bone

osteopath (ôs'tê-ô-pâth) [+ *pathos*, disease]. A practitioner of osteopathy, *q.v.*

osteopathic (ôs'tê-ô-pâth'ik) [+ *pathos*, disease]. Concerning therapeutic bone manipulation

osteopathology (ôs'tê-ô-pâth-ol'ô-jî) [G. *osteon*, bone, + *pathos*, disease, + *logos*, study]. Any bone disease.

osteopathy (ôs'tê-ô-pâth-î) [+ *pathos*, disease] 1 Any bone disease

2. "A school of medicine based upon the theory that the body is a vital mechanical organism whose structural and functional integrity are coordinate and that the perversion of either is disease, while its therapeutic procedure is chiefly manipulative correction, its name indicating the fact that the bony framework of the body largely determines the structural relation of its tissues." *Committee on Osteopathic Terminology*

osteopelia (ôs'tê-ô-pê-sîl'î-â) [G. *osteon*, bone, + *poikila*, spottedness]. Osteopetrosis, *q.v.*

osteopodion (ôs'tê-ô-pê-dî-on) [+ *paidion*, child] A calcified or hardened fetus. **SYN** *lithopedion*.

osteperiosteal (ôs'tê-ô-per-î-ôs'tê-âl) [+ *peri*, around, + *osteon*, bone]. Concerning bone and its periosteum, the protective membrane

osteperiostitis (ôs'tê-ô-per-î-ôs-tî'tis) [+ " + *-itis*, inflammation] Combined inflammation of a bone and its protective membrane, the periosteum.

osteopetrosis (ôs'tê-ô-pê-tô'sis) [G. *osteon*, bone, + *L. petra*, stone, + *G -osis*, disease]. **SYN** *marble bones* *Albers-Schönberg disease*, *osteopoikilosis*, *osteosclerosis fragilis generalisata* Excessive calcification of bones causing spontaneous fractures and marblelike appearance

osteophage (ôs'tê-ô-fâj) [G. *osteon*, bone, + *phagēin*, to eat]. Large multinuclear cell which causes absorption of bone. **SYN:** *osteoclast*, 2.

osteophlebitis (ôs'tê-ô-flê-bî'tis) [+ *phleps*, *phleb-*, vein, + *-itis*, inflammation]. Inflammation of veins of a bone.

ostephone (ôs'tê-ô-fôn) [+ *phônē*, voice] Device used by the deaf for conducting sound through facial bones

osteophyma (ôs'tê-ô-fî'mâ) [+ *phyma*, growth]. A swelling or growth of bone.

osteophyte (ôs'tê-ô-flt) [+ *phyton*, plant]. A bony excrescence or outgrowth, usually branched in shape.

osteoplastic (ôs'tê-ô-plâs'tik) [+ *plastikos*, formed]. 1. Pert to bone repair. 2. Concerning bone formation.

osteoplastic (ôs'tê-ô-plâs'tî) [G. *osteon*, bone, + *plastēin*, to form]. Plastic repair of the bones.

osteopoikilosis (ôs'tê-ô-poy-kî-lô'sis) [+ *poikilos*, spotted]. Disease of bones marked by excessive calcification in spots, causing spontaneous fractures and spotted marble appearance. **SYN** *osteosclerosis fragilis generalisata*, *q.v.*

osteoporosis (ôs'tê-ô-pô-rô'sis) [+ *poros*, a passage] Increased porosity of bone

SYM Softening of bone, widening of haversian canals, absorption of calcareous matter. **SEE** *osteomalacia*.

o., parathitic. O. with tendency to develop into rickets. Congenital.

osteoprotic (ôs'tê-ô-pô-rot'ik) [+ *poros*, passage]. Concerning enlarged bone spaces

osteopsathyrosis (ôs'tê-ô-p-sath'î-rô'sis) [+ *pathyros*, fragile] Fragility or brittleness of bones. *Osteogenesis imperfecta*, *q.v.*

Congenital condition of unknown etiology, in which the long bones seem normal in appearance and chemical composition, but are extremely brittle

SYM Breaks may occur upon bathing infant or turning him over, following minor injuries, chewing, bending the knee, etc. Breaks almost painless with slight swelling and only evidence is unwillingness of the child to use his injured limb.

PROG Condition tends to improve and usually disappears by the 21st year

TREATMENT. Good hygiene, nourishing diet, supports to prevent breaks. Bones knit quickly with normal amount of callus. **SYN** *fragilitas ossium*

osteoradionecrosis (ôs'tê-ô-râ-dî-ô-nê-kro'sis). Death of bone following irradiation

osteorrhagia (ôs'tê-ô-râ-jî-â) [+ *rhēnāi*, to burst forth]. Hemorrhagic flow of blood from a bone.

osteorrhaphy (ôs'tê-ô-râf-î) [+ *raphē*, a sewing] Suture of bone or the wiring of bone fragments

osteosarcoma (ôs'tê-ô-sar-kô'mâ) [G. *osteon*, bone, + *sarx*, *sark-*, flesh, + *-ōma*, tumor] A malignant sarcoma of the bone. **SYN** *myelosarcoma*.

osteosarcomatous (ôs'tê-ô-sar-kô'mât-ūs) [+ " + *-oma*, tumor] Concerning or like an osteosarcoma

osteosclerosis (ôs'tê-ô-skî-lê-rô'sis) [+ *skîlēros*, hard, + *-osis*, intensive]. Hardening of bone with increased heaviness.

o. fragilis generalisata. Abnormal calcification of the bones, causing spontaneous fractures and spotted marblelike appearance in a roentgenogram. **SYN** *Albers-Schönberg disease*, *marble bones*, *osteitis condensans*; *osteopetrosis*, *osteopoikilosis*.

osteoscope (ôs'tê-ô-skôp) [+ *skopein*, to examine] Appliance used to test x-ray machines by observing certain bones of the forearm which are considered as a standard

osteoseptum (ôs'tê-ô-sêp'tûm) [+ *L. saeptum*, a dividing]. The bony area of the nasal septum.

osteosis (ôs'tê-ô'sis) [G. *osteon*, bone, + *-osis*, condition]. Formation of bony tissue. **SYN:** *osteogenesis*.

o. cutis. Diffuse thickening of skin and subcutaneous tissue. Rare

osteospongiosa (ôs'tê-ô-spon-jî-ô'mă) [' + *spongios*, sponge, + *-oma*, tumor]. A spongy neoplasm of bone. **Syn:** *osteoma spongiosum*.

osteosteoma (ôs'tê-ô-stê-ât-ô'mă) [' + *steat*, *steat-*, fat, + *-oma*, tumor]. A fatty tumor with bony elements.

osteostixis (ôs'tê-ô-stîks'îs) [' + *stixis*, a puncture] Therapeutic puncture of a bone.

osteosuture (ôs'tê-ô-sût'chûr) [' + *L. sutura*, a stitch]. Suture or wiring of bone fragments. **Syn:** *osteorrhaphy*.

osteosynovitis (ôs'tê-ô-sîn-ô-vî'tîs) [' + *syn*, with, + *ôon*, egg, + *-itis*, inflammation]. Inflammation of a synovial membrane and the surrounding bones.

osteosynthesis (ôs'tê-ô-sîn'the-sîs) [' + *synthesis*, a joining] Surgical fastening of the ends of a fractured bone mechanically.

osteotabes (ôs'tê-ô-tă-bêz) [G *osteon*, bone, + *tabes*, a wasting] Atrophy of the bone in infants, beginning with wasting of the marrow and gradually the rest of the bone.

osteotanglectasia (ôs'tê-ô-têl-ân'jî-êktă-zî-ă) [' + *telos*, end, + *aggeion*, vessel, + *ektasis*, a stretching] Sarcomatous tumor of the bone containing dilated blood vessels.

osteothrombosis (ôs'tê-ô-thrôm-bô'sîs) [' + *thrombôsis*, a clotting] Clot formation in the veins of a bone.

osteotome (ôs'tê-ô-tôm) [' + *tomê*, a cutting]. A chisel bevelled on both sides for cutting through bones.

osteotomy (ôs'tê-ô-tô-mî) [' + *tomê*, incision] The surgical section of a bone.

o., cuneiform. The excision of a wedge of a bone.

o., linear. Lengthwise division of a bone.

o., MacEwen's. Supracondylar section of the femur for correction of knock-knee.

o., subtrochanteric. Gant's operation, division of shaft of femur below lesser trochanter to correct ankylosis of hip joint.

o., transtrochanteric. Section of the femur through the lesser trochanter for deformity about the hip joint.

osteotrite (ôs'tê-ô-trî't) [' + *tribein*, to crush]. Instrument used to scrape away diseased bone.

osteotrophy (ôs'tê-ô-trô'fî). Bone nutrition.

osthemia (ôs-thêks'î-ă) [G *osteon*, bone, + *exis*, condition]. Excessive ossification, esp in abnormal places.

ostial (ôs'tî-ăl) [L *ostium*, a little opening]. Concerning an orifice.

ostitis (ôs-tî'tîs) [G *osteon*, bone, + *-itis*, inflammation]. Inflammation of a bone. **Syn:** *osteitis*, *q v*.

ostium (ôs'tî-ûm) (pl *ostia*) [L a small opening] Any small opening.

o. abdominale. Fimbriated extremity of a fallopian tube.

o. arteriosum. BNA. Arterial orifice, of ventricle of the heart into the aorta, or pulmonary artery.

o. internum. Uterine end of a fallopian tube. **Syn:** *o. uterinum tubae*.

o. pharyngeum. Pharyngeal opening of the auditory tube.

o. tympanicum. Tympanic opening of the auditory tube.

o. vaginae. Ext. opening of the vagina.

ostraco, ostrac- [G.]. Combining form meaning *hard shell*.

ostreotoxismus (ôs'trê-ô-tôks-îz'mûs) [G. *ostreon*, oyster, + *toxikon*, poison]. Poisoning from eating diseased oysters.

Ostrow'ski manumobilizer. Apparatus to mobilize finger by stretching contractures and loosening adhesions.

O. T. Abbr for (1) *old term* in contrast to BNA term, (2) old tuberculin, (3) occupational therapy.

otacoustic (ô-tăk-koos'tîk) [G. *ôtakoustein*, to listen] 1 Aiding or concerning the hearing 2 Device to aid hearing.

otalgia (ô-tăl'jî-ă) [G. *ous*, *ôt-*, ear, + *algos*, pain]. Pain of the ear.

TREATMENT. Local Heat in the form of compresses or hot water bottle, warm glycerin dropped in ear. Incision of drum if bulging is present. **General:** Active elimination, sedatives. **Syn:** *earache*.

otantritis (ô'tăn-trî'tîs). Inflammation of the mastoid antrum.

otaphone (ô'tă-fôn) [' + *phônê*, voice]. A device used to aid in hearing.

otectomy (ô-têk'tô-mî) [' + *ektomê*, excision] Surgical excision of the contents of the tympanum.

othelcosis (ô-thêl-kô'sîs) [' + *elkôsis*, ulceration]. Ulceration or suppuration of the ear.

othematoma (ô'them-ă-tô'mă) [' + *aima*, blood, + *-oma*, tumor] Effusion of blood between perichondrium and cartilage of pinna.

Common in fighters or wrestlers. Sex: cauliflower ear.

othygroma (ô-thî-grô'mă) [G *ous*, *ôt-*, ear, + *ygros*, moist, + *-oma*, tumor]. Edema of ear lobe.

otiatric (ô-tî-ât'rîks) [' + *iatrikos*, healing] Treatment of ear diseases.

otic (ô'tîk) [G *ous*, *ôt-*, ear] Concerning the ear.

oticodinia (ô'tîk-ô-dîn'î-ă) [' + *dinê*, a whirl] Vertigo due to ear disease.

otitic (ô-tî'tîk) [' + *-itis*, inflammation]. Concerning inflammation of the ear.

otitis (ô-tî'tîs) [G *ous*, *ôt-*, ear, + *-itis*, inflammation] Inflamed condition of the ear.

It is differentiated as *externa*, *media*, and *interna*, depending upon the portion of the ear which is inflamed.

o., aereo- O resulting from pressure changes when auditory tubes are obstructed. Occurs commonly in aviators or divers.

o., furuncular. Furuncle formation in ext. meatus.

o. labyrinthica. Inflammation of the labyrinth.

o. mastoidea. Inflamed condition of the mastoid spaces.

o. mycotica. Fungous inflammation.

o. parasitica. Inflammation caused by a parasitic fungus.

o. sclerotica. Inflammation of inner ear accompanied by hardening of the aural structures.

oto-, ot- [G.]. Combining form meaning ear.

otoantritis (ô'tô-ân-trî'tîs) [G *ous*, *ôt-*, ear, + *antron*, cavity, + *-itis*, inflammation]. Inflamed condition of mastoid antrum.

otoblennorrhea (ô'tô-blên-or-rê-ă) [' + *blenna*, mucus, + *rota*, flow]. Mucous discharge from ear.

otocatharrh (ô'tô-kă-tar') [' + *katarrein*, to flow down]. Catharrhal discharge of the ear.

otocleisis (ô-tô-klî'sîs) [' + *kleisis*, a closure]. Occlusion of ear.

otoconium (ô'tô-kô-nî-ûm) [G. *ous*, *ôt-*, ear, + *konis*, dust] (pl *otoconia*). **Syn:**

otoliths, *ear dust*. Minute particles composed chiefly of calcium carbonate found in otolithic membrane on surface of maculae of inner ear.

otocyst (ô'tô-sist) [" + *kystis*, bladder]. Primordial chamber from which arises the membranous labyrinth. SYN: *auditory vesicle*.

odynia (ô'tô-din'î-â) [" + *odynē*, pain]. Pain in the ear. SYN: *otalgia*.

otogenic, **otogenous**. Having its origin in the ear.

otography (ô-tog'rā-fi) [" + *graphein*, to write]. Anatomical description of the ear.

otolaryngologist. A specialist in otolaryngology.

otolaryngology. The division of medical science which includes otology, rhinology, and laryngology.

otolith (ô'tô-lith) [G. *ous*, *ôt-*, ear, + *lithos*, stone]. SEE *otoconium*.

otological (ô'tô-lôj'î-kl) [" + *logos*, study]. Rel. to study of diseases of the ear.

otologist (ô-tôl-ô-jist) [" + *logos*, study]. One versed in diseases of the ear. SYN: *aurist*.

otology (ô-tol'ô-jî) [" + *logos*, study]. The science of the ear, its function, and diseases.

otomassage (ô'tô-mā-sāj') [" + *massein*, to knead]. Application of massage to tympanic membrane and auditory ossicles.

otomasthenia (ô'tô-mî-ās-thē'nî-â) [" + *mys*, *my-*, muscle, + *astheneia*, weakness]. 1. Weakened condition of the ear muscles. 2. Defective hearing caused by paresis of the tensor tympani and stapedius muscles.

Otomycosis (ô'tô-mî'sēz) [" + *mykēs*, fungus]. Fungus infecting the ear.

O. hageni. Form with green conidia, affecting ext. canal.

O. purpureus. A dark red variety.

otomycosis (ô'tô-mî-kō'sis) [" + " + *-ōsis*, condition]. Fungous infection of ext. auditory meatus of the ear. SYN: *otitis mycotica*.

otomus (ô-tōng'kūs) [" + *ogkos*, tumor]. An aural tumor.

otoneurectomy, **otoneurectomy** (ô'tô-nēk-rēk'tô-mî, -rō-nēk'tô-mî) [G. *ous*, *ôt-*, ear, + *nektros*, dead, + *ektomē*, excision]. Excision of necrosed areas from the ear.

otoneuralgia (ô'tô-nū-rāl'jî-â) [" + *neuron*, snew, + *algos*, pain]. Pain in the ear. SYN: *otalgia*.

otoneurasthenia (ô'tô-nū-rās-thē'nî-â) [" + " + *astheneia*, weakness]. Neurasthenia caused by ear disease.

otoneurology (ô'tô-nū-rōl'ô-jî) [" + " + *logos*, study]. Study of ear conditions in conjunction with neural complications. SYN: *neurotology*.

otopathy (ô-top'āth-î) [" + *pathos*, disease]. Any diseased condition of the ear.

otopharyngeal (ô'tô-far-in'jē-â) [" + *pharynx*, pharynx]. Concerning the ear and pharynx.

O. tube. Passage bet. tympanic cavity and the pharynx. SYN: *eustachian tube*.

otophone (ô'tô-fōn) [G. *ous*, *ôt-*, ear, + *phōnē*, voice]. Device for assisting deaf to hear.

otopiesia (ô'tô-pî-ē'sis) [" + *piesis*, a pressing]. 1. Sinking in or depression of the membrana tympani. 2. Pressure on the labyrinth causing deafness.

otoplasty (ô'tô-plās-tî) [" + *plassein*, to

form]. Plastic surgery of the ear to correct defects.

otopolypus (ô'tô-pol'ip-ūs) [" + *polus*, many, + *pus*, foot]. Smooth growth occurring in the ear.

otopyorrhea (ô'tô-pî-ô-re'ā) [" + *pyon*, pus, + *roia*, a flow]. Purulent ear discharge.

otopyosis (ô'tô-pî-ô'sis) [" + " + *-ōsis*, infection]. Ear disease marked by discharge of pus.

otorhinolaryngology (ô'tô-rî-nô-lār-in-gôl'ô-jî) [" + *ris*, *rin-*, nose, + *larynx*, larynx, + *logos*, study]. The science of ear, nose, and larynx and their functions and diseases.

otorhinology (ô'tô-rî-nôl'ô-jî) [" + " + *logos*, study]. Branch of medicine dealing with ear and nose diseases.

otorrhagia (ô'tô-rā'jî-â) [G. *ous*, *ôt-*, ear, + *regnunai*, to flow]. Discharge of blood from ear.

otorrhea (ô'tô-rē'ā) [" + *roia*, flow]. Inflammation of ear with purulent discharge.

SYM: Membrana tympani may be partially or completely destroyed; deafness, tinnitus, no pain, repeated attacks of nasopharyngitis.

TREATMENT: Frequent dry cleansing, iodine dusting powder, tubal inflation. SEE *otitis*.

otosalpinx (ô'tô-sāl'pinks) [" + *salpiz*, tube]. Passage connecting pharynx and tympanic cavity. SYN: *eustachian tube*.

otosclerectomy (ô'tô-skîē-rō-nēk'tô-mî) [" + *skleros*, hard, + *ektomē*, excision]. Surgical excision of sclerosed and ankylosed ear ossicles.

otosclerosis (ô'tô-skîē-rō'sis) [G. *ous*, *ôt-*, ear, + *skleros*, a hardening]. Condition characterized by chronic progressive deafness esp. for low tones. Due to the formation of spongy bone, esp. around the oval window with resulting ankylosis of stapes. In late stages atrophy of the organ of Corti may occur.

ETIOI.: Unknown. In some cases, condition is familial.

otoscope (ô'tô-skôp) [" + *skopein*, to examine]. Device for examination of the ear.

otosis (ô-tō'sis) [" + *-ōsis*, intensive]. Mishearing of spoken sounds.

ostéal (ô-tō'stē-âl) [G. *ous*, *ôt-*, ear, + *osteon*, bone]. Concerning the bones or ossicles of the ear.

ototomy (ô-tô'tô-mî) [" + *tomē*, incision]. Incision into or dissection of the ear.

O. U. Abbr. for *L. oculus uterque*, for each *ouabain* (wāh-bāh'în). A glucoside prepared from *Strophanthus gratus*. USP. SYN for *G. strophanthum*.

USES: Same as for digitalis, but less tendency to cumulative action.

DOSEAGE: 1/120 gr. (0.0005 Gm), intravenously.

Oudin current (oo-dan'). A high frequency oscillating current of higher voltage than the current used ordinarily, employed in therapeutic treatment.

O. resonator. A coil of wire with an adjustable number of turns, designed to be connected to a source of high frequency current, such as a spark gap and induction coil, for the purpose of applying a convective discharge of high voltage current to a patient.

oula (ôô'lā) The gingiva or gum; ula.

oullitis (oo-lî'tis) [G. *oulon*, gum, + *itis*, inflammation]. Inflamed condition of the gums. SYN: *ulitis*.

otoid (ôô'toyd). Resembling a scar.

oulorrhagia (oo-lô-râ-'jî-â) [' + *rêgnunai*, to burst forth]. Hemorrhage from the gums. **SYN:** *ulorrhagia*.

ounce (ouns) [L *uncia*, a twelfth]. A measure of weight.

In *apothecaries* or *troys* weight, 1/12 lb. [480 gr. (31.103 Gm.)]. **Symb** ȥ.

In *avoirdupois* measure, 1/16 lb. [437.5 gr. (28.349 Gm.)]. **Abbr.** oz.

o., fluid. For liquid medicines, 8 fluid drams (1/16 pint (29.6 cc.)) l.

outflow. In neurology, the passage of impulses outwardly from the central nervous system.

o., craniosacral. Impulses passing through parasympathetic nerves

o., thoracolumbar. Impulses passing through sympathetic nerves

outlet. The inferior aperture of the true pelvis

outpatient. One receiving treatment at a hospital without being an inmate.

ova (ô'vâ) (pl of ovum) [L, from G *ôon*, egg]. Reproductive cells of the female.

2. Eggs. **SEE** *ovary, ovum*.

oval (ô'vâl) [L *ovum*, egg]. 1. Like or concerning an ovum, the reproductive cell of the female 2 Shaped like an egg

o. window. Oval-shaped aperture in the middle ear into which fits the base of the stapes

ovalbumin (ô-vâl-bu'mîn) [' + *albumen*, white of egg] Albumin in egg whites

ovalocyte (ô'vâl-ô-sit) [' + G. *kytos*, cell]. Egg-shaped red blood corpuscle

ovalocytosis (ô-vâl'ô-si-tô'sis) [' + " + -*ôsis*, intensive] Oval red blood corpuscles in the blood.

ovaralgia, ovarialgia (ô-var-al'jî-â, -l-al'-jî-â) [L *ovarium*, ovary, + G. *algos*, pain]. Ovarian pain. **SYN** *oarialgia*.

ovarian (ô-vâ'ri-ân) [L *ovarium*, ovary]. Concerning or resembling the ovary

o. cyst. A sac containing fluid which develops in the ovary proper.

It consists of 1 or more chambers containing fluid These *loculi*, or chambers, may contain an enormous amt. of fluid Not malignant but may prove fatal if not removed, because of twisting of the pedicle which causes gangrene, or because of pressure Dermoid cyst contains a cheesy substance composed of fat, hair, sebaceous matter, bone, or teeth. Solid tumors, if benign, are usually fibroid

ovariectomy (ô-vâ'ri-êk'tô-mî) [' + G. *ektomê*, excision]. Excision of an ovary or a portion of it. **SYN:** *oophorectomy*.

ovario- [G.]. Combining form meaning ovary.

ovariocèle (ô-vâ'ri-ô-sêl) [L. *ovarium*, ovary, + G. *kêlê*, mass]. Ovarian tumor or hernia.

ovariocentesis (ô-vâ'ri-ô-sên-tê'sis) [' + G. *kentesis*, a piercing]. Puncture and drainage of an ovarian cyst.

ovariocytosis (ô-vâ'ri-ô-si-tô'sis) [' + G. *kyôsis*, pregnancy]. Pregnancy in the ovary, instead of in the uterus.

ovariodynesia (ô-vâ'ri-ô-dis-nû'ri-â) [' + G. *dys*, ill, + *neuron*, sinew]. Neuralgia in an ovary.

ovariohysterectomy (ô-vâ'ri-ô-his-têr-êk'tô-mî) [' + G. *ystera*, uterus, + *ektomê*, excision]. Excision of the ovaries and uterus. **SYN** *oophorohysterectomy*.

ovariorrhexis (ô-vâ'ri-ô-rêk'sis) [' + G. *rêxis*, a rupture]. Rupture of an ovary.

ovariosalpingectomy (ô-vâ'ri-ô-sâl-pîn-jêk'tô-mî) [' + G. *salpiz*, tube, + *ektomê*, excision]. Removal of an ovary and oviduct. **SYN:** *oophorosalingectomy*.

ovariosteresis (ô-vâ'ri-ô-ster-ê'sis) [L.

ovarium, ovary, + G. *sterêsis*, loss]. Complete eradication of an ovary.

ovariostomy (ô-vâ'ri-ô-s'tô-mî) [' + G. *stoma*, opening]. Creation of an opening in an ovarian cyst for drainage.

ovariotomist (ô-vâ'ri-ô-tô-mist) [' + G. *tomê*, incision]. A surgeon who performs operations on the ovary.

ovariotomy (ô-vâ'ri-ô-tô-mî) [' + G. *tomê*, incision]. Incision into or removal of an ovary, or of an ovarian tumor

ovariotubal (ô-vâ'ri-ô-tû'bâl) [' + *tuba*, a narrow duct]. Concerning the ovary and the oviducts

ovariprival (ô-vâ'ri-prî'vâl) [' + *privâre*, to remove]. Resulting from loss of the ovaries

ovaritis (ô-vâ-rî'tis) [L *ovarium*, ovary, + G. -*itis*, inflammation]. Inflamed condition of an ovary

Usually involved secondarily in inflammation of the oviducts or pelvic peritoneum. May involve the substance of the organ (*oophoritis*) or its surface (*perioophoritis*), and may be acute or chronic

o., acute. Acute, severe inflammation of the ovary

Etiol: Postabortal or postpartum infection, gonorrheal infection of the oviducts or pelvic peritoneum, tuberculous infection of same area, or may be due to streptococcus, staphylococcus, or colon bacillus Occasionally, from cervicitis or in course of acute infectious diseases.

SYM Ovary swollen and edematous. Interstitial substance infiltrated with round cells and leukocytes. May become suppurative or abscess may form. Sometimes a tuboovarian cyst develops

DIAG. Usually determined at operation

TREATMENT Rest in bed, heat to abdomen, hot douches and bland nourishing diet. Avoid purgation.

o., chronic. Inflammation of ovary over a long period of time.

SYM Marked production of fibrous tissue in interstitial portion as well as about surface of organ. Surface studded by small, cystlike bodies which develop into larger cysts, causing cystic degeneration. Inflammatory exudate forms upon surface of ovaries Severe pain may be felt, which is aggravated by any excitation Leukorrhœa present and sometimes amenorrhœa.

TREATMENT: Usually complete extirpation of the organ necessary.

ovarium (ô-vâ'ri-ûm) (pl. *ovaria*) [L.]. Ovary.

ovary (ô'vâ-ri) [L *ovarium*, ovary, egg holder]. One of 2 glands in the female, producing the reproductive cell, the ovum, and 2 known hormones.

They are 2 almond-shaped bodies, lying in the fossa ovarica on either side of the pelvic cavity, attached to the uterus by the uteroovarian ligament and lying close to the fimbria ovarica of the fallopian tube. About 4 cm. long, 2 cm. wide, and 1½ cm. thick. Each ovary is attached to the broad ligament by the *mesovarium*. It is also attached to the side of the uterus by the *ovarian ligament* (lig. *ovarii proprium*) and to the side of the pelvis by the *suspensory ligament* (lig. *suspensorium ovarii* or *infundibulopelvic lig.*).

The ovary is divided into 2 parts, the cortex and the medulla. In the cortex are the primary oöcytes and the develop-

ing graafian follicles. The medullary portion consists mainly of the vascular supply of the organ. The outer covering of the ovary is known as the *tunica albuginea ovarii*. The surface of the ovary in early life is smooth and in later life is markedly pitted as an end result of the atrophy of the corpus luteum.

STRUCTURE. Each ovary consists of an outer portion or *cortex* which encloses a central *medulla*. The medulla consists of a *stroma* of connective tissue containing nerves, blood and lymphatic vessels, and some smooth muscle tissue at region of hilus. The cortex consists principally of *follicles* in various stages of development (*primary, growing, and mature or graafian*). Its surface is covered by a single layer of cells, the *germinal epithelium* beneath which is a layer of dense connective tissue, the *tunica albuginea*. Other structures (*corpus luteum, corpus albicans, q v*) may be present.

BLOOD SUPPLY Mainly derived from the ovarian artery which reaches it through the infundibulopelvic ligament.

FUNCTION 1. The production of ova.
2. The production of hormones among which are (a) *estrogen* or female sex hormones secreted by the follicles and (b) *progesterone* secreted by the corpus luteum. These hormones are responsible for development and maintenance of secondary sexual characters, preparation of uterus for pregnancy and its continuance, and development of the mammary gland.

Functional activity of the ovary is controlled primarily by gonadotrophins of the hypophysis, esp the follicle-stimulating hormone (FSH) and luteotrophin.

HYPOFUNCTION: Precocious sexual development may occur as a result of premature functioning of the ovary due to pituitary or hypothalamic disorders or the development of ovarian tumors.

DISEASES The ovary, being in close proximity to the fallopian tube, which has contact with the outside air, is frequently subjected to acute inflammation. It is also frequently subjected to cyst formation, both proliferating and nonproliferating cysts. Among the common nonproliferating cysts are those that follow atresia of graafian follicles. The most common proliferating cysts are the papillary adenocystoma and the pseudomucinous cyst. The malignant tumors of the ovary are papillary adenocarcinoma, Krukenberg tumor, sarcoma and the rare teratoma.

ovary, words pert. to: adnexitis; agentialism; albuginea; castrate; cell, interstitial; conception, corpus albicans; dysovarium; facies ovarica; fimbria ovarica; fimbriate; fimbriation; folliculoma; graafian follicle; hyperovaria, Krukenberg's tumor, menstruation, mesosalpinx; mesovarium; oarialgia, oaric, oaritis; "oophor-" words, "ov-" words, pyoovarium; spay; spermatoozon; stroma, teratoma; tunica albuginea.

ovate (ô'vât) [L. *ovum*, egg]. BACT. Having the outline of an egg.

overcorrection. Condition in which light rays passing through center of lens converge at a point nearer the lens than those passing through periphery.

overdetermination (ô'vêr-de-têr-mî-nâ'shûn) [A.S. *ofer*, above, + L. *determinâre*, to limit]. PSY. The idea that every symptom and dream may have several meanings, being determined by more than a single association.

overextension. Hyperextension; extension beyond that which usually occurs.

overflow. The continuous escape of fluid from a vessel or viscus, as o. of urine or tears.

overgrowth. Excessive growth; hypertrophy or hyperplasia.

overlying. Condition in which death occurs in an infant from suffocation resulting from an adult lying upon a child.

overproduction (ô'vêr-prô-dûk'shûn) [' + L. *producere*, to begot]. Destruction of an organic element is followed by overproduction of the element during the reparative process, as excessive callus development after a bone fracture. SYN. *Weigert's law*.

overriding [' + *ridan*, to ride]. The slipping of 1 end of a fractured bone past the other part.

overtone [' + G. *tonos*, a stretching]. A harmonic.

o., psychic. A dimly perceived associated impression about a mental image.

overweight. Exceeding normal weight by more than 10-15%.

overwork (ô'vêr-wûrk) [' + *work*, work]. Excessive work causing exhaustion. SEE *ergasthenia*.

ovi [L.] Combining form meaning egg.

ovi albumen (ô'vi âl-bû'mîn) [L.]. White of egg.

o., vitellum. Egg yolk.

oviduct (ô'vi-dûkt) [L. *ovum*, egg, + *duc-tus*, a path]. SYN *uterine tube, fallopian tube*. One of two tubes extending laterally from sup angles of the uterus which serve to convey the ovum from the ovary to the uterus. Each consists of (a) *infundibulum*, expanded portion surrounding the *ostium* or opening through which the ovum enters, (b) *ampulla*, and (c) *isthmus*, a straight narrow portion which connects with the uterus.

The border of the infundibulum bears many fingerlike processes called *fimbria* one of which, the *fimbria ovarica*, is much longer usually reaching the ovary.

Each oviduct is a muscular tube consisting of three layers, *mucosa, muscular layer*, and *serosa*. The *mucosa* consists of columnar epithelial cells, some ciliated, others glandular. In addition to conveying the ovum, the oviduct serves to transport sperm from the uterus toward the ovary. It is the usual site of fertilization of the ovum.

oviferous (ô-vî'fêr-ûs) [' + *ferre*, to bear]. Containing or producing ova.

ovification (ô-vî-fî-kâ'shûn) [' + *facere*, to make]. The production of ova. SYN: *ovulation*.

oviform (ô'vi-form) [' + *forma*, shape]. 1. Having the shape of an egg. 2. Resembling an ovum.

ovigenesis. Oogenesis, *q v*.

ovigenous. Giving rise to ova.

ovigerous (ô'vi-jêr-m) [' + *germen*, germ]. The cell which produces or develops into an ovum.

ovigerous (ô-vî'jêr-ûs) [' + *gerere*, to bear]. Producing or carrying ova. SYN: *oviferous*.

o. cord. A cord of cells which grows inward from the germinal epithelium and from which an oocyte developed.

oviparous (ô-vîp'âr-ûs) [' + *parere*, to produce]. Producing eggs hatched outside the body.

ovoplasm. The cytoplasm of an unfertilized ovum.

ovi vitellus (ô'vi vî-têl'ûs) [L.]. Egg yolk; pharmaceutical term when used in preparation of emulsions.

ovo- [L.]. Combining form meaning *egg*.
ovo''cent'er. The centrosome of a fertilized ovum.

ovo''flav'in. A flavin derived from eggs; identical to riboflavin.

ovogenesis (ô'vô-jên'ê-sis) ['' + G *genesis*, production]. Production of ova. *SYN.* *oogenesis*.

ovoglobulin (ô'vô-glôb'û-lîn) ['' + *globulus*, globule]. The globulin found in egg white. *SYN.* *albumen*, *protein*.

ovoid (ô'voyd) ['' + G *eidōs*, form]. Egg shaped. *SYN.* *oviform*.

ovomucoid (ô'vô-mu'koyd) ['' + *mucus*, mucus, + G *eidōs*, form]. A glycoprotein principle from egg white.

ovo''plasm'. *Ooplasm*, *q v*

ovovitelin (ô'vô-vi-têl'în) ['' + *vitellus*, yolk]. Protein found in an egg yolk.

ovoviparous (ô'vô-vi-vip'â-rûs) ['' + *vivus*, alive, + *parere*, to bear]. Reproducing by hatching the eggs within the body.

ovula (ô'vû-lâ) (sing. *ovulum*) [L.]. Little eggs.

ovula nabothi (sing. *ovulum*) [L.]. Distended mucous glands in tissues of the cervix uteri.

ovular (ô'vû-lâr) [L. *ovulum*, little egg]. Concerning an ovule or ovum.

ovulation (ô'vû-lâ'shûn) [L. *ovulum*, little egg]. The lunar monthly ripening and rupture of the mature graafian follicle and the discharge of the ovum from the cortex of the ovary, normally occurring 13 times a year.

Ovulation usually occurs between the 10th and 14th days of the menstrual cycle, counting from the 1st day of menstruation. Following ovulation, a corpus luteum develops within the collapsed follicle. *SEE* *corpus luteum*.

The ovum, being liberated from the follicle, enters the fallopian tube and is slowly transported toward the uterus. If sperm are present, it may become fertilized, if not, the ovum degenerates within the oviduct.

RS. *anovular*, *conception*, *menstruation*, *ovary*, *ovum*, *safe period*, *spermatozoon*, *fertilization*, *follicle*, *corpus luteum*.

ovulatory (ô'vû-lâ-tô-rî) [L. *ovulum*, a little egg]. Concerning ovulation.

ovulogenous (ô'vû-lô-jên-ûs). Giving rise to ovules or ova.

ovum (ô'vum) (pl. *ova*) [L. egg]. *SYN.* *Ootid*. The female reproductive or germ cell, a cell which is capable of developing into a new organism of the same species. Fertilization by a spermatozoon is usually necessary although some ova develop within fertilization (*parthenogenesis*, *q v*).

The various parts of the ovum have been named as follows. The protoplasm is known as the *vitellus* or *yolk*; the outer layer is referred to as the *ectoplasm* or *zona pellucida* or *zona radiata*; the inner layer, the cell membrane, is the *vitelline membrane*; the nucleus is called the *germinal vesicle*, and the nucleolus, the *germinal spot*.

The cellular layers proliferate, becoming cuboid in shape, and in the center a clear albuminous fluid, the *liquor folliculi*, forms. The follicular cells surrounding the fluid-filled cavity are known as the *membrana granulosa*. The layer surrounding the egg cell, or *oocyte*, is known as the *discus proliferus*.

As the follicular layer enlarges to form the *graafian follicle*, the term for the developed ovum, containing the above, before it leaves the ovary, there is a slight protrusion of the ovarian

surface when the follicle has matured. Its rupture through the ovarian surface frees the ovum, which then proceeds ordinarily into the fallopian tube and into the uterus, which process is known as *ovulation*, and occurs bet. the 12th and 16th day following the onset of menstruation. It usually takes the ovum from 5 to 7 days to go from the ovary to the uterus. *SEE* *menstruation*.

Normally, only 1 graafian follicle matures each month, coming alternately from the 2 ovaries.

o., alecithal. One in which there is little or no food yolk.

o., centrolecithal. One having a large central food yolk.

o., holoblastic. O. which undergoes complete cleavage.

o., human. The female reproductive cell which develops within the graafian follicle of the ovary. It develops from an *oogonium* which undergoes a process of maturation (*oogenesis*) during which primary and secondary oocytes are produced which finally give rise to the mature ovum. During this process the number of chromosomes is reduced from 48 to 24 and the egg is prepared for fertilization.

A mature ovum is about 120 microns in diameter (1/200 of an in.). Each contains a spherical *nucleus*, bounded by a *nuclear membrane* enclosing *chromatin material* and one or more *nucleoli*. The *cytoplasm* is granular and contains *yolk granules* or *deutoplasm* and the other characteristic organelles of cells. Its surface layer is the *vitelline membrane*. When liberated from the ovary as a primary oocyte (see *ovulation*) it is surrounded by a clear layer, *zona pellucida*, and several layers of adhering follicular cells, the latter constituting the *corona radiata*.

The length of time a human ovum retains its ability to be fertilized and develop is short, a matter of hours. If fertilized it undergoes development. (*SEE* *embryo*, *development of*) If not fertilized, it degenerates and disintegrates within the oviduct. *SEE* *cleavage*, *follicle*, *conception*, *fertilization*, *menstruation*, *ovulation*, *spermatozoa*.

o., isolecithal. O. in which the yolk is uniformly distributed.

o., meroblastic. O. in which only the protoplasmic region undergoes cleav-

MATURE HUMAN OVUM AFTER DISCHARGE FROM FOLLICLE

1. Cells of corona radiata. 2. Zona pellucida. 3. Nucleus or germinal vesicle.

age; characteristic in ova containing a large amount of yolk.

o., permanent. One ready for fertilization.

o., primordial. Germ cells which arise very early in development of embryo, usually in yolk sac endoderm, and migrate into urinogenital ridge and possibly serve as progenitors of functional sex cells.

o., teleolethal. O. in which yolk is fairly abundant and tends to concentrate in one hemisphere.

ox-. 1 Combining form meaning presence of oxygen. 2. Abbr. of oxal-

oxa-. Combining form indicating presence of oxygen in place of carbon

oxacid (ôk'sâ-sîd) [G. *oxy*, sour, + L. *acidum*, acid]. An acid of which oxygen is a constituent

oxal-, oxalo-. CHEM Combining forms indicating derivation from *oxalic acid*.

oxalacetic acid (ôks'âl-â-sê'tik). SYN. *oxyaloacetic acid*. A product of carbohydrate metabolism resulting from oxidation of malic acid. May be derived from other sources

oxalate (ôk'sâ-lât) [G. *oxalis*, sorrel]. A salt of oxalic acid.

About 5-20 mg of the oxalates are excreted in urine per day.

oxalic acid (ôk'sâl'ik) [G. *oxalis*, sorrel]. A white crystalline powder often used about the home as a stain remover or bleach, resembling epsom salts in appearance.

Recent research has revealed that oxalic acid has the effect of marked and rapid reduction of blood coagulation time, with indication of its value in treating hemorrhage, jaundice, etc.

SOURCES: Cranberries, chard, rhubarb, gooseberries, spinach, beet leaves. When eating these should be accompanied by liberal portions of calcium foods, such as eggs, beans, and milk.

POISONING: SYM. Erosive action on swallowing; sour taste; burning in mouth, throat and stomach; great thirst; bloody vomitus; collapse; sometimes convulsions and coma

TREATMENT: Soapsuds are of no value against oxalic acid since they form poisonous oxalates which may be absorbed and do further damage. Use powdered chalk, calcium carbonate or magnesium carbonate. Dilute the poison and cause vomiting. SEE *acid poisoning*.

o. a. diathesis. Chronic state of oxalemia.

oxalism (ôk'sâl-izm) [" + *ismos*, state of]. Poisoning from oxalic acid or an oxalate.

oxaluria (ôk-sa-lû'rî-â) [" + *ouron*, urine]. The abnormal excretion of oxalates in the urine, esp. calcium oxalate.

Presence of oxalates does not always indicate oxaluria when found in standing urine, because of their insolubility. May be due to ingestion of certain vegetables (tomatoes) or the imperfect oxidation of carbohydrates

ERROR: When not due to foods, may be due to oxaluria diathesis, dyspepsia, gout, debility, lithemia, skin disease, constipation, neurasthenia, hemophilia, overeating and lack of exercise.

oxalylurea (ôk'sa-lîl-û-rê-â). An oxidation product of uric acid.

oxidase (ôk'sî-dâs) [G. *oxy*, sour]. An enzyme which catalyzes an oxidation reaction; a respiratory enzyme.

o., cytochrome. Warburg's enzyme.

oxidation (ôk'sî-dâ'shûn) [G. *oxy*, sour].

1 The process of a substance combining with oxygen. 2. The loss of electrons with an accompanying increase in posi-

tive valence 3 The loss of hydrogen atoms (*dehydrogenation*). 4. The opposite of reduction

oxide (ôk'sîd) [G. *oxy*, sharp]. Any chemical compound in which oxygen is the negative radical.

oxidize (ôk'sî-dîz) [G. *oxy*, sour]. 1. To combine with oxygen 2 To increase the positive valence of, or to decrease the negative valence by bringing about a loss of electrons

oxonemia (ôk'sô-nê'mî-â) [L. *oxone*, acetone, + G. *aima*, blood]. Excess of acetone bodies found in the blood. SYN: *acetoneuria*.

oxy [G] 1 Combining form meaning sharp, keen, acute, acid, pungent 2 Presence of oxygen in a compound 3. Presence of a hydroxyl group.

oxyacolia, oxyakolia (ôk'sî-â-koy'â) [G. *oxy*, keen, + *akoê*, hearing]. Abnormal sensitiveness to noises, as in facial paralysis, esp. if the stapedius muscle is involved

oxyacousis (ôk'sî-â-kû'sîs) [" + *akousis*, hearing]. Abnormally acute hearing. SYN *hyperacusis*.

oxyblepsia (ôk'sî-blêp'sî-â) [" + *bleps*, vision]. Extraordinary acuteness of vision

oxybutyria (ôk'sî-bû-tîr'î-â) [G. *oxy*, sharp, + *boutyron*, butter]. Oxybutyric acid in the blood or in the urine.

oxycephalia (ôk'sî-sêf-â'îl-â) [" + *kephalê*, head]. State of having a high and pointed skull

oxycephaleus (ôk'sî-sêf-â-lûs) [" + *kephalê*, head]. Denoting a head that is pointed and conelike

oxychinolin (ôk'sî-kin-ô-lîn) [" + *chino-sol*]. A quinoline derivative used in disinfecting wounds

oxychloride (ôks'î-lôr'id) [G. *oxy*, sharp, + *chlôros*, green]. A compound consisting of an element or radical combined with (a) oxygen and chlorine or (b) the hydroxyl radical (OH) and chlorine

oxychlorine (ôk'sî-klô'rên) [" + *chlôros*, green]. Commercial dressing for wounds

oxychromatic (ôk'sî-krô-mât'ik) [G. *oxy*, sour, + *chrôma*, color]. Staining readily with acid dyes

oxychromatin (ôk'sî-krô-mâ-tîn) [" + *chrôma*, color]. That part of chromatin which stains readily with acid dyes.

oxycinesia (ôks'î-sîn-ê'zî-â) [G. *oxy*, keen, + *kinêsis*, movement]. Pain experienced on moving

oxydase (ôk'sî-dâs) [" + *ase*, enzyme]. A ferment causing oxidation. SYN: *oxidase*.

oxydasis (ôk-sî-dâ'sîs) [G. *oxy*, sour]. The process of oxidation produced by an oxydase.

oxydosis (ôk-sî-dê'sîs) [" + *desis*, a binding]. Acid fixing capacity, esp. as evidenced in the blood by buffer salts.*

oxydatic (ôk-sî-dê'tik) [" + *desis*, binding]. Concerning the acid fixation capacity.

oxyecolia (ôk'sî-ê-koy'â) [G. *oxy*, sharp, + *akoê*, hearing]. Abnormal sensitivity to noises. SYN: *oxyacolia*, q.v.

oxyesthesia (ôk'sî-ês-thê'zî-â) [" + *aisthêsis*, sensation]. Abnormal acuteness of sensation. SYN: *hyperesthesia*.

oxygen (ôk'sî-jên) [G. *oxy*, sharp, since oxygen was formerly considered an essential element of acids, + *gennan*, to produce]. SYMS: O. 1. A nonmetallic element occurring free in the atmosphere as a colorless, odorless, tasteless gas; at. wt., 16. 2. Chlorine used for bleaching purposes.

It is a constituent of animal, vegetable and mineral substances comprising by weight 3/4 of the animal, 4/5 of the vegetable, and 1/2 of the mineral world, and by volume, 1/5 of the atmosphere, and by weight 8/9 of water.

It is essential to respiration of most forms of animal and plant life, and is the most important and abundant element discovered, composing about 21% of the atmosphere's total volume. When O combines with another substance, the process is called *oxidation*. When combination takes place rapidly enough to produce light and heat, the process is called *burning* or *combustion*. O combines readily with other elements to form oxides.

It is the only element that enters the animal organism in a free state. It is absorbed by plants in the form of water and carbon dioxide being converted by them into organic substances utilized for the food of man, and in turn is returned to the atmosphere by man in form of waste products of water and carbon dioxide, thus maintaining the balance of oxygen and carbon dioxide in the atmosphere.

It represents 65% of the elements in the body, 12% in venous, and 20% in arterial blood.

Uses. O is employed largely in the treatment of anemia, pulmonary tuberculosis, pneumonia, poisoning by illuminating gas; or by narcotics such as opium and the barbiturates, heart disease, etc.

In the treatment of pneumonia, there is considerable difference of opinion as to the use of oxygen at all or, if used, as to when to begin, how much to employ, and how to administer. Many begin administration when the diagnosis of pneumonia is made, others only when signs of anoxemia appear. Another large group do not use it at all in the treatment of this disease.

Among the most common methods in use are the open cone, nasal catheter, the oxygen tent, and the oxygen chamber. The modern tent is the most uniformly satisfactory. O is also used subcutaneously.

Oxygen is employed frequently with ether or other agents used for the induction of general anesthesia. Following extensive surgery it reduces reactions to anesthetic. Also employed in septicemia, gas gangrene, peritonitis, and intestinal obstruction.

o. capacity. The maximum amount of oxygen expressed in volume per cent (cc per 100 cc) which a given amount of blood will absorb. For normal blood it is about 20 cc.

o. content. The amount of oxygen in volume per cent which is present in the blood at any one moment.

o. debt. The amount of oxygen required after muscular activity for the removal of lactic acid and other metabolic products which accumulate when the supply of oxygen is below the needs of the organism.

o. dissociation curve. A curve which shows relationship between partial pressure of oxygen and the percentage saturation of hemoglobin with oxygen.

i. e. the proportion of oxyhemoglobin to reduced hemoglobin. Factors which favor shift of curve to the right, i. e., which accelerate the decomposition of hemoglobin are a rise in temperature and an increase of H ions which results from liberation of CO₂ and formation of lactic acid.

o. saturation. Oxygen content of blood divided by oxygen capacity and expressed in volume per cent.

o. tent. An air-tight chamber in which a patient's head and shoulders are enclosed in which the oxygen content of the air can be raised above normal.

o. therapy. The administration of oxygen for the treatment of conditions resulting from oxygen want. It is used to combat acute arterial anoxia such as results from pneumonia, pulmonary edema, or obstruction to breathing. It is also employed in congestive heart failure, coronary thrombosis, and following surgery.

It may be administered by nasal catheter, mask (nasal or oronasal), funnel or cone, oxygen tent, or special oxygen chamber, and usually in a concentration of 70-100%. Inhalation of high concentrations of oxygen, esp at pressures of more than one atmosphere may produce deleterious effects such as irritation of respiratory tract, reduced vital capacity, and sometimes neurological symptoms. For premature infants serious eye defects may result.

CAUTION. Care must be exercised not to permit a spark or open flame in the vicinity of the apparatus.

o. want. Anoxia, oxygen lack.

oxygenase (ôk'si-jên-âs) [G. *oxyz*, sharp, + *gennan*, to produce, + *ase*, enzyme]. An enzyme which enables an organism to use atmospheric oxygen in respiration.

oxygenation (ôk'si-jên-â'shûn) [+ *gennan*, to produce]. Impregnation or combination with oxygen, as the aeration of the blood in the lungs.

oxygenic (ôk'si-jên'ik) [+ *gennan*, to produce]. Concerning, resembling, containing, or consisting of oxygen.

oxygenize [G. *oxyz*, sharp, + *gennan*, to produce]. To oxidize, *q*.

oxygeusia (ôk'si-gû'si-â) [+ *geusis*, taste]. Abnormally keen sense of taste.

oxyhematin. An iron compound which constitutes the coloring matter in oxyhemoglobin. When oxidized it yields hematinic acid; when reduced, hematorporphyrin.

oxyhemoglobin (ôk'si-hem-ô-glô'bîn) [+ *aima*, blood, + *L. globus*, a sphere]. The combined form of hemoglobin and oxygen.

Hemoglobin with oxygen is found in arterial blood and is the oxygen carrier to the body tissues. **SYN:** *hematoglobulin*. See *respiration*.

oxyhemoglobinograph (ôk'si-hem-ô-glô'bîn-ô-grâf). Device for recording amount of oxygen in the blood, a photoelectric cell is attached to the ear lobe, which is blue if the blood is short of oxygen and red if oxygen is sufficient. The result is recorded on a tape.

oxyhemoglobinometer (ôk'si-hem-ô-glo'-bîn-ôm'êt-êr) [+ " + " + *G. metron*, a measure]. Apparatus for measurement of oxygen in the blood.

oxyhydrocephalus (ôk'si-hi-drô-sêf'âl-ûs) [G. *oxyz*, sharp, + *ydôr*, water, + *kephalê*, brain]. Pointed head shape type of hydrocephalus.

oxylodide (ôk'si-lô-did) [+ + *iodês*, violet colored]. Compound of iodine and oxygen with an element or radical.

oxylalia (ôk'si-lâ'lli-â) [G. *oxyz*, swift, + *lalein*, to speak]. Abnormal rapidity of speech.

oxyntic (ôk-sîn'tik) [G. *oxyzinein*, to make acid]. Producing or secreting acid. **See cell.**

oxyopia (ôk'si-ô'pî-â) [G. *oxyz*, sharp, + *ôps*, sight]. Unusual acuteness of vision.

oxyopter (ôk'si-ô'ptêr) ['' + *ôpsis*, vision]. A unit of visual acuity, being the reciprocal of the visual angle, in degrees.

oxyosis (ôk'si-ô'sis) [G. *oxyz*, sharp, + *-ôsis*, condition]. Decrease in normal alkalinity of the blood. SYN: *acidosis*, *q.v.*

oxyosmia (ôk'si-ôz'mî-â) ['' + *osmê*, odor]. Unusual acuity of sense of smell. SYN: *oxyosphresia*.

oxyosphresia (ôk'si-ôz-frê'zî-â) ['' + *osphrêsis*, smell]. Abnormal acuity of the sense of smell.

oxypathia, **oxypathy** (ôk'si-pâth'î-â, -slp-âth-î) [G. *oxyz*, sharp, + *pathos*, feeling]. 1 Unusual acuity of sensation 2 An acute condition 3 Condition of inability to eliminate unoxidizable acids which combine with fixed alkalies of the tissues and harm the organism. SEE: *arthritis*, *lithemia*.

oxyperitoneum ôk'si-pêr-î-tô-nê'um) ['' + *peritoneum*, peritoneum]. Introduction of oxygen into the peritoneal cavity.

oxyphilic (ôk'si-fîl, -fîl) ['' + *philein*, to love]. 1 Staining readily with acid dyes. 2 A cell which stains readily with acid dyes.

oxyphilous (ôk'sîf-îl-ûs) ['' + *philein*, to love]. Having an affinity for acid dyes. SYN: *oxyphil*, 1.

oxyphonia (ôk'si-tô'nî-â) ['' + *phônê*, voice]. An abnormally sharp or shrill voice.

oxypurine (ôk'si-pu'rên) [G. *oxyz*, sharp, + *L. purus*, pure, + *urina*, urine]. An oxidation product of purine.

Group includes hypoxanthine, xanthine, uric acid.

oxyrhine (ôk'sî-rîn) ['' + *ris*, nose]. 1. Having a sharp pointed nose 2. Possessing an acute sense of smell.

oxyrygmia (ôk'sî-rîg'mî-â) ['' + *erygmus*, eruption]. Belching up of acid. SEE: *eructation*.

oxyspartine (ôk'sî-spâr'te-ên) ['' + *L. spartum*, broom]. White crystalline oxidation product of sparteine, used as a cardiac stimulant.

oxytocia (ôk'sî-tô'shî-â) [G. *oxyz*, swift, + *tokos*, childbirth]. Unusual rapidity of childbirth.

oxytocic (ôk'sî-tô'sîk) ['' + *tokos*, birth]. 1. Agent which stimulates uterine contractions. 2. Accelerating childbirth.

o. principle. SYN *pitocin*. A hormone stored in post lobe at hypophysis which acts specifically on smooth musculature of the uterus increasing tone of and inducing uterine contractions.

oxytocin (ôk'sî-to'sîn) [G. *oxyz*, swift, + *tokos*, birth]. SYN *Pitocin*. The oxytocic principle of the post lobe of hypophysis.

o. infection. USP term for an aqueous solution containing the oxytocic fraction of the post pituitary gland.

oxyuriasis (ôk'sî-û-rî-âs-îs) [G. *oxyz*,

sharp, + *oura*, tall, + *iasis*, infection].

Enterobiasis, *q.v.*

oxyuricide (ôk'sî-û'rî-sîd) ['' + '' + *L. caedere*, to kill]. Destructive to, or an agent that destroys pinworms.

oxyurid [G. *oxyz*, sharp, + *oura*, tall]. Pinworm or seatworm. SEE: *Enterobius vermicularis*.

Oxyuris [G. *oxyz*, sharp, + *ours*, tall]. Old name for genus of nematode worms which includes the pinworms or seatworms. SEE *Enterobius*.

o. vermicularis. *Enterobius vermicularis*, *q.v.*

oyster (ôi'ster) [G. *ostreon*]. Shellfish eaten raw or cooked.

AVERAGE SERVING 120 Gm. PRO. 6.8, FAT 1.3, CARBO 4.0 VITAMINS A+, B+, C+, G+. ASH CONST. Ca 0.052, Mg 0.037, K 0.091, Na 0.459, P 0.155, Cl 0.590, S 0.187, Fe 0.0045.

An acid forming food with potential acidity of 15 cc. per 100 Gm., or 30 cc. per 100 cal.

ACTION. Changes in the liquor of oysters may give rise to toxicity with rising temperature, headaches, eruptions, gastrointestinal troubles, infection or food poisoning.

Oz., **oz.** Abbr for ounce.

ozena (ô-zê-nâ) [G. *ozein*, to smell]. Disease of the nose characterized by atrophy of the turbinates and mucous membrane accompanied by considerable crusting and discharge and a very offensive odor. It is present in various forms of rhinitis.

ozocerite (ô'zô-sê-rît) ['' + *kêros*, wax]. Mineral wax used as an ointment base.

SEE *ceresin*.

ozochrofia (ô'zô-krô'shî-â) ['' + *chrôs*, skin]. Strong odor given off by the skin. SYN *bromidrosis*.

ozokerite (ô'zô-kê-rît) ['' + *kêros*, wax]. Mineral wax which is employed as an ointment base. SYN *ozocerite*.

ozonator (ô'zô-nâ-tôr) [G. *ozein*, to smell]. Device for generating ozone.

ozone (ô'zôn) [G. *ozein*, to smell]. A form of oxygen in which 3 atoms of the element combine to form the molecule, O₃.

ozoneization (ô'zô-nî-zâ'shùn) [G. *ozein*, to smell]. The act of converting to, or impregnating with ozone.

ozoneize (ô'zô-nî-z) [G. *ozein*, to smell]. 1. To convert oxygen to ozone, i.e., 3 atoms to the molecule of free oxygen. 2. To impregnate the air of a substance with ozone.

ozonometer (ô'zô-nom-ê-têr) ['' + *metron*, a measure]. An apparatus for estimating the quantity of ozone in the atmosphere.

oxonscope (ô'zô-nô-skôp) ['' + *skopein*, to examine]. A device for showing the presence or amount of ozone.

ozostomia (ô'zô-stô'mî-â) [G. *ôzê*, stench, + *stoma*, mouth]. Fetid breath.

P. Symb. of *phosphorus*.

P., p. Abbr for *para*, *pupil*, *pulse*, *position*, also for *postpartum*.

P₂. Abbr for *pulmonic second sound*.

PABA. Abbr for *para-aminobenzoic acid*, *q.v.*

pabular (pab'ū-lar) [L. *pabulum*, food].

Pert. to nourishment

pabulum (pāb'u-lūm) [L.] Food, nourishment.

pachionian bodies (pāk-ē-ō'nī-ān). Enlarged villi, small pedunculated or rounded growths of fibrous tissue along longitudinal fissure of the cerebrum growing on arachnoid membrane.

p. depressions. Small pits produced on inner surface of skull by protuberance of p. bodies.

p. glands. See *p. bodies*.

pacemaker (pās'māk-ēr) [L. *passus*, a step, + *A. S. macian*, to make]. The sinoauricular node, so named because cardiac rhythm commences here, taking place near the spot where the large veins empty into the auricle

pachismus (pāk-iz'mū-) [G. *pachys*, thick, + *ismos*, condition] Condensation or thickening of an organ or part

pachy-, pach- [G.] Combining form meaning *thick, large, heavy, massive*.

pachyacria, pachyakria (pāk-i-āk'rī-ā) [G. *pachys*, thick, + *akron*, end] Hypertrophy of soft portions of the extremities

pachyblepharon (pāk'i-blēf'ār-ōn) [G. *pachys*, thick, + *blepharon*, eyelid]. A thickening of border of eyelid

pachycephalic (pāk'i-sēf'al'ik) [" + *kephalē*, brain] Possessing a thick skull. SYN *pachycephalous*.

pachyblepharosis (pāk-i-blēf-ā-rō'sis). Chronic thickening of the eyelid

pachycephalous (pāk'i-sēf'āl-ūs) [" + *kephalē*, brain]. Thick skulled. SYN: *pachycephalic*.

pachycephaly (pāk'i-sēf'āl-i) [" + *kephalē*, brain]. Unusual thickness of the walls of the skull

pachychilia (pāk'i-ki'lī-ā) [" + *cheilos*, lip] Unusual thickness of the lips

pachycholia (pāk'i-kō'lī-ā) [" + *cholē*, bile]. Thickening or inspissation of the bile

pachychromatic (pāk'i-krō-māt'ik) [" + *chrōma*, color] Possessing a coarse chromatin network.

pachycolpismus (pāk-i-kōl-piz'mūs) [G. *pachys*, thick, + *kolpos*, vagina, + *ismos*, condition] Chronic inflammation of vagina with thickened vaginal walls. SYN. *pachyvaginitis*.

pachydactylia, pachydaetylly (pāk'i-dāk-tīl'ī-ā, -dak'tīl'ī) [G. *pachys*, thick, + *daktylos*, digit] Condition marked by unusually large fingers and toes

pachyderma (pāk-i-der'mā) [" + *derma*, skin]. Unusual thickness of the skin.

pachydermatocoele (pāk'i-der-māt'ō-sēl) [" + " + *kēlē*, swelling]. A pendulous state of the skin with thickening. SYN: *dermatolysis*.

pachydermatosis (pāk'i-der-māt-ō'sis) [" + " + *-ōsis*, condition]. Chronic hypertrophy of the skin. SYN. *pachydermia*.

pachydermatous (pāk-i-der-mā-tūs) [" + *derma*, skin]. Possessing a thick skin.

pachydermia (pāk-i-der-mī'ā) [G. *pachys*, thick, + *derma*, skin]. 1. Excessive

thickening of the skin. 2. Elephantiasis, *q.v.*

p. laryngis. Irregular thickening and hypertrophy of mucous membrane in the larynx seen in chronic laryngitis.

p. lymphanglectatica. A diffuse form of lymphangioma resulting in formation of lymph-filled sacs often giving rise to gross deformities

p., occipital. A disease in which the skin of the scalp, esp in occipital region, is thrown into thickened folds

p. vesica. Condition in which there is a thickened mucous membrane in the urinary bladder

pachyemia (pāk-i-ē'mī-ā) [G. *pachys*, thick, + *aima*, blood] Thickness of the blood

pachyglossia (pāk'i-glos'sī-ā) [" + *glōssa*, tongue]. Unusual thickness of the tongue.

pachygnathous (pāk-ig'nāth-ūs) [" + *gnathus*, jaw]. Having a thick or large jaw

pachygyria (pāk-i-jī'rī-ā) [" + *gyros*, a circle] Flat, broad formation of the cerebral convolutions

pachyhematous (pāk-i-hēm'āt-ūs) [" + *aima*, blood] Having thickened blood.

pachyhemia (pāk-i-hē'mī-ā) [" + *aima*, blood] A thickened state of the blood.

pachyleptomeningitis (pāk-i-lēp-tō-mēn-ij'tis) [G. *pachys*, thick, + *leptos*, thin, + *meninx*, membrane, + *-itis*, inflammation] Inflammation of pia and dura of the brain and spinal cord

pachylosis (pāk-i-lō'sis) [G. *pachylos*, thick] A rough, div. thickened, chronic condition of skin SYN *zeosis*.

pachymeningitis (pāk-i-mēn-in-jī'tis) [G. *pachys*, thick, + *mēnix*, *mēnigg-*, membrane, + *-itis*, inflammation]. Inflamed condition of the dura mater

Inflammation of the pia, dura, and arachnoid membranes is sure to extend to either or both of the others, and the consequence in any form is suppuration, abscess, effusion into the ventricles and softening of cerebral tissue if brain is involved

p. externa. Inflammation of outer layer of dura mater

p., hemorrhagic. Circumscribed effusion of blood on inner surface of dura with inflammation. SYN *chronic subdural hematoma*

Secondary to chronic cardiac disease, renal disease, the infectious fevers, chronic alcoholism or insanity.

SYM: Often obscure. Where marked, there is headache, failure of memory, impairment of intellect, stupor, contracted pupils, local convulsions, or palsies.

ETIO: Usually the result of trauma, such as a blow, which results in a venous tear. Blood oozes into subdural space, a blood clot is formed which becomes encysted, giving rise to a hematoma.

p., hypertrophic cervical. Thickening of the dura in the cervical region.

p. interna. Inflammation of inner layer of dura mater.

p., spinal. Inflammation of the dura of the spinal cord.

pachymeningopathy (pāk'i-mēn'in-gōp'ā-thī) [Any disease of the dura mater.

pachymeninx (pāk-i-mē'ninks) [G. *pachys*,

thick, + *mēnigz*, membrane]. Membrane known as the dura mater.

pachymeter (pāk-im'ēt-ēr) [+ *metron*, measure]. Instrument for measuring thickness

pachynsis (pāk-in'sis) [G. *pachynsis*, a thickening]. Thickening of a substance or part, usually abnormal

pachyntic (pāk-in'tik) [G. *pachynsis*, a thickening]. Thickening, abnormally thickened

pachyonychia (pāk'ī-d-nīk'ī-ā) [G. *pachys*, thick, + *onyx*, *onych-*, nail]. Thickening of finger or toe nails

p. congenita. A congenital condition characterized by thickening of the nails, thickening of the skin on palms of hands and soles of feet, follicular keratosis at knees and elbows, and corneal dyskeratosis

pachyostosis (pāk'ī-ds-tō'sis) [+ *osteon*, bone, + *-osis*, disease]. Thickening of the bones

pachyotia (pāk-ī-d'shī-ā) [+ *ous*, *ōt-*, ear]. Abnormal thickness of the ears.

pachypelviperitonitis (pāk'ī-pēl'vī-pēr-īt-ō-nī'tis) [+ *L pelvis*, basin, + *G peritoneum*, peritoneum, + *-itis*, inflammation]. Inflammation of the pelvic and peritoneal membranes with hypertrophy and thickening of their surfaces.

pachyperitonitis (pāk-ī-pēr-īt-ō-nī'tis) [+ *peritoneum*, peritoneum, + *-itis*, inflammation]. Inflammation of the peritoneum with thickening of the membrane.

pachypleuritis (pāk-ī-plū-rī'tis) [+ *pleura*, a side, + *-itis*, inflammation]. Inflamed condition of the pleura with thickening of the membrane

pachypodous (pāk-ip'ō-dūs) [+ *pous*, *pod-*, foot]. Having massive feet

pachyrhinc (pāk'ī-rin'k) Having a thick, flat nose

pachysalpingitis (pāk-ī-sāl-pīn-jī'tis) [G. *pachys*, thick, + *salpinx*, tube, + *-itis*, inflammation]. Chronic inflammation of an oviduct with thickening of the muscular coat.

pachysalpingoovariitis (pāk'ī-sāl-pīn-gō-ō-vār-ī'tis) [+ + + *L ovarium*, ovary, + *G. -itis*, inflammation]. Chronic inflamed condition of an ovary and oviduct with thickening of the membranes.

pachysomia (pāk-ī-sō-mī-ā) [G. *pachys*, thick, + *sōma*, body]. Pathological thickening of the soft parts of the body, as in acromegaly

pachyvaginitis (pāk'ī-vāj-in-āl-ī'tis) [+ *L vagina*, sheath, + *G. -itis*, inflammation]. Inflamed condition of the tunica vaginalis with thickening of the membrane.

pachyvaginitis (pāk'ī-vāj-in-āl-ī'tis) [+ + + *-itis*, inflammation]. Chronic inflammation of the vagina with thickening of the membranes. SYN: *pachyculpsimus*.

pacinian corpuscle (pā-sin'ī-ān). SYN: *corpuscle of Vater-Pacini*. An encapsulated sensory nerve ending found in subcutaneous tissue and many other parts of the body (pancreas, penis, clitoris, nipple). These corpuscles are stimulated by deep or heavy pressure

pack (pāk) [Gaelic, *pakke*]. 1. A dry or moist, hot or cold blanket or sheet wrapped around a patient. 2. To fill up a cavity.

p., cold wet sheet. This pack is a physiologic sedative and hypnotic employed for relief of restlessness, insomnia, and used extensively in psychiatric conditions. Effects are similar to those of any cold application except they are

more intense as greater area is covered by the pack.

p., dry. Procedure used in combination with hot bath. When patient leaves hot bath he is placed in dry, warm sheet and wrapped in several warm blankets.

p., full. SEE *pack, wet sheet*.

p., half. Wet sheet pack but in this type the moist fabric and dry blanket extend from the axilla to below the knees.

p., hot bath. SEE *pack, dry*.

p., hot blanket. The envelopment of a patient in moist blanket wrung from very hot water (150° to 160° F.). Given to relax contracted muscles, relieve convulsions, or induce profuse perspiration.

p., ice. If ice bag is not available, a local cold application may be made by folding a soft towel so it will fit the area and filling it with crushed ice.

p., neutral wet sheet. SEE: *pack, wet sheet*.

p., one sheet. Same as wet sheet pack except only 1 large sheet, 84 x 96 in., is used.

p., partial. SEE *half and three-quarter packs*.

p., three-quarter. Pack using same temperatures as wet sheet pack but the body is enveloped from below upward as far as the armpits.

p., wet sheet. The envelopment of patient in 1, 2 or 3 linen or soft cotton sheets that have been wrung out of water which is hot, cold or lukewarm, depending on the purpose. These are held against the body by large woolen blankets

Temperature of the water used for the sheets varies

packer (pāk'ēr) [Gaelic *pakke*, a pack]. Device for packing a cavity, as the uterus or rectum with gauze, etc.

packing (pāk'ing) [Gaelic *pakke*, pack]. 1. The process of filling a cavity or wound with gauze sponges, etc. 2. Material used to fill a cavity or wound

pad (pād) [origin uncertain] Soft cushion or bag to relieve or give pressure, support an organ or part, etc.

Usually cotton, oakum, jute or wood wool. Surgical cotton is not suitable for open wounds or broken surfaces. Oakum or marine lint is too irritating to place in direct contact with skin

p., abdominal. Pad for absorbing fluids from surgical wounds, etc., of abdomen. Stock sizes 6 x 7 and 8 x 9 in.

p., dinner. Pad placed on stomach prior to application of a plaster cast.

Pad is then removed, leaving space for abdominal distention after meals.

p., kidney. Air or water pad fixed on abdominal belt for compression over a movable kidney.

p., knuckle. Nodules on dorsal sides of the fingers.

p., Maigne's. Mass of fat in knee joint on either side of the patella's upper end.

p., Mikulicz's. One of folded gauze used in surgery.

p., sucking. Mass of fat on inner cheek assumed to aid in sucking.

p., surgical. Soft rubber pad with apron and inflatable rim for drainage of escaping fluids, used in operations and obstetrics.

Pagenstecher's ointment (pāhg'ēn-stāk-ēr). Ophthalmic ointment composed of a base of yellow oxide of mercury.

P.'s thread. Suture thread made of linen dipped in celluloid.

Paget's disease (páj'ět). 1. Chronic inflammation of bones with thickening and distortion. **SYN:** *osteitis deformans*.
2. A cancerous dermatosis of nipple area in women, though extramammary cases have been reported.

ETIOL: Exciting cause unknown. Whether it is primary or secondary with reference to malignancy has not yet been settled.

Serum phosphatase used for diagnosis and prognosis.

SYM: Insidious beginning as sharply circumscribed eczematous inflammatory area on areola with itching. Later, crusting from sticky, viscid exudation. Never heals spontaneously, nor does it respond to antieczematous treatment. Extends peripherally with retraction and fissuring of nipple. After 1 or 2 years a superficial ulcerating or deep nodular carcinoma develops.

PROG: Good in early cases under proper treatment. If advanced and extensive, prognosis is same as in breast cancer.

TREATMENT: X-rays, radium, and amputation. Early radical excision is best. **SEE** *mastectomy*.

pain (pân) [G *poînê*, penalty]. 1. A sensation in which a person experiences discomfort, distress, or suffering. 2. In the plural, refers to contractions of the uterus in childbirth, or labor pains.

Pain may vary in intensity from that which produces mild discomfort to that of intolerable agony. In most cases, pain stimuli are harmful to the body and tend to bring about reactions by which the body protects itself. Adaptation to pain stimuli does not readily occur. Pain is one of the cardinal symptoms of inflammation.

Later in life, if one had always been well, definite pain may be a danger signal. In a complainer, a new pain may not mean much.

The degree of pain is measured by a dolorimeter in terms of *dol*. Childbirth is registered as 10½ *dols*; migraine headache, 5 *dols*; toothache 2 *dols*. The average man seldom experiences pain of over 6 *dols*. A 2-*dol* pain may cease after taking aspirin. Increasing dosage over 2 *dols* will not help.

p., abdominal. Increased with respiration; experienced in broken ribs, intercostal neuralgia, wounds, herpes zoster, pleurisy, pleurodynia, myalgia, peritonitis, acute peritonitis, colic; hepatic, gastric, or renal ulcer, gallbladder disorders, carcinoma in late stages, and gummata of this region.

p., absence of. In disorders in which pain should be expected may indicate pressure on the brain. The sudden abatement of pain, when other symptoms continue to be bad, is not a good sign.

p., aching. Generalized aching may be ushered in with infectious disease such as influenza, smallpox, or rheumatic fever. It is also found in myalgia, lumbago, and various headaches.

p., acute. Same as lancinating pain. Usually associated with acute inflammation, or inflammation of serous membranes as in pleurisy, and pericarditis; also posterior spinal-root pains.

p., after. That following labor, caused by contraction and retraction of uterine muscles during involution.

p., agonizing. May be due to coronary thrombosis, angina pectoris, aortic aneurysm, mediastinitis. May occur in milder form in asthma, tracheobronchitis, or it may be due to referred pain

from gallbladder, intestinal obstruction, diaphragmatic hernia, pancreatitis, or a perforated ulcer.

p., angina pectoris. Paroxysmal, severe pain radiating from the heart to shoulder, thence down the arm, or rarely from the heart to the abdomen. Lasts from a few seconds to several minutes.

p., appendicitis. If acute, abdominal pain, usually severe, generally throughout the abdomen, followed by localization of pain in right lower quadrant of abdomen with tenderness over right rectus muscle with rigidity.

p., bearing-down. Straining and tenesmus with uterine contractions.

p., brain. Constant aches lasting for weeks, months, or years are due to worry, nervousness, and fatigue and not to brain lesions. Many such headaches are due to tensions outside of the skull. Brain tumor is rare and it brings about changes in character, dullness of intellect, imperfect vision, unsteady gait and sudden nausea, otherwise, brain pain does not indicate brain tumor.

p., Brodie's. That caused near a joint affected with neuralgia when the skin is folded near it.

p., burning. **SYN** *causalgia*. Experienced in heat burns, superficial skin lesions, herpes zoster and in circumscribed neuralgias.

p., cardiac. **SYN:** *angina pectoris*. A thoracic pain, usually substernal, precipitated by exercise or an emotional disturbance. Due to impaired coronary circulation.

p., causalgic. A spontaneous pain, esp. burning in character, when associated with anesthesia, or hyperesthesia in a given nerve. **SEE** *causalgia*.

p., ceiling and threshold of. Ascertained by a low amount of controlled heat to a square centimeter of skin surface for 3 seconds. The *pain threshold* is reached when sensation starts to be painful, or when 220 millicalories or heat units are reached. The ceiling is found by increased heat until 480 millicalories are reached. Beyond this point no increased physical suffering is experienced although burns will result. They occur at 7 or 8 *dols*, but ordinary pain registers at 2 *dols*; migraine at 3 to 5 *dols*, histamine injectors at 6 to 7 *dols*; passing of a kidney stone or childbirth may register 10½ *dols* if no pain-relieving drug is given. As this is the pain-ceiling no further physical pain may be felt. Pain greater than 6 *dols* is rare. A greater pain cancels a lesser one. Heavy doses of a drug, such as aspirin, do not give greater relief than the ordinary dose. The pain threshold is the same for everyone, although emotional reactions simulate increased pain.

p., central. That due to a lesion in the brain or spinal cord.

p., cephalic. Head pain, *q.v.*

p., chest. Severe pain in chest from exercise may be due to heart trouble. If due to pleurisy it comes with a deep breath, or it may come with a stiff shoulder or neck, due to arthritis or fibrositis. If, after a meal, it comes when bending over it may come from a rupture in the diaphragm.

p., continuous. May indicate persistent obstruction; also a tendency to supplantation.

p., cramplike. Muscular spasm such as epigastric pain. Significance depends upon location of pain.

p., degree of. **SEX:** *dol*, *dolorimeter*.

p., dilating. P. occurring during the first stage of labor accompanying dilatation of the cervix

p., dull. Continuous mild throbbing which attends inflammation of mucous membranes.

p., ear. May indicate inflammation of the ext. auditory canal, except in young children. It also may indicate a furuncle in the meatus, or middle ear disease. **SYN:** *otodynia*.

p., eccentric. P. occurring in peripheral structures due to a lesion involving root roots of spinal nerves

p., ecstatic. Unreasonable desire for excitement, pleasurable or painful. A martyrlike pleasure, or a feeling of being untailly treated may be experienced with satisfaction

p., epigastric. Severe pain occurring in paroxysms in gastric disorders

If to the left of the spine, with epigastric tenderness occurring soon after a meal, gastric ulcer is indicated. If it occurs several hours after eating and is then relieved by food, duodenal ulcer is indicated. If pain is constant and not relieved by food or by alkalies, carcinoma may be suspected.

Heartburn indicates acute gastritis. Epigastric pain and tenderness occurring in paroxysms, with pain in the right shoulder, indicate gallbladder disease. Epigastric pain with slow pulse, occurring in paroxysms, acute and sharp, with tenderness over the umbilicus, indicates pancreatic disease

In general, may accompany any gastric or intestinal disorder, as well as pleural and some cardiac affections. **See:** *cardialgia*.

p., expulsive. That of the second and third stages of labor

p., false. One mistaken for a true labor pain.

p., fixed. Indicates derangement at some special point, the sharper the pain, the deeper seated the trouble.

p., fulgurant. Sudden shooting p., esp. experienced in locomotor ataxia

p., gallbladder. In upper right abdominal quadrant, dull pain just below the last rib in infection, or sharp pain in same area radiating to the back and up under right shoulder, esp. if calculi are present. **See:** *pain, epigastric*

p., gastralgic. Severe pain occurring in paroxysms in gastric disorders. If pain is constant and not relieved by food or by alkalies, carcinoma may be suspected. Heartburn indicates acute gastritis

Epigastric pain and tenderness occurring in paroxysms, with pain in the right shoulder, indicate gallbladder disease. Epigastric pain with slow pulse, occurring in paroxysms, acute and sharp, with tenderness over the umbilicus, indicates pancreatic disease. In general, epigastric pain may accompany any gastric or intestinal disorder, as well as pleural and some cardiac affections. **See:** *pain, epigastric*.

p., girdle. One resembling sensation of a constricting cord around the waist, often associated with syphilis.

p., gnawing. May denote disease of the spinal column, gastric disturbance, and aneurysms.

p., growing. That felt in the joints of growing children.

p., head. **SYN:** *headache, cephalalgia*. An ache or pain located in the head, esp. one experienced in region of cranial vault. Headache is a common symptom of acute systemic infec-

tions; intracranial tumors, infection; or vascular lesions, hypertension; acute and chronic infections of the nose and sinuses, pharynx, eye, and ear; an toxic states (alcoholism, uremia, etc.) Headache occurs after the injection of histamine, following a lumbar puncture in infections of the meninges, and in subarachnoid hemorrhages. Headache occurs in many febrile diseases, in anemia and oxygen want, and following head injuries (post-traumatic). *Migraïne, q.v.* is a common type of unknown etiology. Many headaches are psychogenic such as those occurring in conversion hysteria, anxiety states; etc

p., heterotopic. Referred pain

p., homotopic. That felt at the point of injury

p., hunger. Pain due to need for food

p., hypogastric. Pain in the hypogastrum. May be caused by disease of bladder with urinary retention, diseases of the uterus or prostate, pelvic cellulitis, peritonitis, or other disease of the pelvic bone, by enteroptosis, may occur during labor and abortion, in chronic constipation, tumors of the rectum, in transverse myelitis, and in inflammatory diseases of lower spine

p., ideogenous. Self-induced pain of mental origin

p., imperative. In psychasthenia, persistent sensation of pain

p., inflammatory. Pain in presence of inflammation which is increased by pressure

p., intermenstrual. Pelvic pain occurring during the period between the menses

p., joy. Apparent enjoyment of pain during hysterical conditions

p., lumping. A peculiar pain felt when ulceration of cartilage lays bare the bone in joint conditions

p., labor. That accompanying child birth

p., lancinating. A short, sharp, cutting pain.

p., lightning. The cutting, darting pain of locomotor-ataxia

p., lingual. Pain in tongue which may be due to local lesions, glossitis, fissures, pernicious anemia and malignancies.

p., lung. **See:** *pain, pulmonary*

p., mental. One of psychic origin mental distress or grief. May, if persistent, cause true physical pathologic states.

p., migraine. Headache accompanied by nausea and vomiting. It may arise from a number of causes, esp. those of neurological origin.

p., mind. Pain occurring subsequent to a mental operation or of mental origin. **SYN:** *psychalgia*.

p., mobile. One that moves from area to area

p., movement. Kinesalgia

p., neuralgic. Pain, frequently paroxysmal, occurring along the branches of a nerve. Temporarily relieved by heat or pressure. May be of rheumatic origin, a tic or inflammation of nerves or nerve trunks.

p., nigging. The early ones of puerperal labor.

p., night. Pain in hip or knee during muscular relaxation in sleep. It may be a symptom of hip disease.

p., noise. Pain of ear caused by noise. **See:** *odynacusis*.

p., objective. One excited by some external or internal irritant, by inflam-

mation, or by injury to nerves, organs or other tissues which interfere with the function, nutrition, or circulation of the affected part, usually traceable to a definite pathologic process.

p., organic. Somatalgia

p., osteocopic. Pain in bones. SEE: *osteocope*

p., parenchymatous. That felt at the peripheral end of a nerve

p., paresthetic. Stinging or tingling sensation manifested in central and peripheral nerve lesions. SEE: *paresthesia*

p., phantom. That felt following an amputation and which seems to be in the missing limb

p., postprandial. Abdominal pain after eating

p., premonitory. Ineffective contractions of the uterus prior to the beginning of true labor

p., pressing. Same as *agonizing* or *aching pain*

p., pseudomyelic. False sensation of movement in a paralyzed limb, or 1 of no movement in a moving limb. Not a true pain. SEE: *pseudomyelia paresthetica*

p., psychic. Mental suffering such as that resulting from a sense of unworthiness or from feelings of guilt

p., psychical. Psychalgia

p., psychogenic. P of mental origin which occurs in the absence of physical disorders

p., pulmonary. Sharp pain in the region of the lungs. Indicates that the pleurae are involved. There is no pain when lung substance is involved

p., rectal, constant. Usually aggravated by defecation. May be due to ischioanal abscess, anal abscess, inflamed or strangulated hemorrhoids, carcinoma, proctitis, prostatic abscess, seminal vesiculitis, fecal impaction, acute salpingitis, tubo-ovarian abscess, irritation from diarrhea, foreign bodies, irritating foods, fissures, rectal polyps, or adenoma. **During defecation:** Fissure in ano, ulcer, hemorrhoids, anal abscess, stenosis, stricture, dysentery, impaction, foreign body, or any inflammation.

p., referred. Pain seeming to arise in an area or point other than at its origin, as pain from appendicitis which often seems to occur in areas other than that of the appendix. SYN: *sympathetic*

p., reflex. A reflex action resulting from a painful stimulus. Pain reflexes are protective and prepotent, i.e., tend to take precedence over less urgent reflexes

p., regional. Pain in a specific area and its significance.

p., remittent. P which subsides temporarily. Characteristic of neuralgia and colic.

p., roof. Pain in cutaneous areas fed by affected roots caused by disease of sensory nerve roots

p. sense. The sense through which pain is felt

p., shifting. Present in rheumatism, hysteria and locomotor ataxia.

p., shooting. SEE: *p. fulgurant*

p., sick headache. Migraine, q.v.

p's., spot. Pains which appear to be located in patches of the integument.

p's., starting. Those accompanied by muscular spasm during early stages of sleep

p., subdiaphragmatic (pleurisy). A sharp, stitchlike pain occurring during breathing. When the breath is held, the pain ceases. Pressure against the lower costals eases the pain.

p., subjective. One that has no apparent physical basis for its existence. It may be found among the highly imaginative neurotics in whom mild sensations are translated into pain sense.

p., sun. Pain in the frontal region felt early in the morning in acute purulent inflammation of the frontal cells

p., sympathetic. SEE: *p. referred*

p., tenesmic. P accompanying urination or defecation. SEE: *tenesmus*

p., terebrant, p., terebrating. A boring type of pain

p., thermalgesic. Pain caused by heat. SEE: *thermalgesia*

p., thoracic. A sharp pain over the sternum, often running down the arm to the elbow.

Indicative of angina pectoris, although it must not be confused with pain from gastric pressure in the region of the heart, caused by an accumulation of gas.

It is increased with respiration, experienced in broken ribs, intercostal neuralgia, wounds, herpes zoster, pleurisy, pleurodynia; myalgia, peritonitis; acute peritonitis, colic, hepatic, gastric, or renal ulcer, gallbladder disorders, carcinoma in late stages, and gumma of this region. SEE: *p. abdominal*

p., threshold of. SEE: *p. ceiling and threshold of*

p., throbbing. Found in dental caries, headache, and associated with phlegmonous inflammation and suppuration.

p., tongue. SEE: *lingue*

p., tracheal. Trachealgia

p., ulcer (gastric or duodenal): Sharp, lancinating, or dull and gnawing in epigastrium, radiating to left of spine posteriorly, on a level with the 10th rib. Burning sensation may be felt in epigastrium. Pain may occur from 10 to 15 minutes after eating, as soon as an excess of hydrochloric acid is secreted. If ulcer is near cardia, pain ensues soon after eating, if near pylorus, pain may not ensue for 2 or 3 hours after eating.

p., urethral. Pain at end of the urethra, without soreness, which may denote presence of gravel or stone in the urinary bladder.

p., wandering. One which changes its location repeatedly

p., worry and anxiety. Worry and anxiety cause muscular tension resulting in pain which if long continued may interfere with nerve and blood circulation

p., wrist (in hand) This may be caused by fractures, sprains, occupational neurosis, gout, acroparesthesia, erythromelalgia, Raynaud's disease, thromboangiitis obliterans, various bone diseases, tuberculous dactylitis, rheumatic fever, various other types of arthritis, and also tumors such as sarcoma, chondroma, carcinoma, neurofibroma, and the various types of neuritis.

painters' colic (pân'têrs) Colic accompanying lead poisoning

SYM: Vomiting, abdominal pains, marked prostration, paralysis, profound collapse, if not averted

TREATMENT: Remove patient from source of trouble, as from a newly-painted room; hot applications to abdomen; stimulants, and warmth in bed. SEE: *lead poisoning*

palatable (pâl'ât-â-bl) [L. *palatum*, palate]. Pleasing to the palate or taste, as food.

palatal (pâl'ât-âl) [L. *palatum*, palate]. Pert. to the roof of the mouth, the palate.

THE MOUTH OR BUCCAL CAVITY SHOWING THE HARD AND SOFT PALATE.

The dissection to the left shows the large mass of glandular tissue extending the full length of the palate, to the right the musculature of the soft palate and faucial pillars. 1. Isthmus of fauces 2. Inferior lip frenulum 3. Tongue surface (dorsum linguae). 4. Oropharynx 5. Uvula 6. Palatine tonsil. 7. Buccal cavity. 8. Soft palate. 9. Palatine glands 10. Hard palate. 11. Gum (gingiva). 12. Superior lip frenulum 13. Levator veli palatini.

p. reflex. Swallowing induced by stimulation of soft palate

palate (pāl'āt) [L. *palatum*, palate]. 1. The horizontal structure separating the mouth and the nasal cavity; the roof of the mouth

DISORDERS: *Koplik's Spots*. A rash frequently seen upon the palate in measles.

Secondary Syphilis: Indicated by mucous patches on the palate.

Herpes of the Throat Shown by vesicles in circles upon the pharyngeal walls and soft palate.

Swelling of Uvula Noted in inflammations of pharynx and tonsil, in nephritis, severe anemia, angioneurotic edema, and general debility. In diphtheria and Vincent's angina, a membranous exudate appears. In purpura hemorrhagica and some hemorrhagic diatheses, bloody extravasation appears.

Paralysis May result from diphtheria, bulbar paralysis, neuritis, basal meningitis, tumor at base of brain and vertebral caries.

Anesthesia: Seen in involvement of 2nd division of the 5th nerve.

RS: *Avellis' syndrome*, *Bednar's aphthae*, *cheilognathopalatoschisis*, *cleft*,

"palat-" words, *"staphyl-" words*, *"uran-" words*, *"uvul-" words*.

p., artificial. Hard substance molded to fill a cleft in the palate.

p. bones. Bones forming post. part of hard palate and lateral nasal wall bet. the int. pterygoid plate of sphenoid bone and sup. maxilla.

p., cleft. One with congenital opening bet. 2 parts of palate.

p., falling. Abnormally long uvula.

p., gothic. An excessively high palate arch

p., hard. Ant. part supported by the maxillary and palatine bones.

p., soft. Post. muscular, membranous fold partly separating the mouth and pharynx. Syn: *velum*. See: *Illus.*, p. P-6.

palatine (pāl'ā-tīn) [L. *palatum*, palate]. 1. Concerning the palate. 2. The palate bones, *q.v.*

p. arches. Syn: *pillars*. Two arch-like folds of mucous membrane (*glossopalatine* and *pharyngopalatine arches*) which form the lateral margins of faucial and pharyngeal isthmuses. They are continuous above with the soft palate.

p. artery, greater. A branch of the

maxillary artery which supplies the palate, upper pharynx, and pharyngotympanic tube.

p. bone. Palate bones, *q.v.*
palatitidis (pāl-āt-ī'tis) [" + *G. -itis*, inflammation]. Inflamed condition of the palate.

palatoglossus (pāl'ā-tō-glōs'ūs) [*palatum*, palate, + *G. glossa* tongue]. *SYN* *glossopalatinus*. Muscle arising from sides and under surface of tongue. Fibers pass upward through glossopalatine arch and are inserted in palatine aponeurosis. It constricts faucial isthmus by raising root of tongue and drawing sides of soft palate downward.

palatognathous (pāl-āt-og'nā-thūs) [" + *G. gnathos*, jaw]. Having a congenital fissure in the palate.

palatopharyngeus (pāl'āt-ō-far'in-jē'ūs) [*L. palatum*, palate, + *G. pharynx*, pharynx]. Muscle arising from thyroid cartilage and pharyngeal wall and extending upward in post pillar and inserting into aponeurosis of soft palate. Constricts pharyngeal isthmus, raises larynx, and depresses soft palate.

palatoplasty (pāl'āt-ō-plās'tī) [" + *G. plasmen*, to form]. Plastic surgery of the palate, usually to correct a cleft. *SYN* *staphylorrhaphy*, *uranoplasty*.

palatoplegia (pāl'āt-ō-plē'jī-ā) [" + *G. plēgē*, stroke]. Paralysis of muscles of the soft palate. *SEE* *palate*.

palatorrhaphy (pāl-ā-tor'ā-flī) [" + *G. raphē*, a sewing]. Operation for uniting of a cleft palate. *SYN* *staphylorrhaphy*.

palatoschisis (pāl-ā-lōs'kī-sīs) [*L. palatum*, palate, + *schisis*, a fissure]. Palate with cleft in it. *SYN* *uranoschisis*.

paleocephalon, **paleocephalon** (pāl'lē-ēn-sēf'ā-lōn, -ō-ēn-sēf'ā-lōn) [*G. palaios*, old, + *ekkephalos*, brain]. Phylogenetically older portion of the brain which includes all of it except the cerebral cortex and its allied structures.

paleocerebellum (pāl'lē-ō-ser'ē-bēl'lūm) Phylogenetically, the older portion of the cerebellum which includes the flocculi, certain parts of the vermis (lingula, nodulus, uvula) and the lobulus centralis, culmen, pyramis, uvula, and simple lobule. These parts are primarily concerned with equilibrium and movements of locomotion.

paleogenesis (pāl'lē-ō-jēn'ē-sīs) [" + *genesis*, production]. Reproduction of ancestral characteristics without change, in a later generation, esp. abnormalities.

paleogenetic (pāl'lē-ō-jēn'ē-tīk) [" + *genesis*, production]. Having origin in a previous generation.

paleokinetic (pāl'lē-ō-kīn'ē-tīk) [" + *G. kinēsis*, motion]. Noting a peripheral motor nervous system controlling automatic associated movements and phylogenetically older than system controlling voluntary movement.

paleontology (pāl'lē-ō-nōl'ō-jī) [*G. palaios*, old, + *onta*, existing things, + *logos*, study]. Branch of biology dealing with ancient plant and animal life of the earth. *SEE* *phylogeny*.

paleopathology (pāl'lē-ō-pāth-ōl'ō-jī) [" + *pathos*, disease, + *logos*, study]. The study of diseases in remains of bodies and fossils of ancient times.

paleostriatal (pāl'lē-ō-strī-ā'tāl) [" + *L. striatus*, ridged]. Concerning the primitive portion of the corpus striatum.

paleostriatum (pāl'lē-ō-strī-ā'tūm) [" + *L. striatus*, ridged]. Primitive portion

of corpus striatum, the globus pallidus. *SEE* *neostriatum*.

paleothalamus (pāl'lē-ō-thāl'ā-mūs) [" + *thalamus*, chamber]. Medial portion of thalamus, the medullary, or noncortical part which is phylogenetically older. *SEE* *thalamus*.

palikinesia (pāl'ī-kīn-ē'zī-ā) [*G. palin*, again, + *kinēsis*, motion]. Continued, involuntary, repetitious movements.

palilalia (pāl-lī-ā'lī-ā) [" + *talain*, to speak]. Pathologic repetitious use of words and phrases.

palinal (pāl'in-āl) [*G. palin*, backward]. Moved or moving backward.

palindromia (pāl-in-drō'mī-ā) [" + *dromos*, a running]. The recurrence of symptoms of a disease or its turn for the worse. *SYN* *relapse*.

palindromic (pāl-in-drōm'īk) [" + *dromos*, a running]. Recurring, as the symptoms of a disease. *SYN* *relapsing*.

palinesthesia (pāl'in-ēs-thē'zī-ā) [" + *aisthēsis*, sensation]. Return of power of sensation, as after recovery from anesthesia or coma.

palinogenesis (pāl'in-jēn'ē-sīs) [" + *genesis*, formation]. 1. Regeneration or restoration of an organism or part of one. 2. Reappearance of ancestral characteristics, esp. abnormal ones. *SYN* *atavism*, *paleogenesis*.

palinographia (pāl'in-grāf'ī-ā) [" + *graphein*, to write]. Pathologic repetition of words or phrases in writing.

palinphrasia, **paliphrasia** (pāl-in-frā'zī-ā, -ī-frā'zī-ā) [" + *phrasia*, speech]. Pathological condition in which there is coherent speech but certain words or phrases are frequently repeated. *SYN* *palilalia*.

pallanesthesia (pāl'ān-ēs-thē'zī-ā) [*G. pallain*, to shake, + *anesthesia*, anesthesia]. Loss of vibration sensation of skin and bones. *SYN* *apallesthesia*. *SEE* *pallesthesia*.

pallescence (pāl-lēs'ēns) [*L. pallescere*, to grow pale]. Diminution of body color, a pale appearance. *SYN* *pallor*.

pallesthesia (pāl-ēs-thē'zī-ā) [*G. pallain*, to shake, + *aisthēsis*, sensation]. The sensation of vibration felt in skin or bones, as that produced by a tuning fork when held against the body.

palliate (pāl'ī-āt) [*L. pallium*, a cloak]. To ease or reduce in violence, to allay temporarily, as pain, without curing.

palliative (pāl'ī-a-tīv) [*L. pallium*, a cloak]. 1. Serving to relieve or alleviate, without curing. 2. An agent which alleviates or eases [color, pain, want].

pallid (pāl'īd) [*L. pallidus*, pale]. Lacking pallid [pāl'ī-dāl] [*L. pallidus*, pale]. Concerning the pallium of the brain.

pallidin [*L. pallidus*, pale]. A preparation made from the lung substance of congenital syphilitics, which is used in the skin test for syphilis.

pallidum (pāl'īd-ūm) [*L. pale*]. The globus pallidus of the lenticular nucleus in the corpus striatum.

pallium (pāl'ī-ūm) [*L. cloak*]. The cerebral cortex with its adjacent white substance, considered as a cover for rest of the brain. *SYN* *brain mantle*.

pallor (pāl'or) [*L. pallere*, to be pale]. Lack of color; paleness. *SEE* *skin*.

palm (pahm) [*L. palma*, hand]. Ant. or flexor surface of the hand from wrist to fingers. *SYN* *vola manus*. *SEE* *anthinar*, *thenar*.

palmar (pāl'mar) [*L. palma*, hand]. Concerning the palm of the hand.

p. or darwinian reflex. A grasping re-

flex in infants, more highly developed in some than in others. It gradually disappears and is absent after 4 or 5 months. It persisted in 100 infants up to the age of 4 months.

palmaris (pāl-mā'rīs) [L. *palma*, hand]. One of 2 muscles, *p. brevis* and *p. longus*. SEE *Table of Muscles in Appendix*.

palm-chin reflex. Contraction of chin muscles resulting when the thenar eminence of hand is strongly irritated by a sharp object.

palmic (pāl'mik) [G. *palmos*, a beat]. 1. Concerning palpitation or pulse. 2. Concerning palmus, *q.v.*

palmic acid (pāl-mīt'ik). $\text{CH}_3(\text{CH}_2)_n\text{COOH}$. A fatty acid found in solid fats, animal, and vegetable, palm oil, some waxes and many fatty oils.

palmifin (pāl'mit-in). An ester of glycerol and palmitic acid, derived from fat of both animal and vegetable origin.

palmomen'al reflex. Contraction of chin muscles when the thenar eminence of hand is strongly irritated by a sharp object.

palmop'antar (pāl'mō-plānt'ar). SYN: *volar*. Pert to the palms of the hands and soles of the feet.

palmus (pāl'mūs) [G. *palmos*, a throb]. 1. Palpitation, a throb. 2. Jerking, a disease with convulsive nervous twitching of the leg muscles, similar to jumping. 3. Heartbeat.

palpable (pāl-pā-bl) [L. *palpare*, to stroke]. Perceptible, esp. by touch.

palpate (pāl-pāt) [L. *palpare*, to touch]. To examine by touch, to feel.

palpation (pāl-pā'shūn) [L. *palpatio*, a feeling]. Process of examining by application of the hands to the external surface of the body to detect evidence of disease in the various organs.

RS: abdomen, bladder, chest, heart, intestines, kidney, liver, omentum, ovary, peritoneum, spleen, uterus.

palpebra (pl. *palpebrae*) (pāl'pē-brā, pāl'pē-brā) [L. *eyelid*] An eyelid.

p. inferior. The lower eyelid.

p. superior. The upper eyelid.

palpebral (pāl'pē-brāl) [L. *palpebra*, eyelid]. Concerning an eyelid.

p. cartilages. Thin plates of condensed tissue forming the framework of the eyelid. SYN: *tarsal cartilages*.

p. commissure. The union of the eyelids at each end of palpebral fissure.

p. fissure. The opening bet. the eyelids.

p. ligament. One of two ligamentous structures (medial and lateral) which fix the two ends of the tarsi to the orbital wall.

p. muscles. 1. Palpebral portion of m. orbicularis oculi. 2. Levator palpebrae muscle.

palpebrate (pāl'pē-brāt) [L. *palpebra*, eyelid]. 1. To wink. 2. Possessing eyelids.

palpitant (pāl'pī-tānt) [L. *palpitare*, to quiver]. Throbbing; trembling.

palpitate (pāl'pī-tāt) [L. *palpitare*, to quiver]. 1. To cause to throb. 2. To throb or beat intensely or rapidly, usually said of the heart.

palpitation (pāl'pī-tā'shūn) [L. *palpitare*, to quiver]. Rapid, violent or throbbing pulsation, as an abnormally rapid throbbing, or fluttering of the heart.

ETIO: It may be reflex from the stomach, coronary arteries, or uterus; in chronic heart affection, overwork, or it may be the result of a psychic condition. SEE: *heart*.

p., arterial. That felt in course of an artery.

palsy (paw'lz) [M.E. *palesie*, from G. *paralysis*, a disabling at the side]. 1. Temporary or permanent loss of sensation, or of ability to move, or to control movement. 2. A person disabled by palsy. SYN: *paralysis*.

p., Bell's. P. of the facial nerve at its periphery.

p., birth. P. arising from an injury received at birth.

p., cerebral. SYN: *congenital diplegia*. Bilateral, symmetric, nonprogressive paralysis resulting from developmental defects in brain or trauma at birth.

p., crutch. P. resulting from pressure on axilla from use of a crutch.

p., Erb's. A paralysis of the deltoid, biceps, long supinator, and brachialis anticus muscles due to lesion and degenerative changes in spinal cord. Other muscles may sometimes become affected.

p., lead. P. of the forearm as a result of lead poisoning.

p., night. Form of paresthesia in which numbness is a symptom, esp. at night.

p., shaking. Progressive muscular weakness and tremor with impaired voluntary motion. SYN: *paralysis agitans*, *Parkinson's disease*.

p., wasting. Chronic condition in which there is atrophy and paralysis of muscles which grow progressively worse. SYN: *progressive muscular atrophy*.

paludal (pāl'û-dāl) [L. *palus*, a marsh]. Concerning, or originating in, marshes. SYN: *malarial*.

paludism (pāl'û-dizm) [“ + G. *ismos*, condition]. Swamp fever. SYN: *malaria*, *q.v.*

pampiniform (pām-pln'f-form) [L. *pampinus*, a tendril, + *forma*, shape]. Convoluted like a tendril.

p., plexus. 1. A mesh of spermatic or ovarian veins. 2. Network of nerves supplying the testicles.

pampinocoele (pām-pln'ô-sē) [“ + G. *kōlē*, swelling]. A swollen, painful condition of the veins of the spermatic cord. SYN: *varicocele*.

pan-, pant- [G.]. Combining form meaning all.

panacea (pān-ā-sē'ā) [G. *pas*, *pan-*, all, + *akeisthai*, to heal]. A remedy for all ills.

panagglutinin (pān-āg-lū'tin-in) [“ + L. *agglutinare*, to glue to]. Substance capable of agglutinating corpuscles of every blood group.

Panama fever (pān-ā-mā'). Severe, pernicious, malarial fever peculiar to Panama.

panaris (pā-nā'rīs, pa'nā-rīs) [L. *panarium*, whitlow]. Inflammation and infection of part of digit around the nail. SYN: *felon*, *paronychia*, *whitlow*.

panarthrit (pān-ar-thrīt'is) [G. *pas*, *pan-*, all, + *arthron*, joint, + *-itis*, inflammation]. 1. Inflammation of all parts of a joint. 2. Inflamed condition of all the joints in the body.

panasthenia (pān-ās-thē'nī-ā) [“ + *astheneia*, weakness]. Generalized weakness or exhaustion without evidence of organic disease. SYN: *neurasthenia*, *q.v.*

panatroph (pān-āt'rō-f) [“ + *a-*, priv. + *trophē*, nourishment]. 1. Wasting away of an entire structure. 2. Generalized wasting away of the body.

pancarditis (pān-kār-dī'tis) [“ + *kardia*, heart, + *-itis*, inflammation]. Inflamed

condition involving all the structures of the heart.

panchreston (pân-kre'stôn) ["" + *chrestos*, useful]. A remedy for every disease. SYN: *panacea*.

panchromia (pân-krô'mi-â) ["" + *chrôma*, color]. Power of staining with numerous dyes.

pancreas (pân'kre-âs) [G. *pas*, pan-, all, + *kreas*, flesh]. A compound tubulo-acinar gland situated behind the stomach in front of the 1st and 2nd lumbar vertebrae, in a horizontal position, its head firmly attached to the duodenum and its tail reaching to the spleen. The portion between the head and the tail constitutes the body.

The gland is composed of *lobules* which form lobes connected by strands of tissue, with ducts which lead from the lobules into a main one, the *pancreatic duct*, or duct of Wirsung, which in turn is connected with the duodenum. Scattered throughout the substance are differentiated masses of cells which are the *islets of Langerhans*. * An accessory *pancreatic duct* or duct of Santorini is frequently present. It is smaller than the main duct and opens into the duodenum cephalad to the main duct with which it communicates.

FUNCTIONS The pancreas produces both an external and an internal secretion. The *external secretion*, called *pancreatic juice*, *q.v.* is produced by the cells of the acini. It passes through the pancreatic ducts into the duodenum where it plays an important role in the digestion of all classes of foods. The *internal secretion*, which is elaborated by the islets of Langerhans, includes the hormones *insulin* and *glucagon* (hyperglycemic-glycogenolytic factor). These hormones, in conjunction with hormones from other endocrine glands (adrenal cortex and medulla, anterior hypophysis), play a primary role in the regulation of carbohydrate metabolism.

Diminished secretion of insulin by the islets of Langerhans results in a clinical entity called *diabetes mellitus*, *q.v.* In this disease there are disturbances in the metabolism of carbohydrates and fats resulting in the elevation of blood glucose, cholesterol, and ketones bodies. Urinary output is greatly increased and the urine usually contains glucose and ketone bodies.

Excessive secretion of insulin (*hyperinsulinism*) may sometimes occur. This results in the lowering of blood sugar (*hypoglycemia*).

RB diabetes mellitus, secretin

p., accessory. Small mass of tissue close to the pancreas, apparently detached from it.

p., annular. An anomalous condition in which a portion of the pancreas encircles the duodenum.

p., dorsal. A dorsal outpocketing of the embryonic gut which gives rise to the body and tail of the adult pancreas.

p., fibrocystic disease of. SEE: *cystic fibrosis*.

p., little. Semidetached lobular part of post surface of head of the p., sometimes having a separate duct opening into the principal one.

p., ventral. An outgrowth at the angle of the hepatic diverticulum and the embryonic gut which migrates and fuses with the dorsal pancreas. It forms the head of the definitive organ.

p., Willis'. SEE *pancreas, little*

pancreatagia (pân'kre-ât-â'l'i-â) [G. *pas*, pan-, all, + *kreas*, flesh, + *algos*, pain]. Painful condition of the pancreas.

pancreatotomy (pân'kre-ât-êk'tô-mi) ["" + *ektomê*, excision]. Operation for removal of part or all of the pancreas.

pancreatempiraxis (pân'kre-ât-êm-frâk'sis) ["" + *emphraxis*, stoppage]. Congestion of pancreas due to obstruction.

THE PANCREAS, DUCTS, AND DUODENUM.

1. Head of pancreas. 2. Descending portion of duodenum. 3. Orifice of greater pancreatic duct. 4. Orifice of minor or accessory pancreatic duct. 5. Minor or accessory pancreatic duct. 6. Superior portion of duodenum. 7. Greater pancreatic duct. 8. Greater pancreatic duct. 9. Tail of pancreas. 10. Body of pancreas. 11. Inferior portion of duodenum.

tion of pancreatic duct causing swelling of the gland.

pancreathelcosis (pân"krê-âth-êl-kô'sis) [*" + " + êlkôsis*, ulceration] Ulcerated condition of the pancreas or its suppurative inflammation

pancreatic (pân-kre-ât'ik) [G. *pas*, *pan-*, all, + *kreas*, flesh]. Concerning the pancreas.

p. cystic fibrosis. See. *cystic fibrosis*
pancreatico-enterostomy (pân"krê-ât'1-kô-en-ter-os'to-mi) Surgical creation of a passage between the pancreatic duct and the intestine

pancreaticojunostomy (pân"krê-ât'1-kô-jê-jû-nos'to-mi) Surgical creation of a passage between the pancreatic duct and the jejunum

p. juice. Its secretion is brought about by two hormones, *secretin* and *pancreozymin*, which are secreted by the duodenal mucosa. P. juice begins to flow when the acid contents of the stomach pass through the pylorus. It is a clear, viscid, alkaline fluid (pH 8.4-8.9) resembling saliva in consistency. It contains water, protein, inorganic salts, and enzymes. Among the enzymes are (a) *trypsinogen* which by the action of intestinal enterokinase is converted into *trypsin*, a proteolytic enzyme, (b) *chymotrypsinogen* which is converted by trypsin into *chymotrypsin*, a milkcurdling enzyme, (c) *amylase*, and (d) *maltase* which act on carbohydrates, and (d) *steapsin*, a lipase which acts on fats.

From 500 to 800 cc. are secreted every 24 hr. It is discharged into the duodenum through the duct of Wirsung.

Amylopsin hydrolyzes starch to maltose; steapsin hydrolyzes fats to fatty acids and glycerol; trypsinogen, by the action of enterokinase in the duodenum, is converted into the active form trypsin which hydrolyzes proteins to amino acids. The alkali neutralizes the acidity of the chyme entering the duodenum from the stomach.

RS. *duodenal digestion*, enzyme, *pancreas*, *secretion*.

pancreaticocholecystostomy (pân"krê-ât'1-kô-kô'le-sis-tos'to-mi) [G. *pas*, *pan-*, all, + *kreas*, flesh, + *chole*, bile, + *kystis*, bladder, + *stoma*, opening]. Surgical creation of passage bet. the gallbladder and a fistulous pancreas.

pancreaticoduodenal (pân"krê-ât'1-kô-dû-dê-nâl) [*" + " + L. duodeni*, twelve]. Concerning the duodenum and pancreas.

pancreaticoduodenostomy (pân"krê-ât'1-kô-dû-dê-nôs'to-mi) [*" + " + " + G. stoma*, opening]. Surgical creation of a passage bet. a fistulous pancreas and duodenum.

pancreaticogastrostomy (pân"krê-ât'1-kô-gâs-trôs'to-mi) [*" + " + gastêr*, belly, + *stoma*, opening]. Surgical creation of a passage bet. a fistulous pancreas and the stomach.

pancreatin (pân"krê-ât-in) [*" + kreas*, flesh]. 1. One of the active ferments of the pancreas. 2. USP. A mixture of enzymes obtained from pancreas of ox or hog.

ACTION AND USES: Chiefly as a digestant. Inactive in presence of acid, should be adm in combination with an alkali, as sodium bicarbonate.

DOSAGE 8 gr. (0.5 Gm.).

pancreatitis (pân"krê-â-ti'tis) [G. *pas*, *pan-*, all, + *kreas*, flesh, + *-itis*, inflammation]. Inflamed condition of the pancreas.

p., acute. Form characterized by

necrosis, suppuration, gangrene, and hemorrhage.

SYM: Sudden and intense pain in epigastric region, vomiting, belching of gas, sometimes hiccough, collapse. Rigidity and tenderness over umbilicus. Constipation, slow pulse, possible jaundice.

p., calcareous. P. with calculi formation.

p., centrilobar. P. about divisions of the pancreatic duct.

p., chronic. Form marked by formation of scar tissue in pancreas associated with malfunction.

Pain mild or severe. Pain has tendency to radiate to left side. Jaundice, weakness, emaciation, diarrhea. See *pancreas*.

p., hemorrhagic. Form with hemorrhage into pancreatic tissue.

SYM Paroxysms of deep-seated pain in epigastrium, nausea, retching, constipation. Slight rise in temperature, blood and mucus in vomitus, dyspnea, feeble pulse, delirium, tympanitis, jaundice, hiccough, cyanosis, collapse.

p., interstitial. P. with overgrowth of inter- and intra-acinar connective tissue.

p., perilobar. Fibrosis of the pancreas bet. acinous groups.

p., purulent. P. with suppuration.

p., suppurative. Form marked by development of many small abscesses.

SYM May be those of acute or chronic form.

pancreatoduodenectomy (pân"krê-â-tô-dû-dê-nek'to-mi) [G. *pas*, *pan-*, all, + *kreas*, flesh, + *L. duodeni*, twelve, + *G. êktomê*, excision]. Excision of the head of the pancreas and the adjacent portion of the duodenum.

pancreatogenic, pancreatogenous (pân"-krê-â-tô-jên'ik, -tô-jê-nûs) [*" + " + gennan*, to produce]. Produced in or by the pancreas, having origin in the pancreas.

pancreatolith (pân-kre-ât'ô-lith) [G. *pan*, all, + *kreas*, flesh, + *lithos*, stone]. A calculus of the pancreas.

pancreatolithectomy (pân"krê-ât'ô-lith-êk'to-mi) [*" + " + êktomê*, excision]. Removal of a concretion from the pancreas. **SYN** *pancreatolithotomy*.

pancreatolithotomy (pân"krê-ât'ô-lith-ot'ô-mi) [*" + " + " + tomê*, an incision]. Removal of a concretion from the pancreas. **SYN**: *pancreatolithectomy*.

pancreatolysis (pân"krê-ât'ô-lî't-sis) [*" + " + lysis*, dissolution]. Destruction of the pancreatic substance.

pancreatolytic (pân"krê-ât'ô-lî't'ik) [*" + " + lysis*, dissolution]. Destructive to the pancreatic tissues. **SYN**: *pancreatolytic*.

pancreatotomy (pân-kre-ât'ô-mi) [G. *pas*, *pan-*, all, + *kreas*, flesh, + *tomê*, incision]. Operation into the pancreas. **SYN**: *pancreatotomy*.

pancreatocarcinoma (pân-kre-ât-ong'kûs) [*" + " + ogkos*, tumor]. A pancreatic tumor.

pancreatopathy (pân"krê-ât-op'â-thi) [*" + " + pathos*, disease]. Any pancreatic disease.

pancreatotomy (pân-kre-ât-tôt'ô-mi) [*" + " + tomê*, incision]. Surgical incision into the pancreas. **SYN** *pancreatotomy*.

pancrectomy (pân-kre-êkt'ô-mi) [*" + êktomê*, excision]. Partial or total excision of the pancreas.

pancreolithotomy (pân"krê-ô-lith-ôt'ô-mi) [*" + " + lithos*, stone, + *tomê*, incision]. Surgical removal of a pancreatic concretion.

pancreolytic (pân-kre-ô-lit'ik) [*"* + *"* + *lysis*, dissolution]. Destructive to the pancreas.

pancreopathy (pân-kre-ôp'âth-i) [*"* + *"* + *pathos*, disease]. Any disease condition of the pancreas. *SYN.* *pancreatopathy*.

pancreozym (pân'kre-ô-zim-in). A hormone extracted from the duodenal mucosa which stimulates the secretion of pancreatic juice, especially increasing its enzymatic concentration.

pandemia (pân-dê'mi-â) [*G. pas, pan-, all, + dêmos*, the people]. Epidemic affecting the major portion of the population of a district.

pandemic (pân-dê'm'ik) [*"* + *dêmos*, the people]. 1 Affecting the majority of the population, said of a disease. 2 A disease affecting the majority of the population of a large region, or which is epidemic at the same time in many different parts of the world.

pandiculation (pân-dik-û-lâ'shûn) [*L. pandiculâri*, to stretch oneself]. Stretching of the limbs and yawning, as on awakening from normal sleep.

Paneth cells of. Large secretory cells containing coarse granules found at bottom of crypts of Lieberkuhn of the intestine.

pang (pâng) [*ME prange*]. 1. A paroxysm of extreme agony. 2. A sudden attack of any emotion.

pangenesis (pân-jên'sis-i) [*G. pas, pan-, all, + genesis*, production]. Darwin's theory of reproduction in which each cell of the parent is represented by a particle in the reproductive cell, and thus each part of the organism reproduces itself in the progeny.

panglossia (pân-glos'si-â) Excessive garrulity, esp in psychotic persons.

panhidrosis (pân-hid-rô'sis) [*G. pas pan-, all, + idrosis*, perspiration]. Perspiration over the entire surface of the body. *SYN.* *panidrosis*.

panhydrometer (pân'hi-drôm'êl-êr) [*G. pan-, all, + ydôr* water, + *metron*, measure]. Apparatus for obtaining specific gravity of any fluid.

panhysterectomy (pân-his-têr-êk'tô-mi) [*"* + *ystera*, uterus, + *ektomê*, excision]. Excision of entire uterus including the cervix uteri.

NP. Preparation same as for ovariohysterectomy. *SEE* *hysterectomy*.

panhysterektomy (pân-his-têr-êk'tô-mi) [*"* + *"* + *kolpos* vagina, + *ektomê*, excision]. Total excision of the uterus and vagina.

panic. A sudden overwhelming fright, esp one without a reasonable cause.

panidrosis (pân-id-rô'sis) [*"* + *idrosis*, perspiration]. General perspiration over the body's entire surface.

panis (pân'is) [*L.*]. Bread.

p., mica. Bread crumb.

panmyelophthisis (pân'mi-êl-of'thi-sis) [*G. pas, pan-, all, + myelos*, marrow, + *phthisis*, a wasting]. General wasting away of the bone marrow.

panmyelosis (pân'mi-êl-ô'sis) [*"* + *"* + *-osis*, intensive]. Increase in all the constituents of the bone marrow.

panneuritis (pân'û-rî'tis) [*"* + *neuron*, sinew, + *-itis*, inflammation]. Generalized neuritis.

p. endemica, p. epidemica. Deficiency disease in which there is lack of vitamin B. *SYN.* *beriberi*.

panniculitis (pân-ik-û-lî'tis) [*L. panniculus*, a small piece of cloth, + *G. -itis*, inflammation]. Inflamed condition of a

layer of fatty connective tissue in the abdomen.

SYM. Pain and tenderness and hypertrophy of tissue in parts where fat is the thickest.

TREATMENT. Massage. Improvement of circulation in affected parts.

panniculus (pân-ik-û-lûs) [*L.* a small piece of cloth]. A layer or sheet of tissue.

p. adiposus. The subcutaneous layer of fat, esp where fat is abundant, the superficial fascia which is heavily laden with fat cells.

p. carnosus. Thin layer of muscular tissue in superficial fascia.

pannus (pân'ûs) [*L. cloth*]. Newly formed vascular tissue involving the upper half of the front of the cornea.

The area is cloudy, and its surface is uneven as it is covered with a film of new capillary blood vessels. May cover entire cornea. Seen in trachoma, acne rosacea, eczema, and as a result of irritation in granular conjunctivitis.

p. carateus. Pinta, *q v*.

p. carnosus. *SYN.* *p. crassus, q v*.

p. crassus. P which is highly vascularized, thick, and opaque.

p. degenerativus, p. siccus, q v.

p. siccus. P accompanying xerophthalmia composed principally of connective tissue and poorly vascularized.

p. tenuis. P which is thin, poorly vascularized, and with slight opacity.

panophobia (pân-ô-fô'bî-â) [*G. pas, pan-, all, + phobos*, fear]. Morbid fear of some unknown evil or of everything in general, general apprehension. *SYN.* *panthophobia*.

panophthalmia, panophthalmitis (pân-ôf-thâl'mi-â, -mî'tis) [*G. pas pan-, all, + ophthalmos*, eye, + *-itis*, inflammation]. Inflammation of entire eye.

p. purulenta. Severe form with supuration.

SYM. Fever, pain, headache, vomiting, loss of sight, ant chamber and vitreous filled with pus.

PROG. Unfavorable.

TREATMENT. Hot, moist compresses; incision, and evisceration.

panoptic (pân-ôp'tik) [*G. pas pan-, all, + opis*, sight]. Making every part visible, completely visible.

p. stain. Stain which causes every part of the tissue to be differentiated.

panoptosis (pân-ôp-tô'sis) [*"* + *ptôsis*, a drooping]. General prolapse of the abdominal organs.

panosteitis (pân-ôs-tê-rî'tis) [*"* + *osteon*, bone, + *-itis*, inflammation]. Inflammation of every structure of a bone.

panotitis (pân-ô-tî'tis) [*"* + *ous, ô-, ear, + -itis*, inflammation]. Inflammation involving all the parts of the ear.

panphobia (pân-fô'bî-â) [*"* + *phobos*, fear]. Groundless fear of everything.

panphygmograph (pân-sfig'mô-grâf) [*G. pas, pan-, all, + sphygmos*, pulse, + *graphên*, to write]. Apparatus for registering cardiac movements, the pulse wave, and chest movements at one time.

Panstrongylus (pân-strôn'jî-lûs) A genus of insects belonging to the order Hemiptera, family Reduviidae.

p. megistus. Species which serves as vector for *Trypanosoma cruzi*, the causative agent of Chagas' disease.

pant (pânt) [*OFr. pantaisier*, to be breathless]. 1. To breathe hard; to gasp for breath. 2. A short or labored breath.

ERROR. Produced by overexertion physically, as in running, or from fear.

pantachromatic (pân'tâ-krô-mât'ik) [*G.*

pas, pan-, all. + *a-*, priv. + *chrōma*, color]. Entirely colorless

pantalgia (pān-tāl'jī-ā) [*"* + *algos*, pain]. Pain felt over the entire body

pantatrophia, pantatrophia (pān-tā-trō-fī-ā, -tāt'rō-fī). Complete lack of nourishment to a part with resultant wasting.

panthodic (pān-thōd'ik) [*"* + *odos*, way]. Radiating to all parts of the body, esp. applied to nervous impulses

panting (pānt'ing) [O Fr. *pantaisier*, to be breathless]. 1. Breathing hard, gasping for breath. 2. Labored breathing

pantophobia (pān-tō-tō'bī-ā) [*"* + *phobus*, fear]. Morbid, groundless fear of everything in general SYN *panophobia*.

pantopon (pān-tō-pōn) [*"* + *opium*, poppy juice]. Registered trade-mark for a brand of purified opium alkaloids. Oral and parenteral administration.

Uses. In all disorders where the analgesic, sedative-hypnotic or narcotic effect of an opiate is needed.

Dosage. From 1/24 to 1/3 gr. (0.0025-0.02 Gm.).

pantoscopic (pān'tō-skōp'ik) [G *pas, pan-*, all. + *skopein*, to examine]. Viewing everything, adjusted to both close and far objects

p. glasses. Glasses with 2 segments of different focal lengths for near and far objects SYN *bifocal spectacles*

pantothenic acid (pān-tō-thēn'ik) SYN *vitrate factor, antidermatitis factor, anti-gray-hair factor*. A vitamin of the B-complex group widely distributed in nature, occurring naturally in yeast, liver, heart, salmon, eggs, and various grains. It was synthesized in 1940. Its widespread distribution in living cells suggests that it plays a vital role in cellular metabolism, although its specific function has not been determined

pantothermia (pān'tō-thēr-mī-ā) [G *pan*, all. + *thermē*, heat]. Condition in which there is a variation in bodily temperature without any apparent reason

panturbinate (pān-tur'bi-nāt) [*"* + *L. turbinatus*, shaped like a top]. All of the turbinate structure

pap (pāp) [L *papa*, infant's cry for food]. Any soft, semiliquid food

papain (pā-pā'in, pā'pā-in). A digestive ferment obtained from the papaw fruit.

Uses. As a digestant

Dosage. 2-4 gr. (0.12-0.25 Gm.).

papaverine hydrochloride (pā-pāv'ēr-ēn) [L *papaver*, poppy]. The salt of an alkaloid obtained from opium.

Uses. Antispasmodic, especially in gastric and intestinal distress, and recommended in bronchial spasm

Average Dose. 1/2 gr. (0.03 Gm.).

paper (pā'pēr) [G *pepyros*, a paper] 1. A substance prepared in thin sheets from fibers of wood, rags, and other substances. 2. SYN *charla*. A piece of paper specially prepared, as by having a medicinal preparation spread out on it.

p. bibulous. P. which absorbs water readily

p. blistering. A paper saturated with a substance such as cantharides which causes vesiculation

p. filter. A porous, unglazed paper used for filtration

p. indicator. P. saturated with an indicator solution of known strength and then dried. Used for testing the pH (acidity or alkalinity) of a solution

p. litmus. An indicator paper im-

pregnated with litmus, which in alkalies turns blue, in acids red.

p. test. An indicator paper, *q v*

papilla (pā-pil'ā) (pl *papillae*) [L *nipple*]. A small, nipple-like protuberance or elevation

p., circumvallate. One of the large papillae near the base on the dorsal aspect of the tongue, arranged in a V-shape.

p., dental. A mass of connective tissue which becomes enclosed by the developing enamel organ. It gives rise to dentine and dental pulp

p., dermal. Small elevations of the corium which indent the inner surface of the epidermis

p., duodenal. The slight eminence in duodenum indicating opening of ductus choledochus communis.

p., filiform. One of the very slender papillae at tip of the tongue

p., fungiform. One of the broad, flat papillae resembling a fungus, chiefly found on dorsal central area of tongue

p., gustatory. Taste papilla of tongue, one of those possessing a taste bud

p. (of) hair. A conical process of the corium which projects into under-surface of a hair bulb. It contains capillaries through which a hair receives its nourishment

p., lacrimal. An elevation in edge of eyelid for the lacrimal puncta

p., lenticular. 1. A small flattened form of fungiform papillae 2. A small rounded elevation underlying lymphatic nodules in mucosa of root of tongue

p., lingual. Any one of the tiny eminences covering ant two-thirds of tongue, including circumvallate, filiform, fungiform and conical papillae

p., major. Duodenal papilla, *q v*

p. mammae. The nipple of the mammary gland

p., minor. A small p. in the duodenum upon which the accessory pancreatic duct terminates

p., optic. Terminus of optic nerve where it enters the eyeball

p., renal. Apex of a malpighian pyramid in the kidney

p., tactile. A dermal papilla which contains a sensory end-organ for touch

p., taste. SEE *gustatory p.*

p. of Vater. SEE *p. duodenal*

papillary (pāp'il-lai-ī) [L *papilla*, nipple]

1. Concerning a nipple or papilla.

2. Resembling or composed of papillae

p. ducts of Bellini. Short ducts which open on tip of renal papilla. They are formed by union of the straight collecting tubules

p. layer. SYN *Stratum papillare*. The layer of the corium which adjoins the epidermis

p. muscles. Muscular eminences in ventricles of the heart

p. tumor. Neoplasm composed of or resembling enlarged papillae. SEE *papiloma*.

papillate (pāp'il-āt) [L *papilla*, nipple]. Bact. Having nipplelike growths on the surface, as a culture

papillectomy (pāp'il-ēk'tō-mī) [*"* + G. *ektomē*, excision]. Excision of any papilla or papillae.

papilledema (pāp'il-e-dē'mā) [*"* + *oedema*, swelling]. Edema and inflammation of the optic nerve at its point of entrance into the eyeball

Etiol. Intracranial pressure, often caused by tumor of the brain pressing on optic nerve.

Progn. Unless relieved, blindness may

result very rapidly. SYN: *choked disk, optic neuritis*.

papilliferous (páp-ĭl-ĭf'ĕr-ŭs) [+ *ferre*, to carry]. Having or containing papillae.

papilliform (pá-pĭl'ĭ-form) [+ *forma*, shape]. Having the characteristics or appearance of papillae.

papillitis (páp-ĭl-'it-ĭs) [+ *G. -itis*, inflammation]. Inflammation of optic disk with edema. SYN: *choked disk, optic neuritis*.

papilloadenocystoma (páp'ĭl-ŏ-ăd'ĕ-nŏ-sĭs-tŏ'mă) [+ *G. aden*, gland, + *kystis*, a cyst, + *-oma*, tumor]. A tumor composed of elements of papilloma, adenoma and cystoma.

papillocarcinoma (páp'ĭl-ŏ-kâr-sĭn-ŏ'mă) [+ *G. karkinos*, crab cancer, + *-oma*, tumor]. 1. A malignant tumor of hypertrophied papillae. 2. Carcinoma with papillary growths.

papilloma (pĭ papillomata) (páp-ĭ-lŏ'mă) [+ *G. -oma*, tumor]. 1. Any benign epithelial tumor. 2. Epithelial tumor of skin or mucous membrane consisting of hypertrophied papillae covered by a layer of epithelium.

Included in this group are *warts, condylomas*, and *polypi*. SEE: *acanthoma*.

p. durum. A hardened *p.*, as a wart. **p., hard**. *P.* which develops from squamous epithelium.

p. molle. A *p.* with only a thin, horny layer covering it.

p., soft. *P.* formed from columnar epithelium.

papillomatosis (páp'ĭl-ŏ-mă-tŏ'sĭs) [+ *-osis*, disease]. 1. Widespread formation of papillomata. 2. Condition of being afflicted with many papillomata.

papilloretinitis (páp'ĭl-rĕt-'in-'tĭs) [+ *rĕtē*, net, + *G. -itis*, inflammation]. Inflamed condition of the papilla and retina extending to the optic disk.

pappataci fever. SEE: *sandfly fever*.

pap'pose. Covered with fine, downy hair.

pap'pus. The first growth of hair appearing on the cheeks and chin as a fine, downy hair.

paprika (páp'rĭ-ka, páp-rĕ'kă) [*G. peper*, pepper]. ASH CONST Ca 0.229, Mg 0.164, K 2.075, Na 0.178, P 0.341, Cl 0.155. No iron or sulfur. VITAMINS. C++.

papula (páp'ŭ-lă) [L.]. A pimple. SYN: *papule*.

papular (páp'ŭ-ler) [L. *papula*, pimple]. Of the nature of or concerning pimples.

p. fever. Mild fever with maculopapular eruptions and rheumatoid pains.

papulation (páp-ŭ-lă'shŭn) [L. *papula*, pimple]. 1. The development of papules. 2. The stage of pimple formation in a disease.

papule (páp'ŭl) [L. *papula*, pimple]. Red elevated area on the skin, solid and circumscribed, varying from the size of a pinhead to that of a pea.

P.'s often precede vesicular or pustular formation and may appear in erythema multiforme, eczema papulosum, prurigo, syphilis, measles, smallpox, and they may develop after the use of bromides, iodides, coal tar preparations, etc.

In *measles* they are small and run together, forming crescent-shaped patches; in *smallpox* they are hard and feel like shot, terminating in umbilicated vesicles and exciting itching. In *prurigo* they are small, pale, deep seated, and accompanied by intense itching; in *syphilis* they are dark col-

ored and widely distributed, especially on the trunk and surfaces of the extremities. They do not cause itching. In *eczema* they are small, often associated with pustules and vesicles, and are closely aggregated, there is intense itching and the skin is thickened. In *erythema multiforme* they are found with macules and tubercles, and are bright red or purple and flat, appearing especially on the extremities. They do not suppurate or cause itching, but are accompanied by rheumatic pains and prostration. SEE: *Cason's reaction*.

p., dry. Hard one that is primary lesion of syphilis.

p., moist; **p., mucous**. A syphilitic eruption of papules with flat tops. SYN: *condyloma lata*.

papuliferous (páp'ŭ-lĭf'ĕr-ŭs) [L. *papula*, pimple, + *ferre*, to bear]. Having papules or pimples.

papulo- [L.]. Combining form meaning a pimple, a papule.

papyraceous (páp-'r-ă'shŭs) [L. *papyraceus*, made of papyrus, from *G. papyros*, parchment]. Parchmentlike.

Os. Denoting a fetus retained in the uterus beyond natural term that has assumed a mummified appearance.

Paquelin's cautery (păk-lăn'). A hollow, platinum pointed cautery apparatus kept at a constant temperature by means of benzene vapor.

par [L. pair]. A pair, esp. a pair of cranial nerves.

p. vagum. The vagus or 10th pair of cranial nerves.

para-, par- [G.]. Combining forms meaning *alongside of*, *by*, *past*, *beyond*, the opposite, *abnormal*, *irregular*.

para-aminobenzoic acid (păr'ă-ăm-'i-nŏ-bĕn-zŏ'ĭk). Commonly abbrev. *PABA*. A member of the vitamin B complex. Used in arthritis, rheumatic fever, fibrositis, gout, scleroderma, dermatomyositis. Inhibits bacteriostatic action of sulfonamides, hence contraindicated during sulfonamide therapy.

para-aminosalicylic acid (păr'ă-ăm-'i-nŏ-să-l-'sĭl'ĭk). Commonly abbrev. *PAS*. An adjunct to streptomycin or dihydrostreptomycin in treatment of tuberculosis. Valuable both for inhibitory effect on tubercle bacillus and for ability to delay development of streptomycin-resistant organisms.

para-anesthesia (păr'ă-ăn-ĕs-thĕ'zhl-a) [*G. para*, beside, + *an-*, negative, + *ais-thĕsa*, sensation. Anesthesia of two corresponding sides, esp. of lower half of body.

para-appendicitis (păr'ă-ăp-ĕnd-'i-sĭ-'tĭs) [+ *L. appendix*, + *G. -itis*, inflammation]. Inflammation involving the connective tissue adjacent to the appendix. SYN: *perityphlitis*.

parabiosis (păr'ă-bĭ-ŏ'sĭs) [+ *biōsis*, living]. 1. Temporary suppression of excitability and conductivity of a nerve. 2. Anatomical and physiological joining of 2 separate organisms, naturally or artificially formed. SEE: *Siamese twins*.

parabiotic (păr'ă-bĭ-ŏt'ĭk) [*G. para*, beside, + *biōsis*, living]. Concerning parabiosis.

parablepsia, parablepsis (păr'ă-bĭĕp'sĭ-ă, -sĭs) [*G. para*, irregular, + *blepsĭs*, vision]. Abnormality of the visual sensations.

parabulla (păr-ă-bŭll'ă) [+ *boulĕ*, will]. Perversion or abnormality of will power.

paracanthoma (păr-ă-kăn-thŏ'mă). A tumor involving the prickle-cell layer of the epidermis.

paracasein (pär-ä-kä'sē-in). A substance formed when rennin or pepsin acts on the casein of milk. In the presence of calcium ions, an insoluble protein is formed resulting in the curdling of milk.

paracentesis (pär-ä-sen-tē'sis) [G *para*, beside, + *kentēsis*, a puncture]. Puncture of a cavity with evacuation of fluid by tapping, as in dropsy.

NP: Watch pulse and respirations for signs of collapse during procedure and following.

p., abdominal. Tapping of the abdomen.

p. capitis. P. of the cranium

p. cordis. Surgical puncture of the heart.

p. pericardii. P. of the pericardial sac

p. pulmonis. Removal of fluid from a lung.

p. thoracis. Drainage of fluid from the cavity of the chest. SEE *aspiration*.

p. tunicae vaginalis. P. of the tunica vaginalis

p. tympani. Drainage or irrigation through incision of the tympanic membrane.

p. vesicae. Puncture of the wall of the urinary bladder

paracentetic (pär-ä-sen-tet'ik) [G *para*, beside, + *kentēsis*, a piercing] Concerning paracentesis.

paracentral (pär-ä-sen'träl) [' + *kentron*, center] Located near the center

p. lobule. Cerebral convolution on mesial surface joining the upper terminations of the ascending parietal and frontal convolutions

parachlorophenol (pär-ä-klor-fē'no). Strong antiseptic and disinfectant used in lupus and erysipelas

paracholia (pär-ä-kō'li-ä) [G *para*, abnormal, + *cholē*, bile] Condition of disturbed bile secretion

parachordal (pär-ä-kord'al) [G *para* beside, + *chordē* a cord] 1 Lying alongside the anterior portion of the notochord 2 A parachordal cartilage

p. cartilage. One of a pair of cartilages in head of embryo which in man unite to form a single basal plate which is the forerunner of the occipital bone

parachroma (pär-ä-kro'mä) [' + *chrōma*, color]. Discoloration, as that of the skin

parachromatopsia (pär-ä-kro-mä-tōp'-si-ä) [' + ' + *opsis*, vision]. Color blindness

parachromatosis (pär-ä-kro-mä-tō'sis) [' + ' + *ōsis*, disease] Any 1 of the diseases in which the skin is pigmented.

parachromophoric (pär-ä-kro-mō-for'ik) [' + ' + *phoros*, a carrier] Excreting pigment, but retaining it within the organism

paracnesia, paracinesis (pär-ä-sin-ē'zi-ä, -sis) [G *para*, abnormal, + *kinēsis*, motion]. Condition in which there is perversion of motor powers, motor abnormality.

paracnastic (pär-ä-k-mäs'tik) [' + *akmē*, point]. Denoting the period of decrease of symptoms. RS *acnastic*, *epacnastic*.

par'ac'me. The period of decline or remission of a disease.

Paracoccidioides (par-ä-kök-sid'ē-oy-dēz). A genus of yeastlike fungi

p. brasiliensis. The causative agent of paracoccidioidomycosis

paracoccidioidomycosis (par-ä-kök-sid'ē-oy'dō-mi-kō-sis). SYN *South American blasomycosis* A chronic granulomatous disease of the skin caused by *Paracoccidioides brasiliensis*.

paracolitis (par-ä-kō-lit'is). Inflammation of the tissue surrounding the colon

paracolon bacilli. A group of colonlike bacilli which ferment lactose. Their pathogenicity is uncertain

paracolpitis (pär-ä-kōl-pit'is) [G *para*, abnormal, + *kolpos*, vagina, + *-itis*, inflammation] Inflammation of tissues adjoining the vagina

paracolum (pär-ä-kōl'p-üm) [G *para*, abnormal, + *kolpos*, vagina] The connective tissue adjacent to the vagina

paracrisis (pär-ä-kri-sis, pär-ä-kri'sis) [' + *krisis*, a separation]. Any abnormality of the secretions

paracusia, paracusis (par-ä-kūs'ia, -sis) [' + *akousis* a hearing] Any abnormality or disorder of the sense of hearing

p. acris. Excessively acute hearing

p. duplicata. The hearing of 1 sound as 2 SYN *diplacusis*.

p. loci. Difficulty in estimating the direction of sound

p. willisiana. An apparent ability to hear better in a noisy place, found in deafness due to stapes fixation and adhesive processes

paracyesis (pär-ä-si-ē'sis) [G *para*, beside, + *kyēsis*, pregnancy] Extra-uterine pregnancy

paracystitis (pär-ä-sis-tit'is) [' + *kystis*, bladder, + *-itis*, inflammation]. Inflamed condition of connective tissues and other structures around the urinary bladder

paracystium (pär-ä-sis'ti-üm) [' + *kystis*, bladder] The connective tissue surrounding the urinary bladder

paradenitis (pär-ä-den-it'is) [' + *adēn*, gland, + *-itis*, inflammation] Inflammation of areolar tissues close to a gland

paradidymis (pär-ä-did'imis) [' + *didymos*, testicle] BN The atrophic remnants of the tubules of the wolffian body, situated on the spermatic cord above the epididymis SYN *massa innominata*, *organ of Giralde*s

paradoxical, paradoxical (pär-ä-dök'sik, -sikal) [G *paradoxos*, contrary to opinion] Seemingly contradictory, but demonstrably true.

paraffin (pär-ä-fin) [L *parum*, too little, + *affinis*, allied] 1 A waxy, white, tasteless, odorless mixture of solid hydrocarbons obtained from petroleum.

2 One of a series of saturated aliphatic hydrocarbons having the formula C_nH_{2n+2}. Paraffins constitute the methane or paraffin series

p., hard. Solid p. with a melting point bet. 45° C and 60° C

p., liquid. Liquid hydrocarbon. SYN: *liquid petrolatum*.

p., soft. A semisolid p. SEE *petrolatum*.

paraffinoma (pär-ä-fin-ō'mä) [' + ' + G. *-ōma*, tumor]. A tumor which arises at site of injection of paraffin

paraffinum (pär-ä-fē'nūm) [L] Paraffin, q.v.

paraformaldehyde (par-ä-för-mäl'dē-hid). A white, powdered antiseptic and disinfectant, a polymer of formaldehyde

paragammasism (pär-ä-gām'mā-sizm) [G. *para*, beside, + *gamma*, Greek letter G, + *ismos*, condition]. Inability to pronounce "g" and "k" sounds, with substitution of other consonants, such as "d" or "t," for them

paraganglia pär-ä-gäng'li-ä). Groups of chromaffin cells similar in staining reaction to cells of the adrenal medulla which are associated anatomically and embryologically with the sympathetic

system They are located retroperitoneally, lying along ventral surface of aorta. The largest are the *aortic chromaffin bodies* (organs of Zuckerkandl). See *chromaffin system*.

paraganglioma (pär'ä-gäng-lī-ō'mä) [G. *para*, beside, + *gaglion*, knot, + *-ōma*, tumor] SYN *Chromaffinoma* A tumor derived from chromaffin cells. Includes tumors of the adrenal medulla and the paraganglia.

paraganglion (pl. *paraganglia*) (pär'ä-gäng-lī-ōn) [G. *para*, beside, + *gaglion*, knot]. 1. Any structure supplementing, or in the neighborhood of, a ganglion. 2. A mass of cells in the medullary portion of the adrenal bodies. 3. Chromaffin mass found along the branches of the sympathetic nervous system. See *chromaffinoma*.

parageusia, **parageusis** (pär-ä-gü'sī-ä, -sīs) ['' + *geusis*, taste]. Disorder or abnormality of the sense of taste.

paraglobulin (pär'ä-glōb'ū-līn) ['' + L. *globulus*, a small sphere] A globulin found in blood plasma, lymph, and other body fluids, associated with coagulation.

paraglobulinuria (pär'ä-glōb'ū-līn-ū-rī-ä) ['' + '' + G. *ouron*, urine] Excretion of paraglobulin in the urine.

paraglossa (pär-ä-glō'ssä) ['' + *glōssa*, tongue] 1. Enlargement of the tongue. 2. Congenital hypertrophy of the tongue.

par'aglossia Inflammation of the tissues underlying the tongue.

paragomphosis Impaction of the fetal head in the pelvic canal.

Paragonimus (pär'ä-gōn'im-ūs). Genus of trematode worms.

P. westermani. The lung fluke, a common parasite of the mink in the US. Human infestation occurs through eating raw crabs or crayfish, the second intermediate host. Infestation endemic in certain parts of Orient.

par'agrammatism A speech defect characterized by improper use of words and inability to arrange them grammatically.

paragraphia (pär-ä-gräf'lī-ä) [G. *para*, besides, + *graphein*, to write] The writing of letters or words other than those intended, due to partial lesion of the visual word center in the brain.

par'ahem'ophil'ia A congenital, idiopathic disorder due to deficiency of proaccelerin or factor V characterized by prolonged prothrombin time.

parahepatitis (pär'ä-hēp-ä-tī'tīs) [G. *para*, beside, + *ēpar*, *ēpat*-, liver, + *-itis*, inflammation] Inflamed condition of parts immediately adjacent to the liver.

par'ahormone A substance which is conveyed through the circulatory system and exerts a stimulating effect like hormones, yet not originating in endocrine tissue.

Ex carbon dioxide, secretogogues.

par'ahypno'sis Abnormal sleep.

parainfection (pär'ä-in-fēk'shūn) [G. *para*, beside, + L. *in*, into, + *facere*, to make]. The symptomatology of an infectious disease without evidence of the presence of the microorganism causing the disease.

parakeratosis (pär'ä-kēr-ä-tō'sīs) ['' + *keras*, *kerat*-, horn, + *-osis*, infection]. Any disorder affecting the horny layer of the epidermis.

p. psoriasisformis. Scab formation resembling that of psoriasis.

p. scutularis. Scab disease with hairs encircled by epidermic crust formation.

paralalia (pär-ä-lä'lī-ä) [G. *para*, abnor-

mal + *lalein*, to babble]. Any speech defect, characterized by sound distortion.

p. literalis. Stammering, *q.v.*
paralambdacism (pär'ä-läm'dä-sīzm) [G. *para*, beside, + *lambda*, Greek letter L, + *-ismos*, condition]. Inability to sound the letter "l" correctly, substituting some other letter for it.

paralbumin (pär-äl-bū'mīn) ['' + L. *albumen*, white of egg]. An albumin found in fluid content in ovarian cysts and in ascites.

paraldehyde (pär-äl'dē-hīd) USP. C₈H₁₆O₃. A liquid polymer of acetaldehyde which is colorless, with characteristic unpleasant odor and taste.

Made by action of hydrochloric acid on acetic aldehyde.

ACTION AND USES Hypnotic, having low toxicity and prompt action as a sedative. Recently has been used as an analgesic in obstetrics, esp in combination with rectal ether.

DOSAGE 30 minims (2 cc.) in sweetened water or lemonade.

POISONING SYN. Resemble those of chloral hydrate, cardiac and respiratory depression, dizziness, collapse with partial or complete anesthesia. Odor on the breath is a constant distinct sign.

F. A. TREATMENT Same as for chloral hydrate, *q.v.*

paraldehydism (pär-äl'dē-hīd-īzm) Poisoning from an overdose of paraldehyde, *q.v.*

par'alep'sis A mild or attenuated form of leprosy.

paralepsy (pär-ä-lēp'sī) [G. *para*, besides, + *lēpsis*, seizure]. Temporary attack of mental inertia and hopelessness, or sudden alteration in mood or mental tension. SYN. *psycholepsy*.

paralexia (pär-ä-lēk'sī-ä) [G. *para*, abnormal, + *lexis*, speech]. Inability to comprehend printed words or sentences with substitution of meaningless combinations of words.

paralgnesia (pär-äl-jē'zī-ä) ['' + *algēsis*, pain]. Any unusual sensation which is painful.

paralgia (pär-äl-jī-ä) ['' + *algos*, pain]. Sensation both abnormal and painful.

parallagma (pär-äl-äg'mä) [G. *parallagma*, alternation] Overlapping or displacement of the fragments of a fractured bone.

parallax (pär-ä-läks) [G. *parallax*, in turn] The apparent movement or displacement of objects due to a change in position of the observer or movement of the head or eyes.

paralogia (pär-ä-lō-jī-ä) [G. *para*, abnormal, + *logos* understanding] A disorder of the reasoning; a psychosis.

paralutein cells. Theca lutein cells. See Lutein cells.

paralysis (pär-äl'ī-sīs) [G. *paralyein*, to disable at the side]. Temporary suspension or permanent loss of function in a living part, esp. loss of sensation or voluntary motion.

Any voluntary movement depends on the integrity of 2 motor neurons; 1 arising in the motor cortex, coursing across the brain stem and ending in the ant. gray horn of the spinal cord, and the lower neurons arising in the ant. horn cell and passing to the muscle. If the latter are destroyed, the muscle loses tone, atrophies (wither away) and shows reaction of degeneration (R. D.).

The flaccidity and absent muscular reflexes reveal the loss of tonus. If the

upper neuron is paralyzed, the patient is equally unable to move the affected part, but the intact lower neuron may permit other motor centers to act on the muscle. In addition, tone is increased, there is no R. D. and no atrophy save that of disease. So-called pathological reflexes may appear in addition to the increase of normal deep reflexes.

Paralyses are divided into 2 groups, *spastic*, when due to lesion of upper motor neuron, and *flaccid*, when due to lesion of lower motor neuron.

Psychic inhibition of motor function occurs most characteristically in hysteria, but the evidence of organic disease is always lacking in these hysterical paralyses.

p. of accommodation. Inability of the eye to adjust itself to various distances due to paralysis of ciliary muscles

p., acoustic. Deafness, *q v*

p., acute ascending. Rapidly progressing form of paralysis which begins in the feet and slowly ascends *Fatal SYN: Landry's p.*

p., acute atrophic. *SEE p, infantile*

p., acute infectious. *SEE p, infantile.*

p., agitated. A basal ganglion disease of late life producing a picture of rigid tremulousness progressive in its course, and marked by weakness, delay of voluntary motion, a peculiar festinating gait, and muscular contraction, causing peculiar and characteristic positions of the limbs and head. The disease is attended with excessive sweating and feelings of heat and cold. While movement is slow, there is no true paralysis. The face appears expressionless, there is general flexion attitude, the balance tends to be lost (in a forward direction). Many of these cases follow encephalitis lethargica, others are essentially senile *SEE: Parkinson's disease*

p., alcoholic. P. due to habitual drunkenness

p., anesthesia. P. which develops following administration of anesthesia

p., anterior spinal. *SEE p, infantile.*

p., arsenical. P. following poisoning from arsenic

p., ascending. P. beginning with the lower limbs and progressing upward.

p., association. *SEE p, bulbar.*

p., Bell's. Facial paralysis.

Error: Lesion of the facial nerve or of its nucleus, a neuritis of this nerve. Pressure on nerve as it reaches the face through its bony canal near the ear.

SYM One side of entire face may be affected, or corner of mouth may drop, eyelid may droop or be unable to close, may be unable to close lips or to speak, or loss of control of eye

TREATMENT. Fly blister behind the ear on affected side until blister appears, or better, infrared lamp or heat sufficient to keep skin red for several days to lessen swelling of nerve. Adhesive strips to hold up sagging tissues. Salicylates and iodides may be indicated

p., Bernhardt's. Pain and hyperesthesia on the outer femoral surface from lesion or disease of the external cutaneous nerve of the thigh.

p., birth. P. caused by injury received at birth.

p., brachial. Paralysis of 1 or both arms.

p., brachiofacial. P. of the face and an arm.

p., Brown-Sequard's. P. of motion on 1 side and of sensation on the other.

p., bulbar. P. caused by changes in the motor centers of the oblongata.

p., central. Any paralysis from a lesion of the brain or spinal cord.

p., cerebral. P. due to lesion of some portion of the cerebrum.

p., complete. P. in which there is total loss of function

p., compression. P. due to pressure on a nerve, as by a crutch or during sleep.

p., congenital spastic. Cerebral palsy of children; Little's disease

p., crossed. P. of the face on 1 side of the body and the limbs on the opposite side

p., crutch. P. due to pressure in the armpit

p., decubitus. P. due to pressure on a nerve from lying in 1 position for a long time

p., diver's. P. due to increase in atmospheric pressure, evidenced on return to normal atmosphere. *SYN: caisson disease.*

p., Erb's. 1 *SEE p, birth* 2 Partial p. of the brachial plexus

p., exhaustion. P. due to prolonged voluntary movements involving exhaustion of the nerve centers

p., facial. *SEE p, Bell's*

p., flaccid. P. in which there is loss of muscle tone, loss of or reduction of tendon reflexes, atrophy and degeneration of muscles, and reaction of degeneration is manifest. Due to lesions of lower motor neurons of spinal cord

p., general. Progressive loss of power and the mental faculties resulting eventually in dementia and death *SYN: paresis.*

p., ginger. P. of the limbs after drinking Jamaica ginger

p., glossolabial. P. of the tongue and lips. Occurs in bulbar paralysis, *q v*

p., histrionic. Paralysis of certain facial muscles, producing a facial expression of some emotion

p., hysterical. One that may simulate a form of paralysis, it appears to have no adequate causative lesion

p., incomplete. Partial paralysis of the body or a part.

p., infantile. Motor paralysis with atrophy of a group of muscles following an acute infectious disease in children which is transmitted by a filterable virus. *SYN: acute anterior poliomyelitis.*

p., ischemic. P. resulting from impaired blood supply

p., jake. *SEE p, ginger.*

p., Klumpke's. Wasting p. of the arms and hands.

p., Kussmaul's; p., Landry's. *SEE: p, acute ascending*

p., lead. P. following poisoning by lead.

p., local. P. of a single muscle or 1 group of muscles

p., muscular. Loss of the capacity of muscles to contract. May be due to a structural or functional disorder in the muscle, at the myoneural junction, in efferent nerve fibers, in cell bodies of nuclei of origin of brain or gray matter of spinal cord, in conducting pathways of brain or spinal cord, or motor centers of the brain

p., nuclear. P. caused by lesion of a nucleus.

p., obstetrical. *SEE: p, birth.*

p., periodic. P. which recurs and abates temporarily.

- p., phonetic.** P. of the vocal cords.
- p., progressive bulbar.** SEE: *p., bulbar.*
- p., pseudobulbar.** P. caused by cerebral center lesions, which simulates the bulbar types of paralysis.
- p., pseudohypertrophic muscular.** Pseudohypertrophic muscular dystrophy; Landouzy-Dejerine paralysis. Erb's paralysis.
- p., sensory.** Loss of sensation. May be due to a structural or functional disorder of the sensory end-organs, sensory nerves, conducting pathways of spinal cord or brain, or sensory centers in the brain.
- p., spastic.** P. usually involving groups of muscles and characterized by excessive tone and spasticity of muscles, exaggeration of tendon reflexes but loss of superficial reflexes, positive Babinski response, no atrophy or wasting except from prolonged disuse, and absence of reaction of degeneration. Due to lesions of upper motor neurons or cerebrum.
- p., spinal.** P. due to injury or disease of the spinal cord.
- p., supranuclear.** P. resulting from disorders in pathways or centers above nuclei of origin.
- p., tick-bite.** P. resulting from bites of certain species of ticks, esp. of the genera Ixodes and Dermacentor, presumably due to a toxin present in saliva of tick. Affects domestic animals and humans, esp. children. Causes a progressive ascending, flaccid, motor paralysis. Recovery usually occurs after removal of ticks.
- p., Todd's.** A transitory paralysis following a Jacksonian convulsive seizure.
- p., tourniquet.** P. esp. of the arm, resulting from a tourniquet being applied for too long a time.
- p., vasomotor.** P. of vasomotor centers resulting in lack of tone and vasodilation of blood vessels.
- p., Volkman's.** SEE *p., ischemic.*
- p., wasting.** Progressive wasting away of the muscles. SEE *progressive muscular atrophy.*
- paralytic** (pär-ä-lit'ik) [G. *para*, beside, + *lyein*, to loosen]. 1. Concerning paralysis. 2. One afflicted with paralysis.
- p., dementia.** Progressive paralysis with mental deterioration. SYN: *paresis.*
- p., ileus.** P. of intestinal wall with distention and symptoms of acute obstruction and prostration.
- Etiol. It may occur after any abdominal operation.
- paralyzant** (pär-ä-liz'änt) [' + *lyein*, to loosen]. 1. Causing paralysis. 2. A drug or other agent that induces paralysis.
- paralyze** (pär-ä-liz) [' + *lyein*, to loosen]. 1. To cause temporary or permanent loss of muscular power or sensation. 2. To render ineffective.
- paramastitis** (pär-ä-mäs-tit'is) [' + *mas-tos*, breast, + *-itis*, inflammation]. Inflammation around the mamma.
- paramenia** (pär-ä-mē-ni-ä) [' + *mēniata*, menses]. Irregular, abnormal or difficult menstruation.
- parameter** (pär-am'e-ter) [' + *metron*, measure]. An arbitrary constant characterizing the mathematical expression in which it appears by its values.
- parametric** (pär-ä-mē-trik) [' + *mētra*, uterus]. 1. Concerning the area near the uterus. 2. Rel. to the parametrium, the tissue surrounding the uterus.
- parametritis** (pär-ä-mē-trit'is) [G. *para*, beside, + *-itis*, inflammation]. Inflamed condition of parametrium, the cellular tissue adjacent to uterus. SYN: *cellulitis, pelvis.*
- parametrium** (pär-ä-mē-tri-üm) [' + *mētra*, uterus]. Fat and connective tissue around the uterus.
- paramimia** (pär-ä-mim'i-ä) [G. *para*, beside, + *mimēsthai*, to imitate]. Psy: Disturbance of association tracts bet. motor and sensory centers resulting in misuse of gestures.
- paramnesia** (pär-äm-nē-zī-ä) [' + *a-*, priv. + *mnesia*, memory]. 1. The use of words without meaning. 2. Inability to distinguish imaginary or suggested experiences from those which have actually occurred. 3. Seeming recall of events which never have occurred.
- paramorphia** (pär-ä-mor'fi-ä) [' + *morphē*, form]. Abnormality of shape.
- paramusia** (pär-ä-mū'zi-ä) [G. *para*, beside, + *amousia*, want of harmony]. A form of aphasia in which the ability to render music correctly is lost.
- paramyoclonus multiplex.** [G. *para*, beside, + *mys*, *my-*, muscle, + *klonos*, tumult] A rare degenerative disease characterized by rapidly repeated muscle contractions, esp. those of extremities, due to lesion of basal ganglia.
- paramyosinogen** (pär-ä-mi'ō-sin'ō-jēn) [' + *mys*, *my-*, muscle, + *gennan*, to produce]. Protein derived from muscle plasma.
- paramyotonia** (pär-ä-mi'ō-tō-ni-ä) [' + *tonos*, tone]. A disorder marked by muscular spasms and abnormal muscular tonicity.
- p., ataxia.** Tonic muscular spasm when making any movement, with slight ataxia or paresis.
- p., congenita.** SYN: *Eulenberg's disease*. Congenital condition of tonic muscular spasms when body is exposed to cold.
- p., symptomatic.** Temporary muscular rigidity when first trying to walk, as in paralysis agitans.
- paranasal.** Situated near or alongside the nasal cavities.
- p., sinuses.** The frontal, maxillary, ethmoid, and sphenoidal sinuses.
- paranephritis** (pär-ä-ne-trit'is) [G. *para*, beside, + *nephros*, kidney + *-itis*, inflammation]. 1. Inflamed condition of the suprarenal capsules. 2. Inflammation of connective tissue about kidney. SYN: *perinephritis.*
- paranephros** (pär-ä-nēfr'ōs) [' + *nephros*, kidney]. A suprarenal or adrenal capsule.
- paranoia** (pär-ä-noy'ä) [G. *para*, abnormal, + *nous*, mind]. A chronic, psychotic entity characterized by fixed but ever-expanding systematized delusions of persecution.
- General characteristics are sensitive, suspicious, jealous, brooding nature; excessive self-consciousness; fixed ideas, developed into well-systematized, logical delusions, megalomania, rare hallucinations, repressed homosexuality, inability to make concessions.
- The 3 chief stages are: (1) Self-analytical, introverted, hypochondriacal period. (2) persecution period; (3) delusion period.
- paranoliac** (pär-ä-noy'äk) [' + *nous*, mind]. 1. One suffering from paranoia. 2. Concerning or afflicted with paranoia.
- paranoid** (pär-ä-noyd) [G. *para*, not normal, + *nous*, mind, + *eidōs*, like]. 1. Resembling paranoia. 2. A person afflicted with paranoia.
- p. reaction type.** Individual who has fixed, systematized delusions, is suspicious, has a persecution complex and is resentful, bitter, and a megalomaniac.

Many states approach true paranoia and resemble it, but lack 1 or more of its distinguishing features. Some of these are: (a) Transitory p. states due to toxic conditions; (b) p. type of schizophrenia; (c) p. states due to alcoholism.

In the paranoid-reaction types, the delusions tend to scatter and shift from individual to individual, or group to group, and tend also to be more bizarre. Types are: (a) Delusions of persecution; (b) delusions of jealousy; infidelity on the part of someone loved by the individual; (c) delusions of erotomania; of being loved by someone who *does not* love him; (d) delusions of megalomania; the delusions of greatness which are invariably present.

p. violence. NP. In dealing with all types of paranoids

Do not handle without an assistant. Shout, call, or signal for aid. Don't back away or have back to patient. Don't use more force than necessary. Don't force patient over hard edges of furniture. Don't exert force over patient's chest. Keep pressure off of ribs. Avoid patient's knee or fist in the abdomen. If patient is prone, hold down by shoulders and just above knees or control limbs at wrists and ankles. Remove patient's shoes when under control. Keep close to patient; bend his wrists forward. Have a layer of cloth, sheet, blanket, patient's clothes, anything between patient's skin and yours when holding him, to prevent bruising.

paranomia (pār-ā-nō'mī-ā) [G. *para*, beside, + *onoma*, name]. Form of aphasia in which there is inability to remember correct name of objects shortly after seeing or using them.

paranorm'al. Alongside or aside from the normal. Pertaining to experiences that appear to happen outside of the known.

paranuclein (pār-ā-nū'klē-in) [+ L. *nucleus*, a kernel]. A protein which does not yield nitrogenous bases when decomposed. SYN: *nucleoalbumin*.

paranucleus (pār-ā-nū'klē-ūs) [+ L. *nucleus*, a kernel]. A small body lying close to a cell nucleus.

paraomphalic (pār-ā-ōm-fā'lik) [+ *omphalos*, navel]. Adjacent to the navel. SYN: *paraumbilical*.

paraoperative (pār-ā-ōp'ēr-ā-tīv) [+ L. *opus*, *oper-*, work]. Concerning all the details and the accessories of operation and preparation of the patient.

paraosteothropathy (pār-ā-ōs'tē-ō-ār-thrōp'āth-i) [+ *osteon*, bone, + *arthron*, joint, + *pathos*, disease]. Paralysis of lower portion of the body in addition to bone and joint disease.

paraparesis (pār-ā-pār-ē'sis, -par-ē'sis) [+ *paresis*, paralysis]. Partial paralysis affecting the lower limbs.

parapathia (pār-ā-pāth'ī-ā) [G. *para*, beside, + *pathos*, disease]. Emotional aspects of a disorder.

parapedesis (pār-ā-pēd-ē'sis) [G. *para*, beside, + *pedēsis*, a bending]. Secretion through other than normal channels.

parapeptone (pār-ā-pēp'tōn) [+ *peptin*, to digest]. Intermediate digestion product of albumin. SEE: *peptone*.

paraphasia (pār-ā-fā-zī-ā) [G. *para*, abnormal, + *a-*, priv., + *phasis*, speech]. The misuse of words or word combinations spoken; a form of aphasia.

paraphemia (pār-ā-fē'mī-ā) [+ *phēmē*, speech]. A disorder marked by consistent use of the wrong words, or mispronunciation of words.

paraphia (pār-ā-fī-ā) [+ *aphē*, touch]. Irregularity of the sense of touch.

paraphimosis (pār-ā-fī-mō'sis) [+ *phimosis*, to muzzle]. 1. Strangulation of glans penis due to retraction of foreskin. 2. Retraction of eyelid in back of eyeball.

p. oculi. Retraction of eyelid in back of eyeball.

paraphobia (pār-ā-fō'bī-ā) [G. *para*, abnormal, + *phobos*, fear]. A mild form of phobia.

paraphonia (pār-ā-fō'nī-ā) [+ *phōnē*, voice]. Partial loss or weakness or abnormal change of the voice.

p. puberum. A harsh, deep voice that develops in boys at puberty.

paraphora (pār-ā-fō-rā) [G. a wandering]. 1. A mental disorder of minor degree. 2. The unsteadiness due to drunkenness.

paraphrasia (pār-ā-frā'zī-ā) [G. *para*, abnormal, + *phrasis*, speech]. Disorder characterized by incoherent speech. SYN: *paraphasia*.

paraphrenia (pār-ā-frē'nī-ā) [+ *phrēnē*, mind]. 1. Dementia precox according to Freud. 2. Paranoid dementia precox according to Kraepelin, behavior disorders and personality defects not being marked.

p. confabulans. P. marked by memory distortions.

p. expansiva. P. with delusions of grandeur, exaltation and moderate excitement.

p. phantastica. P. with unsystematized delusions.

p. systematica. P. with progressive delusions of persecution, followed by delusions of grandeur, but personality shows no deterioration.

paraphrenitis (pār-ā-frē-nī'tis) [G. *para*, beside, + *phrēn*, mind, diaphragm, + *-itis*, inflammation]. Inflammation of the tissues around the diaphragm.

paraplast (pār-ā-plāzm) [+ *plasma*, a thing formed]. 1. Any abnormal new formation or malformation. 2. The fluid portion of protoplasm. SYN: *hyaloplasm*.

paraplastic (pār-ā-plās'tik) [G. *para*, beside, + *plastikos*, formed]. 1. Pert. to fluid portion of protoplasm. 2. Misshapen, deformed.

paraplectic (pār-ā-plēk'tik) [G. *para*, striking at [the side]]. Afflicted with paralysis of lower extremities. SYN: *paraplegic*.

paraplegia (pār-ā-plē'jī-ā) [G. *para*, beside, + *plēgē*, stroke]. Paralysis of lower portion of the body and of both legs.

ETIOI. A lesion involving the spinal cord which may be due to the following: maldevelopment, epidural abscess, hematomyelia, acute transverse myelitis, spinal neoplasms, multiple sclerosis, or syringomyelia. May also be of psychogenic origin.

p., alcoholic. P. of spinal origin due to use of alcohol.

p., ataxic. Lateral and post. sclerosis of spinal cord, combined, and resulting symptoms.

p., cerebral. P. from bilateral cerebral lesion.

p. congenital spastic. SYN: *infantile spastic paraplegia*, *cerebral diplegia*, *Little's disease*. Spastic paralysis of the legs occurring at birth or shortly afterwards, usually due to lesions of the brain.

p. dolorosa. P. due to pressure of a neoplasm on post. minor roots. Very painful.

p. infantile spastic. SEE: congenital spastic paraplegia

p. peripheral. P due to pressure on, injury to, or disease of peripheral nerves.

p. senile. P. resulting from arteriosclerosis of arteries supplying spinal cord

p. spastic. P. characterized by increased muscular tone, and accentuated tendon reflexes. Seen in multiple sclerosis and other conditions involving the pyramidal tracts

p., spastic, primary. P from degeneration in pyramidal tracts

paraplegia (pär-ä-plē'jīk) [G. *para*, beside, + *plēgē*, a stroke]. Concerning, or affected with, paraplegia. SYN. *paraplectic*.

parapleuritis (pär-ä-plū-rī'tis) [G. *para*, beside, + *pleura*, a side, + *-itis*, inflammation] 1 Inflammation in the thoracic wall 2 Mild inflammation of the pleura 3 Pain in the pleura SYN: *pleurodynia*

parapoplexy (pär-äp'ō-plēk-sī) [" + *apoplexia*, a striking down] A mild or slight apoplexy with partial stupor, a stupor resembling apoplexy. SYN. *pseudopoplexy*.

parapraxis, parapraxis (pär-ä-prak'si-ä, -sis) [" + *praxis*, a doing] Disturbed mental processes producing inaccuracy and forgetfulness and tendency to misplace things and make slips of speech or pen.

paraproctitis (pär-ä-prök-tī'tis) [" + *proktos*, anus, + *-itis*, inflammation]. Inflamed condition of tissues near the rectum

parapsia, parapsis (pär-äp'si-ä, -sis) [G. *para*, beside, + *apsis*, touch] Any disorder of touch SYN. *paraphia*.

parapsoriasis (pär-ä-sō-rī-ä-sis) [" + *psoriasis*, itching]. A chronic disorder of the skin marked by scaly red lesions.

par'apsychology. The division of psychology which deals with extrasensory perception, telepathy, clairvoyance, and associated phenomena

pararenal (pär-ä-rē-nāl) [" + L. *rēn*, kidney] Near the kidneys.

pararhotacism (pär-ä-rō'tä-sīzm) [" + *rho*, letter R, + *ismos*, condition]. Constant erroneous use of letter r or the placing of undue emphasis on letter r

parasalpingitis (pär-ä-säl-pīn-jī'tis) [G. *para*, beside, + *salpīx*, *salpīgē*, tube, + *-itis*, inflammation]. Inflamed condition of tissues around an oviduct or a eustachian tube.

par'asecretion. 1 An abnormality in secretion 2. A substance abnormally secreted

parasmatism (pär-ä-sig'mä-tīzm) [" + *sigma*, letter S, + *ismos*, condition]. Imperfect pronunciation of the letter S. SYN: *lisp*.

parasite (pär-ä-sīt) [" + *sitos*, food] An organism that lives within, upon, or at expense of another organism known as the host.

p., accidental. One infesting a host which is not its normal host

p., external. One which lives on the outer surface of its hosts. Ex: fleas, lice, mites, ticks. An ectoparasite.

p., facultative. P. capable of living independently of its host at certain times.

p., incidental. An accidental parasite, q.v.

p., intermittent. One which visits its host at intervals.

p., internal. One which lives within the body of the host, occupying the di-

gestive tract or body cavities, or living within body organs, blood, tissues, or even cells. EX. protozoa, worms.

p. obligate. P. completely dependent on its host.

p., occasional. SYN. *Periodic parasite* One which seeks its host at intervals to obtain nourishment.

p., periodic. An occasional parasite, q.v.

p., permanent. One which lives upon its host until maturity or spends its entire life upon its host. Ex: flukes, itch mites.

p., specific. One which requires a specific host in order to complete its life cycle

p., temporary. One which is free-living during a part of its life cycle

parasitic (pär-ä-sīt'ik) [" + *sitos*, food]. Like, caused by, or concerning, a parasite

parasiticide (pär-ä-sīt'ī-sīd) [" + " + L. *caedere*, to kill] 1. Killing parasites 2. An agent that will kill parasites. Ex: sulfur, iodine, mercurial ointment.

parasitism (pär-ä-sīt-izm) [G. *para*, beside, + *sitos*, food, + *ismos*, condition]. The state or condition of being infected or infested with parasites

parasitize (pär-ä-sīt'īz) To infest or infect with a parasite

parasitogenic (pär-ä-sīt'ō-jén'ik) [G. *para*, beside, + *sitos*, food, + *gennan*, to produce] 1. Caused by parasites. 2. Favoring parasite development

parasitology (pär-ä-sīt'ō-lō-jī) [G. *para*, beside, + *sitos*, food, + *logos*, study]. The study of parasites and parasitism

parasitophobia (pär-ä-sīt'ō-rō-bī-ä) [" + " + *phobos*, fear]. Unusual fear of parasites.

parasitosis (pär-ä-sīt'ō-sīs) A disease or condition resulting from parasitism

parasitotropic (pär-ä-sīt'ō-trōp'ik) [G. *para*, beside, + *sitos*, food, + *tropos*, turning] 1. Having attraction for parasites 2. Having an affinity for parasites such as a drug

paraspadia (pär-ä-spä'dī-ä) [G. *para*, *spain*, to draw aside]. Condition in which the urethra has an opening into 1 side of the penis.

paraspasm (pär-ä-späzm) [G. *para*, beside, + *spasmos*, a spasm] 1. Muscular spasm of the lower extremities. 2. Spastic paralysis of the lower extremities.

parasteatosis (pär-ä-stē-ä-tō'sis) [" + *stear*, *stear*, tallow, + *-osis*, disease]. Any disordered condition of the sebaceous secretions

parasternal (pär-ä-ster-nāl) [" + *sternon*, chest]. Along the side of the sternum.

p. line. Imaginary vertical line running midway bet. sternal margin and line passing through the nipple

p. region. Area bet. sternal margin and parasternal line.

parasthenia (pär-ästhē-nī-ä) [" + *sthenos*, strength]. Condition characterized by abnormal functioning of organic tissue at odd intervals.

parastruma (pär-ä-strū'mä) [" + L. *struma*, goiter]. Goiterlike tumor due to hypertrophy of a parathyroid gland.

parasymphathetic (pär-ä-sīm-pä-thēt'ik) [G. *para*, beside, + *sympathētikos*, suffering with] Of or pertaining to the craniosacral division of the autonomic nervous system.

p. nervous system. The craniosacral division of the autonomic nervous system. Preganglionic fibers originate from nuclei in the midbrain, medulla, and sacral portion of the spinal cord. They pass through cranial

nerves III, VII, IX, and X and the second, third, and fourth sacral nerves and synapse with postganglionic neurons located in autonomic (terminal) ganglia which lie in the walls of or near the organ innervated.

Some effects of parasympathetic stimulation are constriction of pupil, contraction of smooth muscle of alimentary canal, constriction of bronchioles, slowing of heart rate, and increased secretion by glands, except sweat glands. In general, parasympathetic effects are brought about during periods of rest when energy supplies are being replenished. Parasympathetic effects are *specific* rather than general. *See*: autonomic nervous system, sympathetic nervous system.

parasympathicotonia (pār-ā-sim-pā-thīk-ō-tōn'ī-ā). *SYN* vagotonia. Condition in which there is an imbalance in functioning of the autonomic nervous system, the parasympathetic division dominating over the sympathetic.

parasympatholytic (pār-ā-sim-pā-thō-līt'ik). Having a destructive effect on or blocking parasympathetic nerve fibers.

parasympathomimetic (pār-ā-sim-pā-thō-mīm-ēt'ik). Producing effects similar to those resulting from stimulation of parasympathetic nervous system.

parasyovitis (pār-ā-sin-ō-vī'tis) [G. *para*, beside, + *syn*, with, + *ōon*, egg, + *-itis*, inflammation] Inflamed condition of tissues about a synovial sac.

parasyphilitic (pār-ā-sif-ilīt'ik) [" + *syn*, with, + *philos*, love] Marking diseases assumed to be indirectly due to syphilis, but with none of the usual lesions of that disease.

parasytolic (pār-ā-sis'tō-lē) [" + *systolē*, contraction]. Abnormally prolonged interval of rest following the cardiac systole.

paratarsium (pār-ā-tar'sī-ūm) [" + *tarsos*, tarsus]. The covering and connective tissues of the tarsus of the feet.

paratenon (pār-ā-tē-nōn) [" + *tenōn*, tendon]. Fatty tissue surrounding a tendon.

parateresomania (pār-ā-te-rē-sē-ō-mā-nī-ā) [G. *paraterēsis*, observation, + *mania*, madness]. Insane desire to investigate new scenes and subjects.

paratherapeutic (pār-ā-thēr-ā-pū'tik) [G. *para*, beside, + *therapeutikē*, treatment]. Caused by the treatment used for another disease.

parathormone (pār-ā-thor'mōn) [G. *para*, beside, + *thyroid*, + *ormanein*, to excite]. 1. An extract from fresh or frozen parathyroid glands of domestic animals which contains the active principle or principles of these glands. 2. Commercial name for this substance.

parathymia (pār-ā-thīmī-ā) [" + *thymos*, mind]. Disordered state of the emotions.

parathyrene (pār-ā-thī'rīn) [G. *para*, beside, + *thyroid*] Parathormone, *q.v.*

parathyroid (pār-ā-thī'royd) [G. *para*, beside, + *thyreos*, shield, + *eidōs*, form]. 1. Located close to the thyroid gland. 2. One of 4 small endocrine glands about the size of a pea on the back of and at lower edge of the thyroid gland or embedded within its substance. These glands secrete a hormone, *parathormone*, which regulates calcium-phosphorus metabolism. *Hyposecretion* results in neuromuscular hyperexcitability as manifested in tetany. Blood calcium falls and blood phosphorus rises. Other symptoms include cataract, teeth defects, bone lesions, maldevelopment of hair and nails, and skin disturbances. *Hypersecretion* results in a rise in blood cal-

cium and fall in phosphorus. Calcium is removed from bones, resulting in increased fragility. Muscular weakness, reduced muscular tone and general neuromuscular hypoexcitability occur. Generalized osteitis fibrosa (von Recklinghausen's disease) is a clinical entity associated with hyperplasia and resulting hypersecretion of the parathyroids. *Parathormone*, *q.v.*, secreted by these glands contains the active principle or principles.

parathyroidectomy (pār-ā-thī-royd-ēk'tō-mī) [G. *para*, beside, + *thyreos*, shield, + *eidōs*, form, + *ektomē*, excision]. Excision of one or more of the parathyroid glands.

parathyroprivia (pār-ā-thī'rō-prīv'ī-ā) [" + " + *L. privus*, deprived of]. Condition which supervenes when the parathyroids are removed or cease functioning.

parathyroprivic, parathyroprivous (pār-ā-thī'rō-prīv'ik, -us) [" + " + *L. privus*, deprived of]. Resulting from loss of function of, or removal of, parathyroid glands.

paratonsillar (pār-ā-tōns-il'ār). Near or about the tonsil.

paratrachosis (pār-ā-trī-kō'sis) [" + *trich*, trich-, hair, + *-ōsis*, disease]. Any disorder of hair growth, as growth in abnormal places.

paratrimma (pār-ā-trīm'mā) [" + *tribein*, to rub]. Chafing, irritation of the skin. *SYN*: intertrigo.

paratripsis (pār-ā-trīps'is). 1. Rubbing, chafing. 2. A slowing of catabolism.

paratrophic (pār-ā-trō'fik) [G. *para*, beside, + *trophē*, nourishment]. 1. Requiring living substances for food, parasitic. 2. Pert to abnormal nutrition.

paratrophy (pār-at'rō-fī) [" + *trophē*, nourishment]. 1. Localized fatty swellings and nerve lesions in various regions of the body. *SYN* Dercum's disease, *adiposis dolorosa*. 2. Defective nutrition. *SYN*: dystrophy.

paratuberculosis (pār-ā-tū-bēr'kū-lō'sis) [" + *L. tuberculus*, a tubercle, + *G. -ōsis*, disease] Disease resembling tuberculosis, but in which the tubercle bacillus cannot be demonstrated.

paratyphilitis (pār-ā-tīf-ilī'tis) [" + *typhlos*, blind, + *-itis*, inflammation]. Inflammation of the connective tissue close to the cecum.

paratyphoid (pār-ā-tī'foyd) [G. *para*, near, + *typhos*, fever, + *eidōs*, like]. Similar to typhoid.

p. fever. An infectious fever resembling typhoid.

Etiol. Bacteria of the genus *Salmonella*, especially the species *S. paratyphi* (A & B strains) and *S. choleraesuis*.

SYM Fever rises more quickly than in typhoid, more diarrhea, less cause for hemorrhages and perforation, recovery quicker and disease milder than typhoid. The ulcers are in lower end of small intestine in typhoid but more are in the upper end of the large intestine in paratyphoid. Widal* test is negative.

paratyptic (pār-ā-tīp'ik) [G. *para*, beside, + *typos*, type]. Relating to differences due to the influences of environment; diverging from a type.

paraumbilical (pār-ā-ūm-blī'k-āl) [" + *L. umbilicus*, navel]. Close to the navel.

paraurethral (pār-ā-ū-rē-thrāl) [" + *ourēthra*, urethra]. Located close to the urethra.

parauterine (pār-ā-ū'tēr-in) [" + *L. uterus*, womb]. Around the uterus.

paravaginal (pär'ä-väj'in-äl) [" + *L. vagina*, sheath]. Around the vagina.

paravaginitis (pär'ä-väj-in-tis) [" + " + *G. -itis*, inflammation]. Inflammation of the tissue surrounding the vagina.

paravertebral (pär'ä-ver'tē-bräl) Alongside or near the vertebral column.

p. anesthesia. Injection of a local anesthetic about roots of spinal nerves.

paravesical (pär'ä-vēs-ik'äl). Near the urinary bladder.

paravitaminosis (pär'ä-vit-äm-in-ō'sis). A disease or disorder resulting indirectly from vitamin deficiency.

paraxanthine (pär-äk-sän'thin) [*G. para*, beside, + *xanthos*, yellow]. A poisonous leukomaine occurring in healthy urine and in excess in gout.

paraxial (pär-tē'si-äl) [" + *L. axis*, axis]. On either side of the axis of the body, or 1 of its parts.

paraxin (pär-äk'sin). Commercial diuretic.

parazon (pär-ä-zō'n). An animal which lives as a parasite upon animals.

parched (pärchd) [*M.E. parchen*]. Dried to extremity.

parectasia, **parectasis** (pär'ēk-tä'si-äs-sis). Excessive dilatation or stretching of a structure.

paregoric (pär-e-gor'ik) [*G. parēgoros*, soothing]. 1. Soothing. 2. Camphorated tincture of opium, a narcotic containing drug which in large doses is poisonous.

TREATMENT FOR POISONING Same as for morphine, *q.v.*

parenchyma (pär-ēn'ki-mä) [" + *en*, in, + *chein*, to pour]. The essential parts of an organ which are concerned with its function in contradistinction to its framework.

The uriniferous tubules of the kidneys are the parenchymatous tissue.

p. disease. Disease affecting the principal tissue of an organ.

parenchymatitis (pär-ēn-ki-mä-ti'tis) [" + " + " + *-itis*, inflammation]. Inflammation of parenchyma, or substance of a gland.

parenchymatous (pär-ēn-ki-mä't-ūs) [" + " + *chein*, to pour]. Concerning the essential substances of an organ.

parent (pä'rent) [*L. parēre*, to bring forth]. A father or a mother; one who begets offspring.

RS brood cell, daughter cell, mother cell.

p. fixation. Continuation of the child-parent affiliation into the adult state, so that the person so afflicted is unable to become interested in a person of the opposite sex.

parenteral (pär-ēn'tēr-äl) [*G. para*, beside, + *enteron*, intestine]. Situated or occurring outside of the intestines.

p. digestion. Digestion of foreign substances by body cells as opposed to *enteral digestion*, which occurs in the alimentary canal.

p. injection. Injection of substances into the body through any route other than via alimentary canal, as subcutaneous, intravenous, intramuscular, or intrathecal injection.

p. therapy. Introduction of a substance, esp. nutritive material, into the body by means other than the intestinal tract.

parepithymia (pär'ēp-i-thi'mi-ä). Abnormal desire or craving.

parergastic reactions (pär-ēr-gäst'ik) [" + *ergon*, work]. A general term used by A. Meyer for the essentials involved in schizoid types but without relation to prognosis.

paresthesia (pär'e-sis, pä-rē'sis) [*G. weak-*

ness]. 1. Partial or incomplete paralysis. 2. An organic mental disease with somatic, irritative and paralytic focal symptoms and signs running a slow, chronic, progressive course and tending to a fatal termination.

Comprises 10-20% of total admissions to mental hospitals.

Error. Diffuse and focal involvement of brain and spinal cord due to syphilis, usually occurring from 5 to 15 years after primary infection and frequently precipitated by trauma of the head.

PATH: A diffuse meningoencephalitis with degenerative changes dependent upon vascular and toxic factors.

SYM: May simulate any psychoneuroses or psychoses. Pupillary changes, facial tremors, tremors of the lips and tongue, speech disturbances. Usually Argyll-Robertson pupil, impaired vision, headache, speech slurred with letters and syllables often omitted. Epileptic convulsions. Unequal exaggeration of the reflexes. Always a positive Wassermann reaction of spinal fluid, with increase of protein and lymphocytes. Colloid gold curve changes, reading often being 5555544431. Memory defective, expansive delusions, depression, dementia.

TREATMENT Penicillin.

p. juvenile. General p due to congenital syphilis, seen in children.

paresthesia (pär-ēs-thē'zi-ä) [*G. para*, beside, + *aisthēsis*, sensation]. Abnormal sensation without objective cause, such as numbness, pricking, etc., heightened sensitivity.

Experienced in central and peripheral nerve lesions and in locomotor ataxia.

paretic (pä-rēt'ik, pä-rē'tik) [*G. paresis*, weakness]. Affected with or concerning paresis.

pareunia (pär-ū-ni-ä) [*G. pareunos*, lying beside]. Sexual intercourse. **SYN**: coition, coitus, copulation.

paridrosis (pär-i-drō'sis) [" + *idrosis*, perspiration]. Any disordered secretion of perspiration.

paries (pä'ri-ēs) (pl. *parietes*) [*L. a wall*]. The enveloping wall of any structure; applied especially to hollow organs.

parietal (pä-ri-ē-täl) [*L. paries*, pariet-, wall]. Pert. to, or forming, the wall of a cavity. **SEE** suture, sagittal.

p. bone. One of two bones which form the roof and sides of the skull.

p. cells. Large cells on margin of the peptic glands of stomach which supposedly secrete hydrochloric acid. **SYN**: border cells.

p. lobe. A central portion of the cerebrum bet. the parieto-occipital and Rolandic fissures above the horizontal branch of the fissure of Sylvius.

parietes (pä-ri-ē-tēs) [*L.*]. Plural of paries; walls of an organ or hollow part.

Paris green (pä'ris grēn). A compound of copper and arsenic, *q.v.*; acetoarsenite of copper.

parity (pä'ri-ti) 1. Equality, similarity. 2. The condition of a woman with respect to the number of children she has borne. **SEE**: multiparity, nulliparity, primiparity, secundiparity.

Parkinson's disease (par'kin-sūn). A chronic nervous disease characterized by a fine, slowly spreading tremor, muscular weakness and rigidity and a peculiar gait.

SYM: Onset may be abrupt; generally insidious. First symptom is a fine tremor beginning in hand or foot which may spread till it involves all the members.

At first paroxysmal but becomes almost continuous.

Face becomes expressionless. Speech slow and measured, later muscular rigidity. Head bowed, body bent forward, arms flexed, thumbs turned into palms, knees slightly bent. Gait characteristic by this time; steps grow faster and faster, body inclines more and more forward until patient falls, seeks some support; this is termed festination.

Occasionally a tendency to fall backwards, retropulsion replaces festination; numbness, tingling, sensation of heat.

Prognosis: Recovery rarely if ever occurs. Duration indefinite.

TREATMENT: Regulated diet; rest of mind and body; frequent bathing followed by friction, massage, electricity, constitutional remedies. Destruction of the *globus pallidus* by injection of absolute alcohol in the brain-called chemopalidectomy. It is not a cure but alleviates tremors. **SYN** *palsy, shaking, paralysis agitata*. **SEE** *paralysis*.

P.'s mask. Expressionless appearance of the face. Eyebrows are raised, wrinkles are smoothed out, and there is immobility of the facial muscles.

A typical symptom seen in P.'s disease and in postencephalitic states.

P.'s syndrome. Symptoms of P.'s disease.

paroccipital (pär-ök-sip'tit-äl) [G. *para*, near, + L. *occiput*, occiput]. 1. Close to the occipital bone. 2. The paramastoid process.

parodontitis (pär'-dön-ti'tis) [' + *odous*, *odont-*, tooth + *-itis*, inflammation]. Inflamed condition of tissues around a tooth.

parodynia (pär-ö-din'i-ä) [L. *parere*, to bring forth, + G. *odynē*, pain]. 1. Labor pains. 2. Difficult or abnormal labor or birth. **SYN** *dystocia*.

p. perversa. Presentation with fetus lying transversely across the uterus. **SYN** *cross birth*.

parolfactory area (pär-öl-fakt'ör-i). **SYN** *Broca's area*. Area of cerebral cortex lying ant. to post. parolfactory sulcus.

parolivary (pär-öl'i-va-ri) [G. *para*, near, + L. *oliva*, olive]. Situated close to the olivary body.

p. bodies. Nuclei in medulla oblongata, lying close to the olivary bodies.

paromphalocoele (pär-om'fä-lö-sēl') [' + *omphalos*, navel, + *kēlē*, hernia]. Hernia or tumor close to the umbilicus.

paroniria (pär-ö-ni'ri-ä) [' + *oneiros*, dream]. Abnormal dreaming of a terrifying nature.

p. ambulans. Sleepwalking.

p. salax. Restlessness in sleep with lascivious dreams and nocturnal emissions.

paronychia (pär-ö-nik'i-ä) [' + *onyx*, *onych-*, nail]. Acute or chronic infection of marginal structures about the nail.

ETIOLOGY: Trauma, infection, systemic disease (syphilis, tuberculosis, leprosy).

SYM: Redness, swelling and suppuration around nail edge.

TREATMENT: Specific, in specific disease. Hot soaks (1% Lysol), painting beneath nail fold (chrysarobin in chloroform, salicylic acid ointment). Surgery in severe cases.

SYN: *felon, onychia, runaround, whitlow*.

p. tendinosa. Inflammation of sheath of a digital tendon. **ETIOLOGY:** Sepsis.

paronychomycosis (pär'-ö-ni-kö-mi-kö-sis). Fungus infection about the nails.

paronychosis (pär-ö-ni-kö-sis). Growth of a nail in an abnormal position.

paroöphoron (pär-ö-öf'ö-rön) [G. *para*, near, + *oon*, egg, + *phoros*, bearer]. A group of minute tubules located in mesosalpinx between uterus and ovary. It is a vestigial structure consisting of the remains of the caudal group of mesonephric tubules and is a homolog of the paradidymis of the male.

parophthalmia (pär-öf-thäl'mi-ä) [' + *ophthalmos*, eye]. Inflamed condition of tissue around the eye.

parophthalmoncus (pär-öf-thäl-mön'kü-s). A tumor located near the eye.

paropsis (pär-op'sis) [' + *opsis*, vision]. Any disorder of sense of sight.

parorchidium (pär-ör-kid'i-um) [' + *orchis*, *orchid-*, testicle]. Abnormal position or nondescent of a testicle. **SYN:** *ectopia testis*.

parorexia (pär-ör-räk'si-ä) [' + *orexis*, appetite]. An abnormal or perverted craving for special or strange foods. **SEE** *appetite, taste*.

parosmia (pär-öz'mi-ä) [' + *osmē*, odor]. Any disorder or perversion of the sense of smell, a false sense of odors or perception of those which do not exist.

Agreeable ones are considered offensive and disagreeable odors are accepted as pleasant. **SEE** *kakosmia*. **SYN:** *parosphresia*.

parosphresia, parosphresis (pär'-ös-frē-zī-ä, -sis) [' + *osphrēsis*, a smelling]. Disordered sense of smell. **SYN** *parosmia, q.v.*

parosteitis, parostitis (pär-ös-tē-i'tis, -ti'tis) [G. *para*, beside, + *osteon*, bone, + *-itis*, inflammation]. Inflammation of tissues next to the bone.

parosteosis, parostosis (pär-ös-tē-ös'sis, -tō'sis) [' + " + *-osis*, disease]. 1. Bone formation outside of the periosteum. 2. Bone development in an unusual location.

parotid (pä-röt'id) [' + *ons*, *ot-*, ear]. 1. Located near the ear. 2. Parotid gland.

p. duct. One 2 in. long from ant. border of the parotid gland crossing the masseter and piercing the buccinator, and buccal mucous membrane.

It opens in the mouth opposite 2nd upper molar. The transverse facial artery is above the duct and buccal branch of 7th nerve below. **SYN** *Stensen's duct*. **SEE:** *salivæ*.

p. gland. A pure albuminous (serous) gland, its secreting tubules and acini being long and branched. It is enclosed in a sheath, the *parotid fascia*.

parotidectomy (pä-röt'id-ek'tō-mi) [' + " + *ektomē*, excision]. Excision of parotid gland.

parotiditis (pä-röt'id-i'tis) [' + " + *-itis*, inflammation]. Parotitis, *q.v.*

parotidoscirrhosis (pä-röt'id-ö-skir'üs) [' + " + *skirros*, hardness]. 1. Hardening of the parotid gland. 2. A scirrhus cancer of the parotid area.

parotitis (pä-rö-ti'tis) [G. *para*, near, + *ous*, *ot-*, ear, + *-itis*, inflammation]. **SYN** *mumps*. Inflammation of the parotid gland, either simple or epidemic.

parous (pä'rus) [L. *parēre*, to bring forth]. Parturient; fruitful; having borne at least 1 child.

parovarian (par-ö-vär'i-än) [G. *para*, near, + L. *ovarium*, ovary]. 1. Situated near or beside the ovary. 2. Pert.

to the parovarium, a residual structure in the broad ligament.

parovariotomy (pär'-vā-ri-ōt'-ō-mī) [" + *G. tomē*, a cutting]. Removal of a parovarian cyst.

parovarium (pär'-vār'-ū-m) [" + *L. ovarium*, ovary]. The epoophoron. *q.v.* Also called *organ of Rosenmüller*.

paroxysm (pär'-ōk-sīzm) [*G. para*, beside, + *oxynēin*, to sharpen]. 1. A sudden, periodic attack or recurrence of symptoms of a disease; an exacerbation of the symptoms of a disease. 2. A fit or convulsion of any kind. 3. Sudden emotional state, as of fear, grief, or joy.

paroxysmal (pär'-ōk-sīz'māl) [" + *oxynēin*, to sharpen]. 1. Occurring in or concerning paroxysms. 2. Of the nature of a paroxysm.

parrot fever. *SYN.* *psittacosis*. *q.v.*

Parrot's disease (pär'-ō') The pseudo-paralysis of the extremities in infants caused by syphilis.

P.'s nodes. Bony nodules on skull of infants with syphilis.

P.'s sign. In meningitis, pupils dilate upon pinching the skin of neck.

P.'s ulcer. Lesions of thrush or stomatitis.

Parry's disease (pär-ē). *SEE* *gotter, exophthalmic*.

pars (pärz) [*L. pars, part-, a part*]. A part.

p. anterior. The ant lobe of the hypophysis cerebri.

p. basilaris. Basilar process of the occipital bone.

p. buccalis. *SEE* *p. anterior*.

p. caeca oculi. The blind spot of the eye.

p. caeca retinae. The nonsensitive part of the retina (*pars ciliaris retinae* and *pars iridica retinae*). *q.v.*

p. cavernosa urethrae. Cavernous portion of urethra.

p. cephalica nervi sympathici. Plexuses, ganglia, and nerves derived from sympathetic nerve.

p. ciliaris retinae. Portion of retina situated in front of ora serrata and covering the ciliary body.

p. distalis. That part of the hypophysis forming the major portion of the anterior lobe.

p. flaccida. A portion of membrane of the cardium which fills the notch of Rivinus. *SYN.* *Shrapnell's membrane*.

p. intermedia. The intermediate lobe of the hypophysis cerebri.

p. iridica retinae. Portion of retina on post surface of iris.

p. membranacea urethrae. The membranous portion of the urethra.

p. nervosa. *SYN.* *neural lobe*. Post. lobe of the pituitary gland.

p. optica hypothalami. The optic chiasma.

p. optica retinae. The sensory portion of the retina extending from optic disc to ora serrata.

p. tensa. The larger portion of the tympanic membrane, a tightly stretched membrane lying inferior to the maleolear folds.

p. tuberalis. The portion of the ant lobe of the hypophysis cerebri which invests the infundibular stalk.

parsley [M.E. *persely*, *parsley*] A plant, *Petroselinum crispum*, belonging to the Umbelliferae. It is the source of a volatile oil called *apiol*. Extracts from parts of the plant have been used as antiperiodics, diuretics, and emmenagogues.

parsnips [M.E. *pasnepe*, *parsnip*]. *AY.* *SERVING:* 120 Gm. *PRO.* 1.8, *FAT* 0.6,

Carbo. 13.2. *VITAMINS.* A+, B++*.* *ASH* *CONSR.* Ca 0.059, Mg 0.034, K 0.518, Na 0.004, P 0.076, Cl 0.030, S 0.036, Fe 0.0006. A base-forming food, alkalinity 12 cc. per 100 Gm., 18 cc. per 100 cal. *ACTION:* Easy to digest. Antifatulent.

partes (partēs) Plural of *pars*. *q.v.*

particulate (par-tik'-ū-lāt). Made up of particles.

parturient (pär-tūr'-ēnt) [*L. parturiens*, desiring to bring forth]. 1. Concerning childbirth or parturition.* 2. Bringing forth, giving birth.

p. canal. Path from uterine cavity to vulva.

p. woman. One in labor.

parturifacient (pär-tūr-rī-fā'shēnt) [" + *facere*, to make]. 1. Inducing or accelerating labor. 2. Drug used to cause delivery of the fetus.

parturiometer (pär-tūr-rī-ōm'-ēt-ēr) [" + *G. metron*, measure] Instrument for determining the expulsive force of the uterus.

parturition (pär-tūr-rīsh'-ūn) [*L. parturitio*, childbirth]. Act of giving birth to young. *SYN.* *childbirth, delivery*.

parturition, words pert. to: accouchement, accoucheur, accoucheuse, afterbirth, afterpains, axis traction, bradycytia, Braune's canal, childbirth, dystocia, labor, mogetocia, multipara, nullipara, obstetrics, oxytocia, parturient, parturifacient, postpartum, sextipara, unipara.

partus (pär'tūs) [*L. partus*, from *parere*, to bring forth]. Labor, parturition.

p. agrippinus. Breech presentation in delivery.

p. caesareus. Delivery by cesarean method.

p. difficilis. Difficult labor. *SYN.* *dystocia*.

p. immaturus. Premature labor.

p. maturus. Labor at term.

p. precipitatus. Precipitate labor.

p. serotinus. Prolonged or delayed labor.

p. siccus. Dry labor with little amniotic fluid.

parulis (pär-ū'lis) [*G. para*, near, + *oulon*, gum]. Abscess in a gum. *SYN.* *gumbol*.

parumbilical (pär-ūm-bil'ī-kāl) [" + *L. umbilicus*, navel]. Close to the navel.

paruria (pär-ūr-i-ā) [" + *ouron*, urine]. Any abnormality in discharge of urine.

parvicellular (pär-vi-sē'l-g-lār) [*L. parvus*, small, + *cellula*, a little box]. Concerning, or composed of, tiny cells.

parvule (pär'vūl) [*L. parvulus*, very small]. A small pill, pellet, or granule.

PAS. Abbrev. for *para-aminosalicylic acid*, *q.v.*

Paschen bodies (pā'shēn). Particles supposed to be the pathogenic virus of vaccinia and variola found in great numbers in skin exanthemas.

passage (pās'aj) [*L. passus*, a step]. 1. A communication bet. cavities and body structures or with the ext surface of an organ. 2. Act of passing. 3. An evacuation of the bowels. 4. Introduction of a probe or catheter, etc.

passion (pāsh'-ūn) [*L. passio*, suffering]. 1. Suffering. 2. Great emotion, esp. sexual excitement.

p. ileac. Intestinal colic due to obstruction. *SEE* *ileus*.

passional (pāsh'-ūn-āl) [*L. passio*, suffering]. Exciting or concerning any passion. *SEX:* *emotional*.

p. attitudes. The stages of hysteria, as an attitude indicating any great emotion.

passive (pās'iv) [*L. passivus*, enduring].

1. Submissive. 2. Acted upon. 3. Not active.

p. congestion. Congestion due to obstruction in venous return or, if general, due to myocardial insufficiency.

p. exercise. Muscular exercise without any effort on part of patient.

p. hyperemia. Blood in a part due to decreased outflow.

p. motion. Same as p. exercise.

p. movement. *Sx:* p. *ezercise.*

passivism (pās'tī-vīzm) [" + G. *ismos*, condition]. Sexual perversion with subjugation of the will by that of another, usually of the male by the female.

paste (pāst) [G. *pastē*, barley broth]. 1. To cause to adhere. 2. Any ointment whose base is a nonfatty material. 3. A mixture of flour and water, used as an adhesive. 4. A moist, doughy, plastic substance.

Pasteurella (pās-tēr-ēl'ā). A genus of bacteria belonging to the tribe Pasteurellaceae, family Parvobacteriaceae. The organisms are gram-negative, non-spore-forming rods, exhibiting bipolar staining. Many species are pathogenic for animals, a few for man.

P. pestis. Organism causing bubonic plague.

P. tularensis. Organism causing tularemia.

pasteurellosis (pās-ter-ēl'ō'sīz) [G. *-ōsis*, disease]. Disease caused by infection with bacteria of the *Pasteurella* group inducing hemorrhagic septicemia.

pasteurization (pās-tēr-jā'shūn) The process of heating a fluid at a moderate temperature for a definite period of time in order to destroy undesirable bacteria without changing to any extent the chemical composition of the fluid.

In p of milk, pathogenic bacteria are destroyed at 167° F. in 10 minutes, 158° F. in 15 minutes, 155° F. in 30 minutes. It decreases the content of vitamin C and vitamin B. The curd in most cases is softer in some tougher, while other cases are not affected.

Pasteurized milk being variable in this respect, boiled milk has some advantages as a soft curd results in the stomach. Use of fruit juice remedies any possible harm from lack of vitamins lost in pasteurization. *Sx:* milk.

Pasteur treatment (pās-tēr') Daily injection of increasingly virulent suspensions prepared from the brain or spinal cord of rabbits which have died of rabies. Suspension is treated so as to kill or inactivate the virus. Used for the prevention of rabies.

CAUTION. In some cases, immune reactions may occur, ranging from simple neuritis to serious encephalomyelitis and paralysis which may be fatal. Treatment should be employed only when absolutely necessary.

pastille (pās-tēl', pās-tīl) [L. *pastillus*, a little roll]. 1. A small cone used to fumigate or scent the air of a room. 2. A medicated disk used for local action on the mucosa of the throat and mouth. *Syn:* lozenge, troche. 3. PT: Small disk of paper coated with barium platinocyanide or other substances, used to estimate the amount of x-rays administered, also for testing the intensity of ultraviolet radiations.

The green color changes to brown when exposed to roentgen rays.

p. radiometer. An instrument consisting of a color index by means of which the color changes in the pastilles, before and after exposure to roentgen

rays, may be gauged. At one time it was used frequently to estimate the quantity of roentgen rays but is now practically obsolete.

patagium (pā-tāy'gl-ūm). A weblike membrane extending from one body part to another.

patch (pātsh) [M.E. *pacche*]. A blotch distinct from surrounding surface in character and appearance.

p., herald. Oval patch of efflorescence showing before the general eruption of pityriasis rosea, often several days before.

p., Hutchinson's. Salmon-yellow area seen on cornea in syphilitic keratitis.

p., mucous. A syphilitic eruption having an eroded, moist surface, generally on mucous membrane of mouth or ext. genitals or on surface subject to moisture and heat. *Syn:* condyloma latum.

p., opaline. Whitish patch in mouth, sometimes observed in syphilis.

p's., Peyer's. Masses of lymphoid follicles found on mucous membrane of small intestine. *Syn:* noduli lymphatici aggregati.

p., salmon. Salmon-colored area of cornea in ocular syphilis.

p. test. One to detect hypersensitivity to food, pollen or other substances by applying suspected substance to an area on the skin.

A small square of clean linen cloth should be covered with substance suspected. Cloth is laid on skin of chest or upper arm and another piece of cloth laid over it and fastened with adhesive. Remove at end of 24 hr. If irritation is present, the substance may be suspected and the individual is probably sensitive to it.

Substances with which the patient comes in contact may be used for the test. *Sx:* allergy, eczema.

patella (pā-tēl'ā) [L. a small pan; kneepan]. The kneecap, or kneepan; a lens-shaped sesamoid bone situated in front of the knee, in the tendon of the quadriceps femoris muscle.

RS: acromiyle, beat knee, housemaid's knee, knee, rotula.

p., floating. A patella which floats up from the condyles due to a large effusion in the knee.

p., fracture of. **TREATMENT.** Suture of bone fragments. A plaster is then put on, reaching from the toes to the groin, remaining on for 6-8 weeks. Then gradual exercise and weight upon the leg for a few weeks, after which patient may walk.

p., rider's painful. Tenderness and pain in patella from horseback riding. **patellapexy** (pā-tēl'ā-pēk'sī) [L. *patella*, kneepan, + G. *pēxis*, fixation]. Fixation of the patella to the lower end of the femur to stabilize the joint.

patellar (pā-tēl'ār) [L. *patella*, kneepan] Concerning the patella.

p. paradoxical reflex. Contraction of ant. muscles when leg is forcibly flexed and immediately released.

p. reflex. Involuntary jerk of leg due to sudden spasm of quadriceps following percussion of patellar ligament. *Syn:* knee jerk reflex.

patelliform (pā-tēl'fōrm) [" + *forma*, shape]. Of the shape of the patella.

patellofemoral (pā-tēl'ō-fēm'ōr-āl) [" + *femur*, femur-, thigh]. Concerning the patella and the femur.

patency (pā-tēn-sē) [L. *patens*, from *patere*, to be open]. The state of being freely open.

patent (păt'ent, păt'ent) [L. *patens*, from *patere*, to be open]. Wide open; evident; accessible

patent medicine. Packaged remedy for public use which is protected by letters patent and sold without a physician's prescription.

The law requires that it be labeled with names of active ingredients, the quantity or proportion of the contents, directions for its use, and that it may not have misleading statements as to curative effects on the label. *See* **prescription**.

path. *See* **pathway**.

path-, **patho-**. Prefix meaning *pertaining to disease*

pathema (pă-thē'mă) [G. *pathēma*, a suffering] Disease.

pathergasia (pă-thēr-gă'zī-ă) [G. *pathos*, disease, + *ergon*, work]. Any form of malfunctioning, constitutional or structural, which inhibits self-adjustment.

pathergy, **pathergia** (păth'ēr-gī, -ī-ă). Condition in which the response to a stimulus is either exaggerated or subnormal. *See* **hyperergy** and **hypoergy**.

pathetic (pă-thēt'ik) [G. *pathētikos*, suffering] Arousing the tender emotions, as sorrow

pathetism (păth-ēt-izm) [G. *pathein*, to suffer, + *ismos*, condition] State of overcoming another's will by suggestion. *Syn* **hypnotism**, **mesmerism**.

pathfinder (păth'find-ēr) [AS *paeth*, road, + *findan*, to locate] Instrument for locating stricture of the urethra

pathic (păth'ik) [G. *pathos*, disease] A sexual pervert who assumes the passive role in submitting to unnatural desires of another

pathocrinia (păth'ō-krin, -krēn, -krīn) [+ *krinein*, to secrete] Concerning an endocrine disorder

pathodixia (păth-ō-dik'sī-ă) [+ L. *dicere*, to say, from G. *deiknunai*, to show] Exhibitionism in reference to an injury or to disease

pathodontia (păth'ō-dōn'shī-ă) [+ *odont*, *odont*, tooth]. Branch of dentistry dealing with diseases of the teeth.

pathogen (păth'ō-jēn) [+ *gennan*, to produce] A microorganism or substance capable of producing a disease.

pathogenesis (păth-ō-jēn'ō-sīs) [+ *genesis*, development] Origination and development of a disease.

p., **drug**. 1 Morbid symptoms of disease produced by a drug. 2 Observation of all symptoms which may be produced by a drug

pathogenetic, **pathogenic** (păth'ō-jēn-ēt'ik, -jēn'ik) [+ *gennan*, to produce]. Productive of disease. *Syn* **morbiific**.

p., **organism**. One that produces disease in the body

pathogeny (păth-ō-jēn-ī) [+ *gennan*, to produce]. The origin or growth of a disease. *Syn* **pathogenesis**.

pathognomonic (păth-ōg-nō-mōn'ik) [+ *gnōmonikos*, showing]. Indicative of a disease, esp. of 1 or more of its characteristic symptoms

pathologic, **pathological** (păth-ō-lōj'ik, -ī-kāl) [+ *logos*, study]. 1 Concerning pathology. 2 Diseased, due to a disease. *Syn* **morbid**.

p., **histology**. Histology of diseased tissues.

p., **reflex**. An abnormal reflex indicating an abnormal or diseased state

pathologist (pă-thōj'ō-jist) [G. *pathos*, disease, + *logos*, study] A specialist in diagnosing the morbid changes in tis-

sues removed at operations and post-mortem examinations.

pathology (pă-thōj'ō-jī) [+ *logos*, study]. 1 Study of the nature and cause of disease which involves changes in structure and function. 2 Condition produced by disease.

p., **anatomic**. That which deals with structural changes

p., **cellular**. That which is based upon microscopic changes in body cells during disease

p., **chemical**. The study of chemical changes which occur in disease

p., **comparative**. The observation of pathological conditions, spontaneous or artificial, in the lower animals or in vegetable organisms as compared to those of human body

p., **experimental**. Study of diseases induced intentionally, esp. in animals

p., **functional**. *Syn* **physiologic pathology**. The study of alterations of functions which occur in disease processes

p., **general**. The general facts of p. derived from a comparison of particular diseases with each other

p., **geographical**. P. in its relations to geographical conditions

p., **medical**. The p. of disorders, the treatment of which does not call for operative interference

p., **special**. The p. of particular diseases

p., **surgical**. The p. of surgical diseases

pathomania (păth-ō-mă'nī-ă) [+ *mania*, madness] Moral insanity; irresistible tendency toward forbidden conduct with retention of reasoning power.

pathometry (păth-ōm'ēt-rī) [+ *metron*, measure] The estimate of the incidence of a disease

pathomimesis (păth'ō-mīm-e'sīs) [+ *mimesis*, imitation]. Intentional or unconscious as well as conscious imitation of a disease.

pathomimicry. Pathomimesis, *q.v.*

pathomorphism (păth-ō-mor'fizm) [+ *morphē*, form, + *ismos*, condition]. Study of abnormal form and structure of organisms

pathonomy (păth-ōn'ō-mī) [+ *nomos*, law]. Science of the laws of diseased conditions

pathophilla (păth-ō-fīl'ī-ă) [G. *pathos*, disease, + *philein*, to love]. Adjustment of habits to conditions made mandatory by some chronic disease.

pathophobia (păth-ō-fō'bī-ă) [+ *phobos*, fear]. Morbid apprehension of disease

pathophoresis (păth'ō-for-ēs'īs) [+ *phoros*, carrying]. The transmission of disease-producing organisms.

pathophoric (păth-ō-for'ik) [+ *phoros*, carrying]. Carrying or transmitting disease, as certain insects.

pathopoleis (păth'ō-poy-ēs'īs) [+ *poiein*, to make]. The method of disease production.

pathopsychology (păth'ō-sī-kōl'ō-jī) [+ *psychē*, soul, + *logos*, study]. The branch of psychology dealing with mental processes during disease

patho'sis. A diseased state or condition

pathway. A path or a course; more specifically a pathway formed by neurons (cell bodies and their processes) over which impulses pass from their point of origin to their destination.

p., **afferent**. One leading from a receptor to the spinal cord and (or) brain.

p., central. One within the brain or spinal cord

p., conduction. A group of fibers in a nerve, spinal cord, or brain over which impulses are conducted

p., efferent. One from the central nervous system to an effector

p., motor. P over which motor impulses are conveyed from a motor center to muscles

p., sensory. P over which sensory impulses are conveyed from sense organs or receptors to sensory or reflex centers of the spinal cord or brain

patient (pā'shēnt) [L. *patiens*, *patient-*, suffering]. 1. Enduring pain or injury 2. A person who is receiving treatment for disease.

pattern. 1. A design, figure, model, or example 2. In psychology, a set or arrangement of ideas or behavior reaction

patulous (pāt'ū-lūs) [L. *patulus* open] SYN *patent* Open, distended, spread apart

paulocardia (pawl'ō-kar'dī-ā) [G. *paula*, pause, + *kardia*, heart] 1. Sensation of momentary stoppage of heartbeat 2. Undue prolongation of the rest period in the cardiac cycle.

pause. An interruption, a temporary cessation of activity

p., compensatory. The long interval following an extrasystole, so-called because its duration is such that the next beat occurs at the exact time of the succeeding normal beat

pavement (pāv'mēnt) [L. *pavire*, to pave]. Any structure resembling a tiled floor, or pavement.

pavementing. Condition occurring during inflammation in which leukocytes adhere to the lining of capillaries

pavor (pā'vor) [L.] Anxiety, dread

p. nocturnus. Night terror during sleep in children and the aged

Pavy's disease (pā'vē). Albuminuria which recurs at periodic intervals.

Pb. SYMS: *plumbum*, lead.

P.B. Abbr for Pharmacopoeia Britannica [British pharmacopoeia]

P.B.E. Abbr for Perlsucht Bacillen-emulsion, a tuberculin prepared from bacilli from bovine tubercles

PBI. Abbr for protein-bound iodine

p.c. Abbr. L. *post cibos*, after meals

Pd. SYMS: *palladium*

P.D. Abbr for Doctor of Pharmacy

pea (pē) [G. *ptison*]. COMP Richer in proteins than other vegetables except lentils, but poorer in carbohydrates. AV. SERVING (fresh and dried). 75-100 Gm. Pro. 5.3-24.6, Fat 0.4-1.00, Carbo. 11.14-57.5. VITAMINS: A+++, C+++, E+++, B+++, +, C+++, - Ca 0.028-0.084, Mg 0.038-0.149, K 0.285-0.903, Na 0.013-0.104, P 0.127-0.400, Cl 0.024-0.035, S 0.063-0.0219, Fe 0.0017-0.0057.

peach (pēsh) [L. *persicum*, peach] AV. SERVING (fresh). 150 Gm. Pro. 0.8, Fat 0.2, Carbo 13.2. AV. SERVING (dried). 50 Gm. Pro. 2.0, Fat 0.4, Carbo 36.1. VITAMINS (fresh): A+ to ++, B+, C+++. VITAMINS (dried): A-, B+, C+. ASH CONST. (fresh and dried) Ca 0.016-0.034, Mg 0.010-0.056, K 0.214-0.830, Na 0.022-0.082, P 0.024-0.146, Cl 0.004, S 0.009-0.212, Fe 0.00033-0.0012. A base forming food, alkalinity 5 cc. per 100 Gm., 12.2 cc. per 100 cal.

peanut (pē'nūt). AV. SERVING. 60 Gm. Pro. 15.5, Fat 23.3, Carbo 14.6. VITAMINS: A+, B+++, G+. ASH CONST. Ca 0.071, Mg 0.180, K 0.654, Na 0.050, P 0.399, Cl 0.056, S 0.224, Fe 0.0020.

p. butter. AV. SERVING: 15 Gm. Pro. 3.8, Fat 7.5, Carbo. 1.7. VITAMINS: A+, B+++, G+.

pear (pār) [L. *pirum*]. AV. SERVING (fresh). 150 Gm. Pro. 0.6, Fat 0.6, Carbo. 12.5. VITAMINS: A+, B+++, C+, E+, G+++. ASH CONST. Ca 0.015, Mg 0.011, K 0.132, Na 0.016, P 0.026, Cl 0.011, S 0.010, Fe 0.0003

ACTION Heavy in the stomach unless cooked. Dried pears are highly nutritive and contain malic acid.

pearl (pērl) [O Fr. *perle*]. 1. Small, tough mass in sputum in asthma. 2. Small, hollow glass capsule containing a fluid for inhalation, as amyl nitrite.

p., epithelial. Concentric squamous epithelial cells in carcinoma.

p., gouty. Sodium urate concretion on cartilage of the ear seen in people with gout

pecan (pē-kān') [Algonquin *paccan*]. AV. SERVING 25 Gm. Pro 2.4, Fat 17.60, Carbo 3.8. VITAMINS A+ to ++, B+++. ASH CONST. Ca 0.089, Mg 0.152, K 0.332, P 0.335, Cl 0.050, S 0.113, Fe 0.0026

peccant (pek'ant) [L. *peccare*, to sin]. Corrupt, producing disease. SYN. *pathogenic*, *unhealthy*, *morbid*.

peccatophobia (pēk-āt-i-fō'bi-ā) ["" + G. *phobos*, fear]. Abnormal dread of sinning.

pecilo-. For words beginning with *pecilo-*, see *poikilo-*

Pecquet's cistern (pē-ka'). A reservoir for chyle at lower end of the thoracic duct. SEE *receptaculum chyli*

P.'s duct. Passage from the cisterna chyli to the joining point of the left subclavian and int. jugular veins, acting as a lymph channel

P.'s reservoir. SEE *P.'s cistern*.

pectase (pēktās) [G. *pēktos*, congealed, + *ase*, enzyme] Enzyme facilitating the conversion of pectin into pectic acid.

pecten (pēktēn) [L. *comb*] 1. The pubic bone. 2. A comblike organ. 3. Middle portion of anal canal

p. ossis pubis. A sharp ridge on superior ramus of pubis which forms pubic portion of the terminal (iliopectineal) line

pectic acid (pēkt'ik) [G. *pēktos*, congealed] An acid derived from pectin by hydrolyzing the methyl ester group which is found in many fruits

pectin (pēkt'in) [G. *pēktos*, congealed]. A white, amorphous, plant carbohydrate that forms a gelatinous mass in the cooking of fruits and vegetables, causing them to "jell" SEE *pectose*

pectinate (pēkt'in-āt) [L. *pecten*, comb]. Having teeth like a comb

pectineal (pēkt'in-ē-āl) [L. *pecten*, comb]. Relating to the os pubis or the pectineus muscle

p. line. The line or ridge on the os pubis separating the true from the false pelvis. SYN: *iliopectineal line*, *linea terminalis*.

pectineus (pek-tin-ē-us) [L. *pecten*, *pectin-*, comb]. A flat, quadrangular muscle at upper and inner part of thigh arising from sup. ramus of pubis and inserted bet lesser trochanter and linea aspera of the femur, which flexes and adducts the thigh. SEE *Table of Muscles in Appendix*.

pectiniform (pēkt'in-t'form) ["" + *forma*, shape]. Toothed like a comb. SYN: *pectinate*.

pectization (pēk-tī-zā'shūn) [G. *pēktos*, congealed] In colloidal chemistry, the conversion of a substance from sol to gel state.

pectoral (pĕk'tō-rāl) [L. *pectus*, *pector-*, breast]. 1. Concerning the chest. 2. Efficacious in relieving chest conditions, as a cough.

pectoralgia (pĕk'tō-rāl'jī-ā) [“ + G. *algos*, pain]. Neuralgic pain in the chest.

pectoralis (pĕk'tō-rāl'is) [L.]. One of 4 muscles of the breast.

p. major. A large triangular muscle extending to the humerus which draws the arm forward and downward and aids in chest expansion.

p. minor. Muscle beneath p. major, extending to scapula, which lowers the scapula and depresses the shoulder point.

pectoriloquy (pĕk'tō-ril'ō-kwī) [L. *pectus*, *pector-*, breast, + *loqui*, to speak]. The distinct transmission of vocal sounds to the ear through the chest wall in auscultation.*

The words seem to emanate from the spot which is ausculted. Heard over cavities which communicate with a bronchus, areas of consolidation near a large bronchus, over pneumothorax when the opening in the lung is patulous; over some pleural effusions. **See:** chest.

p., aphonic. In auscultation, whispered sound heard over a lung with a cavity or pleural effusion.

p., whispering. Sound over a lung with a cavity of limited extent when patient whispers, in auscultation of the chest.

pectorophony (pĕk'tō-rof'ō-nī) [“ + G. *phōnē*, voice]. Exaggeration of vocal sounds heard on auscultation of the chest. **Syn:** *pectoriloquy*.

pectose (pĕk'tōs) [G. *pektos*, congealed]. A substance found in some fruits and vegetables that yields pectin when it is boiled.

pectunculus (pĕk-tun'kū-lūs) [L. little comb]. One of the tiny longitudinal ridges on the sylvian aqueduct.

pectus (pĕk'tūs) [L.]. The chest; breast; thorax.

p. carinatum. Abnormal prominence of the sternum. **Syn:** *chicken* or *pigeon breast*.

p. excavatum. **Syn:** *funnel breast*. Congenital condition in which sternum is abnormally depressed.

pedal (pĕd'āl, pĕd'āl) [L. *pēs*, *ped-*, foot]. Concerning the foot.

pedarthroceae (pĕ'dār-throc'ē-sē). Carious condition of joints of children.

pedatrophia. **See** *pedatrophy*.

pedatrophy (pĕ-dāt'rō-fī) 1. Marasmus. 2. Any wasting disease in children. 3. *Tabes mesenterica*.

pederast (pĕd'ēr-āst) [G. *pais*, *paid-*, youth, + *erastēs*, lover, from *eran*, to love]. One who indulges in the unnatural, illegal habit of sexual intercourse with men, esp. young boys, through the anus.

pederasty (pĕd'ēr-ās-tī) [“ + *erastēs*, lover, from *eran*, to love]. Illicit coitus by the anus with males, esp. with young boys. **Syn:** *sodomy*.

pedesis (pĕ-dē'sis). The incessant dancing or to and fro movements of particles in a colloidal system or minute particles of any substance in a liquid or gaseous medium resulting from thermal movement of molecules. Also called *Brownian movement*.

pedalgia (pĕd'-ī-āl'jī-ā, pĕ-dī-) [G. *pedion*, foot, + *algos*, pain]. Pain of the foot.

pediatrics (pĕd'-ī-āt'rīk) [G. *pais*, *paid-*, child, + *iatriā*, treatment]. Concerning the treatment of children.

pediatrician (pĕ-dī-ā-trīsh'an) [G. *pais*, *paid-*, child, + *iatrikos*, healing]. A specialist in treatment of children's diseases. **Syn:** *pediatrist*.

pediatrics (pĕ-dī-āt'rīks) [“ + *iatriā*, treatment]. Medical science relating to hygienic care of children and treatment of diseases peculiar to them. **Syn:** *pediatry*.

pediatrist (pĕ'dī-āt'rīst) [“ + *iatrikos*, healing]. Physician who specializes in treatment of children's diseases.

pediatry (pĕd'-ī-āt-rī, pĕ-dī-āt-rī). The treatment of children's diseases. **Syn:** *pediatrics*.

pedicellation (pĕd'-ī-sĕl-ā'shūn) [L. *pediculus*, a little foot; stalk]. Formation and development of a pedicle.

pedicle (pĕd'ī-kl) [L. *pediculus*, a little foot]. 1. The stem which attaches a new growth. 2. The bony process which projects backward from the body of a vertebra connecting with the lamina on each side. Forms the *root* of the vertebral arch.

pedicterus (pĕ-dīk'tē-rūs). Icterus neonatorum or jaundice of the newborn.

pedicular (pĕ-dīk'ū-lar) [L. *pediculus*, a louse]. 1. Infested with or concerning lice. 2. [L. *pediculus*, a little foot]. Concerning a stalk or stem.

pediculate (pĕ-dīk'ū-lāt) [L. *pediculus*, a little foot]. Having a pedicle or stem. **Syn:** *pedunculate*.

pediculation (pĕ-dīk'ū-lā'shūn) [L. *pediculus*, a louse; a little foot]. 1. Infestation with lice. 2. Development of a pedicle.

pedicide (pĕ-dīk'ū-lī-sīd) [L. *pediculus*, a louse, + *caedere*, to kill]. Destroying or that which destroys lice.

Pedunculidae. A family of lice belonging to the order Anoplura. Includes the species parasitic on primates including man.

pediculophobia (pĕ-dīk'ū-lō-fō'bī-ā) [“ + G. *phobos*, fear]. Abnormal dread of lice. **Syn:** *phthirriophobia*.

pediculosis (pĕ-dīk'ū-lō'sis) [“ + G. *-ōsis*, infestation]. Lousiness; infestation with lice. **See:** *Pediculus*.

p. capitis. P. due to infestation with the head louse, *Pediculus humanus humanus*, q.v. Transmission is by personal contact or common use of brushes, combs, or headgear.

Sym: Itching and eczematous dermatitis. In long-standing, neglected cases, scratching may result in marked inflammation and secondary infection by bacteria may occur with formation of pustules, crusts, and suppuration. Hair may become matted and give rise to a disgusting odor.

Treatment DDT used either as a powder or a lotion is the treatment of choice. Other substances such as lindane, pyrethrins, rotenone, benzyl benzoate, or a mixture of equal parts of kerosene and olive oil are effective. A day after treatment hair should be shampooed and then combed with a fine-tooth comb to remove nits. In severe infestations or if hair is matted, hair should be cut short. Treatment should be repeated in ten days to kill newly hatched lice. All possible sources of infection should be examined and treated if necessary. Headgear, combs, brushes should be disinfected by heat or use of disinfection solutions.

p. corporis (p. *vestimentī*). P. due to infestation with the body louse, *Pediculus humanus corporis*, q.v. Transmitted by direct contact or use of infested wearing apparel. Occurs as a

result of crowding or unhygienic conditions.

Sym. Intense itching. In heavy infections, generalized red skin eruption, mild fever, tiredness, irritability and, in severe cases, weakness and debility.

Treatment. Clothing and bedding should be sterilized by dry heat (140° F. for 5 min.), hot water (150° F. for 5 min.) or by immersion in gasoline or 5% DDT solution, or by dry cleaning. Thorough cleansing of the body and scrubbing with soap followed by a pediculicidal lotion applied to hairy parts of the body.

P. pubis. P. due to infestation with the crab louse, *Phthirus pubis*, q.v. Generally confined to hairs of genital region but hair of the axilla, eyebrows, eyelashes, beard, and, in hairy individuals, body surface may be involved. Lice may be acquired through sexual relations wearing contaminated clothing, from toilet seats, or from bed clothes.

Sym. Itching, esp. in genital or crural regions. Small pale-blue spots resulting from the action of salivary secretion on hemoglobin are characteristic.

Treatment. Shave area, cleanse thoroughly with soap and water. Apply DDT powder or lotion. A copper pediculicidal solution (Cuprex) is also effective. All sources of infestation should be checked and lice eliminated.

pediculus (pē-dīk'ū-lūs) [L. stem, louse].

1. A pedicle. 2. Louse. **Syn:** *Pediculus*.

Pediculus. A genus of parasitic insects commonly called lice which infests humans and other primates. They are sucking insects belonging to the family Pediculidae, order Anoplura. They are of medical importance in that they are the transmitters of the causative organisms of epidemic typhus, trench fever, and relapsing fever and may also serve as mechanical transmitters of bubonic plague and possibly other diseases.

P. humanus corporis. The body louse which inhabits the seams of clothing worn next to the body and feeds on regions of the body covered by that clothing. Eggs are attached to fibers of the clothing. The cause of *pediculosis corporis* or *vestimentis*, q.v.

P. humanus humanus. **Syn:** *P. humanus var capitis*. The head louse which lives in the fine hair of the head, although beard and eyebrows may be infested. Its eggs, commonly called "nits," are glued to hairs frequently forming "nests" in the vicinity of the ears. Cause of *pediculosis capitis*, q.v.

P. vestimentis. **Syn:** *P. humanus corporis*.

pedicure (pēd-i-kūr) [L. *pēs, ped-*, foot, + *cura*, care]. 1. Care of the feet. 2. A chiropodist or one who cares for the feet. 3. The care, painting, and polishing of the toenails.

pediluvium (pēd-i-lū'vī-ūm) [L. + *luere*, to wash]. A foot bath.

pedionalgia (pēd-i-ō'nāl'i-ā) [G. *pedion*, foot, + *algos*, pain]. Neuralgic pain in the sole of the foot. **Syn:** *metatarsalgia*.

pediophobia (pē-dī-ō-fō'bī-ā) [G. *pais, paid-*, child, + *phobos*, fear]. Unnatural dread of young children or of dolls.

pedobaromacrometer (pē'dō-bār'ō-māk-rōm'ēt-ēr) [L. + *baros*, weight, + *makros*, long, + *metron*, measure]. Apparatus for determining measurement and weight of infants.

pedobarometer (pē'dō-bār-ōm'ēt-ēr) [L.

+ " + *metron*, measure]. Apparatus for weighing infants.

pedodontia, pedodontics (pē'dō-don'shī-ā, -tiks) [L. + *odontus, odont-*, tooth]. Phase of dentistry dealing with care of children's teeth.

pedodontist (pē'dō-dōn'tist) [L. + *odontus, odont-*, tooth]. Dentist who specializes in care of children's teeth.

pedograph (pē'dō-grāf) [L. *pēs, ped-*, foot, + G. *graphein*, to write]. Imprint of the foot on paper.

pedologist (pē-dōl'ō-jist) [G. *pais, paid-*, child, + *logos*, study]. One who has made a study of children and their development.

pedology (pē-dōl'ō-jī) [L. + *logos*, study]. The study of children and their development.

pedometer (pē-dōm'ēt-ēr) [G. *pais, paid-*, child, + *metron*, measure]. 1. Device for measurement of infants. 2. (pēd-ōm'ēt-ēr) [L. *pēs, ped-*, foot, + G. *metron*, measurement]. Watch which indicates number of steps taken in walking.

pedomorphism (pē'dō-mor'fizm) [G. *pais, paid-*, child, + *morphē*, form, + *ismos*, condition]. Retention of juvenile characteristics in the adult.

pedonology (pē'dō-nōs-ōl-ō-jī) [L. + *nosos*, disease, + *logos*, study]. The study of children's diseases. **Syn:** *pediatrics*.

pedophilia (pē'dō-fīl-i-ā) [L. + *philein*, to love]. 1. Fondness for children.

2. Psv. Unnatural desire for sexual relations with children.

peduncle (pē-dung'kl) [L. *pedunculus*, a little foot]. 1. A stem or stalk. **Syn:** pedicle. 2. A brachium of the brain; a band connecting parts of the brain. **Syn:** *pedunculus*. **See:** *cimbria, crus, sessile*.

P., cerebellar, inferior. **Syn:** *restiform body*. A band of fibers running along lateral border of 4th ventricle which connects spinal cord and medulla with the cerebellum.

P., cerebellar, middle. **Syn:** *brachium pontis*. A band of fibers connecting cerebellum with basilar portion of the pons.

P., cerebellar, superior. **Syn:** *brachium conjunctivum*. A band of fibers connecting cerebellum with midbrain.

P., cerebral. **Syn:** *crus cerebri*. A pair of white bundles from upper part of the pons to the cerebrum. They constitute the ventral portion of the midbrain.

P., mammillary. A band of fibers extending from tegmentum of midbrain to mammillary body.

P. of flocculus. A band of fibers connecting flocculus of cerebellum with vermis.

P. of sup. olive. A slender band of fibers extending from sup. olivary nucleus in medulla to nucleus of abducens nerve.

P., pineal. A band from either side of the pineal gland to the ant. pillars of the fornix.

P., thalamic. One of four groups of fibers known as *thalamic radiations*, q.v., which connect thalamus with cerebral cortex.

peduncular (pē-dun'kū-lar) [L. *pedunculus*, a little foot]. Concerning a peduncle.

pedunculate, pedunculated (pē-dūn'kū-lāt, -ed) [L. *pedunculus*, a little foot]. Possessing a stalk or peduncle. **Syn:** *pediculate*.

peeling. Shedding of surface layer of skin; desquamation.

peliotherapy (pī-nō-thēr'ā-pī) [G. *peina*,

hunger, + *therapeia*, treatment]. Hunger cure for disease. SYN *pinotherapy*.
pelage (pē-lahj') [Fr.]. The hair of the body collectively.

Pel-Ebstein's fever. Cyclic fever occurring in Hodgkin's disease in which periods of fever lasting from 3 to 10 days are separated by an afebrile period of about the same length.

pelidisi (pē-lid-ē-sē) [coined term]. Pirquet's unit index for the nutritive development of children

It is obtained by division of cube root of 10 times the weight (grams) by sitting height (centimeters). Quotient of less than 95 indicates undernutrition

pelloma (pē-lō-mā) [G. *pelhōma*, a livid spot]. A livid cutaneous patch. SYN: *eczymosis*.

pelliosis (pē-lī-ō-sis) [G. *pelhōsis*, a livid spot]. A disease marked by purple patches on the mucous membranes and skin. SYN *purpura*.

p. rheumatica. An acute affection characterized by inflammation of the joints

A form of rheumatism. SYN: Sore throat, urticaria, moderate fever, purpuric spots over extremities or trunk. Tenderness, swelling, and pain in joints. SYN: *purpura rheumatica*, *Schonlein's disease*.

pellagra (pē-lā-grā, pē-lāgrā) (L *pellis*, skin, + G *agra*, seizure). A deficiency disease or syndrome endemic in southern U S and other parts of the world, characterized by cutaneous, gastrointestinal, mucosal, neurologic, and mental symptoms

Etiol. Due to deficiency in diet or failure of body to absorb niacin (nicotinic acid) or its amide (niacinamide, nicotinamide), and usually associated with a deficiency of proteins containing tryptophane, such as occurs in a high maize diet. It may occur secondary to gastrointestinal diseases and alcoholism. Its incidence is highest in the spring, lowest in winter, paralleling seasonal variation in intensity of sunlight

SYM In advanced cases, scarlet stomatitis and glossitis, diarrhea, dermatitis, and mental symptoms. Cutaneous lesions include erythema followed by vesiculation, crusting and desquamation. Skin may become dry, scaly, and atrophic. The mucous membranes of mouth, esophagus, and vagina may undergo atrophy, ulcers and cysts may develop. Anemia is common. Nausea, vomiting and diarrhea occur, the latter being characteristic. Involvement of the central nervous system is first manifested by neurasthenia, followed by organic psychosis characterized by disorientation, impairment of memory and confusion. Later delirium and clouding of consciousness may occur.

TREATMENT A diet adequate in all vitamins, minerals, and amino acids supplemented by 500 to 1000 mg of niacinamide given orally three times daily.

p. sine pellagra. Pellagra in which the characteristic erythematous rash is absent.

pellagrazein (pē-lā-grā-zē-in). Poisonous substance in cornmeal that has decomposed. SYN *pellagracetin*.

pellagrin (pē-lā-grin, -lāgrin) [L *pellis*, skin, + G *agra*, seizure]. A person afflicted with pellagra.

pellagrous (pē-lā-grūs, -lāgrūs) [+ G *agra*, seizure]. Concerning or affected with pellagra.

pellet (pēl'ēt) [L. *pila*, a ball]. A tiny pill or small ball of medicine or food.

pelletierine tannate (pēl'ē-tēr'en). USP. A mixture of the tannates of alkaloids obtained from the pomegranate.

ACTION AND USES: Anthelmintic and teniafuge.

Dosage: 4 gr. (0.25 Gm) in capsule, after adm. of a mild purgative, previous fasting, followed by a purgative.

pellicle (pēl'i-kl) [*pellicula*, a little skin] SYN: *scum*. 1 A thin piece of cuticle or skin. 2 Film or surface on a liquid. 3 A thin nonliving sheath forming the surface layer of certain one-celled animals

peliofine (pēl'ō-tēn). A white, crystalline alkaloid used as a hypnotic.

pellucid (pē-lū'sid) [L *pellucidus*, shining through]. Translucent, transparent. **p. zone**. Clear layer covering the oocyte. SYN: *zona pellucida*

pelvic (pēl'vik) [L *pelvis*, basin] Pertaining to a pelvis, usually the bony pelvis

p. girdle. Arch made by the innominate bones.

p. inlet. Upper pelvic entrance, the brim of the pelvis forming its boundary

p. outlet. Lower pelvic opening

pelvolithotomy (pēl'vī-lī-thōt'ō-mī) [+ G *lithos*, stone, + *tome*, a cutting] Removal of a stone from the renal pelvis. SYN: *nephrolithotomy*, *pelmolithotomy*, *pyelolithotomy*.

pelvimeter (pēl-vim'ēt-ēr) [+ G *metron*, measure]. Device for measuring the pelvis.

pelvimetry (pēl-vim'ēt-rī) [+ G *metron*, measure]. Measurement of the pelvic dimensions or proportions. SEE *pelvis*, *illus*, pp P-30 and P-31

pelvolithotomy (pēl'vī-lī-thōt'ō-mī) [+ G *lithos*, stone, + *tome*, a cutting]. Incision of the renal pelvis to remove a calculus.

pelvioplasty (pēl'vī-ō-plās'tī) [+ G. *plassein*, to form] Enlargement of the outlet of the pelvis. SYN: *hebotomy*, *symphyseotomy*.

pelviscopy (pēl'vī-ōs'kō-pī) [L. *pelvis*, basin, + G *skopein*, to examine] Inspection of the pelvis

pelviotomy (pēl-vī-ōt'ō-mī) [+ G. *tome*, a cutting]. 1. Incision of pelvic bones, esp. in case of difficult labor. 2. Incision into the renal pelvis

pelvipерitonitis (pēl'vī-pēr-i-tō-nī'tis) [L. *pelvis*, basin, + G *peritonaea*, peritoneum, + *-itis*, inflammation] Inflammation of the peritoneum lining the pelvic cavity

pelvis (pēl'vis) (pl *pelvies*) [L. basin] 1 Any basin-shaped structure or cavity. 2 The bony structure formed by the innominate bones, the sacrum, the coccyx, and the ligaments uniting them, which serves as a support for the vertebral column and for articulation with the lower limbs. 3. The cavity included within these bones

It is separated into a *false*, or superior pelvis, and a *true*, or inferior one, by the iliopectineal line, and the upper margin of the symphysis pubis, the circumference of this area constituting the *inlet* of the true pelvis. Lower border of true pelvis is formed by the coccyx, the protuberances of the ischia, the ascending rami of the ischia, the descending rami of the ossa pubis and the sacrosacral ligaments, and is termed the *outlet*.

The floor of the pelvis is formed by

the perineal fascia, levator ani and the coccygeus.

DIAMETERS: All diameters are larger in the female than in the male.

EXTERNAL: *Interspino:* Distance bet. outer edges of the ant. sup. iliac spines, diameter normally measuring 26 cm (10 in.). *Intercristal* Distance bet. outer edges of the most prominent portion of the iliac crests, diameter normally being 28 cm. (11 in.). *Intertrochanteric.* Distance bet. most prominent points of the femoral trochanters, 32 cm. (12½

in.). *Oblique* (right and left): Distance from 1 post. sup. iliac spine to the opposite ant. sup. iliac spine, 22 cm. (8½ in.), right being slightly greater than the left. *External conjugate* Distance from the undersurface of the spinous process of last lumbar vertebra to the upper margin of ant. surface of the symphysis pubis, 20 cm. (7¾ in.). **SYN:** *Baudelocque's diameter.*

INTERNAL: *True conjugate* Anteroposterior diameter of the pelvic inlet, 11 cm. (4¼ in.), the most important single

Measuring the interspinous diameter of the pelvis.

Measuring the intercristal diameter.
EXTERNAL PELVIMETRY.

diameter of the pelvis. *Diagonal conjugate*. Distance bet. the promontory of the sacrum to undersurface of symphysis pubis, 13 cm. (5 in.), 2 cm. being deducted for the height and inclination of symphysis to obtain diameter of conjugate. *Transverse*: Distance bet. ischial tuberosities, 11 cm. (4½ in.). *Anteroposterior* (of outlet). Distance bet. the lower border of symphysis and tip of sacrum, 11 cm. (4¼ in.). *Anterior sagittal*: Distance from undersurface of symphysis to center of line bet. the ischial

tuberosities, 7 cm. (2¾ in.). *Posterior sagittal*. Distance from the center of line bet ischial tuberosities to the tip of the sacrum, 10 cm. (4 in.).

RS *acanthopelvis*, *brim*, *Claudius' fossa*, *diameter*, *endopelvic*, *pelvic cavity*, *pelvimetry*, *pelvotomy*.

p. aequabiliter justo major. One symmetrically above standard in all its dimensions

p. aequabiliter justo minor. One with all equally below standard.

Measuring the bitrochanteric diameter.

Measuring the external conjugate diameter.

EXTERNAL PELVIMETRY (Continued)

p., android. A female pelvis which resembles that of a male.

p., anthropoid. A female resembling that of the great apes in being long and narrow.

p., beaked. One with the pelvic bones laterally compressed and pushed forward so that outlet is narrow and long.

p., brim of. SEE: inlet of pelvis.

p., caoutchouc. Same as India rubber pelvis.

p., Capuron's cardinal points of. Four points within the pelvic inlet, the 2 sacroiliac articulations and the 2 iliopectineal eminences.

p., contracted. One in which one or more of the principal diameters is reduced to a degree that parturition is impeded.

p., cordate. One possessing a heart-shaped inlet.

p., coxalgic. One deformed subsequent to hip joint disease.

p., dwarf. SYN: *p. nana*. An aequibilter justo minor pelvis. One reduced in all its diameters and resembling an infantile pelvis. Bones usually united by cartilage.

p., elastic. An osteomalacic pelvis.

p., false. Portion above the iliopectineal line.

p., fissa. A split pelvis. *q v*

p., fissured. A rachitic pelvis with ilia pushed forward so as to be almost parallel.

p., flat. One in which anteroposterior diameters are shortened.

p., funnel-shaped. One in which the outlet is considerably contracted.

SECTION OF FEMALE PELVIS.

1. Uterus. 2. Bladder. 3. Urethra.
4. Vagina. 5. Rectum.

p., giant. SEE: *p. aequibilter justo major*.

p., gynecoid. One in which inlet is oval instead of heart-shaped.

p., halisteretic. A deformed *p* resulting from softening of bones.

p., Hauder's. Same as *pelvis spinosa*.

p., inclination of, obliquity of. The angle between the axis of the pelvis and that of the body.

p., India rubber. A pelvis, the bones of which may be stretched out of normal position in osteomalacia. SYN: *caoutchouc p.*

p., infantile. *P.* of an adult which retains its infantile characters.

p., Killan's. SEE: *osteomalacic pelvis*.

p., kyphotic. Deformed *p.* characterized by increase of the conjugate diameter at the brim with reduction of the transverse diameter at the outlet.

p., lordotic. Deformed *p* in which the spinal column has an ant curvature in the lumbar region.

p., major. The false pelvis. *q v*

p., malacosteon. SEE: *rachitic p.*

p., masculine. SYN: *android pelvis*. *P.* of a female which resembles that of a male, esp in being narrower, more conical, with heavy bones, and heart-shaped inlet.

p., Naegele. An obliquely contracted pelvis in which conjugate diameter assumes an oblique direction.

p., nana. A dwarf pelvis. *q v*

p., osteomalacic. *P.* distorted as a consequence of osteomalacia.

p., Prague. SEE: *spondylolisthetic p.*

p., pseudoosteomalacic. A ricketty pelvis similar to that of a person affected with osteomalacia.

p., rachitic. One deformed from rickets.

p., reduced. SEE: *aequibilter justo minor*.

p., renal. SYN: *pelvis renalis*. The expanded proximal end of the ureter. It lies within renal sinus of kidney and receives the urine through the major calyces.

p., reniform. Pelvis shaped like a kidney.

p., Robert's. One with an embryonic sacrum and narrowing of the transverse and oblique diameters.

p., Rokitsansky's. SEE: *spondylolisthetic p.*

p., rostrate. SEE: *beaked p.*

p., rotunda. A tympanic depression in the inner wall, at the bottom of which is the fenestra rotunda.

p., round. One with a circular inlet.

p., rubber. An osteomalacic *p*

p., scoliotic. Deformed *p.* due to spinal curvature.

p., simple flat. One whose deformity is a shortened anteroposterior diameter.

p., spinosa. A rachitic pelvis with a pointed crest of the pubis.

p., split. One with a congenital division at the symphysis pubis.

p., spondylolisthetic. A pelvis in which the last lumbar vertebra is dislocated in front of the sacrum causing occlusion of the brim.

p., triangular. One whose inlet is triangular.

p., triradate. SEE: *p., beaked*

p., true. The part of the *p.* below the iliopectineal line.

pelvitherm (pél'vi-thurm) [*L. pelvis*, basin, + *G. thermê*, heat]. Device for heating the pelvis.

pelvoscopy (pél-vôs'kô-pl) [" + *G. skopein* to examine]. Inspection of a pelvis.

pelycalgia (pél-i-kâl'ji-â) [*G. pelyz*, pelvis, + *algos*, pain]. Pain in the pelvic area.

pelycogram (pél'i-kô-grâm) [" + *gramma*, a writing]. An x-ray of the pelvis.

pelycography (pél-i-kôg'râ-fi) [" + *graphein*, to write]. Treatise describing the pelvis.

pemphigoid (pém'fi-goyd) [*G. pemphix*, blister, + *eidós*, like]. Similar to pemphigus.

pemphigus (pém'fi-güs) [*G. pemphix*, a blister]. An acute or chronic disease of adults characterized by occurrence of successive crops of bullae appearing suddenly on apparently normal skin, and which disappear leaving pigmented spots.

It may be attended by itching and burning and constitutional disturbance.

ETIOLOGY. Unknown.

TREATMENT: Care of general health. In severe and extensive cases patient to be kept on air or water mattress; continuous bath therapy, tonics, arsenic, arsphenamine, carron oil bath, ultraviolet irradiation, corticosteroid hormones. In *p. foliaceus* and *p. vegetans*, autogenous serum. Locally, large quantities of powder, soothing lotions.

p. acutus. Butcher's p. Constitutional symptoms severe and outcome often fatal. Bullae 1-10 cm. in diameter often containing blood and serum. If coalescing, denuded areas are formed.

p. benignus. A mild form of *p.*

p. chronicus, *p. vulgaris*. Uncomplicated form in which replacement of epidermis follows. Lesions round or oval, thin walled, tense, translucent, contents bilateral in distribution, developing suddenly, without scarring resulting.

p. circinatus. P. with circular eruptions [the groin and axilla].

p. contagiosa. An infective type of

p. disseminatus. P. marked by widely separated bullae.

p. foliaceus. Rare type. Large flaccid bullae developing rapidly, rupture soon, leaving moist, raw surface covered with seropurulent fluid. Bullous contents are purulent from beginning with sickening odor. Chronic course.

p. neonatorum. P. soon after birth, generally due to septic infection but sometimes leucic. [Intense itching.]

p. pruriginosus. P. with severe, con-

p. syphiliticus. A form due to syphilis.

p. vegetans. Resembles *p. vulgaris* in beginning, but instead of drying up, the lesions persist, resulting in papillary excrescences with no tendency to heal, secreting foul-smelling seropurulent fluid and sodden decomposing masses of epidermis.

penalgesia. A reduction in number of touch and pain spots in cases of trigeminal neurakia.

penicillin (pén-'á-tín). A derivative of penicillin more powerful than the latter, affecting germs nonresistant to penicillin, and in dilutions of from one to ten to four hundred million parts. Also called *corylophiline*, *penicillin-B*.

pendular (pén-'dū-lèr) [L. *pendulus*, from *pendere*, to hang]. Hanging so as to swing by an attached part, oscillating like a pendulum.

pendulous (pén-'dū-lūs) [L. *pendulus*, from *pendere*, to hang]. Swinging freely like a pendulum; hanging.

penetrate (pén-'e-trät) [L. *penetrāre*, to go within]. To enter into the interior of.

penetrating (pén-'e-trät-ing) [L. *penetrāre*, to go within]. Entering beyond the exterior. [lens.]

p. power. Penetrating capacity of a

p. wound. Wound affecting the interior of an organ or cavity.

penetration (pén-'e-träshün) [L. *penetrāre*, to go within]. 1. Process of entering within a part. 2. Capacity to enter within a part. 3. Power of a lens to give a clear focus at varying depths.

penetrometer (pén-'e-tröm-'ët-ër) [" + G. *metron*, measure]. FT: An instrument that compares roughly the comparative absorption of roentgen rays in various metals, esp. silver, lead and aluminum; hence, it gives a rough estimation of hardness of roentgen rays.

Best known are those of Benoist, Walter, and Wehnelt.

penicillin (pén-'is-'lín, pen-'is-'lín). One of a group of antibiotics biosynthesized by several species of molds, esp. *Penicillium notatum* and *P. chrysogenum*. They are bacteriostatic inhibiting the growth of most Gram-positive bacteria and certain Gram-negative forms. They are also effective against certain molds, spirochetes, and rickettsias. There are many different penicillins and their effectiveness varies for different organisms. The penicillin generally used is a salt of benzyl penicillin (penicillin-G) the calcium, potassium, sodium, and procaine salts being official.

penicilliosis (pén-'is-'il-'i-osis) [L. *penicillium*, pencil]. Infection with the fungi of the genus *Penicillium*.

Penicillium (pén-'is-'il-'i-um) [L. *penicillum*, pencil, brush]. A genus of molds belonging to the Ascomycetes (*Sac fungi*). They form the blue molds which grow on fruits, bread, cheese, etc. A number of species (*P. chrysogenum*, *P. notatum* and others) are the source of penicillin. Occasionally in man they produce infections of the external ear, skin, or respiratory passageways. They are common allergens.

penicillus. A group of the branches of arteries in the spleen which are arranged like the bristles of a brush. Each consists of successive portions, the *pulp arteries*, *sheathed arteries*, and *terminal arteries*.

penile (pé'níl-, -níl) [L. *penis*, penis]. Pert. to the penis.

p. reflex. 1. Sudden downward movement of penis when the prepuce or gland of a completely relaxed penis is pulled upward. 2. Contraction of bulbocavernous muscle on percussing dorsum of penis. 3. Contraction of bulbocavernous muscle resulting from compression of glans penis.

penis (pé'nís) (pl *penes*) [L.]. The male organ of copulation.

It is a cylindrical, pendulous organ suspended from the front and sides of the pubic arch. It is composed of 3 columns of cavernous tissue, the whole being covered with skin, the 2 lateral columns being known as the *corpora cavernosa penis*. The 3rd or median column contains the urethra, known as the *corpus cavernosum urethrae*.

The head of the penis is known as the *glans penis* in which the urethral orifice is situated, and it is covered with a movable hood known as the *foreskin* or *prepuce*,* under which is secreted a lubricating substance called *smegma*.* Hyperemia of the genitals fills the *corpora cavernosa* with blood as the result of libido, thus causing an *erection*.* The hyperemia is lowered following ejaculation of the seminal fluid and the organ returns to its normal condition.

Normally the penis is about 4 or more inches long when distended.

p. captivus. One which is held within the vagina during copulation as a result of vaginismus and contraction of the perineal muscles.

p. cerebri. The pineal gland.

p., clubbed. A condition when the penis is curved during erection.

p. lunatus. Painful curved erection in gonorrhea. SYN: *chordee*, q.v.

p. mullebris. Clitoris,* the erectile organ of the female.

p. palmatus. One enclosed by the scrotum.

TRANSVERSE SECTION OF PENIS.

A. Lumen of urethra. B. Mucosa urethrae. C. Corpus cavernosum urethrae. D. Corpus cavernosum penis. E. Arteria profunda penis. F. Arteria dorsalis penis. G. Vena dorsalis penis. H. Nervus dorsalis penis with pacciniani corpuscles. I. Musculus ischioavernosus. J. Musculus bulbocavernosus.

p. webbed. Same as *p. palmatus*.

penis, words pert. to: anaspadias, apellous, "balan-" words, cavernitis, chordee, circumcision, condyloma, cord, corpora cavernosa, Cowper's gland, erectile, erection, erector, foreskin, frenulum, hypospadias, mentulagra, mentulate, mentulomama, nervi erigentes, peotomy, "phall-" words, prepuce, prostate, scrotum, seminal vesicles, testes, urethra, vas deferens.

penischisis (pen-'is'kís-'is). Epispadias, hypospadias, paraspadias, or any fissured condition of the penis.

penitis (pē-ní'tis) [L. *penis*, penis, + G. *itis*, inflammation]. Inflammation of the penis

peniniform (pēn-'i-form) [L. *penna*, feather, + *forma*, shape]. Feather-shaped.

pennyroyal (pēn-'rōi-āl). Name for various plants, esp. *Hedeoma* and *Mentha*, which yield commercial oil used as emmenagogue, carminative, and stimulant.

pennyweight (pēn-'wät). Troy weight containing 24 gr. or 1/20 of an ounce.

pension neurosis (pēn-'shan nū-rō-sis). A condition which develops subsequent to an injury in the belief that compensation can be obtained by being ill. **SX:** neurosis, compensation.

penta-, pent- [G.] Combining form meaning five.

pentad (pēn'tād) [G. *pente*, five]. 1. A radical or element with a valence of 5. 2. Group of 5.

pental (pēn'tāl) [G. *pente*, five]. C_5H_{10} . Trimethylethylene, a hydrocarbon, used as an anesthetic in minor surgery.

pentamethylenediamine (pēn-'tā-mēth-'il-ēn-dī-ām-ēn) [G. *pente*, five]. A pathogenic ptomaine occurring in tissue decomposition. **SYN:** *cadaverine*.

pentane (pēn'tān) [G. *pente*, five]. C_5H_{12} . One of the hydrocarbons of the methane series used as an anesthetic.

pentavalent (pēn-'tā-vā-lēnt, -tāv-ā-lēnt) [G. *pente*, five, + L. *valens*, having power]. Having a valence of 5. **SYN:** *quintivalent*.

pentene (pēn'tēn) [G. *pente*, five]. A

liquid hydrocarbon used as an anesthetic.

pentnucleotide (pēnt-nū'klē-ō-tid). A solution prepared from yeast nucleic acid. **USES:** Recommended in certain infectious conditions, accompanied by a low white blood cell count.

Dosage: From 10 to 20 cc. intramuscularly.

pentobarbital sodium (pēn'tō-bar'bi-tāl sō'di-ūm). A barbituric acid derivative used as an analgesic, sedative, and hypnotic, prior to anesthesia.

Used in labor with or without scopolamine. **SYN:** *nembutal*.

pentosazon (pēn'tō-sa'zōn). Abnormal substance in urine which is incapable of fermentation.

pentose (pēn'tōs) [G. *pente*, five]. $C_5H_{10}O_5$. A simple sugar with 5 atoms of oxygen in the molecule.

pentosemia (pēn'tō-sē'mi-ā) [*pentose* + G. *aima*, blood]. Pentose in the blood.

pentoside (pēn'tō-sid). Pentose combined with some other substance.

pentosuria (pēn'tō-sū'ri-ā) [*pentose* + G. *ouron*, urine]. A condition in which pentose is found in the urine.

pentothal sodium (pēn'tō-thāl sō'di-ūm). Commercial barbituric acid derivative used as an anesthetic and hypnotic.

CONTRAINDICATIONS: In arteriosclerosis.

peonin (pē'ō-nin). A dye used as a hydrogen ion concentration test.

peotillomania (pē'ō-til-ō-mā'nī-ā) [G. *peos*, penis, + *tillēn*, to pull, + *mania*, madness]. A tic resulting in constant pulling at the penis. **SYN:** *pseudomasturbation*.

peotomy (pē-ō'tō-mī) [" + *tomē*, incision]. Amputation of the penis.

pepo (pē'pō) [G. *pepōn*, ripe]. **USP.** Pumpkin seed which is used as an agent to remove tapeworms.

Dosage 1 oz (30 cc.).

pepper (pē'pēr) [G. *peperi*, pepper]. A spice which is used as a condiment, stimulant, carminative, counterirritant and antiperiodic.

ASST. CONST. (black and white, dry): Ca 0.440-0.425, Mg 0.156-0.113, K 1.140-none in white pepper, Na 0.131-none in white pepper, P 0.188-0.233, Cl 0.312-0.029, no sulfur or iron in either.

(Green, fresh): **AV. SERVING:** 25 Gm. **PRO.** 0.2, **FAT** trace, **CARBO.** 1.00. **VITAMINS:** A+++, B+++, C+++, Ca 0.006, Mg 0.010, K 0.139, P 0.026, Cl 0.013, S 0.014.

peppermint (pē'pēr-mīnt). **USP.** The top and leaves of the plant *Mentha piperita* from which oil of peppermint is derived.

USES: Aromatic stimulant, carminative, and flavoring agent.

pepsic (pēp'sik) [G. *pepten*, to digest]. 1. Concerning digestion. 2. Concerning pepsin. **SYN:** *peptic*.

pepsin (pēp'sin) [G. *pepsis*, digestion]. The chief enzyme of gastric juice which converts proteins into proteoses and peptones. It is formed by the chief cells of gastric glands and produces its maximum activity at a pH of 1.5 to 2. It is obtainable in granular form and in the presence of HCl, will digest proteins *in vitro*.

USP: An enzyme obtained from the glandular layer of the fresh stomach of the hog. Assayed to digest 3000 times its weight of freshly coagulated egg albumen.

ACTION AND USES: Acts only in acid medium. Useful to aid digestion of protein food in the stomach, sometimes

combined with hydrochloric acid in cases of acute dyspepsia.

DOSAGE: 8 gr. (0.5 Gm.).

pepsinogen (pép-sin-ô-jên) [G. *pepsis*, digestion, + *gennan*, to produce] The zymogen or antecedent of pepsin existing in the form of granules in the chief cells of gastric glands

peptic (pép'tik) [G. *peptein*, to digest]. 1. Concerning digestion. 2. Concerning pepsin.

p. ulcer. An ulcer occurring in lower end of esophagus, in stomach usually along lesser curvature, in duodenum, or on jejunal side of a gastrojejunostomy

SYM Pain is the most characteristic symptom, tending to be of uniform quality and usually described as "gnawing." It is localized in the epigastrium and exhibits a rhythmicity and periodicity usually appearing one to three hours after a meal. It is absent before breakfast but may occur during the night. It is relieved by foods and alkalis; it is aggravated by alcohol and condiments. Often periods of remission occur in which pain is absent.

Other symptoms include dyspepsia, heartburn, acid eructations, nausea, vomiting, and anorexia. Diarrhea may occur with loss of weight. In some cases, physical signs may be absent, the first indication of the condition being hemorrhage or perforation. Gastric juice always exhibits hyperacidity.

Proc Guardedly favorable. Hemorrhage or perforation may occur without warning and relapses from new ulcers not uncommon.

NP Alkalinization. Banthine or pro-banthine Bed rest, at first, in calm, quiet atmosphere. Daily bath and oral hygiene. Watch for complications of hemorrhage and perforation. Examine vomitus and stools for blood. In hemorrhage, ice cap over epigastric area, no food or fluid by mouth, no movement. Report pain immediately as it is first sign of perforation.

TREATMENT Absolute rest in bed, alkaline Sippy treatment. Mucin therapy, metaphen and iron therapy in presence of hemorrhage. Lavage contraindicated. Stomach cleansed by sipping hot water before breakfast. Hemorrhage requires absolute rest, ice bag to stomach, pellets of ice by mouth. Remedies as indicated.

Diet Frequent feedings, bland, smooth, liquid or semi-liquid foods; high protein feedings to keep the acid in combination; high fat to inhibit acid secretion and increase energy value of food; alkaline powders at intervals bet. feedings to combine with HCl to keep stomach neutral. In acute ulcer, Sippy diet recommended, *q.v.* With normal progress, after 1 week at the most, soft, bland foods, purée of vegetable and fruit; custards, and toast may be added. Number of feedings is decreased if increased amount is given at each feeding and intervals of feeding extended to 6 small meals a day, each to consist of from 10 to 12 oz. Diet should be low in cellulose. **SYN:** gastric ulcer.

peptidase. An enzyme which converts peptides to aminoacids

peptide (pép'tid) [G. *peptein*, to digest]. Compound formed by hydrolytic cleavage of peptones and which contains 2 or more amino acids.

A class of substances prepared by synthesis from amino acids and intermediate in molecular weight and chemical properties bet. the amino acids,

which may be made artificially, and the proteins, which may not.

RS: *dipeptide, polypeptide, tripeptide, peptidolytic* (pép'tid-ô-lit'ik) [" + *lysis*, dissolution]. Causing the splitting up or digestion of peptides.

peptinotoxin (pép-tin-ô-tôk'sin) [" + *toxi-con*, poison]. Poisonous ptomaine found in the body as a result of disordered or defective digestion

peptization (pép-ti-zâ'shün) [G. *peptein*, to digest]. In the chemistry of colloids, the process of making a colloidal solution more stable, conversion of a gel to a sol.

peptogenic, peptogenous (pép-tô-jên'ik, -tôjên-üs) [" + *gennan*, to produce]. 1. Producing peptones and pepsin 2. Promoting digestion

peptoid (pép'toyd) [" + *eidos*, resemblance]. A product of protein digestion which does not give the biuret reaction

peptolysis (pép-tôl'i-sis) [G. *peptein*, to digest, + *lysis*, dissolution]. The splitting up or hydrolysis of peptones

peptolytic (pép-tô-lit'ik) [" + *lysis*, dissolution]. Pert. to the splitting up of peptone

peptone (pép'ton) [G. *pepton*, digesting]. A secondary protein formed by the action of proteolytic enzymes, acids, or alkalis on certain proteins

They are nitrogenous compounds soluble in water and are not coagulated by boiling

peptonemia (pép-tô-né'mi-ä) [" + *ama*, blood]. Peptones in the blood.

peptonization (pép'tô-ni-zâ'shün) [G. *pepton*, digesting]. Process of changing protein substance into peptones by action of proteolytic enzymes

peptonize. To convert into peptones; to digest with pepsin

peptonized milk (pép'tô-nizd) [G. *pepton*, digesting]. This is milk that has been predigested by the addition of pancreatic extract and sodium bicarbonate, before feeding, to prevent formation of tough curds in stomach

To make peptonized milk, take 250 cc. of milk and add contents of a Fairchild's peptonizing tube. Stir the mixture thoroughly and set aside in a warm place for 20 minutes. The mixture should not be boiled, but should be set in a pan of very hot water to heat when ready to use.

1. Another formula is the following: Dissolve 1 Fairchild peptonizing powder in 4 oz. of cold water to which 12 oz. of fresh milk should be added. This should be placed in a water bath at 105° F. for 15 minutes and then placed on ice for use

2. Another combination is peptonized milk. 3 ounces, with 1 egg stirred into it. The egg should be cut with a spoon or scissors, but never beaten. It may be added with salt to the milk.

pep'tonolysis. **SYN.** *peptolysis*. The breakdown of peptones into simpler products, (peptides, or amino acids).

peptonuria (pép-tô-nü'ri-ä) [" + *ouron*, urine]. Excretion of peptones in the urine.

per- [L.] Prefix meaning through, by, by means of. In chemistry the highest valence of an element

peracidity (pür-äs-id'ti-ti) [L. *per*, throughout, + *acidus*, sour]. Abnormal acidity.

peracute (pür-äk-üt') [" + *acutus*, keen]. Very acute or violent.

per anum (pür ä'nüm) [L.]. Through or by way of the anus.

peratodynia. Heartburn; pain in region of cardia of stomach.

percaline (pŭr'kă-lîn). A quinoline derivative used as a local anesthetic, which is powerful and toxic; nupercaine

per cent. By the hundred

p. c. of a solution. Term which designates the number of grams of solute per 100 cc. of solvent or the number of cc. of a liquid dissolved in 100 cc. of another.

perception (pŭr-sĕp'shŭn) [L. *perceptiō*, a seeing through]. 1. Process of being aware of objects, consciousness. 2. The process of receiving sensory impressions. 3. The elaboration of a sensory impression, the ideational association modifying, defining, and usually completing the primary impression or stimulus.

Vague or inadequate association occurs in confused and depressed states.

p., depth. The ability to recognize that an object has depth, as well as height and width.

p., extrasensory. Perception not through the recognized senses. Also called *paranormal perception*.

p., stereognostic. Recognition of objects by touch

perceptivity (pŭr-sĕp-tiv'it-i) [L. *perceptus*, from *percipere*, to see through]. Power to receive sense impressions.

perclulsion. Inability to perform a movement

percolate (pŭr'kô-lăt) [L. *percolāre*, to strain through]. 1. To seep through a powdered substance. 2. Any fluid that has been filtered or percolated. 3. To strain a fluid through powdered substances in order to impregnate it with soluble principles of such substances.

percolation (pŭr'kô-lăt'shŭn) [L. *percolāre*, to strain through]. 1. Filtration.

2. Process of exhausting virtues of a drug of powdered composition by filtering a liquid solvent through it.

percolator (pŭr'kô-lăt'tŭr) [L. *percolāre*, to strain through]. Apparatus used for extraction of a drug with a liquid solvent.

per contiguum (pŭr kŏn-tig'ŭ-ŭm) [L.]. Touching, as in the spread of an inflammation from 1 part to a contiguous structure.

per continuum (pŭr kŏn-tin'ŭ-ŭm) [L.]. Continuous, as the spread of an inflammation from part to part.

percuss (pŭr-kŭs') [L. *percussus*, from *percutere*, to strike through]. To tap parts of the body to aid diagnosis by sound emitted.

percussion (pŭr-kŭsh'ŭn) [L. *percussio*, a striking through]. Tapping the body lightly but sharply to determine position, size and consistency of an underlying structure, the presence of fluid or pus in a cavity and resonance, pitch of the sound emitted, by vibration elicited, or by resistance encountered.

Immediate percussion is performed by striking the surface directly with the fingers. Not often employed except over the clavicles where bones themselves act as pleximeters.

Mediate p. is performed by using fingers of one hand as a plexor, and those of the opposite hand as a pleximeter, or using a piece of glass, ivory, or hard rubber as a pleximeter and small hammer as plexor. Use of fingers preferable, as only in this way can resistance be determined.

RS: abdomen, bladder, boxnote, chest, heart, intestines, kidney, liver, ovary, palpation, spleen, uterus.

p., auscultatory. Percussion combined with auscultation.

p., direct. Immediate percussion

p., finger. Striking of the finger resting upon the body with a finger of the other hand

p., hammer. **Syn:** *plexor*. A hammer with a rubber head used for percussion

p., indirect. Mediate percussion

percussor (pŭr-kŭs'ŭr) [L. *striker*]. Device used for diagnosis by percussion, consisting of hammer with rubber or metal head. **See** *emballometer*.

percutaneous (pŭr'kŭ-tă-nĕ-us) [L. *per*, through, + *cutis*, skin]. Effected through the skin, as in incision and friction.

perelrine (pĕ-ră'rĕn). An alkaloid obtained from pereira bark which is used as a tonic, antiperiodic, and antipyretic.

perflation (pŭr-flăt'shŭn) [L. *perflāre*, to blow through]. The process of blowing air into a cavity to expand its walls or to force out secretions or other matter

perforans (pŭr'fô-răns) [L. *boring through*]. Perforating or penetrating, as a nerve or muscle

perforate (pŭr'fô-răt) [L. *perforāre*, to pierce through]. 1. To puncture or to make holes. 2. Pierced with holes.

perforation (pŭr'fô-răt'shŭn) [L. *perforāre*, to pierce through]. 1. The act or process of making a hole, such as that caused by ulceration. 2. Hole made through substance or part.

p. of stomach or intestine. **Syn:** Abdominal crisis due to escape of contents of the perforated viscous into the peritoneal cavity. Peritonitis certain unless operated upon in time. Onset is accompanied by acute pain over perforated area spreading all over the abdomen which is rigid. Face is anxious with beads of perspiration on it. Nausea and vomiting will occur. Pulse rapid and feeble, respiration rapid and shallow. Temperature drops, but rises as peritonitis sets in, when pulse becomes fuller.

TREATMENT Surgical. Pending operation give no fluids. Complete rest. No talking. Apply warmth. **See** *peritonitis*.

perforator (pŭr'fô-rătŭr) [L. a piercing device]. Instrument for piercing the skull and other bones

p., tympanum. Instrument for perforating the tympanum

perfrication (pŭr-frĭ-kăt'shŭn) [L. *perfricare*, to rub]. Thorough rubbing with an ointment or embrocation. **Syn:** *inunction*.

perfusion (pŭr-fŭ-zhŭn) [L. *perfundere*, to pour through]. 1. Passing of a fluid through spaces. 2. The pouring of a fluid. 3. Supplying an organ or tissue with a fluid by injection into an artery

peri [G.]. Prefix meaning *around*, *about*.

periacinal, periacinous (pĕr'ĭ-ăs'ĭ-năl, -ŭs) [G. *peri*, around, + L. *acinus*, grape]. Placed around an acinus.

periadenitis (pĕr'ĭ-ă-dĕ-nĭ'tis) [“ + *adēn*, gland, + *-itis*, inflammation]. Inflamed condition of tissues surrounding a gland.

periallenitis (pĕr'ĭ-ăl'ĕn-ĭ'tis) [“ + *alienus*, foreign, + G. *-itis*, inflammation]. Noninfectious inflammation around a foreign body. **Syn:** *perizenitis*.

periamygdaletis (pĕr'ĭ-ăm-ĭ-g'ďăl-ĭ'tis) [“ + *amygdalē*, tonsil, + *-itis*, inflammation]. Inflammation of connective tissue around the tonsil. **Syn:** *peritonsillitis*.

periangiocholitis (pĕr'ĭ-ăn'ĭ-ŭ-kŏ-l'ĭ'tis) [“ + *aggeion*, vessel, + *cholē*, bile, +

-itis, inflammation]. Inflamed condition of tissues around the bile ducts.

periangitis (pēr'ī-ān-jī'tis) [" + " + -itis, inflammation]. Inflamed condition of tissue around a blood or lymphatic vessel.

periarteritis (pēr'ī-ā-or-tī'tis) [" + *aorte*, *aorta*, + -itis, inflammation]. Inflamed condition of adventitia and tissues around the *aorta*.

periapical (pēr'ī-āp'ī-kāl) [G. *peri*, around, + *L. apex*, tip]. Around the apex of the root of a tooth.

peripendicitis (pēr'ī-ā-pēn-dī-sī'tis) [" + *L. appendix*, that which hangs, + G. -itis, inflammation]. Inflamed condition of appendix with its surrounding tissues. **SYN.** *perityphilitis*.

P. decidua. Decidual cells in the peritoneum of the appendix vermiformis in cases of tubal pregnancy due to adhesions bet. fallopian tubes and the appendix.

periarthral (pēr'ī-ar-tēr'ī-āl) [" + *ar-tēria*, artery]. Placed around an artery.

periarthritis (pēr'ī-ar-tēr-ī'tis) [" + " + -itis, inflammation]. Inflammation of ext. coat of an artery.

P. gummosa. Inflammation in the blood vessels in syphilis.

P. nodosa. A multiple, circumscribed inflammation of an outer arterial coat resulting in the formation of nodules along its course.

periarthric (pēr'ī-ar-thrī'k) [" + *arthron*, joint]. Surrounding a joint. **SYN.** *circumarticular*.

periarthritis (pēr'ī-ar-thrī'tis) [" + *arthron*, joint, + -itis, inflammation]. Inflammation of area around a joint.

periarthral (pēr'ī-ar-thrī-āl) [" + *L. articularis*, a joint]. Surrounding a joint. **SYN.** *circumarticular*.

periaxial (pēr'ī-āk-sī-āl) [" + *axōn*, axis]. Located around an axis.

periaxillary (pēr'ī-āk-sī-lī-āl) [G. *peri*, around, + *L. axilla*, armpit]. About the axilla.

peribronchitis (pēr'ī-brōng-kī-ō-lī'tis) [" + *L. bronchialis*, bronchiole, + -itis, inflammation]. Inflammation of area around the bronchioles.

peribronchitis (pēr'ī-brōng-kī'tis) [" + *bronchos*, windpipe, + -itis, inflammation]. Inflammation of all tissues surrounding the bronchi or bronchial tubes.

pericardiac, **pericardial** (pēr'ī-kar'dī-āk-āl) [" + *kardia*, heart]. Concerning the pericardium.

pericardicentesis (pēr'ī-kar'dī-sēn-tēs'is) [" + *kardia*, heart, + *centesis*, puncture]. Surgical piercing of the pericardium.

pericardiectomy (pēr'ī-kar'dī-ēk'tō-mī) [" + " + *ektomē*, excision]. Excision of part or all of the pericardium.

pericardiocentesis (pēr'ī-kar'dī-ō-sēn-tēs'is) [G. *peri*, around, + *kardia*, heart, + *centesis*, puncture]. Surgical perforation of the pericardium. **SYN.** *pericardiocentesis*.

pericardiolysis (pēr'ī-kar'dī-ō-lī-sis) [" + " + *lysis*, dissolution]. Separation of adhesions bet. the visceral and parietal pericardium.

pericardiomedastinitis (pēr'ī-kar'dī-ō-mē-dī-ās'tī-nī'tis) [" + " + *L. mediastinum* + G. -itis, inflammation]. Inflamed condition of the pericardium and mediastinum.

pericardiophrenic (pēr'ī-kar'dī-ō-fren'īk) [" + " + *phrēn*, diaphragm]. Concerning the pericardium and diaphragm.

pericardiopleural (pēr'ī-kar'dī-ō-plū'rāl)

[" + " + *pleura*, rib]. Concerning the pericardium and pleura.

pericardiorrhaphy (pēr'ī-kar'dī-or-ā-fī) [" + " + *raphē*, a sewing]. Suture of a wound in the pericardium.

pericardiostomy (pēr'ī-kar'dī-ōs'tō-mī) [G. *peri*, around, + *kardia*, heart, + *stoma*, opening]. Formation of an opening into the pericardium for drainage.

pericardiosymphysis (pēr'ī-kar'dī-ō-sīm-fī-sis) [" + " + *sympphysis*, a joining]. Adhesion bet. the layers of the pericardium.

pericardiotomy (pēr'ī-kar'dī-ōt'tō-mī) [" + " + *tomē*, a cutting]. Incision of membranous sac around heart.

pericarditic (pēr'ī-kar'dī'īk) [" + *kardia*, heart]. Concerning the pericardium.

pericarditis (pēr'ī-kar'dī'tis) [G. *peri*, around, + *kardia*, heart, + -itis, inflammation]. Inflammation of pericardium.

Etiol.: Tuberculosis, mycoses, infection by pyogenic organisms, collagen disease, uremia, myocardial infarction, neoplasms, trauma.

SYM. Moderate fever, precordial pain and tenderness, dry cough, dyspnea and palpitation. Pulse, first rapid, forcible, then weak and irregular.

First stage Auscultation reveals to and fro friction sound heard over 4th left intercostal space near sternum. Inspection and palpation sometimes reveal a diffuse apex beat. Friction rub may sometimes be palpated.

Second stage Serofibrinous effusion. Bulging of precordium. Increased area of dullness, triangular in shape, base down. Heart sounds muffled, distant, feeble. Purulent effusion yields similar signs, but in addition high, irregular fever; sweats; chills, and progressive pallor; sometimes edema over the precordium. In doubtful cases the aspirating needle reveals pus.

Prog. Fair in early stages. In purulent and fibrinous, extremely grave.

Treatment: General. Absolute bed rest, light diet, regulate bowels. For the relief of pain apply ice bag over precordium or administer pain-relieving drugs, depending on its intensity. Specific. Appropriate antibiotic for specific organisms involved. If purulent effusion occurs, aspiration or surgical drainage. If gallop rhythm or signs of heart failure occur, restrict fluids and salt. For chronic constrictive pericarditis, resection of pericardium.

P. acute fibrinous. P. characterized by fibrinous exudate.

P. acute nonspecific. A disease of unknown etiology usually following respiratory infections.

P. adhesiva. Form in which the layers of pericardium adhere.

P. constrictive. P. in which adhesions form between visceral and parietal layers of the peritoneum.

P. externa. Inflammation of exterior surface of the pericardium.

P. fibrinous. Membrane is covered with butterlike exudate which organizes and unites the pericardial surfaces.

SYM.: Precordial bulging, a weak apex beat with loud sounds, a systolic retraction at apex and over large part of precordium, peculiar diastolic collapse of jugular veins, feeble apex beat with a forcible impulse over body of heart. Signs of heart failure, as dyspnea, dropsy, cyanosis.

P. hemorrhagic. P. in which the exudate contains blood.

p., idiopathic. SEE: *p., acute nonspecific*

p., ischemic. P. resulting from myocardial infarction.

p., neoplastic. P. due to invasion of pericardium by malignant tumors of adjoining structures

p., obliterans. Pericardial inflammation causing adhesions and obliteration of the pericardial cavity.

p., serofibrinous. P. in which there is a considerable quantity of serous exudate but little fibrin

p., uremic. P. resulting from uremia.

p., viral. SEE: *p. acute nonspecific*

pericardium (pĕr'i-kar'di-ŭm) [G. *peri*, around, + *kardia*, heart]. The double, membranous, cone-shaped, fibroserous sac enclosing the heart and the roots of the great blood vessels.

It is composed of an inner serous layer, *visceral pericardium* or *epicardium* and an outer fibrous layer, *parietal pericardium*. The space between the two constitutes the *pericardial cavity* which is normally filled with a small amount of serous fluid

Its base is attached to the diaphragm, its apex extending upward as far as the first subdivision of the great blood vessels. It is attached in front to the sternum, laterally to the mediastinal pleura and posteriorly to the esophagus, trachea, and principal bronchi

Normally, p. contains a thin serous fluid.

p., adherent. Condition in which fibrous bands form between the two layers obliterating pericardial cavity. SEE *pericarditis, constrictive*

p., brevis, buffer. Condition seen in fibrinous pericarditis in which pericardium has a peculiar appearance due to fibrinous deposits on the two opposing surfaces

p., externum. The outer fibrous layer of the pericardium.

p., internum. Serous inner layer of the pericardium.

p., parietal. The outer fibrous layer of the pericardium

p., shaggy. Condition occurring in fibrinous pericarditis in which loose shaggy deposits of fibrin are seen on surfaces of pericardium

p., visceral. Serous inner layer of the pericardium

pericecal (pĕr-i-sĕ-kāl) [" + L. *caecum*, blind]. Situated around the cecum.

pericecitis (pĕr-i-sĕ-si'tis) [" + " + G. *-itis*, inflammation]. Inflamed condition of area around the cecum. SYN: *perityphlitis*.

pericementitis (pĕr'i-sĕm-ĕn-ti'tis) [" + L. *caementum*, cement, + G. *-itis*, inflammation]. Progressive necrosis of the alveoli of the teeth. SYN: *periodontitis*.

pericementoclasia (pĕr'i-sĕm-ĕn-tō-klā-zī-ā) [" + " + G. *klasis*, a breaking]. Dissolution of the pericementum with alveolar absorption. SYN: *pyorrhea alveolaris*.

pericementum (pĕr'i-sĕm-ĕn'tŭm) [" + L. *caementum*, cement]. Fibrous tissue covering the root of a tooth.

perichorea (pĕr'i-kā-rī-ā). Excessive or abnormal rejoining, seen in certain psychoses.

pericholangitis (pĕr'i-kō-lān-jī'tis) [G. *peri*, around, + *cholē*, bile, + *ageion*, vessel, + *-itis*, inflammation]. Inflammation of tissues surrounding a bile duct. SYN: *periangiocholitis*.

pericholecystitis (pĕr'i-kō-lĕ-sis-ti'tis) [" + " + *kystis*, a sac, + *-itis*, inflamma-

tion]. Inflammation of tissues situated around the gallbladder.

perichondral, perichondrial (pĕr-i-kon'drāl, -drī-āl) [" + *chondros*, cartilage]. Concerning the membrane covering cartilage.

perichondritis (pĕr-i-kōn-dri'tis) [" + " + *-itis*, inflammation]. Inflamed condition of perichondrium.

perichondrium (pĕr-i-kōn'drī-ŭm) [" + *chondros*, cartilage]. Membrane of fibrous connective tissue around surface of cartilage.

perichondroma (pĕr'i-kōn-drō'mā) [" + " + *-oma*, tumor]. A tumor arising from fibrous tissue which covers cartilage.

perichordal (pĕr-i-kor'dāl) [" + *chordē*, cord]. Placed around the notochord.

perichoroidal, perichoroidal (pĕr'i-kō-ri-oy'dāl, -roy'dāl) [G. *peri*, around, + *chorioeidēs*, skinlike]. Situated around the choroid coat

perichrome (pĕr'i-krōm) [" + *chrōma*, color]. A nerve cell in which the tigroid mass is arranged in rows through the protoplasm.

pericolic (pĕr-i-kō'lik) [" + *kōlon*, colon]. Around or encircling the colon

pericolitis (pĕr'i-kō-lī'tis) [" + " + *-itis*, inflammation]. Inflammation of area around the colon

pericolonitis (pĕr'i-kō-lōn-i'tis) [" + " + *-itis*, inflammation]. Inflamed condition of region around the colon

pericolpitis (pĕr'i-kōl-pi'tis) [" + *kolpos*, vagina, + *-itis*, inflammation]. Inflammation of connective tissues surrounding the vagina.

periconchal (pĕr-i-kōng'kāl) [" + *cogchē*, concha]. Around the concha of the ear

p. sulcus. Groove on post. surface of the auricle

periconchitis (pĕr'i-kōng-ki'tis) [" + " + *-itis*, inflammation]. Inflamed condition of the lining of the orbit.

pericorneal (pĕr'i-kor'nē-āl) [G. *peri*, around, + L. *cornu*, horn]. Placed around the cornea

pericranitis (pĕr'i-krā-ni'tis) [" + *kranion*, skull, + *-itis*, inflammation]. Inflamed condition of pericranium

pericranium (pĕr'i-krā'ni-ŭm) [" + *kranion*, skull]. Fibrous membrane surrounding the cranium, periosteum of the skull.

p. Infernum. Lining surface of the cranium. SYN: *endocranium*.

pericystitis (pĕr'i-sis-ti'tis) [" + *kystis*, a bladder, + *-itis*, inflammation]. Inflamed condition of tissues about the bladder.

pericytial (pĕr-i-sis'h-āl) [" + *kytos*, cell]. Placed around a cell.

peridectomy (pĕr-i-dĕk'tō-mī) [" + *ektomē*, excision]. 1. Operation for relief of pannus. 2. Circumcision. SYN: *peritomy*.

peridendric (pĕr-i-dĕn'drik) [" + *dendron*, a tree]. Surrounding a dendrite of a nerve cell.

peridental (pĕr-i-dĕn'tāl) [G. *peri*, around, + L. *dens*, *dent-*, tooth]. Surrounding a tooth or part of one. SYN: *periodontal*.

peridentitis. Inflammation of tissues surrounding a tooth, periodontoclasia.

periderm. SYN: *epitrichal layer* or *epitrichium*. Thin layer of flattened cells forming a transient layer of embryonic epidermis.

peridesmitis (pĕr'i-dĕz-mī'tis) [" + *desmos*, band, + *-itis*, inflammation]. Inflammation of the areolar tissue around a ligament.

peridesmium (pĕr'i-dĕs'mī-ŭm) [" + *des-*

mos, band]. The connective tissue membrane sheathing a ligament.

peridiverticulitis (pĕr-'ī-dī-vĕr-tīk-'ū-lī'tis) [G. *peri*, around, + L. *diverticulāre*, to turn aside, + G. *-itis*, inflammation]. Inflammation of tissues situated around an intestinal diverticulum.

periductal (pĕr-'ī-duk'tāl) [' + L. *ductus*, a passage]. Situated about a duct.

periduodenitis (pĕr-'ī-dū-'ō-dō-nī'tis) [' + L. *duodeni*, twelve, + *-itis*, inflammation]. Inflammation around the duodenum often causing adhesions attaching it to the peritoneum.

periencephalitis (pĕr-'ī-ĕn-sĕf-ā-lī'tis) [' + *egkephalos*, brain, + *-itis*, inflammation]. Inflamed condition of the surface of the brain.

periencephalomeningitis (pĕr-'ī-ĕn-sĕf-ā-lō-mĕn-in-jī'tis) [' + ' + *mĕnigx*, membrane, + *-itis*, inflammation]. Inflamed condition of cerebral cortex and the meninges.

periendothelioma (pĕr-'ī-ĕn-'dō-thē-lī-'ō-mā) [' + *endon*, within, + *thēlē*, nipple, + *-ōma*, tumor]. A tumor arising from the endothelium of the lymphatics and the perithelium of blood vessels.

perienteritis (pĕr-'ī-ĕn-tĕr-'ī-tis) [G. *peri*, around, + *enteron*, intestines, + *-itis*, inflammation]. Inflamed condition of peritoneal lining of intestines.

periesophagitis (pĕr-'ī-ĕ-sōf-ā-jī'tis) [' + *esophagos*, esophagus, + *-itis*, inflammation]. Inflamed condition of tissues around the esophagus.

perifistular (pĕr-'ī-fis'tū-lĕr) [' + L. *fistula*, pipe]. Located around a fistula.

perifolliculitis (pĕr-'ī-fō-līk-'ū-lī'tis) [' + L. *folliculus*, a little sac, + *-itis*, inflammation]. Inflamed condition of area around the hair follicles.

periganglitis (pĕr-'ī-gāng-lī-'ī-tis) [' + *gagglion*, knot, + *-itis*, inflammation]. Inflamed condition of region around a ganglion.

perigastritis (pĕr-'ī-gās-trī'tis) [' + *gaster*, belly, + *-itis*, inflammation]. Inflammation of peritoneal lining of stomach.

perihepatitis (pĕr-'ī-hĕp-ā-tī'tis) [' + *ĕpar*, *ĕpat*-, liver, + *-itis*, inflammation]. Inflammation of peritoneal covering of the liver, usually occurring in circumscribed areas.

perijelunitis (pĕr-'ī-jĕ-'ū-nī'tis) [' + L. *jejunum*, empty, + G. *-itis*, inflammation]. Inflamed condition of tissues around the jejunum.

perikaryon (pĕr-'ī-kār-'ī-ōn) [G. *peri*, around, + *karyon*, nucleus]. The cell body of a neuron.

perikeratic. About the cornea.

perilabyrinthitis (pĕr-'ī-lab-'ir-līn-thī'tis) [' + *labyrinthos*, a maze, + *-itis*, inflammation]. Inflammation of tissues and parts about the labyrinth.

perilaryngitis (pĕr-'ī-lār-līn-jī'tis) [' + *larynx*, larynx, + *-itis*, inflammation]. Inflamed condition of tissues around the larynx.

perilymph (pĕr-'ī-līmf) [' + L. *lymphā*, serum]. The pale, limpid fluid contained in the space bet the membranous and bony labyrinth of the internal ear.

perilymphangitis (pĕr-'ī-līmf-ān-jī'tis) [G. *peri*, around, + L. *lymphā*, serum, + *aggeion*, vessel, + *-itis*, inflammation]. Inflammation of tissues around a lymphatic vessel.

perimenigitis (pĕr-'ī-mĕn-in-jī'tis) [' + *mĕnigx*, membrane, + *-itis*, inflammation]. Inflamed condition of the dura mater. *SYN*: *pachymeningitis*.

perimeter (pĕr-'īm-ĕt-ĕr) [' + *metron*, measure]. 1. The outer edge or periphery of a body or measure of the same. 2. Device for determining the extent of the field of vision.

perimetritis (pĕr-'ī-mĕ-trī'tis) [' + *mĕtra*, uterus, + *-itis*, inflammation]. Inflammation of the peritoneal covering of the uterus.

May be associated with parametritis.

perimetrium (pĕr-'ī-mĕ-trī-ūm) [' + *mĕtra*, uterus]. Peritoneum covering uterus.

perimetry (pĕr-'īm-ĕ-trī) [' + *metron*, measure]. 1. Circumference, edge, border of a body. 2. Measurement of the scope of the field of vision with a perimeter.

perimyelitis (pĕr-'ī-mī-ĕ-lī'tis) [' + *myelos*, marrow, + *-itis*, inflammation]. 1. Inflammation of the pia mater and arachnoid of the brain or spinal cord. *SYN*: *leptomeningitis*. 2. Inflammation of the endosteum, or membrane around medullary cavity of a bone.

perimyelography (pĕr-'ī-mī-ĕ-lōg-rā-fī) [' + ' + *graphem*, to write]. X-ray examination around the spinal cord.

perimyocarditis (pĕr-'ī-mī-'ō-ĕn-'dō-kar-dī'tis) [' + *mys*, *my-*, muscle, + *endon*, within, + *kardia*, heart, + *-itis*, inflammation]. Inflammation of the muscular wall of the heart, its epithelial lining and the membrane surrounding it.

perimysial (pĕr-'ī-mīs-'ī-āl) [G. *peri* around, + *mys*, muscle]. Concerning, or of the nature of, perimysium, sheathing a muscle.

perimysitis (pĕr-'ī-mīs-'ī-tis) [' + ' + *-itis*, inflammation]. Inflamed condition of the perimysium, the sheath surrounding a muscle.

perimysium (pĕr-'ī-mīs-'ī-ūm) [G. *peri*, around, + *mys*, muscle]. The connective tissue sheath that envelops each primary bundle of muscle fibers. Sometimes called *p. internum*.

p. externum. The epimysium, *q v*
perineal (pĕr-'ī-nĕ-'āl) [G. *perinaion*, perineum]. Concerning or situated on the perineum.

p. body. Mass of tissue composed of skin, muscle, and fascia bet. vagina and rectum in the female, and the urethra and rectum in the male. [of perineum]

p. fascia. Three layers bet muscles

p. hernia. Hernia perforating the perineum. *SYN*: *perineoceles*.

p. section. Surgical incision through perineum. *SYN*: *perineotomy*.

perineo- [G.]. Combining form pertaining to the perineum.

perineocele (pĕr-'ī-nĕ-'ō-sĕl) [G. *perinaion*, perineum, + *kĕlē*, hernia]. Hernia in the region of the perineum.

perineocolporectomyomectomy (pĕr-'ī-nĕ-'ō-kōl-'pō-rĕk-'tō-mī-'ō-mĕk'tō-mī) [' + *kolpos*, vagina, + L. *rectus*, straight, + G. *mys*, *myo-*, muscle, + *-ōma*, tumor, + *ektomē*, excision]. Excision of a myoma by incising the perineum, vagina, and rectum.

perineoplasty (pĕr-'ī-nĕ-'ō-plās'tī) [' + *plastēn*, to form]. Reparatve surgery on the perineum.

perineorrhaphy (pĕr-'ī-nĕ-'ō-rā-fī) [' + *raphē*, a sewing]. Suture of the perineum usually following labor.

NP: After operation a towel should be pinned around the limbs to hold them in position until anesthetic wears away. Give external irrigation to perineum following each use of bedpan as sepsis must be avoided. Keep stitches dry.

sterile dressing secured with a T-bandage which may be removed for urination. Swab with antiseptic, dry and put on fresh dressing. Warm glycerin packs are sometimes ordered to relieve pain and reduce edema.

It is difficult for patient to assume a comfortable position in which to lie. Prop up first on one and then the other side. The patient cannot sit upright. Keep bowels from acting during first 5 days. Fluid diet and light jellies. After 5th day a mild aperient 4-5 oz. of warm olive oil per rectum before aperient acts. Warn against straining. Stitches removed about 12th day.

p., anterior. Rectifying cystocele *

p., colpo. Removal of part of post. vaginal wall and suturing torn perineal body.

p., posterior. Removal of rectocele
perineosynthesis (për-I-nê'ô-sîn'the-sis) [" + *synthesis*, a placing together] Plastic operation for repair of a lacerated perineum, performed by grafting vaginal mucosa over area.

perineotomy (për'I-nê-ô'tô-mî) [" + *tomê*, a cutting]. Operation of incising the perineum.

perineovaginal (për-I-nê'ô-vâj'in-âl) [" + *L. vagina*, sheath]. Concerning the perineum and vagina.

perinephric (për-I-nê'f'rik) [G. *peri*, around, + *nephros*, kidney]. Located or occurring around the kidney.

p. abscess. Abscess formation in peritoneal membrane surrounding the kidney
perinephritis (për'I-nê-frî'tis) [" + " + *-itis*, inflammation]. Inflammation of peritoneal tissues around the kidney
Syn: *paranephritis*.

perineurium (pê-I-nê'ri-ûm) [" + *nephros*, kidney]. The connective and fatty tissue surrounding the kidney.

perineum (për-I-nê-ûm) [G. *perinaion* perineum] 1. The structures occupying the pelvic outlet and comprising the pelvic floor. 2. The region between the vulva and anus in a female or between scrotum and anus in a male.

It is made up of skin, muscle and fasciae. The muscles of the perineum are the ant. portion of the intact levator ani muscle, the transverse perineal muscle and the sphincter muscles of the vagina. RS: *bodies, perineal, "perine" words.*

p. tears of the. There are 3 degrees of severity, being caused by overstretching of vagina and perineum in delivery, malposition increasing the tears.

COMPLICATIONS Hemorrhage, infection, cystocele, rectocele, descent of uterus, perhaps loss of bowel control.

TREATMENT Surgery

NP: Spray wound after each urination and bowel movement with mild antiseptic solution. Compound licorice at night, enema every morning in 3rd degree tears. Anal stitches removed the 12th day. Dressing of balsam of Peru in castor oil.

p., watering-pot. One riddled with fistulas from urethral stricture.

perineurial (për'I-nû-ri-âl) [G. *peri*, around, + *neuron*, sinew]. Concerning the perineurium, the sheath around a bundle of nerve fibers.

perineuritis (për'I-nû-ri'tis) [" + " + *-itis*, inflammation]. Inflammation of the sheath enveloping nerve fibers.

perineurium (për'I-nû-ri-ûm) [G. *peri*, around, + *neuron*, sinew, + *-itis*, inflammation]. A connective tissue sheath

investing a fasciculus or bundle of nerve fibers. Also called *perifascicular sheath*
periocular (për-I-ôk'û-ler) [" + *L. oculus*, eye]. Located around the eye. Syn: *circumocular*.

period (për'I-ôd) [" + *odos*, a way] 1. The time during which anything or at which anything takes place, which is limited by a recurring event. 2. The menses. 3. Time occupied by a disease in running its course, or by a division of the total, as an incubation period.

p., childbearing. The p. in the female during which she is capable of procreation; puberty to the menopause.

p. (of) development. SEE *embryo, development of*

p., gestation. Period of pregnancy or time from conception to parturition. Average length is 10 lunar months, or 280 days measured from onset of last menstrual period. Length varies from 250 to 310 days. SEE *gestation, pregnancy table*

p., incubation. Time from moment of infection until appearance of first symptom.

p's (of an) infectious disease. 1. P. of incubation. 2. P. of prodromal symptoms. 3. P. of invasion. 4. Pastigium or acme. 5. P. of decline or defervescence. SEE *infection*

p., latent. 1. The time bet stimulation and the resulting response.

p., menstrual. Time for an individual act of menstruation.

p., neonatal. The first 30 days of infant life.

At this time the mortality of all infants under 1 yr is greatest (67%); usual causes are prematurity, birth injuries, and sepsis.

p., patent. The time in a parasitic disease during which organisms are demonstrable in the body.

p., puerperal. 1. The period of a woman in labor or one who has just been delivered. 2. Period between labor and involution of pelvic organs.

p., safe. The time during the menstrual cycle when conception is unlikely to occur. Roughly it includes eight days following the onset of menstruation and seven days preceding the next menstruation.

periodic (për-I-ôd'ik) [G. *peri*, around, + *odos*, way]. Recurring after definite intervals.

p. law. That which states that the chemical and physical properties of the chemical elements are periodic functions of their atomic weights.

periodicity (për'I-ô-dis'tî-tî) [" + *odos*, way]. 1. State of being regularly recurrent. 2. PT. The rate of rise and fall or interruption of a unidirectional current. 3. Recurrence of the menses.

periodontal (për'I-ô-dôn'tâl) [" + *odous*, odont-, tooth]. Located about a tooth.

periodontitis (për'I-ô-dôn-tî'tis) [G. *peri*, around, + *odous*, odont-, tooth, + *-itis*, inflammation] Syn: *pyorrhoea alveolaris*, *Ragg's disease*. Inflammation or degeneration, or both, of the dental periosteum, alveolar bone, cementum, and adjacent gingiva. Suppuration usually occurs, supporting bone is resorbed, teeth become loose and recession of gingivae occurs. Usually follows chronic gingivitis, Vincent's infection, or poor dental hygiene. Systemic factors may predispose.

p., apical. P. of periapical region usually leading to formation of periapical abscess.

periodontium (për-I-ô-dôn'shî-ûm). The

tissues surrounding and supporting a tooth. They include periodontal membrane, alveolar bone, and gingiva.

periodontoclasia (pĕr'ī-ō-dōn'tē-klā'zī-ā) [G. *peri*, around, + *odous* *odont-*, tooth, + *klasis*, a breaking]. Condition characterized by inflammation accompanied by degenerative and retrogressive changes in the periodontium.

periodontology (pĕr'ī-ō-dōn-tōl'ō-jī) [" + " + *logos*, disease]. Phase of dentistry dealing with treatment of diseases of the tissues around the teeth.

periodoscope (pĕr'ī-ō-d'ō-skōp) [G. *peri*, around, + *odos*, way, + *skopein*, to examine]. Table or dial for calculation of expected date of confinement.

periophthalmic (pĕr'ī-ōm-fāl'ik) [" + *ophthalmos*, eye]. Located around umbilicus.

perionychia (pĕr'ī-ō-nīk'ī-ā). Inflammation about a nail.

perionychium (pĕr'ī-ō-nīk'ī-ūm) [" + *onyx*, *onych-*, nail]. The epidermis surrounding a nail.

perionyxis (pĕr'ī-ō-nīk'īs) [" + *onyx*, nail]. Inflammation of epidermis surrounding a nail.

periophoritis (pĕr'ī-ō-f'ō-r'ītis) [" + *ophoron*, ovary, + *-itis*, inflammation]. Inflammation of the surface membrane of the ovary. *SYN* *perioothecitis*.

perioporphorosalingitis (pĕr'ī-ō-f'ō-r'ītis) [" + " + *salingis*, tube, + *-itis*, inflammation]. Inflamed condition of tissues around an ovary and oviduct.

periothecitis (pĕr'ī-ō-the-sītis) [" + *oōn*, egg, + *thēcē*, box, + *-itis*, inflammation]. Inflammation of the tissues around the ovary. *SYN* *periophoritis*.

periothecosalingitis (pĕr'ī-ō-the-kō-sāl-pn-jītis) [G. *peri*, around, + *thēcē*, box, + *salingis*, tube, + *-itis*, inflammation]. Inflammation of peritoneal membrane around the ovary and oviduct. *SYN* *perioporphorosalingitis*, *perisalingoboritis*.

perioptometry (pĕr'ī-op-tōm'ēt-rī) [" + *optos*, visible, + *metron*, a measure]. Measurement of the visual field.

perior'al. *SYN* *circumoral*. About or surrounding the mouth.

periorbita (pĕr'ī-or-bī-tā) [" + *L. orbita*, orbit]. Periosteum of the socket of the eye.

periorbital (pĕr'ī-or-bī-tāl) [" + *L. orbita*, orbit]. Surrounding the socket of the eye. *SYN* *circumorbital*.

periorbititis (pĕr'ī-or-bī-tītis) [" + " + *G. -itis*, inflammation]. Inflamed condition of the periorbita.

periorchitis (pĕr'ī-or-kītis) [" + *orchis*, testicle, + *-itis*, inflammation]. Inflamed condition of the tissues investing a testicle.

p. hemorrhagica. Chronic hematocoele of the tunica vaginalis coat of the testis.

periosteal (pĕr'ī-ōs-tē-āl) [" + *osteon*, bone]. Concerning the periosteum.

periosteltis (pĕr'ī-ōs-tē-lītis) [G. *peri*, around, + *osteon*, bone, + *-itis*, inflammation]. Inflammation of membrane investing a bone, the periosteum. *SYN* *periostitis*.

periosteodema (pĕr'ī-ōs-tē-ō-dē-mā) [" + " + *oidema*, swelling]. Edema of the periosteum, the membrane surrounding a bone.

periosteoma (pĕr'ī-ōs-tē-ō-mā) [" + " + *-oma*, tumor]. 1. An abnormal growth surrounding a bone. 2. Tumor of the periosteum, the tissue surrounding a bone.

periosteomyelitis (pĕr'ī-ōs-tē-ō-mī-ē-lītis) [G. *peri*, around, + *osteon*, bone,

+ *myelos*, marrow, + *-itis*, inflammation]. Inflammation of bone including the periosteum and marrow.

periosteophyte (pĕr'ī-ōs-tē-ō-fīt) [" + " + *phylon*, growth]. Abnormal bony growth on periosteum, or arising from it.

periosteorrhaphy (pĕr'ī-ōs-tē-ō-rā-fī) [" + " + *raphē*, a sewing]. Joining by suture the margins of a severed periosteum.

periosteotome (pĕr'ī-ōs-tē-ō-tōm) [G. *peri*, around, + *osteon*, bone, + *tomē*, a cutting]. Instrument for cutting the periosteum or removing it from the bone.

periosteotomy (pĕr'ī-ōs-tē-ō-tō-mī) [" + " + *tomē*, an incision]. Incision into the periosteum.

periosteous (pĕr'ī-ōs-tē-ūs) [" + *osteon*, bone]. Concerning, or of the nature of, periosteum. *SYN* *periosteal*.

periosteum (pĕr'ī-ōs-tē-ūm) [G. *peri*, around, + *osteon*, bone]. The fibrous membrane which forms the investing covering of bones except at their articular surfaces. Consists of a dense *external* layer containing numerous blood vessels and an *inner* layer (cambium layer), less vascular and more cellular. It serves as a supporting structure for blood vessels nourishing bone and for attachment of muscles, tendons, and ligaments.

It extends over the whole surface except at the cartilaginous articulations.

p. externum. P. covering ext. surfaces of bones.

p. Internum. Int. p. lining the medullary canal of a bone.

periostitis (pĕr'ī-ōs-lītis) [" + " + *-itis*, inflammation]. Inflamed condition of membrane investing a bone, the periosteum.

Etiol. Infection following infectious diseases, esp. syphilis, also trauma.

Sym. Pain over part, esp. under pressure, fever, sweats, leukocytosis, skin inflamed, rigidity of overlying muscles.

p., albuminous. P. with albuminous serous fluid exudate beneath the membrane affected.

p. alveolar. Inflammation of the periodontal membrane. *SYN* *periodontitis*.

p., dental. P. of a tooth sheath.

p., diffuse. P. of the long bones.

p., hemorrhagic. P. with extravasation of blood under the periosteum.

periostoma (pĕr'ī-ōs-tō-mā) [G. *peri*, around, + *osteon*, bone, + *-oma*, tumor]. A bony neoplasm around a bone or arising from its membranous sheath.

periosteomedullitis (pĕr'ī-ōs-tē-mēd-ū-lītis) [" + " + *L. medulla*, marrow, + *G. -itis*, inflammation]. Inflammation of the marrow or sheath of a bone. *SYN*: *periosteomedullitis*, *periosteomyelitis*.

periostosis (pĕr'ī-ōs-tō-sīs) [" + " + *-ōsis*, disease]. A bony neoplasm around a bone or arising from it.

periostotomy (pĕr'ī-ōs-tōt-ō-mī) [" + " + *tomē*, incision]. Incision of the periosteum, the sheath covering a bone. *SYN*: *periosteotomy*.

periotic (pĕr'ī-ōt'ik) [G. *peri*, around, + *ous*, of-, ear]. Situated around the ear, esp. the internal ear.

p. bone. The mastoid and petrous portions of the temporal bone.

peripachymeningitis (pĕr'ī-pak'ī-mēn-in-jītis) [" + *pachys*, thick, + *mēnig*, membrane, + *-itis*, inflammation]. Inflamed condition of connective tissue bet. the dura mater and the bone.

peripancratis (pĕr'ī-pān-kre-ā-tītis) [G. *peri*, around, + *pankreas*, pancreas, + *-itis*, inflammation]. Inflammation of tissues about or around the pancreas.

peripatetic (pér-i-pā-tét'ik) [" + *patein*, to walk]. Moving from place to place, as in walking typhoid.

periphaeitis (pér-i-fā-sí'tis) [" + *phakos*, lens, + *-itis*, inflammation]. Inflamed condition of the capsule of the crystalline lens of the eye.

periphakus (pér-'i-fāk'ús) The elastic capsule surrounding the crystalline lens.

peripherad (pér-ifér-ád) [" + *pherein*, to bear, + *L. ad*, to]. In the direction of the periphery.

peripheral (pér-ifér-ál) [" + *pherein*, to bear]. Located at or pert. to the periphery.

peripheraphose (pér-ifér-ā-fōs) An aphose which originates in peripheral optic structures (optic nerve or eyeball).

peripherophose (per-ifér-ō-fōs) A phose which originates in peripheral optic structure (optic nerve or eyeball).

periphery (pér-if'é-rí) [" + *pherein*, to bear]. Outer part or a surface of a body, part away from the center.

periphelebitis (pér-'i-fé-bí'tis) [G. *peri*, around, + *phleps*, vein, + *-itis*, inflammation]. Inflamed condition of external coat of a vein or tissues around it.

periphoria (pér-i-fó-rí-á) [" + *phoros*, a bearer]. Tendency for the cornea to deviate from its normal axis. SYN *cyclophoria*.

periphrastic (pér-i-frás'tík) [" + *phrazein*, to speak]. Relating to the use of superfluous words in expressing a thought.

periphrénitis (pér-'i-frén-í'tis) [" + *phrén*, diaphragm, + *-itis*, inflammation]. Inflamed condition of the structures around the diaphragm.

Periplaneta (per-'i-plā-nē'tā) A genus of cockroaches belonging to the order Orthoptera. Roaches contaminate food and transmit mechanically infectious bacteria, helminth ova, and cysts of protozoa. They also serve as intermediate host of the tapeworm, *Hymenolepis diminuta*.

P. americana. The American cockroach.

P. australasiae. The Australian cockroach.

periplast (pér-i-plást) [" + *plassein*, to form]. 1. Peripheral protoplasm of a cell exclusive of the nucleus. 2. Matrix of a part or organ. 3. A cell wall. SYN: *periblast*.

peripneural (pér-'i-plū-rál) [" + *pleura*, rib]. Encircling the pleura.

peripneuritis (pér-i-plū-rí'tis) [" + *-itis*, inflammation]. Inflamed condition of the connective tissues bet the pleura and wall of the chest.

periplocin (pér-ip'lo-sín). $C_{26}H_{44}O_{12}$. Glucoside of *Periploca graeca*, used in treating diseases of the heart.

periproctitis (pér-'i-prók-tí'tis) [" + *prōktos*, anus, + *-itis*, inflammation]. Inflammation of areolar tissues in region of the rectum and anus. SYN *perirectitis*.

periprostatic (pér-'i-prós-tát'ik) [" + *prostātēs*, prostate]. Surrounding or occurring about the prostate.

periprostatitis (pér-'i-prós-tá-tí'tis) [" + *-itis*, inflammation]. Inflamed condition of tissues surrounding the prostate.

peripylephlebitis (pér-'i-pí'le-fé-bí'tis) [" + *pylē*, gate, + *phleps*, phleb., vein, + *-itis*, inflammation]. Inflamed condition of tissues about the portal vein.

peripyloric (pér-'i-pl-lor'ík) [G. *peri*, around, + *pyloros*, pylorus]. Extending around the pylorus.

perirectal (pér-'i-rékt'ál) [" + *L. rectus*, straight]. Extending around the rectum.

perirectitis (pér-'i-rékt-tí'tis) [" + *G. -itis*, inflammation]. Inflamed condition of tissues about rectum and anus. SYN: *periproctitis*.

perirenal (pér-'i-rē-nál) [" + *L. rēn*, kidney]. Extending around the kidney. SYN: *circumrenal*, *perinephric*.

perirhinal (pér-'i-rí-nál) [" + *ris*, *rin*, nose]. Located about the nose or nasal fossae.

perirhizoclasia (pér-'i-rí-zō-klā'zī-ā) [" + *riza*, root, + *klasis*, a breaking]. Inflammation and destruction of tissues extending around the roots of a tooth.

perisalpingitis (pér-'i-sál-plín-jí'tis) [" + *salpigr*, *salpigo*, tube, + *-itis*, inflammation]. Inflamed condition of peritoneal coat about the oviduct.

perisalpingoovariis (pér-'i-sál-plín-gō-ō-vár-í'tis) [" + *G. -itis*, inflammation]. Inflammation of peritoneal tissues surrounding the fallopian tubes and ovaries. SYN: *perioophorosalingitis*, *perioothecosalingitis*.

periscle'rium [G. *peri*, around, + *sklēros*, hard]. Fibrous tissue encircling ossifying cartilage.

periscopic (pér-'i-skop'ik) [" + *skopein*, to examine]. Viewing on all sides.

perish (pér'ish) [L. *perire*, to come to nothing]. To disintegrate or die, esp. by other than natural causes.

perisigmoiditis (pér-'i-sig-moi-dí'tis) [G. *peri*, around, + *sigma*, Greek letter S, + *eidos*, like, + *-itis*, inflammation]. Inflamed condition of peritoneal tissues around sigmoid flexure of the colon.

perisinusitis (pér-'i-si-nū-sí'tis) [G. *peri*, around, + *L. sinus*, cavity, + *G. -itis*, inflammation]. SYN *perisinuitis*. Inflammation of membranes about a sinus, esp a venus sinus of the dura mater.

perispermatis (pér-'i-spér-mā-tí'tis) [" + *sperma*, seed, + *-itis*, inflammation]. Inflamed condition of tissues about spermatic cord.

p. serosa. Hydrocele of spermatic cord.

perisplanchnic (pér-'i-splānk'ník) [" + *spagchnon*, viscus]. Extending around a viscus or the viscera.

perisplanchnitis (pér-'i-splānk-ní'tis) [" + *-itis*, inflammation]. Inflamed condition of the tissues around the viscera. SYN: *perivisceritis*.

perisplenitis (pér-'i-splē-ní'tis) [" + *splēn*, spleen, + *-itis*, inflammation]. Inflammation of peritoneal coat of the spleen, the splenic capsule.

p. cartilaginea. SYN *hyalin capsulitis*. Inflammation of capsule of the spleen resulting in thickening and hardening.

perispondylitis (pér-'i-spōn-díl-í'tis) [" + *spondylos*, vertebra, + *-itis*, inflammation]. Inflamed condition of the parts around a vertebra.

perissad (pér-'is-ád, pér-'is-ad) [G. *perissos*, odd]. 1. Radical or element of odd valence. 2. Having odd valence.

perissodactylous (pér-'is-ō-dák'tí-lūs) [" + *daktylos*, digit]. Having an odd number of toes.

peristalsis (pér-'is-tál'sis) [G. *perissos*, odd, + *stalsis*, contraction]. A progressive, wavelike movement which occurs involuntarily in hollow tubes of the body, esp the alimentary canal. It is characteristic of tubes possessing longitudinal and circular layers of smooth muscle fibers.

P. is induced reflexly by distention of the walls of the tube. The wave consists of contraction of the circular muscle above the distention with relaxation of the region immediately distal to the distended portion. The simultaneous contraction and relaxation progresses slowly for a short distance as a wave which causes the contents of the tube to be forced onward in a spiral fashion.

p., mass. Forced peristaltic movements of short duration moving contents from 1 section of the colon to another, occurring 3 or 4 times daily.

p., reverse. **SYN:** *antiperistalsis*. Peristalsis in a direction opposite to the normal direction. It may occur normally in the duodenum below the cap. However, its appearance in other parts of the alimentary canal is indicative of pathological conditions such as inflammation, obstruction, or presence of diverticula or diverticulitis.

peristaltic (pēr'ī-stāl'tik) [*G. perī, around, + stalsis, contraction*]. Concerning, or of the nature of, peristalsis.

p. rush. A rapidly moving peristaltic wave which occurs from time to time in the small intestine moving all of the contents before it.

p. unrest. Increased peristalsis or abnormal motility of the intestinal tract.

p. wave. The wavelike movement occurring during peristalsis.

peristaphyline (pēr'ī-stāf'ī-līn) [*" + staphylē, uvula*]. About the uvula.

peristome (pēr'īs-tōm) [*" + stoma, mouth*]. Channel leading from the mouth in protozoa.

peristromitis (pēr'ī-strū-mī'tis) [*" + L. struma, goiter*]. Inflamed condition of tissues around a goiter. **SYN:** *perithyroiditis*.

perisynovial (pēr'ī-sīn-ō-vī-āl) [*" + syn, with, + ōn, egg*]. Extending around a synovial structure.

perisystole (pēr'ī-sīs'tō-lē) [*" + systolē, contraction*]. The period preceding the systole in the cardiac rhythm.

peritectomy (pēr'ī-tēk'tō-mī) [*G. perī, around, + ektomē, excision*]. Surgical removal of a ring of conjunctiva around the cornea.

peritendineum (pēr'ī-tēn-dīn'ē-ūm) [*G. perī, around, + L. tendo, tendon*]. A sheath of fibrous connective tissue investing a fiber bundle of a tendon.

peritendinitis (pēr'ī-tēn-dīn-ī'tis) [*" + G. -itis, inflammation*]. Inflamed condition of the sheath of a tendon. **SYN:** *peritenonitis*.

p. calcarea. The deposition of calcareous material in tendons and associated regions, characterized by pain, tenderness, and limitation of motion.

peritenonitis (pēr'ī-tēn-on-ī'tis) [*" + tenōn, tendon, + -itis, inflammation*]. Inflammation of sheath investing a tendon. **SYN:** *peritendinitis*.

perithelioma (pēr'ī-thē-lī-ō-mā) [*" + thēlē, nipple, + -ōma, tumor*]. A tumor derived from the perithelial layer of the blood vessels.

perithellium (pēr'ī-thē-lī-ūm) [*" + thēlē, nipple*]. Fibrous outer layer of the smaller blood vessels and capillaries.

perithyroiditis (pēr'ī-thī-roy-dī'tis) [*" + thyreos, shield, + eidos, form, + -itis, inflammation*]. Inflammation of capsule or tissues sheathing the thyroid gland. **SYN:** *peristromitis*.

peritomy (pēr'ī-tō-mī) [*G. perī, around, + tomē, incision*]. 1. Excision of narrow strip of conjunctiva around the

cornea in treatment of pannus. 2. Circumcision.

Operation also consists in dividing the conjunctival vessels running over the limbus.

peritoneal (pēr'ī-tō-nē-āl) [*G. peritonaion, peritoneum*]. Concerning the peritoneum.

p. cavity. Region bordered by parietal layer of the peritoneum containing all the abdominal organs exclusive of the kidney. **SEE:** *cholangos*.

p. sac, lesser. The omental bursa or cavity of the great omentum.

peritonealgia (pēr'ī-tō-nē-āl'jī-ā) [*" + algos, pain*]. Pain of the peritoneum.

peritoneocentesis (pēr'ī-tō-nē-ō-sēn-tē-sis) [*" + kentēsis, a puncture*]. Piercing of the peritoneal cavity to obtain fluid. **SEE:** *paracentesis*.

peritoneoclysis (pēr'ī-tō-nē-ō-klī'sis) [*" + klysis, a washing out*]. Introduction of fluid into the peritoneal cavity.

peritoneopathy (pēr'ī-tō-nē-op-āth-ī) [*" + pathos, disease*]. Any disordered condition of the peritoneum.

peritoneopexy (pēr'ī-tō-nē-ō-pēks'ī) [*" + pēxis, fixation*]. Fixation of the uterus by way of the vagina.

peritoneoplasty (pēr'ī-tō-nē-ō-plās'tī) [*" + plassein, to form*]. Reporative surgery to prevent re-formation of loosened adhesions.

peritoneoscope (pēr'ī-tō-nē-ō-skōp) [*G. peritonaion, peritoneum, + skopein, to examine*]. Long, slender telescope with a tiny electric light on the end as well as a forceps for grasping a small metal fragment or for clamping a bleeding artery in the peritoneum.

peritoneoscopy (pēr'ī-tō-nē-ōs'kō-plī) [*" + skopein, to examine*]. Examination of peritoneal cavity with the peritoneoscope.

peritoneotomy (pēr'ī-tō-nē-ōt'ō-mī) [*" + tomē, a cutting*]. Process of incising the peritoneum.

peritoneum (pēr'ī-tō-nē-ūm) [*G. peritonaion*]. The serous membrane reflected over the viscera, and lining the abdominal cavity.

PALPATION. If palmar surface of hand be applied to side of abdomen at level of the liquid in ascites, and light percussion be performed on the opposite side, a sense of fluctuation will be communicated to the hand.

p., parietal. P. lining abdominal and pelvic walls and undersurface of diaphragm.

p., visceral. The p. that invests the abdominal organs.

peritonitic (pēr'ī-tō-nī'tik) [*" + -itis, inflammation*]. Affected with or concerning peritonitis.

peritonitis (pēr'ī-tō-nī'tis) [*G. peritonaion, peritoneum, + -itis, inflammation*]. Inflammation of the peritoneum, the membranous coat lining the abdominal cavity and investing the viscera.

ETIOLOGY. Infectious organisms which gain access by way of. (1) rupture or perforation of viscus or associated structures, (2) female genital tract, (3) piercing of abdominal wall, (4) blood stream or lymphatic vessels, (5) operative incisions and failure to practice aseptic technics.

TREATMENT: Antibiotic therapy. Penicillin and streptomycin given parenterally in large doses. In some cases a broad spectrum antibiotic may be used. Transfusions of blood or plasma may be necessary. More important than treatment are prophylactic measures to prevent the development of peritonitis.

p., acute diffuse. Generalized p. of a large area.

ETIOL. Rupture of an intraabdominal viscus, as the appendix or stomach. Infection may take place directly from an adjacent organ which is inflamed, or from the blood stream in patients with septicemia.

Sym: Chill; fever, 102°-103° F.; rapid, wiry pulse, abdominal pain and tenderness so intense abdominal respiration and bodily movement inhibited; patient on back, thighs flexed; features pinched, and anxious, teeth showing by raised lips; vomiting persistent; bowels usually constipated, hiccough; abdominal distention.

Proc. Guarded

TREATMENT Surgical intervention. Absolute bed rest, sips of water by mouth; saline or glucose solution parenterally; heat to abdomen; repeated gastric lavage, sedatives, foot of bed raised.

Recent additions to treatment have been the inhalation of concentrated oxygen, and in cases complicating appendicitis, the administration of sulfanilamide

p., adhesive. P in which the visceral and parietal layers stick together by means of adhesions.

p., aseptic. P due to other causes than bacterial infection, such as trauma, presence of chemicals produced naturally or introduced from without, irradiation.

p., chronic. Usually tuberculous, cancerous or syphilitic; occurs in chronic alcoholism.

Sym: Fever slight or absent. Pain not severe, paroxysms, usually diffuse tenderness, anemia and emaciation may be marked.

Proc. Guarded

TREATMENT. Rest; light diet; constitutional treatment, when effusion is great; paracentesis Laparotomy.

Diet: Milk diet, meat juices, raw eggs, no vegetables or fruit. Avoid causes of distention.

p. deformans. Chronic p. with thickened membrane and adhesions contracting and causing retraction of the intestines.

p., diffuse. **Syn.** generalized peritonitis P which is widespread involving most of the peritoneum

p., localized. P in which only a small area is involved

p. pelvic. That involving p. of the pelvic region, usually the sequela of uterine tube infection in female.

p., primary. P. resulting from infectious organisms transmitted through blood or lymph.

p., puerperal. P. which develops following childbirth.

p., secondary. P. resulting from extension of infection from adjoining structures, rupture of a viscus, abscess, or trauma.

p., septic. P. caused by a pyogenic bacterium.

p., serous. P. in which there is liquid exudation.

p., traumatic. P. due to injury or wound infection.

p., tuberculous. P. caused by numerous tubercle bacilli on the peritoneum.

peritonissilar (pēr'ī-ton'sīl-ār) [G. *peri*, around, + L. *tonsilla*, tonsil]. Extending around a tonsil.

peritonitis (pēr'ī-tōn-sīl'ī-tis) [" + " + G. *-itis*, inflammation]. Inflamed

condition of tissues around the tonsils. **Syn:** *periamygdaletis*.

peritrichous (pēr'ī-trīk-ūs) [" + *thrix*, *trich-*, hair]. **Bact:** Having cilia or flagella covering the entire surface.

perityphilitis (pēr'ī-tīf-lī'tis) [" + *typhlos*, blind, + *-itis*, inflammation]. Inflamed condition of tissues around the cecum and appendix. **Syn:** *appendicitis*.

periurometeritis (pēr'ī-ūr-rē'tēr'ī-tis) [" + *ourēter*, ureter, + *-itis*, inflammation]. Inflamed condition of parts about the ureter.

periuethral (pēr'ī-ū-rē-thrāl) [" + *ourēthra*, urethra]. Located about the urethra.

peruterine (pēr'ī-ū'tēr-in) [" + L. *uterus*, womb]. Located about the uterus. **Syn:** *perimetrix*.

perivaginitis (pēr'ī-vāj-in'ī-tis) [G. *peri*, around, + L. *vagina*, sheath, + G. *-itis*, inflammation]. Inflammation of region around the vagina. **Syn** *periccolpitis*.

perivascular (pēr'ī-vās'kū-ler) [" + L. *vasculus*, a little vessel]. Located around a vessel, esp. a blood vessel.

perivascularitis (pēr'ī-vās-kū-lī'tis) [" + " + G. *-itis*, inflammation]. Inflamed condition of tissues surrounding a blood vessel. **Syn.** *periangitis*

perivisceritis (pēr'ī-vīs'ēr'ī-tis) [" + L. *viscus*, *viscer-*, internal organ, + G. *-itis*, inflammation]. Inflamed condition of the tissues surrounding the viscera.

perixenitis (pēr'ī-zēn'ī-tis) [" + *zenos*, strange, + *-itis*, inflammation]. Inflammation of the region around a foreign body.

perle (perl). A capsule containing a medicine.

perlèche (pēr-lāsh) [Fr.]. Disorder marked by fissures and epithelial desquamation at corners of the mouth, esp. seen in children. May be infectious or a symptom or dietary deficiency, esp riboflavin deficiency.

permanent (pūr'mān-ēnt) [L. *per*, through, + *manere*, to remain]. Enduring, without change.

p. teeth. Teeth developing at the 2nd dentition. **See** *dens permanens*.

permanganate (pēr-man'gān-āt). Any one of the salts of permanganic acid.

permeability. The quality of being permeable.

p. capillary. The condition of capillary wall which enables substances in the blood to diffuse into tissue spaces or into cells or vice versa.

permeable (pūr'mē-ā-bl) [L. *per*, through, + *meare*, to pass]. Capable of or allowing the passage of fluids or substances in solution

permeation (pēr'mē-ā'shūn). The spread of cells of a malignant tumor through adjacent tissues

pernicious (pēr-nīsh'ūs) [L. *perniciōsus*, destructive]. Destructive; fatal; harmful.

p. anemia. Severe, often fatal, form of blood disease, marked by progressive decrease in red blood corpuscles, muscular weakness, and gastrointestinal and neural disturbances. **See:** *anemia*, *pernicious*.

p. trend. **Psy:** An abnormal departure from conventional ideas and social interests. Pregenital interests are manifested.

pernio (pūr'nī-ō) [L. *chilblain*]. Congestion and swelling of the skin, due to cold.

Sym: Attended with severe burning or itching; ulceration may result from

vesicles and bullae which sometimes form. **Syn:** *chilblain*.

perniosis (pŭr-ni-ŏ'sis) [L. *perniŏ*, chilblain, + G. -ŏsis, disease]. A skin disorder due to cold. **Sx:** *chilblain*, *pernio*.

pernoston (pur-nŏs'tŏn). Barbituric acid derivative used as an anesthetic and hypnotic, as in labor.

pero-. Comb. form meaning "deformed"

perobrachiŭs (pe'rŏ-bră'kē-ŭs). Condition in which forearms and hands are deformed

perocephalus. Term applied to an individual with a defective head

perogen (pe'rŏ-jĕn). A preparation composed of 2 separate mixtures which are united in making an oxygen bath

per'om'elus. An individual with stunted, deformed limbs

peroneal (pĕr-ŏ-nĕ'ăl) [G. *peronē*, pin]. Concerning the fibula

peroneo- [G.]. Combining form, *pert*, to the fibula.

peroneum (pĕr-ŏ-nĕ'üm) [G. *peronē*, pin]. The fibula. **Syn:** *os peroneum*.

peroneus (pĕr-ŏ-nĕ'üs) [L., from G. *peronē*, pin]. One of several muscles of the leg causing motion in the foot

peronia (pe-rŏ-ni-ä). Malformation.

peroral (pĕr-or'äl) [L. *per*, through, + *os*, or-, mouth]. Via the mouth.

per os [L.]. By mouth

perŏ'sis. Condition due to abnormal or defective development

peroxidase (pe'r-ŏks'ĭ-däs) [L. *per*, through, + *ŏrys*, acid, + *ase*, enzymel. An enzyme which hastens the decomposition of peroxides, esp. of hydrogen peroxide.

The presence of this enzyme in the tissues is the cause of the bubbling seen when peroxide is poured over a cut in the skin. **Sx:** *catalase*.

peroxide (pŭr-ŏk'sid) ["" + G. *ŏrys*, acid]. In chemistry, a compound containing more oxygen than do the other oxides of the element in question.

Examples are the peroxides of hydrogen, H₂O₂; sodium, Na₂O₂; magnesium, MgO₂, and nitrogen, NO₂.

perplication (pe-pli-kă'shŭn) ["" + *pli-care*, to fold]. Inserting the cut end of an artery through an incision in its own wall to arrest bleeding.

per primam, per primam intentionem (pe'r prĕ'măm ĩn-tĕn-ti-ŏ'nĕm) [L.]. By first intention **Sx:** *healing, first intention*.

per rectum (pe'r rĕk'tŭm) [L.]. By the rectum; through the rectum.

persalt (pur'sawlt) **CHEM** A salt containing largest possible amount of an acid radical.

per secundam (pe'r se-kun'dăm) [L.]. By second intention. **Sx:** *healing, second intention*.

perseveration (pŭr-sĕv-ĕr-ă'shŭn) [L. *per-severāre*, to persist]. Continued repetition of a meaningless word or phrase, or repetition of answers which are not related to successive questions asked.

persimmon (pur-sim'ŭn) [Algonquin]. **Av. SAVING** (American): 50 Cm. **Pro.** 0.4, **Fat** 0.4, **Carbo.** 14.9. **VITAMINS:** A+, C+, **ASH CONSR:** Ca 0.002, Mg 0.009, K 0.292, Na 0.011, P 0.021, Cl 0.002, S 0.005.

personal (pŭr-sŏ-năl) [L. *persona*, a person]. Characteristic of an individual.

p. equation. In scientific observation, factors depending on personal qualities of individual observers

personality (pŭr-sŏ-năl'i-ti) [L. *persona*, person]. The unique organization of traits, characteristics and modes of behavior of an individual which sets him apart from other individuals and at

the same time determines how others react to him

P., double. **Sx:** *dual p.*

P., dual. Mental dissociation in which 1 individual shows in alternation 2 very different personalities. **Sx:** *dual personality*.

P., extroverted. That in which activities or libido are directed to other individuals or the environment

P., introverted. One in which activities or libido are directed to the individual himself

P., multiple. State in which 3 or more personalities alternate in the same individual. **Sx:** *multiple personality*.

P., neurotic. One characterized by behavior intermediate between normal and that of a neurotic individual

P., psychopathic. One who, while possessing normal intelligence, by reason of heredity or congenital conditions, becomes constitutionally lacking in moral sensibilities, emotional control and inhibitions of the will

Constitutional imbalance in the pattern of the mind, but not a disorder of function such as is observed in actual neuroses and psychoses. In other words, such a personality represents a borderline state. The inferiority of the psychopath is *emotional and not intellectual*.

P., schizoid. One characterized by withdrawal, introspection, odd and unsocial behavior

P., split. Dissociation of ideas not amenable to conscious control, as in schizophrenia.

RS consciousness, dissociation, dual p., multiple p., somnambulism, vigilambulism.

perspiration (pŭr-spir-ă'shŭn) [L. *per*, through, + *spirāre*, to breathe]. 1. Sweat. 2. Secretion and exudation of fluid by sweat glands of the skin, about 700 cc. per day

Perspiration is increased by: (a) Temperature and humidity of the atmosphere; (b) diluted blood; (c) exercises; (d) pain, (e) nausea, (f) nervousness; (g) mental excitement, (h) dyspnea; (i) diaphoretics.

It is decreased by: (a) Colds; (b) diarrhea; (c) voiding large quantities of urine, by using certain drugs.

P., insensible. P. which evaporates as fast as formed, leaving no moisture on the skin.

P., sensible. P. which occurs so as to form drops.

perspiration, words pert. to: adiahoresis, adiapneusia, anhidrosis, anhidrotic, andros, bromohyperhidrosis, bromidrosis, chorephidrosis, chromidrosis, diaphoresis, meridrosis, panidrosis, polyidrosis, secretion, sudor, sudorific, sweat-, center, sweating, transpiration, uridrosis.

perspire (pŭr-spir') [L. *per*, through, + *spirāre*, to breathe]. To excrete fluid through the skin **Syn:** *sweat*.

perstriction (pĕr-strĭk'shŭn) [L. *per*, through, + *strictus*, from *stringere*, to tighten]. Ligation of a bleeding vessel for the arrest of hemorrhage.

persulfate (pŭr-sŭl'fāt). One of a series of sulfates containing more sulfuric acid than the others in same series.

per tertiam intentionem (pe'r tĕr'ti-ăm ĩn-tĕn-ti-ŏ'nĕm) [L.]. By third intention. **Sx:** *healing, third intention*.

Perthes' disease (păr'tās). One in which changes take place in bone at head of femur with deformity resulting.

Sym: Similar to tuberculous hip joint disease. **Syn.** *osteochondritis deformans juvenilis*.

per tubam (pêr tûbâm) [L.]. Through a tube.

perturbation. State of being greatly disturbed or agitated; uneasiness of mind

pertussis (pêr-tûs'is) [“ + *tussis*, cough]. An acute, infectious disease characterized by a catarrhal stage, followed by a peculiar paroxysmal cough, ending in a whooping inspiration

Etiol. Due to a coccobacillus, *Hemophilus pertussis* (Bordet-Gengou bacillus)

Incubation: Seven to 10 days.

Sym. A blood count shows a marked lymphocytosis which may vary from 20,000 to 19,000. Often divided into 3 stages; first *catarrhal*. At this time the symptoms chiefly suggestive of the common cold—slight elevation of fever, sneezing, rhinitis, and dry cough. Irritability and loss of appetite.

After from 7 to 10 days, the second, or *paroxysmal stage*, sets in. The cough is more violent, and consists of a series of several short coughs, followed by long drawn inspiration, during which the typical whoop is heard, this being occasioned by the spasmodic contraction of the glottis

With the beginning of each paroxysm, patient often assumes a worried expression, sometimes even one of terror. The face becomes cyanosed, eyes injected, veins distended. With conclusion of the paroxysm, vomiting is common. At this time also, there may be epistaxis, subconjunctival hemorrhages, or hemorrhages in other portions of body

Number of paroxysms in 24 hours may vary from 3 to 4 up to 40 or 50. Following an indefinite period of several weeks, the stage of *decline* begins, the paroxysms grow less frequent and less violent. Nutrition of child improves, and after a period which may be prolonged for several months, the cough finally ceases.

pertussoid (pêr-tûs'oyd) [L. *per*, through, + *tussis*, cough, + G. *eidos*, resemblance]. 1. Of the nature of whooping cough. 2. A cough generally similar to that of whooping cough.

peruol (pêr'û-ôl). Oil derived from balsam of Peru used in scabies

perversion (pûr-vur'shûn) [L. *per*, through, + *versio*, a turning]. Deviation from the normal path, as in function

p., sexual. Maladjustment of sexual life in which satisfaction is sought in ways deviating from the accepted normal.

Substitution of sadism, peeping, or touching the object of one's libido, or gloating upon some possession of that object rather than the normal expression through heterosexual coition; it may take many forms of expression, such as homosexuality.

pervert (pûr-vûrt') [L. *per*, through, + *vertere*, to turn] 1. v. To turn from the normal. 2. (pûr'vûrt). n. One who has turned from the normal or right path, esp. sexually.

p., sexual. One whose sex conduct is not normal.

Many of them suffer from mental diseases, such as dementia, senility, epilepsy, and from general paralysis.

Most of them are mental degenerates suffering from psychic or physical de-

fects. Heredity plays a part in some instances. Diseases of the nervous system, alcoholism, and infections also may be responsible in part. Stigmata or malformations are often present.

pervigilium (pêr-vî-jîl'î-um) [L. *per*, through, + *vigil*, awake]. Inability to sleep. **Syn** *insomnia*, *wakefulness*.

pervious (pûr'vî-ûs) [L. *per*, through, + *via*, way]. 1. Capable of being penetrated 2 Penetrating **Syn** *permeable*.

pes (pl. pē'dēz) (pēz) [L. *pes*, *ped*, foot]. The foot or a footlike structure.

p. anserinus. Three primary branches of the facial nerve after leaving the stylomastoid foramen

p. cavus. Abnormal hollowness of the sole of the foot

p. contortus. **Syn** *talipes*, *q* Clubfoot

p. corvinus. Wrinkles at outer ocular canthus **Syn** *crow's foot*.

p. equinus. Deformity marked by walking without touching heel to the ground. **Syn** *talipes equinus*, *q.v.*

p. gigas. **Syn** *macropodia* An abnormally large foot

p. hippocampi. Lower portion of the hippocampus major

p., infraorbital. Terminal radiating branches of the infraorbital nerve after exit from the infraorbital canal.

p. planus. Flatfoot

p. valgoplanus. P. planus, *q.v.*

p. valgus. Clubfoot in which sole turns outward **Syn** *talipes valgus*.

p. varus. Clubfoot in which sole turns inward **Syn** *talipes varus*.

pessary (pēs'âr-î) [G. *pessos*, oval pebble] A device which is inserted into the vagina. It may function as a supportive structure for the uterus or as a contraceptive device

p., cup. One which has a cup-shaped hollow that fits over the os uteri.

p., diaphragm. Cup-shaped rubber p used as a contraceptive device

p., Gariel's. Inflatable hollow rubber p.

p., Hodge's. P. used to correct retro-deviations of the uterus

p., lever. P. designed according to the principles of a lever

p., ring. Round pessary

p., stem. P with stem which fits into the uterine canal

pes'simism. Morbid state of mind in which outlook toward life is gloomy or the worst interpretation is applied to events occurring, lacking in hope. **Opp** of *optimism*

pest (pēst) [L. *pestis*, plague]. 1. Fatal epidemic disease, esp. the plague. 2 A noxious, destructive insect

p.-house. Hospital for those infected with a pestilential or communicable disease.

pestiferous (pēst-îf'êr-ûs) [“ + *ferre*, to carry]. Producing a pestilence; carrying infection. **Syn** *pestilential*.

pestilence (pēst'îl-ēns) [L. *pestilential*, a widespread epidemic]. 1. An epidemic contagious disease, specifically bubonic plague. 2. An epidemic caused by such a disease.

pestilential (pēst-îl-ēn'shāl) [L. *pestilential*, a widespread disease]. Concerning or causing a pestilence. **Syn** *pestiferous*.

pestis (pēs'tis) [L. *plague*]. The plague.

pestle (pēs'l) [L. *pistillum*, pestle]. Device for macerating drugs in a mortar.

petechiae (pe-tē'ki-ē) [Italian *peteche*, a flea bite]. 1. Small, purplish, hemorrhagic spots on the skin which appear

in certain severe fevers and are indicative of great prostration, as in typhus. Also applied to similar spots occurring on mucous membranes or serous surfaces. 2. Red spots from bite of a flea.

petechial (pe-tē'ki-āl) [Italian *petechie*, a flea bite]. Marked by presence of petechiae.

petiole. A slender stalk or stem. Ex. petiole of epiglottic cartilage.

petit mal (pēt's māhl) [F. little illness].

Mild form of epileptic attack. Consciousness may be lost, but there is an absence of convulsions. SEE. *epilepsy*, *pyknolepsy*.

Petit's canal. SYN *zonular space*. A space or cleft encircling lens between points of attachment of fibers of suspensory ligament.

P.'s sinuses. Hollows in aortic and pulmonary arteries behind semilunar valves.

P.'s triangle. SYN *trigonum lumbale*. Area on lateral abdominal wall bounded by crest of ilium, post margin of ext oblique, and lateral margin of latissimus dorsi.

petrification (pēt-rī-fāk'shūn) [L. *petra*, stone, + *facere* to make]. Process of changing into stone or hard substance.

petrified (pēt-rī-fid) [L. *petra*, stone]. Changed into stone, rigid.

petrify (pēt-rī-fi) [L. *petra*, stone]. Convert into stone, make rigid.

petrissage (pā-tie-sazh') [Fr.]. A kneading movement in massage.

Performed generally by (a) The tips of the thumbs, (b) with index finger and thumb, (c) with palm of hand.

It is used principally on the extremities. The operator picks up a special muscle or tendon and, placing 1 finger on each side of the part, proceeds in centripetal motion with a firm pressure. SYN *kneading*.

petro- [L.]. Combining form meaning stone. Pert to petrous portion of temporal bone.

petrolatoma (pēt'rō-lā-tō'mā) [L. *petra*, stone, + *oleum*, oil, + G. -ōma, tumor]. Tumor or swelling caused by introduction of liquid petrolatum under the skin.

petrolatum (pēt-rō-lā'tūm) [" + *oleum*, oil]. USP. A purified semi-solid mixture of hydrocarbons obtained from petroleum.

ACTION AND USES: As a base for ointments and as a lubricant.

p. liquid. USP. A mixture of liquid hydrocarbons obtained from petroleum.

ACTION AND USES: A vehicle for medicinal substances for local applications. Light p. employed as a spray. Heavy p. given internally in treatment of constipation.

DOSAGE: 4 drams (15 cc). SEE: *mineral oil*, *paraffin*, *liquid*.

petroleum (pēt-rō-lē-um) [L. *petra*, stone, + *oleum*, oil]. An oily inflammable liquid found in the upper strata of the earth, a hydrocarbon mixture.

petro-'mastoid'. Pert to petrous portion of temporal bone and occipital bone.

petrosa (pēt-rō'sā) [L. stony]. The petrous part of the temporal bone.

petrosal (pēt-rō'sāl) [L. *petrosus*, stony]. Of, pert. to, or situated near, the petrous portion of the temporal bone.

petrositis (pēt'rō-sī'tis) [" + -itis, inflammation]. Inflamed condition of the petrous region of the temporal bone.

petro-'sphenoid'. Pert to petrous portion of temporal bone and sphenoid bone.

petro-'squa'mous'. Pert to petrous and squamous portions of temporal bone.

petrous (pēt'rūs) [G. *petra*, stone]. 1. Resembling stone. 2. Relating to the petrous portion of the temporal bone. SYN. *petrosal*.

p. ganglion. Inf. ganglion of the glossopharyngeal nerve.

Peyer's patch (pi'ēr) An aggregation of solitary nodules or groups of lymph nodules found chiefly in the ileum near its junction with the colon. Each consists of 10 to 70 nodules, forming an oval patch, varying from 12 to 20 mm. in length. They lie in the mucosa and submucosa and always occur on side of intestine opposite to attachment of mesentery. In typhoid fever, they undergo hyperplasia and often become ulcerated. Also called *aggregated* or *agminated nodules* or *follicles*.

Pfeiffer's bacillus (fīfēr). *Hemophilus influenzae*, q.v.

P.'s phenomenon. A discovery announced in 1894 that serum of guinea pigs immunized with cholera vibrios destroyed cholera organisms in peritoneal cavity of immune and nonimmune guinea pigs and that same reaction occurred *in vitro*. Also that same lytic reaction occurred with typhoid and colon bacteria.

PH. Abbr. for *Pharmacopoeia*.

pH. In chemistry, the logarithm of $\frac{1}{CH}$

or hydrogen ion (H+) concentration, a symbol used to express degree of acidity or alkalinity. The pH of a neutral solution is 7. Alkaline or basic solutions range from pH 7 to pH 14; acid solutions range from pH 1 to pH 7.

The pH of a solution may be determined electrically by a pH meter or colorimetrically by the use of indicators. A list of indicators and the pH range registered by each is given under *indicator*, q.v.

The following table is for orientation.

Material	pH
Decinormal HCl	1.0
Gastric juice	1.0 to 1.3
Thousandth-normal HCl	3.0
Pure water (neutral)	7.0
Blood plasma	7.3 to 7.5
Pancreatic juice	8.4 to 8.9
Thousandth-normal NaOH	11.0
Decinormal NaOH	13.0

phacitis (fā-sī'tis) [G. *phakos*, lens, + -itis, inflammation]. Inflamed condition of the crystalline lens. SYN *phakitis*.

phaco- [G.]. Prefix, pert. to lens of the eye.

phacoanaphylaxis (fāk'ō-ān-ā-flī-āk'sis) [G. *phakos*, lens, + *ana*, up, + *phylaxis*, a guard]. Hypersensitivity to protein of the crystalline lens.

phacocoele (fāk'ō-sēl) [" + *kēlē*, swelling]. Displacement of the crystalline lens into the int. chamber of the eye.

phacocyst (fāk'ō-sist) [" + *kystis*, a sac]. Capsule of the crystalline lens.

phacocystectomy (fāk'ō-sis-tēk'tō-mī) [" + " + *ektomē*, excision]. Surgical excision of part of crystalline lens capsule for cataract.

phacocystitis (fāk'ō-sis-tī'tis) [" + " + -itis, inflammation]. Inflamed condition of capsule of crystalline lens.

phacoeresis (fāk'ō-ēr-ē'sis) [" + *erēsis*, removal]. Removal of crystalline lens by suction method.

phacoglaucoma (fāk'ō-glāw-kō'mā) [" + *glaukos*, green, + -ōma, tumor]. Glaucoma and the changes it induces in the crystalline lens. SEE: *glaucoma*.

phacohymentitis (fāk'ō-hī-mēn-tis). In-

flamed condition of capsule of crystalline lens

phacoid (fāk'oyd) [G. *phakos*, lens, + *eidos*, form]. Lentil or lens-shaped.

phacodscope (fāk'oyd'ō-skōp) [" + *skopein*, to examine]. Instrument for observing accommodative changes of the lens. SYN *phacoscope*.

phacolysis (fāk-ol'i-sis) [" + *lysis*, dissolution]. 1 Dissection and removal of the lens of the eye in treatment of cataract. 2 Any dissolution or disintegration of the crystalline lens.

phacomalacia (fāk'ō-mal-ā'si-ā) [" + *malakia*, softening]. A softening of the lens usually due to a soft cataract.

phacomatosis. SYN *neurodermatosis*. One of a group of diseases, congenital and probably hereditary in origin, manifested by cutaneous and neurologic syndromes. They include the following *neurofibromatosis* (von Recklinghausen's disease), *von Hippel-Lindau disease*, *Sturge-Weber syndrome*, and *tuberous sclerosis*.

phacometachoresis (fāk'ō-mēt-ā-kō-rē'sis) [" + *metachōresis*, displacement]. Dislocation of the crystalline lens. SYN: *phacocoele*.

phacometer (fāk-ōm'ēt-ēr) [" + *metron*, measure]. Device for ascertaining refractive power of a lens.

phacoplanesis (fāk'ō-plān-ē'sis) [" + *planēsis*, a wandering]. Abnormal mobility of the crystalline lens.

phacosclerosis (fāk'ō-sklē-rō'sis) [G. *phakos*, lens, + *sklērosis*, a hardening]. Hardening of the crystalline lens of eye.

phacoscope (fāk'ō-skōp) [" + *skopein*, to examine]. Instrument for observing change of curvature of crystalline lens during accommodation.

phacoscotismus (fāk'ō-skō-tās'mūs). Clouding of crystalline lens of the eye.

phag-, phago-. Combining form meaning an *eater*, or pertaining to ingestion or engulfing.

phage (fā) [G. *phagēin*, to eat]. A particulate, transmissible, ultramicroscopic substance which dissolves or exerts a lytic effect upon bacteria. SEE *bacteriophage*.

phagedena (fāj-ēd-ē'nā) [G. *phagedaina*, a cancerous sore]. A sloughing ulcer that spreads.

p., sloughing. Hospital gangrene.

phagedenic (fāj-e-dē'nik) [G. *phagedaina*, a cancerous sore]. Concerning, or of the nature of, phagedena.

phagocyte (fāg'ō-sīt) [G. *phagēin*, to eat, + *kytos*, cell]. A cell which has the ability to ingest and destroy particulate substances such as bacteria, protozoa, cells and cell debris, dust particles, and colloids. Ex. Cells of the reticuloendothelial system (macrophages or histiocytes, reticular cells of lymph nodes, Kupffer's cells of liver, dust cells of lung) and leukocytes.

There are 2 classes: *macrophages*, or large mononucleated cells, which ingest dead tissues and cells, and *microphages*, which ingest bacteria.

RS *histiocyte macrophage, reticuloendothelial system*

phagocytic (fāg'ō-sīt'ik) [" + *kytos*, cell]. Concerning phagocytes or phagocytosis.

p. index. The average number of bacteria ingested by each leukocyte, after incubation of the bacteria in a mixture of serum and bacterial culture. SEE *opsonic index*.

phagocytolysis (fāg'ō-sīt'ōl'is) [" + *lysis*, dissolution]. Destruction or

disintegration of phagocytes. SYN: *phagolysis*.

phagocytolytic (fāg'ō-sīt'ōl't'ik) [" + *lysis*, dissolution]. Destroying phagocytes.

phagocytosis (fāg'ō-sīt'ō'sis) [G. *phagēin*, to eat, + *kytos*, cell, + *-osis*, intensive]. Ingestion and digestion of bacteria and particles by phagocytes.

PHAGOCYTOSIS.

A small drop of blood was mixed with a drop of a suspension of dead streptococci, the mixture was kept at 37° C for 20 minutes. A smear examined under the microscope was found to show (1) polys containing streptococci in their cytoplasm, (2) polys which did not contain streptococci, and (3) a few chains of streptococci which lay free in the medium and must have escaped phagocytosis.

phagodynamometer (fāg'ō-dī-nām-ōm'ēt-ēr) [" + *dynamis*, power, + *metron*, measure]. Device which measures energy expended in chewing.

phagokaryosis (fāg'ō-kar-i-ō'sis) [" + *karyon*, nucleus, + *-osis*, intensive]. Phagocytic action which is performed by a cell nucleus.

phagolysis (fāg-ol'i-sis) [" + *lysis*, dissolution]. Disintegration of phagocytes. SYN *phagocytolysis*.

phagomania (fāg'ō-mā'nī-ā) [" + *mania*, madness]. Abnormal craving for food.

phagoprism (fāg'ō-pī'rizm) [" + *pvr*, fever, + *ismos*, condition]. Hyper sensitivity to certain foods which induce symptoms of poisoning upon ingestion.

phagotherapy (fāg'ō-thēr-ā-pī) [" + *therapeia*, treatment]. Treatment by feeding or overfeeding.

phakitis (fāk-it'is) [G. *phakos*, lens, + *-itis*, inflammation]. Inflamed condition of the crystalline lens. SYN: *phacitis*.

phakolysis (fāk-ol'is-is) [" + *lysis*, dissolution]. Disintegration or removal of the crystalline lens. SYN: *phacolysis*.

phalacrois (fāl-āk-rō'sis) [G. *phalakrōsis*, baldness]. Baldness. SYN: *alopecia*.

phalacroitic (fāl-āk-rōi't'ik) [G. *phalakrōsis*, baldness]. Bald; baldheaded.

phalacrous (fāl-āk'rūs) [G. *phalakrōsis*, baldness]. Bald. SYN: *phalacroitic*.

phalangeal (fāl-lān'jē-āl) [G. *phalagx*, row]. Concerning a phalanx.

p. cells, inner. A row of cells along surface of inner pillar cells in the organ of Corti.

p. cells, outer. SYN: *cells of Deiters*. Cells arranged in rows which support the outer hair cells in the organ of Corti.

phalangectomy (fāl-lān-jēkt'ō-mī) [" + *ektomē*, excision]. Excision of 1 or more phalanges.

phalanges (fāl-lān'jēz) (sing. *phalanx*) [G.

phalagx, row]. 1. Bones of a finger or toe. *See* **skeleton**.

phalangitis (fā-lān-'jītis) [“ + -itis, inflammation]. Inflamed condition of 1 or more phalanges.

phalanx (fā'lānx) (pl. *phalanges*) [G. row]. 1. Any 1 of the bones of fingers or toes. 2. One of a set of plates formed of phalangeal cells (inner and outer) forming the reticular membrane of the organ of Corti.

p., distal. The one most remote from the metacarpus or metatarsus.

p., metacarpal, p., metatarsal. *See* **p., proximal**.

p., middle. The p. (where there are 3) intermediate between distal and proximal phalanges.

p., proximal. The p. articulating with a metacarpal or metatarsal bone.

p., terminal, p., ungual, p., ungular. *See* **p., distal**.

phallalgia (fāl-āl-'jī-ā) [G. *phallos*, penis, + *algos*, pain]. Pain in the penis.

phallic (fāl'ik) [G. *phallos*, penis] Concerning the penis.

phallitis (fāl-'ītis) [“ + -itis, inflammation] Inflamed condition of the penis.

phallogocampsia (fāl-ō-kāmp'sis) [“ + *kampsis*, a bending] Painful downward curvature of penis when erect, seen in gonorrhea. *See* **chordae**.

phallogynia (fāl-ō-dīn'ī-ā) [“ + *odynē*, pain] Pain in the penis. *See* **phallalgia**.

phallogid (fāl'oyd) [“ + *eidos*, form]. Similar to a penis.

phallogocis (fāl-on'kūs) [“ + *ogkos*, a mass] Tumor or swelling on the penis.

phallogoplasty (fāl-ō-plās'tī) [“ + *plassein*, to form] Reparatory or plastic surgery on the penis.

phalloghagia (fāl-ō-rā'jī-ā) [G. *phallos*, penis, + *rhōgnunai*, to flow forth]. Flow of blood from the penis.

phallus (fāl'ūs) [G. *phallos*, penis]. 1. The penis, the male generative organ. 2. An artificial penis, used as a symbol. 3. Embryonic structure developing at tip of genital tubercle which in the male develops into the penis, in the female, the clitoris.

phanero-, phaner- [G.] Combining forms meaning *evident, visible*.

phaneromania (fān-ēr-ō-mā'nī-ā) [G. *phaneros*, visible, + *mania*, madness]. Abnormal tendency to bite the nails, pick or scratch the skin.

phaneroscope (fān-ēr-ō-skōp) [“ + *skopein*, to examine]. Instrument for securing transparency of skin by illumination.

phaneroscopy (fān-ēr-ōs'kō-pī) [“ + *skopein*, to examine] Observation of skin by phaneroscope. Use of a lens to concentrate light in examination of skin lesions.

phanerosis (fān-ēr-ō'sis) [“ + -ōsis, intensive]. The process of becoming visible.

phanic (fān'ik) [G. *phanēin*, to show] Manifest; apparent.

phantasia (fān-tā'zī-ā) [G. *phantasia*, a showing]. An appearance that is imaginary.

phantasm (fān'tāzm) [G. *phantasma*, appearance]. An optical illusion; an apparition, or illusion of something that does not exist.

phantasmatomoria (fān-taz'māt-ō-mō'rī-ā) [“ + *moria*, folly]. Dementia with silly fancies; childishness in the demented.

phantasy (fān'tā-sī) [G. *phantasia*, appearance]. A daydream.

Phantasy-thinking is a form of wish fulfillment, a disregard for reality which one would escape through revelling in imaginative possibilities.

RS delirium, delusion, hallucination, hysteria, illusion, phobia.

phantom (fān'tum) [G. *phantasma*, an appearance]. 1. An apparition. 2. A model of the body or of 1 of its parts.

p. corpuscle. A colorless erythrocyte.

p. limb. An illusion following amputation of a limb that the limb still exists. The sensation that pain exists in the removed part is known as **phantom limb pain**.

p. pregnancy. Pseudopregnancy, *qv*.

p. tumor. An apparent tumor due to muscular contractions or flatus seen in hysterics.

pharmaceutical (fār'māk-āl) [G. *pharmakon*, drug]. Concerning pharmacy.

pharmaceutic (fār-mā-sū'tik-āl) [G. *pharmakeutikos*, pert. to a drug]. Concerning drugs or pharmacy.

pharmaceutics (fār-mā-sū'tiks) [G. *pharmakon*, drug]. Science of dispensing medicines. *See* **pharmacy**.

pharmacist (fār'mā-sist) [G. *pharmakon*, drug]. A druggist, one licensed to prepare and dispense drugs. *See* **apothecary**.

pharmaco- [G.] Combining form meaning *drug, medicine, poison*.

pharmacodiagnosis (fār'mā-kō-dī-āg-nō'sis) [G. *pharmakon*, drug, + *dia*, through, + *gnosis*, knowledge]. Use of drugs in making a diagnosis.

pharmacodynamics (fār'mā-kō-dī-nām'iks) [“ + *dynamis*, power]. Study of drugs and their reactions.

pharmacognosy (fār'mā-kog'nō-sī) [“ + *gnōsis*, knowledge] The science of crude drugs, their physical, botanical and chemical properties.

pharmacography (fār'mā-kog'rā-flī) [“ + *graphein*, to write]. Treatise on the properties of drugs.

pharmacology (fār-mā-kōl'ō-jī) [G. *pharmakon*, drug, + *logos*, a study] The study of drugs, their origin, nature, properties and their effects upon living organisms.

pharmacomania (fār'mā-kō-mā'nī-ā) [“ + *mania*, madness]. Abnormal desire for giving or taking medicines.

pharmacopodia (fār'mā-kō-pē'dī-ā) [“ + *paideia*, education] Information concerning drugs and their preparation.

pharmacopeia (fār'mā-kō-pē-ā) [G. *pharmakon*, drug, + *poiein*, to make]. Authorized treatise on drugs and their preparation, esp. a book containing formulas and information concerning drugs which is a standard for their preparation and dispensation.

Pharmacopeia, United States. *Abbr* U.S.P.; U.S. Phar. A pharmacopeia issued every five years prepared under supervision of a national committee of pharmacists.

The United States Pharmacopeia was adopted as standard in 1906.

pharmacophobia (fār'mā-kō-fō'bī-ā) [“ + *phobos*, fear]. Abnormal fear of taking medicines.

pharmacopsychosis (fār'mā-kō-sī-kō'sis) [“ + *psychē*, soul, + -ōsis, disease]. Addiction to drugs.

pharmacotherapy (fār'mā-kō-thēr-ā-pī) [“ + *therapeia*, treatment]. Use of medicine in treatment of disease.

pharmacy (fār'mā-sī) [G. *pharmakon*, drug]. 1. The practice of compounding

and dispensing medicinal preparations.

2 A drugstore

pharyngalgia (fâr-in-gâl'jî-â) [G. *pharygx*, pharynx, + *algos*, pain]. Pain in the pharynx. *SYN*: *pharyngodynia*.

pharyngeal (fâr-in'jê-âl) [G. *pharygx*, pharynx]. Concerning the pharynx.

p. bursa. A small, inconstant, blind sac often present in lower portion of pharyngeal tonsil

p. hypophysis. A small structure anterior to pharyngeal bursa. It is derived from lower portion of Rathke's pouch and occasionally gives rise to a cyst or tumor

p. reflex. Attempt to swallow following any application of stimulus to pharynx

p. tonsil. Lymphoid tissue on post. sup wall of the pharynx. When hypertrophied called "adenoids"

pharyngectomy (fâr-in-jêk'tô-mî) [" + *ektomê*, excision]. Partial excision of the pharynx to remove growths, abscesses, etc.

pharyngemphraxis (fâr-in-jêm-frâks'is) [" + *emphraxis*, stoppage]. Pharyngeal obstruction.

pharyngismus (fâr-in-jiz'mûs) [" + *ismos*, condition]. Spasm of the muscles in the pharynx. *SYN*: *pharyngospasm*.

pharyngitis (fâr-in-jî'tis) [" + *-itis*, inflammation]. Inflammation of pharynx, usually associated with rhinitis

p., acute. *SYM*. Malaise, slight rise in temperature, dysphagia, pain in throat, postnasal secretion

TREATMENT Local intranasal medication, gargles, lozenges, topical application to oral pharynx. *General* Catharsis, salicylates, fluids

p., atrophic. Chronic form with some atrophy of mucous glands and abnormal secretion. *SYN*: *p. sicca*.

p., chronic. Associated with pathology in nose and sinuses, mouth breathing, excessive smoking and chronic tonsillitis.

SYM: Dryness and irritation of throat, cough.

TREATMENT Intranasal medication and removal of sinus pathology, tonsillectomy, cauterization of hypertrophic lymph follicles if present on post. pharyngeal wall.

p., croupous. P with the false membrane of croup.

p., diphtheritic. Sore throat with general symptoms of diphtheria

p., follicular. *SEE*: *granular p.*

p., gangrenous. G inflammation of mucous membrane of pharynx. *SYN*: *angina maligna*, *cynanche maligna*.

p., granular. P. with granulations seen on the pharynx. *SYN*: *clergyman's sore throat*.

p., hypertrophic. A chronic form with thickened, red mucous membrane on each side with glazed central portion.

p. sicca. *SEE*: *p. atrophic*

p. ulcerosa. P. with fever, pain and the formation of ulcerations

pharyngo- [G.]. Combining form pertaining to the pharynx

pharyngoamygdalitis (fâr-in'gô-âm-ig-dâl'itis) [G. *pharygx*, pharynx, + *amygdalon*, tonsil, + *-itis*, inflammation]. Inflamed condition of the pharynx and tonsil.

pharyngocele (fâr-in'gô-sêl) [" + *kêlê*, hernia]. Hernia through pharyngeal wall.

pharyngodynia (fâr-in'gô-dîn'î-â) [" + *odynê*, pain]. Pain in the pharynx. *SYN*: *pharyngalgia*.

pharyngokeratosis (fâr-in-gô-kêr'â-tô'sis). Thickening and hardening of mucous lining of pharynx

pharyngolaryngitis (fâr-in'gô-lâr-in-jî'tis) [" + *larygx*, larynx, + *-itis*, inflammation]. Inflamed condition of pharynx and larynx.

pharyngolith (fâr-in'gô-lith) [" + *lithos*, stone]. Concretion in pharyngeal walls.

pharyngology (fâr-in-gô'lô-jî) [" + *logos*, a study]. Branch of medicine dealing with the pharynx

pharyngolysis (fâr-in-gô'lî-tis) Paralysis of the pharynx

pharyngomycosis (fâr-in'gô-mî-kô'sis) [" + *mykê*, fungus, + *-osis*, disease]. Disease of pharynx due to fungi

pharyngoparalysis (fâr-in'gô-pâr-âl'î-tis) [G. *pharygx*, pharynx, + *paralysis*, a loosening of the side]. Paralysis of the muscles of the pharynx. *SYN*: *pharyngoplegia*.

pharyngopathy (fâr-in-gôp'âth-î) [" + *pathos*, disease]. Any disorder of the pharynx

pharyngoperistole (fâr-in'gô-pêr-îs'tô-lê) [" + *peristole*, a drawing out]. Narrowing or stricture of the lumen of the pharynx

pharyngoplasty (fâr-in'gô-plâs'tî) [" + *plassein*, to form]. Reporative surgery of the pharynx

pharyngoplegia (fâr-in'gô-plê'jî-â) [" + *plêgê*, a stroke]. Paralysis of muscles of pharynx. *SYN*: *pharyngoparalysis*.

pharyngorhinitis (fâr-in'gô-rî-nî'tis) [" + *ris*, *rin*, nose, + *-itis*, inflammation]. Inflamed condition of the nasopharynx

pharyngorhinocopy (fâr-in'gô-rî-nô's'kô-pl) [" + *+* + *skopein*, to examine]. Inspection of the nasopharynx and posterior nares.

pharyngorrhea (fâr-in-gô-rê'â) Discharge of mucus from the pharynx

pharyngoscope (fâr-in'gô-skôp) [G. *pharygx*, pharynx, + *skopein*, to examine]. Instrument for examination of the pharynx.

pharyngoscopy (fâr-in-gô's'kô-pl) [" + *skopein*, to examine]. Examination of the pharynx

NP: Watch for difficult breathing and cyanosis from edema. Steam inhalations are sometimes ordered

pharyngospasm (fâr-in'gô-spâzm) [" + *spasmos*, a spasm]. Spasmodic contraction of muscles of the pharynx. *SYN*: *pharyngismus*.

pharyngotherapy (fâr-in'gô-thêr'â-pî) [" + *therapeia*, treatment]. Treatment of pharyngeal disturbances or diseases.

pharyngotome (fâr-in'gô-tôm) [" + *tomê*, an incision]. Instrument for incision of the pharynx

pharyngotomy (fâr-in-gô'tô-mî) [" + *tomê*, a cutting]. Incision of the pharynx.

pharynx (pl. *pharynges*) (fâr'înk) [G. *pharygx*, *pharynx*]. A musculomembranous tube extending from base of skull above to level of the 6th vertebra below where it becomes continuous with the esophagus. Upper portion is lined with pseudostratified ciliated epithelium, middle portion with stratified columnar epithelium, and lower portion with stratified squamous epithelium.

Communicates with post. nares, eustachian tube, mouth, esophagus and larynx. *Nasopharynx* part above the palate, *oropharynx* bet. palate and hyoid bone, and *laryngopharynx* part below the hyoid bone.

NERVES: Autonomic, vagus, glossopharyngeal.

BLOOD VESSELS: Branches from the ext. carotid artery. Veins form an extensive pharyngeal plexus and drain into int. jugular vein.

FUNCTION Serves as passageway for air from nasal cavity to larynx and food from mouth to esophagus. Also acts as a resonating cavity.

phase (fáz) [G. *phasis*, a showing]. 1. A stage of development. 2. A transitory appearance. 3. The state of a component of a heterogeneous system, as when oil is mixed with water, which is homogeneous throughout itself and bounded by an interface with other phases of the system.

p., continuous. State of substance in a heterogeneous system in which particles are continuous. **Ex:** The water particles in which oil has been dispersed.

p., contrast microscope. SEE. microscope, phase

p., disperse. State of a substance in a heterogeneous system in which particles are separated from each other. Also called *discontinuous phase*. **Ex:** Oil particles in water

phasic (fá'sik). Of or pertaining to a phase

p. irregularity. Periodic slowing of heart beat such as occurs during convalescence from certain diseases. Cause unknown

phatne (fát'nē) [G. *phatnē*, socket]. Socket for a tooth.

phatnoma (fát-nó'má) [' + -óma, tumor]. Tumor of a tooth socket.

phatnorrhagia (fát'nó-rá'ji-á) [' + *rēgnunai*, to burst forth]. Hemorrhage from the socket of a tooth.

phenate (fē'nat). A salt of phenic acid.

phenazone (fē'ná-zōn). SEE. antipyrene.

phenetidinuria (fēn-ēt'id-in-ú'ri-á). Phenetidin in the urine

phengophobia (fēn-gō-fō'bi-á) [G. *phengos*, light, + *phobos*, fear]. Abnormal dread of light. **Syn.** *photophobia*.

phenic acid (fē'ník). Carbolic acid, *q.v.*

phenobarbital (fē'nó-bar'bi-tál). **Syn:** *luminal*, *phenylethylmalonylurea*. Phenylethylbarbituric acid, a white crystalline substance soluble in alcohol

ACTION AND USES A hypnotic sedative and antispasmodic. Used in treatment of epilepsy

DOSEAGE $\frac{1}{4}$ to 2 gr. (0.015-0.12 Gm.).

p. sodium. (soluble phenobarbital). More rapidly absorbed than phenobarbital

phenol (fē'nól). C_6H_5OH , **USP.** 1. A crystalline, colorless or light pink, solid melting at 43° C., obtained from the distillation of coal tar, having a characteristic odor, and dangerous because of its rapid corrosive action on tissues. **Syn.** *carbolic acid*. 2. Any of the aromatic hydroxyl derivatives of benzene of which phenol is the type.

POISONING: **Sym.** Strong solutions cause burning, pain and later anesthesia. The skin and mucous membrane first become pale, then grayish white, opalescent and finally brown to black. Even a 5 per cent solution may cause local gangrene. It is absorbed from intact skin wounds and mucous membrane to cause general effects, including collapse and coma. When taken by mouth, it causes whitish discoloration of mucous membranes, intense burning, nausea and vomiting, followed shortly by faintness, weakness and collapse. Pulse slow and weak. Perspiration is increased, and it causes renal damage.

F. A. TREATMENT: Remove poison from stomach as soon as possible. Emetics such as ipecac or mustard may fail to function because of anesthetic effect of phenol or their action may be dangerous. If corrosion has occurred, a well-lubricated stomach pump should be used with caution. Give oil at once in large quantities. Olive oil dissolves phenol without hastening absorption. Give extensive lavage with olive oil leaving some in stomach. Do not use ethyl alcohol as lavage fluid as it speeds absorption of phenol. Following this, demulcents such as olive oil, cream, or mucilage of tragacanth should be given. Lime water is frequently used as a chemical antidote, also the sulfates, sodium sulfate being the salt of choice. About an ounce of the latter preparation may be introduced through the tube after the stomach has been emptied. Large amounts of liquid petroleum have been recommended as an antidote. Shock should be combated. A guarded prognosis should always be given, for should the patient improve at first, damage to the mucous membrane and absorption of phenol may lead to serious complications later. Skin burns with phenol should be first cleansed with a solution of alcohol and then treated as burns from any other cause.

p. red. An indicator used in determining hydrogen ion concentration.

phenolphthalein (fē'nól-thál'ē-in, fē'nól-thál'ēn). **USP.** A white, yellowish, crystallized powder, produced by the interaction of phenol and phthalic anhydride.

ACTION AND USES As a laxative.

DOSEAGE: 1 gr. (0.06 Gm.). SEE. indicator.

phenolsulfonphthalein (fē'nól-sul'fōn-thál'ēn). Phenol compound used to test renal function and as an indicator. **Syn.** *phenol red*.

phenoltetrachlorophthalein (fē'nól-tēt'rā-klōr-thál'ēn). A phenol compound used to test function of the liver and as a purgative.

phenoluria (fē'nól-ú'ri-á) [*phenol* + G. *ouron*, urine]. Elimination of phenols in the urine.

phenomenon (fē-nóm'ē-nōn) [G. *phainomenon*, appearing]. A change perceivable by the senses that occurs in an organ or vital function; a symptom.

p., Bell's. Rolling of the eyeballs upward and outward when an attempt is made to close the eye affected in peripheral facial paralysis.

phenotype (fē'nō-tip). The physical appearance or makeup of an individual. Some phenotypes, such as the blood-groups, are completely determined by heredity, while others, such as hair color, are readily altered by environmental agents. In genetics, a group of individuals who resemble each other in appearance but may differ in genetic makeup. SEE. *genotype*.

phenozygous (fē-nō'zī-gūs). Possessing a cranium much narrower than the face

phenyl (fē'níl). In chemistry, the univalent radical of phenol C_6H_5 .

phenylhydrazine (fē'níl-hī'drā-zēn). Oily nitrogenous base used as a test for presence of sugar.

phenylketonuria (fēn-il-kē'tō-nú'ri-á). 1. Phenylpyruvic acid in the urine. 2. A mental disease caused by the body's failure to oxidize an amino acid (phenylalanine) to tyrosine, perhaps because of a defective enzyme. One per

cent of two million mental defectives suffer from this disease.

phenylpyruvic acid (fēn-il-pī-rū'vik). A metabolic derivative of phenylalanine. *p. a. amentia*. *Sx:* *p. a. oligophrenia*.

p. a. oligophrenia. A form of inherited mental deficiency resulting from an inborn error of metabolism. Characterized by inability to oxidize phenylpyruvic acid which is excreted in urine. Defect is congenital and familial.

pheochromocytoma (fē'o-kro'mo-sī-to'-mah) [G. *phaios*, dusky + *chrōma*, color + *cyto*, cell + *-ōma*, tumor]. *Syn:* *medullary chromaffinoma*, *medullary paraganglioma*. A chromaffin cell tumor producing hypertension by excreting epinephrine and norepinephrine. It usually occurs in the adrenal medulla but may arise in other chromaffin tissues. Is usually benign.

Ph.G. Abbr. for 1. Graduate in Pharmacy. 2. German Pharmacopoeia.

phial (fī'āl) [G. *phialē*, a bowl]. A small vessel for medicine, a vial.

-philia. Combining form meaning love for, tendency towards, craving for.

phloneism (flō'ō-nē'izm) Excessive love or fondness for newness or change. *Opp.* of *misoneism*.

philt'r, philt're. A potion or drug which is supposed to induce love or promotes sexual activity.

philt'rum. A median groove on external surface of upper lip.

phimosi (fī-mō'sis) [G. a muzzling]. Stenosis or narrowness of preputial orifice so that the foreskin cannot be pushed back over the glans penis.

Treatment: Circumcision. *Sx:* *capitration*.

p. vaginalis. Narrowness or closure of the vaginal orifice.

phlebangioma (flēb-ān-jī-ō'mā) [" + *aggeion*, vessel, + *-ōma*, tumor]. An aneurysm occurring in a vein.

phlebarteriectasia (flēb'ār-tē'rī-ēk-tā'-zī-ā) [" + *arteria*, artery, + *ektasis*, dilatation]. Varicose aneurysms; dilatation of blood vessels.

phlebarteriodialysis (flēb'ār-tē'rī-ō-dī-āl'-is) [" + *dialysis*, separation]. Arteriovenous aneurysm

phlebectasia, phlebectasis (flēb-ēk-tā'-zī-ā, -ēk-tā'-sis) [" + *ektasis*, dilatation]. Venous dilatation. *Syn:* *varicosity*.

phlebectomy (flēb-ēk-tō-mī) [" + *ektomē*, excision]. Surgical removal of a vein.

phlebectopia (flēb-ēk-tō-pī-ā) [" + *ek*, out, + *topos*, place]. Abnormal position of a vein.

phlebemphraxis (flēb-ēm-frāk'sis) [G. *phleps*, *phleb-*, vein, + *emphraxis*, a stopping]. Artificial obstruction of a vein.

phlebh hepatitis (flēb-hēp-ā-tī'tis) [" + *ēpat*, *ēpat-*, liver, + *-itis*, inflammation]. Inflammation of the hepatic vein.

phlebisus (flēb-iz'mūs) [G. *phleps*, *phleb-*, vein, + *ismos*, condition]. Venous congestion and dilatation.

phlebitis (flē-bī'tis) [G. *phleps*, *phleb-*, vein, + *-itis*, inflammation] *Syn:* *phlebothrombosis*, *phlegmasia alba dolens*, *milk leg*, *thrombophlebitis*, inflammation of a vein.

Error: Unknown. May occur in acute or chronic infections or following operations or childbirth.

Sym: Pain and tenderness along course of vein; discoloration of skin; inflammatory swelling, and acute edema below obstruction; rapid pulse; rigors;

elevation of temperature; dry, brown tongue; pain in joints

p., adhesive. P. in which vein tends to become obliterated

p., migrating. A transitory p. which appears in a portion of a vein, then clears up only to reappear later in another location.

p. nodularis necroticans. Circumscribed inflammation of cutaneous veins resulting in nodules which ulcerate.

p., obliterative. P. in which the lumen of a vein becomes closed. Also called *obstructive* or *adhesive phlebitis*

p., plastic. Adhesive phlebitis, *q.v.*

p., proliferative. Adhesive phlebitis

p., puerperal. Venous inflammation following childbirth.

p., sclerosing. P. in which the veins become obstructed and hardened

p., sinus. Inflammation of a sinus of the cerebrum.

p., suppurative. P. characterized by the formation of pus

phlebo-. Combining form meaning vein.

phlebocholosis (flēb'ō-kō-lō'sis) [G. *phleps*, *phleb-*, vein, + *chōlos*, maimed]. Diseased condition of a vein.

phleboclysis (flēb-ōk-lī-sis) [" + *klysis*, injection]. The introduction of an isotonic solution of dextrose or other substances into a vein.

p., drip. Injection, intravenously, drop by drop. *See* *Murphy's drip*

phlebogram (flēb'ō-grām) [G. *phleps*, *phleb-*, vein, + *gramma*, a mark]. A record of the venous pulse

phlebography. A study of the structure and function of the veins

phlebold. Pert to, resembling, or of the nature of a vein, venous

phlebolite, phlebolith (flēb'ō-lī-t, -līth) [G. *phleps*, *phleb-*, vein, + *lithos*, a stone]. A calcareous concretion in a vein resulting from calcification of a thrombus

phle'bolithia'sis. The formation of phleboliths in veins

phlebology (flēb-ō-lō-jī) [" + *logos*, study]. The science of veins and their diseases.

phlebometritis (flēb'ō-me-trī'tis) [" + *mētra*, uterus, + *-itis*, inflammation]. Inflammation of uterine veins

phlebomyomatosis (flēb'ō-mī'ō-mā-tō'sis) [" + *mys*, *my-*, muscle, + *-ōma*, tumor, + *-ōsis*, disease]. Thickening of the tissue of a vein from overgrowth of muscular fibers.

phlebopexy (flēb'ō-pēks'ī) [G. *phleps*, *phleb-*, vein, + *pēksis*, fixation]. Extracereous transplantation of the testes for varicocele, with preservation of venous network.

phleboplasty (flēb'ō-plās'tī) [" + *plassein*, to form]. Plastic repair of a wounded vein.

phle'boplero'sis. Condition in which veins are distended

phleborrhaphy (flēb-or-āf-ī) [" + *raphē*, a sewing]. Suture of a vein.

phleborrhexis (flēb-or-rēks'is) [" + *rēxis*, a rupture]. Rupture of a vein.

phlebosclerosis (flēb'ō-sklē-rō'sis) [" + *sklērosis*, a hardening]. Fibrous hardening of a vein's walls.

phlebotasis, phlebotaxis (flēb-ō-stā'-zī-ā, -ōs'tā'-sis) [" + *stasis*, a standing]. Compression of veins temporarily removing an amount of blood from the general circulation. *Syn.* *phlebotomy*, *bloodless*.

phlebothrombosis (flēb'ō-thrōm-bō'sis) [" + *thrombos*, a clot]. Clotting in a vein; phlebitis with secondary thrombosis.

phlebotome (flēb'ō-tōm) [G. *phleps*, *phleb-*, vein, + *tomē*, a cutting]. Lancet used in cutting a vein.

Phlebotomus. A genus of insects, the sandflies, belonging to the family Psychodidae, order Diptera. They are annoying bloodsucking insects and transmit various forms of leishmaniasis, sandfly (papatasi) fever, and Oroya fever.

P. argentipes. In India, the transmitter of *Leishmania donovani*, causative agent of kala-azar.

P. chinensis. Transmitter of kala-azar in China.

P. papatasi. Transmitter of the causative agent of sandfly fever. The virus is capable of being transmitted through the offspring of flies.

P. sergenti. Transmitter of kala-azar in Middle East and India.

P. verrucarum. In So. America, the transmitter of *Bartonella bacilliformis*, causative agent of Oroya fever (Carrión's disease).

phlebotomy (flēb-ōt-ō-mī) [“ + tomē, an incision]. Opening a vein. SYN. venesection, q.v.

p., bloodless. Compression of veins of the extremities, cutting off some of the blood from the general circulation. SYN. phlebotasia.

phlegm (flēm) [G. *phlegma*, inflammation]. 1. Thick mucus, esp. that from the respiratory passages. 2. One of the 4 “humors” of early physiology.

phlegmasia (flēg-mā’zī-ā) [G. *phlegmasia*, inflammation]. Inflammation.

p. alba dolens. Acute edema, esp. of leg from venous obstruction, usually thrombosis.

SYM Usually begins, esp in lying-in women, with slight rigors, and febrile phenomena, pain in lower part of abdomen follows, extends to hips and back, passes under Poupart's ligament and thence down the thigh into calf of leg. Sometimes proceeds from calf upwards. Whole extremity becomes excessively swollen, hot and painful, but not red, hence the name. The lochia and milk may or may not be suppressed. Constitutional disturbance and fever become greatly increased.

Tenderness on pressure most marked along course of femoral vein and veins of the affected region together with associated lymphatics may be felt to be hard and cordlike. Sometimes marked by faint red line. Progress rapid, which frequently doubles size of limb in 24 hours or less, parts within pelvis become irritable, often difficulty in evacuating bladder and rectum; glands in groin sometimes swell and suppurate, and abscesses may form in different parts of limb.

TREATMENT Elevate limb and apply warm fomentations. Where supuration is inevitable, poultices of linseed meal beneficial. Constitutional remedies. During inflammatory stage diet should be very simple. Later, milk, broths, soft boiled eggs, fruits, vegetables, etc. Strict cleanliness and ventilation.

NP Complete rest, immobilization of the limb. There is danger of a piece of thrombus* becoming detached to form an embolus.* No excitement. Six weeks in bed. SYN: milk leg, white leg.

p., cellulitic. Septic inflammation of connective tissue of the leg following childbirth.

p. malabarica. Inflammation with hypertrophy and induration of the skin. SYN: elephantiasis.

p., thrombotic. SEE: p. alba dolens.

phlegmatic (flēg-māt’ik) [G. *phlegmatikos*, inflamed]. Of sluggish or calm temperament. SYN: apathetic.

phlegmon (flēg’mōn) [G. *phlegmonē*, inflammation]. Acute suppurative inflammation of subcutaneous connective tissue, esp. a pyogenic inflammation that spreads along fascial planes or other natural barriers.

p., bronze. Gaseous p. after a renal operation causing bronze spots near incision.

p., diffuse. D. inflammation of subcutaneous tissues with sepsis.

p., gas. P. with extensive emphysema.

p., Holz. A chronic cellulitis of the deep tissues of the floor of the mouth.

phlegmonous (flēg’mōn-ūs) [G. *phlegmonē*, inflammation]. Pert. to inflammation of subcutaneous tissues.

phlogistic (flō-jist’ik) [G. *phlogistos*, burnt]. Pert. to or inducing inflammation.

phlogogenic, phlogogenous (flō-gō-jēn’ik, -gō-jēn-ūs) [“ + *gennan*, to produce]. Producing or exciting inflammation.

phlogesia (flō-gō’sin) [G. *phlogōsis*, inflammation]. Substance, isolated from cultures of *Staphylococcus aureus*, producing suppuration.

phlogosis (flō-gō’sis) [G. inflammation]. 1. Inflammation. 2. Erysipelas.

phloretin (flōr’e-tin) Product derived from phlorizin used as a febrifuge.

phlorizin (flōr’iz-in). A bitter, white, crystalline glucoside used as an antiperiodic and tonic.

phlyctena (flīk-tē’nā) [G. *phlyktaina*, a blister]. A thin ichor or lymph containing vesicle, esp. one of many after a first degree burn.

phlyctenoid (flīk-tē’nōyd) [“ + *eidos*, resemblance]. Resembling a blister or pustule.

phlyctenosis (flīk-tē-nō’sis) [“ + *-ōsis*, disease]. Appearance of blisters or pustules.

phlyctenula (flīk-tēn’ū-lā) [G. *phlyktaina*, a blister]. A tiny vesicle or pustule, esp that seen on the cornea.

phlyctenular (flīk-tēn’ū-lār) [G. *phlyktaina*, a blister]. Resembling or pert. to vesicles or pustules.

phlyctenule (flīk-tēn’ūl) [G. *phlyktaina*, a blister]. A small vesicle or blister, as on cornea or conjunctiva.

phlyctenulosis (flīk-tēn’ū-lō’sis) [“ + *-ōsis*, intensive]. The formation of many phlyctenules.

-phobia [G.L. Suffix meaning dread, horror, fear.

phobia (fō’bī-ā) [G. *phobos*, fear]. Any abnormal fear.

RS: Words beginning with the following forms* *acaro-*, *acro-*, *aero-*, *apora-*, *achmo-*, *ailuro-*, *algo-*, *amazo-*, *amycho-*, *andro-*, *anemo-*, *anthropo-*, *aphe-*, *api-*, *astro-*, *atazo-*, *auto-*, *automyso-*, *bacillo-*, *ballisto-*, *basī-*, *batho-*, *bato-*, *belone-*, *bromidrosi-*, *cinato-*, *carcino-*, *cardio-*, *carneo-*, *captopro-*, *ceuo-*, *chero-*, *cholero-*, *clausuro-*, *copro-*, *dora-*, *eremo-*, *erecto-*, *ergasio-*, *ergo-*, *erythro-*, *gato-*, *gephyro-*, *gymno-*, *gyne-*, *haphē-*, *hemo-*, *klepto-*, *lyssor-*, *mateusio-*, *moso-*, *myso-*, *mytho-*, *necro-*, *neo-*, *nos-*, *nudo-*, *nycto-*, *ochlo-*, *odonto-*, *ombro-*, *ophidio-*, *pan-*, *pharmaco-*, *photo-*, *poly-*, *pomo-*, *psychro-*, *pyro-*, *rhado-*, *rhypo-*, *scoto-*, *sito-*, *symbolo-*, *syphilo-*, *thanato-*, *topo-*, *toxico-*, *tricho-*, *trichopatho-*, *xeno-*, *zoo-*.

phobic (fō’bik) [G. *phobos*, fear]. Concerning a phobia.

phobophobia (fō'bō-fō'bi-ā) ["+" + *phobos*, fear]. Morbid fear of acquiring a phobia.

phonoscope (fō-nā'k'ō-skōp) [G. *phōnē*, voice, + *skopein*, to examine]. A device for increasing the percussion note or voice sounds.

phonascopy (fō-nā'k-ōs'kō-pl) ["+" + *skopein*, to examine]. Inspection of the chest with the phonoscope.

phonal (fō'nāl) [G. *phōnē*, voice]. Concerning the voice.

phonasthenia (fō-nās-thē'nī-ā) ["+" + *asthenia*, weakness]. Abnormal voice sounds due to functional fatigue.

phonation (fō-nā'shun) [G. *phōnē*, voice]. Process of uttering vocal sounds.

phonatory (fō'nā-tō-rī) [G. *phōnē*, voice]. Concerning utterance of vocal sounds.

phonautograph (fōn-aw'tō-grāf) ["+" + *autos*, self, + *graphein*, to write]. Device for registering the voice's vibrations.

-phone. Combining form meaning *sound* or *voice*.

phone. An element of speech, a single speech sound.

phoneme (fō'nēm) [G. *phōnēma*, sound]. Auditory hallucination of voices and spoken words.
May include neologisms. They may repeat a thought or the part of a sentence just read.

phonendoscope (fō-nēn'dō-skōp) [G. *phōnē*, voice, + *endon*, within, + *skopein*, to examine]. A stethoscope magnifying sounds.

phonendoskiascope (fō-nēn'dō-ski'ās-kōp) ["+" + *skia*, shadow, + *skopein*, to examine]. Device for observing the cardiac movements and for hearing heart sounds.

phonetics (fō-nēt'iks) [G. *phōnētikos*, spoken]. Science of speech and pronunciation. SYN. *phonology*.

pho'niatrics. The study of the voice and treatment of its disorders.

phonie (fō'nīk) [G. *phōnē*, voice]. Concerning the voice or sound.

phonism (fō'nīzm) ["+" + *-ismos*, condition]. An auditory sensation occurring when another sense is stimulated. SEE *synesthesia*.

phono- [G.]. Combining form meaning *sound, voice*.

phonocardiography (fō'nō-kar-dī-ōg-rā-fī) ["+" + *kardia*, heart, + *graphein*, to write]. Mechanical registration of heart sounds.

phonogram (fō'nō-grām) ["+" + *gramma*, a mark]. A graphic curve indicating intensity and duration of a sound.

phonograph (fō'nō-grāf) ["+" + *graphein*, to write]. Appliance used for reproduction of sounds.

phonology (fō-nōl'ō-jī) ["+" + *logos*, a study]. Science of vocal sounds. SYN. *phonetics*.

phon'oma'nia. Insanity characterized by homicidal tendencies.

-phonomassage (fō'nō-mās-sāzh') [G. Combining form meaning *sound, voice*, + *massein*, to knead]. Exciting movements of the ossicles of the ear by means of noise or alternating suction and pressure directed through the ext. auditory meatus.

phonometer (fō-nōm'ēt-ēr) ["+" + *metron*, measure]. Device for determining intensity of vocal sounds.

phonoclonus (fō'nō-mī-ok'lō-nūs) [G. *phōnē*, voice, + *mys*, *myo-*, muscle, + *klonos*, a contraction]. Invisible fibrillary muscular contractions revealed by auscultation.

phonomyogram (fō'nō-mī'ō-grām) ["+" + *gramma*, a writing]. A recording of sound produced by action of a muscle.

phonomyography (fō'nō-mī-ōg'rā-fī) ["+" + *graphein*, to write]. The recording of sounds made by contracting muscular tissue.

phonopathy (fō-nōp'āth-I) ["+" + *pathos*, disease]. Any disease of organs affecting speech.

phon'oph'bia. 1 Morbid fear of sound or noise. 2. Fear of speaking or hearing one's own voice.

phonopsia (fō-nōp'sī-ā) [G. *phōnē*, voice, + *opsis*, vision]. The subjective perception of sensations upon hearing certain sounds.

phonoscope (fō'nō-skōp) [G. *phōnē*, voice, + *skopein*, to examine]. Device for recording photographs of heart sounds.

phoresis (fō-rē'sis) [G. *phorēsis*, from *phorein*, to bear]. PT: The migration of ions through a membrane by the action of an electric current.
The direction of migration is sometimes distinguished by the use of the terms "cataphoresis" and "anaphoresis" for migrations toward cathode and anode, respectively.

-phoria. In ophthalmology a combining form meaning a *turning with reference to the visual axis*. Ex *cyclophoria*.

phorology (fō-rol'ō-jī) [G. *phorein*, to carry, + *logos*, study]. Science dealing with disease carriers.

Phormia. A genus of blowflies belonging to the family Calliphoridae. Their larvae normally live in decaying flesh of dead animals, but they may infest neglected wounds or sores giving rise to myiasis.

phorotone (fō'rō-tōn) ["+" + *tonos*, tension]. Device for exercising eye muscles.

phose (fōz) [G. *phōs*, light]. A subjective sensation of light or color. SEE *centrophose*, *centrophose*, *chromophose*.

phosgene. Carbonyl chloride, COCl₂. A poisonous gas used in war.

phosphatase (fōs'fat-ās). One of a group of enzymes which catalyzes the hydrolysis of phosphoric acid esters. They are of importance in absorption and metabolism of carbohydrates, nucleotides, and phospholipids and are essential in the calcification of bone.

p., acid. P whose optimum pH is between 4 and 5.4. Present in kidney, semen, serum, and prostate gland.

p., alkaline. P whose optimum pH is about 9.0. Present in teeth, developing bone, plasma, kidney, and intestine. It is excreted by the liver, hence increases in blood in obstructive jaundice.

phosphate (fōs'fat) [G. *phōs*, light, + *pherein*, to carry]. A salt of phosphoric acid.

Phosphates are important in maintenance of acid-base balance of the blood, the principal ones being monosodium and disodium phosphate. The former is acid, the latter alkaline. In the blood, because of their low concentration, they exert a minor buffering action. In the formation of urine, by altering the proportions of acid and alkaline phosphates, an acid urine is formed and the body's fixed base, chiefly Na but also K, Mg, and Ca, is conserved.

Decreased p excretion in urine occurs: when alkaline reserve is high, in nephritis, tetany (hypoparathyroidism), adrenal cortical deficiency, and certain bone diseases.

Increased p excretion in urine occurs: when alkali reserve is low, in starvation, hyperparathyroidism, high

protein diet and extreme muscular exercise.

p., acid. P. in which only one or two of hydrogen atoms of phosphoric acid have been replaced by a metal.

p.-bond-energy. Energy derived from phosphorylated compounds such as adenosine triphosphate (ATP) and creatine phosphate.

p., normal. P. in which all three hydrogen atoms of phosphoric acid have been replaced metals.

p., test for, in urine. To half an inch of urine add a few drops of uranium nitrate and a few drops of sodium acetate solution. The presence of phosphates is indicated by a greenish precipitate.

phosphatemia (fōs-fā-tē'mī-ā) [“ + “ + *aima*, blood]. Phosphates in the blood.

phosphatide (fōs-fā-īd) [G. *phōs*, light, + *pherein*, to carry]. A phospholipid *q.v.*

phosphatoptosis (fōs-fā-tōp-tō'sis) [“ + “ + *ptōsis*, a dropping]. Spontaneous precipitation of phosphates in urine.

phosphaturia (fōs-fā-tū-rī-ā) [G. *phōs*, light, + *pherein*, to carry, + *ouron*, urine]. Phosphates in the urine.

They often cause renal calculi. May be associated with mental strain, anxiety or neurasthenia. *SYN* *phosphoruria*, *phosphuria*.

SYM Cloudy urine, opaque and pale. Reaction alkaline. Pearly or pinkish-white deposits of phosphates in standing urine.

phosphene (fōs'fēn) [“ + *phainein*, to show]. A subjective sensation of light caused by pressure upon the eyeball.

p., accommodation. P. resulting from contraction of ciliary muscles in accommodation. Seen esp in the dark.

phosphide (fōs'fid) [G. *phōs*, light, + *pherein*, to carry]. Binary compound of phosphorus with an element or radical.

phosphite (fōs'fit) [“ + *pherein*, to carry]. A salt of phosphoric acid.

phosphocreatine (fōs'fō-krē-ā-tēn). A compound found in muscle of equal parts of phosphoric acid and creatine.

phospholipid (fōs'fō-lip'id) [G. *phōs*, light, + *pherein*, to carry, + *lipos*, fat]. A lipid substance containing phosphorus, fatty acids and nitrogenous base, as lecithin. *SYN* *phosphatide*.

phospholipin (fōs'fō-lip'in) [“ + “ + *lipos*, fat]. A lipid compound containing phosphorus. *SYN* *phosphatide*.

phosphonecrosis (fōs'fō-nē-krō'sis) [G. *phōs*, light, + *pherein*, to carry, + *nekros*, dead, + *-ōsis*, discase]. Necrosis of the alveolar process in those working with phosphorus.

phosphonuclease (fōs'fō-nū'klē-āse). An enzyme that catalyzes the hydrolysis of nucleotides to nucleosides and phosphoric acid.

phosphopenia (fōs'fō-pē'nī-ā) [“ + “ + *penia*, lack]. Deficiency of phosphorus in the body.

phosphoprotein (fōs'fō-prō'tē-in) [G. *phōs*, light, + *pherein*, to carry, + *prōtos*, first]. One of a group of proteins in which the protein is combined with phosphorus-containing compound. *Ex*: caseinogen, *vitellin*.

Formerly called nuclealbumin.

phosphorated (fōs'fō-rā-tēd) [“ + *phorein*, to carry]. Impregnated with phosphorus.

phosphorescence (fōs'fō-rēs'ēns) [“ + *phorein*, to carry]. *PT*: The induced luminescence that persists after cessation of the irradiation that caused it.

The emission of light without appreciable heat.

phosphorhidrosis (fōs'for-hīd-rō'sis) [G. *phōs*, light, + *phorein*, to carry, + *idrōsis*, sweating]. Secretion of phosphorescent perspiration. *SYN* *phosphoridrosis*.

phosphoric acid (fōs-for'ik) [G. *phōs*, light, + *phorein*, to carry]. Orthophosphoric acid H_3PO_4 , a tribasic acid.

phosphoridrosis (fōs'for-id-rō'sis) [“ + “ + *idrōsis*, perspiration]. Secretion of perspiration that is luminous. *SYN*: *phosphorhidrosis*.

phosphorism (fōs'for-izm) [G. *phōs*, light, + *phoros*, carrying, + *ismos*, condition]. Chronic poisoning from P.

phosphorous acid (fōs-fō'rūs) [“ + *phoros*, carrying]. Crystalline acid formed when phosphorus is oxidized in moist air H_3PO_3 .

phosphoruria (fōs'for-ū-rī-ā) [“ + “ + *ouron*, urine]. Phosphorus in the urine in excess of normal. *SYN* *phosphaturia*, *phosphuria*.

phosphorus (fōs'fēr-ūs) [G. *phōs*, light, + *phoros*, carrying]. *SYMS* P. At wt 31.04. A nonmetallic element not found in a free state but in combination with alkalis.

The adult body contains from 500 to 700 Gm of phosphorus in various forms, 70 to 80 per cent is in bones and teeth principally combined with calcium, 10 per cent in muscle and 1 per cent in nerve tissue. Minimum daily requirement is approx 0.9 Gm., although daily intake should be about 15 Gm for safety. Amount should be doubled during pregnancy. Vitamin D is important in the absorption and metabolism of phosphorus. Excesses of phosphorus are excreted by kidney and intestine, about 60% being excreted in urine principally as phosphates.

Phosphorus compounds (adenosinetriphosphate and phosphocreatine) are the principal sources of energy in muscle contraction and phosphorus is essential in the conversion of glycogen to glucose.

DOSAGE 1/100 gr. (0.0006 Gm.). *DEFICIENCY SYM*: Perverted appetite, retarded growth, loss of weight, weakness, rickets, imperfect bone and teeth development.

It is found in the protein of food. *Ex*: Almonds, beans, barley, bran, cheese, cocoa, chocolate, eggs, lentils, liver, milk, oatmeal, peanuts, peas, walnuts, whole wheat, and rye. *Good* Asparagus, beef, cabbage, carrots, celery, cauliflower, chards, chicken, clams, corn, cream, cucumbers, egg plant, fish, figs, prunes, pineapples, pumpkin, raisins, string beans; also in meats.

POISONING SYM: Acute irritation of gastrointestinal tract, followed by symptoms resembling acute yellow atrophy of liver and marked blood changes. Bloody vomitus, garlic odor of breath, cramps, headache, liver and kidney damage. Profound weakness, hemorrhage, heart failure. Occasionally nervous symptoms predominate. Metabolism changes.

F. A. TREATMENT: Prolonged gastric lavage, part of which should contain a small amount of copper sulfate or potassium permanganate which may aid in oxidizing the phosphorus. This should, of course, be washed out. Oils, creams and fats should be avoided. Sodium bicarbonate tends to reduce acidosis. Otherwise treat symptomatically. Blood transfusion is helpful.

- phos'phor'ylase**. An enzyme that catalyzes the formation of glucose-1-phosphate from glycogen.
- phosphotal** (fōs-fō-tāl). Commercial phosphorus and cresote compound.
- phosphuria** (fōs-fūr'ī-ā) [G. *phōs*, light, + *phoros*, a bearer, + *ouron*, urine]. Excess of phosphorus in the urine. SYN: *phosphaturia*, *phosphoruria*.
- photalgia** (fō-tāl'jī-ā) [G. *phōs*, *phot-*, light, + *algos*, pain]. Pain produced by light. SYN: *photodynia*.
- photauglophobia** (fō-tāw-jī-ō-fō'bl-ā) ['' + *augē*, glare, + *phobos*, fear]. Intolerance of bright light.
- photo** (fōt) [G. *phōs*, *phot-*, light]. The unit of photochemical energy, 1 lumen per square centimeter, employed in determination of color solidity in comparison with average noonday solar light.
- photesthesia** (fō-tēs-thē'sis) ['' + *aisthesis*, sensation]. Sensitivity to light.
- photic** (fō'tik) [G. *phōs*, *phot-*, light]. Concerning light.
- photism** (fō'tizəm) ['' + *ismos*, condition]. A subjective sensation of color or light produced by a stimulus of another sense, such as smell, hearing, taste, or touch. SEE: *synesthesia*.
- photo** [G.]. Combining form meaning light.
- photobiotic** (fō'to-bī-ōt'ik) [G. *phōs*, *phot-*, light, + *bios*, life]. Capable of living only in the light.
- photocauterization** (fō'tō-kaw-tēr-īz-ā'shūn) ['' + *kautērion*, a branding iron]. Cauterization using radioactive means, as x-rays.
- photoceptor** (fō'tō-sēp'tor) ['' + L. *ceptor*, a receiver]. A nerveceptor receiving light ray sensations.
- photochemistry** (fō'tō-kēm'is-trī) ['' + *chemera*, chemistry]. Phase of science dealing with chemical changes produced by light rays.
- photodynamic** (fō'tō-dī-nām'ik) ['' + *dynamis*, force]. Pert. to the effect of light on organisms.
- P. action**. Action exerted by certain dyes such as methylene blue and eosin on certain biological systems when subjected to light.
- photodynia** (fō'tō-dīn'ī-ā) ['' + *odynē*, pain]. Pain produced by rays of light. SYN: *photalgia*.
- photodysphoria** (fō'tō-dis-fō'ri-ā) ['' + *dys*, bad, + *phorein*, to carry]. Extreme intolerance of light. SYN: *photophobia*, *phengophobia*.
- photoelectricity** (fō'tō-ē-lēk-trī'sī-tī) [G. *phōs*, *phot-*, light, + *elektron*, amber]. Electricity formed by action of light or irradiations such as x-rays.
- photogene** (fō'tō-jēn) ['' + *gennan*, to produce]. Prolonged retinal image. SYN: *after-image*.
- photogenic, photogenous** (fō'tō-jēn'ik, -tōjēn-ūs) ['' + *gennan*, to produce]. Induced by or inducing light.
- photographic radiometer**. PT: An instrument containing a half-tone color index for strips of photographic paper after exposure to roentgen rays and after development, used to estimate the quantity of roentgen rays.
- photohemotachometer** (fō'tō-hem'ō-tāk-ōm'ēt-ēr) [G. *phōs*, *phot-*, light, + *aima*, blood, + *tachus*, swift, + *metron*, measure]. Device for photographing velocity of blood current.
- photokinetic** (fō'tō-kīn-ēt'ik) ['' + *kīnēsis*, motion]. Reacting with motion to stimulus of light.
- photoluminescence** (fō'tō-lū-mīn-ēs'ēns) ['' + L. *lumen*, light]. PT: The power of an object to become luminescent when acted on by light.
- photolysis** (fō-tōl'is-īs) ['' + *lysis*, dissolution]. Dissolution or disintegration under stimulus of light rays.
- photolytic** (fō'tō-līt'ik). Dissolved by stimulus of light rays.
- photomania** (fō'tō-mā'nī-ā) ['' + *mania*, madness]. 1. A psychosis produced by prolonged exposure to intense light. 2. A psychotic desire for light.
- photometer** (fō-tōm'ēt-ēr) [G. *phōs*, *phot-*, light, + *metron*, measure]. PT: A device for measuring the intensity of light.
- photometry** (fō-tōm'ēt-ri) ['' + *metron*, measure]. Measurement of light rays.
- photomicrograph** (fō'tō-mī'krō-grāf) ['' + *mikros*, small, + *graphein*, to write]. Enlarged photograph of an object under the microscope.
- photomotor**. Pert. to muscular contraction induced by light.
- photon** (fō'tōn) [G. *phōs*, *phot-*, light]. A light quantum or unit of energy of a light ray.
- photonosus** (fō-ton'ō-sūs) ['' + *nosos*, disease]. Disease due to prolonged exposure to intense light.
- photoperceptive** (fō'tō-pēr-sēp'tiv) ['' + *perceive*, to receive]. Capable of perceiving light.
- photophilic** (fō'tō-fīl'ik) ['' + *philein*, to love]. Seeking or fond of light.
- photophobia** (fō'tō-fō'bī-ā) ['' + *phobos*, fear]. Unusual intolerance of light. Occurs in measles and rubella, meningitis, and inflammations of the eyes. SYN: *phengophobia*, *photodysphoria*.
- photophone** (fō'tō-fōn) ['' + *phōnē*, voice]. Device for production of sound by action of light.
- photopic**. Pert. to bright light.
- P. vision**. Vision in bright light which involves the formation of images and discrimination of color. CF: *scotopic vision*.
- photopsia, photopsy** (fō-tōp'sī-ā, fō'tōp-sī) ['' + *opsis*, vision]. Subjective sensation of sparks or flashes of light in retinal, optic, or brain diseases.
- photoptarmosis** (fō'tō-tar-mō'sis) ['' + *ptarmosis*, sneezing]. Sneezing caused by the action of light.
- photoptometer** (fō-tōp-tōm'ēt-ēr) ['' + *opsis*, vision, + *metron*, measure]. Device for determining acuteness of vision.
- photoreceptive** (fō'tō-rē-sēp'tiv) ['' + *receptor*, a receiver]. Capable of perceiving light rays.
- photoreceptor** (fō'tō-rē-sēp'tor) [G. *phōs*, *phot-*, light, + *receptor*, a receiver]. Sensory nerve endings or cells which are capable of being stimulated by light. In man, rods and cones of the retina.
- photoscope** (fō'tō-skōp) [G. *phōs*, *phot-*, light, + *skopein*, to examine]. A variety of fluoroscope used to observe light.
- photoscopy** (fō-tōs'kō-pī) ['' + *skopein*, to examine]. Examination with a fluorescent screen. SYN: *fluoroscopia*, *skiascopy*.
- photosensitization** (fō'tō-sēn-sī-tī-zā'shūn) [G. *phōs*, *phot-*, light, + *sensitivus*, feeling]. Condition in which the skin reacts abnormally to light, esp. ultraviolet rays or sunlight; due to the presence of drugs, hormones, or heavy metals in the system.
- photosensitizer** (fō'tō-sēn-sī-tī-zēr) ['' + *sensitivus*, feeling]. Sensitizing substance used in light therapy to produce photosensitization, such as fluorescein dyes.

photosynthesis (fō'tō-sin'thē-sis) [G. *phōs*, *phot-*, light, + *synthesis*, a placing together]. The process by which plants are able to manufacture carbohydrates by combining carbon dioxide from the air and water from the soil, utilizing light energy in the presence of chlorophyll.

The basic chemical reaction is as follows

Only plants containing chlorophyll are capable of thus producing sugars. The red and blue waves of the spectrum are absorbed by the chlorophyll, but all other rays are rejected. CO_2 and H_2O are also necessary factors.

When simple sugar is formed, the plant splits up CO_2 , uses the carbon by photosynthesis, and liberates the oxygen. The sources of energy for this disruption are the blue and red rays which are absorbed by the plant. To make 1 Gm. of natural sugar the plant uses 750 cu. ft. of CO_2 .

phototaxis (fō'tō-tāks'is) [" + *taxis*, arrangement]. PT. The reaction and movement of cells and microorganisms under the stimulus of light.

phototherapy (fō'tō-thēr'ā-pl) [" + *therapeia*, treatment]. Light therapy, the use of light in treating disease.

By custom the term denotes also the application of the invisible, infrared or heat and ultraviolet, or actinic rays. See *actinotherapy*.

photothermal (fō'tō-thēr'māl) [G. *phōs*, *phot-*, light, + *thermē*, heat]. Concerning heat produced by light.

p. radiation. Radiation of heat by a source of light, as that from an electric bulb.

pho'totop'ia. A subjective sensation of light.

phototoxis (fō'tō-tōks'is) [" + *toxikon*, poison]. Disorder produced by effects of overexposure to light or radiation.

pho'totrop'ism. A tendency exhibited by green plants and some microorganisms to turn toward or grow toward light.

photuria (fō-tū'ri-ā) [" + *ouron*, urine]. Excretion of phosphorescent urine.

phren (frēn) [G. *phrēn*, mind, diaphragm]. 1. The mind. 2. The diaphragm.

phrenalgia (frē-nāl'jī-ā) [" + *algos*, pain]. 1. Pain of mental origin or caused by a mental process. SYN: *psychalgia*. 2. Pain in the diaphragm.

phrenasthenia (frēn-ās-thē'nī-ā) [" + *astheneia*, weakness]. Mental deficiency.

phrenemphraxis (frēn-ēm-frāk'sis) Crushing of the phrenic nerve in order to induce temporary paralysis of the diaphragm, a therapeutic measure employed in treatment of pulmonary tuberculosis.

phrenetic (frēn-ēt'ik) [G. *phrēn*, mind]. 1. Maniacal; frenzied. 2. A maniac.

-phrenia. Combining form meaning *mental disorder*.

phrenic (frēn'ik) [G. *phrēn*, mind, diaphragm]. 1. Concerning the diaphragm; as the p. nerve. 2. Concerning the mind.

p. avulsion. Elevation of a side of the diaphragm and semi-collapse of corresponding lung by means of excision of part of the phrenic nerve.

p. nerve. One arising in the cervical plexus entering the thorax and passing to the diaphragm.

A motor nerve to the diaphragm with sensory fibers to the pericardium. SYN: *nervus phrenicus*.

phrenicectomy (frēn-īs-ēk'tō-mī) [" + *ektomē*, excision]. Resection of a part of the phrenic nerve.

Used to collapse the lung on 1 side by paralyzing the diaphragm.

phrenicoexsuresis (frēn'ī-kō-ēks-i-rē'sis) [" + *ek*, out, + *avrein*, to take]. Excision of part of the phrenic nerve.

phrenicotomy (frēn-īk-ōt'ō-mī) [" + *tomē*, a cutting]. Cutting of the phrenic nerve to produce immobilization of a lung by inducing a paralysis of 1 side.

This causes the diaphragm to rise, it compresses the lung, and diminishes respiratory movement, thus resting the viscus.

phrenitis (frē-nī'tis) [" + *-itis*, inflammation]. 1. Acute delirium or frenzy. 2. Inflammation of the brain. SYN: *encephalitis*. 3. Inflammation of the diaphragm.

phreno- [G.]. Combining form meaning *mind, diaphragm*.

phrenocardia (frē'nō-kar'dī-ā) [" + *kardia*, heart]. Cardiovascular neurasthenia.

SYN: Cardiac arrhythmia, dyspnea with psychic disturbances, and submammary pain.

phrenocolopexy (frē'nō-kō'lō-pēks'ī) [" + *kōlon*, colon, + *pēxis*, fixation]. Suture of the transverse colon to the diaphragm.

phrenodynia (frē'nō-dīn'ī-ā) [" + *odynē*, pain]. Pain in the diaphragm.

phrenograph (frēn'ō-grāf) [G. *phrēn*, diaphragm, mind, + *graphein*, to write]. Device for registering movements of diaphragm.

phrenopathy (frē-nōp-āth-ī) [" + *pathos*, disease]. Any mental disorder.

phrenopericarditis (frē'nō-pēr-i-kar'dī-tis) [" + *peri*, around, + *kardia*, heart, + *-itis*, inflammation]. Attachment of the heart by adhesions to the diaphragm.

phrenoplegia (frē-nō-plē'jī-ā) [" + *plēgē*, a stroke]. 1. A sudden psychopathic attack. 2. Paralysis of the diaphragm.

phrenosin (frēn'ō-sin) [G. *phrēn*, mind, diaphragm]. SYN: *cerebron*. A cerebroside isolated from brain tissue.

phrictopathic (frīk-tō-pāth'ik) [G. *phrik-tos*, shuddering, + *pathos*, disease]. Pert. to or having a shuddering sensation; applied to a shuddering sensation due to irritating a hysterical anesthetic area.

phro'ne'sis. Soundness of mind. **phrynoderma** (frēn'ō-der'mā) SYN: *toad-skin*. Skin disorder characterized by dryness and follicular hyperkeratosis due to deficiency of vitamin A.

phthiriasis (thīr'ī-ās-ī) [G. *phthier*, louse]. Condition of being infested with lice. SYN: *pediculosis*.

phthirophobia (thīr'ī-ō-fō-bī-ā) [" + *phobos*, fear]. Abnormal dread of lice.

Phthirus (thīr'ūs) [G. *phthier*, louse]. A genus of sucking lice belonging to the order Anoplura.

P. pubis. The crab louse. Infests primarily pubic region but also found in armpits, beard, eyebrows, and eyelashes. SYN: *pediculosis pubis*.

phthisic (tīz'ik) [G. *phthisis*, a wasting]. 1. Affected with pulmonary consumption. 2. Asthma. 3. One afflicted with phthisis or asthma.

phthisical (tīz'ik-āl) [G. *phthisis*, a wasting]. Concerning, or afflicted with, phthisis.

phthisicky (tīz'ī-kl) [G. *phthisis*, a wasting]. Suffering from asthma or phthisis.

phthisis (tī'sis) [G. a wasting]. 1. Pulmonary consumption. See: *tuberculosis*. 2. Any wasting or atrophic disease.

- p., abdominal.** Intestinal tuberculosis.
- p., black.** Lung disease from inhaled coal dust. SYN *anthracosis*.
- p. bulbi.** Atrophy of eyeball following intraocular inflammation.
- p., fibroid.** 1. Interstitial pneumonia. 2. Pulmonary tuberculosis with dense layers of fibrous tissues surrounding a cavity.
- p., miner's.** SEE *p. black*.
- p., pulmonary.** Tuberculosis of the lungs.
- p., stonecutter's.** A wasting form of bronchopneumonia due to inhalation of stone dust with consequent irritation. SYN: *chalciosis*.
- phygogalactic** (fi-'gō-gāl-āk'tīk) [G *phuegen*, to avoid, + *gala*, milk]. Checking or that which checks or arrests milk secretion. SYN: *galactophygous*, *ischogalactic*, *lactifuge*.
- phylacogogic** (fi-lāk-ō-gōj'īk) [' + *agōgos*, leading]. Stimulating the formation of protective antibodies.
- phylactic** (fi-lāk'tīk) [G. *phylaxis*, protection]. Concerning or producing phylaxis.
- p. agent.** One with protective power.
- p. power.** That of an organism to ward off infection.
- phylaxis** (fi-lāks'is) [G *phylaxis*, protection]. Substance warding off infection. SEE *torophylarin*.
- phylaxis** (fi-lāks'is) [G. protection]. The active defense of the body against infection.
- phyletic** (fi-lēt'īk). SYN *phylogenetic*.
- pert** to a phylum or race.
- phyllo-** [G]. Combining form meaning leaf.
- phylogenesis** (fi-lō-jēn'ē-sis) [G. *phylon*, tribe, + *genesis*, generation]. The evolutionary development of a group, race or species. SEE *phylogeny*.
- phylogenetic** (fi-'lō-jēn-ēt'īk) [' + *genesis*, generation]. Concerning the development of a race or group.
- phylogeny** (fi-lōj'ē-nī) [' + *gennan*, to produce]. Development and growth of a group or race. SEE *ontogeny*.
- phylum** (fi'lūm) [G. *phylon*, tribe]. One of the primary divisions of the animal or plant kingdom.
- phyma** (fi'mā) (pl. *phymata*) [G *phyma*, growth]. A small, rounded skin tumor.
- phymatoid** (fi'māt-ōyd) [' + *eidos*, resemblance]. Like a tumor.
- phymatorrhis** (fi'mā-tor-hī'sin) A pigment present in hair and melanotic tumors.
- phymatosis** (fi-mā-tō'sis) [' + *-ōsis*, disease]. A disease marked by the presence of phymata or small nodules in the skin.
- physaliform, physalliform** (fis-al'ī-form) [G. *physallis*, bubble, + *L. forma*, shape]. Resembling a bleb or bubble.
- Phy'salop'tera.** A genus of nematode worms belonging to the suborder Spiruata.
- p. caucasica.** Species normally infesting monkeys but common in natives of tropical Africa.
- physiatrics** (fiz'ī-āk'tīks) The curing of disease by natural methods.
- physic** (fiz'īk) [G. *physikos*, natural]. 1. The art of medicine and healing. 2. A medicine, esp. a cathartic. 3. Drugs in general. 4. To treat with a physic, esp. to purge.
- physical** (fiz'īk-āl). [G *physikos*, natural]. 1. Of or pertaining to nature or material things. 2. Concerning or pert. to the body; bodily.
- p. examination.** Examination of the

body by auscultation, palpation, percussion and inspection.

p. signs. Disease symptoms revealed by physical examination.

p. therapist. PT. A medical graduate skilled in physical therapy.

p. therapy. The therapeutic use of physical agents other than drugs.

It comprises the use of physical, chemical and other properties of heat, light, water, electricity, massage, exercise, and radiation. SEE: *breeze*, *static*.

p. t. technician or aide. A lay assistant or a nurse trained to apply the physical measures of treatment which have been prescribed by a physician.

p. unit. Coulomb, erg, dyne, etc. SEE *unit*.

physician (fi-zish'ān) [O Fr. *physicien*, from G. *physikos*, natural]. A person authorized by law to treat diseases with medicines.

p., house. P who lives in a hospital and is available at all times.

p., resident. A physician who lives in a hospital to continue his training after internship. Commonly called *resident*.

physicist (fiz'īs-ist) [G. *physikos*, natural]. One who is versed in the science of physics.

physico- [G]. Combining form meaning *physical*, *natural*.

physics (fiz'īks) [G. *physis*, nature]. The study of forces and properties of matter, and of natural phenomena.

physisosis (fiz-in-ō'sis) [' + *nosos*, disease]. A disease caused by physical agents.

physio- [G]. Combining form meaning *nature*.

physiogenic (fiz'ī-ō-kō-jēn'īk) Originating from physical causes.

physiopyrexia (fiz-ī-ō-kō-pī-rēks'ī-ā). Fever produced artificially by physical means.

physiognomy (fiz-ī-ōg'nō-mī) [G. *physis*, nature, + *gnōmōn*, a judgment]. 1. The countenance. 2. Assumed ability to see the mental or moral character and qualities by the face.

physiognosis (fiz-ī-ōg'nō'sis) [' + *gnosis*, knowledge]. Diagnosis determined from one's facial expression and appearance of the eyes.

physiological (fiz'ī-ō-lōj'īk-āl) [G. *physis*, nature, + *logos*, study]. 1. Normal; not diseased. 2. Concerning body function.

p. chemistry. Chemistry of living organisms. SEE *biochemistry*.

p. salt solution. An isotonic sterile solution consisting of 0.85% sodium chloride in distilled water. Also called *normal salt solution* or *normal saline*. Abbr. NS. Sol. A teaspoonful of table salt in a pint of water approximates a physiological salt solution.

Used (a) in irrigating mucous membranes and raw surfaces, (b) replenishing of body water in dehydration, and (c) in shock or hemorrhage to restore circulating blood volume.

p. s. s. enema. The distention made by this enema excites peristalsis and evacuation. Often ordered when there is dehydration. SEE: *enema*.

physiology (fiz-ī-ōlōj'ī) [G. *physis*, nature, + *logos*, study]. The science of the functions of cells, tissues, and organs of the living organism. SEE: *cerebrophysiology*, *chemophysiology*.

physiotherapy (fiz-ī-ō-thēr'ā-pī) [' + *therapeia*, treatment]. Treatment with physical and mechanical means, as massage, electricity, etc.

The term "physical therapy" has supplanted it in medical usage.

physique (fiz'ik). Body build; the structure and organization of the body

physo- [G.]. Combining form meaning *bladder, bellows, bubble*.

physocoele (fiz'sō-sē) [G. *physa*, air, + *kēlē*, tumor]. 1. A tumor filled with gas or circumscribed swelling due to gas. 2. A gas-distended hernial sac

physohematometra (fiz'sō-hem-āt-ō-mē-trā) [" + *ama*, blood, + *mētra*, uterus]. Gas and blood distending the uterus.

physohydrometra (fiz'sō-hi-drō-mē-trā) [" + *ydōr*, water, + *mētra*, uterus]. Air or gas and serum in the uterus

physometra (fiz'sō-mē-trā) [" + *mētra*, uterus]. Air or gas in the uterine cavity.

physoposalpinx (fiz'sō-pi'ō-sāl'pinks) [" + *pyon*, pus, + *salpīx*, tubel]. Pus and gas in the fallopian tube

physostigmine salicylate (fiz'sō-stīg'mēn sāl-is'īl-āt). USP The salicylate of an alkaloid obtained from the dried Calabar bean SYN *eserine salicylate*

ACTION AND USES It inactivates cholinesterase thus prolonging and intensifying the action of acetylcholine. It improves the tone and action of skeletal muscle, and through its effects on parasympathetic nervous system, it increases intestinal peristalsis and, in the eye, acts as a miotic. It is used in tetanus and strychnine poisoning and in the treatment of myasthenia gravis

phytaalbumose (fiz-tāl'bū-mōs) [" + *L albumen*, white of egg]. An albumose found in plants and vegetables

phytase (fiz-tās) [" + *ase*, enzyme]. A liver and blood ferment which splits phytin.

phytin (fiz'tin) [G. *phyton*, plant] A calcium or magnesium salt of inositol, and hexaphosphoric acid, present in cereals. SEE *inositol*

phyto-, phyt- [G.]. Combining forms meaning *a plant, or that which grows*.

phytozoxar (fiz'tō-bē-zōr) [G. *phyton*, plant, + Persian *bād-zahr*, antidote]. SYN *food ball* A mass composed of vegetable matter found in the stomach

phytogenesis (fiz'tō-jēn-ē-sis) SYN *phytogeny* The origin and development of plants

phytoid (fiz-toyd'). Plantlike

1. Any disease of vegetable parasitic origin. 2 The production of a disease by plant parasites. 3. The presence of plant parasites in an organism

phytosterol (fiz'tō-ster'ol). Any sterol present in vegetable oil or fat

phyto toxin (fiz'tō-tōks'in) A toxin produced by one of the higher plants Ex: ricin, from castor bean

pia (pi'ā). [L. tender]. SEE *pia mater*.

pia-arachnitis. SEE *piarachnitis*.

pia-arachnoid. SEE *piarachnoid*

pia, cerebral. The pia of the brain, containing in its meshes ramifications of cerebral vessels

pia, external. Pia covering ext. of the brain

pia, internal. Pia within the ventricles of the brain.

piail (pi'al). Concerning the pia mater.

pia mater. A thin, vascular membrane closely investing the brain and spinal cord and proximal portions of the nerves. Innermost of the three meninges

pian (pi-an') [Fr.]. Contagious skin disease of the tropics. SYN: *frambesia*, *yaws*.

pianists' cramp (pē'an-ists). Spasm or professional neuritis of muscles of fingers and forearms from piano playing.

piarachnitis (pi-ār-āk-nī'tis) [L. *pia*, tender, + G. *arachnē*, spider, + *-itis*, inflammation] Inflammation of the arachnoid and pia mater. SYN: *leptomeningitis*.

piarachnoid (pi-ār-āk'noyd) [" + " + *eidos*, like] SYN *leptomeninge*, *leptomeninges*. The pia mater and arachnoid membranes, when regarded as one structure

pica (pi'kā) [L. magpie]. A perversion of appetite, with craving for substance not fit for food.

Condition seen in pregnancy, chlorosis, hysteria, helminthiasis and in certain psychoses. SEE *appetite*, *taste*.

piceous (pi'sē-ūs). Like pitch.

Pick's disease. 1 A brain disorder involving atrophy of cerebral cortex SYN *asthenia*, loss of speech, progressive dementia 2 Polyserositis Condition in which fibrous adhesions of peritoneum, pleura, or pericardium form, sometimes undergoing hyalinization

P.'s syndrome. A liver disorder accompanied by ascites but not producing cardiac symptoms or icterus

picrate (pi'krāt). A salt of picric acid.

picro-, plicr- [G.]. Combining forms meaning *bitter*.

picrocarmine (pi'kr-rō-kar'min). A stain used in microscopy.

picroformal (pi'kr-rō-for'mal). Solution of picric acid, formaldehyde and water used as a fixing agent

picrol (pi'kr'ol). Antiseptic powder used as a dressing.

piebald skin (pi'bawld). Skin with spots or pigmentation or patches with loss of pigment SEE *leukoderma*, *vitiligo*.

pie dra (pi-ā'drā) [Spanish, stone]. Disease in which hard nodules form on the hair shafts.

Composed of fungous masses of *Trichosporon giganteum*.

p., black. P. caused by fungus, *Piedraia hortai*. Occurs in tropical regions and affects hair of scalp.

p., nostras. P. affecting the beard.

p., white. SYN: *Tinea nodosa*, *Beigel's disease* P. caused by fungus, *Trichosporon bigelli*. Occurs in temperate regions and affects hair of face

piesesthesia (pi-es-ēs-thē-zī-ā) [G. *piēsia*, pressure, + *aisthēsis*, sensation]. Sensibility to pressure SYN: *pressure sense*.

plesimeter, plesometer (pi-ē-sim'ēt-ēr, -sōm'ēt-ēr). Device for measurement of skin's sensitiveness to pressure.

pigeon breast. Projection of sternum anteriorly

p. toe. *Pes varus*; walking with feet turned in

pigment (pig'mēnt) [L. *pigmentum*, paint]. Any coloring matter. SEE: *albino*, "*chrom-*" words.

p., bile. P. in bile: bilirubin and biliverdin and their derivatives (e.g., urobilin, urobilin, biliverdin, bilifuscin)

p., billary. Bilirubin, biliverdin, q.v. **p., blood**. P. in blood (hemoglobin) or a derivative of it (hematin, hemin, methemoglobin, hemosiderin)

p., endogenous. A pigment produced within the body, as melanin.

p., exogenous. A pigment produced outside the human body.

p., hematogenous. P. from hemoglobin of erythrocytes.

p., hepatogenous. P. from hemoglobin destruction in the liver. SYN: *bile pigment*.

- p., skin.** Melanin, melanoid, and carotene, *q.v.*
- p., urinary.** Urochrome, and sometimes urobilin, *q.v.*
- p., uveal.** That in cells on inner or post. surface of the iris, choroid, and ciliary processes.
- pigmentary** (pĭg'mĕn-tĕr-i) [L *pigmentum*, paint]. Concerning, or like, a pigment.
- pigmentation** (pĭg-mĕn-tā'shŭn) [L *pigmentum*, paint]. Coloration due to deposition of pigments.
- RS:** albinism, carotenosis, "chrom-" words.
- pigmentophagē** (pĭg-mĕn'tō-fāj) [" + G *phagēn*, to eat]. Cell which absorbs pigment.
- pig'mĕntŭm nig'rŭm.** The pigment of the lamina vitrea of the choroid of the eye.
- pilitis** (pĭ-lĭ-tis) [L *pila*, tender, + G -itis, inflammation]. Inflamed condition of the *pila mater*.
- Pil.** Abbr. of L. *pilula*, pill, or pl *pilulae*, pills.
- pilar, pilary** (pĭ-lar, pĭ-l'ā-ri) [L *pilaris*, pert. to the hair]. Concerning, or covered with, hair.
- plaster** (pĭ-lās-ter) [L *pila*, pillar]. A prominent ridge sometimes seen on the femur.
- pille** (pĭl) [L *pila*, a ball, a pillar]. 1. A single hemorrhoid. **Syn:** *piles*. 2. The hair. 3. A battery for production of electricity.
- pilleous** (pĭ-lē-ŭs) [L. *pilus*, hair]. Hairy; hirsute.
- piles** (pĭls) [L. *pila*, a mass]. Dilated blood vessels in the rectal mucosa forming a vascular tumor. **Syn:** *hemorrhoids, q.v.*
- pilleus** (pĭ-lē-ŭs) [L. a cap]. A nipple shield.
- pili** (pĭl'ē). Plural of pilus. Hairs.
- p., annulata.** Condition in which hairs have a ringed appearance, monilithrix.
- p., tactiles.** Sensitive or tactile hairs.
- p., torti.** Condition in which hairs are broken and twisted.
- piliation** (pĭ-l'ā-shŭn) [L *pilus*, hair]. Formation and development of hair.
- piliform** (pĭl'f-form) [" + *forma*, shape]. Hairlike.
- pillmiction** (pĭ'll-mĭk'shŭn). Passing of urine containing hairlike or filamentous substances.
- pili** (pĭl) [L. *pilula*, from *pila*, a ball]. Medicine in the form of a tiny rounded mass to be taken whole.
- piliar** (pĭ-l'ēr) [L *pila*, a column]. An upright support; column, or structure resembling a column.
- p. of the abdominal ring.** One of the columns on either side of abdominal ring.
- p's., ant., of fornix.** Two diverging columns extending downward from ant. extremity of body of the fornix.
- p. cells.** Two groups of cells (inner and outer) resting on basement membrane of organ of Corti in which elongated bodies (pillars) develop. These enclose the inner tunnel (Corti's tunnel).
- p's. of Corti.** Two layers resting on membrana basilaris in the ear. **Syn:** *rods of Corti*.
- p's of diaphragm.** Crura of diaphragm, two bundles of muscle fibers extending from lumbar vertebrae to central tendon and forming sides of hiatus aorticus.

- p's of the fauces.** **Syn:** *the glosso-palatine and pharyngopalatine arches*. Folds of mucous membrane, one on each side of the fauces, *q.v.* and bet. which is situated the tonsil.
- p's., posterior, of fornix.** Two bands forming prolongation of fornix posteriorly.
- pilleus, pileum** (pĭ-lē-ŭs, -ŭm) [L. a cap, caul]. A membrane sometimes covering a baby's head at birth. **Syn:** *caul*.
- p., ventricull.** The 1st portion of the duodenum. **Syn:** *pyloric cap*.
- pillion** (pĭ-l'ŭn) [L. *pellus*, skin]. Artificial leg, esp. in form of a stump.
- pilo-** [L.] Combining form meaning *hair*.
- pilocarpine hydrochloride** (pĭ-l'ō-kar'pĕn). Hydrochloride of an alkaloid obtained from leaves of the plant.
- ACTION AND USES.** Increases secretion of salivary mucus and sweat glands. Used internally as a diaphoretic, esp. in nephritis.
- DOSAGE:** 1/12 gr. (0.005 Gm.).
- p. n'itrate.** **USP.** Nitrate of the alkaloid obtained from pilocarpus.
- ACTION, USES, AND DOSAGE.** Same as pilocarpine hydrochloride.
- pilocystic** (pĭ-lō-sis'tik) [L. *pilus*, hair, + G. *kystis*, a bladder]. Encysted and containing hair, said of a dermoid cyst.
- pilomotor** (pĭ-lō-mō'tor) [" + *motor*, a mover]. Causing the movements of hairs, as the *arrectores pilorum*.
- p., reflex.** Gooseflesh formation when skin is cooled or as a result of emotional reaction.
- pilonidal** (pĭ-lō-nĭ-dāl) [" + *nidus*, nest]. Containing hairs in a cyst in nest formation.
- p., fistula.** F. near the rectum resulting from a growth of subcutaneous hair.
- p., sinus.** A p. fistula.
- pilose** (pĭ-lōs) [L. *pilus*, hair]. Hairy, downy.
- pilosebaceous** (pĭ-lō-sē-bā'shŭs) [" + *sebaceus*, fatty]. Concerning the hair and sebaceous glands.
- pilosis** (pĭ-lō'sis) [L. *pilus*, hair, + G. -ōsis, intensive]. Excessive formation of hair.
- pilosity** (pĭ-lōs'i-ti) [L *pilus*, hair]. Hairiness.
- pilous** (pĭ-lŭs) [L *pilus*, hair]. Covered with hair, hirsute.
- Piltz's reflex** (pĭltz). Change in size of pupil on sudden fixation of attention.
- pilula** (pĭl'ŭ-lā) (pl. *pilulae*) [L. pill]. A small, solid body of medicine of a globular, ovoid or lenticular shape, intended to be swallowed whole and produce medicinal action.
- May be ordered to be made extemporaneously by the druggist, or ready-prepared pills may be used. The latter usually are coated with sugar, gelatin, chocolate, etc. The gelatin-coated pills are the most desirable, as a rule, for many reasons. Pills are not prescribed as often as formerly. Five different pills are official.
- pilular** (pĭl'ŭ-lar) [L *pilula*, pill]. Pert. to, or of the nature of, pills.
- pilus** (pĭ-lŭs) (pl. *pili*) [L. hair]. A hair.
- pimel-** [G.]. Combining form or prefix meaning *fat* or *associated with fat*.
- pimellititis** (pĭm-ĕl-lĭ'tis) [G. *pimelē*, fat, + -itis, inflammation]. Inflammation of adipose and of connective tissue in general.
- pimeloma** (pĭm-ĕl-ō'mā) [" + -ōma, tumor]. A fatty tumor. **Syn:** *lipoma*.
- pimlopterygium** (pĭm'ē-lō-tĕ-rij'ē-ŭm). A fatty outgrowth of the conjunctiva.

pinelorrhea (pim'-el-or-ē-ā) [' + *roia*, flow]. Discharge of fat in loose stools.

pinelorthopnea (pim'-el-or-'thōp-nē-ā). Difficulty in breathing when lying down, resulting from obesity.

pinelosis (pim'-el-ō'sis) [' + -ōsis, intensive]. 1. A conversion into fat. 2. Fatty degeneration of any tissue. 3. Corpulence; obesity.

pineluria (pim'-el-ū-ri-ā) [' + *ouron*, urine]. Excretion of fat or oil in urine. *Syn.* *lipuria*.

pimple (pim'pl) [A.S. *pimpel*]. A tiny, sharp-pointed protuberance of the skin, sometimes going on to suppuration. *Syn.* *papule*, *pustule*.

Often seen on the skin of the adolescent. They have little diagnostic value, but are supposed to result from faulty nutrition or interference with capillary circulation. Patients should be warned, when necessary, not to pick at pimples, as infection may take place and blood poisoning result.

pinement (pans-mong') [Fr. *pinching*]. Pinching or nipping of the flesh in massage.

pineal (pi'nē-āl, pin'-ē-āl) [L. *pineus*, pine cone]. 1. Shaped like a pine cone. 2. The small red gland attached to post. part of 3rd ventricle of brain. 3. Pertaining to the pineal body. *q.v.*

Function Unknown. Such knowledge as we have is derived from observation of cases of teratoma. These are sometimes associated with marked sexual and somatic overgrowth leading to the condition known as *pubertas praecox* or *macrogenitosomia praecox*. Whether this is due to a lack of pineal secretion or to a hyperfunction of the gland is not known. *Syn.* *epiphysis*.

p. body. *Syn.* *epiphysis cerebri*. A small ovoid body which extends from the roof of post. extremity of third ventricle of brain. Consists of ependymal cells and neuroglia embedded in connective tissue stroma. Often contains calcareous granules (brain sand).

pinealectomy (pi'nē-āl-ēk'tō-mī) [L. *pineus*, pine cone, + *G. ektomē*, excision]. Removal of the pineal body.

pinealism (pi'nē-āl-izm) [' + *G. ismos*, condition]. Disorder caused by abnormality of the secretion of the pineal body.

pineaioma (pin'-ē-āl-lōm-ā). A tumor of the pineal body, usually encapsulated. Often associated with precocious puberty.

pinealopathy (pi'nē-āl-op'āth-l) [' + *G. pathos*, disease]. Any disorder of the pineal gland.

pineapple (pin'āp-l) [A.S. *pin*, pine, + *aepel*, apple]. *Comp.* Very rich in cane sugar. Contains tartaric acid.

Av. Serving (fresh and juice): 150-120 Gm. **Pro.** 0.6-0.4. **Fat** 0.5-0.4. **Carbo.** 13.9-15.4. **VITAMINS:** A++ + + to ++, B++ + + to ++, C++ + + to ++, G+ + +. **ASH CONST.** (fresh only): Ca 0.018, Mg 0.011, K 0.321, Na 0.018, P 0.028, Cl 0.051, S 0.009, Fe 0.0005.

ACTION: Easy to digest. Juice very valuable.

pineblastoma (pin'-ē-āl-blāst-ō-mā). A blastoma of the pineal body.

pine tar (pin). USP. A product obtained from the distillation of pine wood.

ACTION AND USES: Externally, a stimulant in dermatitis; internally, a stimulant to bronchial mucous membrane.

DOSAGE. 8 gr. (0.5 Gm.). Externally, 50% ointment in petrolatum. *Syn.* *piz liquida*.

pinguecula (pin-gwēk'-ū-lā) [L. *pinguis*, fat]. BNA. Yellowish thickening of bulbar conjunctiva, triangular in shape, on inner and outer margins of the cornea.

Base of triangle is toward the limbus. Yellowish color is due to increase in the elastic fibers.

pinhole (pin'hōl) [A.S. *pin*, a pin, + *hol*, hole]. Small perforation made by, or size of that made by, a pin [women].

p. os. A very small os uteri in young

p. pupil. Extreme contraction of the iris

It is seen in locomotor ataxia, after use of miotics, in some brain diseases, and in opium poisoning

piniform (pin'f-form) [L. *pineus*, pine cone, + *forma*, shape]. Shaped like a pine cone.

pink disease (pink). Rare disease of children marked by swelling and redness of feet and hands, sweating, itching and polyarthritides. *Syn.* *acrodynia*, *erythredema*.

p. eye. *Syn.* *Koch-Weeks conjunctivitis*. Epidemic form of acute conjunctivitis caused by pneumococci, *Hemophilus aegyptius* (Koch-Weeks bacillus), and other organisms. Sporadic, noninfectious cases may result from irritation by various agents, such as intense light, or they may accompany exanthematous disease such as measles.

pinna (pin'ā) (pl. *pinnae*) [L. wing]. The auricle or projection part of the ext. ear. It collects and directs sound waves into the ext. acoustic meatus and thence to the tympanic membrane.

p. nasal. Protruding cartilaginous extension on each nostril. *Syn.* *ala nasi*.

pinocytosis (pi'nō-si-tō'sis) [G. *pinen*, to drink, + *kytos*, cell]. Term for the absorption of liquids by phagocytic cells.

Pins's sign. In pericarditis, the disappearance of symptoms of pleurisy when patient assumes knee-chest position.

pint (pint) [O Fr. *pinte*]. Measure of capacity equal to one-half a quart; 16 fluid ounces; 28.875 cu. in. *See* Table of weights and measures in Appendix.

pin'ta. *Syn.* *azul*, *carate*, *mal de los pintos*, *spotted sickness*. Etiol: *Trepionema carateum*, a spirochete.

pinworm (pin'wurm). *Syn.* *ascaris*, *oxyuris*. A parasitic nematode, *Enterobius vermicularis*, *q.v.*

pinemia (pi'nō-mē-mī-ā) [' + *aima*, blood]. Fat in the blood. *Syn.* *lipemia*.

piescope (pi'ō-skōp) [' + *skopein*, to examine]. Device for estimating the fat content of milk.

peper (pi'pēr) [L.]. Pepper.

pipet, pipette (pi-pēt) [Fr. *pipette*, a tiny pipe]. Narrow glass tube with both ends open for transferring and measuring liquids, using suction principle.

piptonychia (pip-tō-nik'-ā). The shedding of nails

Pirogoff's amputation (pi'rō-gōf). Foot amputation, removing part of the os calcis.

Piroplasma (pi'rō-plāz-mā) [L. *pirum*, pear, + *G. plasma*, a thing formed]. Former name of *Babesia*, *q.v.*, a genus of Sporozoa parasitic in domestic animals.

piroplasmosis (pi'rō-plāz-mō'sis) [L. *pirum*, near, + *G. plasma*, a thing formed, + -ōsis, condition]. Infection by species of the genus *Babesia* or *Theileria*, sporozoan blood parasites.

Pirquet's test (pēr-kā'). Test for tuberculosis by means of a skin reaction.

pisiform (pi'si-form) [L. *pisum*, pea, + *forma*, shape]. 1. Name of small, pea-

like sesamoid bone of the wrist. 2. Pea-shaped. 3. The smallest carpal bone, located in proximal row on ulnar side.

pit (pit) [A.S. *pytt*, hole]. 1. A tiny hollow or pocket. SYN: *depression*, *fossa*. 2. To be or become marked with a shallow depression, to cause a depression on pressure in edema.

p., auditory. A pit which develops in auditory placode, *q.v.*

p., gastric. One of many minute depressions (foveolae) in gastric mucosa into which open the gastric glands.

p., nasal. One of two horseshoe-shaped depressions on ventrolateral surface of head bounded by lateral and median nasal processes. It gives rise to nostrils and portion of nasal fossa.

p., olfactory. Nasal pit, *q.v.*

p., primitive. Minute depression at ant end of primitive groove or streak and immediately posterior to primitive knot.

p. of the stomach. 1. Depression at end of the esophageal process. 2. The center of the abdominal region above the navel.

pitch. That quality of the sensation of sound that enables one to classify it in a scale from high to low. It is dependent principally on frequency of vibrations.

pithecoïd (pith'-ē-koyd) [G. *pitēkos*, ape, + *eidōs*, like]. Apelike; resembling an ape.

pithiatism (pith-i-āt-izm) [G. *peithēin*, to persuade, + *iatos*, curable]. 1. Hysteria induced by suggestion. 2. Mental disorder cured by suggestion.

pithiatric (pith-i-at'rik) [" + *iatrikos*, healing]. Capable of being soothed or relieved by persuasion or by suggestion.

pithing (pith'ing). Destruction of the central nervous system by the piercing of brain or spinal cord, as in vivisection. Done on experimental animals to render them insensible to pain and to inhibit controlling effects of the central nervous system. SYN: *decerebration*.

pitocin (pit-ō'sin). Brand name for an aqueous solution containing the oxytocic fraction of the post. pituitary gland. SEE: *oxytocin injection*.

Pitres's sections (pē-trē'). Series of 6 coronal vertical brain sections for study of this organ.

pitressin (pit-rēs'in). A product obtained from the post. lobe of the pituitary gland containing pressor and antidiuretic principles. SEE: *principle*, *antidiuretic*; *vasopressin*.

Uses: For increasing blood pressure, the muscular contraction of the intestinal tract, and diminishing urinary output.

Dosage: From 5 to 15 m (0.3-1 cc.) intramuscularly. SEE: *vasopressin*.

pitting (pit'ing) [A.S. *pytt*, hole]. The formation of pits or depressions or scars, as in smallpox.

pitucyte (pi-tū't-sit). A branched, modified, neuroglia cell characteristic of pars nervosa post lobe of pituitary gland. Also present in infundibular stalk.

pituita (pit-ū't-tā) [L. *phlegm*]. A glairy or viscid mucus, as a thick nasal secretion.

pituitarism (pit-ū't-tā-rizm) [" + G. *is-mos*, condition]. Any disorder of the pituitary gland.

pituitary (pit-ū't-tār-i) [L. *pituita*, phlegm]. 1. Concerning phlegm. 2. The pituitary body or gland, *q.v.*; the hypophysis cerebri.

p. body. SEE: *p. gland*.

p., desiccated ant. SYN: *pituitarium anterius*. Dried, defatted, and powdered ant. lobe of pituitary gland of domestic animals.

p., desiccated post. SYN: *pituitarium posterius*. Dried, powdered, post. lobe of pituitary gland of animals used as food by man.

p., desiccated whole. SYN: *pituitarium totum*. The dried, defatted, powdered entire pituitary gland of domestic animals.

p. disorders. *Hypersecretion of ant lobe*—gigantism, acromegaly, pituitary basophilism (Cushing's disease). *Hyposecretion of ant. lobe*—dwarfism, pituitary cachexia (Simmonds' disease), Sheehan's syndrome, acromicria, eunuchoidism or hypogonadism. *Post lobe deficiency or hypothalamic lesion*—diabetes insipidus. *Ant. and post. lobe deficiency and hypothalamic lesion*—Frohlich's syndrome (adiposogenital dystrophy), pituitary obesity.

p. gland. SYN: *hypophysis cerebri*. A small, gray, rounded body attached to the base of the brain by the infundibular stalk, a downward extension of the floor of the third ventricle. It lies in the sella turcica of the sphenoid bone, averages 13 x 10 x 0.5 cm in size and 0.55 to 0.6 Gm. weight.

Functions: The pituitary is an endocrine gland secreting a number of hormones which regulate many bodily processes including growth, reproduction, and various metabolic activities. It is often referred to as the "master gland" of the body. Evidence indicates that these hormones are secreted by neurosecretory cells of the hypothalamus and pass through fibers of the supraopticohypophyseal tracts in the infundibular stalk to the neurohypophysis where they are stored.

HORMONES OF INTERMEDIATE LOBE: In cold-blooded animals, *intermedia* is secreted which influences the activity of pigment cells (chromatophores) of fishes, amphibians, and reptiles. In warm-blooded animals no effects are known.

HORMONES SECRETED BY ANT LOBE: *Somatotropic, or growth, hormone* (STH), which regulates growth, *adrenocorticotrophic hormone* (ACTH), which regulates functional activity of the adrenal cortex; *thyrotrophic hormone* (TTH), which regulates functional activity of thyroid gland, *gonadotrophic hormones* which include *follicle-stimulating hormone* (FSH), which stimulates development of ovarian follicles and spermatogenesis in the testis, *lutinizing hormone* (LH), also called *interstitial cell stimulating hormone* (ICSH), in conjunction with FSH induces secretion of estrogens, ovulation, and development of corpus luteum; *luteotrophic hormone* (LTH), which maintains mature corpora lutea and induces secretion of progesterone. It also induces secretion of milk in fully developed mammary gland. Because of this action, it is sometimes called the *lactogenic hormone*.

HORMONES OF THE POST LOBE: These include oxytocin, which acts specifically on smooth muscle of uterus increasing tone and contractility; *vasopressin*, which induces contraction of smooth muscles of the blood vessels, and associated with it an *antidiuretic principle* which prevents excessive loss of water through the kidneys.

p., post., injection. SYN: *injectio pituitarii posterioris*. A sterile, aqueous

solution of the principles of post. lobe of pituitary from healthy domesticated animals used as food for man.

ACTION: Constricts blood vessels raising blood pressure, stimulates smooth muscles thus increasing intestinal peristalsis and uterine contractions; reduces volume of urine excreted

pituittotrope (pit-'it-ō-trōp) [L. *pituuta*, phlegm, + G. *tropos*, a turning]. A person exhibiting tendencies to being overinfluenced by the pituitary gland.

pituittotropic (pit-'it-ō-trōp'ik) [+ G. *tropos*, a turning]. Concerning or marked by pituitotropism.

pituittotropism (pit-'it-ō-trō'pizm) [+ " + *ismos*, condition]. Bodily constitution in which the pituitary influence dominates.

pituittin (pit-'it-rin). A solution of the dried powdered post. lobe of the pituitary body of cattle.

ACTION AND USES: Used to stimulate contraction of blood vessels, peristalsis in intestines, and uterine contractions in labor

pityriasis (pit-'ir-'ās-'is) [G. *pityron*, bran, + *iasis*, disease]. A skin disease characterized by branny scales

p. alba atrophicans. Cutaneous disorder with scaling and atrophy. **SYN:** *atrophyoderma albidum*.

p. capitis. Dandruff. **SYN:** *dermatitis seborrhoica*.

p. lichenoides et varioliformis acuta. A skin disorder characterized by development of pustules and vesicles and formation of crusts and scarring. Non-communicable

p. linguae. Transitory benign plaques of the tongue [rosea]

p. maculata et circinata. **SEE** *p. nigra*. The dark brown or black patches in *p. versicolor* in warm climates.

p. pilaris. **SEE** *p. rubra*.

p. rosea. A skin disease characterized by development of distributed patches which are circinate in outline, slightly scaly, a faint red color. **SYN:** *p. maculata et circinata*.

Acute inflammatory disease marked by a macular eruption on the trunk, obliquely to the ribs. Rose red and somewhat scaly with a clearing in the center, or reddish ring-shaped patches symmetrically distributed over the limbs

ETIO. Unknown.

SYM. Macular or circinate lesions, yellowish, salmon or red, rounded, oval or irregular, thinly covered with fine branny scales, increasing in size, when centers clear up, giving rise to slightly elevated reddish rings with fawn-colored centers, coalescence of rings resulting in segmental or gyrate lesions of various sizes. Spontaneous disappearance

TREATMENT: Salicin internally. Locally: antipruritics

p. rubra. Persistent general exfoliative dermatitis.

p. rubra pilaris. A chronic disease with formation of subacute inflammatory papules around the hair follicles. These coalesce and form infiltrated plaques of scaling dermatitis

p. versicolor. Contagious skin disease marked by yellow patches, scales and itching. Due to a fungus *Malassezia furfur*.

pityroid (pit-'ir-oyd) [G. *pityron*, bran, + *eidos*, like]. Branny; resembling bran.

pix (piks) [L.]. Pitch.

p. liquida. Tar.

PK. Abbr. for psychokinesis.

placebo (plā-sē'bō) [L. I shall please]. Inactive substance given to satisfy patient's demand for medicine, such as a bread pill.

placenta (plā-sen'ta) (pl. *placentae*) [L. a flat cake, from G. *plakous*]. The oval or discoid spongy structure in the uterus through which the fetus derives its nourishment.

ANAT. The placenta consists of a fetal portion, the *chorion frondosum*, bearing many chorionic villi which interlock with the decidua basalis of the uterus which constitutes the maternal portion. The chorionic villi lie in spaces in the uterine endometrium where they are bathed in maternal blood and lymph. Groups of villi are separated by placental septa forming about 20 distinct lobules called *cotyledons*

Attached to the margin of the placenta is a membrane which encloses the embryo. It is a composite of several structures (decidua parietalis, decidua capsularis, chorion laeve, and amnion). At the center of the concave side is attached the umbilical cord through which the umbilical vessels (two arteries and one vein) pass to the fetus. The cord is approx. 50 cm long at full term

The mature placenta is about 6 to 7 in in diameter and weighs about a pound. When expelled following parturition it is known as the *afterbirth*

PHYS. Maternal blood enters the intervillous spaces of the placenta through spiral arteries, branches of the uterine arteries. It bathes the chorionic villi and flows peripherally to the marginal sinus which leads to uterine veins. Food substances, oxygen and antibodies pass into fetal blood of the villi, metabolic waste products pass from fetal blood into mother's blood. There is no admixture of fetal and maternal blood. The placenta also serves as an endocrine organ elaborating and storing certain hormones, among them chorionic gonadotrophins, the presence of which in urine is the basis of pregnancy tests. Evidence also indicates that estrogens and progesterone are secreted by the placenta

p. accreta. A placenta in which the cotyledons have invaded the uterine musculature and, as a result of this, separation of the placenta is very difficult or even impossible.

p., abruptio of. Premature separation of placenta

p., adherent. One that remains adherent to the uterine wall after normal period following childbirth

p., annular. A p. that extends like a belt around the interior of the uterus.

p., battledore. A form of insertion of the umbilical cord into margin of the p. in which it spreads out to resemble a battledore.

p. bipartite. One that is divided into two separate parts

p., circinate. One that is cup-shaped.

p. cirsoides. P. with appearance of varicose veins

p., cordiform. A p. having a marginal indentation giving it a heart shape.

p., deciduate. A p. of which the maternal part escapes with delivery.

p., discoid. P. which constitutes practically 1 mass, circumscribed and circular in form.

p., double. A placental mass of the 2 placentae of a twin gestation.

p. duplex. Same as *p. bipartitia*.

p., fetal. That part of the p. formed by aggregation of chorionic villi in which the umbilical vein and arteries ramify.

p., fundal. One attached to the uterine wall within the fundal zone.

p., horseshoe. A formation in which the 2 placentae of a twin gestation are united.

p., incarcerated. One retained in the uterus by irregular uterine contractions after delivery.

p., lateral. One attached to lateral wall of uterus.

p., maternal. Portion of placenta that develops from decidua basalis of uterus.

p., membranous. A thinning of the p. from atrophy.

p., nondeciduate. One that does not shed the maternal portion.

p., previa. Placenta which is implanted in the lower uterine segment. There are 3 types *Centralis*, *lateralis*, and *marginalis*. *P. p. centralis* is the condition where the placenta has been implanted in the lower uterine segment and has grown to completely cover the cervical os. *P. p. lateralis* is the condition when the placenta lies just within the lower uterine segment. *P. p. marginalis* is the condition where the placenta partially covers internal cervical os.

Sym. Slight hemorrhage, recurrent with greater severity, appears 7th or 8th month; gradual anemia, pallor, rapid weak pulse, air hunger, low blood pressure.

Diag. Painless bleeding during last 3 months; placenta in lower portion of uterus.

Prog. Depends upon control of hemorrhage and assepsis.

Treatment. Conserve blood supply during delivery and before, prevent and control postpartum hemorrhage; combat anemia before and after labor, prevention of sepsis.

p., reniformis. A kidney-shaped placenta.

p., retained. One not expelled for 2 hours after 2nd stage of labor.

p., spuria. An outlying portion of p. which has not maintained its vascular connection with the decidua vera.

p., succenturiata. An accessory p.

p., tripartita. A 3-lobed p.

p., triple. A placental mass of 3 placentae of a triple gestation.

p., velamentous. A p. having the umbilical cord attached at outer end.

p., zonary. Same as *annular p.*

placental (plā-sen'tāl) [*L. placenta*, a flat cake]. Relating to the placenta.

p., bruit, p., souffle. Sound heard in auscultation over the placenta in pregnancy due to circulation of the blood.

placentation (plā-sen-tā'shun) [*L. placenta*, a flat cake]. The process of formation and attachment of the placenta.

placentitis (plā-sen-tī'tis) [" + *G. -itis* inflammation]. Inflamed condition of placenta.

placentography (plā-sen-tōg'rā-fī) [" + *G. graphein*, to write]. Examination of the placenta by x-ray.

placentaloid (plās-ēn'toyd) [" + *G. eidos*, like]. Like the placenta.

placentolysin (plā-sen-tōl'is-in) [" + *G. lysis*, dissolution]. A lysin obtained by injecting placental tissue into an animal, the serum thus obtained being destructive to placental cells of the species of

animal from which the placenta was taken.

placentoma (plā-sen-tō'mā) [" + *G. -ōma*, tumor]. A new growth derived from retained placental tissue.

placentotherapy (plā-sen'tō-thēr'ā-pī) [" + *G. therapēia*, treatment]. Therapeutic use of placental extract.

Placido's disk (plā-sē'dō). A disk marked with black and white circles used in determining amt. and character of corneal astigmatism.

plac'ode. In embryology, a platelike thickening of epithelium, usually ectoderm, which serves as the anlage of an organ or structure.

p., auditory. A dorsolateral placode located alongside hindbrain which gives rise to *otocyst* which in turn develops into *internal ear*.

p., lens. P. developing in ectoderm directly overlying optic vesicle. Forms *lens vesicle* which becomes enclosed in optic cup and eventually becomes lens of eye.

p., olfactory. P. which gives rise to *olfactory pit* and finally major portion of nasal cavity.

pladaroma (plad-ar-ō'mā) [*G. pladaros*, soft, + *-ōsis*, disease]. A soft growth like a wart on the eyelid.

pladarosis (plad-ar-ō'sis) [*G. pladaros*, soft, + *-ōsis*, disease]. Pladaroma.

plagiocephalic (plā-jī-ō-sēf-ā'l'ik) [*G. plagios*, oblique, + *kephalē*, head]. Marked by or relating to plagiocephaly.*

plagiocephalism, plagiocephaly (plā'jī-ō-sēf-ā'l-izm, plā'jī-ō-sēf-ā'l-ī) [" + " + *ismos*, condition]. Condition of malformation of the skull, it being developed more ant than post.

plague (plāg) [*G. plēgē*, a stroke]. 1. Any widespread contagious disease of great mortality. 2. **Syn** *bubonic plague, black plague, pestis*. An acute, febrile epidemic disease caused by *Pasteurella pestis*. Primarily a disease of rats and other rodents and transmitted to man by fleas. Exists in two forms, *bubonic* characterized by bubos (enlarged, tender, lymph nodes) and often accompanied by an overwhelming *septicemia*, and the *pneumonic*, characterized by respiratory symptoms. Streptomycin and other antibiotics have reduced the mortality rate from 50-90% to 5-10%.

p., ambulatory. **Syn** *pestis minor*. Mild but often fatal. Patient does not take to his bed.

p., black. **Syn** *bubonic plague, black death*. An epidemic disease with high mortality that swept Europe during the 14th century. So called because of appearance of petechiae or black spots about 3rd day of disease.

p., bubonic. The more common form of plague marked by formation of bubos.

p., hunger. Relapsing fever, *q.v.*

p., murine. Plague infecting rats.

p., pneumonic. A highly virulent form of plague occurring as sequela of bubonic plague, or as a primary infection.

p., septicemic. Bubonic plague accompanied by *septicemia*.

p., sylvatic. Plague infecting various species of rodents. In the U.S., 38 species harbor the plague organism.

plane (plān) [*L. planus*, flat]. 1. A flat or relatively smooth surface. **Sz:** planum. 2. A flat surface formed by making a cut, imaginary or real, through the body or a part of it. Planes are used as points of reference by which positions of parts of the body are indicated. In the human subject, all planes are

based on body being in an upright, anatomic position, *q.v.*

p's., Addison's. Planes used as landmarks in thoracoabdominal topography.

p., Aebys's. One perpendicular to the median plane of the cranium through the *basion* and *nasion*.

p., alveolocondylar. One tangent to the alveolar point and most prominent points on lower aspects of condyles of the occipital bone.

p., Baer's. One through upper border of the zygomatic arches.

p., coccygeal. The 4th parallel one of the pelvis.

p., coronal. Vertical p. at right angles to a sagittal p. dividing the body into ant. and post. portions.

p., datum. An assumed horizontal plane from which craniometric measurements are taken.

p., Daubenton's. One passing through the opisthion and inferior borders of the orbits.

p's., focal. Two p's through ant. and post. principal foci of a dioptric system and perpendicular to the line connecting the two.

p., frontal. A coronal plane, *q.v.*

p., Hodge's. One parallel to the plane of the pelvic inlet and passing through the 2nd sacral vertebra and upper border of the os pubis.

p., horizontal. A transverse plane at right angles to vertical axis of body

p's., inclined, of the pelvis. According to Lusk, "The sacral spines divide the pelvic cavity into 2 unequal sections. In the larger, anterior section, the lateral walls slope toward the symphysis and arch of the pubes, while posteriorly the walls slope in the direction of the sacrum and coccyx. The declivities in front of the spines are termed the anterior inclined p's. of the pelvis, over which rotation of the occiput takes place in the mechanism of normal labor. Behind the spines the lateral slopes are known as the posterior inclined p's."

p., intertubercular. A horizontal plane passing through tubercles of crests of ilia. Lies approx. at level of 5th lumbar vertebra

p., Listing's. A transverse vertical plane perpendicular to anteroposterior axis of eye, containing center of motion of the eyes, in it also lie the transverse and vertical axes of voluntary ocular rotation.

p., Meckel's. One through the auricular and alveolar points.

p., medial; p., median; p., mesial. One usually anteroposterior dividing a body or organ into 2 equal and symmetrical parts. The median p. of the body is known as the *meson*.

p., midsagittal. Vertical plane dividing body into symmetrical right and left halves.

p., Morton's. One passing through the most projecting points of the parietal and occipital protuberances.

p's., parallel, of the pelvis. Those intersecting at right angles the axis of the pelvic canal. The 1st is the p. of the superior strait; the 2nd the p. extending from middle of the sacral vertebra to level of the subpubic ligament; the 3rd the p. at level of spines of the ischia; the 4th at the outlet.

p's. of the pelvis. Imaginary ones touching the same parts of the pelvic canal on both sides.

p. of refraction. One passing through

a refracted ray of light and drawn perpendicular to the surface at which refraction takes place.

p. of regard. One through the fovea of the eye and fixation point.

p., sagittal. Vertical plane parallel to the midsagittal plane; one which divides body into right and left portions

p., subcostal. Horizontal plane passing through lowest points of 10th costal cartilages. Lies approx. at level of 3rd lumbar vertebra

p., transverse. A horizontal plane

p., visual. One passing the visual axis of the eye.

planoconcave (plā'nō-kon'kāv) [L. *planus*, flat, + *concavus*, hollow] Flat on one side and concave on the other

planoconvex (plā'nō-kon'veks) [L. + L. *convexus*, arched]. Flat on 1 side and on the other convex.

planomania (plan'o-mā'nē-ā). Morbid desire to wander and to be free of social restraints

Planorbis (plan-or'bis). A genus of fresh water snails which serves as intermediate host for certain species of blood flukes (*Schistosoma**)

plant (plānt) [L. *planta*, a sprout]. An organism which contains chlorophyll and manufactures carbohydrates from carbon dioxide and water or, if lacking these characteristics, is similar in structure and life history to those organisms which do possess chlorophyll and manufacture food

planta (plān'tā) [L. sole]. BNA. The sole of the foot.

plantar (plān'tār) [L. *planta*, sole]. Concerning the sole of foot

p. arch. Vascular arch in sole of foot. The union of the plantar and dorsalis pedis arteries in the sole. SYN: *arcus plantaris*.

p. reflex. Contraction of toes upon irritation of the sole

plantaris (plān-tār'is) [L.] An extensor muscle found in the calf of the leg.

p. wart. SYN *verruca plantaris*. Wart occurring on sole of the foot, usually quite painful

plantigrade. Type of foot posture in which entire sole of foot is placed on ground in walking. Ex bears, rabbit, man

plasma. A flat or relatively smooth surface. SEE *plane*

p. nuchale. Outer surface of occipital bone between foramen magnum and sup. nuchal line

p. occipitale. Outer surface of occipital bone lying above sup. nuchal line.

p. orbitale. Portion of maxilla which forms greater part of floor of orbit.

p. popliteum. Smooth triangular area on post. surface of distal end of femur. Bordered by medial and lat. supracondylar lines and forms floor of popliteal fossa

p. sternale. Ant. or ventral surface of sternum

p. temporale. Depressed area on side of skull below inf. temporal line. Underlies the temporal fossa

planuria (plān-ū'rī-ā) [G. *planē*, a wandering, + *ouron*, urine]. The voiding of urine from an abnormal passage of the body.

plaque (plāk) [Fr. a spot]. 1. A patch on the skin or on a mucous surface. 2. A blood platelet.*

plasma (plāz'mā) [G. *plasma*, a thing formed]. 1. The liquid part of the lymph and of the blood. 2. Protoplasm, cell

substance outside the nucleus. 3. An ointment base of glycerol and starch.

In the blood, the corpuscles and platelets float in it. It consists of serum and protein substances in solution.

The blood plasma consists of water in which numerous chemical compounds, both solids and gases, are dissolved. Among the important constituents may be mentioned the following: Water, electrolytes, sugar, proteins, nonprotein nitrogenous compounds, fats and lipoids, bile pigment or bilirubin, gases.

In general, plasma is a medium for circulation of blood cells, carries nutritive substances to various structures, and removes from them waste products of metabolism. It makes possible chemical communication bet. different portions of the body carrying minerals, hormones, vitamins and antibodies.

Different constituents of the plasma have specific functions within the blood. The proteins, bicarbonates, carbon dioxide, chlorides, phosphates, and ammonia serve to keep the acid base equilibrium of the blood constant, when acid or base substances are added to it. The proteins, esp. albumin, by virtue of their osmotic pressure, tend to prevent undue leakage of fluids out of the capillaries, and to maintain a proper exchange of fluid bet. capillaries and tissues.

Plasma, if normal, is thin and colorless when free from corpuscles, or it has a faint yellow tinge when seen in thick layers.

After clotting of the blood, the liquid squeezed out by the clot is called blood serum. If whole blood is prevented from clotting either by chilling it or by adding anticoagulants, such as sodium citrate, it can be centrifuged. The clear fluid which then occupies the upper half of the centrifuge tube is called plasma. SEE: blood, coagulation, serum

p. blood. Fluid in which float the corpuscles.

p. cell. Cell found in bone marrow and loose connective tissue, probably derived from lymphocytes SEE: plasmocyte.

p. lymph. Lymph without its corpuscles.

p. normal human. Sterile pooled plasma obtained from citrated whole blood of eight or more healthy human subjects. It is stored as fluid plasma as 4° C or as dried plasma prepared by lyophilization technic, i.e., drying in a vacuum at low temperatures.

p. skimming. Phenomenon observed in capillaries in which plasma lacking corpuscles flows into neighboring capillaries.

plasmacule (plāz'mă-kūl) [L. *plasmacula*, little plasm]. One of the minute particles said to be found in the blood plasma giving it its vital power. SYN: *hemokonia*.

plasmacyte (plāz'mă-sīt) [G. *plasma*, a thing formed, + *kytos*, cell]. A plasma cell, 1 of those found in connective tissue with an eccentrically placed round nucleus and filled with a chromatin mass that stains deeply.

plasmacytoma. A plasma cell myeloma occurring in bone marrow SEE: *myeloma*, *multiple*.

plas-ma-gel. The peripheral portion of the endoplasm of a cell such as in an amoeba. It is immobile and of the nature of a gel.

plas'ma-ge'nte. A cytoplasmic hereditary determiner.

plasmapheresis (plāz-mă-fēr'ē-sis) [G. *plasma*, a thing formed, + *aphairesis*, a taking away]. The removal of fluid portion of blood from the body by venesection, centrifugalization, and replacement of the corpuscles into the blood stream.

plasmasol. The internal more fluid portion of the endoplasm of a cell.

plasmosome (plāz'mās-ōm) [' + *sōma*, body]. A leukocyte granule; nucleolar substance (nonchromatin staining) in the cytoplasm.

plasmatherapy (plās'mă-thēr'ā-pī) [The use of blood plasma for therapeutic purposes, as injection in treatment of shock].

plasmatic (plāz-măt'ik) [G. *plasma*, a thing formed]. 1. Relating to plasma. 2. Formative or plastic.

p. layer. Blood plasma adjacent to the capillary walls. SYN: *plasmic*.

plasmatorrhesis (plāz'măt-ō-rēks'is) [' + *rēxis*, a rupture]. Rupture of a cell with loss of its plasma from internal pressure due to swelling.

plasmatosis (plās-mă-tō'sis) [Liquefaction of substance of a cell].

plasmic (plāz'mik) [G. *plasma*, a thing formed]. Concerning plasma. SYN: *plasmatic*.

plasmocyte (plāz'mō-sīt) [G. *plasma*, a thing formed, + *kytos*, cell]. SYN: *plasma cell*. Cells found in bone marrow, connective tissue, and sometimes in blood plasma. Considered by some to be abnormal leukocytes. They are numerous in plasma cell myeloma.

plasmocytoma (plās-mō-sī-tō'mă) [A plasma cell myeloma].

plasmodium (plāz-mō'dī-ūm) [pl. *plasmodia*, + G. *plasma*, a thing formed, + *eidos*, form]. A multinucleate mass of naked protoplasm, occurring commonly among slime molds.

Plasmodium (plāz-mō'dī-ūm) [pl. *plasmodia*] [G. *plasma*, a thing formed, + *eidos*, form]. A genus of protozoa belonging to subphylum Sporozoa, class Telosporidia. Includes causative agents of malaria in man and lower animals. SEE: *malaria*, *mosquito*.

P. falciparum. Causative agent for malignant tertian (estivo-autumnal) malaria.

P. malariae. Causative agent for quartan malaria.

P. ovale. Causative agent for benign tertian or ovale malaria.

P. vivax. Causative agent for benign tertian or vivax malaria.

plas'mog'am'y. The fusion of cells.

plasmogen (plāz'mō-jēn) [' + *gennan*, to produce]. Essential part of protoplasm.

plasmology (plāz-mōl'ō-jī) [' + *logos*, a study]. The study of the cells and plasma. SYN: *histology*.

plasmolysis (plāz-mōl'is-is) [' + *lysis*, dissolution]. Shrinking of cytoplasm in a living cell due to loss of water by osmosis.

plasmolyze (plās'mō-līz) [To bring about loss of water by osmosis].

plasmorrhesis (plāz-mor'ēks'is) [' + *rēxis*, rupture]. Rupture of a cell with loss of plasma. SYN: *erythrocytorrhesis*, *erythrorrhesis*, *plasmatorrhesis*.

plasmoschisis (plāz-mos'kī-sis) [G. *plasma*, a thing formed, + *schisis*, a splitting]. The splitting of a cell.

plasmotomy (plāz-mōt'ō-mī) [' + *tomē*, incision]. Mitosis in which the cytoplasm divides into 2 or more masses.

plasmotropism (plāz-mōt'rō-pīzm) [' +

tropeln, to turn, + *ismos*, condition). The action of spleen, liver and bone marrow, causing the destruction of red blood cells.

plasson (pläs'ôn) [G. *plässôn*, forming]. Primitive protoplasm in the cytode or non-nucleated stage.

plaster (pläs'tür) [G. *emplastron*]. Medicinal preparation, to be used externally, in which the constituents are formed into a tenacious mass of substance harder than an ointment and spread upon muslin, linen, skin or paper.

It may be *mustard*, *belladonna*, to check secretions or to allay pain; *capsicum*, as a counterirritant; *cantharides*, or Spanish fly, as a vesicant* used in arthritis with synovitis, and in pleural effusions. Cantharides is readily absorbed if used in large quantities and it is eliminated through the kidneys and may induce nephritis. The urine should be watched for 24 hours after application.

p., adhesive. Plaster made of resin, wax and olive oil used to immobilize a part, to relieve pressure upon sutures, to protect wounds, to secure traction in fractures, to exert pressure, to hold dressings in place, etc

Hair on the area should first be removed before applying any plaster. It should never be applied to abraded or raw surfaces. In re-applying, dead scarf skin should be removed. Surface should be dry and clean. Removal should be made by stripping from both ends up to the wound, first moistening with benzene or ether.

p. bandage. Bandage stiffened with plaster of Paris.

p., blistering. P made of cantharides.

p., court. P. made of isinglass on silk, used for superficial wounds.

p. jacket. P for the trunk made of plaster of Paris.

p., mustard. P. made of powdered mustard paste spread on cloth, used as a rubefacient.

p. of Paris. Calcined gypsum mixed with water to form a paste which sets rapidly, used to make casts and stiff bandages.

p., porous. Perforated p.

p., resin; **p., rosin**. P. containing resin, wax and lead plaster, used as a soothing agent, esp. for children.

p., rubber. SEE: *adhesive p.*

p., warming. P. of cantharides and pitch employed as a counterirritant.

plaster cast. Rigid dressing made of gauze impregnated with plaster of Paris, used to immobilize an injured part, esp. in bone fractures.

NP: Patient's position is indicated by fracture. A fracture table should be used when possible and various parts should be in readiness. Place a plaster bandage end up in tepid water. When about saturated water is gently squeezed by pressing both ends (otherwise the plaster will be forced out through the ends of bandage). As 1 bandage is passed to doctor, another is placed in water. There should be extra plaster of Paris in perforated cans so it can be shaken on in smoothing the cast.

plastic (pläs'tik) [G. *plastikos*, formed]. 1. Capable of being molded. 2. Contributing to building tissues.

p. bronchitis. Bronchitis with fibrin exudate adhering in the form of a cast to the bronchial tubes.

p. force. The impetus that builds tissues; generative force.

p. linitis. Cirrhosis of the stomach.

p. lymph. The exudate covering inflamed serous surfaces, as in wounds.

p. surgery. The restoration and repair of external physical defects by use of grafts of bone or tissues. SEE: *chalinoplasty*.

plasticity (pläs-tis'ti-ti) [G. *plastikos*, formed]. The ability to be molded.

plastid (pläs'tid) [G. *plastidēs*, molded]. A cytoplasmic organoid found in plant cells. Includes *chloroplasts* (which contain chlorophyll), *leukoplasts* (colorless), *chromoplasts* (contain pigment) and *amyloplasts* (store starch). Plastids are centers of chemical activity involved in cell metabolism.

plate (plät) [G. *platys*, flat] SYN *lamina*, *lamella* 1. A thin flattened part or portion 2. A flattened process of bone 3. An artificial denture or structure for holding false teeth 4. A shallow covered dish for culturing micro-organisms

p., approximation. A disk of decalcified bone used in intestinal surgery.

p., auditory. Bony roof of the ext. auditory meatus.

p., axial. The primitive streak of the embryo.

p., blood. Platelet.

p., bone. Flat, round or oval decalcified bone metal or hard rubber disk, employed in pairs, used in approximation.

p. culture. Bacterial culture in agar or gelatin on a plate.

p., dorsal. One of 2 prominences of the notochord in the embryo.

p., end. Termination expanded of a nerve fibril in muscular tissue.

p., foot. Flat portion of stapes. BNA. *basis stapedis*

p., medullary or neural. Central portion of the ectoderm developing into neural canal

p., palate. Part of the palate bone forming a lateral half of roof of mouth.

p., tympanic. Bony plate between ant. wall of the ext. auditory meatus and the tympanum.

platelet (plät'lët) [G. *platys*, flat] SYN: *thromboplastid*, *thrombocyte*. A round or oval disk, 1/4 to 1/2 the size of an erythrocyte found in the blood. Platelets number from 200,000 to 800,000 per cc. They contain no hemoglobin. SEE: *blood*

FUNCTIONS: Platelets play an important role in clotting by forming knots to which fibrin adheres, liberating thromboplastin, and in facilitating retraction of the clot. They also stimulate phagocytic action of leukocytes.

Thrombocytopenia (reduced platelet count) occurs in acute infections, anaphylactic shock, certain hemorrhagic diseases and anemias. *Thrombocytosis* (increased platelet count) occurs after operations, esp. splenectomy and following tissue injury

plating. In Bact., inoculation of liquefiable, solid media (gelatin or agar) with microorganisms and pouring of medium into a shallow flat dish. Also called *plating out*.

platinum (plät'in-üm) [Spanish *plata*, silver]. Heavy silver-white metal. SYMS: Pt. At. wt. 195.2. Sp. gr. 21.5.

platy [G.]. Combining form meaning broad.

platycelous (plät-i-sē'lūs) [G. *platys*, broad, + *kollos*, hollow]. Concave ventrally and convex dorsally, said of vertebræ.

platycephalic, platycephalous (plăt'î-sê-făl'îk, -sêf'ä-îus) [' + *kephalê*, head]. Having a wide skull with vertical index less than 70.

platyemia, platyemism (plăt-îk-nê-mî-ä, -mîzm) [' + *knēmê*, knee, + *is-mos*, condition]. 1. Having an unusually broad tibia 2. Broadlegged.

platyemic (plăt-îk-nê'mîk) [' + *knēmê*, knee]. Having unusually broad tibiae.

platycoria (plăt-î-kor'î-ä). Mydriasis; dilatation of the pupil

platycoriasis (plăt-î-kor-î-äs'îs). Platy-coria, *q v*

Platyhelminthes (plăt'î-hêl-mîn'thêz) [G. *platys*, broad, *elmins*, *elminth-*, worm]. A phylum of flatworms which includes the classes *Turbellaria* (tapeworms), and *Cestoides* (tapeworms). The last two are parasitic and include many species of medical importance. **See:** *Cestoda*, *Cestodea*, *fluke*, *tapeworm*, *trematode*

platyhielic (plăt-e-hî-er'îk). Having a broad sacrum with a sacral index over 100

platymeric (plăt-î-mê'rîk) [G. *platys*, broad, + *mêros*, thigh]. Having an unusually broad femur.

platymorphia (plăt-î-morf'î-ä). Having an eye with shortened anteroposterior diameter. Results in hyperopia.

platyopia (plăt-î-ô'pî-ä) [' + *ôps*, visage]. Having a very broad face, the nasomalar index being less than 107%.

platypelvic, platypelvic (plăt-î-pêl'îk, -vîk) [' + *pella*, a basin]. Having a broad pelvis

platypodia (plăt-î-pô'dî-ä) [' + *pous*, pod-, foot]. Condition of being flat-footed

platyrrhine (plăt'îr-în) [' + *ris*, rim, nose]. 1. Having a very wide nose in proportion to length 2. Pert. to a skull with a nasal index bet. 51.1 and 58

platysma myoides (plăt-îz'mä mî-ôy'dêz) [G. *platysma*, plate, + *mys*, my-, muscle, + *eidos*, form]. Broad, thin muscular layer on either side of the neck under the superficial fascia.

platysmal reflex. Dilatation of pupil resulting from sharp pinching of platysma myoides.

platyspondylisis (plăt'î-spôn-dîl'îs-îs) [G. *platys*, flat, + *spondylos*, vertebra]. Flatness of the vertebral bodies.

platystencephaly (plăt'îs-tên-sêf'ä-î) [G. *platys*, flat, + *encephalon*, brain]. Having a skull wide at occiput

Plaut's angina (plawt's äng-jî'nä). Ulceromembranous form of contagious disease of the oral mucosa, with inflammation of the tonsil. **Syn:** *trench mouth*, *Vincent's angina*.

pleasure principle. **Psy.** The avoidance of pain and the seeking of pleasure, indicative of the early stages of man's development. **Syn:** *hedonism*.

pledget (plêj'ê) [origin uncertain] Small, flat, lint compress, used to apply or absorb fluid, as a protector, to exclude air, etc.

plegaphonia (pleg-af-ô-nî-ä) [G. *plêgê*, stroke, + *a-*, neg. + *phônê*, voice]. A sound produced in percussion of the larynx when the glottis is open during auscultation of the chest.

pleo-, pleo-, plio- [G.]. Combining forms meaning *more*.

pleochroic, pleochromatic (plê-ô-krô'îk, -mât'îk) [G. *pleôn*, more, + *chroa*, color]. Pert. to property of crystals and some other bodies of showing various colors when seen from different axes.

pleocytosis (plê-ô-sî-tô'sîs) [' + *kytos*, cell, + *-ôsis*, intensive]. Increased num-

ber of lymphocytes in the cerebrospinal fluid.

pleomastia, pleomazia (plê-ô-mäs'tî-ä, -mâ'zî-ä) [' + *mastos*, *mazos*, breast]. The state of having more than 2 mam-mae. **Syn:** *polymastia*.

pleomorphic (plê-ô-morf'îk) [' + *morphê*, form]. Having many shapes.

pleomorphism (plê-ô-morf'îzm) [' + ' + *ismos*, condition]. 1. Property of crystallizing into 2 or more different forms. 2. Occurrence of more than 1 form in a life cycle.

pleomorphic (plê-ô-morf'îs) [' + *morphê*, form] Having many shapes or crystallizing into several forms.

pleonasm (plê-ô-nâzm) [G. *pleonasmos*, exaggeration]. State of having more than normal number of organs or parts.

pleonectic (plê-ô-nêk'tîk) [G. *pleonexia*, greediness]. 1. Being saturated with more than the normal amount of oxygen, said of blood 2. Relating to excessive urge to possess, greedy. **See:** *mesectic*, *mitonectic*

pleonexia (plê-ô-nêk'sî-ä) [G. *greediness*]. Having morbid desire for possession.

pleo'r'sis. Restoration of lost tissue.

pleisomorphous (plê-sî-ô-morf'îs) [G. *plei-sios*, close, + *morfê*, form]. Of like or nearly the same in form

pleisopia (plê'sî-ô'pî-ä) Increase in convexity of lens of eye

plessthesia (plês-ês-thê'zî-ä) [G. *plês-sîn*, to strike, + *aisthêsis*, sensation]. Palpatory percussion with left middle finger pressed against body and the index finger of right hand percussing in contact with left finger.

plessimeter (plês-î-met'er) [' + *metron*, a measure] A disk held over the body which is struck in mediate percussion. **Syn:** *pleximeter*.

plexor (plê'sor) [G. *plêssein*, to strike]. A hammer for performing percussion. **Syn:** *plexor*.

plethora (plêth'ô-rä) [G. *plêthôrê*, fullness]. 1. Overfullness of blood vessels or of the total quantity of blood or other fluid in the body 2. Congestion causing distention of blood vessels. **See:** *sanguine*.

plethoric (plêth-or'îk) [G. *plêthôrê*, fullness]. Pert. to or characterized by plethora, overfull

plethysmograph (plê-thîz'mô-gräf) [G. *plêthysmos*, increase, + *graphein*, to write]. Device for finding variations in size of a part, due to vascular changes.

pleura (pl. *pleurae*) (plû'rä) [G. *pleura*, a side]. Serous membrane that enfolds lungs and is reflected upon the walls of the thorax and diaphragm. **See:** *mediastinum*, *thorax*.

p. costal or parietal layer. Extends from roots of the lungs covering the sides of the pericardium to chest wall and backward to the spine. The visceral and costal pleural layers are separated only by a lubricating secretion. These layers may become adherent or separated by fluid or air in diseased conditions.

p. diaphragmatica. That covering upper surface of diaphragm.

p. pericardica. That covering the pericardium.

p. phrenica. **See:** *p. diaphragmatica*.

p. pulmonalis. **BNA**. The pleura investing the lungs and fissures bet. the lobes.

p. visceral. Invests the lungs and enters into and lines the interlobar fissures. It is loose at the base and at

sternal and vertebral borders to allow for lung expansion.

pleural (plū'rāl) [G. *pleura*, a side]. Concerning the pleura

p. cavity. Space bet. the parietal and visceral layers of the pleura. SEE: *chylothorax*.

p. fibrosis. Condition occurring in pulmonary tuberculosis in which pleura becomes thickened and pleural cavity is often obliterated

pleuralgia (plū-rāl'jī-ā) [" + *algos*, pain]. Pain in the pleura, or in the side SYN: *neuralgia*, *intercostal*.

pleurapocnysis (plū-rā-pof'is-is) [" + *apo*, from, + *physis*, a growth]. A rib or a vertebral lateral process.

pleurectomy (plū-rēk'tō-mī) [" + *ektomē*, excision]. Excision of part of the pleura.

pleurisy (plū'rī-sī) [G. *pleura*, a side]. Inflammation of pleura—may be primary or secondary, unilateral, bilateral or local, acute or chronic, fibrinous, serofibrinous or purulent SEE: *Andral's decubitus*.

NP. In simple pleurisy, absolute rest is essential with plenty of sunlight and fresh air if there is no rise in temperature. Routine nursing is in order, but the patient should not be permitted to exert himself and he should be kept cheerful. Assistance should be given in moving the patient. Fluids should be given to eliminate body poisons. Five meals per day of a high caloric character may be given. The doctor may strap the affected side to help immobilize the chest. Counterirritants such as an icebag may be indicated.

p., acute. Chilliness, stabbing pain or stitch in affected side, intensified by coughing or deep breathing. Fever, 101°-103°, cough short, dry, partially suppressed, face pale, anxious, patient usually lies on affected side. An effusion of any kind remaining unabsorbed constitutes a chronic p.

p., diaphragmatic. Inflammation of diaphragmatic pleura

SYM. Intense pain under margin of ribs, sometimes referred into abdomen, with tenderness on pressure, thoracic breathing, tenderness over phrenic nerve referred to supraclavicular region in neck or same side, hiccough, extreme dyspnea

p., dry. Condition in which the pleural membrane is covered with a fibrinous exudate

It clings together, causing pain during respiration. There is slight pain when apical pleura is inflamed, but acute stabbing pain in costal or diaphragmatic pleural inflammation

p., encysted. P. with effusion limited by adhesions.

p., fibrinous. Pain severe and continuous. Aspiration gives negative results, later much retraction of affected side.

p., hemorrhagic. P. with hemorrhage.

p., interlobar. P. in interlobar spaces.

p., purulent. High, irregular fever; sweats; chills; anemia; sometimes pitting from edema of surface, purulent effusion found on aspiration.

p., secondary. Infectious p. resulting from some specific inflammation.

p., serofibrinous. P. with fibrinous exudate and serous effusion.

p., suppurative. SEE *p., purulent*.

p., tuberculous. Most common cause of pleurisy that is apparently primary is tuberculosis. May be secondary to pulmonary phthisis. Effusion apt to be

bloody, but presents same symptoms as ordinary serofibrinous pleurisy.

pleuritic (plū-rīt'ik) [G. *pleura*, a side]. Relating to, or like, pleurisy.

pleuritis (plū-rī'tis) [" + *-itis*, inflammation]. Inflammation of the pleura. SYN: *pleurisy*.

pleurocele (plū'rō-sēl) [" + *kēlē*, a swelling]. 1. Hernia of lungs or of pleura. 2. A serous pleural effusion

pleurocentesis (plū'rō-sēn-tē'sis) [" + *kentēsis*, a piercing]. Surgical puncture of the pleural cavity. SYN: *thoracentesis*.

pleurocentrum (plū-rō-sēn'trum) [G. *pleura*, a side, + *kentron*, center]. The lateral half of the centrum of a vertebra

pleurocholecystitis (plū'rō-kō-lē-sist-ītis) [" + *cholē*, bile, + *kystis*, bladder, + *-itis*, inflammation]. Inflamed condition of the pleura and gallbladder

pleuroclisis (plū-rōk'lis-is) [" + *klysis*, an injection]. Injection of fluid into the pleural cavity

pleurodynia (plū'rō-dīn'ī-ā) [" + *odynē*, pain]. Pain in intercostal muscles of sharp intensity, due to chronic inflammatory changes in chest fasciae, pain of the pleural nerves

p., epidemic diaphragmatic. Epidemic disease with sudden attack of pain in the chest, fever, and a tendency to recrudescence on the 3rd day SYN: *devil's grip*.

pleurogenic (plū-rō-jēn'ik) [G. *pleura*, a side, + *gennan*, to produce]. Arising in the pleura. SYN: *pleurogenous*.

pleurogenous (plū-rō-jēn-us) [" + *gennan*, to produce]. Having origin in the pleura SYN: *pleurogenic*.

pleurography (plū-rōgr'fī) [" + *graphēn*, to write]. X-ray examination of the lungs and pleura.

pleurohepatitis (plū'rō-hēp-ā-tītis) [" + *ēpar*, *ēpat-*, liver, + *-itis*, inflammation]. Inflammation of pleura and the liver.

pleurolith (plū'rō-līth) [" + *lithos*, stone]. A calculus in the pleura

pleurolysis (plū-rōl'ī-sis) [G. *pleura*, a side, + *lysis*, a loosening]. Loosening of parietal pleura from intrathoracic fascia to facilitate contraction of the lung or artificial pneumothorax. Also called *Jacobaeus operation*

pleuroparietopexy (plū'rō-pār-tēt-ō-pēk-sī) [" + *L. paries*, parietal, wall, + *G. pēxis*, fixation]. Fastening the lung to the wall of the chest by binding the visceral pleura to the wall of its cavity.

pleuropericarditis (plū'rō-pēr'ī-kar-dītis) [G. *pleura*, side, + *pērī*, around, + *kardia*, heart, + *-itis*, inflammation]. Pleuritis accompanied by pericarditis.

pleuroperitoneal (plū'rō-pēr-ī-tō-nē-āl) [" + *peritonaeon*, peritoneum]. Relating to the pleura and peritoneum

p. cavity. The body cavity. SYN: *celom*.

pleuropneumonia (plū'rō-nū-mō'nī-ā) [" + *pneumōn*, lung]. Pleurisy accompanied by pneumonia

pleuropneumonolysis (plū'rō-nū-mōn-ōl'ī-sis) [" + *lysis*, a loosening]. Resection of 1 or more ribs from 1 side to collapse the lung in unilateral pulmonary tuberculosis

pleurorrhoea (plū'rō-rē-ā) [" + *roia*, a flow]. Effusion of fluid into the pleura.

pleuroscopy (plū-rōsk'ō-pī) [" + *skopēn*, to examine]. Inspection of the pleural cavity through an incision into the thorax.

pleurothotonos (plū-rō-thōt'ō-nos) [G. *pleurothen*, from the side, + *tonos*, ten-

PLEUROTHOTONOS.

sion]. Tetanic spasm in which the body position is arched to 1 side.

RS. *emprothotonos*, *opisthotonos*, or *thotonos*, position, posture.

pleurotomy (plū-rōt'ō-mī) [G. *pleura*, a side, + *tomē*, incision]. Incision of the pleura.

pleurotyphoid (plū-rō-tī'foyd) ["" + *typhos*, fever, + *eidos*, form]. Typhoid fever with pleural involvement.

pleurovisceral (plū-rō-vis'ēr-āl) ["" + L. *viscus*, *viscer-*, viscera]. Concerning the pleura and the viscera.

plexal (plēks'āl) [L. *plexus*, a braid] Pertaining to, or of the nature of, a plexus.

plexiform (plēks'ī-form) ["" + *forma*, shape]. Resembling a network or plexus.

plexiometer (plēks-im'ēt-ēr) ["" + G. *metron*, measure] Device for receiving the blow of the percussion hammer

plexor (plēks'or) [G. *plēxis*, a stroke] Hammer or other device for striking upon the pleximeter in percussion

plexus (plēks'stūs) (pl. *plexus* or *plexuses*) [L. a braid]. A network of nerves or vessels—blood or lymphatic SEE *rete*, table of *plexus* in Appendix

p., cavernous. 1 Of the nose, a venous p in mucosa covering sup and mid. conchae 2. Of the penis, nerve plexus at root of penis Gives rise to large and small cavernous nerves 3. Of the clitoris, nerve plexus at base of clitoris formed of fibers from uterovaginal plexus 4. Of the cavernous sinus, a sympathetic plexus supplying fibers to int. carotid artery and its branches within cranium

p., enteric. One of two plexuses of nerve fibers and ganglion cells which lie in wall of alimentary canal Include *myenteric* (Auerbach's) and *submucosal* (Meissner's) plexus

p., nerve. SEE table of plexuses in Appendix

p., pampiniform. In male, a complicated network of veins lying in spermatic cord and draining testis, in female, a network of veins lying in mesovarium and draining ovary.

p., prevertebral. One of three plexuses of autonomic division which lie in body cavities Includes *cardiac*, *celiac*, and *hypogastric* (pelvic) plexuses, q.v.

pliability (plī-ā-bīl'ī-tī) [Fr. *plier*, to bend]. Capacity of being bent or twisted easily.

plica (plī'kā) (pl. *plcae*) [L. a fold]. A fold.

p., circularis. One of the transverse folds in the intestinal mucosa.

p., epiglottica. One of 3 folds of mucosa bet. the tongue and the epiglottis.

p., lacrimalis. Mucosal fold at the lower orifice of the nasolacrimal duct.

p., neuropathica. Curly hair due to a nervous disorder.

p., palmariae. Radiating fold in the uterine mucosa on ant and post walls of cervical canal

p., polonica. Tangled matted hair in which crusts and vermin are embedded.

p., semilunaris. 1 Mucosal fold at the inner canthus of the eye 2 Transverse fold of mucosa of large intestine lying between sacculations

p., synovialis. A fold of synovial membrane which projects into a joint cavity

p., transversalis recti. One of the mucosal folds in the rectum.

plicate (plī'kāt) [L. *plica*, fold]. Braided or folded.

plication (plī-kā'shūn) [L. *plīcare*, to fold]. Stitching folds in an organ's walls to reduce its size.

plicotomy (plī-kōt'ō-mī) ["" + G. *tomē*, a cutting]. Section of the post. fold of the tympanic membrane.

plombage (plūm-bazh') [Fr. *plomber*, to plug] A method of collapsing the apex of lung by stripping the parietal pleura from the chest wall at the site of desired collapse and packing the space bet. the lung and chest wall with a foreign substance, such as adipose tissue, muslin, gauze, or paraffin wax.

plug (plūg) [M.D. *plugge*, plug] A mass obstructing or for closing a hole.

p., cervical. One forming in cervix after conception for duration of pregnancy.

p., vaginal. Closed tube for maintaining patency of vagina following operation for fistula.

plumbago (plūm-bā'gō) [L. lead ore]. Graphite; a native carbon.

plumbic (plūm'bīk) [L. *plumbicus*, leaden]. Pertaining to, or containing, lead.

plumbism (plūm'bīzm) [L. *plumbum*, lead, + G. *ismos*, condition]. Poisoning from lead, q.v.

plumbum (plūm'būm) [L. lead]. Lead; a bluish-white metal. SYMS' Pb. At. wt. 207.21. Sp gr 11.35 SYN lead

plumose (plū'mōs) [L. *pluma*, feather]. Having a delicate, feathery growth.

plumper (plūm'pēr). Pad for filling out sunken cheeks, sometimes in form of extended artificial dentures.

pluri- [L.] Prefix meaning several.

pluriceptor (plū-rī-sēp'tor) [L. *plus*, plur-, more, + *ceptor*, a receiver]. A receptor which has more than 2 groups uniting with the complement.

pluridyscrinia (plū'ri-dis-krīn'ī-ā) [" + *G dys*, bad, + *krinein*, to secrete] Disorder of several endocrine organs at the same time.

plurigravida (plū-ri-grāv'īd-ā) [" + *gravid*, pregnant] A gravid woman who has had 2 or more pregnancies

plurilocular (plū-ri-lōk'ū-lar) [" + *loculus*, a cell] SYN *multilocular* Composed of several compartments or cavities

pluripara (plū-rīp'ā-rā) [" + *parere*, to bring forth]. A woman who has given birth to 3 or more children in at least 3 pregnancies

pluriparity (L. *plus*, *plur-*, more, + *parere*, to bring forth). Condition of having borne 3 or more children

plutomania (plū'tō-mā'nī-ā) [G. *ploutos*, wealth, + *mania*, madness]. Delusion that one is very rich.

pluto'nium. A chemical element SYMB. Pu At. number, 94 At wt 239 Obtained from neptunium which in turn is obtained from uranium

Pm. Symb for *promethium*

PMSG. Abbr for *pregnant mare's serum gonadotrophin* SEE *gonadotrophin, chorionic*

pneo-. Combining form meaning *pert to breath or breathing*

pneocardiac reflex (nē-ō-kar'dī-āk) [G *pnein*, to breathe, + *kardia*, heart]. Change in rate and rhythm of heart when an irritant vapor enters air passages

pneodynamics (nē'ō-dī-nām'īks) [" + *dynamis*, force]. Branch of science which treats of respiration. SYN: *pneumodynamics*.

pneograph (nē'ō-grāf) [" + *graphein*, to write]. Apparatus for registering respiratory movements

pneometer (nē-ōm'ēt-ēr) [" + *metron*, a measure]. Instrument for measuring lung respiration. SYN: *spirometer*, *q.v.*

pneophore (nē'ō-for) [" + *phoros*, bearing]. Device to aid artificial respiration.

pneopneic reflex (nē-ōp-nē'īk) [" + *pnein*, to breathe]. Change in respiratory depth and rate, coughing, suffocation and pulmonary edema, when an irritant vapor enters air passages.

pneoscope (nē'ō-skōp) [" + *skopein*, to examine]. Device for measuring movements of respiration.

pneum-, **pneuma-**. Combining from meaning *pert to air, or gas, or respiration*.

pneumarthrosis (nū-mar-thrō'sīs) [G. *pneuma*, air, + *arthron*, joint, + *-ōsis*, intensive]. Accumulation of gas or air in a joint

pneumascop (nū'mā-skōp) [" + *skopein*, to examine]. 1. Device for estimating gas in expired air. 2. Instrument for internal auscultation of the thorax. 3. Device for discovering foreign bodies in mastoid sinuses. 4. Apparatus for measurement of the movements of respiration. SYN: *pneumatoscope*.

pneumatic (nū-māt'īk) [G. *pneumatikos*, *pert. to air*]. 1. Concerning gas or air. 2. Relating to respiration. 3. Relating to rarefied or compressed air.

p. cabinet. Cabinet for treatment of a part with rarefied or compressed air.

pneumatunuria (nū'māt-in-ū'ri-ā) [G. *pneuma*, air, + *ouron*, urine]. Excretion of urine containing free gas. SYN: *pneumatunria*.

pneumatocardia (nū'māt-ō-kar'dī-ā) [" + *kardia*, heart]. Air or gas in the heart chambers

pneumatocoele (nū-māt-ō-sēl) (" + *kēlē*, hernia). 1. Hernial protuberance of lung tissue. 2. A swelling containing a gas or air, esp. of the scrotum. SYN: *pneumonocele*.

pneumatodyspnea (nū'māt-ō-dīsp-nē-ā) [" + *dys*, bad, + *pneia*, breath]. Dyspnea caused by pulmonary emphysema.

pneumatogram (nū-māt-ō-grām) [" + *gramma*, a mark] A tracing or record made by a pneumatograph.

pneumatograph (nū-māt-ō-grāf) [" + *graphein*, to write]. Device for registering respiratory movements. SYN: *pneograph*.

pneumatology (nū-mā-tōl'ō-jī) [" + *logos*, a study]. Science of gases and air, their chemical properties and use in treatment.

pneumatometer (nū-māt-ōm'ēt-ēr) [G. *pneuma*, air, + *metron*, a measure]. Device for measuring quantity of air involved in inspiration and expiration. SYN: *spirometer*.

pneumatometry (nū-māt-ōm'ēt-ri) [" + *metron*, measure]. Measurement of respiratory force as a means of diagnosis.

pneumatorachis (nū-māt-or-ā-kīs) [" + *rachis*, spine]. Air in the spinal canal.

pneumatoscope (nū-māt-ō-skōp) [" + *skopein*, to inspect]. 1. Device for ascertaining presence of foreign bodies in mastoid sinuses 2. Apparatus used to measure the gas in expired air. 3. Apparatus for internal thoracic auscultation 4. Instrument used to measure the respiratory movements. SYN: *pneumascop*

pneumatotherapy (nū'māt-ō-thēr-ā-pī) [" + *therapeia*, treatment]. Treatment by means of rarefied or compressed air.

pneumatothorax (nū'māt-ō-thō'rāks) [" + *thōrax*, chest]. Air or gas accumulation in the pleural cavities. SYN: *pneumothorax*.

pneumatunria (nū-māt-u'ri-ā) [G *pneuma*, air, + *ouron*, urine]. Excretion of urine containing free gas

pneumatype (nū'mā-tīp) [" + *typos*, type]. Deposit of moisture on glass from the breath exhaled through the nostrils with the mouth closed for purpose of diagnosis.

pneumectomy (nū-mēk'tō-mī) [G. *pneumōn*, lung, + *ektomē*, excision]. Excision of all or part of a lung.

pneumo-, **pneumono-** [G]. Combining forms meaning *air, lung*.

pneumobacillus (nū'mō-bā-sī'l'ūs) [" + L. *bacillus*, a little rod]. The bacillus causing pneumonia. SYN: *B. pneumoniae*.

pneumocoele (nū'mō-sēl) [" + *kēlē*, hernia]. 1. A swelling containing air or gas, esp. of the scrotum. 2. Hernia of lung tissue through chest wall. SYN: *pneumatocoele*.

pneumocentesis (nū'mō-sēn-tē-sīs) [" + *kentēsis*, a piercing]. Paracentesis of surgical puncture of a lung to evacuate a cavity.

pneumocephalus (nū'mō-sēf-ā-lūs) [" + *kephalē*, head]. Gas or air in the cavity of the cranium.

pneumochysis (nū'mōk'īs-is) [" + *chysis*, a pouring]. Edema of the lung.

pneumococcal (nū-mō-kōk'al) [G. *pneu-*

mōn, lung, + *kokkos*, berry]. Concerning or caused by pneumococci
pneumococemia (nū'mō-kōk-sē'mī-ā). Presence of pneumococci circulating in the blood.

pneumococcolysis (nū'mō-kōk-ōl'ī-sis) [+ *lysis*, destruction]. Destruction or lysis of pneumococci.

PNEUMOCOCCUS TYPING
 (Schematized.)

The sputum is mixed with typing sera. Left, negative reaction, the capsule is thin, the flame shaped cocci are close together; right, positive reaction; the capsules are much swollen, pushing the cocci apart

pneumococcus (nū-mō-kōk'ūs) [G *pneumon*, lung, + *kokkos*, berry] SYN *Diplococcus pneumoniae*, qv *Diplococcus lanceolatus*, *Micrococcus lanceolatus* Frankel's *pneumococcus* The pathogenic microorganism causing pneumonia of which there are 33 known strains or types

Types I, II, III, V, VII, VIII and XIV cause over 80% of all cases, with I and II causing 60 to 70% SEE *illus.* above.

pneumoconiosis (nū'mō-kō-nī-ō'sis) [G. *pneumōn*, lung, + *konis*, dust, + *-ōsis*, disease] A condition of the respiratory tract due to inhalation of dust particles.

An occupational disorder such as that caused by mining or stonecutting.

RS: *anthracosis*, *chalicosis*, *monoconiosis*, *siderosis*, *silicosis*

pneumoderma (nū-mō-dēr'mā) [+ *derma*, skin]. Emphysema under the skin.

pneumodynamics (nū'mō-dī-nām'iks) [+ *dynamis*, force] Branch of science treating with force employed in respiration.

pneumoempyema (nū'mō-ēm-pī-ē'mā) [+ *em*, in, + *pyon*, pus] Empyema accompanied by an accumulation of gas.

pneumoencephalography. Roentgenographic examination of ventricles and subarachnoid spaces of brain following withdrawal of cerebrospinal fluid and injection of air or a gas via lumbar puncture

pneumoenteritis (nū'mō-ēn-tēr-ī'tis) [+ *enteron*, intestine, + *-itis*, inflammation]. Pneumonia and enteritis combined.

pneumogalactocoele (nū'mō-gāl-āk'tō-sēl) [+ *gala*, *galakt*, milk, + *kēlē*, hernia]. A breast tumor containing milk and gas

pneumogastric (nū'mō-gās'trīk) [G *pneumōn*, lung, + *gastēr*, stomach]. Concerning the lungs and stomach

p. nerve. Old term for the vagus nerve

pneumogram (nū'mō-grām) [G *pneumōn*, lung, + *gramma*, a mark] SYN *pneumatogram* A record of respiratory movements

pneumography (nū-mōg'rā-ī) [+ *graphein*, to write]. 1. A descriptive treatise on the lungs. 2. A tracing of the respiratory movements

pneumohemopericardium (nū'mō-hem'ō-pēr-l-kar'dī-ūm) [+ *aima*, blood, + *peri*, around, + *kardia*, heart]. The accumulation of air and blood in the pericardium

pneumohemorrhagia (nū'mō-hem-or-hā-īl-ā) [+ *hēgnunai*, to burst forth]. Hemorrhage into pulmonary air cells; apoplexy of the lungs

pneumohemothorax (nū'mō-hem'ō-thō-rāks) [+ *thōrax*, chest] Gas or air and blood collected in the pleural cavity.

PNEUMOCOCCI IN PUS.

Empyema, diplococci, varying in shape and size, surrounded by capsules are distributed among the pus cells.

pneumohydropericardium (nū'mō-hī'drō-pēr-l-kar'di-ūm) [G. *pneumōn*, lung, + *ydōr*, water, + *peri*, around, + *kardia*, heart]. Air and fluid accumulated in the pericardium.

pneumohydrothorax (nū'mō-hī-drō-thō-rāks) [' + + *thōraz*, chest]. Gas or air and fluid in the pleural cavity

pneumohypoderma (nū'mō-hī-pō-dēr-mā) [' + *ypo*, under, + *derma*, skin]. Air in the tissues under the skin.

pneumokidney (nū'mō-kid'nī) [' + M.E. *kydney*, kidney]. X-ray of the kidney following introduction of oxygen into renal pelvis. SYN *pneumopyelography*.

pneumolith (nū'mō-lith) [' + *lithos*, stone]. A pulmonary calculus

pneumolithiasis (nū'mō-lith-iās-is) [' + *lithos*, stone]. Formation of concretions in the lungs.

pneumonectasia, pneumonectasis (nū-mōn-ēk-tā'zi-ā, ēk-tā-sis) [G. *pneumōn*, lung, + *ektasis*, dilatation]. Distention of lungs with air.

pneumonectomy (nū-mōn-ēk'tō-mī) [' + *ektome*, excision]. Removal of a lung. SYN: *pulmonectomy*, *pneumectomy*.

pneumonemia (nū'mō-nē'mī-ā) [' + *aima*, blood]. Congestion of the lungs.

pneumonia (nū'mō-nī-ā) [G. *pneumōn*, lung]. Inflammation of the lungs with exudation into the lung tissue and high temperature.

ETIOI. *Pneumococcus*, *streptococcus hemolyticus*, *staphylococcus*, *Friedlander's bacillus* and the *influenza bacillus*.

SYM. Sudden elevation of temperature, chill, pain in chest or side, blood-tinged or rusty sputum

NP. Afford the patient as nearly ab-

LOBAR PNEUMONIA

pneumology (nū'mōl'ō-jī) [' + *logos*, a study]. The scientific study of diseases of the lungs and air passages.

pneumolysis (nū'mōl'is-is) [G. *pneumōn*, lung, + *lysis*, a loosening]. Separation of an adherent lung from costal pleura.

pneumomalacia (nū'mō-mā-lā'si-ā) [' + *malakia*, a softening]. Abnormal softening of the lung.

pneumomassage (nū'mō-mās-sazh') [' + *massein*, to knead]. Massage of the tympanum with air to cause movement of the ossicles.

pneumomelanosis (nū'mō-mēl-ān-ō'sis) [' + *melas*, melan-, black, + *-ōsis*, disease]. Pigmentation of lung seen in pneumoconiosis.

pneumometer (nū'mōm'ēt-ēr) [' + *metron*, measure]. Instrument for measuring amt. of air inspired and expired in respiration. SYN *spirometer*, *q.v.*

pneumomycosis (nū'mō-mī-kō'sis) [' + *mykēs*, fungus, + *-ōsis*, disease]. A fungous pulmonary disease. SYN *pneumonomycosis*.

pneumomyelography (nū'mō-mī-ēl-ōg'rā-flī) [' + *myelos*, marrow, + *graphein*, to write]. X-ray inspection of the spinal canal.

solute rest as possible. He should be turned in the bed, he should not turn himself. He should be fed, not feed himself. He should not be allowed to talk except to make his wants known. If he is restless or in pain, drugs or other therapeutic agents should be used as prescribed by the physician. All measures to promote comfort should be taken.

A careful watch over the patient's general condition, his color, his general appearance, and his pulse, temperature, and respiration. Cyanosis, or a rising respiratory rate, calls for the administration of oxygen, or for increase in the amount of oxygen if it is already being given. The nurse must understand how to regulate the flow of oxygen and to adjust the temperature of the oxygen tent. High fever demands tepid sponges or the use of antipyretics. Any marked change in the patient's general condition should be reported to the doctor at once.

Measures to prevent and combat abdominal distention. The bowels must act daily; to accomplish this an enema or flush may be given, or the physician may prescribe a laxative. If distention

appears, a rectal tube is inserted, pituitrin, or prostigmine may be given by hypodermic, and turpentine stupes may be used.

TREATMENT Penicillin is the drug of choice in pneumococcal pneumonia. Chlorotetracycline, oxytetracycline, chloramphenicol, and erythromycin are also effective. Sulfonamides (sulfamerizine, sulfadiazine, and sulfathiazole) may be used. Serum therapy has been almost completely abandoned because of its expense, difficulty of administration, and risk of anaphylactic shock or serum sickness.

p., acute lobar. Pneumonia of one or more lobes of the lungs.

p., aspiration. P following the entrance of foreign matter into respiratory passageways.

p., bronche. SEE *p. catarrhal*

p., catarrhal. Inflammation of terminal bronchioles and air vesicles, with scattered areas of consolidation, usually secondary to bronchitis.

SYM. Onset gradual, prostration, cough, fever moderately high, 101-104° F, and very irregular. Dyspnea marked; respirations, 50 to 80 per minute; pulse, 120 to 180, cough painful, with mucopurulent expectoration. Face pale, anxious, lips blue.

PROG. Always guarded. Most fatal in extremes.

TREATMENT. No draft, temperature, uniformly 70°. Moist atmosphere. Liquid or semi-liquid diet. Remedies conforming to special phase of disease.

p., chronic interstitial. Chronic disease of lung with overgrowth of fibrous tissue.

SYM. Moderate dyspnea and chronic cough, expectoration, slight or profuse, fetid, from being retained in bronchiectatic cavities. No fever. May live years.

p., croupous. SEE *p. lobar*

p., double. That affecting both lungs or both lobes of 1 lung.

p., hypostatic. Pneumonia caused by constantly remaining in same position.

Gravity causes blood to become congested in 1 part of the lung. Infection aids development of true pneumonia.

NP. Change position of patient frequently and whenever patient is uncomfortable. Have patient breathe deeply several times each hour for full aeration of lungs. Short, shallow breaths predispose to pulmonary complications. Deep respirations after an upper abdominal incision cause pain.

DIER. No routine diet; adjust to patient. Nutrition increased preoperatively by rectum, and postoperatively by hypodermoclysis. *First Day* Hot fluids; no milk or orange juice until ordered. *Second Day* Tea, broth, ginger ale, etc. *Third Day* Soapsuds enema and cathartic, then diet of milk, custards, milk-toast, cereals, soft eggs, stewed fruits. *Fourth and Fifth Days* Regular diet if tolerated. This is also a general post-operative diet.

p., lipid. P. following aspiration of oily substances such as oily nose drops or mineral oil.

p., lobar. An acute specific disease characterized by inflammation of lungs, followed by a rapid infiltration of their alveoli.

SYM. Decided chill, sharp pain in side, rapid rise of temperature; latter often reaches its maximum in 24 hr. (104°-105° F.), and generally continues high

with slight diurnal remissions till 9th day, when it falls by crisis or occasionally by lysis. SEE *illus.*, p. 73.

Dyspnea—respirations 40 to 80 per minute. Cough, at first short, dry, later rusty, translucent, tenacious sputum. Face flushed, lips cyanosed, often with herpetic eruption, tongue heavily furred, bowels constipated. Urine scanty, high colored, deficient in chlorides, often albuminous. In severe cases delirium.

PROG. Guarded. Average mortality, 20%.

TREATMENT. Absolute rest—liquid or semi-liquid diet. Delirium with high fever, cold pack or tepid bath. Remedies to suit individual case.

p., massive. P in which a large area of or an entire lung is involved.

p., migratory. P in which infected area shifts from one part of the lung to another part.

p., primary atypical. SEE *p. virus*

p., terminal. P occurring secondary to another disease and resulting in death.

p., tuberculous. Condition which simulates pneumonia caused by discharge of large numbers of tubercle bacilli from a cavity or rupture of a caseous node. Results in rapid and widespread inflammatory exudation. If untreated may run a malignant course ending fatally or it may subside and become chronic.

p., tularemic. P caused by *Pasteurella tularensis*. May be primary or associated with tularemia, q.v.

p., virus. SYN *primary atypical pneumonia*. An acute respiratory affection of unknown etiology but supposedly viral in origin. Onset usually gradual instead of abrupt. Constitutional symptoms pronounced, physical signs may be sparse or absent. Detected primarily by roentgenographic examination.

SYM. White cell count usually normal, rarely rising above 15,000. High fever, severe cough, slow pulse. Little or no expectoration. White cells sometimes decreased in number. Mild form runs 5 to 10 days. More severe form produces fever during 2nd week, lasting 15-18 days, or even 25 days.

TREATMENT. Symptomatic treatment and use of oxygen when necessary. The use of sulfa drugs and antibiotics is ineffective except to protect against secondary invaders.

pneumonic (nū-mon'ik) [G. *pneumōn*, lung]. Concerning the lungs or pneumonia.

p. phthisis. Tuberculosis of an entire pulmonary lobe.

pneumonitis (nū-mō-nī'tis) [" + -itis, inflammation]. 1 Inflammation of the lung. SYN *pneumonia*. 2 A virus form of pneumonia. SYN: *Virus pneumonia*.*

pneumono- (nū-mon-ō) [G.]. Prefix: pert. to the lungs.

pneumocoele (nū-mō'nō-sēl) [G. *pneumōn*, lung, + *kēlē*, hernia]. A pulmonary hernia. SYN: *pneumocoele*.

pneumocirrhosis (nū'mō-nō-sīr-ō'sis) [" + *kirros*, orange]. Interstitial pneumonia; cirrhosis of the lung.

pneumonoconiosis (nū'mō-nō-kō-nī-ō'sis) [" + *konis*, dust, + -ōsis, disease]. Fibrous inflammation or chronic induration of the lungs resulting from inhalation of dust. SEE: *anthracosis*, *chalicosis*, *siderosis*.

pneumonograph (nū-mō'nō-gräf) [" + *graphein*, to write]. Roentgen ray picture of the lungs.

pneumography (nū-mō-nōg'grā-fī) ["" + *graphem*, to write]. The taking and developing of x-ray pictures of the lungs.

pneumolysis (nū-mō-nōl'fī-sis) [G. *pneumon*, lung, + *lysis*, loosening]. SYN: *pneumolysis*. Loosening of an adherent lung from the chest wall to induce collapse of lung.

p., extra pleural. Separation of parietal pleura from chest wall. SEE *apicolysis*.

p., intrapleural. Separation of adhering visceral and parietal layers of pleura.

pneumomelanosis (nū-mō-nō-mēl-ān-ō'sis) ["" + *melas*, *melan-*, black, + *-osis*, disease]. Pigmentation and disease of the lung due to inhalation of dust.

pneumomycosis (nū-mō-nō-mī-kō'sis) [G. *pneumon*, lung, + *mykēs*, fungus, + *-osis*, disease]. Disease of the lungs caused by fungi. SYN *pneumomycosis*.

pneumopathy (nū-mō-nōp'āth-i) ["" + *pathos*, disease]. Any diseased condition of the lung.

pneumoperitonitis (nū-mō-nō-pēr'ī-tō-nī'tis) ["" + *peritonaion*, peritoneum, + *-itis*, inflammation]. Peritonitis with gas in the peritoneal cavity.

pneumopexy (nū-mō-nō-pēk'sī) ["" + *pēxis*, fixation]. Surgical attachment of the lung to the chest wall. SYN *pneumopexy*.

pneumorrhaphy (nū-mō-nor'ā-fī) ["" + *raphē*, a sewing]. Suture of a lung.

pneumonosis (nū-mō-nō'sis) [G. *pneumon*, lung, + *-osis*, disease]. Any non-infective disease or disorder of the lungs, esp. those resulting from degenerative processes.

p., traumatic. In *aviation med.* condition resulting from quick deceleration which may result in hemorrhage, emphysema, and other pulmonary changes.

pneumotomy (nū-mō-nōt'ō-mī) ["" + *tomē*, incision]. Incision into the lung. SYN: *pneumotomy*.

pneumopericardium (nū-mō-pēr'ī-kar'di-um) ["" + *peri*, around, + *kardia*, heart]. Air or gas in the pericardial sac.

ETIOI. Traumatism or communication bet. the esophagus, stomach, or lungs and the pericardium.

SYM. Unusual metallic heart sounds, tympany over precordial area.

pneumoperitoneum (nū-mō-pēr'ī-tō-nē'um) [G. *pneumon*, lung, + *peritonaion*, peritoneum]. Condition in which air or gas is collected in the peritoneal cavity.

May be artificially injected to treat tuberculous peritonitis or where pneumothorax is impossible.

pneumoperitonitis (nū-mō-pēr'ī-tō-nī'tis) [G. *pneumon*, lung, + *peritonaion*, peritoneum, + *-itis*, inflammation]. Peritonitis with gas accumulation.

pneumopexy (nū-mō-pēks'ī) ["" + *pēxis*, fixation]. Surgical attachment of a lung to the thoracic wall.

pneumopleuritis (nū-mō-plū-rī'tis) ["" + *pleura*, a side, + *-itis*, inflammation]. Inflamed condition of lungs and pleura.

pneumopleuroparietopexy (nū-mō-plū'rō-pā-rī'ēt-ō-pēk'sī) ["" + *L. parietes*, wall, + G. *pēxis*, fixation]. The operation of attaching the lung with its parietal pleura to the border of a thoracic wound.

pneumopyelography (nū-mō-pī-ē-lōg'grā-fī) ["" + *pyelos*, pelvis, + *graphem*, to write]. Making of a skiagram of the renal pelvis and ureters after they are injected with oxygen.

pneumopyopericardium (nū-mō-pī-ō-pēr'ī-kar'di-um) ["" + *pyon*, pus, + *peri*,

around, + *kardia*, heart]. Air, gas and pus collected in the pericardial sac.

pneumopyothorax (nū-mō-pī-ō-thō'raks) ["" + *thōrax*, chest]. Air and pus collected in the pleural cavity.

pneumoradiography (nū-mō-rā-dī-ōg'grā-fī) ["" + *L. radius*, a ray, + G. *graphem*, to write]. Injection of air into a part for taking an x-ray picture.

pneumorrhachis (nū-mor-rā'kīs) [G. *pneumon*, lung, + *rachis*, spine]. Gas accumulation in the spinal canal.

pneumorrhagia (nū-mor-ā'ji-ā) ["" + *rēgnanai*, to burst forth]. Pulmonary hemorrhage. SYN *hemoptysis*.

pneumoserothorax (nū-mō-sē-rō-thō'raks) ["" + *L. serosus*, chest]. Air or gas and serum collected in the pleural cavity.

pneumotachograph (nū-mō-tāk'ō-grāf) [G. *pneuma*, air, + *tachus*, swift, + *graphem*, to write]. Device for registering velocity of inspiration and expiration of air.

pneumotherapy (nū-mō-ther'ā-pī) [G. *pneumon*, lung, + *therapeia*, treatment]. 1 Treatment of diseases of the lungs. 2 Use of compressed air in treatment. SYN *pneumatotherapy*.

pneumotherm massage (nū-mō-ther'mās-azh') [G. *pneuma*, air, + *thermē*, heat, + *massein*, to knead]. Application to the body of air of varying temperature and pressure.

pneumothorax (nū-mō-thō'raks) ["" + *thōrax*, chest]. A collection of air or gas in the pleural cavity.

The gas enters as the result of a perforation through the chest wall or the pleura covering the lung (visceral pleura). This perforation may be the result of an injury or the rupture of an emphysematous bleb or superficial lung abscess, the most common latter condition being a tuberculous abscess in the presence of pulmonary tuberculosis.

SYM. The onset is sudden, usually with a severe sticking pain in the side and marked dyspnea. Fluid very frequently is found, developing within 48 hours (hydropneumothorax). The physical signs are those of a distended unilateral chest, tympanic resonance, absence of breath sounds, and with fluid, a splash or succussion on shaking patient.

p., artificial. Pneumothorax induced intentionally by artificial means employed in the treatment of pulmonary tuberculosis or pneumonia.

Pneumothorax gives the diseased lung temporary rest. The lung collapses when the air enters the pleural space which is not possible if there are adhesions. Twenty per cent of cases have no free pleural space.

Scattered adhesions may afford only a partial collapse. Forty per cent is the estimated number of indicated cases. Effusion may occur in about one-third of the cases. Hazards are small.

NP. Explain to patient. Instruct not to cough or to warn doctor when so impelled. Patient lies on affected side, arm overhead, and held by nurse. Observe color of face, respiration, and pulse. Record intrapleural pressure. Watch for pleural shock and effusion. Pain in side, weak pulse, dyspnea, sweating are instances. Doctor gives hypodermics or inhalation of oxygen. Complications may be: (a) Air embolism from puncture of a vein; (b) puncture of lung; (c) surgical emphysema.

Postoperative care: Rest for an hour

after. Four hour record of temperature for 48 hours Report dyspnea, as it is serious.

p., spontaneous. Spontaneous entrance of air into the pleural cavity. The pressure may collapse the lung and displace the heart.

Sym. Pain, dyspnea, cyanosis, prostration, collapse, death, perhaps in a few minutes.

p., valvular. That which is characterized by an opening through the pleura which has a slit with a valvelike action allowing the air to pass in but not out

pneumotomy (nū-mōt'ō-mī) [G. *pneumōn*, lung, + *tomē*, a cutting]. Incision of the lung

pneumotoxin (nū'mō-tōks'in) [' + *toxikon*, poison]. A toxin produced by the pneumococcus

pneumothypus (nū'mō-tī'fūs) [' + *typhos*, fever] 1. Typhoid fever with pneumonia at onset 2. Development of pneumonia during typhoid fever

pneumouria (nū'mō-ū'rī-ā) [G. *pneuma*, air, + *ouron*, urine] Excretion of urine with free gas **Syn** *pneumaturia*.

pneumoventricle (nū'mō-vēn'trī-kl) [' + *L ventriculus*, little belly] Air accumulation in the cerebral ventricles.

pneumoventriculography (nū'mō-vēn-trīk'ū-lōg'rā-fī) [' + ' + G *graphein*, to write] Radiography of the lateral ventricles of the brain, after removal of fluid content and injection with air **Syn** *ventriculography*.

pnigophobia (ni-gō-fō'bī-ā) [G. *pnigos*, choking, + *phobos*, fear] Morbid fear of choking, sometimes experienced in angina pectoris

pock (pōk) [A.S. *poc*, pustule, pouch] A pustule of an eruptive fever, esp. of smallpox.

p.-marked. Pitted or marked with cicatrices of smallpox pustules

pocket (pōk'ēt) [Fr. *pochet*, little pouch]. A saclike cavity

pocketing (pōk'ēt-ing) [Fr. *pochet*, little pouch]. Method of treating the pedicle in ovariectomy by enclosing it within the edges of the wound

podagra (pōd-āg'rā) [G. *pous*, *pod-*, foot, + *agra*, seizure] Gout, esp. of the foot's joints or of the great toe

podalgia (pōd-āl'jī-ā) [' + *algos*, pain]. Pain in the feet

podalic (pōd-āl'ik) [G. *pous*, *pod-*, foot]. Pert. to the feet.

p. version. Shifting position of a fetus to bring the feet to the outlet in labor.

podarthrits (pōd-ar-thrī'tīs) [' + *arthron*, joint, + *-itis*, inflammation] Inflammation of joints of the feet **Syn** *podagra*.

podiatrist (pōd-l'āt-rīst) [G. *pous*, *pod-*, foot, + *iatria*, treatment]. Specialist in foot diseases **Syn** *chiropodist*.

podiatry (pōd-l'āt-rī) [' + *iatria*, healing]. Treatment of foot disorders **Syn** *chirology*.

pedo-, pod- [G.]. Combining forms meaning foot

podobromidrosis (pōd'ō-brō-mī-drō'sīs) [' + *bromos*, stench, + *idrosis*, perspiration]. Offensive perspiration of the feet

pododynamometer (pōd'ō-dī-nām-ōm'ēt-ēr) [' + *dynamis*, force, + *metron*, measure]. A device for testing strength of the leg and foot muscles

pododynia (pōd'ō-dīn'ī-ā) [' + *odynē*, pain]. Pain in the feet, esp. a neuralgic pain in the heel with swelling and redness.

podogram (pōd'ō-grām) [' + *gramma*, a mark]. An imprint of the sole of the foot.

podology (pōd-ōl'ō-jī) [' + *logos*, a study]. The study of the anatomy and physiology of the foot.

podophyllum (pōd-ō-fīl'ūm) [G. *pous*, *pod-*, foot, + *phyllon*, leaf] **USP**. Mandrake; May apple. An herb grown extensively in eastern U S and parts of the South.

p., resin of.

ACTION AND USES Cathartic.

DOSAGE 1/6 gr. (0.01 Gm.)

pogoniasis (pō-gō-nī'ās-īs) [G. *pōgōn*, beard, + *-iasis*, disorder]. 1 Excessive growth of the beard. 2. Growth of a beard in a woman

pogonion (pō-gō-nī-ōn) [G. *pōgōn*, beard] The most anterior projecting midpoint of the chin

-poietic (poy-ēt'ik) [G.]. Suffix meaning making or producing

poikilocyte (poy'kil-ō-sīt) [G. *poikilos*, spotted, + *kytos*, cell] A large, irregular, malformed blood corpuscle

poikilocytosis (poy'kil-ō-sī-tō'sīs) [' + ' + *-ōsis*, intensive] Variation in shape of red blood corpuscles, a condition characterized by poikilocytes in the blood.

poikiloderma (poy'kil-ō-dēr'mā) A skin disorder characterized by pigmentation, telangiectasis, purpura, pruritus, and atrophy

poikilothermal (poy'kil-ō-thēr'māl) [' + *thermē*, heat] Varying in temperature according to environment

point (poynt) [O Fr. *point*, a prick, a dot]

1. The sharp end of any object 2. Point at which an abscess is about to rupture on a surface **See** *fixation*. 3. A minute spot 4. Position in space, time, or degree

p., anterior focal. Same as focal p.

p., anterior nodal. **Sfr** *p.'s. nodal*

p., auricular. Center of external orifice of auditory canal

p., Boas'. Tender spot in gastric ulcer left of 12th thoracic vertebra

p., boiling. The temperature at which a liquid vaporizes

p., Broca's. Center of the ext auditory meatus, the *auricular point*.

p.'s., Capuron's. Four fixed points in pelvic inlet, the iliopectineal eminences and the sacralia joints

p.'s., cardinal. Six p's determining direction of light rays emerging from and entering the eye and of 4 points of the pelvic inlet toward 1 of which the head of the fetus is presented. **See** *p's., principal*, *p's., nodal*

p.'s., corresponding. Point in the retina of the two eyes which, when stimulated simultaneously, result in a single visual sensation

p., cranio-metric. One of the fixed points of the skull used in craniometry

p., critical, of gases. Temperature at or above which a gas can no longer be liquefied by pressure

p., critical, of liquids. Temperature above which no pressure may retain a body in a liquid form

p.'s., deaf, of the ear. Point at lower end of tragus and 1 where helix intersects line of motion when vibrating tuning fork held in front of ear cannot be heard when started from the lower edge of the zygoma and moved backward toward the occiput.

p., dew. The temperature at which moisture begins to be deposited as dew.

p., disparate. Points on the retinae unequally paired.

p., external orbital. The prominent 1 at outer edge of orbit above the frontomalar suture.

p., far. The point (20 ft. or more) at which distinct vision is possible without aid of the muscles of accommodation. It is nearer than 20 ft. according to degree of myopia. There is no far point in the hypermetropic eye.

p., fixation. That at which the 2 visual axes converge.

p., freezing. Temperature at which liquids become solid.

p.'s., hystero-genic. Circumscribed areas of the body which produce symptoms of a hysterical aura, and eventually a hysterical attack when rubbed or pressed.

p.'s., identical retinal. P's in the 2 retinae upon which the images are seen as one.

p., lugal. Posterior border of frontal process of the malar bone where cut by a line tangent to upper border of zygoma.

p., lacrimal. Outlet of lacrimal canaliculus. *SYN puncta lacrimalia.*

p., Lanz's. One on line bet 2 ant sup iliac spines, 1/3 distant from right spine, indicating origin of the vermiform appendix.

p., Lian's. One at junction of outer and middle thirds of a line from the umbilicus to ant sup spine of ilium where trocar may be introduced safely for paracentesis.

p., malar. The most prominent p. on ext tubercle of the malar bone.

p., McBurney's. One bet. 1 1/2 and 2 in above ant. sup spine of ilium, on line bet. the ilium and umbilicus, where pressure shows tenderness in acute appendicitis.

p., motor. A point usually about the middle of a muscle where a motor nerve enters the muscle at which a minimal electrical stimulus to the overlying skin will elicit a visible contraction.

p., Munro's. One halfway bet left ant iliac spine and the umbilicus.

p.'s., nasal genital. Point at ant end of lower turbinated bone, and 1 at the tuberculum septi, irritation of which, when in a hyperesthetic state, produces pain in the hypogastrium and in sacral region.

p., near. Nearest one at which the eye can accommodate for distinct vision.

p.'s., nodal. An ant. and post cardinal p. on the surface of lens of the eye so related that every ray directed toward the ant. p. is represented after refraction by a ray emanating from the post p.

p.'s., painful. Points over which a neuralgic nerve is tender on pressure.

p.'s., pressure. 1 Points on the skin which when stimulated give rise to sensation of pressure. 2 Points where arteries come near to the surface at which pressure may be applied to stop arterial bleeding.

p.'s., principal. Two p.'s. so situated that the optical axis is cut by the 2 principal planes.

p.'s., Valleix's. Tender spots upon pressure over the course of a nerve in neuralgia. *SYN: points douloureux.*

pointillage (pwāhn-tī-yahzh') [Fr.]. Massage with the finger tips.

Poiseuille's law (pwā-sū-ēz'). The rapidity of the capillary current is in proportion to the square of the diameter of their capillary tubes.

P.'s layer or space. The inert capil-

lary current in which leukocytes move slowly, the erythrocytes moving more rapidly in the middle current.

poison (poy'zn) [L. *potiō*, a poisonous draft]. Any substance which, taken into the system, will produce an injurious or deadly effect.

poison ivy. A climbing vine *Toxicodendron radicans*, contact with which causes a severe form of dermatitis. *SEE: ivy poisoning, Rhus*

poison oak. A climbing vine, *Toxicodendron quercifolium*, which resembles poison ivy and causes a contact dermatitis.

poison sumac. A shrub, *Toxicodendron vernix*, contact with which produces a contact dermatitis resembling poison ivy.

poison, words pert. to: alkaloid, active principles, names of preparations, drugs with 2 names, antidote, convulsant corrosive; dosage, drug action, drugs and their administration, irritant, medical preparations, names of individual drugs in alphabetical order (over 500 in

all), names of poisons, poisoning; preparations usually given by rectum; prescription writing, virulent, virus.

poisoning (poy'zn-ing) [L. *potiō*, a poisonous draft]. 1 The state produced by introduction of a poison into the system. 2 Administration of a poison.

GENERAL SYM Somewhat slow in onset. Include gastrointestinal irritation with nausea, cramping and vomiting, systemic effects on brain, heart, kidneys, liver, etc. They also cause local irritation, as preparations of arsenic, antimony, copper, mercury, and silver.

FIRST AID Avoid becoming excited. Send for a physician immediately. Notify him of the character of emergency.

Recognition of poison if possible; by looking at bottle, or by observing burns, stains, odor, or symptoms. **SEX:** name of specific poison.

Dilute at once with large doses milk

Some Common Poisons and Treatment

Poison	Lavage or Emetic	Antidote	Other Treatment
Aconite.	Lavage or emetic.	Tr. digitalis or liq. atropinae, mii.	Keep flat with head low. Stimulants. Treat for shock. Unceasing artificial respiration.
Alcohol.	Lavage or emetic.		Strychnine, gr. 1/20. Cold douches, etc. Leave coffee in stomach after lavage.
Ammonia.	None.	Weak acetic acid or vinegar.	Olive oil and demulcents. Treat shock. Morphine (Tracheotomy may be necessary)
Antimony (<i>tartar emetic</i>).	Not usually required.	Tannin.	Alcohol. Strong tea or coffee. Warmth. Treat shock. Keep prone. Give demulcents.
Arsenic.	Lavage or emetic.	Dialyzed iron, 3i every 2 hours for some hours.	Large dose of castor oil to clear out intestines. Demulcent drinks
Belladonna and atropine.	Lavage or emetic.	Tannin or tea, morphine, gr. 1/2.	Free stimulation. Artificial respiration.
Camphor.	Lavage or emetic.		Stimulants. Alternate hot and cold douches. Oils.
Carbolic, lysol, etc.	Lavage with very soft tube.	Mag. sulf.	Albumen water, oil, milk. Treat shock.
Caustic potash. Caustic soda.	Neither.	Dilute vinegar or lemon juice.	Treat shock. Oils and butter. Demulcents.
Chloral hydrate.	Lavage or emetic.	Strychnine, gr. 1/20, or atropine, gr. 1/25.	Stimulants. Artificial respiration. External warmth. Rouse patient.
Cocaine.	Lavage or emetic.	Strychnine, gr. 1/20.	Stimulants. Artificial respiration. External warmth. Rouse patient.
Corrosive sublimate. Digitalis.	SEE: Mercury. Emetic and lavage (zinc sulfate, gr. 1/2).	Opium and tannin.	Keep in horizontal position. Free stimulation. Alcohol.
Fungi.	Emetic or lavage.	Atropine or morphine.	Free stimulation and friction.
Hydrochloric acid (<i>spirits of salt</i>).	Same as for sulfuric acid.		
Hydrocyanic acid (<i>prussic acid</i>).	Lavage or rapid emetic.	Ammonia inhalation. Ferrisulf.	Alternate hot and cold douches. Artificial respiration. Treat for shock.

Some Common Poisons and Treatment (Continued)

Poison	Lavage or Emetic	Antidote	Other Treatment
Iodine.	Emetic or lavage (used continuously).	Starch in water.	Demulcent drinks. Bread, arrowroot, flour.
Laudanum (opium).	SEE Morphine.		
Lead salts.	Lavage or emetic.	Sulfate of zinc.	Demulcents Epsom salts White of egg.
Mercury.	Emetic or lavage.		Demulcents Treat for shock. White of egg.
Morphine.	Lavage with pot. permanganate or emetic (apomorphine, gr. 1/10).	Pot. permanganate. Atropine.	Stimulation Prevent sleep. Artificial respiration if necessary.
Nitric acid.	Neither.	Alkalies.	Demulcents Magnesia, lime water, or albumen water.
Nux vomica.	SEE Strychnine.		
Opium.	SEE Morphine.		
Oxalic acid.	Lavage or emetics.	Lime water and chalk.	Castor oil Free stimulation. Demulcents. Treat shock.
Phosphorus.	Lavage or emetics (CuSO ₄ .)	Potassium permanganate of potash, gr. 5, in 1 oz. of water. Also CuSO ₄ , gr 5	Avoid oils but give French oil of turpentine. Purgatives. Demulcents.
Ptomaines.	Lavage with Condy's fluid.		Purgation and colonic lavage. Salines. Strychnine. Treat for shock
Silver nitrate (lunar caustic).	Lavage and emetics.	Large doses of common salt.	White of egg, milk, and water.
Soda, caustic.	SEE Caustic soda.		
Strychnine.	Lavage before spasms appear. Emetic (apomorphine, gr. 1/10).	Tannin or charcoal. Chloral, pot. bromide.	Chloroform inhalation Morphine. Artificial respiration.
Sulfuric acid (oil of vitriol).	Neither.	Dilute alkalies, e. g., lime, soap, chalk, magnesia, etc.	Wall plaster in warm water. Oils Demulcents.
Tobacco.	Emetics.	Tannin.	Free stimulation. Strychnine. Recumbent position.
Turpentine.	Emetics.	Mag. sulf.	Albumen water or milk.
Veronal.	Lavage.	Strychnine.	Artificial respiration. Keep warm.
Zinc chloride.	Cautious lavage, emetic (apomorphine, gr. 1/10).		Tannin. Egg albumen. Oils. Give demulcents freely.

or water. Soap water may be useful, but should be avoided if alkalies are present. Diluting the poison delays absorption.

Removal from alimentary tract by emesis, lavage, and catharsis as indicated. *SEE: emetic*, may be dangerous in corrosive poisoning.

The administration of antidotes. *SEE: antidote*

Elimination of poison from system.

Counteract the effects of the poison. *SEE: name of specific poisoning*.

Treat collapse. Avoid strong stimulants, without specific instructions.

LOCAL IRRITANTS Represented by acids, alkalies, and caustics.

SYM: Burning, color changes of skin and mucous membrane, gastrointestinal irritation with nausea, vomiting and cramping

F. A. TREATMENT: Dilute with large volumes of water, following by diluted antidote, then soothing substances as oils, egg whites, cream, etc.

LOCAL EFFECTS or *Corrosives:* Chemical decomposition, as seen in the effects of strong mineral acids and alkalies; irritation or inflammation. Varies from simple redness to ulceration and gangrene; local specific effects. Produced on sentient extremities of nerves as felt on local application of prussic acid.

NP: Keep any receptacle containing poison taken, as well as specimens of vomitus, sputum, urine, or feces. Make note of all said by the patient, and do not repeat any of it to anyone but the physician or court officials.

Never administer any drug without first looking at label on bottle. Do not take any medicine from a bottle when the light is so dim the label may not be read easily. Keep poisonous drugs separate from other medicines and out of the reach of children. The law requires that all poisonous drugs bear a label printed in red. Odd-shaped bottles for poisons is another precaution.

The nurse may not legally administer an overdose of any poisonous drug, even though prescribed by a physician. His attention must be called to the assumed mistake, and even then she is within her rights in refusing to administer the prescription.

DISEASES SIMULATING POISONS *Acute indigestion, intestinal obstruction, appendicitis, cholera and c. morbus, hepatic colic, gastritis, gastroenteritis, renal colic, peritonitis, peptic ulcer*, may give symptoms similar to irritant poisons. *Cerebral hemorrhage, epilepsy, hysteria, organic heart disease, meningitis, thrombosis, and uremia* may offer symptoms similar to those of narcotic poisons.

p., acid. *SEE: acid p.*

p., alkali. *SEE: alkali p.*

p., atropine. *SEE: atropine sulfate p.*

p., belladonna. *SEE: belladonna and atropine p.*

p., black widow spider. *SEE: spider, black widow*

p., blood. *SEE: bacteremia, pyemia, septicemia, toxemia.*

p., carbon monoxide. *SEE: carbon monoxide*

p., convulsive. *SEE: convulsant p's.*

p., food. *SEE: food poisoning.*

p., ivy. *SEE: ivy p.*

p., mushroom. *SEE: mushroom and toadstool p.*

p., narcotic. *SEE: name of.*

p., sedative. *SEE: sedative p.*

p., toadstool. *SEE: toadstool p.*

p., unknown. In case no information is available about the character of the poison taken, and the symptoms and signs are not characteristic, it is evident that the exact antidote cannot be administered.

In such instances it is often helpful to be able to administer antidotes which in themselves are harmless and may prove efficacious.

Many combinations of this character have been described. One of the best is the following: Pulverized charcoal, 2 parts; magnesium oxide (magnesia), 1 part; tannic acid, 1 part; fullers' earth, kaolin or hydrous magnesium silicate, 1 part. This mixture may be administered in doses of 1 heaping teaspoonful mixed in water. It may be repeated several times, as none of the ingredients is harmful and may be very advantageous.

The charcoal and fullers' earth act physically by absorption of the drugs, thus retarding their absorption. The tannic acid acts chemically by precipitating many drugs, and physiologically, by coating the lining of the stomach with a coagulum which delays absorption, and the magnesia neutralizes acids and is a good antidote for arsenic, and acts mechanically by incorporating the undissolved poison in the stomach and thus delays its absorption.

poisoning, words pert. to: acid; alkali; alkaloid, allantiasis, antidote; artificial respiration, atropinism; atropinism; brass-founder's disease, bromatoxism; bromoderma; carbolicism, carboxyhemoglobin, cellulotoxic, chalcosis, cinchonism; Clapton's lines, daturine, du-boisine, emetic, first aid, food, grain; hemlock; heroin; ink; lavage, gastric; matches, meat, milk, nicotine, oxalic acid, oxygen; plumbism; ptomaine; rough-on-rai; saturnism, Scheele's green; sedative; sodium hydroxide; strychnine, sulfur dioxide, tellurium, tin, toadstool, tobacco; "tox-" words; "venen-" words, verdigris.

poisonous. Having the properties or qualities of a poison, venomous

p. plants. Do not eat: castor bean, chinaberry, European bittersweet, wild or black cherry, horseanut, poisonous hemlock, laurel, mushroom or death cup, black nightshade or deadly nightshade, Jimson weed. Do not touch: poison ivy, poison oak, snow-on-the-mountain, showy lady-slipper, poison sumac

poker back. Stiffness of the spine. May result from spondylitis, *q.v.*, or rheumatoid arthritis.

pokeroot. The dried root of *Phytolacca americana*, used internally as a treatment of rheumatism.

p. poisoning. P. resulting from ingestion of pokeroot. *SYM:* nausea, vomiting, drowsiness, vertigo, and possibly convulsions and respiratory paralysis

TREATMENT: emetic or lavage.

polar [*L. polus*, pole, from *G. polos*, axis]. Concerning a pole.

polarimeter (pō-lar-ī-m'ēt-ēr) [*"* + *G. metron*, a measure]. Instrument for measuring amount of polarization of light, or rotation of polarized light.

polarimetry (pō-lar-ī-m'ēt-rī) [*"* + *G. metron*, a measure]. Measurement of the amount and rotation of polarized light.

polariscope (pō-lar'ī-skōp) [" + G. *sko-pein*, to examine]. Apparatus used in measurement of polarized light.

polarity (pō-lar'ī-tē) [L. *polus*, pole]. P.T. 1. The quality of having poles. 2. The exhibition of opposite effects at the 2 extremities.

polarization (pō-lār-ī-zā'shūn) [L. *polus*, pole]. 1. Condition in a ray of light in which vibrations occur in only 1 plane or in curves. 2. In a galvanic battery, collection of hydrogen bubbles on negative plate and oxygen on the positive plate, whereby generation of current is impeded. 3. Condition in which ions of opposite charges are separated by a semi-permeable membrane such as a cell membrane.

pole (pōl) [L. *polus*, a pole, from G. *polos*, axis]. 1. The extremity of any axis about which forces acting on it are symmetrically disposed. 2. One of 2 points in a magnet, cell, or battery having opposite physical qualities.

p., animal. One opposite the yolk in an ovum. At this point, polar bodies are formed and pinched off and protoplasm is concentrated and has greatest activity.

p.s. of the eye. The ant. and post extremities of the optic axis.

p., frontal. Most projecting part of the ant. extremity of both cerebral hemispheres.

p., germinal. The p. of an ovum at which the development begins.

p.s. of the kidney. The kidney's upper and lower extremities.

p., occipital. The post. extremity of the occipital lobe.

p., pelvic. Breech of a fetus.

p., placental, of the chorion. Spot at which the domelike placenta is situated.

p., temporal. The anterior extremity of the temporal lobe.

p.s. of the testicle. The upper and lower extremities of a testicle.

p., vegetal. Part of the egg containing the food yolk. Also called *vegetative* or *antigermlinal pole*.

policlinic (pōl-ī-klīn'īk) [G. *polis*, city, + *klinē*, bed]. A city hospital or clinic for outpatients. SYN *polyclinic*.

pol'io. Acute anterior poliomyelitis, *q v*.

polioclastic (pōl'ī-ō-klās'tīk) [G. *polios*, gray, + *klastos*, breaking]. Destructive of the gray matter of the nervous system.

polioencephalitis (pōl'ī-ō-ēn-sēf-āl-ī'tīs) [G. *polios*, gray, + *egkephalos*, brain, + *-itis*, inflammation]. Condition characterized by lesions sometimes inflammatory of the gray matter of the brain. SYM: Fever, vomiting, convulsions.

p., acute. Acute inflammation of the cerebral cortex giving rise to infantile cerebral palsy in children.

p., anterior superior. SYN: *Wernicke's encephalopathy*. A disease involving necrotic changes in gray matter about 3rd ventricle, ant. portion of 4th ventricle and aqueduct of Sylvius. Characterized by ocular abnormalities, mental disturbances, and ataxia. Of nutritional origin, probably thiamine deficiency.

p., hemorrhagic. P accompanied by hemorrhagic lesions.

p., posterior. P involving gray matter about 4th ventricle.

polioencephalomyelitis (pōl'ī-ō-ēn-sēf-āl-ī-men-īng-ō-mī-āl-ī'tīs) [" + *egkephalos*, brain, + *mēnīgā*, membrane, + *myelos*, marrow, + *-itis*, inflammation]. Inflammation of the gray matter

of the brain and spinal cord and their meninges.

polioencephalomyelitis (pōl'ī-ō-ēn-sēf-āl-ō-mī-āl-ī'tīs) [" + " + *myelos*, marrow, + *-itis*, inflammation]. Inflamed condition of the gray matter of the brain and spinal cord. SYN: *Heine-Medin disease*.

polioencephalopathy (pōl'ī-ō-ēn-sēf-āl-ōp-āth-ī) [" + " + *pathos*, disease]. Diseased condition of the gray matter of the brain.

poliomyelencephalitis (pōl'ī-ō-mī-āl-ēn-sēf-āl-ī'tīs) [" + *myelos*, marrow, + *egkephalos*, brain, + *-itis*, inflammation]. Poliomyelitis with polioencephalitis.

poliomyelitis (pōl'ī-ō-mī-āl-ī'tīs) [G. *polios*, gray, + *myelos*, marrow + *-itis*, inflammation]. Inflammation of the gray matter of the spinal cord.

p., abortive. P in which illness is mild with no involvement of central nervous system.

p., acute anterior. SYN: *infantile paralysis*, *epidemic paralysis*, *polio*, *Heine-Medin's disease*, *acute wasting paralysis*. An acute infectious inflammation of the ant. horns of the gray matter of the spinal cord.

This is an acute, systemic, infectious disease in which paralysis may or may not occur. In the majority of patients, the disease is mild being limited to respiratory and gastrointestinal symptoms such constituting the *minor illness* or the *abortive type*, which lasts only a few days. In the *major illness*, paralysis or weakness of muscles occurs with loss of superficial and deep reflexes. In such cases, characteristic lesions are found in the gray matter of the spinal cord, medulla, motor area of cerebral cortex, and cerebellum.

Etiol. Causative agent is a virus, consisting of particles 8-30 millimicrons in diameter. The virus is resistant and stable remaining viable for months outside the body. Three immunologic types exist, I (Brunhilde), II (Lansing), and III (Leon).

SYM: Onset is often abrupt, though the ordinary manifestations of a severe cold, or some gastrointestinal disturbances may come on gradually, accompanied by slight elevation of temperature, frequently enduring for not more than 3 days. At the end of this period, paralysis may, or may not, develop. The extent of any paralysis necessarily depends upon degree of nerve involvement. Consequently, paralysis may be confined either to 1 small group of muscles, or affect 1 or all extremities. In some instances, the respiratory muscles are also involved, and it is in these cases that death is so likely to ensue. In the average paralytic case it is the extensor muscles in particular that are concerned.

COMPLICATIONS: Any paralysis occurring in this disease may be regarded as a complication. Atrophy of muscles, and ultimate deformities may likewise be classed in a similar way. Aside from bronchopneumonia, which may develop in very severe cases, other complications are surprisingly few.

DIFFERENTIAL DIAG: Among the diseases confused with this infection are the various types of meningitis, rheumatism, traumatic conditions, tuberculosis involving bones or joints, and occasionally scurvy or rickets in infants.

INCIDENCE: Poliomyelitis is endemic throughout the world but occurs in

epidemics in certain countries, including the U.S. Epidemics are seasonal, occurring in summer and fall. Children are more susceptible than adults. Infection is spread by direct contact, the virus probably entering the body via mouth. How it reaches the central nervous system is not known. Incubation period is thought to be from 7-14 days or possibly longer.

Prog: Ordinarily, the outcome as to life is good. It is only the bulbar and respiratory cases in which death is likely to occur. In fact, these 2 types constitute nearly all of the fatal cases. Even in those cases where paralysis is present, complete restoration of the parts may finally be brought about. In the more severe types, however, some deformity is very likely to remain.

PROPHYLAXIS Passive immunization with gamma globulin gives a limited amount of protection. Active immunization with Salk vaccine has greatly reduced the incidence of paralytic poliomyelitis. 10 cc. is administered I M twice 2-4 weeks apart followed by a 3rd injection after 7 mo. Predisposing factors are tonsillectomy, and other nose and throat operations, routine immunizations, excessive physical strain, and overfatigue. Pregnant women are especially susceptible during epidemics.

TREATMENT: No specific treatment is known as there is no drug or antibiotic which destroys the virus or prevents its spread within the body. Treatment is systematic, aimed at relieving symptoms, preventing deformities, and saving life. In abortive cases, bed rest for 7 to 10 days and light diet is adequate. In severe cases, muscle tenderness and pain are alleviated by proper positioning, gentle passive movement, and hot wool compresses. Muscle spasm and pain relieved by application of hot, moist packs at 20-min intervals or by hot baths for children. Mild analgesics and sedatives may be used. Fluid and salt balance should be maintained.

Retention of urine and constipation are troublesome complications. The former may be treated by a parasympathetic stimulating drug; the latter by mild laxatives and warm saline enemas.

Respiratory failure may occur in bulbar poliomyelitis. It may result from paralysis of respiratory muscles, failure of respiratory centers in medulla, obstruction of air passageways resulting from weakness of pharyngeal or laryngeal muscles, or pulmonary edema. Oxygen administration, tracheotomy, or use of a respirator may be indicated.

Convalescence of the paralyzed patient necessitates careful attention, often involving physical and occupational therapy and orthopedic treatment as well as an understanding of, and amelioration of, psychological difficulties. Mechanical supports for weakened structures may be necessary.

p., anterior. Inflamed state of spinal cord's ant. horns.

p., ascending. P in which paralysis begins in lower extremities and progresses up legs, thighs, trunk, and finally involves respiratory muscles.

p., bulbar. P in which gray matter of the medulla oblongata is involved, resulting in paralysis and usually respiratory failure.

p., chronic, anterior. Progressive wasting of the muscles.

p., epidemic. SEE: *poliomyelitis, acute anterior.*

poliomyelopathy (pōl'i-ō-mī-ēl-ōp'āth-l) [G. *polios*, gray, + *myelos*, marrow, + *pathos*, disease]. Any diseased condition of the gray matter of the spinal cord.

polioplasm (pōl'i-ō-plāzm) [" + *plasma*, a thing formed]. Granular protoplasm.

poliosis (pōl-i-ō'sis) [" + *-osis*, condition]. Absence of pigment in the hair. SYN. *calvities*, *grayness*.

Pol'ish plait. Matted hair due to disease of the scalp and want of cleanliness. SYN: *plica polonica*.

politzerization (pō-līt-zēr-i-zā'shūn) The inflation of the middle ear using a Politzer bag.

Politzer's bag (pōl'its-ēr). Soft rubber bag with rubber tip for inflating the middle ear.

pollakiuria (pōl-āk-i-ūr'i-ā) [G. *pollakis*, often, + *ouron*, urine]. Abnormally frequent passage of urine.

pollen (pōl'ēn) [L. powder]. The microspores of a seed plant which develop in the anther at tip of stamen. Each pollen grain develops a *pollen tube* and constitutes the *male gametophyte*. Within it develops a *tube nucleus* and two *sperm nuclei*; the latter constituting the male reproductive elements.

pollenogenic (pōl'ēn-ō-jen'ik) [" + G. *gennan*, to produce]. Due to the pollen of plants or producing plant pollen.

pollenosis (pōl'ēn-ō'sis) [" + G. *-osis*, disease]. Hay fever; disease due to pollen.

pollux (pōl'ēks) [L. thumb]. The thumb **p. pedis**. The great toe. SYN *hallux*.

p. valgus. Abnormal deviation of thumb toward ulnar side.

p. varus. Abnormal deviation of thumb toward radial side.

pollinosis (pōl-in-ō'sis) [L. *pollen*, powder, + G. *-osis*, disease]. Nasal congestion of mucous membranes due to contact with pollen. SYN *hay fever*.

pollution (pōl'ū'shun). 1. State of making impure or defiling. 2. Emission of semen at other times than in coition.

polonium (pō-lo'ni-ūm) Radioactive metal isolated from pitchblende. SYN *radium P*.

polus (pō'lūs) [L.] Pole

poly- [G.]. Prefix meaning *many* or *much* **poly.** (pōl'i). Abbr. for *polymorphonuclear leukocyte*.

polyadenomatosis (pōl'i-ād-ē-nō-mā-tō'sis) [" + *-oma*, tumor, + *-osis*, disease]. Adenomas in many glands.

polyadenous (pōl-i-ad-ē-nūs) [" + *adēn*, gland]. Involving or relating to many glands.

polyalgia (pōl'i-āl-jē-zī-ā) [" + *algēsis*, sensation]. A single stimulus of a part, producing sensation in many parts.

polyandry (pōl'i-an'drī) [" + *aner*, *andr-*, man]. The practice of having more than 1 husband at the same time. SEE: *polygamy*.

polyarteritis (pōl'i-ar-ter-i'tis) [" + *arteria*, artery, + *-itis*, inflammation]. Inflammation of more than 1 or 2 arteries at the same time.

p. nodosa. P with nodules on smaller arterial branches.

polyarthric (pōl'i-ar-thr'ik) [" + *arthron*, joint]. Affecting or pert. to several joints.

polyarthrits (pōl-i-ar-thr'i'tis) [G. *polys*, many, + *arthron*, joint, + *-itis*, inflammation]. Inflammation of a number of joints.

polyarticular (pōl'i-ar-tik'ū-lar) [" + L.

artculus, a joint). Affecting many joints. SYN *multiarthral*.

polyatomic (pōl'i-ā-tōm'ik) [" + *atomon*, atom]. Having several atoms or more than 2 replaceable hydrogen atoms.

polyblast (pōl'i-blāst) [" + *blastos*, a germ]. Large mononuclear phagocyte present in inflammation derived from an embryonic wandering cell.

polyblennia (pōl'i-blēn'ni-ā) [" + *blennos*, mucus]. Secretion of more mucus than normal.

polycholia (pōl'i-kōl'i-ā) [" + *cholē*, bile]. Abnormal secretion of bile.

polychrest (pōl'i-krēst) [" + *chrēstos*, useful]. A medicine useful in many diseases.

polychromasia (pōl'i-krō-mā-zī-ā) [" + *chrōma*, color]. Quality of having many colors.

polychromatic (pōl'i-krō-māt'ik) [" + *chrōma*, color]. Multicolored.

polychromatophilic (pōl'i-krō-māt'ō-flī) [G. *polys*, many, + *chrōma*, color, + *philin*, to love]. A cell, esp. an erythrocyte, which is stainable with more than one kind of stain.

polychromatophilia (pōl'i-krō-māt'ō-flī-lā) [" + " + *philin*, to love]. 1. The quality of being stainable with more than 1 stain. 2. Polychromatophil cells in the blood to excess.

polychromemia (pōl'i-krō-mē'mī-ā) [G. *polys*, many, + *chrōma*, color, + *aima*, blood]. Increase in the blood's coloring matter.

polychylia (pōl'i-kī'lī-ā) [" + *chylōs*, juice]. Excessive secretion of chyle.

polyclinic (pōl'i-klīn'ik) [" + *klinē*, bed]. Hospital or clinic treating many diseases, a general hospital.

polyclonia (pōl'i-klō'nī-ā) [" + *klonos*, tumult]. A disease characterized by many clonic spasms but distinct from chorea or tic.

polycoria (pōl'i-kō'rī-ā) [" + *korē*, pupil]. The state of having more than 1 pupil in 1 eye.

polycrotic (pōl'i-krōt'ik) [" + *krōtos*, a beat]. Having several pulse waves for each cardiac systole.

polycrotism (pōl'i-krōt-izm) [" + " + *ismos*, a beat]. Condition of having several pulse waves for each cardiac systole.

polycystic (pōl'i-sīs'tik) [" + *kystis*, a bladder]. Composed of many cysts.

polycythemia (pōl'i-sī-thē'mī-ā) [" + *kytos*, cell, + *aima*, blood]. An excess of red blood cells. SEE: *erythrocytosis*.

p. megalosplenica, p., myelopathic, p. rubra, p., splenomegalic, p. vera. A slowly progressive disease characterized by an increased number of red blood cells and increase in total blood volume.

SYM: Weakness, fatigue, vertigo, tinnitus, irritability, enlarged spleen, skin and mucosa have a red cyanosis. Basal metabolism increased and bone marrow shows increased cellularity.

ETIO: Unknown.

TREATMENT: Permanent cure cannot be achieved today, but remissions of many months can be produced. Venesection, phenylhydrazine derivatives, roentgen-ray therapy and Fowler's solution, in combination or singly. SYN: *erythremia, Osler's disease, Vaquez's disease*.

p., primary. P. in which there is hyperplasia of blood-forming cells in bone marrow. SEE: *p. vera*.

p., relative. Relative increase in number of erythrocytes which occurs in hemoconcentration.

p., secondary. SYN: *erythrocytosis*,

symptomatic p. P. resulting from some physiological condition such as lowered oxygen tension in the blood which stimulates erythropoiesis.

p., splenomegalic. P. in which enlargement of the spleen occurs. SEE: *p. vera*.

p. vera. SYN: *erythremia, p. rubra, splenomegalic p., Osler's disease, Vaquez's disease*. A slowly progressive disease characterized by an increased number of red blood cells and increase in total blood volume.

TREATMENT: Permanent cure cannot be achieved today, but remissions of many months can be produced. Venesection, radioactive phosphorus (³²P), nitrogen mustard (mechlorethamine), and triethylenemelamine have proved to be effective.

polydactylism (pōl'i-dāk'tī-lizm) [" + *daktylos*, digit, + *-ismos*, condition]. State of having supernumerary fingers or toes.

polydipsia (pōl'i-dīp'sī-ā) [" + *dipsa*, thirst]. Excessive thirst.

polyemia (pōl'i-ē'mī-ā) [" + *aima*, blood]. Abnormal amount of blood in the system. SYN: *polycythemia*.

polyesthesia (pōl'i-ēs-thē'zī-ā) [G. *polys*, many, + *aisthēsis*, sensation]. Abnormal sensation of touch in which a single stimulus is felt at two or more places.

polyesthetic (pōl'i-ēs-thēt'ik) [G. *polys*, many, + *aisthēsis*, sensation]. 1. Pert. to polyesthesia, *q v*. 2. Pert. to several senses or sensations.

polygalactia (pōl'i-gāl-āk'shī-ā) [" + *galn*, *galakt*, milk]. Excessive secretion or flow of milk.

polygamy (pō-lī-gā-mī) [G. *polys*, many, + *gamos*, marriage]. Practice of having several wives or husbands at the same time, esp. wives.

polygastria (pōl'i-gās'trī-ā). Excessive secretion of flow of gastric juice.

polyglandular (pōl'i-glān'dū-lar) [" + *L. glandula*, a little kernel]. Pert. to or affecting many glands. SYN: *pluri-glandular*.

polyglobulia, polyglobulism (pōl'i-glō-bū-lī-ā, -glōb'ū-lizm) [" + *L. globulus*, globule, + *G. -ismos*, condition]. Increase in number of red corpuscles in the blood. SYN: *polycythemia*.

polygram (pōl'i-grām) [" + *gramma*, a mark]. Sphygmographic record made by polygraph of pulse beats simultaneously.

polygraph (pōl'i-grāf) [" + *graphein*, to write]. A device which records simultaneously tracings of several different pulsations, as arterial and venous pulse waves, apex beat of heart, and other pulsations. SYN: *sphygmograph*.

polygyria (pōl'i-jī'rī-ā) [" + *gyros*, circle]. Excess of the number of convolutions in the brain.

polyhedral (pōl'i-hē'drāl) [" + *edra*, base]. Having many surfaces.

polyhemia (pōl'i-hē'mī-ā) [" + *aima*, blood]. Abnormal increase in amount of the blood. SYN: *polycythemia*.

polyhidrosis (pōl'i-hī-drō'sīs) [" + *idrōsis*, perspiration]. Excessive perspiration.

polyhydramnios (pōl'i-hī-drām'nī-ōs) [" + *ydōr*, water, + *amnion*, amnion]. An excess of amniotic fluid in the bag-of-waters in pregnancy. SEE: *amnion*.

polyhydruria (pōl'i-hī-drū'rī-ā) [" + " + *ouron*, urine]. Excessive amt. of water in urine.

polyhypermenorrhea (pōl'i-hī-pēr-mēn-ō-rē-ā) [G. *polys*, many, + *yper*, over, +

- mén**, month, + *rota*, flow). Frequent menstruation with excessive discharge.
- polyhypomenorrhea** (pól-i-hi-pó-mén-ó-ré-á) [" + *ypo*, under, + *mén*, month, + *rota*, flow). Frequent menstruation with scanty discharge.
- polyinfection** (pól-i-in-fék-shün) [" + *L. infectio*, a making in]. Infection with 2 or more microorganisms. SYN: *multi-infection*.
- polykaryocyte** (pól-i-kar'i-ó-sít) [" + *karyon*, nucleus, + *kytos*, cell]. A cell possessing several nuclei.
- polyleptic** (pól-i-lép'tik) [" + *lêpsis*, a seizure, from *lambanem*, to seize]. Characterized by numerous remissions and exacerbations, as malaria.
- polymastia**, **polymazia** (pól-i-más-ti-á, -má-zí-á) [" + *mastos*, mazos, breast]. Condition of having more than 2 mammae.
- polymastigote** (pól-i-más-tí-gót) [" + *mastix*, *mastig-*, whip]. Possessing several flagella.
- polymenia** (pól-i-mé-ní-á) [G. *polys*, many, + *mén*, month]. Excessive and frequent menstrual flow. SYN: *menorrhagia*, *polymenorrhea*.
- polymenorrhea** (pól-i-mén-or-ré-á) [" + " + *rota*, a flow]. Excessive menstrual flow occurring too frequently. SYN *menorrhagia*, *polymenia*.
- polymer** (pól-i-mer) [G. *polys*, many, + *meros*, a part]. A substance formed by a combination of two or more molecules of the same substance. Ex paraformaldehyde (HCHO) formed from three molecules of formaldehyde, HCHO.
- polymeria** (pól-i-mé-rí-á) [" + *meros*, a part]. Condition of having supernumerary parts of the body.
- polymeric** (pól-i-mér'ik) [" + *meros*, a part]. 1. Consisting of the same elements in same proportions by weight, but differing in molecular weight. 2. Said of muscles derived from more than 1 myotome.
- polymerism** (pól-i-mér-izm, pó-ilm'é-izm) [" + *meros*, part, + *ismos*, condition]. 1. Condition of having more than normal number of parts. 2. Isomerism in which the molecular weights of the polymers are multiples of each other.
- polymerization** (pól-i-mér-i-zá-shün) [" + *meros*, part]. Process of changing into another compound having same elements in same proportions, but a higher molecular weight.
- polymitus** (pó-ilm'i-tüs) [G. *polys*, many, + *mitos*, thread]. Stage in reproduction of microorganisms with threads of protoplasm which, being detached, constitute the microgamete.
- polymorph** (pól-i-morf'). A polymorphonuclear leukocyte.
- polymorphic** (pól-i-morf'ik) [" + *morphé*, form]. Occurring in more than 1 form.
- polymorphism** (pól-i-morf'izm) [" + " + *ismos*, condition]. 1. Capacity for appearing in many forms. 2. Existence of several types in the same group or species. SYN: *pleomorphism*.
- polymorphocellular** (pól-i-morf-fó-sél'ú-lar) [" + " + *L. cellula*, a small chamber]. Composed of cells of many forms.
- polymorphonuclear** (pól-i-morf-fó-nú'klé-ar) [G. *polys*, many, + *morphé*, form, + *L. nucleus*, a kernel]. Possessing a nucleus consisting of several parts or lobes connected by fine strands.
- p. leukocyte**. A white blood cell which possesses a nucleus composed of two or more lobes or parts; a granulocyte (neutrophil, eosinophil, basophil).
- polymorphous** (pól-i-morf'ús) [" + *mor-*

- phé*, form]. Appearing in many forms. SYN: *polymorphic*.
- polymyoclonus** (pól-i-mí-ók'ló-nüs) [G. *polys*, many, + *mys*, *myo-*, muscle, + *klonos*, tumult]. A shocklike muscular contraction, occurring in various parts at the same time. SYN: *myoclonus multiplex*, *paramyoclonus*.
- polymyositis** (pól-i-mí-ó-sít'is) [" + " + *-itis*, inflammation]. Simultaneous inflammation of many muscles.
- polymyxin** (pól-i-miks'in). One of several closely related antibiotics isolated from *Bacillus polymyxa* and designated polymyxins A, B, C, D, and E.
- polynesian** (pól-i-né'sik) [" + *nēsos*, an island]. Appearing in many separate locations or foci.
- polynuclear** (pól-i-nú'rál) [" + *neuron*, sinew]. Pert. to, innervated, or supplied by, many nerves.
- polynuralgia** (pól-i-nú-rál'jí-á) [" + " + *algos*, pain]. Neuralgia in several nerves.
- polyneuritis** (pól-i-nú-rít'ik) [" + " + *-itis*, inflammation]. Suffering from inflammation of several nerves at once.
- p. psychosis**. P. seen in chronic alcoholism with disturbed orientation, polyneuritis, hallucinations, falsification of memory, etc.
- polyneuritis** (pól-i-nú-rít'is) [" + " + *-itis*, inflammation]. A neuritis involving 2 or more nerves; usually a large number.
- p., acute idiopathic**. SYN: *infectious polyneuritis*, *Landry's paralysis*, *Guillain-Barré syndrome*. A disorder of peripheral nerves characterized by ascending muscular weakness, impairment of reflexes, and sensory disorders. Often follows a febrile illness. Cause unknown.
- p., Jamaica ginger**. P. esp. of nerves of extremities following ingestion of Jamaica ginger containing triorthocresylphosphate.
- p., metabolic**. P. resulting from metabolic disorders such as nutritional deficiency, esp lack of thiamine, gastrointestinal disorders, or pathologic conditions such as diabetes, pernicious anemia, toxemias of pregnancy, etc.
- p., toxic**. P. resulting from poisons such as heavy metals, alcohol, carbon monoxide, various organic compounds, etc.
- polyneuropathy** (pól-i-nú-róp'á-thí). SYN: *polyneuritis*, *multiple neuritis*. Term applied to any disorder or affection of peripheral nerves but preferably restricted to those of a noninflammatory nature.
- p. amyloid**. P. characterized by deposition of amyloid in nerves.
- p. erythredema**. SYN: *pink disease*, *acrodynia*, *Seller's disease*, *Feer's disease*. A condition of unknown etiology occurring in children, characterized by degenerative changes in peripheral nerves, skin disorders, motor and sensory disturbances.
- p. porphyric**. P. resulting from acute porphyria characterized by pains and paresthesias in the extremities and flaccid paralysis.
- p., progressive hypertrophic**. SYN: *Dejerine-Sottas disease*. A rare familial disease beginning in childhood characterized by increased size of peripheral nerves due to multiplication and hypertrophy of cells of sheath of Schwann.
- polynuclear** (pól-i-nú'klé-ar) [G. *polys*, many, + *L. nucleus*, a kernel]. Possessing more than one nucleus. Multinuclear.
- polynucleotidase** (pól-i-nú'klé-ó-tíd-ás).

An enzyme present in intestinal mucosa and intestinal juice that catalyzes the breakdown of nucleic acids to nucleotides.

polynucleotide (pōl-i-nū-klē'ō-tīd). Nucleic acid composed of four nucleotides; a tetranucleotide.

polyodontia (pōl-i-ō-dōn'shl-ā) [" + *odont*, *odont*, tooth]. State of having supernumerary teeth.

polyopia, **polyopsia** (pōl-i-ō'pī-ā, -ōp'sī-ā) [" + *opsis*, vision]. Multiple vision; perception of more than 1 image of the same object.

polyorchidism (pōl'i-or'kīd-izm) [" + *orchis*, testicle, + *-ismos*, condition]. Condition marked by having more than 2 testicles.

polyorchis (pōl-i-or'kīs) [" + *orchis*, testicle]. One with more than 2 testicles.

polyorrhomenitis (pōl-i-or'ro-mēn-ī'tīs) [" + *orros*, serum, + *ymēn*, membrane, + *-itis*, inflammation]. Malignant inflammation and wasting of serous membranes. **SYN:** *Concato's disease*.

polyotia (pōl-i-ō'shl-ā) [G. *polys*, many, + *ous*, of-, ear]. State of having more than 2 ears.

polyp (pōl'ip) [G. *polys*, many, + *pous*, foot] **SYN:** *polypus* A tumor with a pedicle. Commonly found in vascular organs such as the nose, uterus, and rectum. Polyps bleed easily and should be removed surgically.

p., bleeding. Angioma of nasal mucous membrane.

p., fibrinous. A pedunculated fibroid tumor within the uterine or cervical cavities.

p., mucous. A polyp of soft or jelly-like consistency and exhibiting mucoid degeneration.

p., vascular. A pedunculated angioma.

poly paresis pōl'i-par'ēs-īs) [" + *paresis*, relaxation]. General progressive paralysis of paralytic dementia.

poly pathia (pōl-i-pāth'i-ā) [" + *pathos*, disease]. The presence of several diseases at 1 time, or their frequent recurrence.

poly peptide (pōl-i-pēp'tīd) [" + *peptin*, to digest]. A union of 3 or more amino acids. **SEE:** *peptide*.

poly peptide mia (pōl'i-pēp-tīd-ē'mī-ā) [" + *aima*, blood]. Polypeptides present in the blood.

poly peptide rorrachia (pōl'i-pēp-tīd-ō-rā'-kl-ā) [" + *rachis*, spine]. Polypeptides in the cerebrospinal fluid.

polyphagia pōl-i-fā'gī-ā) [G. *polys*, many, + *phagein*, to eat]. Eating abnormally large amounts of food at a meal. **RS:** *anorexia*, *acoria*, *bulimia*, *parorexia*, *taste*.

polyphalangism (pōl'i-fāl-ān'jīzm) [" + *phalang*, phalanx, + *-ismos*, condition]. An extra number of phalanges on a finger or toe.

polypharmacy (pōl-i-far'mā-sī) [" + *pharmakon*, drug]. 1. Excessive use of drugs or overdose of a drug. 2. Prescription of many drugs given at 1 time.

polyphobia (pōl-i-tō'bī-ā) [" + *phobos*, fear]. Excessive or abnormal fear of a number of things.

polyphony (pōl'i-fōn'fī). **SYN:** *pleiotropism*. Condition in which a single gene produces several effects in the body.

polyphrasia (pōl-i-frā'zī-ā) [" + *phrasis*, speech]. Excessive talkativeness, a manifestation of insanity. **SYN:** *verbigeration*.

polyphyletic (pōl'i-fl-ēt'īk). Having more

than one origin. Opp. of *monophyletic*, *q.v.*

polyplastic (pōl-i-plāst'īk) [G. *polys*, many, + *plastos*, formed]. 1. Having had many evolutionary modifications. 2. Having many substances in cellular composition.

polyplastyctosis (pōl'i-plāst-ō-sī-tō'sīs) [" + *kytos*, cell, + *-osis*, intensive]. Increase of blood platelets formation.

polyplegia (pōl-i-plē'gī-ā) [" + *plēgē*, a stroke]. Paralysis affecting several muscles.

polyplod (pōl-i-plō'd) 1. Characterized by polyploidy. 2. An individual in which the chromosome number is a multiple of the haploid number.

polyplodidy (pōl-i-plō'dī-ī). Condition in which the chromosome number is a multiple of the haploid number found in gametes. **SEE:** *triploidy*, *tetraploidy*.

polypnea (pōl-ip-nī-ā) [" + *pnoia*, breath]. Very rapid breathing. **SYN:** *panting*.

poly podia (pōl'i-pō'dī-ā) [" + *pous*, pod-, foot]. Possession of more than normal number of feet.

poly poid (pōl'i-poyd) [" + *pous*, foot, + *eidos*, like]. Like a polyp.

poly porous (pōl-i-por'ūs). Possessing many small openings or pores.

polyposis (pōl-i-pō'sīs) [" + *-osis*, intensive]. The presence of numerous polypi.

p. coli. P. of the large intestine.

p. ventriculi. Presence of numerous polyps, sometimes involving entire mucosa, accompanied by chronic atrophic gastritis.

poly potome (pōl-ip'ō-tōm) [G. *polys*, many, + *pous*, foot, + *tomē*, a cutting]. Instrument for excision of a polypus.

polypus (pōl'i-pūs) (pl. *polypī*) [" + *pous*, foot]. A pedunculate tumor growing from a mucous membrane.

Commonly found in vascular organs such as the nose, uterus and rectum. They bleed easily and should be removed surgically. **SYN:** *polyp*.

p., bleeding. Angioma of nasal mucous membrane.

p., cellular. Mucous polypus.

p., cervical. A polyp, either fibrous or mucous, on the cervical mucosa.

p., fibrous. A pedunculated fibroid tumor within the uterine or cervical cavities.

p., fleshy. A submucous myoma in the uterus.

p., placental. A polyp composed of retained placental tissue.

polyrexia (pōl'i-ō-rēks'i-ā). **SYN:** *bulimia*. Insatiable appetite, excessive hunger.

polyrrhea, **polyrrhoea** (pōl-ir-rē-ā) [G. *polys*, many + *roia*, flow]. Excessive secretion of fluid.

polysaccharide (pōl'i-sāk'hā-rīd) [G. *polys*, many, + *sakcharon*, sugar]. One of a group of carbohydrates which upon hydrolysis yield more than 2 molecules of simple sugars. They are complex carbohydrates of high molecular weight, usually insoluble in water but when soluble form colloidal solutions. Their basic formula is (C₆H₁₀O₅)_x.

They include two groups: 1. *Starch group* (Ex: starch, inulin, glycogen, dextrin). 2. *Cellulose group* (Ex: cellulose and hemicelluloses). The hemicelluloses include the pentosans (Ex: gum arabic), hexosans (Ex: agar-agar) and hexopentosans (Ex: pectin).

SEE: *carbohydrates*, *monosaccharides*, *disaccharides*.

polysaccharose (pól'i-sák'-rós) [G. *polys*, many + *sakcharon*, sugar]. A polysaccharide. *q.v.*

polysarcia (pól'i-sar'shl-á) [" + *sarz*, *sark-*, flesh]. Fleshiness; obesity.

polysarcous (pól'i-sar'kus) [" + *sarz*, *sark-*, flesh]. Very fleshy; fat.

polysceia (pól'i-sé'i-á) [" + *skelos*, leg]. Condition of having more than the normal number of legs.

polyscope (pól'i-skóp) [" + *skopein*, to examine]. Instrument for illumination and examination of cavities.

polyserositis (pól'i-sē-rō-si'tis) [G. *polys*, many, + *L. serum*, whey, + *-itis*, inflammation]. *Syn* *multiple serositis*. General progressive inflammation, esp. in upper abdominal cavity.

p. chronic. *Syn* *Pick's disease*. *P* involving fibrous adhesions in pleural and pericardial cavities.

polysinuitis, **polysinusitis** (pól'i-sín-ú-i'tis, -si'nús-i'tis) [" + *L. sinus*, a hollow, + *G. -itis*, inflammation]. Inflammation of several sinuses simultaneously.

polysermia, **polypermism** (pól'i-sper'mi-á, -mizm) [" + *sperma*, seed]. 1. Excessive secretion of seminal fluid. 2. Entrance of several spermatozoa into one ovum.

polystichia (pól'i-stík'i-á) [" + *stichos*, a row]. Condition in which there are more than 2 rows of eyelashes.

polystomatous (pól'i-stómá-tús). Possessing many mouths or openings.

polythelia, **polythelism** (pól'i-thē'lí-á, -lizm) [" + *thēlē*, nipple, + *-ismos*, condition]. Presence of more than 1 nipple on a mamma.

polytocous (pól-i-tó-kús) [" + *tokos*, birth]. Producing several offspring at 1 time.

polytrichia, **polytrichosis** (pól-i-trík'i-á, -ósis) [G. *polys*, many, + *trich-*, hair, + *-osis*, intensive]. Excessive growth of hair. *Syn* *hypertrichosis*.

polytrophia, **polytrophie** (pól-i-tró'fi-á, -it-ró-fi) [" + *tróphē*, nourishment]. Excessive or abundant nutrition.

pol'ytróp'ic. Affecting more than one type of cell, said of viruses, or affecting more than one type of tissues, said of certain poisons.

polyuria (pól-i-ú'ri-á) [" + *ouron*, urine]. Excessive secretion and discharge of urine.

The urine does not, as a rule, contain abnormal constituents. Several hundred ounces a day may be voided. It is pale in color. Sp. gr. 1.000 to 1.002 and higher in diabetes.

Etiol. Occurs in diabetes insipidus, diabetes mellitus, chronic nephritis, nephrosclerosis, following edematous states, esp those induced by heart failure, in hyperthyroidism, and following excessive intake of liquids.

polyvalent (pól-i-vá'lēnt, pól-iv-á-lēnt) [" + *L. valēre*, to be strong]. 1. Multivalent; having a combining power of more than 2 atoms of hydrogen.

p. serum. One with antibodies produced by injecting several strains of microorganisms of the same species or by injecting different species.

p. vaccine. One produced from cultures of a number of strains of the same species.

pomade (pómád) [Fr., from *L. pomum*, apple]. A perfumed ointment, esp. 1 for the hair. *Syn* *pomatum*.

pomatum (pó-má'tum) [*L. pomum*, apple]. A perfumed unguent, esp. 1 used on the hair. *Syn* *pomade*.

pompholyx (póm'fó-lik) [G. *pompholyx*,

bubble]. Acute inflammatory affection characterized by bullae limited to hands and feet.

Etiol. Not known. Occurs in 2nd to 4th decade, in coffee and tobacco users, and in those with lowered vitality.

Sym: Symmetrical eruptions of crops of deeply seated vesicles and bullae with itching, hyperemia, lasting 4-6 weeks. Secondary infection may occur.

Treatment Hygienic regimen. Locally, soothing lotions, potassium permanganate compresses, salicylic acid in alcohol. X-irradiation in resistant cases.

pomphus (póm'fús) (pl. *pomphi*) [G. *pomphos*, a blister]. A blister or a circumscribed elevation on the skin, a wheal.

pomum (póm'mum) [L.]. An apple.

p. Adami, *Syn* *Adam's apple*. Prominence in middle line of throat, caused by junction of two lateral wings of the thyroid cartilage.

pomograph (póm'ó-gráf) [G. *pomos*, pain, + *graphein*, to write]. Device for measuring and registering sensitiveness to pain or fatigue.

pompalmosis (póm'ó-pál-mó'sis) [" + *palmos*, palpitation, + *-osis*, intensive]. Palpitation of the heart produced by slight exertion. *Syn* *neurocirculatory asthenia*.

pompophobia (póm-ó-fó'bi-á) [G. *pomos*, pain, + *phobos*, fear]. 1. Abnormal distaste for exerting one's self. 2. Dread of pain.

pons (pl. *pontes*) [L. bridge]. 1. A process of tissue connecting 2 or more parts. 2. Pons varolii. *q.v.*

p. hepatis. Part of liver extending sometimes from quadrate lobe to left lobe across the umbilical fissure.

p. varolii. A portion of the brain stem forming a rounded eminence on ventral surface of hind brain. It lies between the medulla and cerebral peduncles, and appears externally as a broad band of transverse fibers. It is connected to the cerebellum by the mid. cerebellar peduncle or brachium pontis. It contains fiber tracts connecting medulla oblongata and cerebellum with upper portions of the brain and also important motor and sensory nuclei of cranial nerves V, VI, VII and VIII.

Named for Costanzo Varolio, anatomist of Bologna, 1544-75.

RS cerebellopontile, cerebellopontine, cerebroponitile.

pontic (pón'tik) [L. *pons*, *pont-*, bridge]. An artificial tooth set in a bridge.

pontile, **pontine** (pón'til, -tēn) [L. *pons*, *pont-*, bridge]. Pert. to the pons varolii.

p. hemiplegia. One due to lesion of the pons. The arm and leg on 1 side and face on the other are affected.

p. nuclei. The gray matter in the pons.

pont'obulb'ar. Pert. to the pons and the medulla oblongata.

pontocaine hydrochloride (pón'tó-kán). A white crystalline powder, the base of which belongs to the procaine type.

Uses: As a local anesthetic, useful for surface anesthesia in the eye, ear, nose and throat.

Dosage: 1/2% strength recommended for the eye, 2% for nose and throat.

popliteal (póp-lit-é'al, -līt-é'al) [L. *poples*, *poplit-*, the ham]. Concerning the post. surface of the knee.

popliteus (póp-lit-é-ús, -līt-é-ús). Muscle located in hind part of the knee joint which flexes the leg and aids it in rotating. *See*: *Table of Muscles in Appendix*.

poppy. A plant *Papaver somniferum*, the source of opium.

poradenitis (pôr-âd-ê-nî'tis) [G. *poros*, pore, + *adên*, gland, + -itis, inflammation] SYN *lymphogranuloma venereum*. *q v*. Formation of small abscesses in the iliac glands.

porcellaneous, porcellaneous (pôr-sê-lâ-nê-ûs, -sê-lân-ûs) [Italian *porcellana*, the porcelain shell]. Translucent or white like porcelain, as the skin.

porcupine disease (pôr'kû-pin) [L. *porcus*, swine] A chronic skin disease with scaly epidermal plates. SYN *ichthyosis*.

pore (pôr) [G. *poros*, a pore] 1. A minute opening, esp one on an epithelial surface. 2. Opening of excretory duct of a sweat gland.

RS skin, stoma, sweat glands.

p., alveolar. A minute opening in wall of alveoli of a lung.

p., gustatory. A taste pore, *q v*.

p., taste. SYN *gustatory pore*. The opening of a taste bud. The surface opening is the *outer taste pore*; the inner opening into which the taste hairs of the gustatory cells project is the *inner taste pore*.

porencephalla, porencephaly (pôr-ên-sêf-â-l'â, pôr-ên-sêf-â-l'â) [G. *poros*, a pore + *egkephalos*, brain] An anomalous condition in which the ventricles of the brain are connected with the subarachnoid space.

porencephalitis (pôr-ên-sêf-âl-l'itis) [G. *poros*, a pore, + *egkephalos*, brain, + -itis, inflammation] Inflammation of the brain with development of cavities communicating with the subarachnoid space.

porencephalous (pôr-ên-sêf-âl-ûs) [G. *poros*, a pore, + *egkephalos*, brain] Pertaining to *porencephalia*, *q v*.

pori. Plural of *porus*, *q v*.

poriomania. Morbid desire to wander from home.

pork (pôr'k) [L. *porcus*, swine]. COMP. NUTRIENTS. Nutritive value greater than that of beef. AV. SERVING: 230 Gm.

Unit of Serv. Av. SERVING: 250 Gm		Prot.	Fat

VITAMINS: A— to +, B++, G++.

pornography (pôr-nôgrâ-fi) [G. *pornê*, prostitute, + *graphein*, to write]. 1. Obscene writing or painting. 2. Description of prostitutes or prostitution.

porocephaliasis, porocephalosis (pôr'rô-sêf-âl-l'â-sis, -ô'sis) [G. *poros*, pore, + *kephalê*, head]. Infection with a species of *Porocephalus*.

Porocephalus (pôr'rô-sêf-âl-l'ûs) [G. *poros*, pore, + *kephalê*, head]. A genus of wormlike arthropods found commonly in snakes. The young sometimes infests mammals, including man. SEE: *tongue worms*

porokeratosis (pôr'rô-kêr-ât-ô'sis) [G. *pôros*, callus, + *keras*, a horn, + -ôsis, disease]. Skin disease marked by thickening of stratum corneum in linear arrangement, followed by its atrophy.

It appears on smooth areas. It is

irregular in form and size, with circumscribed outline and affects hands and feet, forearms and legs, the face, neck and scalp.

poroma (pô-rô-mâ) [' + -ôma, tumor]. Inflammatory hardening or callosity.

porosis (pô-rô'sis) [G. *poros*, callus, + -ôsis, disease]. Condition marked by (a) formation of pores or cavities, (b) increased translucency to roentgen rays.

porosity (pô-rôs-i-ti) [G. *poros*, pore]. The state of being porous.

porous (pô-rûs) [G. *poros*, a pore]. Full of pores, able to admit passage of a liquid.

porphin. C₂₀H₁₄N₄, the structure forming the framework of all porphyrins. Consisting of four pyrrole rings united by methene couplings.

porphobilin (pôr-fô-bi-lin) A derivative of hemoglobin sometimes present in urine.

porphobilinogen (pôr-fô-bi-lin-ô-gên). The precursor of porphobilin.

porphyria (por-fî-rî-â) [G. *porphyra*, purple]. Porphyrin in the blood.

p., acute. A rare metabolic disorder characterized by excessive excretion of porphyrins, acute abdominal pain, and neurologic disturbances, inherited as a mendelian dominant.

p., chronic. P. sometimes following excessive use of sulfonamides, barbiturates, or other drugs. Sensitivity to light is characteristic.

p., congenital. A rare condition due to an inborn error of metabolism. Inherited as a mendelian recessive.

p., erythropoietica. P. due to a defect in the synthesis of hemoglobin.

p., hepatica. P. due to disturbance in liver metabolism such as occurs following hepatitis, poisoning by heavy metals, certain anemias, and other conditions.

porphyria (por-fî-rî-n) [G. *porphyra*, purple]. One of a group forming basis of animal and plant respiratory pigments, obtained from hemoglobin and chlorophyll.

porphyrinuria (por-fî-rî-n-û-rî-â) [' + -ouron, urine]. The excretion of porphyrin in the urine.

porphyrazation (por-fî-rî-zâ-shûn) [G. *porphyra*, purple]. Process of pulverizing.

porphyruria (por-fî-rî-û-rî-â) [' + -ouron, urine]. Excretion of porphyrin in urine.

porrigo (pô-rî-gô) [L. dandruff]. Any disease of scalp involving scaling or loss of hair.

p. decalvans. Baldness in patches. SYN: *alopecia areata*.

p. favosa. Tiny, contiguous ulcer and crust formation. SYN: *favus*.

p. furfurans. Ringworm of the scalp. SYN: *tinea tonsurans*.

p. larvalis. Eczema of the scalp with impetigo.

Porro's operation (por-ôz). Removal of a pregnant uterus, the ovaries and tubes through an incision in the abdominal wall.

porta (portâh) [L. gate]. The point of entry of nerves and vessels into an organ or part.

p. hepatis. The fissure of the liver where the portal vein enters.

p. lienis. Hilus of the spleen where vessels enter.

p. pulmonis. Pulmonary hilus for entry and exit of the bronchi, nerves, and vessels.

p. renalis. Hilus of the kidney for entry of the vessels.

portal (portâl) [L. *porta*, a gate]. 1. Concerning a porta or entrance to an

organ, esp. that through which the blood is carried to liver. 2 An entryway.

p. circulation. That of blood brought by the portal vein into the liver and out by the hepatic vein.

p. of entry. The avenue by which infectious organisms gain access to the body.

p. intestinal. The opening of the midgut or yolk sac into the foregut or hindgut of an embryo.

p. system. The portal vein and its branches by which blood is collected from abdominal viscera and conveyed to the sinusoids of the liver from which it passes through the hepatic veins to the inf. vena cava.

p. vein. One formed by the veins of the splanchnic area conveying its blood into the liver.

It is made of the combined sup. and inf. mesenteric, splenic, gastric, and cystic veins.

porte-, port- (pôrt) [Fr. *porter*, to carry, from L. *portare*, to carry]. To carry.

portio (pôr-shi-ô) [L. a part]. A part.

p. dura. The 7th cranial or facial nerve.

p. vaginalis. The part of the cervix within the vagina.

port-wine mark or stain. A purplish-red, superficial birthmark. SYN *nevus*.

porus (pôr'ûs) [L. from G. *poros*, a passage]. A meatus or foramen; a tiny aperture in a structure; a pore.

p. acusticus externus. The ext. opening of the ext. acoustic meatus.

p. acusticus internus. The opening of the int. acoustic meatus into the cranial cavity.

p. lactiferous. Opening of a lactiferous duct on tip of nipple of mammary gland.

p. opticus. Opening in center of optic disk through which retinal vessels (central artery and vein), reach retina through lamina cribrosa of sclera.

p. sudoriferus. Opening of a sweat gland.

posiomania (pos"i-ô-mă-ni-â) [G. *posis*, a drink, + *mania*, madness]. Addiction to alcoholic drinks. SYN *dipsomania*.

position (pô-zish'ûn) [L. *positio*, a placing, from *ponere*, to place]. 1. Place in which a thing is put. 2. Manner in which a body is arranged, as by the nurse or physician for examination. 3. Os: The relation of some arbitrarily chosen portion of the child in the pelvis to the right or left side of the mother, the occiput, chin, and sacrum being the points used. SEE *posture*.

p. anatomic. Position assumed when a person is standing erect with arms at the sides, palms forward.

p. dorsal. P. in which patient is on his back.

p., d. elevated. On back, head and shoulders elevated at angle of 30° or more. Employed in digital examination of genitalia and in bimanual examination.

p., d. recumbent. On back, extremities moderately flexed and rotated outward. Employed in application of obstetrical forceps, repair of lesions following parturition, vaginal examination, bimanual palpation. SEE: *dorsal recumbent p. for illustration*.

p., dorsosacral. Same as *p., lithotomy*.

p., Edebohls. Same as *Simon's p.*

p., Elliott's. P. in which supports are placed under small of back so that patient resembles a double inclined plane.

p., English. SEE: *p., left lateral recumbent*

p., erect. Occiput and heels on line, also nose, groins, and great toes in same vertical plane. Employed in practice of ballottement, differentiation of tumors, cystic and solid hernia.

p., Fowler's. Position when the head of the patient's bed is raised above the level about 1½ ft. SEE: *Fowler's p. for illustration*.

p., genucubital. Patient on knees, thighs upright, body resting on elbows, head down on hands. Employed when not possible to use the classic knee-chest position.

p., genupectoral. Patient on knees, thighs upright, head and upper part of chest resting on table, arms crossed above head. Employed in displacement of prolapsed fundus, dislodgment of impacted head, management of transverse presentation, replacement of retroverted uterus or displaced ovary, flushing of intestinal canal.

p., horizontal. Lying supine, feet extended. Employed in palpation, in auscultation of fetal heart and in operative procedures. SEE: *horizontal p. for illustration*.

p., h. abdominal. Patient flat on abdomen, feet extended. Employed in examination of back and spinal column.

p., jackknife. Patient on back, shoulders elevated, legs flexed on thighs, thighs at right angles to abdomen. Employed when passing urethral sound.

p., knee-chest. SYN: *genupectoral p.* SEE: *knee-chest p. for illustration*.

p., knee-elbow. SEE: *p. genucubital*

p., kneeling-squatting. Patient stooping, knees pressed on abdomen, trunk erect. Employed in childbirth in difficult cases and in uncivilized nations.

p., lateroprone. Same as *Sims' p.*

p., laterosemiprone. Same as *Sims' p.*

p., left lateral recumbent. Patient on left side, right knee and thigh drawn up. Employed in childbirth.

p., lithotomy. Patient on back, thighs flexed on abdomen, legs on thighs, thighs abducted. Employed in operation on genital tract, in vaginal hysterectomy, diagnosis and treatment of diseases of urethra and bladder.

p., obstetrical. SEE: *p., left lateral recumbent*.

p., orthograde. SYN: *anatomical position, q.v.*

p., prone. P. in which patient is lying face downward.

p., recining. SEE: *p. jackknife*

p., side, semiprone. Same as *Sims' p.*

p., Simon's. Exaggerated lithotomy position. Patient flat on back, legs flexed on thighs, thighs on abdomen, hips somewhat elevated, thighs strongly abducted. Employed in operations on vagina.

p., Sims'. Patient on left side, right knee and thigh drawn well up above left, left arm back of patient and hanging over edge of table, chest inclined forward so that patient rests upon it. Employed in curettement of uterus, intrauterine irrigation after labor, tamponade of vagina, rectal exploration, operations on cervix. SEE: *Sims' position for illustration*.

p., Trendelenburg. Dorsal position, body elevated at angle of about 45°, feet and legs hanging over end of table, head down. Employed in abdominal surgery to favor gravitation upward of abdominal viscera.

p., Walcher. The patient with hips on the edge of the table and the lower extremities hanging down.

position, words *post-, for:* aboral, acathisia, accubation, adduct, adduction, adductor, adoral, anacathisia, anteflexion, antelocation, anteoposition, anterior, "antero-" words, anteversion, anticheirotonus, anticalinal, anticus, apex, aspect, atropic, attitude, dorsal, dorsosacral, Edebohl's, emprosthotonos, erect, Fowler's, genupectoral, horizontal, in situ, jackknife, jactitation, kneeling squatting, lateropron, left lateral recumbent, lithotomy, opisthotonos, orthotonos, posture, pronation, prone, recumbent, sedentary, side, Simon's, Sims', supination, supine, Trendelenburg's, vertical, Walcher's.

positive (pōz'tīv) [L. *positivus*, ruling]. 1. Definite, affirmative, opposed to negative 2 Indicating the reaction in laboratory work. 3. Indicating an abnormal condition in examination and diagnosis. 4 Indicates pathological change in post-mortem examination. 5. Noting a quantity greater than zero

Indicated by the plus (+) sign.

positron (pōz'trōn). A particle having the same mass as a negative electron but possessing a positive charge

posological (pōs'ō-lōj'ī-kāl) [G. *posos*, how much, + *logos*, a study] Concerning dosage.

posology (pō-sōl'ō-jī) [G. + *logos*, a study]. Branch of scientific study dealing with dosage.

possession (pō-zesh'ūn) [L. *possessio*, a sitting before]. State of being dominated by an idea, a passion or a mental obsession.

p., demoniacal. Belief of being under the influence of an evil spirit or demon.

post- [L.]. A prefix meaning *behind* or *after*.

postabortal (pōst'āb-or'tāl) [L. *post*, after, + *abortus*, abortion]. Happening subsequent to abortion

postaxial (pōst-āks'ī-āl) [G. *axōn*, axis]. Situated or happening behind an axis.

postcapillary (pōst-kāp'ī-lā-rī). **SYN** *renous capillary* A terminal vessel of a capillary network which leads to a venule

postcava (pōst-kā'vā) [G. + *cavus*, a hollow]. The ascending or inf. vena cava.

postcaval (pōst-kā'vāl) [G. + *cavus*, hollow] Concerning the postcava.

postcentral (pōst-sen'trāl) [G. + *ken-tron*, center] 1. Situated or happening behind a center. 2. Located behind the fissure of Rolando

postcibal (pōst-sī'bāl) [G. + *cibum*, food]. Occurring after meals.

postclavicular (pōst'klā-vīk'ū-lār) [G. + *clavicula*, a little key]. Located or occurring behind the clavicle.

postclimacteric (pōst-kli-māk-tēr'īk, -māk'tēr'īk) [L. *post*, after, + *G. klimakter*, round of a ladder]. Occurring after the menopause.

postcoital (pōst-kō'īt-āl) [G. + *coitō*, a coming together] Subsequent to sexual intercourse.

postconnubial (pōst-kōn-ū'bī-āl) [G. + *connubium*, marriage]. Occurring after marriage.

postconvulsive (pōst-kōn-vūl'sīv) [G. + *convulsio*, a pulling together]. Occurring after a convulsion

postdiastolic (pōst-dī-ās-tōl'īk) [G. + *diastole*, a sending apart]. Occurring after the cardiac diastole

postdicrotic (pōst-dī-krōt'īk) [L. *post*,

after, + *G. dikrotos*, beating double]. Occurring after the dicrotic pulse wave.

p., wave. A recoil or second wave (not always present) in a sphygmographic tracing.

postencephalitis (pōst'ēn-sēf-āl'ī-tīs) [G. + *egkephalos*, brain, + *-itis*, inflammation]. The condition sometimes remaining after convalescence from epidemic encephalitis

postepileptic (pōst'ēp-lēp'tīk) [G. + *G. epi*, upon, + *lēpsis*, a seizure]. Following an epileptic seizure

posterior (pōs-tēr'i-or) [L. after] 1. Toward the rear or caudal end; opp of anterior 2 In man, toward the back, dorsal 3 Situated behind; coming after

postero- [L.]. Prefix meaning *posterior*, *situated behind* or *towards the back*

posterocentral (pōs'tēr-ō-ēks-tūr'nāl) [L. *posterus*, behind, + *externus*, outer] Towards the back and outer side

posterointernal (pōs'tēr-ō-in-tūr'nāl) [L. *posterus*, behind, + *internus*, inner]. Towards the back and inner side of

posterolateral (pōs'tēr-ō-lāt'ēr-āl) [G. + *latus*, later-, a side] Located behind and at the side of a part

posteromedial (pōs-tēr-ō-mē'dī-āl). Toward the back and toward the median plane.

posteromedian (pōs-tēr-ō-mē'dī-ān) [L. *posterus*, behind, + *medius*, middle] Situated posteriorly and in the median plane

posterosuperior (pōs-tēr-ō-sū-pēr'i-or) [G. + *superior*, upper] Located behind and above a part

postesophageal (pōst'ē-sō-fā'j-āl) [L. *post*, after, + *G. oisophagos*, gullet]. Located behind the esophagus.

postethmoid (pōst-ēth'moyd) [G. + *G. ethmos*, sieve, + *eidos*, form]. Located behind the ethmoid bone

postfebrile (pōst-fē-brīl) [G. + *febris*, fever]. Occurring after a fever

postganglionic (pōst'gān-glī-ōn'īk). Situated behind or after a ganglion

p., fiber. The axon of a postganglionic neuron which passes from an autonomic ganglion to a visceral effector

p., neuron. The second of a series of efferent neurons which transmit impulses from the central nervous system to a visceral effector its cell body lies in one of the autonomic ganglia.

posthetomy (pōs-thēt'ō-mī) [G. *posthe*, prepuce, + *tomē*, a cutting]. Surgical removal of all or part of the foreskin **SYN** *circumcision*.

posthioplasty (pōst'hī-ō-plas'tī) [G. + *plastos*, formed] Plastic surgery of the prepuce or foreskin

posthitis (pōs-thī'tīs) [G. + *-itis*, inflammation]. Inflamed condition of the foreskin.

posthumous (pōst'ū-mūs) [L. *postumus*, last]. 1. Occurring after death 2 Born after death of father 3 Said of a child taken by cesarean section after death of mother

posthypnotic (pōst'hīp-nōt'īk) [L. *post*, after, + *G. ypnos*, sleep]. Occurring or performed subsequent to the hypnotic state.

p., suggestion. One offered during the hypnotic state influencing a later action when individual returns to normal state.

postical (pōst-īk'tāl). Following jaundice.

posticus (pōs-tī'kūs) [L.]. Posterior.

post-mortem (pōst-mōr'tēm) [L.]. After death.

p. examination. Dissection of a dead body to ascertain cause of death and the changes wrought by disease. SYN. *autopsy*.

postnatal (pōst-nā'tāl) [L. *post*, after, + *natus*, birth]. Happening after birth.

postnecrotic. After death of a tissue or a part

postocular (pōst-ōk'ū-lar) ["" + *oculus*, eye]. Behind the eye

p. neuritis. Inflammation of the optic nerve behind the eyeball

postolivary (pōst-ōl'iv-a-rī) ["" + *oliva*, olive]. Behind the olivary body; back of the ant. pyramid of the medulla

postoperative (pōst-ōp'ēr-ā-tīv) ["" + *operatus*, from *operari*, to work]. After or following a surgical operation.

POSTOPERATIVE CARE. 1. When you are called to the operating room to get a patient, take a towel and emesis basin with you. 2. See that ether bed is ready and furniture moved so stretcher can be gotten close to it. 3. Be careful when handling unconscious patient. Remember that it will be a difficult task because he is a dead weight and not able to help himself. Get assistance. 4. See that there are no drafts, but plenty of fresh air. Do not let direct light shine on patient's face. 5. When he vomits keep head turned to one side so vomitus will not be swallowed or inhaled. 6. Change gown when wet or soiled, rubbing patient dry with bath towel under the bedclothes. 7. Watch him carefully when consciousness begins to return, for it is at this time he becomes restless. 8. Note pulse, respiration and other symptoms at intervals as required by the routine of your hospital. It varies with the operation

postoperculum (pōst-ō-per'kū-lūm) ["" + *operculum*, a cover]. The fold covering the insula that is formed of part of the supertemporal gyrus. SYN. *operculum temporal*.

postoral (pōst-ō'rāl) ["" + *os*, or-, mouth]. Behind or in the posterior part of the mouth.

postpallium (pōst-pāl'ū-ūm) [L. *post*, after, + *pallium*, cloak]. That part of the cerebral cortex behind the fissure of Rolando

postpaludal (post-pal'ū-dāl) ["" + *palus*, palud-, swamp]. After a malarial attack

postparalytic (pōst-par-ā-lī'tik) ["" + *para*, beside, + *lyein*, to loosen]. Subsequent to an attack of paralysis

postpartum (pōst-par'tūm) [L. *post*, after, + *partus*, birth]. After parturition.

p. hemorrhage. Hemorrhage which occurs after childbirth

NP: If hemorrhage occurs, regardless of the use of safe and preventive measures, drastic ones for its control must be employed

Extra hypodermies of oxytocic drugs may be used. An icebag placed on fundus is used as early routine postpartum measure by some physicians. Massage of uterus with a piece of ice on the abdomen is frequently used when bleeding persists. Packing the lower segment of uterus and vagina is an excellent method of controlling hemorrhage. The large tubular packer is preferred here to a dressing forceps to avoid contamination of the packing by contact with the vulva and vaginal tract. Packing the vagina may be done by the nurse, if absolutely necessary, when a physician is not available. A hot intrauterine douche may be used by the doctor in place of the pack-

ing. The temperature of the solution should always be 120° F. This is sufficiently hot to stimulate the uterus to contract. Cooler douches simply wash out the clots, causing more bleeding, and fail to stimulate contractions.

If the above procedures fail to halt the hemorrhage, the physician may insert 1 hand into the fundus and at the same time massage the uterus with the other hand on the abdomen. A sterile pair of long gloves should be ready in this case. Keep the patient warm during this time. Elevate the lower extremities as soon as possible. Oxytocic drugs may be ordered intravenously by some physicians. Note the pulse and general condition frequently. Stimulants are given as necessary.

Blood transfusions are generally given to maintain and increase the patient's resistance. Massage the uterus. The fingertips may be kept lightly on the fundus to discover any relaxation. Give massage only when relaxation occurs. Hypodermoclysis and intravenous injections are used if patient is unable to take and retain fluids. Force fluids as soon as patient's condition warrants, but do not take a chance on making the patient vomit, as retching may start another hemorrhage

When tolerated, the patient may be given a limited number of mouth preparations of ergot, preferably the ones that are not nauseating. These keep the uterus contracted and lessen the chance of infection to which the patient has been predisposed by the loss of blood, lowered resistance, and much manipulation. Perfect asepsis must be maintained at all times. Remember that since this patient is predisposed to sepsis, her general resistance must be built up and maintained by plenty of fluids, nourishing foods and, above all, rest

postpontile (pōst-pōnt'il) [L. *post*, after, + *pons*, pont-, bridge]. Situated behind the pons varoli

postprandial. Following a meal

postpubescent. Following puberty

postpyramidal (post-pī-rām'id-āl). Behind a pyramidal tract

p. nucleus. Mass of gray matter in post column of the medulla. SYN: *nucleus funicularis gracilis*.

postulate (pōst'ū-lāt) A supposition or view, usually self-evident, which is assumed without proof. SEE: *Koch's law of postulates*

postural (pōst'ūr-āl) [L. *postura*, position]. Pert to or effected by posture.

p. drainage. Drainage of secretions from the bronchi or a cavity in the lung by placing the patient's head lower than the area to be drained.

Used in bronchiectasis and before operation for lobectomy. The position aggravates coughing, resulting in expectoration of much sputum, 5-10 oz. in bad cases. 5-10 minutes morning and evening is recommended. High protein diet to replace protein lost.

posture (pōst'ūr) [L. *postura*, position]. Attitude or position of the body.

p., colled. Body on 1 side with legs drawn up to meet the trunk. Noted in cerebral diseases, hepatic, intestinal or renal colic.

p., dorsal inertia. Patient on back, with tendency to slip down in bed or to either side. Seen in great weakness, in acute infectious diseases such as typhoid, in mental apathy or muscular weakness.

p., dorsal, rigid. P. on back with both legs drawn up. Seen in peritonitis, meningitis, ascites, tympanites. In appendicitis the right leg is drawn up. Also occurs in pelvic inflammation or peritonitis of right side, renal calculus in right ureter, and in psosas abscess.

p., emprosthotonos. The body is incurved and rests upon the forehead and feet with face downward. It is rarely seen in tetanus and strychnia poisoning.

p., opisthotonos. An uncommon dorsal position in which the body rests upon the head and heels, with the trunk arched upward. It is seen in strychnia poisoning, tetanus, hysteria, epilepsy, the convulsions of rabies, and to a slight extent in meningitis. In the latter case, the neck is rigid and the head retracted, seeming to press into the pillow. SEE: *opisthotonos*.

UNILATERAL POSTURE FOR COMFORT.

p., orthopnea. Patient sitting upright, hands or elbows resting upon some support. Seen in spasmodic asthma, emphysema, dyspnea, abdominal dropsy, effusions into the pleural and pericardial cavities, and in late stages of diseases of the heart.

p., orthotonos. Neck and trunk extended rigidly in straight line, in tetanus, strychnine poisoning, rabies or meningitis.

p., pleurothotonos. Lateral position with body arched in acute pleural involvement or spinal affection.

p., prone. Posture assumed after abdominal colic or because of tuberculosis of spine, eroded vertebrae, abdominal pain or gastric ulcer.

p., semireclining. Used in diseases of heart and interference with respiration in asthma and pleural effusions.

p., unilateral. Patient on right side in acute pleurisy, lobar pneumonia of right side and in a greatly enlarged liver, or left side in lobar pneumonia, or pleurisy on that side, and in large pericardial effusions.

postuterine (pōst-ū'tēr-in) [L. *post*, after, + *uterus*, womb]. Situated behind the uterus.

potable (pō'tā-bl) [L. *potabilis*, from *potare*, to drink]. Suitable for drinking.

Potain's apparatus (po-tan'). A form of aspirator.

P.'s disease. Pleural and pulmonary edema.

P.'s sign. Dullness on percussion of the aorta in dilatation, extending from the *manubrium sterni* toward the third

costal cartilage on the right, the base of the sternum in segment of a circle to the right marking the upper limit.

potamophobia (pōt'ām-ō-fō'bī-ā) [G. *potamos*, river, + *phobos*, fear]. A morbid fear of large bodies of water.

potash (pōt'āsh) Potassium carbonate, *q v*.

p., caustic. Potassium hydroxide, *q v*.

p., sulfurated. Potassa sulfurata, *q v*.

potassa sulfurata (pō-tās'a sul-fu-rā'ta). USP (Liver of sulfur) Greenish yellow pieces containing 12.8% sulfur in the combination as a sulfide. [diseases]

USFS Externally, in parasitic skin

Dosage For application in 5% solution.

INCOMPATIBILITIES. Acids, alcohol, acid salts.

potassemia (pō-tās-sē'mī-ā) [L. *potassa*, + G *aima*, blood]. Presence of excessive quantity of potassium in the blood.

potassic (pō-tas'ik) [L. *potassa*, potash]. Composed of or containing potash.

potassium (pō-tas'ī-ūm) [L. *potassa*, potash] SYMB K At. wt 39.100 Sp gr 0.87 Mineral element found in combination with other elements in the body and constituting 0.35% of body weight SYN *kaliūm*.

FUNCTIONS. Potassium is the principal cation in intracellular fluid and is of primary importance in its maintenance in conjunction with sodium and chloride, it aids in regulation of osmotic pressure and acid-base balance. A proper balance of potassium, calcium, and magnesium ions is essential for normal excitability of muscle tissue, esp cardiac muscle, and it plays a role in the conduction of nerve impulses.

DEFICIENCY: SYM. Disorders of the nervous system, loss of weight, poor digestion, irregular heart action, and poor muscular control.

SOURCES: Found in most foods. Excellent sources are cereals, dried peas and beans, fresh vegetables, fresh or dried fruits, nuts, molasses, cocoa, fresh fish, and fresh poultry.

p. acetate. USP. A white powder or crystalline flakes. CH₃COOK.

ACTION AND USES: Alkaline diuretic.

DOSAGE: 15 gr. (1 Gm.).

p. bicarbonate. USP. White crystals or powder KHCO₃.

ACTION AND USES. To neutralize acid of stomach and lessen acidity of urine.

DOSAGE: 15 gr. (1 Gm.). SEE: *p. chromate*.

p. bitartrate. USP. Cream of tartar. White powder or crystalline salt. KHC₄H₄O₆.

ACTION AND USES: Diuretic, cathartic and refrigerant.

DOSAGE: As a diuretic, 1-3 Gm.; as a cathartic, 8-23 Gm.

p. bromide. USP. White cubical crystals of powder.

ACTION AND USES: Nerve sedative.

DOSAGE: 15 gr. (1 Gm.).

p. carbonate. SYN: *potash*. K_2CO_3 , a white crystalline powder used in pharmaceutical and chemical preparations.

p. chlorate. $KClO_3$, an explosive white crystalline salt soluble in water. Formerly used internally in treatment of pharyngitis and stomatitis but its use has been discontinued because of destructive effect on red blood cells. Its use now is limited to mouthwashes and gargles.

POISONING: SYM: Large doses cause abdominal discomfort, vomiting, diarrhea, hematuria with nephritis and disturbances of the blood.

F. A. TREATMENT: Stomach should be washed out. Otherwise treatment must be symptomatic.

p. chloride. KCl , a white crystalline salt, soluble in water. One of the three chlorides used in preparation of Ringer's solution. Used in treatment of potassium deficiencies.

DOSAGE: 30-90 gr daily

p. chromate. Used as dye, furniture stain, in manufacture of batteries, in photography and in medicine for cauterization.

SYM: May be inhaled or contact the nose from fingers, causing deep, indolent ulcers. When taken by mouth has a disagreeable taste, causes cramping, pain, vomiting, diarrhea, slow respiration; may affect liver and kidneys.

F. A. TREATMENT: Treat as an acid, dilute and give weak alkalies as chalk, baking soda, magnesia, etc., followed by soothing mucilaginous drinks. Treat symptomatically.

p. citrate. USP. Transparent prismatic crystals. [sodium acetate.

ACTION AND USES: Similar to potassium acetate.

DOSAGE: 15 gr. (1 Gm.) benzoate.

INCOMPATIBILITIES: Caffeine sodium

p. cyanide. SEE: cyanide.

p. hydroxide. SYN: *caustic potash*. KOH . Grayish-white compound used in various shops, and in preparation of soap.

POISONING: SYM: Nausea; soapy taste; burning pain in mouth which causes bloody, slimy vomitus, abdominal cramping; bloody purging and prostration.

TREATMENT: Dilute with weak, acidulated water such as vinegar, lemon juice, orange juice, grape juice. Household oils likewise reduce the free alkali, but more slowly. Follow with olive oil, sweet melted butter or lard.

p. iodide. USP. Colorless or white crystals having a faint odor of iodine.

ACTION AND USES: To increase bronchial secretions; to treat certain metallic poisons; to make strong iodine solution.

DOSAGE: 5 gr. (0.3 Gm.).

p. permanganate. USP. Dark purple prisms, odorless, with sweet taste.

ACTION AND USES: Deodorant, germicide and astringent. Internally, an anti-

dote in phosphorous poisoning and snake bite. Used for disinfectant and deodorant action as an application in gangrenous ulcers, cancerous sores, diphtheria and gonorrhea. In diluted solutions it may be used as a gargle or mouthwash (1/4%), to disinfect the hands (1%), and for other purposes.

Concentrated solutions irritate and even corrode the skin, and when swallowed induce gastroenteritis. The solutions have considerable power as disinfectants, owing to their oxidizing power which destroys bacteria. They fail to penetrate deeply in an active form and this renders them of less value than many other disinfectants, except for use in very superficial infections.

DOSAGE: 1 gr. (0.06 Gm.).

p. sulfate. USP. A laxative and a purgative, but because of its irritant qualities not to be recommended.

DOSAGE: 15 gr. (1 Gm.).

potato (pō-tā'tō). COMP: Deficient in protein and fat, also in salt (sodium chloride) and water is in excess. This lowers the nutritive value. Young potatoes contain more juice and protein and less starch. They should be supplemented with milk, butter and eggs, and always used with salt. Potash and soda make them higher in alkalinity than fresh vegetables.

They contain 0.003 purine. Nitrogen is low, half of it being in the form of glutaric acid (asparagin, leucine, tyrosine). The ash has only a small amount of phosphoric acid and magnesium and a still smaller amount of lime, but it contains as much as 60% of potassium. This makes the use of salt with potatoes necessary, as potassium splits the sodium chloride (common salt) in the blood and forms a chloride of potassium, which, if in excess, is eliminated through the urine, and this loss of sodium chloride must be made up by the use of salt.

The potassium in the potato is in part combined with organic acids and partly with phosphoric acid, making the ash strongly alkaline. The carbohydrates are the only nutritive elements the potato has. Heat changes its starch to sugar and in sprouting potatoes this change is absolute. Cold, if long continued, reverses this process. They are antiscorbutic.

The sprouting potato contains *solanin*, from 0.04 to 0.60 Gm. per kilogram and should never be used, as this is a dangerous poison. If used, cut out the sprouts and their roots.

NUTRIENTS (white): AV. SERVING: 100 Gm. PRO 2.2, FAT 0.1, CARBO. 18.

NUTRIENTS (sweet): AV. SERVING: 150 Gm. PRO 2.7, FAT 1.1, CARBO. 39.2.

VITAMINS (white): A+, B+, C+, G+ +. (Sweet): A+ + to + + +, B+ +, C+ +.

ASH CONST. (white and sweet): Ca 0.014-0.018, Mg 0.028, K 0.429-0.347, Na 0.021-0.039, P 0.058-0.045, Cl 0.038-0.094, S 0.030-0.024, Fe 0.00013-0.0005.

A base-forming food; alkaline potentiality 7 cc. units per 100 Gm.. 8.6 cc. per 100 cal.

ACTION: The intestinal absorption is imperfect which lessens the food value. The method of cooking changes the nutritive value and ease of digestion.

COOKING: *Boiled:* The weight is not appreciably diminished by boiling, but part of the essential salts is lost. By adding common salt, or by boiling with the jackets on, much of this loss is compensated. *Steaming* also helps. *Baked:* Baked, they lose $\frac{1}{4}$ of their weight of water. The addition of milk and butter and salt adds to their nutritive value. Esp. good for dyspeptics. *Fried:* The addition of fat and the elimination of water doubles their food value, but this process adds to their difficulty of digestion. This also applies to potato salad. Following is the order of ease in digestion:

EASE OF DIGESTION: **PROTEIN.** 23% is lost in digestion. **STARCH** 5% is lost in digestion. 1st. Mealy potatoes. 2nd. Mashed potatoes. 3rd. Unmashed potatoes. 4th. Waxy potatoes. **Stomach:** Potatoes are said to be the easiest of all vegetables on the stomach. The cellulose is tender and small, and the starch is fine. **Intestines:** The cellulose stimulates peristalsis. Putrefaction is not frequent. They improve the tone of the entire digestive system and their alkalinity aids oxidation and the combustion of waste material.

CONTRA: Avoid in obesity. Soggy potatoes and fried potatoes cause indigestion.

potency (pō'tēn-sī) [L. *potentia*, power]. 1. Strength of a medicine. 2. Ability of male to perform coitus. 3. Strength; force, power.

potent (pō'tēnt) [L. *potens*, potent-, powerful]. 1. Powerful. 2. Highly effective medicinally. 3. Having power of procreation.

potentia coeundi (pō-tēn'shī-ā kō-ē-ūn'dē). Complete ability to perform sexual intercourse in a normal manner.

potential (pō-tēn'shāl) [L. *potentia*, power]. 1. Latent, existing in possibility. 2. In *elect.* Voltage or electrical pressure; a condition in which a state of tension or pressure exists capable of doing work. When two electrically charged bodies of different potentials are brought together, an electric current passes from the body of high potential to that of low.

p. action. **ABBR.** A.P. The electrical changes which are associated with conduction of a nerve impulse or contraction of a muscle. They may be visualized by use of a cathode-ray oscillograph.

p., after. P's which follow the spike, some of which are negative, some positive.

p., demarcation. **SYN:** *injury potential*. The difference in potential which exists between an intact longitudinal surface and the injured end of a muscle or nerve.

p., injury. **SEE:** *p., demarcation*. **p., spike.** A change in potential indicated by a sharp spikelike curve indicating a negative deflection.

potentiate (pō-tēn-shī-āt). To augment or increase the potency of.

po'tentia'tion. **SYN:** *augmentation*. The synergistic action of two substances, e.g., hormones, in which the total effects are greater than the sum of the independent effects of the two substances.

potion (pō'shūn) [L. *potiō*, draft]. A drink or draught; a dose of poison or liquid medicine.

potocytosis (pō'tō-sī-tō'sis). The submicroscopic imbibing or taking up of water by cells in contrast to *pinocytosis*, *q. v.*

potomania (pō-tō-mā'nī-ā) [G. *potos*, a drinking, + *mania*, madness]. Delirium tremens, *q. v.*

Pott's disease (pōts). Caries or osteitis of the vertebrae, usually of tuberculous origin, tubercular inflammation of bodies of the vertebrae.

The disease is primarily a disease of children and of adults up to age 40. Destruction and compression of affected vertebrae often results in kyphosis with resulting compression of spinal cord and nerves. Often infection spreads to paravertebral tissues giving rise to paravertebral abscesses.

SYM: Child will complain of pain in region supplied by the nerves arising from affected segment of the cord. If disease is lumbar, pains are abdominal and apt to be associated with vesical irritability, if dorsal, pains are epigastric or intercostal, and respiration sometimes irregular and hurried from failure of respiratory muscles to take the full share in the work, if cervical, neuralgic pain or numbness in hands, a tickling cough and difficult deglutition. Pains apt to be symmetrical.

Increase of pain on jumping or flexing or rotating spine is extremely significant. If child can jump painlessly from chair to floor it is almost certain no inflammation of the body of a vertebra exists. If vertebra be crowded together by pressure on head or shoulders, while patient sits or stands, or while he lies face downward across knees of surgeon, pain much increased.

If stretched, so spine is elongated, relief follows. Involuntary immobilization of spine, as a result of pain on movement, is very characteristic military attitude. If child is asked to look at something behind him he turns whole trunk. If requested to pick up something from floor, he stoops by bending the thighs upon the trunk and knees upon thighs; never by flexing spinal column in usual way.

In walking moves as if on ice, sliding or shuffling along so as to avoid jar of successive steps. In standing he fixes upper portion of column by aid of trapezius and other scapular muscles, action of which at same time raises shoulders and throws arms out from sides. In standing or sitting there is an involuntary transfer of the weight of head and shoulders and parts above diseased area to the pelvis, by means of the upper extremities. Hands placed upon the hips and arm muscles are tense. In walking about room lays hold of furniture for aid. Spinal abscess occurs later, position varies with seat of caries. Paralysis may occur, always motor at first, not affecting sensation at all.

TREATMENT: 1. Endeavor to secure resolution of the tuberculous osteitis. 2. Limit destruction of tissue and resulting deformity. 3. Promote ankylosis. 4. Evacuate pus. 5. Remove a sequestrum or the focus of carious bone. 6. Relieve

cord from pressure by pus, bone, or most commonly, by products of an ext. pachymeningitis. Rest in bed in recumbent position. Gentle massage, friction, alcohol baths. Cod-liver oil inunctions. Food nutritious and abundant. Extension—plaster or other jackets—jury masts, etc. Tuberculosis in any part must be dealt with accordingly. Good nourishing food, fresh air, sunshine, and constitutional remedies plus surgical aid, when feasible. Chemotherapy as for pulmonary tuberculosis *q v*.

SEE: *gibbosity, kyphosis*

P.'s fracture. Fracture of lower end of fibula and medial malleolus of the tibia with dislocation of foot outwards and backwards.

After reduction, foot and leg are put in plaster in which a walking iron is incorporated. The patient is able to walk, and plaster is removed in about 6 weeks.

pouch (powch) [Fr. *poché*, pocket]. Any pocket or sac. SYN *sacculation*.

p., branchial. SEE *p. pharyngeal*

p., Broca's. A sac in tissues of the labia majora.

p. of Douglas. Rectouterine *p. q v*

p., laryngeal. Blind pouch of mucosa entering the ventral portion of the ventricle of the larynx.

p., Pavlov. A stomach pouch formed surgically for the experimental study of gastric secretion. A section of the stomach is separated from the main stomach left or attached by only a small pedicle, and fistulized so as to drain to exterior of body.

p., pharyngeal. One of a series of five pairs of entodermal outpocketings, which develop in lateral walls of pharynx of embryo.

p., Rathke's. An outpocketing of the roof of embryonic stomodeum. Gives rise to ant. lobe of hypophysis cerebri.

p., rectouterine. Pouch bet. ant. rectal wall and post. uterine wall. SYN *Douglas' cul-de-sac*

p., rectovesical. A fold of peritoneum which in the male extends downward between bladder and rectum.

poultice (pōl'tis) [L *puls*, *pult*—porridge]

A hot, moist mass of linseed, bread, mustard, or soap and oil bet. 2 pieces of muslin applied to the skin to relieve congestion or pain, to stimulate absorption of inflammatory products, and to hasten suppuration. SYN *cataplasma*. SEE *plaster, snapism*.

p., bread. The crumb of bread is moistened by pouring boiling water over it; the water is then pressed out, and the bread mash spread between old linen and applied.

p., charcoal. Used for foul septic wounds. It can either be made in the same way as a mustard poultice in the proportion of 1 to 3, or an ordinary linseed poultice can be made and the charcoal powdered over the top; the former method is the more usual.

p., flaxseed. AIM: To apply moist heat for the relief of congestion and the promotion of suppuration.

ARTICLES NECESSARY Tray. Old muslin twice the size the finished plaster is to be. Flaxseed meal. Tablespoon, teaspoon. Saucepan, 1 to 2 qt. size. Boiling water. Sodium bicarbonate. Vaseline, or mineral oil in medicine glass. Applicators. Oiled muslin a little larger than the finished plaster. Bandage or binder if needed. Towel. Emesis basin or paper bag.

PROCEDURE 1. Assemble equipment. 2. Put water in saucepan and bring to rapid boil. 3. Spread muslin on tray. 4. Sprinkle flaxseed meal into boiling water, stirring constantly until it is about the consistency of "breakfast cereal," or until it will drop off the spoon in lumps. 5. Take from fire and beat well. 6. Add $\frac{1}{2}$ to 1 teaspoonful of sodium bicarbonate, stir in well but do not beat hard. 7. Spread on one-half the muslin, leaving a 2 in. margin around plaster. 8. Turn edges of muslin up and fold other half over. 9. Lay on tray, cover with towel, add oiled muslin, oil and swabs, and carry to bedside. 10. Cover area to be poulticed (unless poultice is to be put over dressings) with oil or Vaseline. Apply poultice, raising it frequently to accustom the patient's skin to the heat. 11. When patient can bear heat without discomfort, cover poultice with oiled muslin and then with towel. Fasten with bandage or binder if needed. 12. Change poultices each $\frac{1}{2}$ hour or as ordered. Do not let them get cold. 13. Make fresh poultice each time. The old one cannot be reheated. 14. Renew oil as necessary. 15. When treatment is completed wipe excess oil from skin and cover area with old flannel or a towel.

p., jacket. One made both for the chest and back; used in acute lobar pneumonia.

p., linseed. Have everything heated before commencing. Pour 1 teacupful of boiling water into hot bowl and add heated linseed (about 3 cupfuls) handful by handful, stirring all the time. Should be a stiff paste which does not stick to the sides of the bowl.

On the flannel spread the paste $\frac{1}{4}$ to $\frac{1}{2}$ in thick with the hot moist spatula, fold over the edges of the flannel. The poultice is then rolled on itself, carried bet. 2 hot plates to the bedside. Apply to the part, cover with wool and bandage. The fresh poultice is rolled on as the old one is removed. The skin must not be exposed.

p., mustard. Dry mustard is added to the dry linseed in proportions of 1 to 8 for adults, but 1 to 12 to 1 to 16 for children, the poultice is then made as for an ordinary linseed poultice.

Mustard acts as a counterirritant and produces erythema. Skin should be examined every 5 min. and plaster removed when a definite pinkness appears, usually within 10-20 min. Blistering will result if left on too long.

p., starch. Used in eczema and other skin affections.

A thick paste of 3in of starch is made, to which is added 1 dram of boracic acid to water, 1 pint, the mixture is boiled to burst the starch granules, and is then spread on old linen and applied to the part; it is renewed 4-hourly.

pound (pownd) [L *pondus*, a weight, pound]. SYMS. lb A measure of weight, commonly 12 or 16 ounces.

p., avoirdupois. Sixteen ounces, 7000 grains. [pound 1 foot high.]

p., foot-. Power necessary to raise 1

p., troy. Twelve ounces, 5760 grains.

Poupart's ligament (pōō-parz'). The ligament which is the lower border of aponeurosis of external oblique muscle bet. ant. sup. spine of the ilium and spine of the pubis. SYN: *inguinal ligament*.

powder (pow'der) [Fr. *poudre*, powder].

1. Aggregation of particles. 2. Fine par-

ticles of 1 or more substances that may be passed through fine meshes. 3. A dose of such a powder, contained in a paper.

power (pow'cr) [M.E. *power*, from L. *posse*, to be able]. 1. PT. Rate at which work is done. 2. Capacity for action. 3. In optics, the degree to which a lens or optical instrument magnifies. 4. In microscopy, the number of times the diameter of an object is magnified, indicated by placing an X after the number. Ex. 10x.

pox (pöks) [M.E. *pokkes*, pits]. 1. An eruptive, contagious disease. 2. A papular eruption that becomes pustular. SEE *chickenpox*, *smallpox*, etc.

P.P. Abbr. for *punctum proximum*, near point of vision.

P. P. D. Abbr. *purified protein derivative*, substance used in intradermal test for tuberculosis.

P. P. F. Abbr. meaning the *pellagra preventive factor* in vitamin B.

PFLO. Pleuro-pneumonia-like microorganisms found in the throat, saliva, sputum, bladder and urine, growing in masses. They may be an underlying cause of some infectious diseases.

Ppt. Abbr. for *precipitate*.

Pr. Abbr. for *presbyopia*.

P. r. [L.] Abbr. of *punctum remotum* meaning far point.

practice (prák'tis) [G. *praktikē*, business]. Phase of medicine dealing with professional diagnosis and treatment of disease.

practitioner (prák-tish'un-ēr) [G. *praktikē*, business]. One who practices the profession of medicine.

prae-. For words beginning thus, see *pre-*.
pragmatagnosia (prág'mát-ág-nó-zí-ä) [G. *pragma*, object, + *agnōsia*, lack of recognition]. Inability to recognize objects once familiar.

pragmatamnesia (prág'mát-äm-nē-zí-ä) ["" + *amnesia*, forgetfulness]. Inability to recall the appearance of an object.

p., visual. Name for the mental condition making possible pragmatamnesia.

pragmatic (prág-mát'ik) [G. *pragma*, a thing done]. Pert. to, or concerned with, the practical side of anything.

pragmatism (prág'mā-tizm) ["" + *ismos*, condition]. A belief that the practical application of a principle should be the determining factor.

pragmatist (prág'mā-tist) [G. *pragma*, a thing done]. One who believes that practical application should be the determining factor of a principle.

praxinoscope (prák-sín'ō-skóp) [G. *praxis*, action, + *skopein*, to examine]. Contrivance for studying the larynx.

pre- [L.]. Prefix meaning *before*, or in front of.

preagonal (prē-äg'ō-nāl) [L. *prae*, before, + G. *agōnia*, agony]. Pert. to condition immediately before death agony.

prealbuminuric (prē-äl-bū'mín-ūr'ik) ["" + *albumen*, white of egg]. Before the appearance of albuminuria.

preanal (prē-ā'nāl) ["" + *anus*, anus]. In front of the anus.

preanesthetic (prē-än-ēs-thēt'ik) ["" + G. *anesthesia*, lack of sensation]. Preliminary drug given to facilitate induction of general anesthesia.

preantiseptic (prē-än'ti-sēp'tik) ["" + G. *anti*, against, + *sepsis*, decay]. Before the adoption of antiseptics in surgery.

preaortic (prē-ä-or'tik) ["" + G. *aortē*, aorta]. Located in front of the aorta.

preataxic (prē-ät-āk'sik) ["" + G. *ataxia*, disorder]. Before the onset of ataxia.

preaxial (prē-āk'si-äl) ["" + G. *axōn*, axis]. In front of the axis of a limb or of the body.

precancerous (prē-kan'sēr-ūs) ["" + *cancer*, crab]. Taking place before the development of a carcinoma.

precapillary. An arterial capillary, one which branches from an arteriole or metarteriole.

precava (prē-kā'vā) ["" + *cavus*, hollow]. The descending or superior vena cava.

precentral (prē-sén'trāl) ["" + G. *kentron*, center]. In front of a center, as the central fissure of the brain.

p. convulsion. The ascending frontal convulsion.

prechordal (prē-kor'dāl) ["" + G. *chordē*, cord]. In front of the notochord.

precipitant (prē-sip'ti-ánt) [L. *precipitare*, to cast down]. A substance bringing about precipitation.

precipitate (prē-sip'ti-ät) 1. A deposit separated from a suspension or solution by precipitation, the reaction of a reagent, which causes the deposit to fall to the bottom or float near the top. 2. To separate as a precipitate. 3. Hasty.

precipitation (prē-sip'ti-tā'shün) Process of a substance being separated from a solution by action of a reagent.

p. test. One in which positive reaction is indicated by formation of a precipitate in the solution being tested.

precipitin (prē-sip'ti-tin). An antibody formed in the blood serum of an animal due to presence of a soluble antigen usually a protein. When added to a solution of the antigen, it brings about precipitation.

The injected protein is called the *antigen** and the antibody produced is the *precipitin*. SEE *autoprecipitin*, *precipitinogen*.

p. reaction. The formation of a precipitate in a solution containing a soluble antigen upon addition of serum containing the specific precipitin. The reaction is very specific, the test being used for identification of unknown proteins, determining types of pneumococci, meningococci, determination of types of blood stains, whether human or animal, and for diagnosis of plague, anthrax, and echinococcus disease, also called *precipitin test*.

precipitinogen (prē-sip'ti-tin'ō-jén) ["" + G. *gennan*, to produce]. Any protein which, acting as an antigen, stimulates the production of a specific precipitin.

precipitoid (prē-sip'ti-tin-oyd) [L. *precipitare*, to cast down, + G. *eidōs*, form]. Precipitin which can no longer cause precipitation due to subjection to heat.

precipitophore (prē-sip'ti-tō-för) ["" + G. *phoros*, a bearer]. Group in a precipitin which produces precipitation. OPP *haptophore precipitin*.

preclinical (prē-klín'i-kāl) [L. *prae*, before, + G. *klinikos*, pert. to a bed]. Before the development or onset of disease.

p. medicine. 1. Medical procedures designed for preventing the development of or postponing the onset of disease or pathologic conditions. 2. Medical training engaged in before the study of patients, usually constituting the first two years of medical study.

preclival (prē-kliv'vāl) ["" + *clivus*, slope]. In front of the cerebellar clivus.

precoital (prē-kō'ti-äl) ["" + *coitō*, a go-

ing together]. Prior to sexual intercourse.

preconscious (prē-kōn'shūs) [+ *conscious*, aware]. Not present in consciousness but able to be recalled as desired.

preconvulsive (prē-kōn-vul'siv) [+ *convulsio*, a pulling together]. Before a convulsion.

precordia (prē-kor'di-ā) [L. *prae*, before, + *cor*, cord-, heart]. Syn. *precordium*. The region of the thorax overlying the heart.

precordial (prē-kor'di-āl) [L. *prae*, before, + *cor*, cord-, heart]. Pert. to the precordia or epigastrium.

precordialgia (prē'kor-di-āl'ji-ā) [+ + *G algos*, pain]. Pain in the chest or precordial area.

precordium (prē-kor'di-ūm) [+ + *cor*, cord-, heart]. A rectangular space over the heart, its blood vessels and the pericardium.

Its sup border is at the level of the 3rd sternocostal articulation; its inf border is at level of ant ends of 5th ribs; its right border is the right parasternal line; its left border is the left midclavicular line. It includes the thoracic organs in front of the heart. Syn: *precordia*.

precornu (prē-kor'nū) [+ + *cornu*, horn]. Anterior horn of lateral ventricle of the brain.

precuneus (prē-kū'nē-ūs) [+ + *cuneus*, wedge]. The division of the mesial surface of a cerebral hemisphere bet the cuneus and the paracentral lobule.

prediastolic (prē-di-ās-tōl'ik) [+ + *G diastolē*, a sending apart]. Before the diastole, or interval in the cardiac cycle that precedes it.

predicrotic (prē-di-krōt'ik) [+ + *G dikrotois*, beating double]. Preceding the diicrotic wave of the sphygmographic tracing.

predigestion (prē-di-jēs'chūn) [L. *prae*, before, + *digestio*, a carrying apart]. Artificial proteolysis or digestion of proteins and amylolysis of starches before ingestion for use in illness.

predisposing (prē-dis-pōz'ing) [+ + *disponere*, to dispose]. Conferring a tendency to or susceptibility to disease.

predisposition (prē'dis-pō-zī'shūn) [+ + *disponere*, to dispose]. A tendency to develop a certain disease, either acquired or hereditary, such as nervous disorders.

p., acquired. P. to disease not due to innate or inherited factors, such as that resulting from malnutrition, excessive fatigue, etc.

pre-eclampsia (prē'ēk-lāmp'si-ā) [+ + *G ek*, out, + *lampen*, to flash]. A toxemia of pregnancy characterized by hypertension which increases, headaches, albuminuria, and edema of the lower extremities.

If this condition is neglected or not treated properly, the patient may develop true eclampsia. See *eclampsia*.

predormition (prē-dōrm-i'shūn) State of unconsciousness immediately preceding actual sleep.

prefrontal (prē-fron'tāl) [+ + *frons*, front-, front]. 1. The middle portion of the ethmoid bone. 2. In ant. part of the frontal lobe of the brain.

p. leukotomy. P. lobotomy, *q v*.

p. lobotomy. See: *lobotomy*.

preganglionic (prē'gāng-li-ōn'ik) Situated in front of or anterior to a ganglion.

p. fiber. The axon of a preganglionic neuron.

p. neuron. The first of a series of two efferent neurons which transmit impulses to visceral effectors. Its cell body lies in the central nervous system, its axon terminates in an autonomic ganglion.

pregenital (prē-jēn'ti-āl) [L. *prae*, before, + *genitalia*, genitals]. Psy: Relating to that period when erotic interest is not yet organized about the reproductive organs and functions.

preglobulin (prē-glōb'ū-lin) [+ + *globulus*, a small sphere]. A proteid in cell protoplasm derived from cytoglobulin.

pregnancy (prēg'nān-si) [L. *prae*gnans, with child]. The condition of being with child.

Sym: Amenorrhea, nausea and vomiting, inordinate appetite, pigmentation of the areola of the breasts, the development of Montgomery's tubercles around the nipple, changes in the uterus (softening and progressive enlargement), vaginal discoloration and frequent urination.

The positive signs are: Aschheim-Zondek test positive, hearing of the fetal heart tones, and finding of the fetus on x-ray. The term of pregnancy is 280 days. See *Table*, p. P-98.

PHYSICAL CHANGES DURING: *The Uterus* (a) Changes shape, size and consistency. (b) Lining undergoes changes. (c) Peritoneal covering enlarges. (d) Muscles increase enormously. (e) Blood vessels penetrate through uterine muscle. (f) Cervix, vagina, and vulva become softer.

The Vaginal Canal. (a) Elongation caused by rising of uterus in pelvis. (b) Mucosa thickens. (c) Secretion increased. (d) Increased vascularity, and more elastic.

Abdominal Changes (a) Growing distention and flattened navel. (b) Striae gravidarum.

The Breasts (a) Enlarged and painful. (b) Skin thin and sensitive. (c) Nipples erectile and enlarged, and darker. (d) Escape of colostrum. (e) Primary and secondary areola. (f) Tingling sensation.

Endocrine Glands: (a) Thyroid increases in size and activity. (b) Parathyroids enlarge, secretion increases. (c) Pituitary increases its activity. One of its hormones contracts blood vessels. One contracts uterus. Some affect follicles and corpus luteum. (d) Placenta gives forth hormones, affecting ovaries and corpus luteum.

Circulatory System: (a) Increased activity. (b) Increased blood supply, with increased white corpuscles. (c) Blood pressure should be normal. (d) Varicose veins common.

Skeletal Changes: (a) Pelvic joints soften. (b) Pelvic joints more movable. (c) Bones and teeth affected.

Respiratory Changes: (a) Lungs impeded in late pregnancy. (b) Breathing deeper and more frequent.

Digestive Tract: (a) Nausea and vomiting in early pregnancy. (b) Appetite affected. (c) Loss of weight in early pregnancy with slight anemia. (d) Basal metabolism raised in later pregnancy. (e) Constipation frequent.

The Liver. Enlarged and displaced in late pregnancy.

Skin: (a) Sudoriparous and sebaceous glands very active. (b) Deposit of brown pigment (mask of pregnancy). (c) Linea nigra.

The Weight: (a) Loss during first months. (b) Increased later.

Posture: (a) Changes, as enlargement of abdomen advances. (b) Sacroiliac joints and symphysis pubis more movable. (c) Painful locomotion and backache; waddling gait.

The Urinary Tract: (a) Increased kidney activity. (b) Failure of kidneys produces nephritic toxemia. (c) Ureters, especially right one, dilated. (d) Pressure on bladder with increased circulation. (e) Frequent urination. (f) Bladder lifted into abdomen and pressure diminished. (g) Bladder later pressed upon by presenting part. (h) Urinary output varies. (i) Presence of albumen abnormal. (j) Sugar found in later part of pregnancy. May be diabetes or glycosuria. (k) No blood sugar change.

Disorders of Nausea and Vomiting: (a) May be marked when stomach is empty. (b) May occur at any time. (c) Food may help on arising. (d) Four or five small meals per day. (e) Psychic causes may be responsible.

Constipation and Flatulence: (a) Pressure of uterus on intestines may be a cause. (b) Laxative diet and exercise may aid. (c) Intestinal stasis may cause flatulence. (d) Gas-forming foods should be avoided.

Muscular Cramps: (a) Retention of waste products a cause. (b) Poor circulation may cause. (a). (c) Pressure on foot, extension of leg helps. (d) Rest between periods of standing needed. (e) Tetany may ensue because of deficient calcium supply. (f) Calcium and vitamin D indicated.

Pressure Edema: (a) May occur during last weeks. (b) Better in morning, worse at night. (c) Frequent rest and elevation of limbs indicated. (d) May be due to calcium deficiency. (e) Toxemia must be ruled out by frequent blood pressure and urinalysis.

Headache: (a) Intestinal intoxication and constipation causes. (b) Eyestrain may be suspected. (c) Temporary hypertrophy of pituitary common. (d) Sinusitis most common cause. (e) May be due to toxemia. (f) Blood pressure and urinalysis checked.

Neuralgic Pains: (a) Pressure of fetal head upon sciatic nerve suspected. (b) Rest periods and abdominal support indicated. (c) Knee-chest position after retiring.

Toothache: (a) May be due to caries induced by deficient calcium. (b) Acid condition of gums may be a cause. (c) Magnesia as a mouthwash indicated in (b). (d) Frequent dental examinations desirable.

Backache: (a) Abnormal balance caused by protruding abdomen. (b) Proper shoes indicated for (a). (c) Intra-abdominal pressure may be a cause. (d) Flatulence aggravates (c); enemas may help it. (e) Knee-chest position at night may help. (f) Gastric hyperacidity may induce high backaches. (g) Alkalies may temporarily help (f).

Dyspnea: (a) Pressure of uterus upward on transverse colon and stomach. (b) Aggravated by flatulence, especially when lying down. (c) Alkalies may help. (d) Pillows under head and shoulder indicated. (e) Reexamination of heart indicated.

Vaginal Discharge: (a) Increased blood supply to glands of cervix. (b) Cleanliness but no douches indicated.

(c) Foul or blood-tinged or profuse discharge should be reported.

Pruritus or Itching: (a) Breasts, abdomen, and vulva may be affected. (b) Stretching of skin of abdomen a cause in that area. (c) If general, a toxic or nervous origin may be cause. (d) Acid-forming organism may cause vulvar itching. (e) Alkaline solutions, bland ointment, talcum for (e). (f) Sugar in urine may cause pruritus of vulva.

Heartburn: (a) Hyperacidity may be responsible, due to oversecretion of hydrochloric acid; also nervous tension. (b) Sedation, frequent small meals, no highly seasoned foods. (c) Organic acids from fermentative changes may be responsible. (d) Alkalies must not be taken too close to a meal. (e) Discomfort may be felt in the back. (f) Hydrochloric acid administered by the doctor.

Salivation: (a) May be associated with extreme nausea and vomiting. (b) Usually an expression of neurosis. (c) Mild astringents may be employed. (d) If due to a toxemia, refer to the physician.

Varicose Veins: (a) Congenitally acquired, aggravated by pregnancy. (b) May occur in pelvis, vulva, and legs marked on right side. (c) Round garters, tight clothing, standing to be avoided. (d) Rest and supporting bandage indicated. (e) Elevation of lower limbs while sleeping. (f) Sims position, pillow under hips to shift uterus.

Hemorrhoids: (a) Avoid constipation. (b) Ointments, wet compresses, suppositories on doctor's orders. (c) Carbolized or mentholated petrolatum in absence of (b). (d) Incision by surgeon.

p., abdominal. Implantation of the ovum in the abdominal cavity.

p., ampullar. P in ampulla of uterine tube.

p., bigeminal. Pregnancy with twins in utero.

p., cervical. Implantation of the ovum in the cervical canal.

p., cornual. Pregnancy in 1 of the horns of a bicornuate uterus.

p., ectopic. SEE *p. extrauterine*.

p., extrauterine. Pregnancy outside the uterine cavity.

p., false. SEE: *p. phantom*.

p., heterotropic. Combined intra-uterine and extrauterine pregnancies.

p., hydatid. P giving rise to a hydatiform mole. SEE: *hydatid mole*.

p., interstitial. P occurring in the uterine wall which forms part of the oviduct.

p., intraligamentary. P occurring within the broad ligament.

p., intramural. *Interstitial p., q v*.

p., mask of. Area of brown pigmentation sometimes appearing on the face during pregnancy.

p., membranous. P in which amniotic sac ruptures and fetus comes to lie in direct contact with uterine wall.

p., mesenteric. *Tuboligamentary, p., q v*.

p., multiple. State of having more than 1 fetus in the uterus at the same time.

p., ovarian. Implantation of the fertilized ovum in the substance of the ovary.

p., phantom. Enlargement of the abdomen simulating pregnancy. SEE: *pseudocyesis*.

p., sarcofetal. P involving presence of a fetus and a mole.

p. table. SEE: Table for calculation.

PREGNANCY TABLE

Find the date of the first day of the last menstrual period in the top line and the date below this will be the expected day of delivery.

	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31

of expected date of delivery from the first day of the last menstrual period.

p., tuboabdominal. P. in which part of fetus is in uterine tube and part in abdominal cavity.

p., tuboligamentary. P. occurring in uterine tube and extending into broad ligament.

p., tuboovarian. P. in which development of fetus occurs in both uterine tube and ovary.

pregnancy, words pert. to: Aaron's sign; Abderhalden's reaction, abortion; acromphalus, acycesis, Ahlfeld's sign, alochia; amnion, amniorrhexis; amniorrhoea; amnios; amniotic, amniotitis; Aschheim-Zondek test, Beccaria's sign, Bercovitz's test; Brouha's test; celococpotoomy; childbirth, chloasma gravidarum, conception; congenital, cyeslognosis; cyesiology, cyesis, decidua, deciduoma, deciduomatosis, ectopic, eclampsia, embryo, cneinte, encyopyclitis, fertility; fetal, fetation, feticide, fetus, Friedman test, gestation, gravid; grvida, gravidity, hyperemesis gravidarum, hypercyesis, interstital, labor, linea nigra; maleusophobia, maeutics, menstruation, miscarriage; monocyesis, multi-gravida, multipara; multiparity, nabothian menorrhagia, nullipara, obstetrics, paracyesis, parturition; placenta; plurigravida, pseudocyesis, quadripara; quickening, quintipara, Rubin test, sterility, stria gravidarum, striae, superfetation, toxemia, unigravida, unipara; uterogestation, vomiting, pernicious, of.

pregnanediol (prĕg'nān-dī-ōl). $C_{26}H_{46}O_2$. A substance present in urine and thought to be the form in which progesterone is excreted by the kidneys. Amount in urine increases during premenstrual or luteal phase of menstrual cycle and during pregnancy.

pregnant (prĕg'nānt) [L. *pregnans*, with child.] Having conceived; with child. **SYN:** *gravid*.

pregnenolone (prĕg-nĕn'ō-lōn) A synthetic hormone. A direct oxidation product of cholesterol with a formula closely related to that of cortisone. Used in rheumatoid arthritis, given in intramuscular injection for arthritis of the spine, fibrositis, dermatomyositis.

pregnadic (prĕ-grāv-id'ik) [L. *prae*, before, + *gravida*, pregnant]. Before pregnancy.

prehallux (prĕ-hāl'ŭks) [" + *hallux*, the great toe]. A supernumerary bone or accessory *navicular pedis* or sometimes a prolongation inward of it on the foot.

prehemiplegic (prĕ-hĕm-i-plĕ'ĭk) [" + *G. emi*, half, + *plĕgĕ*, a stroke]. Occurring before an attack of hemiplegia.

prehensile (prĕ-hĕn'sil) [L. *prehendere*, to seize]. Capable of grasping.

prehension (prĕ-hĕn'shŭn) [L. *prehensio*, from *prehendere*, to seize]. The act of grasping or seizing.

preimmunization. (prĕ-'im'ū-nī-zā'shŭn) [L. *prae*, before, + *immunis*, safe]. Immunization produced artificially in very young infants.

Preiser's disease (prī'zĕr). A porous condition of bone, osteoporosis, caused by trauma and affecting the carpal scaphoid bone of the wrist.

prelum (prĕ'lŭm) [L.]. A press.

p. abdominale. Squeezing of abdominal viscera in defecation, urination, and parturition, bet. the diaphragm and abdominal wall.

premaure (prĕ-mā-tūr'). Not mature; before term or full development.

p. beat. A cardiac contraction occurring before the normal one. **SYN:** *extrasystole*.

p. infant. One born before term.

p. Errol. Uterine disease, shock, accident, toxemia of pregnancy, syphilis or any serious organic disease.

p. labor. Onset of labor before full term.

premaxilla (prĕ-'māks-'lĭ-ā) [" + *maxilla*, upper jaw]. The intermaxillary bone forming median ant. part of sup. maxillary bones.

premaxillary (prĕ-māk's-'lĕr-'l) [" + *maxillaris*, pert. to the upper jaw]. Located before the maxilla.

p. bone. The intermaxillary bone. **SYN:** *incisive bone*.

premedication (prĕ-mĕd-i-kā'shŭn) [" + *medicari*, to heal]. Induction of unconsciousness by internal drugs prior to administration of inhalation anesthesia.

premenstrual (prĕ-mĕn'strŭ-āl) [L. *prae*, before, + *menstruare*, to menstruate]. Before menstruation.

premenstruum (prĕ-mĕn'strŭ-ŭm) [" + *menstruum*, monthly fluid]. The period prior to menstruation.

premolar (prĕ-mō'ler) [" + *moles*, a mass]. 1. A bicuspid tooth. 2. Before a molar tooth.

premonition (prĕ-mō-nīsh'ŭn) [" + *monĕre*, to warn]. A feeling of an impending event.

premonitory (prĕ-mon'ī-tō-rĭ) [L. *prae-monitorius*, warning before]. Giving a warning, foreboding or forewarning.

premonocyte (prĕ-mon'ō-sit) [L. *prae*, before, + *G. monos*, alone, + *kytos*, cell]. An embryonic cell transitional in development prior to a monocyte.

premunition (prĕ-nū-nīsh'ŭn) [L. *prae*, before, + *munio*, a fortification]. Immunity depending upon existence of a long-continued latent infection, as in malaria.

premyelocyte (prĕ-mī-ĕl-ō-sīt) [L. *prae*, before, + *G. myelos*, marrow, + *kytos*, cell]. The cell which is the immediate precursor of a myelocyte.

pre narcosis (prĕ-nar-kō'sis) [" + *G. nar-kōsis*, stuporous condition]. Induction of unconsciousness by int. drugs before general inhalation anesthesia. **SYN:** *premedication*.

prenatal (prĕ-nāt'l) [" + *natalis*, pert. to birth]. Before birth.

p. care. The care of the pregnant woman during the period of gestation. This care consists of periodic examinations for the determination of the blood pressure, weight, urinalysis, changes in the size of the uterus, and condition of the fetus as determined by the heart tones and position. By such examinations, changes in the condition of the patient can be noted and toxemias prevented by the institution of treatment as soon as any abnormal signs are present.

preoperative preparation. 1. Prepare area indicated according to technic of your hospital. 2. Be sure the water and liquid soap you use for shaving and cleansing the skin are warmed, cold liquids on the abdomen give the patient a disagreeable shock. 3. See that patient is attended by his clergyman if this has not already been done before he came to the hospital. This is *absolutely essential* in the case of Catholic patients. 4. Try to have the patient get as much sleep as possible. If he is wakeful and you do not wish to give sedative early,

try to find some reading matter for him. 5. Give the enemas ordered for the morning as late as you can if he is asleep so as to give him as much rest as possible. 6. Get order for catheterization if you think it will be needed. 7. Never send a patient to the operating table with a full bladder. 8. Give preanesthetic medication, or basal anesthetic, at exactly the time specified. 9. See that dentures are removed and placed in a glass of water which is marked with the patient's name and room number. 10. See that women do not have make-up on face or nails and that they are not wearing hair pins or "bobbie" pins. 11. Tie the wedding ring in place. 12. Do not use straight pins in patient's gown or operating cap. 13. Wrap blankets well around neck when he is placed on stretcher to keep drafts out. 14. Do not forget chart when taking him to surgery. 15. Do not chatter with other nurses you meet on the way or while waiting with the patient before he is anesthetized. 16. Do not forget to reassure anxious relatives who may not like to disturb you with many questions and who do not understand all that is going on as well as you do.

preoral (prē-ō'rāl) [+ os, or-, mouth]. In front of the mouth

paralytic (prē-pār-ā-lit'ik) [+ G. *para*, at the side, + *lyein*, to loosen]. Before the appearance of paralysis.

Preparations usually given by rectum. These are the following

Asafetida. Two drams of asafetida in 4 to 6 oz. of water. Another mixture is 1 oz. of milk of asafetida and 1 pt. of warm water, or to 12 oz. of warm water add 4 oz. of asafetida emulsion prepared by agitating ½ dram of asafetida powder in 4 oz. of hot water

Chloral hydrate. Ten to 30 gr. dissolved in 3 oz. of olive oil, warmed; or 3 oz. of very warm milk, or 3 oz. of thin, boiled cornstarch water. This makes a good preparation or a base in which to hold the medicine in suspension. The patient's pulse should be taken 5 minutes before and 5 minutes after the administration to determine the heart action. If untoward effects are noticed, action may be taken to prevent further absorption

Glycerin. This is added, 1 oz. to a pt. of solution of plain water. It will cause a good evacuation. One ounce of glycerin to 1 oz. of water will cause irritation of the lower bowel and precipitate an evacuation. This may be given with a bulb syringe.

Alum: The alum enema consists of 1 qt. of warm water and 1 oz. of powdered alum. This enema has a tendency to dry up intestinal fermentations.

Paraldehyde: Dosage, 1 to 4 cc. may be mixed with water in the proportion of 1 to 8 and in this ratio it may be mixed with thin starch water for rectal medication. There should be about 3 oz. of starch water.

Sodium bicarbonate: One tablespoonful or 4 Gm. to 500 cc. or 1 pt. of water aids in the expulsion of the bowel content. The neutralizing action of the acidity of the bowel content brought about by the sodium bicarbonate solution leaves the bowel soothed and with a bland reaction.

Sodium bromide: Ten to 60 gr. dissolved in plain warm water, 2 to 4 oz.

RS: *alkaloids, active principles, drugs with 2 names, names of preparations;*

antidotes; dosage; drug action; drugs and their administration; medical preparations; names of individual drugs in alphabetical order; names of poisons poison; poisoning, prescription writing.

prepatellar (prē-pā-tē'lār) [L. *prae*, before, + *patella*, pan]. In front of the patella.

p. bursitis. Inflammation of the bursa in front of patella. **Syn:** *housemaid's knee*. **See:** *bursitis*.

prepatent. Before becoming evident or manifest

p. period. P. between the time of introduction of parasitic organisms into the body and their appearance in the blood or tissues.

prepuce (prē-pūs) [L. *praeputium*, prepuce]. The foreskin or fold of skin over the glans penis in the male.

Excision constitutes *circumcision*, a common religious practice, but also performed in cases of phimosis and for hygienic purposes. A sebaceous secretion under the prepuce is called *smegma*

RS: *acrobystiolith, acrobystitis, acroposthitis, aposthia, frenulum, penis, phimosis, smegma, urethra* (of male)

p. of the clitoris. Fold of the labia minora which covers the clitoris **Syn:** *clitoris*.

preputial (prē-pū-shāl) [L. *praeputium*, prepuce]. Concerning the prepuce

p. glands. Small sebaceous glands of the corona of the penis which secrete an odoriferous discharge. **Syn:** *Tyson's glands*.

preputium (prē-pū-shi-lūm) (pl. *preputia*) [L. *praeputium*, prepuce]. The fold of skin which covers the glans penis. **Syn:** *prepuce, q.v.*

p. clitoridis. Prepuce of the clitoris, a fold overhanging the glans clitoridis formed by the union of the two labia minora

presbycusia, presbyacousia (prēz-bi-ā-kū-si-ā) [G. *presbys*, old, + *akousis*, hearing] Hearing less acutely, due to old age. **Syn:** *presbycusis*

presbyatrics, presbyatry (prēz-bi-āt'rīks, prēz-bi-āt'rī) [+ *iatrikos*, healing] That branch of medicine dealing with the diseases of old age.

presbycusis, presbykousis (prēz-bi-ku'sis, prēz-bi-ā-kousis, hearing). Impairment of acute hearing in old age. **Syn:** *presbycusia*.

presbyophtenia (prēz-bi-ō-frē-ni-ā) [+ *phrēn*, mind]. Senile psychotic syndrome involving confabulation and disorientation with preservation of mobility, loquacity, and good spirits. **Syn:** *Wernicke's syndrome*.

presbyopia (prēz-bi-ō-pl-ā) [+ *ōps*, eye]. Defect of vision in advancing age involving loss of accommodation or recession of near point. Due to loss of elasticity of crystalline lens

Usually occurs between 40 and 45 years of age. **See:** *farsightedness*.

presbyiatrics (prēz-bi-ī-āt'rīks) [+ *iatrikos*, healing]. Science of old age and its treatment. **Syn:** *geriatrics, presbyatrics, presbyatry*.

prescription (prē-skrīp-shūn) [L. *prae-scriptio*, a writing before, an order]. A written order for dispensing drugs signed by a physician. [parts

A prescription consists of 4 main **SUPERSCRIPTION**. Represented by the symbol *R* which signifies *Recipe*, from the Latin *recipere*, meaning to take.

INSCRIPTION: Containing the ingredients. This again is generally constructed of 4 parts: (a) The basis or

principal drug; (b) the *adjuvant*, which assists the action of the basis; (c) the *corrective*, which diminishes unpleasant taste or pain or griping, etc.; (d) the *vehicle* to hold the drugs either in solution or suspension.

SUBSCRIPTION: Directions to the dispenser as to the manner of preparation of the drugs.

SIGNATURE: Directions to the patient with regard to the manner of taking, dosage, etc.; finally, the physician's signature and the date must be added.

p. carbons. PT Carbons impregnated with various substances for use in treatment of specific conditions.

prescription writing. **LATIN USAGE IN PRESCRIPTIONS:** An official Latin name is in the nominative case. *Drugs:* Written in the genitive case, as the prescription is an order, meaning "take thou" *Word "of".* This is not written in Latin but is indicated by the ending of a word. *Quinine*, of course, means "quinine," but changing the termination to "ae" we have "*quininae*," meaning of *quinine*.

ALKALOIDS: Written the same as in English, except that the final "e" is changed to "a" to form the nominative case, as *quinina*, for the English *quinine*. To form the genitive case, the final "e" is changed to "ae," as *quininae*.

ACTIVE PRINCIPLES: These, such as glucosides, resins and others, add "um" to the nominative, and "i" to the genitive, as *Strophanthin* becomes *strophanthinum* to form the Latin nominative, and *strophanthini*, to form the Latin genitive.

ACIDS: The names of these are formed in the same way as those of alkaloids, except that the adjective is formed in the same way and follows the nominative, as *Acidum Hydrochloricum*, or the genitive, *Acidi Hydrochlorici*.

METALS: Latin names of metals, except those of a few known to the ancients, are the same as English forms ending in "um," as in *Sodium*, forming the Latin nominative, but ending in "i" to form the genitive, *Sodii*.

SALTS: Written first with the name of the base in its genitive form, next the acid radical in the nominative, followed by the qualitative adjective, also in the nominative, as *Ferri Sulfas Exsiccatus*, exsiccated sulfate of iron.

NAMES OF PREPARATIONS: Show the class to which it belongs first, the name of the ingredient next, as the *qualifying* adjective last, as *Syrupus Scillae Compositus* (Compound Syrup of Squills). First and last words are in nominative case and middle one in genitive.

DRUGS WITH TWO NAMES: Both should be in the genitive, as *Liquor Potassi Arsenitis*. *-ate endings:* The Latin nominative ends in "as," as *sulfas*, for sulfate, and the genitive in "atis," as *sulfatis*. *-ite endings:* If the English word ends in "ite," as "*sulfite*," the Latin nominative ends in "is," as *sulfis*, and the genitive in "itis," as *sulfitis*. *-ide endings:* If an English word has this ending, as "Bromide," the Latin nominative ends in "um," dropping the final "e" in the English form, as *Bromidum*; the genitive dropping the "um" to add "i," as *Bromidi*.

-a, -us, -um endings: English words with these endings are the same in the Latin nominative, but the genitive is formed by changing "a" to "ae," or the "us" or "um" to "i." *-in endings:* An

English word having this ending adds "um" (usually) to form the Latin nominative as *Benzoin* and *Benzonium*, the genitive being formed by merely adding "i," as *Benzoini*. *-ol endings:* The Latin nominative is the same as the English, as in "Phenol," but "is" is added to form the genitive, as *Phenolis*. *-al endings:* To form the Latin nominative, "um" is added, as *Chloral* and *Chloralum*. To form the genitive, "i" is added to the English form, as *Chlorali*.

There are, of course, exceptions to the foregoing. Many Latin words have the same form as in English. Fortunately, perhaps, most drugs are indicated in prescription by abbreviations which may not discriminate bet. the Latin nominative and genitive.

RS: alkaloids, active principles, drugs with 2 names, names of preparations, antidotes; dosage, drug action; drugs and their administration, medical preparations; names of individual drugs in alphabetical order (500+ in all), names of poisons; poison, poisoning; preparations usually given by rectum.

presentation (prē-zēn-lā'shūn) [L. *praesentatio*, a placing before]. **Ob:** Term applied to the manner of the fetus presenting itself to the examining finger at the mouth of the uterus.

Thus longitudinal (normal) and transverse (pathological) presentation.

p., breech. When pelvic extremity presents.

Breech presentation is divided into 3 types: *Complete breech*, when the thighs are flexed on the abdomen and the legs flexed upon the thighs, *Frank breech*, when the legs are extended over the ant. surface of the body, and *footling*, when a foot or feet present; footling can be single, double, or if the leg remains flexed, knee presentation.

p., brow. When the brow presents.

p., cephalic. Presentation of the head in any position.

p., face. When the head is sharply extended so that the face presents.

p., footling. Presenting feet first.

p., placental. Presentation of the placenta first. **Syn:** *placenta previa*.

p., sinciput. When the large fontanel presents.

p., transverse. With fetus lying crosswise.

p. vertex. P. of the upper and back part of the head.

presphenoid (prē-sfē'nōyd) [L. *prae*, before, + G. *sphēn*, wedge, + *ēdois*, form]. **Ant.** region of the body of the sphenoid bone.

presphygmie (prē-sfīg'mīk) [+ G. *sphygmōs*, pulse]. **Pert.** to period preceding the pulse wave.

prespinal (prē-spi'nāl) [+ *spina*, thorn]. Before the spine, or ventral to it.

prespondylolisthesis (prē-spōn'dil-ō-lis-thē'sis) [+ G. *spondylos*, vertebra, + *olisthanein*, to slip]. A congenital defect of a lumbar vertebra without displacement, which predisposes to spondylolisthesis.

pressinervoscopy (prēs'ī-nēr-vōs'kō-pī) [L. *pressus*, from *premere*, to press, + *nervus*, a nerve, + G. *skopein*, to examine]. **Diagnosis** by pressing upon the pneumogastric and sympathetic nerves.

pressor (prēs'ōr) [L. *pressor*, from *premere*, to press]. 1. Stimulating, increasing the activity of a function, especially of vasomotor activity, as a nerve. 2. Inducing an elevation in blood pressure.

Terms Used in Prescription Writing

<i>Abbreviation</i>	<i>Word or Phrase</i>	<i>English Equivalent</i>
āā or a	ana	of each
abs. feb.	absente febre	fever being absent
ad	ad	to, up to
add.	adde	add
ad. feb.	adstante febre	fever being present
adhib.	adhibendus	to be administered
ad. lib.	ad libitum	at pleasure
admov.	admovere	apply
ante cib. or A. C.	ante cibum	before food
aq. bull.	aqua bulliens	boiling water
aq. dest.	aqua destillata	distilled water
aq. font.	aqua fontis	spring water
aq. pur.	aqua pura	pure water
bene	bene	well
b. i. d.	bis in die	twice daily
bull.	bulliat	let (it) boil
ē	cum	with
cap.	capsula	a capsule
chart. or cht.	chartula	a small medicated paper
coch. mag.	cochleare magnum	a tablespoonful
coch. med.	cochleare medium	a dessertspoonful
coch. parv.	cochleare parvum	a teaspoonful
collyr.	collyrium	an eyewash
comp.	compositus	compounded of
cong.	congius	a gallon
cont. rem.	continuatur remedia	continue the medicine
cras mane sum.	cras mane sumendus	take tomorrow morning
cuj lib.	cujus libet	of any you please
d., det.	da, detur	give, let be given
d. d. in d.	de die in diem	from day to day
dent. tal. dos.	dentur tales doses	give of such doses
dieb. alt.	diebus alternis	every other day
dieb. tert.	diebus tertius	every 3rd day
dil.	dilue, dilutus	dilute, diluted
dim.	dimidius	one-half
div.	divide	divide
div. in p. aeq.	dividatur in partes aequales	let it be divided into equal parts
donec alv. sol. ft.	donec alvus soluta fuerit	until bowels are open
dos.	dosis	dose
dur. dolor.	durante dolore	while pain lasts
emp.	emplastrum	plaster
emuls.	emulsio	an emulsion
ft.	fiat	let be made
garg.	gargarisma	a gargle
grad.	gradatim	by degrees
gr.	granum	a grain
gtt.	gutta, guttae	a drop, drops
guttat.	guttatum	by drops
haust.	haustus	a draught
hor. decub.	hora decubitus	bed hour
hor. som. or h. s.	hora somni	bed time
hor. 1 spat.	horae unius spatio	one hour's time
ind.	indies	daily
inf.	infusum	let it infuse
int.	intime	thoroughly
lin.	linimentum	a liniment
lot.	lotio	a lotion
M.	misce	mix
mac.	macera	macerate
man. prim.	mane primo	first thing in the morning
mas.	massa	mass
med.	medicamentum	a medicine
m. et n.	mane et nocte	morning and night
mitt.	mitte	send
mitt. x tal.	mitte decem tales	send 10 like this
mod.	modicus	moderate sized
mod. praesc.	modo praescripto	in the manner written
moll.	mollis	soft
mor. dict.	more dicto	in the manner directed
mor. sol.	more solito	as accustomed
ne tr. s. num.	ne tradas sine nummo	deliver not without the money
no.	numerus	number
noct. maneq.	nocte manequa	night and morning

Abbreviation	Word or Phrase	English Equivalent
non. rep., n. r.	non repetatur	let it not be repeated
o.	octarius	a pint
omn. bih.	omni bihoris	every 2nd hour
omn. hor.	omni hora	every hour
om. ¼ h.	omni quadrantae horae	every 15 minutes
om. mane vel. noc.	omni mane vel nocte	every morning or night
p. c.	post cibum	after meals
pil.	pilula	a pill
p. p. a.	phiala prius agitata	the bottle being first shaken
p. r. n.	pro re nata	as occasion arises
pro. rat. act.	pro ratione aetatis	according to patient's age
pulv.	pulvis	powder
q. h.	quaque hora	every hour
q. l.	quantum libet	as much as pleases
q. s.	quantum sufficiat	as much as suffices
quotid.	quotidie	daily
red. in pulv.	redactus in pulverem	reduced to powder
repetat., rep.	repetatur	to be repeated
sec. a., or s. a.	secundem artem	according to art
semih.	semihora	half an hour
sig.	signa	write
sing.	singulorum	of each
sol.	solutio	solution
s. o. s.	si opus sit	if need exists
solv.	solve	dissolve
ss.	semi or semisse	a half
stat.	statim	immediately
st.	stet or stent	let it (or them) stand
subind.	subinde	frequently
sum.	sume	take
sum. tal.	sumat talem	take 1 such
suppos.	suppositoria	a suppository
tab.	tabella	a tablet
tere.	tere	rub
tere bene	tere bene	rub well
t. i. d.	ter in die	thrice daily
trit.	tritura	triturate or grind
ult. praes.	ultimus praescriptus	the last ordered
ut dict.	ut dictum	as directed
vitel.	vitellus	yolk of an egg

Weights and Measures.

- ℥ Minimum, -i, n., minim, of a fluidram.
- Gtt. Gutta, -ae, f, a drop.
- gr. Granum, -i, n, a grain.
- ℥ Scrupulus, -i, m., a scruple, 20 grains.
- ℥ Drachma, -ae, f., a dram, 60 grains
- ℥ Fluidrachma, -ae, f, a fluidram, 60 minims.
- ℥ Uncia, -ae, f, a troy ounce 480 grains
- ℥ Fluiduncia, -ae, f, a fluidounce, 8 fluidrams.
- lb. Libra, -ae, f, a pound (troy), 5760 grains.
- ℥ Octarius, -i, m, a pint, 16 fluidounces
- ℥ Congius, -i, m., a gallon, 8 pints.
- ss. Semis, indecl, a half.

Quantities are designated by Roman numerals following the symbol for denomination. SEE. charting.

p. base or substance. One of several products of intestinal putrefaction found in normal urine which, when injected, raises blood pressure in animals.

p. nerves. Nerves which when stimulated bring about an increase in blood pressure

p. reflex. Any reflex in which the response to stimulation is increased by blood pressure.

pre'sorecept'or. Sensory nerve ending such as those in the aorta and carotid sinus which are stimulated by changes in blood pressure

pressure (prēsh'ūr) [L. *pressura*, a squeezing]. 1. A compression. 2. Stress or force exerted on a body, as by tension, weight, pulling, etc. 3. Psy. Quality of sensation aroused by moderate compression of the skin. 4. In physics, the quotient obtained by dividing a force by the area of the surface on which it acts.

RS atmosphere, blood, hypertonic, isotonic.

p., after. A feeling of p. which remains for a few seconds after removal of a weight or other pressure.

p., arterial. P. of blood in the arteries

For a normal young man at physical and mental rest and in sitting position, systolic blood pressure averages about 120 mm Hg; diastolic pressure about 80 mm Hg. There is a wide range of normal variation, due to constitutional, physical, and psychic factors. For women the figures are lower; for older people they are higher. There is little difference in the b.p. of the two arms

p., atmospheric. P. of weight of atmosphere; at sea level it averages about 760 mm. of mercury.

p., back. P. resulting from interference in flow of blood from the ventri-

cies such as occurs in valvular disorders. Results in reduced venous return to the heart and consequent venous engorgement.

p., blood. P. exerted by blood against the walls of blood vessels *See* **blood pressure**.

p., diastolic. Arterial pressure during diastole or dilatation of heart chambers

p., endocardiac. *SYN:* **intracardiac**

p. Blood pressure within the heart.

p., hydrostatic. The pressure exerted by a fluid within a closed system

p., intraabdominal. P. within the abdominal cavity such as that caused by descent of the diaphragm

p., intracranial. P. of the cerebrospinal fluid, which in a recumbent position is from 60 to 120 mm.

p., intraocular. Normal tension within the eyeball, equal to 20-25 mm of mercury.

p., intrathoracic. P. within the thorax but outside of the lungs. In quiet expiration it is about -4.5 mm., and in forced inspiration, as high as -30 mm., but in quiet inspiration, -7.5 mm.

p., intraventricular. P. within the ventricles of the heart during different phases of diastole and systole

p., oncotic. Osmotic pressure, *qv*

p., osmotic. The force with which a solvent, usually water, passes through a semipermeable membrane separating solutions of different concentrations. It is measured by determining the hydrostatic (mechanical) pressure which must be opposed to the osmotic force to bring the passage to a standstill. The osmotic p. of blood serum and of solutions isotonic with it is 6.7 atmospheres.

p., palsy. Temporary paralysis due to pressure on a nerve trunk

p., paralysis. Paralysis due to pressure on the spinal cord.

ETIOL: Injury, tumor, gummata

p. points. Areas for exerting pressure to control bleeding

For control of hemorrhage, pressure above bleeding point when an artery passes over a bone may be sufficient. The principal p. points are:

(a) Two inches above clavicle, over common carotid artery, backwards, against spine. (b) At side of face in front of ear, over temporal artery. (c) Behind mastoid process, over occipital artery. (d) Behind clavicle, pressing subclavian artery down on to 1st rib. (e) The axillary artery by compression in axilla. (f) The brachial artery compressed by pressure at inner edge of biceps muscle halfway down arm, and also above bend of elbow, before artery divides into radial and ulnar arteries. (g) On thumb side of wrist against radius, to compress the radial. (h) On little finger side of wrist against ulna, to compress ulnar. (i) In palm, opp. root of abducted thumb, over deep palmar arch. (j) Abdominal artery may be compressed against lumbar vertebrae, to left of middle line, when patient lies on his back. (k) By abduction and ext. rotation of thigh, head of femur is brought forward into groin and femoral artery may be compressed against it, in this position. (l) In popliteal space over popliteal artery. (m) At front of bend of ankle over ant. tibial artery. (n) Behind int. malleolus, over post. tibial artery, as it passes into foot.

p., pulse. The difference between systolic and diastolic pressures; normally about 120, -70 equalling 50 mm. Normally about 40 (120 - 80).

p. sore. A bed* sore, one caused by pressure on a certain area or by a splint. *SYN:* **decubitus**.

p., systolic. Arterial pressure at time of the contraction of the ventricles, or the ventricular systole

p., venous. Pressure of the blood within the veins. It is highest near the periphery, diminishing progressively from capillaries to the heart. Near the heart the pressure may be below zero (a "negative pressure") due to negative intrathoracic pressure

presternum (prê-stêr'nûm) [L *prae*, before, + G *sternon*, chest]. The upper part of the sternum. *SYN* **manubrium, sterni**.

presuppurative (prê-sûp'û-râ-tîv) [+ sub, under, + *puris*, pus]. Relating to period of inflammation before suppuration.

presylvian fissure (pre-sîl'vî-ân) [L *prae*, before]. The anterior division of the sylvian fissure

presystole (prê-sîs'tô-lê) [+ G *systole*, contraction]. The period in the heart's cycle just before the systole

presystolic (prê-sîs-tô-lîk) [+ *systole*, contraction]. Before the systole of the heart.

pretarsal (prê-tar'sâl) [+ G *tarsus*, tarsus]. In front of the tarsus

pretibial (prê-tîb'î-âl) [+ *tibia*, shin]. In front of the tibia

p. fever. *SYN* **Fort Bragg fever**. A viral disease characterized by fever, rash on legs, prostration, splenomegaly, and respiratory disturbances

preurethritis (prê'û-re-thrî'tîs) [+ G *ourêthra*, urethra, + *-itis*, inflammation]. Inflammation around the urethral orifice of the vaginal vestibule

prev'alece. The number of cases of a disease present in a population at a given time

preventive (prê-vên'tîv) [L *praevenire*, to come before]. Warding off. *SYN* **prophylactic**.

p. medicine. That branch of medicine concerned with the prevention of disease

preventorium (prê-vên-to'ri-um) [L *praevenire*, to come before]. An institution for those threatened with tuberculosis

prevertebral (prê-ver'te-brâl) [L *prae*, before, + *vertebra*, vertebra]. In front of a vertebra

prevertiginous (prê-ver'tîj'în-ûs) [+ *vertigô*, dizziness]. Having a tendency to fall forward. *SYN* **dizzy**.

preves'ical. Located in front of the bladder.

pre'via. Appearing before or in front of, **prezon'ular.** Pert. to the post chamber of the eye, the space between iris and ciliary zonule (suspensory ligament)

priapism (prî'âp-îzm) [G. *Priapos*, god of procreation, + *-ismos*, condition]. Abnormal, painful and continued erection of the penis due to disease, usually without sexual desire.

ETIOL: May be due to lesions of the cord above the lumbar region, or turgescence of corpora cavernosa without erection may exist. It may be reflex from peripheral sensory irritants, from organic irritation of nerve tracts or nerve centers when libido may be lacking or from psychical irritation with libido present in satyriasis.

RS: erection, gonorrhoea, satyriasis. **priapitis** (prî-âp'î-tîs) [+ *-itis*, inflammation]. Inflammation of the penis.

prickle cell (prîk'l). A cell with rod-

shaped processes, intercellular bridges connecting with similar adjoining cells

p. c. layer. SYN: *stratum germinativum*, *stratum spinosum*, *malpighian layer*. The innermost layer of the epidermis.

prickly heat (prĭk'li hēt). Noncontagious, cutaneous eruption of red pimples, with itching and tingling of the affected parts, seen usually in hot weather.

Error. Inflammation of skin around sweat ducts. SYN: *lichen tropicus*, *milriaria*.

Priessnitz compress (prēs'nĭtz). A wet cold compress. SEE *Neptune girdle*

primae viae (pri'mē vi'ē) [L. first passages]. The alimentary canal, the secondary ones consisting of the lacteals.

primary (pri'mā-rĭ) [L. *primus*, first]. First in time or order. SYN: *principal*.

p. amputation. One before inflammation has set in.

p. bubo. An adenitis, of simple character, of an inguinal gland. SYN: *bubon d'emblee*.

p. cell. PT. A device consisting of a container 2 solid conducting elements and an electrolyte, for the production of electric current by chemical energy.

p. dementia. A psychosis of youth. SYN: Extreme apathy, listlessness, without perception of environment.

p. hemorrhage. Bleeding at time of an injury.

p. lesion. 1. An original one from which a 2nd one originates. 2. Lesion of syphilis, a chancre.*

p. sore. The initial s. or hard chancre of syphilis.

primate (pri'māt) [L. *primus*, first] A member of the order Primates

Primates. An order of vertebrates belonging to the class Mammalia, subclass Theria. Includes the lemurs, tarsiers, monkeys, apes, and man. They are most highly developed with respect to the brain and nervous system

prime (prim) [L. *primus*, first]. Period of greatest health and strength

p. mover. SYN: *agonist*, *protagonist*. The muscle primarily responsible for a specific action

primigravida (pri-mĭ-grāv'i-dā) ['' + *grāvīda*, pregnant]. A woman during her 1st pregnancy.

primipara (pri-mĭp'ā-rā) ['' + *parēre*, to bear offspring]. A woman who has had or who is giving birth to her 1st child

primiparity (pri-mĭp'ār'it-i) ['' + *parēre*, to bear offspring]. Condition of having given birth to only 1 child.

primiparous (pri-mĭp'ā-rūs) ['' + *parēre*, to bear offspring]. Pert. to a primipara, woman giving birth to, or having had, 1st child.

primitiae (pri-mĭsh'i-ē) [L. *primus*, first]. Liquor amnii appearing before the fetus at birth. SEE: *amnion*, *bag of waters*, *liquor amnii*, *labor*.

primitive (prim'i-tiv) [L. *primitivus*, from *primus*, first]. Original; early in point of time; embryonic.

p. groove. The longitudinal depression in the dorsum of the embryonic area.

p. streak. A dark, thickened longitudinal band which forms at caudal end of the embryonic disk, consisting of a surface layer of ectoderm overlying a thickened mass of mesoderm cells. It marks the future longitudinal axis of the embryo.

primordial (pri-mor'di-āl) [L. *primordium*, the beginning]. Existing first.

primordium. SYN: *anlage*. In Embry. the first beginnings of a future organ or part

princeps (prin'sēps) [L. *princeps*, chief]. 1. Original; first 2. The name of certain arteries. EX: *princeps cervicis*.

principal (prin'sĭ-pāl) [L. *princeps*, *princeps*, chief]. 1. Chief. 2. Outstanding.

principle (prin'sĭ-pl) [L. *principium*, foundation]. 1. A constituent of a compound representing its essential properties 2. A fundamental truth. 3. An established rule of action.

p., antianemic. SEE: *factor*, *anti-anemic*.

p., antidiuretic. The antidiuretic hormone (ADH) present in extracts of the post. lobe of hypophysis.

p's, gastrointestinal. Substances secreted by mucosa of stomach and intestine which are absorbed by the blood and act as hormones. SEE: *cholecystokinin*, *gastrin*, *secretin*.

p., oxytocic. A hormone in extracts of post. lobe of hypophysis which stimulates contraction of uterine muscle.

p., proximate. A substance that may be extracted from its complex form without destroying or altering its chemical properties

prism (prĭzm) [G. *prisma*]. A solid with sides which are parallelograms whose bases are similar plane figures

p., enamel. A minute rod of calcareous material deposited at the end of an ameloblast in the formation of the enamel of a tooth

prismometer (prĭz-mōp-tōm'ēt-ēr) ['' + *opsis*, vision, + *metron*, measure]. Device for estimating abnormal refraction of the eye by using prisms.

privates (prĭv'ēts) [L. *privatus*, peculiar to an individual]. The ext. genitalia of the male or female.

p. r. n. [L. *pro re nata*]. As circumstance may require.

pro- [L. & G.]. Prefix meaning *for*, *in front of*, *before*, *from*, *in behalf of*, *on account of*, etc.

proactinomycin (prō-āk'ti-nō-mĭ'sĭn). An antibiotic obtained from *Nocardia gardneri*. Effective against gram-positive bacteria

proagglutinoïd (prō-äg-glū'ti-noyd) An agglutinoïd having a greater affinity for the agglutinoïd than that possessed by the agglutinin

proamnion (prō-ām'nĭ-ōn) [G. *pra*, before, + *amnion*, amnion]. A region anterior to the head in a vertebrate embryo in which mesoderm is lacking

proantithrombin (prō-ān-tĭ-thrōm'bĭn) A substance present in blood plasma or serum which, through the action of heparin, is converted into antithrombin.

proband (prō'bānd). One selected as the basis for a genetic or hereditary study as the original one having a physical or mental disorder.

probationary (prō-bā'shūn-ar-i) [L. *probatio*, a trial]. One who is on trial. Waiting, as for admission or for a test.

p. ward. One for the temporary detention of patients suspected of having a communicable disease.

probationer (prō-bā'shūn-ēr) [L. *probatio*, a trial]. A person on trial for a time, as a newly admitted student nurse.

procaine hydrochloride (prō-kān). USP. White, colorless, crystalline compound. ACTOY AND USES: A safe, local anesthetic, less toxic than cocaine. Used in infiltration anesthesia, nerve block, and spinal anesthesia. Its effect is prolonged by simultaneous injection of epinephrine

Dosage. For infiltration, 0.25-0.5% sol., for instillations, injections, or nerve block, 1-2% sol.; for eye, 1-5% sol. Relatively ineffective for surface application.

procatactic (prō'kāt-ark'ŭk) [G. *prō*, before, + *katachein*, to begin]. Predisposing or inciting, as the cause of a disease.

procataxis (prō'kāt-ark'sis) [+ *katachein*, to begin]. Inception of a disease through a predisposing cause.

procelous (prō-sē'lūs) [+ *kollos*, hollow] Concave anteriorly.

procephalic (prō-sē-fāl'ik) [+ *kephalē*, a head] Of or relating to the ant. part of the head.

proceroid (prō-sēr'koyd) The first larval stage in the development of certain cestodes belonging to order Pseudophyllidea. It is an elongated structure which develops in crustaceans.

process (prō'sēs) [L. *processus*, a going before]. 1. A method of action. 2. State of progress of a disease. 3. A projection, as of the extremity of a bone.

p. acromion. The acromion, *q.v.*

p. alar. A process of cribiform plate of ethmoid bone which articulates with frontal bone.

p. alveolar. 1. The inferior border of the maxilla containing sockets for upper teeth. 2. The superior border of body of mandible containing sockets for lower teeth.

p. articular, of vertebra. One of four processes (2 sup. and 2 inf.) by which vertebrae articulate with each other.

p. basilar. Narrow part of the base of occipital bone, in front of foramen magnum, articulating with the sphenoid bone. *SYN pars basilaris.*

p. caudate. P. of caudate lobe of liver extending under rt. lobe.

p. ciliary. One of about 70 prominent meridional ridges projecting from cornea ciliaris of choroid coat of eye to which suspensory ligament of lens is attached.

p. condyloid. Post process on sup. border of ramus of mandible which articulates with temporal bone.

p. coracoid. A beak-shaped process extending upward and laterally from neck of scapula.

p. coronoid. 1. P. extending upward from ant. portion of ramus of mandible. 2. Sharp projection forming ant. and lower border of semilunar notch of ulna.

p. ensiform. The xiphoid process of the sternum.

p. ethmoidal. Small p. on sup. border of inf. concha which articulates with uncinate process of ethmoid.

p. falciiform. An extension of post. edge of sacrotuberous ligament to ramus of ischium.

p. frontal. Upward projection of maxilla which articulates with frontal bone. Forms part of orbit and nasal fossa.

p. frontosphenoidal. Upward projecting process of zygomatic bone.

p. head. *SYN notochordal plate.* An axial strand of cells in vertebrate embryos extending forward from primitive knot. Forms primitive axis about which embryo differentiates.

p. infraorbital. Medially projecting process of zygomatic bone which articulates with maxilla. Forms inferior lateral margin of orbit.

p. jugular. P. of occipital bone lying lateral to occipital condyle.

p. lacrimal. A short process of inf.

concha which articulates with lacrimal bone.

p. lenticular. A knob on the malleus in the ear which articulates with the stapes.

p. lyophilic. *SEE lyophilization.*

p. mandibular. Post. portion of 1st branchial arch from which lower jaw develops.

p. mastoid. Projection of mastoid portion of the temporal bone.

p. maxillary. 1. Ant. portion of 1st branchial arch which, with medial nasal processes, forms upper jaw. 2. P. of inf. nasal concha extending laterally and covering orifice of antrum. 3. P. on ant. border of perpendicular portion of palatine bone.

p. odontoid. *SYN dens.* Toothlike process extending upward from axis about which the axis rotates.

p. olecranon. The olecranon, an extension at proximal end of ulna.

p. orbital. 1. P. at tip of perpendicular portion of palatine bone directed upward and backward. 2. P. of zygomatic bone which forms ant. boundary of temporal fossa.

p. palatine. P. extending transversely from medial surface of maxilla. With corresponding process from other side, it forms major portion of hard palate.

p. postglenoid. P. of temporal bone separating mandibular fossa from ext. acoustic meatus.

p. pterygoid. P. of sphenoid bone extending downward from junction of the body and great wing. Consists of the lateral and medial pterygoid plates.

p. styloid. *SEE styloid process.*

p. transverse. P. extending laterally and dorsally from the arch of a vertebra.

p. vermiform. *SYN vermiform appendix, q.v.*

p. vocal. P. of arytenoid cartilage which serves for attachment of vocal ligament.

p. xiphoid. *SYN ensiforme p.* Thin, elongated process extending caudally from body of sternum.

processus (prō-sēs'ūs) (pl *processūs*) [L.]. Process or processes.

p. cochleariformis. Curved portion of a thin plate of bone separating eustachian tube from canal for tensor tympani muscle over which tendon of muscle passes before insertion into manubrium of malleus.

p. retromandibularis. Wedge-shaped portion of parotid gland which projects medially toward the pharynx.

p. uncinatus. 1. Curved process of ethmoid labyrinth projecting from lateral wall of middle meatus which forms inf. border of hiatus semilunaris. 2. *SYN pancreas of Winslow.* A hooklike portion of the head of pancreas which curves around the sup. mesenteric vessels.

procheilon (prō-high'lōn) Prominence in central portion of the upper lip.

prochondral. Preceding the formation of cartilage.

Prochowick's diet (prō-kōv'nik). A restricted one for women with a narrow pelvis who are pregnant. Carbohydrates and liquids are reduced.

Prochowick's method (artificial respiration). A manner of administering artificial respiration in asphyxia of the newborn by compression of the infant's chest while the head hangs backward.

pro'chromosome. *SYN: chromocenter; false or chromatin nucleolus, karyosome, q.v.*

procidencia (prō-sī-dēn'shī-ā) [L. a fall-

ing forward]. A complete prolapse, esp. of the uterus which lies outside of the vulva, with inverted vaginal walls.

Proctol. Generally due to injury of pelvic floor. See *descensus uteri*.

procreate (prō'krē-āt) [L. *prō*, forward, + *crēare*, to create]. To beget; to bring forth young.

procreation (prō'krē-ā'shūn) [+ *crēare*, to create]. The act or state of bringing forth young. *Syn*: reproduction.

proctagra (prōk-tag'rā) [G. *prōktos*, anus, + *agra*, seizure]. Sudden rectal pain.

proctalgia (prōk-tāl'jī-ā) [+ *algos*, pain]. Pain in or about the anus and rectum.

proctatresia (prōk-tāt-rē'zī-ā) [+ *a-*, priv. + *trēsis*, perforation]. Imperforate condition of the anus.

proctectasia (prōk'tēk'tā-sī-ā). Dilatation of the anus or rectum.

proctectomy (prōk-tēk'tō-mī) [+ *ek-tomē*, excision]. Excision of the rectum or anus.

proctenclisis (prōk-tēn-klī'sis) [+ *egklein*, to shut in]. Stricture of the anus or rectum.

procteuranter (prōk-tū-rin'tēr) [+ *eurynēin*, to widen]. Instrument for dilation of the anus or rectum.

proctitis (prōk-tītis) [+ *-itis*, inflammation]. Inflammation of rectum and anus. *See* *bicho*, *rectitis*.

Etiol. Infectious organisms, trauma, radiation injury, drugs, esp broad-spectrum antibiotics, allergy.

p., acute or chronic. *Syn*: Rectal discomfort, repeated urge to evacuate rectum, accompanied by inability to pass feces, presence of mucus, blood or pus in stools, tenesmus.

p., diphtheritic. Diphtheritic membrane forms over surface of mucous membrane, forms sort of albuminous membrane. Headache, roaring in ears. Constipation, gas, neurasthenia, bloating.

p., dysenteric. May result from ordinary diarrhea, affects upper part the most. May have ulcers, afterwards cicatricial scars.

p., gonorrheal. Gonorrheal infection.

p., traumatic. *Sym*: Pain, pressure as if bowels were going to move; Irritable; mucous membrane red, eroded. Surface tissues sensitive to touch. Chronic constipation.

procto-, proct- [G.]. Combining forms meaning the *anus* and *rectum*.

proctocoele (prōk'tō-sēl) [G. *prōktos*, anus, + *kēlē*, hernia]. A protrusion of the rectal mucosa.

p., vaginal. Hernia of the rectum into the vagina.

proctoclysis (prōk-tōk'li-sis) [+ *klysis*, a washing out]. A continuous injection into the rectum and colon in which the solution is introduced drop by drop.

THERAPEUTIC PURPOSES: (a) To supply fluid in postoperative cases when fluids cannot be taken otherwise. (b) In suppression of kidney functioning, to flush the kidneys and stimulate elimination. (c) To supply the body with fluid as in hemorrhage, vomiting, or in diarrhea. (d) To stimulate the body when in shock, by raising the blood pressure. (e) To relieve thirst as in persistent vomiting. (f) To dilute toxic substance as in septicemia. (g) To promote elimination in infectious conditions. (h) To help prevent or overcome acidosis.

SOLUTIONS USED: The solution usually consists of a normal saline solution, a

sodium bicarbonate solution, or plain tap water at body temperature. Normal salt solution half strength is frequently used. This need not be a sterile solution unless so ordered. Sodium bicarbonate of 2% to 5% strength. A glucose solution of 5% to 15% strength may be ordered for its nutritive value. A combination of these may also be ordered. as a normal saline with glucose and sodium bicarbonate, 5% and 2%, respectively, or other combinations may be given as an order.

METHOD: 15-30 drops per minute continuously for 36 hr. *See* *enteroclysis*.

TEMPERATURE: This should be not less than 105° F. to begin with, although some advocate 118° to 120° F. *Syn*: *Murphy drip*.

proctococcyxia, proctococcyx (prōk'tō-kōk-sī-pēk'sī-ā, -kēk'sī-pēk'sī) [+ *kokkyx*, coccyx, + *pēsis*, fixation]. Suture of rectum to the coccyx.

proctocolitis (prōk'tō-kō-lī'tis) [+ *kolon*, colon, + *-itis*, inflammation]. Inflamed condition of colon and rectum.

proctocolonoscopy (prōk'tō-kō'lōn-ōs'kō-pī) [+ *kolon*, colon, + *skopein*, to examine]. Examination of interior of rectum and lower colon.

proctocystotomy (prōk'tō-sīs-tōt'ō-mī) [G. *prōktos*, anus, + *kystis*, bladder, + *tomē*, a cutting]. Incision into the bladder through the rectum.

proctodeum (prōk-tō-dēūm) [G. *prōktos*, anus, + *daein*, to divide]. An ectodermal depression located caudally which, upon rupture of the cloacal membrane, forms the anal canal.

proctodynia (prōk'tō-dīn'ī-ā) [+ *odynē*, pain]. Pain in the rectum or about the anus.

proctologist (prōk-tōl'ō-jist) [+ *logos*, a study]. One who specializes in diseases of the rectum and anus.

proctology (prōk-tol'ō-jī) [+ *logos*, a study]. Phase of medicine dealing with treatment of diseases of rectum and anus.

proctoparalysis (prōk-tō-pār-āl'is-tis) [+ *para*, at the side, + *lyein*, to loosen]. Paralysis of the anal sphincter muscle.

proctopexia, proctopexy (prōk-tō-pēks'ī-ā, prōk'tō-pēks'ī) [+ *pēxis*, fixation]. Suture of the rectum to some other part.

proctophobia (prōk'tō-fō-bī-ā) [G. *prōktos*, anus, + *phobos*, fear]. Abnormal apprehension in those suffering from rectal disease.

proctoplasty (prōk'tō-plās-tī) [+ *plastos*, formed]. Plastic surgery of the anus or rectum.

proctoplegia (prōk'tō-plē'jī-ā) [+ *plēgē*, a stroke]. Paralysis of the anal sphincter. *Syn*: *proctoparalysis*.

proctoptosis (prōk-tō-skōp'tōsis) [+ *ptōsis*, a drooping]. Prolapse of the rectum. *See*: *proctidentia*.

proctorrhaphy (prōk-tōr-ā-flī) [+ *raphē*, a sewing]. Suturing of rectum or anus.

proctorrhea (prōk-tōr-ē-ā) [+ *roia*, a flow]. Mucous discharge from the anus.

proctoscope (prōk'tō-skōp) [+ *skopein*, to examine]. Instrument for inspection of the rectum.

proctoscopy (prōk-tōs'kō-pī) [G. *prōktos*, anus, + *skopein*, to examine]. Instrumental inspection of the rectum.

proctosigmoiditis (prōk'tō-sīg-moyd'ītis) [+ *sigma*, letter S, + *eidōs*, form, + *-itis*, inflammation]. Inflamed condition of the rectum and sigmoid.

proctospasm (prōk'tō-spāzm) [+ *spasmos*, a contracting]. Rectal spasm.

proctostasis (prók'tō-stā'sis). Constipation resulting from failure of rectum to respond to defecation stimulus.

proctostenosis (prók'tō-stēn-ō'sis) [' + stēnōsis, a narrowing]. Stricture of the anus or rectum.

proctostomy (prók-tōs'tō-mī) [' + stoma, a mouth]. Creation of a permanent opening into the rectum.

proctotome (prók'tō-tōm) [' + tomē, a cutting]. Knife for incision into rectum.

proctotomy (prók-tōt'ō-mī) [' + tomē, a cutting]. Incision of the rectum or anus.

Position: Simon's.

Dressing: Iodoform gauze, T-bandage.

proctotoreusis (prók-tō-tō-rū'sis) [' + toreusis, boring]. The making of an opening in an imperforate anus.

proctovalvotomy (prók-tō-vāl-vōt'ō-mī) [' + L. valva, valve, + G. tomē, a cutting]. Incision of the rectal valves.

procumbent (prók-kum'bēt) [L. *procumbere*, to lean forward] Lying face down.

procurive (prók-kūr'iv) [L. *procurivus*, running forward]. Having an involuntary tendency to run forward, as in p. epilepsy.

prodromal (pród'rō-māl) [G. *pródromos*, running before]. Pert. to the initial stage of a disease; the interval bet. the earliest symptoms and the appearance of the rash or fever.

p. rash. One that precedes the true rash of an infectious disease.

prodrome (pród'róm) [G. *pródromos*, running before]. A symptom indicative of an approaching disease.

product (pród'ukt) [L. *producere*, to beget]. Anything which is made naturally or artificially. See *catabolism*, *catabolite*.

production (pród'ukt'shún) [L. *productio*, a begetting, a formation]. Development or formation of a substance. See: *chromoparic*.

productive (pród'ukt'iv) [L. *producere*, to beget]. Forming, as new tissue.

p. inflammation. Inflammation producing new tissue with or without an exudate.

proenzyme (pró-én'zim) [G. *pró*, before, + *en*, in, + *zymē*, a leaven]. SYN: *zymogen*. The inactive form of an enzyme found within a cell which upon leaving the cell is converted into the active form. Ex: *pepsinogen*.

proerythroblast (pró-ē-rith'rō-blást) SYN: *basophilic erythroblast*. The earliest cells which show differentiation in the direction of erythrocyte formation.

proestrus. The period preceding estrus characterized by development of ovarian follicles and concomitant development of uterine endometrium.

proferment (pró-fer'mēt) [' + L. *fermentum*, leaven]. 1. Substance which develops into an enzyme. 2. Microorganism causing fermentation.

professional (pró-fēsh'ün-ál) [L. *professio*, from *profiteri*, to profess]. 1. Pert. to a profession. 2. Caused by the practice of a profession, as *writer's cramp*.

proflavine powder (pró-flā'vín). A powder used for dusting wounds, apparently overcoming infection where sulfanilamide fails.

pro'flu'ium. An excessive flow or discharge; a flux.

p. lactis. Excessive flow of milk.

p. seminis. Flow of semen from the vagina deposited during coition.

profundometer (pró-fōn-dóm-ēt-ēr) [L. *profundus*, deep, + G. *metron*, a measure]. Device for locating a foreign body with the fluoroscope.

profunda. Deep seated; term applied to certain deeply located blood vessels.

progen'itor. An ancestor.

progeny (pró-jén-i) [L. *progeniēs*, offspring]. Offspring.

progeria (pró-jē'rī-ā) [G. *pro*, before, + *geras*, old age]. Premature senility supervening upon infantilism. Rare.

Etiol. Unknown.

Sym: Skin becomes loosened and wrinkled, baldness is common, and arteries become hardened.

progestin (pró-jēs'tin). A corpus luteum hormone which prepares the endometrium for the fertilized ovum. SYN: *progesterone*.

progesterone (pró-jēs'tēr-ōn). $C_{21}H_{32}O_2$, a steroid hormone obtained from the corpus luteum in crystalline form, occurring in two isomeric forms, alpha and beta. It is responsible for 1. Changes in uterine endometrium in 2nd half of menstrual cycle preparatory for implantation of blastocyst. 2. After implantation, development of maternal placenta. 3. Development of mammary glands. It is also formed in the placenta.

Uses. In treatment of menstrual disorders (amenorrhea, dysmenorrhea) and threatened abortion. It is ineffective when given orally hence must be administered parenterally.

proglot'id or proglottis. A segment of a tapeworm. SEE *Cestoda*, *tapeworm*.

prognathism (próg'nā-thizm) [*pro*, before, + *gnathos*, jaw, + *ismos*, condition]. Projection of jaws beyond upper face.

prognathous (próg'nāth-ūs) [' + *gnathos*, jaw]. Having jaws projecting forward beyond rest of the face.

prognosis (próg-nō'sis) [G. *prognōsis*, foreknowledge]. Prediction of course and end of disease, and outlook based on it.

p. anceps. Doubtful prognosis.

p. fausta. Favorable prognosis.

p. infausta. Unfavorable prognosis.

prognostic (próg-nōst'ik) [G. *prognōsis*, foreknowledge]. Affording an indication as to outcome of a disease.

prognosticate (próg-nōst'i-kāt) [G. *prognōstikon*, knowing before]. To make a statement on the probable outcome of an illness.

prog'oso'ma. A tumor such as a hairy mole which develops from displacement of embryonic cells.

pro'gran'ulocyte. A promyelocyte, *q.v.*

pro'grav'id. Before or preceding pregnancy.

p. phase. The secretory phase of the menstrual cycle, *q.v.*

pro'gres'sion. Advancing or moving forward.

p., backward. SYN: *retropulsion*. Walking backward; a symptom seen in certain nervous disorders.

progressive (pró-grēs'iv) [L. *progressus*, stepping forward]. Advancing.

p. muscular atrophy. Gradual advancing atrophy of groups of muscles due to spinal cord degeneration. See: *atrophy*.

p. ossifying myositis. Tendency to bony deposits in the muscles with chronic inflammation.

progyon (pró-jin-ōn). Commercial preparation of female sex hormone extracted from the placenta.

prolowsystole (pró-lō-sis'tō-lē) [G. *prōi*, early, + *systolē*, contraction]. A cardiac contraction occurring before its normal time.

prolowsystolia (pró-lō-sis'tō-lī-ā) [' + *systolē*, contraction]. A condition marked by occurrence of systoles before the normal time.

proletia (prō-lē'fō-shī-ā) [G. *prōtī*, early]. Genital precocity.

projectile vomiting. Vomiting not preceded by nausea in which the stomach contents are forcibly ejected.

projection (prō-jēk'shūn) [L. *pro*, forward, + *jacere*, to throw] 1. The act of throwing forward 2. A part extending beyond the level of its surroundings 3. The mental process by which sensations are referred to the sense organs or receptors stimulated or outside the body to the object which is the stimulus. 4. For: Distortion of a perception as a result of its repression, resulting in such a phenomenon as hating without cause one who has been dearly loved, or attributing to others one's own undesirable traits. Characteristic of the paranoid reaction

prolabium (prō-lā'bi-ŭm) [L. *pro*, forward, + *labium*, lip]. The entire central portion of the upper lip

prolactin (prō-lāk'tīn) [" + *lac*, milk]. Hormone, derived from the ant. pituitary lobe, which stimulates lactation. It also produces luteotrophic effects and is considered identical to luteotrophine. Syn. *galactin*, *mammotropin*

prolaminin (prō-lām'īn, prō-lā-min). Any one of a class of proteins found in seeds, soluble in alcohol, and insoluble in water and absolute alcohol. Syn. *gliadin*.

prolan (prō'lan). A hormone from the ant. pituitary body

prolapse (prō-lāps') [L. *pro*, before, + *lapsus*, from *labi*, to fall]. 1. A dropping of an int. part of the body, as of the uterus or rectum 2. To drop down, noted of an organ. Syn. *ptosis*.

p. (of) anus. See: *prolapsus ani*.

p. of the cord. Expulsion of umbilical cord prematurely. See *labor*.

p. (of) intervertebral disk. Posterior displacement of disk

p. (of) iris. Protrusion of iris through an injury in the cornea

p. (of) rectum. Protrusion of rectal mucosa through the anus

p. (of) uterus. See: *prolapsus uteri*.

prolapse (prō-lāp'sūs) [L. a dropping] A falling or downward displacement of some part of the body, as the uterus.

p. ani. Protrusion of lower portion of digestive tract through ext. sphincter of anus. See: *prolapsus (of) rectum*

p. uteri. Downward displacement of uterus, the cervix sometimes protruding from the vaginal orifice. Syn. *descensus uteri*.

proleptis (prō-lēp'sis) [G. *pro*, before, + *lepsis*, a seizure]. Return of paroxysmal attacks at successively shorter intervals

proleptic (prō-lēp'tik) [" + *lepsis*, a seizure]. Recurring before the time expected, said of paroxysms.

proleukocyte (prō-lū'kō-sīt) [" + " + *kytos*, cell]. An undeveloped leukocyte. Syn: *leukoblast*

proliferate (prō-līf'ēr-āt) [L. *proles*, offspring, + *ferre*, to bear]. To increase by reproduction of similar forms

proliferation (prō-līf'ēr-ā'shūn) [" + *ferre*, to bear]. 1. Reproduction rapidly and repeatedly of new parts, as by cell division. 2. Process or result of rapid reproduction. See: *auzeisis*.

proliferous (prō-līf'ēr-ūs) [" + *ferre*, to bear]. 1. Multiplying, as by formation of new tissue cells. 2. Bearing offspring

p. cyst. One with epithelial lining, proliferating and projecting from inner surface of the cyst.

prolific (prō-līf'ik) [" + *facere*, to make]. Fruitful; reproductive. Syn: *fertile*.

proligerous (prō-līf'ēr-ūs) [" + *gerere*, to bear]. Producing offspring. Syn: *germinating*.

prolinase. An enzyme found in animal tissues and yeast which hydrolyzes proline peptides to simpler peptides and proline.

proline (prō'lēn, -līn). An important amino acid, formed by protein decomposition, having the formula. $C_4H_9N-COOH$.

prolymphocyte (prō'limf'ō-sīt). A cell intermediate between a lymphoblast and lymphocyte

promegakaryocyte. Cell from which a megakaryocyte develops

promegaloblast (prō'mēg'āl-ō-blāst) [G. *pro*, before, + *megas*, *megal*, large, + *blastos*, germ]. A cell of the erythrocyte series preceding the megaloblast.

prometheum. A chemical element. *Sym* *Pm*. At number 61. At. weight 147.

prominentia (prōm-in-ēn'shī-ā) [L.]. A projection

p. laryngea. BNA. The laryngeal prominence; Adam's apple. Syn: *prominens adam*.

p. spiralis. Syn. *spiral prominence*. A small ridge extending entire length of cochlea located on inner surface of spiral ligament. It projects slightly into cochlear canal and contains blood vessels including the vas prominens.

promontory (prōm'un-tō-rī) [L. *promontorium*, a projection]. A projecting process or part.

p. of sacrum. The ant. projecting portion of the pelvic surface of base of the sacrum. With the 5th lumbar vertebra, it forms the sacrovertebral angle

p. of tympanic cavity. Projection on medial wall of tympanic cavity produced by first turn of the cochlea

promyelocyte (prō'mī'ēl-ō-sīt) [G. *pro*, before, + *myelos*, marrow, + *kytos*, cell]. 1. A large mononuclear myeloid cell seen in the blood in leukemia. 2. Cell development bet. myeloblast and a myelocyte, resembling a myeloblast.

pronation (prō-nā'shūn) [L. *prōndre*, to bend forward] 1. The act of lying prone or face downward 2. The act of turning hand so that palm faces downward or backward

pronator. A muscle which pronates. See *Muscles of arm and forearm*. See: *App*

prone (prōn) [L. *prōndre*, to bend forward]. Lying horizontal, with face downward; of the hand, with the palms turned downward. Off: *supine*.

pronephric (prō-nēf'rik). Pert. to the pronephron, *q v*

p. duct. Duct which connects posteriorly to cloaca and to which pronephric tubules are connected.

p. tubules. Several pairs of segmentally arranged tubules which open into cranial portion of pronephric duct. They communicate with coelom through a ciliated funnel-shaped nephrostome. They are vestigial in higher vertebrates.

pronephron, **pronephros** (prō-nēf'rōn, -rōs) [G. *pro*, before, + *nephros*, kidney]. The earliest and simplest type of excretory organ of vertebrates, functional in simpler forms (cyclostomes) and serving as a provisional kidney in some fishes and amphibians. In reptiles, birds, and mammals, it appears in the embryo as a temporary, functionless structure

pronograde (prō'nō-grād) [L. *prōndre*, to bend forward, + *gradus*, a step]. Walking on hands and feet or resting with the body in a horizontal position. Off: *orthograde*.

PRONE POSITION.

pronometer (prō-nōm'ēt-ēr) [" + *G. metron*, a measure] Device for showing amount of pronation or supination of forearm

pronucleus (prō-nū'klē-ūs) [*L. pro*, before, + *nucleus*, nut]. Nucleus of the ovum, the female p., or of the spermatozoon, the male p., after the fertilization of the ovum

prootic (prō-ō'tīk, -ō'tīk) [*G. pro*, before, + *ous, ot-*, ear] In front of the ear.

propagation (prōp-ā-gā'shūn) [*L. propagare*, to fasten forward] Act of reproducing or giving birth *SYN*: generation, reproduction.

propagative (prōp-ā-gā-tīv) [*L. propagare*, to fasten forward]. Pert. to or taking part in reproduction.

propalinal (prō-pāl'in-āl) [*G. pro*, before, + *palin*, back] Applied to a backward and forward movement, as of the jaws.

propeptone (prō-pēp'tōn) [*G. pro*, before, + *peptin*, to digest] An intermediate product in the digestive conversion of protein into peptone *SYN*: hemialbumose

propeptonuria (prō'pēp-tō-nū'rī-ā) [" + " + *ouron*, urine] Excretion of propeptone in the urine. *SYN*: hemialbumosuria.

properdin (prō-perd'in) [*L. perdere*, to destroy] A natural blood chemical that destroys bacteria. It neutralizes viruses giving innate immunity against would-be invaders It is an antidote to "radiation sickness" It is a protein obtained from the serum of blood

prophase (prō'fāz) [*G. pro*, before, + *phasis*, an appearance]. First stage of indirect cell division.

SEE: centriole, "meta-" words, mitosis, "tele-" words.

prophylactic (prō-flī-āk'tīk) [*G. prophylaktikos*, guarding] 1. Warding off disease. 2. Agent which wards off disease

prophylaxis (prō-flī-āks'is) [*G. prophylassein*, to guard against] 1. Observance of rules necessary to prevent disease 2. In dentistry, cleansing of the teeth's surface.

proprietary medicine (prō-prī'ē-tar'ī) [*L. propriarius*, pert. to property]. "Any chemical, drug or similar preparation used in the treatment of diseases, if such article is protected against free competition, as to name, product, composition or process of manufacture, by secrecy, patent or copyright, or by another means." *American Medical Association*. SEE: patent medicine.

proprioception (prō'prī-ō-sēp'shūn). The awareness of posture, movement, changes in equilibrium, and the knowledge of position, weight, and resistance of objects in relation to the body.

proprioceptive (prō'prī-ō-sēp'tīv) [*L. proprius*, one's own, + *ceptor*, from *capere*, to take] Pert. to proprioception.

p. impulses. Afferent impulses arising in proprioceptors, *q v*

p. sense. Muscle sense, kinesthetic sense

proprioceptor (prō'prī-ō-sēp'tor) [*L. proprius*, one's own, + *ceptor*, a receiver, from *capere*, to take] A receptor which responds to stimuli originating within the body itself, esp. those responding to pressure or stretch *Ex*: muscle spindles, Golgi tendon organs, pacinian corpuscles, and labyrinthine receptors

proptometer (prōp-tōm'ēt-ēr) [*G. proptōsis*, protrusion, + *metron*, a measure] An instrument for measuring extent of exophthalmos

proptosis (piōp-tō'sis) [*G. proptōsis*, protrusion] A downward displacement, as of the uterus or of the eyeball in exophthalmic goiter, or in inflammatory conditions of the orbit

propulsion (prō-pūl'shūn) [*L. propulsus*, from *propellere*, to force forward]. 1. A tendency to push or fall forward in walking. 2. A condition seen in paralysis agitans. SEE: festination

propylthiouracil (prō'pil-thī-ō-ū'rā-sil). Antithyroid drug used in treatment of hyperthyroidism, thyroditis, and thyrotoxicosis Also employed for preoperative therapy and in cases where surgery is contraindicated

DOSAGE Severe hyperthyroidism, 50 mg every 8 hours Milder hyperthyroidism, 50 mg twice daily

pro re nata (prō rā nah'tā) [*L.*]. According to the circumstances

prorennin (prō-rēn'in) [*L. pro*, before, + *rennin*]. The preliminary material which is converted into rennin. *SYN*: mother substance, renninogen, zymogen.

prosecretin (prō'sē-krē'tin) [*L. pro*, before, + *secretio*, a secretion] Substance present in the duodenal mucosa which, when acted on by hydrochloric acid in chyme, is converted into secretin. SEE: secretin

prosector (prō-sēk'tor) [" + *sector*, from *secare*, to cut]. One who prepares cadavers for dissection or dissects for demonstration.

prosencephalon (prōs-ēn-sēf'al-ōn) [*G. pros*, before, + *egkephalos*, brain]. The embryonic forebrain which gives rise to the telencephalon and diencephalon, *q v*.

prosodemic (prōs-ō-dēm'ik) [*G. prosō*, forward, + *dēmos*, people]. Spread by individual contact; said of a disease.

prosepalgia (prōs-ō-pāl'yī-ā) [*G. prosōpon*, face, + *algos*, pain]. Neuralgic pain in

the trigeminal nerve and its branches.
SYN: *protopodynia*.

prosopectasia (prós'ô-pék-tá'zī-ā) [G. *prosopeon*, face, + *ektasis*, dilatation] Abnormal size of the face

prosopic (prô'sôp'ik). Pert to face or facial skeleton that is convex anteriorly

prosoptanoschisis (prôs'ô-pô-nô-chê-sis) Oblique facial cleft, a slanting furrow extending from mouth to eye

prosoptodiplegia (prôs'ô-pô-di-plê'jī-ā) [G. *prosopeon*, face, + *dis*, double, + *plêge*, a stroke] Paralysis on both sides of the face

prosoptodynia (prôs'ô-pô-dīn'ī-ā) [+ *odyne*, pain] Pain in the face. **SYN** *tic douloureux*.

prosoptoneuralgia (prôs'ô-pô-nu-rāl'jī-ā) [+ *neuron*, sinew, + *algos*, pain]. Facial neuralgia. **SYN** *prosoptalgia*.

prosoptoplegia (prôs'ô-pô-plê'jī-ā) [+ *plêge*, stroke]. Paralysis of the face.

prosoptoplegic (prôs'ô-pô-plê'jīk) [+ *plêge*, a stroke]. Relating to, or afflicted with, facial paralysis.

prosoptoschisis (prôs'ô-pôs'kī-sis) [L + *schisis*, a cleft]. Congenital cleft of the face.

prosoptospasm (prôs'ô-pô-spazm) [+ *spasmus*, a spasm]. Facial spasm.

prosoptocia (prôs'ô-pô-tô'shī-ā) [+ *tokos*, birth] Presentation of the face in parturition.

prosoptopus va'rus. Congenital obliquity of face and sternum

prostatalgia (prôs-tā-tal'jī-ā) [G. *prostatēs*, prostate, + *algos*, pain]. Pain of the prostate gland.

prostate (prôs'tāt) [G. *prostatēs*]. A male body, partly glandular, partly muscular, surrounding proximal portion of the male urethra and the neck of the bladder, consisting of a median lobe and 2 lateral lobes, the glandular matter emptying through ducts into the prostatic urethra. About the size of a horse-chestnut, weighing about 25 Gm. It is enclosed in a fibrous capsule containing smooth muscle fibers in its inner layer. Muscle fibers also separate the glandular tissue and encircle the urethra forming the int. sphincter of the bladder. The gland is about 4 x 3 x 2½ cm. It frequently contains *corpora amylacea*, concentrically striated bodies.

FUNCTION The gland secretes a thin, opalescent, slightly alkaline fluid which forms a part of semen and stimulates motility of sperm.

PATHOLOGY Inflammation of the prostate may occur, oftentimes the result of gonorrheal urethritis. Enlargement of the prostate is common, esp. after middle age. This results in urethral obstruction, impeding urination and sometimes leading to retention. Forty to 50% of men over 60 have prostate trouble. Tumors, both benign and malignant, calculi, and nodular hyperplasia are common.

prostatectomy (prôs-tā-têk'tô-mī) [G. *prostatēs*, prostate, + *ektomê*, excision]. Excision of part or all of the prostate gland. P. may be an incision in the perineum (*perineal p.*) or by an incision into the bladder (*suprapubic p.*)

The operation procedure is same as that for the cystotomy. In this operation

some operators control hemorrhage with packs 4 in. wide and 2 yd. long. These pads are dipped in a small sterile dish filled with thromboplastin.

NP. It is very essential that these packs be made with edges turned in and sewed together, otherwise a thread of gauze may be left behind. Raw edged gauze should never be used in the bladder, nor in fact at any time by the operating surgeon.

COMPLICATIONS Retention of urine, hematuria, cystitis, infection of kidney, pyelitis, infective nephritis, renal failure.

prostatic (prôs-tāt'ik) [G. *prostatēs*, prostate]. Concerning the prostate gland.

p. calculus. A stone in the prostate.

p. plexus. 1 Veins around the base and neck of the bladder and prostate gland. 2 Nerves from the pelvic plexus to the prostate gland, erectile tissue of the penis, and to the seminal vesicles.

p. urethra. Part of the urethra surrounded by the prostate gland.

prostatism (prôs'tā-tizm) [G. *prostatēs*, prostate, + *-ismos*, condition]. Term applied to all conditions which result in obstruction by the prostate gland of flow of urine from the bladder.

ETIOI. Benign hypertrophy, carcinoma, prostatitis, nodular hyperplasia.

SYM. Frequent, uncomfortable urination, nocturia. Retention of urine may occur with development of uremia.

prostatitis (prôs-tā-tīt'is) [+ *-itis*, inflammation]. Inflamed condition of the prostate gland.

May be a complication of gonorrheal infection.

p., acute. Discomfort and pain in perineal area. Frequent urination; later, retention of urine. If severe, marked malaise, rise of temperature, constipation, thirst, furred tongue, rigors and vomiting.

p., chronic. Dull, aching pain in perineal region. Discharge from the penis.

prostatocystitis (prôs'tāt-ô-sīs-līt'is) [G. *prostatēs*, prostate, + *kystis*, bladder, + *-itis*, inflammation]. Inflammation of the prostatic urethra involving the bladder.

prostatocystotomy (prôs'tāt-ô-sīs-tôt'ô-mī) [+ *tome*, a cutting]. Surgical incision of the prostate and the bladder.

prostatodynia (prôs'tāt-ô-dīn'ī-ā) [+ *odyne*, pain]. Pain in the prostate gland. **SYN** *prostatalgia*.

pros'tat'olith. A calculus of the prostate gland.

prostatomegaly (prôs'tāt-ô-mêg'āl-ī) [+ *megas*, *megal-*, large]. Enlargement of the prostate gland.

prostatometer (prôs-tāt-ô-mêt'ēr) [+ *metron*, a measure]. Device for measuring enlargement of the prostate.

prostatomyomectomy (prôs'tāt-ô-mī-ô-mêk'tô-mī) [+ *mys*, *my-*, muscle, + *ektomê*, excision]. Surgical excision of a prostatic myoma.

prostatomy (prôs'tāt'ô-mī) [+ *tomê*, a cutting]. Incision into the prostate.

prostatorehea (prôs-tāt-or-rê-ā) [G. *prostatēs*, prostate, + *roia*, flow]. Abnormal discharge from the prostate gland.

prostatotomy (prōs-tā-tōt'ō-mī) ['' + *tomē*, a cutting]. Incision into prostate gland.

prostatovesiculectomy (prōs'tāt-ō-vēs-īk'-ū-lēk'ō-mī) ['' + *L. vesiculus*, a little sac, + *G. ektomē*, excision]. Removal of the prostate gland and seminal vesicles

prostatovesiculitis (prōs'tāt-ō-vēs-īk'-ū-lī'tis) ['' + '' + *G. -itis*, inflammation]. Inflammation of the seminal vesicles and prostate gland

prostration (prō-stēr-nā'shun) [*G. pro*, before, + *sternon*, chest]. Habitual flexion of the trunk forward. *SYN campocormia*.

prosthion (prōs'thē-ōn) [*G. prosthos*, foremost] The alveolar point; midpoint of lower border of upper alveolar arch

prosthesis (prōs'thē-sis) [*G. pros*, to, + *thesis*, a placing]. 1 Replacement of a missing part by an artificial substitute 2. An artificial organ or part

p., dental. Mechanical dentistry.

p., maxillofacial. Repair and artificial replacements of face and jaw.

p., paraffin. Subcutaneous injection of paraffin to restore the natural contour of a part or to replace cartilaginous part of the nasal septum.

prosthetics (prōs'thē'tiks) ['' + *thesis*, a placing] The making and application of an artificial part to remedy a want or defect of the body, as a wooden leg.

prosthetist (prōs'thē-tist) ['' + *thesis*, a placing]. 1. Specialist in artificial dentures. 2. Maker of artificial limbs.

prosthodontist (prōs-thō-dōn'tist) ['' + '' + *odous*, *odont-*, tooth] A dentist who specializes in the mechanics of making and fitting artificial teeth.

prostigmin (prō-stīg'mēn). Regisd. trademark for a brand of neostigmine; a synthetic parasymphathetic stimulant for oral and parenteral use A cholinergic stimulant which inhibits the destruction of acetylcholine by cholinesterase

Uses: To stimulate peristalsis, improve tone and motility of intestine and urinary bladder, and to stimulate skeletal muscle. Used as an antidote to curare, for treatment of myasthenia gravis and glaucoma, for diagnosis of pregnancy and treatment of delayed menstruation

p., bromide. *Uses*: Orally, for the treatment of myasthenia gravis USP. *Syn*: *neostigmine b.*

Dosage: 0.015 Gm.

p., methylsulfate. *Uses*: For prevention and treatment of postoperative distention. USP. *Syn*: *neostigmine methylsulfate*.

Dosage: For prophylactic, 1 cc. 1-4000; for treatment, 1 cc 1-2000 solution.

prostitution (prōs-lī-tū'shun) [*L. prosti-tuere*, to prostitute]. Profession practiced, esp. by women, in which sexual gratification is exchanged for hire.

Said to be the oldest profession. Although not engaged in it as a profession, the woman who, without affection, accepts money, gifts, or maintenance in exchange for sexual gratification prostitutes her body.

It is a neurosis found esp. in the hypothyroid, hypoadrenal female, generally of low intelligence and without culture. The prostitute, however, may be of either sex, the male prostitute being inf. to the female. Many female prostitutes

have a father fixation complex. *See*: *parent-fixation*.

prostrate. 1. Lying with body extended 2 To deprive of strength or to exhaust *pros'trated*. Depleted of strength, exhausted.

prostration (prōs-trā'shun) [*L. prostratus*, spreading before]. Absolute exhaustion.

p., heat. Exhaustion resulting from exposure to excessive heat

p., nervous. General physical and nervous exhaustion *SYN*: *neurasthenia*

profamine (prō'tā-mēn) ['' + *amine*] 1 One of a class of simple proteins which are strongly basic, noncoagulable in heat and yield diamino acids when hydrolyzed 2 An amine, $C_{16}H_{15}O_2N_2$, isolated from spermatozoa and spawn of fish

Found in fish sperm and named from the fish from which it is derived. *See*: *clupeine*, *salmine*, *sturnine*.

p., insulin, *p., zinc insulin*. Preparations of insulin which are more slowly dissolved and absorbed by body tissues than ordinary insulin Act longer and keep the blood sugar normal for 20 to 24 hr. One injection is sufficient for this period

protanopia (prō-tān-ō'pī-ā) [*G. prōtos*, first, + *an-*, negative, + *opsis*, vision]. Defect in color vision in which there is condition of red blindness

protean (prō'tē-ān) [*G. Prōteus*, a god who changed shapes at will]. Having the ability to change form, as the amoeba. 2. [*G. prōtos*, first]. One of the primary derivatives of protein resulting from action of water, enzymes or dilute acids

protease (prō'tē-as) [*G. prōtos*, first, + *ase*, enzyme]. A protein-splitting enzyme.*

protective (prō-tēk'tiv) [*L. protectus*, shielding]. 1. Covering or guarding. 2. An agent that will mechanically protect the part to which applied. *Ex*: *collodion*, *plaster*. *SYN*: *dressing*

proteidogenous (prō'tē-id-ōj'ēn-ās) ['' + *gennan*, to produce]. Producing proteins.

protein (prō'tē-in, prō'tēn) [*G. protos*, first]. One of a class of nitrogenous compounds which occur naturally, give amino acids when hydrolyzed, and are essential to all living organisms.

CLASSIFICATION

p., conjugated. Those containing the protein molecule with some other molecule or molecules. *Chromoproteins*: *Ex*: hemoglobin. *Glycoproteins*: *Ex*: mucin. *Lecithoproteins*: Compounds of lecithins or similar substances with the protein molecule. *Nucleoproteins*. *Phosphoproteins*: *Ex*: casein.

p., derived. Proteins not occurring naturally but derived from them through the action of heat, reagents, enzymes, etc.

p., simple. Those which produce alpha amino acids on hydrolysis *Albumins*: Soluble in water and coagulated by heat *Ex*: egg albumen. *Globulins*: Insoluble in water, soluble in salt solutions, coagulated by heat. *Ex*: edestin, from hemp seed. *Glutelins*: *Prolamines* (alcohol-soluble proteins) *Ex*: gliadin, from wheat. *Albuminoids*: *Ex*: keratin, from corn. *Histones*. *Protemnes*. *Ex*: salmon, from the ripe sperm of salmon.

Composition: Proteins are composed of carbon, hydrogen, oxygen, nitrogen,

phosphorus, sulfur, and iron which make up the greater part of plant and animal tissue. Amino acids represent the elements in proteins, 22 of which may be combined to form various proteins. Different protein foods contain a different number and various kinds of amino acids. A complete protein is one that contains all the *essential amino acids* (tryptophane, lysine, methionine, valine, leucine, isoleucine, phenylalanine, threonine, arginine, and histidine). These are necessary for growth and maintenance of body weight.

Functions. Proteins are a source of heat and energy to the body, they are essential for growth, the building of new tissue, and the repair of injured or broken-down tissue. They form an integral part of the protoplasm of every cell.

They are oxidized in the body, thus liberating heat. One Gm supplies 4 calories of heat. It is said that 0.65 Gm. of protein will care for the wear of 1 kilogram of body tissue or body weight. That amount is the minimum requirement as a basal protein level.

Children require from 2 to 3 Gm. per kilogram of body weight. Weight should always be calculated at the normal level. Age also is a factor in determining protein requirements, the amount decreasing with the age. Physical work demands increased protein requirement, as is the case during menstruation, lactation, and convalescence. Excess protein in the diet means an elimination of nitrogen through the urine.

Sources. Milk, eggs, cheese, and meat are the best sources. Proteins are found in both vegetable and animal forms. The principal animal proteins are ovalbumin in eggs, lactalbumin in milk, serumalbumin in serum, myogen or myosinogen in striated muscle tissue, crystallins found in the lens of the eye, fibrinogen in blood, ovoglobulin in eggs, lactoglobulin in milk, serumglobulin in serum, myosin in striated muscle tissue, thyroglobulin in thyroid, globin in blood, thymus histones in thymus, collagen and gelatin in connective tissue, elastin and keratin. Nucleoprotein is found in the thymus, pancreas, liver, animal cells and glands, chondroprotein is found in tendons and cartilage; mucin and mucoids are found in various secreting glands; and animal mucilaginous substances; caseinogen in milk, vitellin in egg yolk; hemoglobin in blood, and leucithoprotein in blood, brain and bile.

p. balance. Equilibrium between protein intake and anabolism and protein catabolism and elimination of nitrogenous products. SEE. *nitrogen equilibrium*

p., Bence-Jones. Protein which occurs in urine; its presence is symptomatic of certain pathologic conditions multiple myeloma, lymphosarcoma, leukemia, or Hodgkin's disease.

p.s., blood. Those present in blood. Includes *hemoglobin* present in red blood cells and the *plasma proteins*. Normal values are hemoglobin, 14-16%; albumin, 4-5%; globulin, 1.5-3%, fibrinogen, 0.2-0.4%. The amount of albumin in relation to the amount of globulin is referred to as the *albumin-globulin (A/G) ratio*, which is normally 1.5-2.5:1.

p., complete. One containing all the essential amino acids.

p., defensive. Any of the proteins

present in blood which render the body immune to infectious disease. SEE. *globulin, alecin*

p., denatured. P. whose amino acid composition and stereochemical structure has been altered by physical or chemical means.

p., high diet. 1.5-2 Gm. pro. per kg. ideal body weight.

p., incomplete. One lacking one or more of the essential amino acids.

p., low diet. 0.65 Gm. pro. per kg. ideal body weight. Supplied by means of pro. of good biological value.

p., native. A protein in its natural state; one which has not been denatured.

p.s., plasma. P's present in blood plasma, viz., albumins, globulins, fibrinogen.

p., sensitization. Condition in which patient is hypersensitive to foreign proteins, so that severe reaction occurs upon their administration.

p., serum. P's present in blood serum, viz., albumins and globulins.

p., sparer. A substance in the diet (carbohydrates or fat) which relieves the body tissues of the necessity of giving up protein for energy.

p., tissue. P. within the solid tissues of the body in contrast to those in circulating blood.

proteinase (prō'tē-in-ās) [G. *prōtos*, first, + ase, enzyme]. A proteolytic enzyme, an enzyme that acts on native proteins.

proteinic (prō'tē-in'ik) [G. *prōtos*, first] Relating to protein.

proteinivorous (prō'tē-in-iv'ō-rūs) ["" + L. *vorare*, to devour] Living on protein.

proteinogenous (prō'tē-in-ōj'ēn-ūs) ["" + *gennan*, to produce] Developing from a protein.

proteinophobia (piō'tē-in-ō-fō-bi-ā) ["" + *phobos*, fear] Aversion to foods containing protein.

proteinosis (prō'tē-in-ō'sis). Accumulation of proteins in the tissues.

p., lipid. SYN. *lipodosis cutis et mucosae*. A rare condition resulting from altered fat metabolism.

proteinuria (prō'tē-in-ūr'i-ā) ["" + *ouron*, urine]. Protein, usually albumin, in the urine.

proteogens (prō'tē-ō-jēns) [G. *prōtos*, first, + *gennan*, to produce]. Preparations of plant proteins for injection hypodermically.

proteolysin (prō'tē-ōl'is-in) ["" + *lysis*, dissolution] A specific substance causing decomposition of proteins.

proteolysis (prō'tē-ōl'is-is) [G. *prōtos*, first, + *lysis*, dissolution]. The hydrolysis of proteins usually by enzyme action into simpler substances.

proteolytic (prō'tē-ō-lit'ik) ["" + *lysis*, dissolution]. In the chemistry of enzymes, hastening the hydrolysis of proteins.

proteometabolism (prō'tē-ō-mē-tāb'ō-lizm) ["" + *metabolē*, change, + *ismos*, condition]. Digestion, absorption, and assimilation of proteins.

proteopeptic (prō'tē-ō-pēp'tik) ["" + *peptēn*, to digest]. Pert. to the digestion of protein.

proteopexic (prō'tē-ō-pēks'ik) ["" + *pēxis*, fixation]. Pert. to fixation of proteins within the organism.

proteopexy (prō'tē-ō-pēks't) [G. *prōtos*, first, + *pēxis*, fixation]. The fixation of proteins within the body.

protease (prō'tē-ās) [G. *prōtos*, first]. One of the class of intermediate prod-

ucts of proteolysis bet. protein and peptone.

P., primary. First formed products during proteolysis of proteins.

P., secondary. P. resulting from further hydrolysis of primary proteoses.

proteosuria (prō'tē-ōs-ū'ri-ā) [' + *ouron*, urine] Proteose in urine. SYN. *albumosuria*.

proteuria (prō'tē-ū'ri-ā) [' + *ouron*, urine] Proteins in the urine. SYN. *proteinuria*.

Proteus (prō'tē-ūs) [G. *Prōteus*, a god of many forms]. A genus of family Bacteriaceae found in intestines and decaying material, which cause protein decomposition.

P. morgani. Species isolated from stools of children suffering from summer diarrhea.

P. vulgaris. An essentially saprophytic form but may invade body producing pathologic conditions.

prothesis (piōthēs-is) [G *pro*, before, + *thesis*, a placing]. Replacement by an artificial part SYN *prosthesis*.

prothrombase (prō-thrōm'bās) [' + *thrombos*, a clot]. A substance which becomes a fibrin ferment when activated by thrombokinase. SYN *prothrombin*, *thrombogen*.

prothrombin (prō-thrōm'bīn) [' + *thrombos*, a clot]. A chemical substance existing in circulating blood, and which, through the medium of *thrombokinase*, interacts with calcium salts to produce thrombin. SYN. *thrombogen*.

prothrombinopenia (prō-thrōm'bi-nō-pē-ni-ā). SYN *hypoprothrombinemia*. Deficiency of prothrombin in the blood.

prothrombonemia (prō-thrōm'bō-nē-mi-ā). Presence of excess prothrombin in the blood.

Protis'ta. Term applied to kingdom of organisms including the simpler animals and plants, characterized by being acellular or unicellular, includes bacteria, fungi, spirochetes, protozoa, viruses, and rickettsias.

protistologist (prō'tis-tōl'ō-jist) [G. *prōtista*, the very first, + *logos*, study]. One who studies the Protista, the unicellular organisms.

protistology (prō'tis-tōl'ō-jī) [' + *logos*, study] The science of Protista or animal unicellular plant and microorganisms. SYN *microbiology*.

proto- [G]. 1. A prefix signifying *first*. 2. The lowest of a series of compounds having the same elements.

protobe (prō'tōb) [G *prōtos*, first, + *bios*, life]. d'Herelle's term for the bacteriophage. SYN: *protobios*.

protobiology (prō'tō-bi-ōl'ō-jī) [' + *bios*, life, + *logos*, study] The phase of science dealing with the forms more minute than bacteria, as the ultraviruses and bacteriophages.

protobios (prō'tō-bi-ōs) [' + *bios*, life]. A term suggested by d'Herelle for the minute forms parasitic to other organisms. SYN: *bacteriophage*.

protoblast (prō'tō-blāst) [' + *blastos*, a germ]. 1. A naked cell with no cell wall yet formed. 2. Blastomere of segmenting ovum which is parent cell of a part or organ.

protoblastic (prō'tō-blās'tik) [' + *blastos*, germ]. Pert. to a protoblast.

protocol (prō'tō-kōl) [' + *kolla*, glue (first notes glued)]. 1. A clinical report from first notes taken. 2 Minutes of a meeting. 3. Description of steps taken in an experiment.

protodiastole (prō'tō-dī-ās'tō-lē). The

first of four phases of ventricular diastole characterized by drop in intraventricular pressure and closure of semilunar valves.

protogala (prō'tō-gāl-ā) [' + *gala*, milk]. A mother's first milk after birth of a child. SYN *colostrum*.

protogaster (prō'tō-gās'ter) [G *prōtos*, first, + *gaster*, belly] The archenteron or gastrocele; the cavity in a gastrula or developing embryo from which the digestive tract develops.

protoleukocyte (prō'tō-lū'kō-sīt) [' + *leukos*, white, + *kytos*, cell]. A minute lymphoid cell in red bone marrow and in the spleen.

Pro'tomastig'ida. An order of flagellate protozoa. It contains several pathogenic forms including *Leishmania* and *Trypanosoma*.

proton (prō'tōn) [G *prōtos*, first]. A positively charged particle forming the nucleus of light hydrogen (*protium*) and present in the nuclei of all elements, the atomic number of the element indicating the number of protons present. SEE *atom*, *atomic theory*, *electron*, *element*.

pro'topath'ic. Primitive, undiscriminating. SEE *sensibility*.

pro'topla'sia. The primary formation of tissue.

protoplasm (prō'tō-plāzm) [G *prōtos*, first, + *plasma*, a thing formed] A thick, viscous colloidal substance which constitutes the physical basis of all living activities, exhibiting the properties of assimilation, growth, motility, secretion, irritability, and reproduction. It is a complex mixture of heterogeneous substances surrounded by an invisible membrane which regulates the interchange of substances with the surrounding medium. It possesses the physical properties of a colloidal mass, the medium of dispersion being water.

It consists of *inorganic substances* (water, mineral compounds) and *organic substances* (proteins, carbohydrates, and lipids). The principal elements present are oxygen, carbon, hydrogen, nitrogen, calcium, and phosphorus, which comprise about 99% of protoplasm. Others present in small amounts are potassium, sulfur, chlorine, sodium, magnesium, iron together with trace elements (copper, cobalt, manganese, zinc and others).

RS cell, *cytoplasm*, *nucleus*.

protoplasmic (prō'tō-plāzm'ik) [G. *prōtos*, first, + *plasma*, a thing formed]. Pert. to protoplasm or composed of it.

protoplast (prō'tō-plāst) [G *prōtos*, first, + *plassein*, to form] SYN: *protoplastism*. 1 A cell. 2 A mass of protoplasm.

protoporphyrin (prō'tō-pōr'fir-in). C₃₄H₃₄N₄O₄, a derivative of hemoglobin containing four pyrrole nuclei. Formed from heme (ferriprotoporphyrin) by deletion of an atom of iron. Occurs naturally and has also been synthesized.

protoproteose (prō'tō-p'rō'tē-ōz). A primary proteose which upon further digestion is converted to deuteroproteose.

protopasm (prō'tō-spāzm) [' + *spasmos*, a spasm]. One which begins in 1 area and which extends to other parts.

prototoxin (prō'tō-tōks'in) [' + *toxikon*, poison]. Dissociation product of a toxin, having greatest affinity for the antitoxin.

protophagic (prō'tō-trō'fik) [' + *trophē*, nourishment]. Requiring simple inorganic elements as food.

protovertebra (prō'tō-vēr'te-brā) [G. *prōtos*, first, + *L. vertebra*, vertebra].

Table of Pathogenic Protozoa

Subphylum	Genus and Species	Disease Caused
<i>Mastigophora</i> Locomotion by flagella	<i>Borrelia recurrentis</i> <i>Borrelia duttoni</i> <i>Borrelia bronchialis</i> <i>Borrelia vincenti</i> <i>Leptospira icterohaemorrhagiae</i> <i>Leishmania donovani</i> <i>Leishmania braziliensis</i> <i>Leishmania tropica</i> <i>Giardia lamblia</i> <i>Trypanosoma gambiense</i> <i>Trypanosoma rhodesiense</i> <i>Trypanosoma cruzi</i>	Relapsing fever Relapsing fever Bronchial infection Vincent's disease Well's disease Kala-azar American leishmaniasis Oriental sore Intestinal disturbances Sleeping sickness Sleeping sickness Chagas' disease
<i>Sarcodina</i> Locomotion by pseudopodia	<i>Entamoeba histolytica</i> <i>Dientamoeba fragilis</i>	Amebic dysentery Diarrhea, fever
<i>Sporozoa</i> No locomotion in adult stage	<i>Plasmodium malariae</i> <i>Plasmodium falciparum</i> <i>Plasmodium vivax</i> <i>Plasmodium ovale</i> <i>Balantidium coli</i>	Quartan malaria Malignant tertian malaria Benign tertian malaria Ovale malaria Balantidiasis
<i>Ciliophora</i> Possess cilia in some stage of life cycle		

Primitive vertebra in the notochord.

SYN *metamere, somite*

protozoa (prō-tō-zō'ā) (sing. *protozoon*) [G *protos*, first, + *zōon*, animal]. The phylum of the animal kingdom which includes the simplest animals. Most are unicellular, although some are colonial. Reproduction usually asexual by fission, although conjugation and sexual reproduction occur. For subphyla and species of medical importance, SEE: *Table of Pathogenic Protozoa*

protozoacide (prō-tō-zō'ā-sid) [" + " + L. *cidus*, from *caedere*, to kill]. Destructive to, or that which kills, protozoa. **protozoal** (prō'tō-zō'āl) [" + *zōon*, animal]. Pert. to protozoa, unicellular organisms.

p. diseases. Those produced by single-celled organisms, such as amebic dysentery, malaria and syphilis.

protozoology (prō'tō-zō-ō'lō-jī) [" + " + *logos*, study]. Phase of science dealing with study of protozoa.

protozoon (prō'tō-zō'ōn) (pl. *protozoa*) [" + *zōon*, animal]. Unicellular organism. SEE: *protozoa*.

protozoophagie (prō'tō-zō'ō-fāg, -fāj) [" + " + *phagein*, to eat]. A phagocyte which ingests protozoa.

protractor (prō-trāk'tōr) [L. *pro*, forward, + *tractōr*, that which draws]. 1. Instrument for removing foreign bodies from wounds. 2. A muscle that draws a part forward. OPP: *retractor*.

protrude. To project; to extend beyond a border or limit.

protrusion. State or condition of being forward or projecting.

protuberance (prō-tū'bēr-āns) [" + *tuberare*, to bulge]. A part that is prominent beyond a surface, like a knob.

proud flesh (prowd). A mass of excessive

granulation, formed when a wound shows no other sign of healing or tendency to cicatrization.

provisional (prō-vizh'un-āl) [L. *provisio*, a providing before]. Serving a temporary use

provitamin (prō-vi'tām-in) [L. *pro*, before, + *vita*, life, + *amine*]. A substance which may be inactive, but which can be transformed in the body to the corresponding active vitamin. They can function as vitamins

Ex *carotene*, which is the precursor of *vitamin A*

proximal (prōk'sim-ād) [L. *proximus*, next, + *ad*, toward]. Toward the proximal or central point.

proximal (prōks'im-āl) [L. *proximus*, nearest]. Nearest the point of attachment.

proximate (prōks'im-āt) [L. *proximus*, nearest]. Next to; immediate

proximate (prōk-si-mō-āi-āk'si-ā) [L. *proximus*, nearest, + *G ataxia*, lack of order]. Lack of coordination in muscles of the proximal area of an extremity, as the arm, forearm, thigh, or leg

pro'zone. That portion of the low dilution range of a homologous serum which fails to agglutinate bacteria which are agglutinated by the same serum in a higher dilution.

prozymogen (prō-zī'mō-jēn) [G. *pro*, before, + *zyme*, leaven, + *gennan*, to produce]. An intranuclear substance that becomes zymogen. SYN: *prezymogen*.

prune (prōon) [L. *prunā*]. COMP: Contains malic acid and sugar.

AV. SERVING (fresh and dried): 50-100 Gm. PRO. 0.5-2.1, Fat 0.1-0.0, Carbo. 6.7-73.0.

VITAMINS (both): A++ , B+ and ++ , C— to + and none, G+ and dried only.

ASH CONST. (dried only): Ca 0.054, Mg 0.055, K 1.030, Na 0.069, P 0.105, Cl 0.617,

S 0.037, Fe 0.003. A good source of iron and ranks with raisins.

pruriginous (prū-rĭj'ĭn-ŭs) [L. *prurigō*, itch, from *prurire*, to itch]. Pert. to, or of the nature of, prurigo.

prurigo (prū-rĭgō) [L. itch, from *prurire*, to itch]. A chronic skin disease marked by constantly recurring, discrete, pale, deep-seated, intensely itchy papules on extensor surfaces of limbs.

Superimposed exanthematous manifestations may mask the true nature.

Etiol.: Exciting cause unknown. Hygienic factors are supplementary.

Progn.: Guarded. It begins in childhood and may last a lifetime.

Treatment: Constitutional and local. Hygienic regimen. Locally, antipruritics.

p. aestivalls. P. recurring every summer and continuing during hot weather.

p. agria. Very severe p. with great itching. [eruption of milk teeth]

p. infantilis. P. in children during p. nodularis.

p. nodularis. Eruption in skin of hard nodules with great itching.

p. simplex. Simple form of p. with recurring tendency.

pruritus (prū-rĭ'tūs) [L. itching, from *prurire*, to itch]. Severe itching.

May be symptomatic, or occur idiosyncratically as a neurosis without structural change.

Etiol.: Predisposing factor is cutaneous hyperesthesia. Localized causes are present in p. ani, p. vulvae, focal infection, mycotic infection, bath itch, etc.

Treatment: Exciting or contributory cause to be located and removed.

Hygienic regimen. Filocarpine, phenacetin, bromide. Colon vaccine for protein shock.

In anal and vulvar pruritus, examination by competent gynecologist or proctologist before cutaneous therapy is instituted.

In bath avoid too sudden changes of temperature. For dry skins, avoid frequent soap and water bathing.

Soft, nonirritating underclothing, soothing lotions, oil rubs, antipruritics.

p. aestivalls. P. with prickly heat occurring in hot weather. SYN: *summer itch*.

p. ani. Itching about the anus. May be due to threadworms, fistula in ani, hemorrhoids, or irritation.

[lesion. **p. essential**. P. without apparent skin

p. hiemalls. Winter itch, occurring in cold weather. [live skin changes.

p. senilis. P. in aged with degeneration. **p. symptomatic**. P. as a symptom of some other disorder.

p. vulvae. Disorder marked by severe itching of ext. female genitalia. Often an early sign of diabetes mellitus.

Prussak's space (prōs'āk). Tiny space in middle ear bet. Shrapnell's membrane laterally and neck of malleus medially.

prussic acid (prūs'ĭk, prōs'sĭk). A violent and rapid poison. SYN: *acid, hydrocyanic, q.v.*

psalterium (sāhl-tēr'ĭ-ŭm) [G. *psalterion*, harp]. SYN: *lyre, hippocampal commisure*.

A transverse band of fibers which connect the crura of the fornix immediately posterior to body of fornix.

psammoma (sām-ō'mā) [G. *psammos*, sand, + *ōma*, tumor]. A small tumor of the brain, the choroid plexus and other areas, containing calcareous particles.

p. bodies. SYN: *corpora arenacea, brain sand*. Laminated concretions often found in the pineal body.

psammomasarcoma (sām-ō'-sar-kō'mā) [G. *psammos*, sand, + *sarx*, flesh, + *ōma*,

tumor]. A sarcoma in which psammoma bodies are present.

psammotherapy (sām-ō'-thēr-ā-pĭ) [" + *therapeia*, treatment]. The application of sand baths in treatment.

psammous. Sandy, gritty.

pselaphesia, pselaphesis (sēl-ā-fē-zhĭ-ā, -sĭs) [G. *pselaphēsia*, touch]. 1. Active sense of touch, including muscle sense.

2. Plucking at bedclothes with the fingers, a sign observed in low delirium. SYN: *carphology*.

psellism, psellismus (sēl'ĭzm, sēl-ĭz-mŭs) [G. *psellizein*, to stammer]. Defective pronunciation, stuttering or stammering.

p. mercurialis. Jerking, hurried, unintelligible speech in mercurial tremor.

pseudacousma (sū'dā-kūz'mā) [G. *pseudēs*, false, + *akousma*, a thing heard]. Condition in which all sounds are heard falsely, seeming to be altered in quality of pitch, or imaginary sounds are heard.

pseudacousis (sū'dā-kū'sĭs) [" + *akousis*, hearing]. State in which sounds are heard falsely or imagined. SYN: *pseudacousma*.

pseudagraphia (sū-da'grāf'ĭ-ā). SYN: *pseudographia*. A form of agraphia in which a person is unable to write independently but is able to copy words or letters.

pseudaphia (sū-dāf'ĭ-ā) [" + *aphē*, touch]. A false or defective perception of touch.

See: *paraphia, pseudesthesia*.

pseudarthrit (sū'dar-thrĭ'tĭs) [" + *arthron*, joint, + *-itis*, inflammation]. Hysterical disease of the joints.

pseudarthrosis (sū-dar-thrō'sĭs) [" + *-ōsis*, disease]. A false joint developing after a fracture that has not united.

pseudesthesia (sū-dēs-thē-zĭ-ā) [" + *aisthēsis*, sensation]. 1. An imaginary or false sensation, as that after amputation felt in the lost part. 2. Sense of feeling not caused by ext. stimulation.

See: *paraphia, pseudaphia*.

pseudo- (sū'dō) [G. *pseudēs*, false]. A prefix meaning false.

pseudocromia parasitica. Tinea versicolor, q.v.

pseudoagglutination (sū-dō-āg-gliū-tĭn-ā'-shūn). The clumping together of red blood cells as in the formation of rouleaux, but differing from true agglutination in that they can be dispersed by shaking.

pseudoagglutination. See: *pseudographia*.

pseudoalbinism. Loss of pigment of the skin as occurs in leukopathia or vitiligo.

pseudoanemia (sū'dō-ān-ē'mĭ-ā) [G. *pseudēs*, false, + *an-*, negative, + *aima*, blood]. Pallor of mucous membranes and skin without other signs of true anemia.

pseudoangina (sū'dō-ān-'jĭ-nā) [" + *L. angina*, a choking]. False symptoms resembling angina pectoris of nervous origin.

SYN: Functional attacks in cardiac region but not associated with any disease of the heart or its vessels.

pseudoapoplexy (sū'dō-āp-ō-plēk-sĭ) [G. *pseudēs*, false, + *aplexia*, lack of order]. Condition simulating apoplexy but not accompanied by cerebral hemorrhage.

pseudoataxia (sū'dō-ā-tāks'ĭ-ā) [G. *pseudēs*, false, + *ataxia*, lack of order]. Condition resembling ataxia not due to *tabes dorsalis*.

pseudobacterium (sū'dō-bāk-tēr'ĭ-ŭm) [G. *pseudēs*, false, + *bakterion*, a little rod]. Any microscopic cell similar to a bacterium.

pseudoblepsia, pseudoblepsie (sū'dō-blēp'-sĭ-ā, -sĭs) [" + *blepsia*, sight]. False or

- imaginary vision. SYN: *paralepsia*, *pseudopsia*.
- pseudobulbar paralysis** (sū'dō-bŭl'ber) [" + *bolbos*, a swollen end]. Paralysis resembling bulbar paralysis, but due to lesion of cortical centers.
- pseudocartilaginous** (sū'dō-kar-tī-lā'j'n-ūs) [G. *pseudēs*, false, + L. *cartilāgō*, gristle]. Pert. to, or formed of, a substance resembling cartilage.
- pseudocast** (sū'dō-kāst) [" + M.E. *casten*, a throwing off]. A sediment in urine resembling a true cast.
- pseudocoele** (sū'dō-sēl) [G. *pseudēs*, false, + *kōlos*, hollow]. SYN: *cavum septi pellucidi*. The cavity of the septum pellucidum, the so-called 5th ventricle.
- pseudocholinesterase** (sū'dō-kōl-in-ē'ster-ās) A nonspecific cholinesterase which hydrolyzes noncholine esters as well as acetylcholine. Found in blood serum and pancreatic tissue.
- pseudochorea** (sū'dō-kō-rē'ā) [" + *chorea*, a dance]. Hysterical state resembling chorea. SYN: *spurious chorea*.
- pseudochromesthesia** (sū'dō-krō-mēs-thē'zī-ā) [" + *chrōma*, color, + *aisthēsis*, sensation]. A condition in which sounds, esp. of the vowels, seem to induce a sensation of a distinct visual color. SEE: *phonism*, *photism*.
- pseudochromhidrosis** (sū'dō-krōm-hī-drō'sis) Appearance of colored sweat in which the sweat acquires its color after it is excreted.
- pseudocirrhosis** (sū'dō-sīr-ō'sis) [" + *kirros*, orange yellow, -*ōsis*, disease]. A condition with symptoms of cirrhosis of liver, due usually to pericarditis.
- SYM. Cyanosis, ascites, dyspnea.
- pseudocoele** (sū'dō-sēl) [G. *pseudēs*, false, + *kōlos*, hollow]. The 5th ventricle of brain. SYN: *pseudocoele*.
- pseudocoloboma** (sū'dō-kōl-ō-bō'mā) [" + *kolōboma*, imperfection]. A scarcely noticeable scar on the iris from an embryonic fissure.
- pseudocrisis** (sū'dō-krī'sis) [" + *krisis*, a separation]. A temporary fall of body temperature which may be followed by a rise.
- pseudocroup** (sū'dō-kroop) [" + A.S. *kropan*, to shout aloud]. False croup. SYN: *laryngismus stridulus*.
- pseudocyesis** (sū'dō-sī-ē'sis) [" + *kyēsis*, pregnancy]. A condition in which the abdomen enlarges and the menses cease when the patient thinks that she is pregnant but is not.
- Usually seen in woman very desirous of having children, due to an abnormal mental state in which the woman sometimes imagines she has had sexual intercourse with a man she would like to have as lover or husband. Men have been accused of being the father of an unborn child or guilty of fornication or adultery because of this.
- Under anesthesia the enlargement of the abdomen disappears. SYN: *phantom pregnancy*.
- pseudocyst** (sū'dō-sist) [G. *pseudēs*, false, + *kystis*, bladder]. A dilatation resembling a cyst.
- pseudodementia** (sū'dō-dē-mēn'shī-ā) [" + L. *dē*, negative, + *mens*, *ment-*, mind]. Exaggerated indifference to environment without impairment of mind.
- pseudodiphtheria** (sū'dō-dif-thē'rī-ā) [" + *diphthera*, membrane]. A condition resembling diphtheria but not due to Klebs-Löffler bacillus.
- p. *bacillus*. A nonpathogenic one resembling the true diphtheria bacillus.
- pseudoedema** (sū'dō-ē-dē'mā) [G. *pseu-*

- dēs*, false, + *oedēma*, a swelling]. A puffy condition of the skin simulating edema.
- pseudoemphysema** (sū'dō-ēm-flē-ē'mā) [" + *emphysema*, an inflation]. A bronchial condition with blocking simulating emphysema.
- pseudoencephalitis** (sū'dō-ēn-sēf-ā-ll'itis) [" + *egkephalos*, brain, + *-itis*, inflammation]. A false encephalitis, due to profuse diarrhea.
- pseudoerysipelas** (sū'dō-ēr-i-sip'ēi-ās) [" + *erythros*, red, + *pella*, skin]. An inflammation of subcutaneous cellular tissue simulating erysipelas.
- pseudoesthesia** (sū'dō-ēs-thē'zī-ā) [G. *pseudēs*, false, + *aisthēsis*, sensation]. An imaginary sensation or a false one. SYN: *pseudesthesia*.
- pseudofracture**. A ribbonlike zone of decalcification seen in certain types of osteomalacia, esp milkman's syndrome.
- pseudoganglion** (sū'dō-gān'gīl-ōn) [" + *gagglion*, knot]. A slight thickening of a nerve resembling a ganglion.
- pseudogeusthesia** (sū'dō-gū-sēs-thē'zī-ā) [" + *geusis*, taste, + *aisthēsis*, sensation]. A sense of color accompanying sensations of taste.
- pseudogeusia** (sū'dō-gū-sī-ā) [" + *geusis*, taste]. A subjective sensation of taste not produced by external stimulus.
- pseudoglioma** (sū'dō-gīl-ō-mā) [G. *pseudēs*, false, + *glia*, glue, + *-ōma*, tumor]. Inflammatory changes occurring in the vitreous body, due to iridochoroiditis, which simulate glioma of retina.
- pseudoglobulin** (sū'dō-glōb'ŭ-līn) [G. *pseudēs*, false, + L. *globulus*, little globe]. One of a class of globulins characterized by being soluble in salt-free water. SEE: *euglobulin*.
- pseudoglottis** (sū'dō-glōt'is) [" + *glottis*, glottis]. Area bet. false vocal cords.
- pseudohemophilia** (sū'dō-hēm-ō-fīl'ī-ā) Condition in which coagulation time is normal but bleeding time is prolonged.
- pseudohemoptysis** (sū'dō-he-mōp'tis-is) [" + *aima*, blood, + *ptyein*, to spit]. Spitting of blood which does not arise from the bronchi or the lungs.
- pseudohermaphroditism** (sū'dō-hēr-māf'rō-dīt'izm) [G. *pseudēs*, false, + *Hermaphroditos*, mythical two-sexed god]. A congenital abnormality of the ext. genitalia and of the body in which one resembles the other sex; not a true hermaphroditism. SEE: *hermaphroditism*.
- p. *femininus*. One with a large clitoris resembling the penis and with hypertrophied labia majora resembling the scrotum, thus resembling a male.
- p. *masculinus*. A male with a small penis and perineal hypospadias, and scrotum without testes, the condition resembling the vulva.
- pseudohydrophobia** (sū'dō-hī-drō-fō-bī-ā) [" + *ydor*, *ydr-*, water, + *phobos*, fear]. Disorder simulating hydrophobia in its symptoms. SYN: *lyssophobia*.
- pseudohypertrophic** (sū'dō-hī-per-trō'fik) [" + *yper*, above, + *trophē*, nourishment]. Pert. to a false hypertrophy.
- p. *paralysis*. Paralysis with enlargement and loss of motion of muscles.
- pseudohypertrophy** (sū'dō-hī-per-trō'fī) [G. *pseudēs*, false, + *yper*, above, + *trophē*, nourishment]. Increase in size of an organ or structure due to hypertrophy or hyperplasia of tissue other than parenchyma. Often accompanied by diminution of function.
- pseudoisochromatic** (sū'dō-ī-sō-kro-māt'ik). Apparently of the same color,

said of certain colors which appear alike to the color blind.

pseudoleukemia (sü'dô-lû-kê'mî-ä) [G. *pseudēs*, false, + *leukos*, white, + *aima*, blood] Condition in which pathological changes such as enlargement of lymph nodes resemble those in leukemia but in which blood picture remains near normal. Includes Hodgkin's disease, aleukemic myelosis, and others.

p. infantile. SYN: von Jassch's disease. A form of anemia in children usually associated with rachitic tendencies and accompanied by mild leukocytosis.

pseudoleukocytomia (sü'dô-lû'kô-si-thê'mî-ä) [' + *leukos*, white, + *kytos*, cell, + *aima*, blood] Progressive anemia with lymphomata, characteristic of several conditions. SYN: *pseudoleukemia*.

pseudologia (sü'dô-lo'jî-ä) [G. *pseudēs*, false, + *logos*, a study] Falsification in writing or in speech, a form of pathological lying.

p. fantastica. Pathological lying, one of the forms of the psychopathic state.

A moral deficiency exists and punishment therefore is useless.

pseudomania (sü'dô-mä'nî-ä) [G. *pseudēs*, false, + *mania*, madness] 1. A psychosis in which the patient falsely accuses himself of crimes which he thinks he has committed. 2. Pathological lying.

pseudomasturbation (sü'dô-mäs-tur-bä'shûn) [' + *L. manus*, hand, + *stuprâre*, to rape] A nervous habit of pulling at the penis. SYN: *peotillomania*.

pseudomelanosis (sü'dô-mêl-än-ô'sîs) [' + *melas*, melan-, black, + *-ôsis*, disease] Discoloration of tissues after death.

pseudomembrane (sü'dô-mêm-brân) [' + *L. membrana*, membrane] A false membrane, as in diptheria.

pseudomembranous (sü'dô-mêm-brä-nûs) [' + *L. membrana*, membrane] Pert. to or marked by false membranes.

pseudomeningitis (sü'dô-mên-in-jî'tîs) [' + *mênigx*, membrane, + *-itis*, inflammation] A condition resembling symptoms of meningitis without lesions of meningeal inflammation.

pseudometamerism (sü'dô-mê-täm'er-ism) False metamerism such as seen in tapeworms in which the body consists of linear series of proglottids instead of true segments.

pseudomnesia (sü'dô-mê-zî-ä) [' + *mnêsis*, memory] A memory perversion in which patient remembers that which never occurred.

Pseudomonas (sü'dô-mô'näs) [G. *pseudēs*, false, + *monas*, single] A genus of small, motile, Gram-negative bacilli belonging to the family Pseudomonadaceae. Most are saprophytic living in soil and decomposing organic matter. Some produce blue and yellow pigments.

Ps. aeruginosa. SYN: *pyocyanea*. A pathogenic species isolated from infections of otitis media, suppurative lesions, and infant diarrhea.

Ps. pyocyanea. Ps. aeruginosa, *q.v.* **pseudomucin** (sü'dô-mü'sîn) [G. *pseudēs*, false, + *L. mucus*, mucus] A variety of mucin found in proliferative ovarian cysts.

pseudomyelia paresthetica (sü'dô-mî-ê'll-ä pä-êš-thêt'îk-ä) False sense of motion in paralyzed limb or of no motion in a moving limb. SEE: *pain*.

pseudomyotonia (sü'dô-mî-ô-tôn'î-ä) Delay in relaxation of the muscle contraction induced by a deep tendon reflex. Characteristic of hypothyroidism.

pseudomyxoma (sü'dô-mîx'ô-mä). A peritoneal tumor resembling a myxoma and containing a thick viscid fluid.

p. peritoneal. A type of tumor developing in peritoneum from implantation metastases resulting from rupture of ovarian cystadenoma or cells escaping during surgical removal. Numerous papillomas develop attached to abdominal wall and intestine and peritoneal cavity becomes filled with mucouslike fluid.

pseudoneoplasm (sü'dô-nê'ô-pläsm). A false or phantom tumor. A temporary swelling which simulates a tumor, usually of an inflammatory nature.

pseudoneuroma (sü'dô-nû-rô'mä) [G. *pseudēs*, false, + *neuron*, sinew, + *-ôma*, tumor] SYN: *neurofibroma*. A mass of interlacing, coiled nerve fibers, cells of Schwann and fibrous tissue which forms a mass at end of amputation stump. Also called *amputation or traumatic neuroma*. It is not a true neuroma.

pseudonuclein (sü'dô-nû'klê-in) [' + *L. nucleus*, a nut] A combination of albumin with metaphosphoric acid. SYN: *paranuclein*.

pseudonucleolus (sü'dô-nû-klê-ôl'ûs). The false nucleolus or karvosome.

pseudoparalysis (sü'dô-pä-räl'tî-sîs) [' + *para*, at the side, + *lyein*, to loosen] A loss of muscular power not due to lesion of the nervous system.

pseudoparaplegia (sü'dô-pär-ä-plê'jî-ä) [' + ' + *plegē*, a stroke] Seeming paralysis of the lower extremities without impairment of the reflexes.

pseudoparasite (sü'dô-par-ä-sît) [' + ' + *sitos*, food] 1. Anything resembling a parasite. 2. Organism which can live as a parasite, although it is normally not one. SYN: *commensal*. SEE: *facultative parasite*.

pseudoparesis (sü'dô-par-ê'sîs, -par-ê-sîs) [' + *paresis*, relaxation] A condition simulating paresis but unlike the ordinary forms and due to hysteria.

pseudopeptone (sü'dô-pêp'tôn) [G. *pseudēs*, false, + *pepten*, to digest] Hemialbumose, *q.v.* Also called *propeptone*.

Pseudophyllidea (sü'dô-fîl-lîd'ê-ä) An order belonging to the class Cestoidea, subclass Cestoda. Includes tapeworms with scolex bearing two lateral (or one terminal) sucking grooves (bothria). Includes *Diphyllbothrium*, the fish tapeworm of man.

pseudoplegia (sü'dô-plê'jî-ä) [G. *pseudēs*, false, + *plégē*, a stroke] Paralysis of hysterical origin. SYN: *pseudoparalysis*.

pseudopod (sü'dô-pôd) [' + *pous*, pod-, foot] Protruding protoplasmic process of a temporary nature in protozoa for taking up food and aiding in locomotion. SYN: *pseudopodium*.

pseudopodium (sü'dô-pô'dî-ûm) (pl. *pseudopodia*) [G. *pseudēs*, false, + *pous*, pod-, foot] SYN: *pseudopod*. 1. A temporary protruding process of a protozoan or an amoeboid cell such as a leukocyte which aids in locomotion and the engulfing of food particles or foreign substances as in phagocytosis. 2. An irregular projection at the edge of a wheel.

pseudopregnancy (sü'dô-prêg'nän-sî) 1. Condition occurring in lower animals following sterile matings in which anatomical and physiological changes occur similar to those of pregnancy. 2. Phantom pregnancy. *q.v.* SEE: *pseudocystitis*.

pseudopsia (sü'dôp'sî-ä) [' + *opsis*, vision] Visual hallucinations or false perceptions. SYN: *pseudoblepsis*.

pseudoptosis (sū-dō-tō'sis). Apparent ptosis of the eyelid resulting from fold of skin or fat projecting below edge of eyelid

pseudorabies (sū-dō-rā'bēz, -rā'bī-ēz) [G. *pseudēs*, false, + L. *rabere*, to rage]. A condition resembling rabies. **SYN:** *lyssophobia*, *pseudohydrophobia*.

pseudoreaction (sū-dō-rē-āk'shūn). A false reaction. A response to injection of a test substance into the tissues due to presence of an allergen other than one for which test is made

pseudorubella (sū-dō-rū-bē'lā) **SYN:** *exanthema subitum*, *roseola infantum*. An acute disease in infants characterized by high fever and rubelliform eruption

pseudoscarlatina (sū-dō-skar-lā-tē'nā) [+ L. *scarlatina*, scarlet]. A septic febrile condition with rash resembling scarlatina

ETIOI. Gonorrhea, puerperal infection, food or blood poisoning

pseudosclerosis (sū-dō-skērō-sis) [+ + *sklēros*, a hardening]. A condition with the symptoms, but without the lesions, of multiple sclerosis of the nervous system.

pseudosmia (sū-dōz'mī-ā) [+ + *osmē*, smell]. An olfactory hallucination or perversion of the sense of smell

pseudostoma (sū-dōs-tō-mā) [+ + *stoma*, a mouth]. An apparent aperture bet. endothelial cells that have been stained

pseudostriated (sū-dō-strā'tī-fid). Apparently composed of layers

p. epithelium. E in which basal ends of all cells rest on basement membrane but distal ends may or may not reach the surface. Their nuclei lie at different levels giving the appearance of being stratified

pseudosyphilis (sū-dō-sif'ī-lis) [+ + *syn*, with love, + *philos*, love]. A nonspecific condition resembling syphilis.

pseudotabes (sū-dō-tā'bēz) [+ + L. *tabēs*, a wasting]. A neural disease simulating tabes dorsalis.

pseudotetanus (sū-dō-tēt-ān-ūs) [G. *pseudēs*, false, + *tētanos*, tension]. Persistent muscular contractions resembling tetanus

pseudotuberculosis (sū-dō-tū-ber'kū-lō'sis) [+ + L. *tuberculus*, tubercle, + G. -*ōsis*, disease]. Disease like tuberculosis not caused by the tubercle bacillus.

pseudotympany (sū-dō-tīm'pā-nī). Flattening of arch of diaphragm, swelling of abdomen with increased respiration.

It disappears under anesthesia and is of purely nervous origin. **SYN.** *accordion abdomen*.

pseudotyphoid (sū-dō-tī'foid) [+ + *typhos*, fever, + *eidos*, resemblance]. Condition resembling typhoid fever, not caused by the typhoid bacillus.

pseudoxanthoma (sū-dō-zān-thōm'ā) [G. *pseudēs*, false, + *xanthos*, yellow, -*ōma*, tumor]. Condition resembling xanthoma

p. elasticum. Chronic, degenerative cutaneous disease marked by yellow patches and stretching of skin. Associated with hypertension and degeneration of elastic coat of arteries. Angioid streaks in retina common

psilosis (sī-lō'sis) [G. *psilōsis*, a stripping].

1. Falling out of removal of hair. 2. Tropical diarrhea of severe, often fatal form. **SYN:** *sprue*.

ETIOI. Disease of pancreas, invasion by bacteria, mold; or fat deficiency.

SYM: Diarrhea, large, lightly-colored, acid stools containing fat. No pain or

tenesmus. Inflamed, eroded and cracked tongue and mouth, angina.

psittacosis (sīt-ā-kō'sis) [G. *psittakos*, parrot, + -*ōsis*, disease]. A fatal, infectious disease of parrots and other birds that may be transmitted to man

SYM. (in man): Headache, epistaxis, nausea, chill followed by fever, constipation, sometimes pulmonary disorders

psaos (sō'ās) [G. *psao*, loins]. One of 2 muscles of the loins. **SEE:** *Table of Muscles in Appendix, Illus., below*.

p. abscess. A cold a. in sheath of the psoas major muscle.

It follows the sheath of this muscle until it reaches the surface and points. It generally occurs above Poupart's ligament in the iliac fossa or near the attachment of the psoas muscle to the femur.

PSOAS, ILIACUS AND QUADRATUS LUMBORUM

1 Piriformis; 2 Quadratus lumborum; 3 Twelfth rib; 4 Psoas minor; 5 Psoas major; 6 Iliacus; 7 Sacrospinous ligament; 8 Sacrotuberous ligament; 9 Obturator externus

ETIOI: Usually tuberculous disease of vertebrae accompanied by pus.

psoltis (sō-lī'tis) [G. *psoa*, loins, + -*itis*, inflammation]. Inflammation of the psoas muscles or of the area of the loins

psora (sō'rā) [G. *psōra*, itch]. 1. An itching disease of the skin; scabies. 2 Psoriasis, an erythematous, scaling, cutaneous eruption

psorelcosis (sō-rēl-kō'sis) [+ + *elkōsis*, ulceration]. Ulceration occurring as a result of scabies.

psoriasis (sō-rī'ās-lis) [G. *psōriasis*, an itching]. Chronic inflammatory skin disease of many varieties characterized by formation of scaly red patches on extensor surfaces of body.

ETIOI: Unknown.

SYM: Begins in adult life as flat-topped papule covered with thin, grayish-white scale spreading peripherally; lesions coalescing; centers regressing, forming circinate lesions. Under the dry scales are red bleeding points (papillae).

TREATMENT: Hygienic regimen. Daily colloid baths followed by soothing oint-

ment. Locally, salicylic acid, mineral or wood tar, ammoniated mercury, betanaphthol, pyrogallol. Ointments to be rubbed in thoroughly.

Diet: Low protein because of positive nitrogen metabolism in this disease. 4.5 Gm. nitrogen with calories made up of fats and carbohydrates. Sugar, candy, oysters, and ice cream may be used. Fruits and vegetables may be substituted. **See:** *Bazin's disease*.

p. buccalis. Variety with white patches on tongue and cheek. **Syn:** *leukoplakia buccalis*.

p. circinata. Form with ring-shaped lesions with healing beginning in the center.

p. diffusa. P. with more or less coalescence of lesions.

p. punctata. P. with papular red eruptions tipped with white scales.

psorophthalmia (sō-rōf-thāl'mī-ā) [G. *psōra*, itch, + *ophthalmos*, eye] Marginal inflammation of the eyelids with ulceration

psorous (sō'rūs) [G. *psōra*, itch]. Related to or affected with itch.

P.S.P. Abbr. for phenolsulfonphthalein test.

psychoagogy (sī'kă-gō'jē) A psychotherapeutic, reeducational procedure which stresses proper social adjustment of the individual

psychalgia (sī-kāl'jī-ā) [G. *psychē*, soul, mind, + *algos*, pain]. 1. Mental distress or pain, esp. in melancholia 2. Pain of hysterical origin. **Syn.** *mind* or *soul pain*, *phrenalgia*.

psychoanalysis (sī-kăn-āl'ī-sīs) [" + *analysis*, a loosening apart] Discovery of the pathogenic links bet. the objective and subjective consciousness by a system of recall. **Syn.** *psychoanalysis*, *q.v.*

psychanopsia (sī-kăn-ōp'sī-ā) [" + *an-*, negative, + *opsis*, vision]. Sight with failure to recognize anything seen, due to brain lesion. **Syn.** *psychic blindness*.

psychasthenia (sī-kās-thē'nī-ā) [" + *astheneia*, weakness] A neurotic condition marked by sense of inadequacy, unreality, anxiety and doubt

A neurosis characterized by obsessions, phobias, tics, and compulsions. Obsessions are intrusive ideas which the patient cannot dismiss from consciousness and yet clearly recognizes as pathologic. (Delusions are false ideas not recognized as abnormal)

There may be associated restlessness, palpitation, fatigue, or irritability. A definite sense of dread or fear is associated with phobias. The anxiety is rationalized, as a fear of syphilis (syphilophobia), or cancer (carcinomatophobia), or insanity (psychopathophobia), or contamination (mysophobia), among many others.

Obsessions and phobias may occur at the onset or during the course of other diseases, notably schizophrenia. Frequently, obsessive impulses dominate behavior. These may be peculiar (touching lampposts, avoiding lines on sidewalk), or distinctly antisocial. In the latter event, it is indicative of a condition more serious than a neurosis. **Syn:** *anxiety neurosis*, *q.v.*; *Janet's disease*.

psychataxia (sī'kă-tāk'sī-ā) [G. *psychē*, soul, + *ataxia*, lack of order]. Disordered power of concentration.

psychauditory (sī-kaw'dī-tō-rī). Pert. to the perception and interpretation of sounds

psyche (sī'kē) [G. *psychē*, soul, mind]. All

that constitutes the mind and its processes

psychentonia (sī'kēn-tō-nī-ā). Mental strain or tension

psychiasis (sī-kē-i-ās'is). Spiritual healing

psychiatric (sī-kī-āt'rīk) [" + *iatricos*, healing]. 1. Pert. to psychiatry, the science dealing with mental ailments 2. One who has a psychosis or tendency toward one

p. types. *The Confused:* May not realize the incongruity of an act as related to the environment.

The Deluded: May have phobias or specific fears which control some of their habits

The Depressed: May ignore everything because of their misery, which engages all of their attention.

The Excited: May be unable to concentrate

The Feeble: May be unable to control themselves because of weakness

The Hallucinated: Habits may be affected by "voices," etc

psychiatrist (sī-kī-ā-trīst) [G. *psychē*, soul, + *iatrea*, healing]. A physician who specializes in study and treatment of mental disorders

psychiatry (sī-kī-ā-trī) [G. *psychē*, soul, + *iatrea*, healing]. The branch of medicine which deals with the diagnosis, treatment and prevention of mental illness

psychiatry, words pert. to: abalienation, abalienatio mentis; aberration; abnormality, abreaction; abulia, acatalepsia, acatamathesia, acataphasia; acousma, acousmatagnosia, acousmatamnesia, acrasia; Adler's organ inferiority; affect, agnosia; agraphia; agrypnia, ahypnia, akathisia; akinesia, alcoholism; alexia, algesia, algolagnia; algopsychalia, alienation, alienism, alienist; alliteration, allophasia, allopsychic, allotropic, alolia, Alzheimer's disease, ambledendency, ambivalence, amentia; amimia, amnesia amnestic, amok; amoralia; amusia, anacritic choice; anacroasia; anal erotic, anabasia; anastasia; anandria, anergastic; anhedonia; anoesia; anolia, anomia; anorexia, apandria; aparthropia; apasia; apathy; aphasia; apemnesia; aphemia; aphonia; aphrasia, aphrenia, apronesia, apthexia; apodemiagia; apraxia; aprosexia; apathyria, apsychois; asemasia; asemia; astia; association; assonance; asterognosis; asyllabia; asymbolia; asynesia, atactilia; atavism; ataxaphasia; ataxia, intrapsychic; ataxophemia, ateliosis, athymia; atrabiliary; attitude; autism, autistic thinking, autoanalysis; automatism; autoecholalia; autophagy; autophilia; autophobia, autoplatic; autopsychosis, autosuggestion; autosynonia; avulsion, behaviorism; blocking; bradylalia; bradylexis; brain storm; catatonia, catharsis, cenesthesia; censor; chorea; claustrophobia; claustrophobia; complex, compulsion; conation; condensation; confabulation; conflict; constellation, coprolagnia; coprolalia; coprophilia; cretinism; cryptesthesia; cycloid; cyclothymia; deafness; delire de toucher; delirium; delusion; dementia; depersonalization; depression; derelict; determinism; disassociation; disorientation; displacement; distractibility; divagation; dysbulia; dyschiria; dyscinia; dysmenesia; dysphremia; dysymia; echolalia; echomania; echominia; ego; egocentric; ekphorize; electra complex; emotion; emotivity; empathy; eremophobia; erethism;

ergasiomania; ergasiophobia; erotism; erotomania; erythrophobia; eschrolalia; eviration; exhibitionism; extrovert; fabrication; fastidium, fear; feeble-mindedness, fixation; folie; free association, fuge, furor amatorius; Ganser's syndrome; geophagia; graphorrhea; hallucination; hallucinosis, haphalgasia; hebephrenia; heterolalia; holergastic; hyperhedonia; hyperognosis; hyperprosexia, hypershemia; hyperthymia; hypnagogic, hypnoidal, hypnosis; hypnotic; hypnotism; hypochondria, hypochondriac; hypochondriasis; hypophrenia; hysteria, idea; idioy; idiophrenic psychosis; idiot; idiotropic type; illusion; image, imago, imbecile, imperious act, impulsio, incoherency, incompetent; infantilism; inhibition, insanity; instinct, integration, intelligence, intraphysical, introjection; introversion, introvert; kakergastic reaction, katatonía, kinesthesia, Korsakoff's psychosis; latent content; lethargy, lethologica, logamnesia, logopathia, logorrhea; malinger; masochism; melancholia, mesmerism; mestatropism, metaphrenia; mind, miscalnea; misologiamisopodia, moramnesia; moria, moron, morosis, narcissism, narcotism; necrophilia, negativism, neologism, neurosis, noctambulism, non compos mentis, nookleptia; nunation; object choice; obsession; oligergasia, oligopnea; omnipotence of thought, oneiric; oneirism, oneirodynia, organic reaction type, orthopsychiatry; overdeterminism, overtone, paragrafia, paralexia; paralogia, paramia, paramnesia, paranoia, paranomia, parapatia; paraphasia; paraphonia, parapraxis; parent-fixation; parergastic reaction; paresis, pathergasia, pavor nocturnus; pedophilia; pephistic; perseveration; personality; phantasia; phantasm; phantasmatomoria, phantasy; phantom; phomeme, pica; pithiatism; pleasure principle; pragmatism; pragmatagnosia; preconscious, pseudoalga; psychasthenia, psychiatrist; psyche, psychic; psychoanalysis; psychobiological; psychobiology, psychogenesis; psychogenic; psycholepsy; psychology; psychologist; psychoneurosis, psychopath; psychopathology; psychosis, psychotherapy; rationalization, reaction; reality principle, recapitulation theory; repression, resistance, restraint; retardation, rut formation, safety symbolism; satyriasis, schizoid; schizophrenia; scotomization; sexual bondage, shell shock; sterotypy; stupor, subconscious, subjective, sublimation; subliminal; suggestion; surrogate; sycophancy; symbiosis; symbol, symbolism; syntonic; threshold of consciousness; transfer; transference; transvestism, trend, twilight state; tyrannism; unconscious; verberation, vesania; vigil, vigilambulism; vision; voice; word blindness; word salad; zeolotypia.

psychic (s'k'ik) [G. *psychē*, soul, mind].

1. Concerning the mind, or psyche. 2. One said to be endowed with semisupernatural powers, such as the ability to read the mind of others, or to foresee coming events; one apparently sensitive to nonphysical forces.

p. blindness. Sight without recognition of that which is seen.

p. contagion. Communication of another's nervous disorder by imitation, as a tic.

p. deafness. Inability to recognize sounds heard.

p. determinism. The theory that men-

tal processes are determined by conscious or unconscious motives, and are never irrelevant.

p. force. One generated apart from physical energy.

psychical (s'k'i-kAl) [G. *psychē*, soul]. Pert. to mind or soul. Syn. *psychic*.

psychinosis (s'i-kin-ō'sis) [G. *psychē*, mind, + *nosos*, disease]. Any functional disease affecting the mind.

psycho-, psych-. Combining form meaning pert. to the mind, or mental processes.

psychoanalysis (s'i'kō-ān-āl'i-sis) [psy + *analysis*, a loosening apart]. Method of obtaining a detailed account of past and present mental and emotional experiences and repressions, in order to determine the source and eliminate the pathologic mental or physical state produced by these mechanisms.

Largely a system that is the creation of J. man, Sigmund Freud, and originally the outgrowth of his observations of neurotics. Frequently, the term often is used synonymously with Freudianism, but more commonly for a rather more extensive system of psychologic fact and theory applying both to normal and abnormal groups.

In addition to Freudian method, other schools of thought or disciplines utilized in analysis of the psyche include *analytical psychology* (Jung), *psychobiology* (Meyer) and *individual psychology* (Adler).

The process is based upon the theory that such abnormal phenomena are due to repression of painful or undesirable past experiences, which, although totally forgotten, later manifest themselves in various abnormal ways. Psychoanalysis, therefore, makes an effort to bring up such forgotten memories into the conscious mind. The patient is thus enabled to view the occurrence in its true perspective, and so loses its harmful effect. There are 2 main methods. (1) Dream analysis, (2) the method of free association.

Includes a study of the ego in relation to reality, and more particularly the herd, and the conflicting goals so created. This conflict is "solved" by repressing 1 component. This repressed or censored emotion-laden complex of ideas exists in the so-called "subconscious," manifesting itself in the hidden content of dreams, in neuroses and tension states.

Quite unaware of the influence of the subconscious, anger outbursts, rationalization of unfair attitudes, slips of the tongue, etc., occur. Repressed material is largely sexual and the peculiar conditioning of the patient is chiefly determined by the emotional experiences of the earlier years. Reactions of inferiority may result in a compensatory reaction of goodness, ambition, etc. Sublimation is the escape of creative interest on levels not socially taboo. This, however, is not accepted by all psychologists.

psychoanalyst (s'i-kō-ān-āl'ist). One who practices psychoanalysis.

psychobiology (s'i'kō-bi-ō'l-ō-jī) [G. *psychē*, soul, + *bios*, life, + *logos*, a study]. Syn: *biopsychology*. 1. The study of the biology of the psyche, including the anatomy, physiology, and pathology of the mind. 2. A method of psychoanalysis est. by Adolf Meyer employing *distributive analysis* which includes a study of all mental and physical factors involved in the growth and development of an individual.

p., objective. P. in which special emphasis is placed on the relationship of the individual to his environment.

psychocardiac reflex (sī'kō-kar'dī-āk). Change in circulatory rate and consciousness of heart thumping resulting from memory of, or subconscious dream state recollection of, an emotional impression or experience.

psychocatharsis (sī'kō-ka-thar'sis). The bringing of so-called traumatic experiences and their affective associations into consciousness by interview, hypnosis, or by use of drugs such as sodium amylal.

psychochrome (sī'kō-krōm) [G. *psychē*, soul, + *chrōma*, color]. Color impression resulting from sensory stimulation of a part other than the visual organ. SEE *psychochromesthesia*.

psychochromesthesia (sī'kō-krōm-ēs-thē-zī-ā) [' + + *aisthēsis*, sensation]. Color sensation produced by the stimulus of sense organ other than that of vision.

psychocoma (sī-kō-kō-mā) [' + *kōma*, stupor]. Condition of mental stupor.

psychocortical (sī'kō-kor'tī-kāl) [' + L. *cortex*, rind]. Pert. to the cerebral cortex as the seat of sensory, motor, and psychic functions.

psychodiagnostics (sī'kō-dī-āg-nōs'tiks). The Rorschach test used in personality study.

Psychodidae (sī'kōd'i-dē). A family of the order Diptera which includes the moth flies, owl midges, and sand flies. SEE *Phlebotomus*.

psychodometry (sī'kō-dōm-ē-trī) [' + *odos*, way, + *metron*, measure]. Measurement of rate of mental activity.

psychodynamics (sī'kō-dī-nām'tiks) [' + *dynamis*, power]. The scientific study of mental action or force.

psychoepilepsy. SEE *epilepsy*, *idiopathic*.

psychogenesis (sī'kō-jēn'ēs-īs) [G. *psychē*, soul, + *genesis*, formation]. 1. The origin and development of mind, the formation of mental traits. 2. Origination within the mind or psyche.

psychogenetic (sī'kō-jēn-ēt'ik) [' + *genesis*, to produce]. 1. Originating in the mind, as a disease. 2. Concerning formation of mental traits.

psychogenic (sī-kō-jēn'tik) [' + *gennan*, to produce]. 1. Of mental origin. 2. Concerning the development of the mind. SYN. *psychogenetic*.

psychogeusic (sī'kō-gēu'sik). Pert. to perception of taste.

psychogram (sī'kō-grām) [' + *gramma*, a writing]. A subjective visualization of a mental concept.

psychograph (sī'kō-grāf'). 1. A chart showing personality traits. 2. A history of the personality of an individual.

psychokinesia (sī'kō-kīn-ē-zī-ā) [' + *kinēsis*, motion]. Explosive or impulsive maniacal action due to defective inhibition. SYN. *psycheclampsia*.

psychokinesis (sī-kō-kīn-ēs'sis). Alleged ability of the mind to move objects.

psycholagny (sī'kō-lāg'nī). Sexual excitation brought about by mental imagery; psychic or mental masturbation.

psycholepsy (sī'kō-lēp'sī) [' + *lēpsis*, a seizure]. Sudden alteration of moods in which mental inertia and hopelessness are manifested.

psycholeptic (sī'kō-lēp'tik) [' + *lēpsis*, a seizure]. Concerning sudden shifting of moods, particularly to 1 marked by hopelessness and mental inertia.

psychological (sī'kō-lōj'i-kal) [G. *psychē*, soul, mind, + *logos*, a study]. Pert. to study of the mind in all of its relationships, normal and abnormal.

psychologist (sī-kōl'ō-jist) [' + *logos*, study]. One who specializes in the mental phenomena of consciousness and behavior or mental activity.

psychology (sī-kōl'ō-jī) [' + *logos*, a study]. The science which deals with the mental processes, both normal and abnormal and their effects upon behavior.

There are 2 main approaches to the study: (1) Introspective, i.e., looking inwards, or self-examination of one's own mental processes. (2) Objective, i.e., studying the minds of others. In this latter there are 4 chief lines of attack: (a) The experimental method, (b) the comparative method, (c) the genetic method, (d) the pathological method. SEE: *esthetic morality*, "psych-" words.

p., abnormal. The study of abnormal behavior and the mental phenomena associated with such.

p., analytic. Psychoanalysis based on the concepts of Carl Jung which deemphasizes sexual factors in motivation and emphasizes the "collective unconscious" and "psychological type" (introvert and extrovert).

p., animal. The study of animal behavior.

p., applied. The application of the principles of psychology to special fields, such as clinical, industrial, educational, nursing, or pastoral psychology.

p., depth. P. which pertains to the unconscious.

p., dynamic. The psychology of motivation, that which seeks the causes of mental phenomena.

p., experimental. Study of mental acts by tests and experiments.

p., Gestalt. That which emphasizes the wholeness of psychological processes and behavior and maintaining that such cannot be adequately explained by breaking down into constituent parts.

p., individual. A system of psychological thinking developed by Alfred Adler in which an individual is regarded as having three life goals, physical security, sexual satisfaction, and social integration. Self-evaluations lead to feelings of inferiority and inadequacy which often lead to overcompensation or a striving for superiority.

p., physiologic. That which deals with the structure and function of the nervous system and other bodily organs and their relationship to behavior.

psychometry (sī-kōm'ē-ri) [G. *psychē*, soul, mind, + *metron*, a measure]. Measurement of work accomplished, time consumed, and precision of mental operations. Intelligence testing.

psychomotor (sī-kō-mō'tor) [' + L. *motor*, a mover]. Concerning, or causing, voluntary movement.

psychoneurosis (sī'kō-nū-rō'sis) [G. *psychē*, soul, + *neuron*, sinew, + *-ōsis*, disease]. One of a group of mental disorders of a functional nature in which there is partial disorganization of the psyche, a psychopathological syndrome characterized principally by anxiety, states, phobias, compulsions, obsessions, and conversion phenomena. Insight is maintained.

Includes hysteria, psychasthenia and neurasthenia. [sic.]

SEE: *neurosis*, *psychoanalysis*, *psychop., defense*. Condition due to attempt to dismiss from the mind ideas and sensations that are painful. This results in

buried subconscious memories producing psychoneurosis.

psychoneurotic (sī'kō-nū-rōt'ik) [G. *psychē*, soul, mind, + *neuron*, sinew]. Pert. to a functional disorder of mental origin

psychonomy (sī-kōn'ō-mī) [΄ + *nomos*, law]. The science of the laws of the mind and its functions

psychoparesis (sī'kō-pār-ēs'is, -par'ēs-īs) [΄ + *paresis*, relaxation]. Weakness or enfeeblement of the mind

psychopath (sī'kō-pāth) [΄ + *pathos*, disease]. One with a constitutional lack of moral sensibility, although possessing normal intelligence. **SYN** *psychopathic personality*.

P., transportation of. 1. Be sure you have necessary legal papers

2. Learn all you can about patient before starting

3. Ascertain, if suicidal, epileptic, destructive, or dangerous

4. If so (No. 3), do not travel with patient without assistance.

5. See that patient has nothing that may be used for violence or self-destruction

6. If on train or boat, use a compartment

7. If patient is dangerous, notify the transportation company in advance.

8. Do not hesitate to call upon local police or trainmen if necessary.

9. Be sure you have enough money for the journey and your own return.

10. Ascertain names of physicians who may be called en route if needed.

11. Secure copy of inventory of patient's effects from hospital, with statement as to any bruises or injuries suffered by patient.

psychopathia. *Psychopathy, q v*

p. marialis. Shell-shock

p. sexualis. Sexual perversions

psychopathic (sī'kō-pāth'ik) [΄ + *pathos*, disease]. 1. Concerning or characterized by a mental disorder. 2. Concerning treatment of mental disorders 3. Abnormal

p. Personality. "One who, though possessing normal intelligence, is or becomes, by reason of heredity or congenital conditions, constitutionally lacking in moral sensibility, emotional control, and the inhibition of will."—Dr. C. H. Patten

A constitutional imbalance in the pattern of the mind, but not a disorder of function, such as is observed in the actual neuroses and psychoses. *Psychopathics* are attractive but cannot be depended upon. Judgment is poor; they are easily pleased or displeased, and are above the average in intelligence. Usually antisocial.

psychopathology (sī'kō-pāth-ōl'ō-jī) [G. *psychē*, soul, mind, + *pathos*, disease, + *logos*, a study]. The study of the causes and nature of mental disease or abnormal behavior

psychopathy (sī-kōp'āth-i) [G. *psychē*, soul, + *pathos*, feeling]. Any mental disease, esp 1 characterized by defective character or personality

psychophonesthenia (sī'kō-fō'nās-thē-nī-ā). A speech defect of mental origin.

psychophysical (sī'kō-fiz'ī-kāl) [΄ + *physisikos*, natural]. Concerning the relation of the physical and the mental.

p. law. Intensity of sensation increases as the logarithms of the stimuli.

psychophysics (sī'kō-fiz'īks) [΄ + *physisikos*, natural]. 1. The study of mental

processes in relation to physical processes. 2. The study of stimuli in relation to the effects they produce.

psychophysiology (sī'kō-fiz-i-ō-lōg'ik). Pert. to psychophysiology, *q v*

p. autonomic and visceral disorders. Term applied to a large number of disorders of organs and viscera innervated by the autonomic nervous system in which emotional factors are a primary causative factor. Formerly called psychosomatic disease or disorder

psychophysiology (sī'kō-fiz-i-ōl'ō-jī) [΄ + *physis*, nature, + *logos*, study]. Physiology of the mind, science of the correlation of body and mind

psychoplegic (sī'kō-plē'jik) [G. *psychē*, mind, soul, + *plēgē*, a stroke]. An agent reducing excitability of the cerebrum

psychorhythmia (sī'kō-rith'mī-ā) [G. *psychē*, soul, mind, + *rhythmos*, rhythm]. Mental condition in which involuntary repetition of previous voluntary actions occurs

psychorrhea (sī-kōr-ē-ā) [G. *psychē*, soul, mind, + *roia*, a flow]. A mental condition characterized by incoherent stream of thought resulting in vague and often bizarre theories and ideas

psychosensory (sī'kō-sēn'sor-i) [΄ + *L. sensorius*, pert. to sensation]. 1. Understanding and interpreting sensory stimuli. 2. Concerning perceptions not arising in sensory organs, as hallucinations

psychosexual (sī'kō-sēks'ū-āl) [΄ + *L. sexus*, sex]. Concerning the emotional components of sexual instinct

p. development. Evolution of personality through infantile and pregenital periods to sexual maturity.

psychosin (sī-kō'sin) [G. *psychē*, mind, soul]. A cerebroside occurring in brain tissue.

psychosis (sī-kō'sis) (pl. *psychoses*) [G. *psychē*, mind, soul]. A term formerly applied to any mental disorder but now generally restricted to those disturbances of such magnitude that there is personality disintegration and loss of contact with reality. They are of psychogenic origin or without clearly defined physical cause or structural change in the brain. They are usually characterized by delusions and hallucinations and hospitalization is generally required

A condition manifested in the behavior, emotional reaction and ideation of the patient. He fails to mirror reality as it is, reacts erroneously to it, builds up false concepts regarding it, and his behavior responses are peculiar, abnormal, inefficient, or definitely antisocial.

All this does not include amentia, because defective intelligence merely lessens comprehension of reality but does not distort it, or the psychopathic personality, as here the patient reacts badly because of intrinsic emotional differences playing upon an undistorted world of reality.

Delusions or hallucinations strongly suggest a psychosis, as does marked indifference, depression and excitement. Antisocial behavior occurs with psychopathic personalities and mental defectiveness. When epileptic, it suggests the occurrence of an episodic psychosis known as an equivalent.

CLASSIFICATION: Divided into 2 main groups 1. Those due to impairment of brain tissue. 2. Those in which any associated brain function disturbance is secondary to the psychiatric disorders.

TREATMENT: Treatment includes medical, psychological, and sociological procedures. Medical therapy includes shock therapy (insulin, metrazol, electroshock), electroencephalosis, psychosurgery (prefrontal lobotomy), physiotherapy (hydrotherapy, electrotherapy massage), biochemotherapy (use of CO₂, hormones, histamine, benzedrine sulfate, ataraxic and tranquilizing agents). Psychotherapy includes psychoanalysis, emotional release, emotional reeducation, hypnotherapy, and occupational and recreational therapy. Sociological therapy involves modification of environment.

p., alcoholic-delusional. A degenerative process marked by delusions.

p., circular. P. with alternating manic and depressive episodes.

p., climacteric. Occurring at the menopause.

p., congenital. From birth.

p., depressive. SYN: *psychotic depressive reaction* P characterized by extreme depression, melancholia, and feelings of unworthiness.

p., exhaustion. SYN: *exhaustion or collapsed delirium* Reaction resulting from extreme physical exertion.

p., famine. P. resulting from starvation.

p., involuntional. P. occurring during involuntional period of bodily and intellectual decline. In women from ages 40-55, in men from 50-65.

p., manic-depressive. Ordinarily a series of periods of psychotic depression or excessive well-being, appearing in any sequence and alternating with longer periods of relative normalcy.

Though intensity may vary greatly, the manic shows an elated though unstable mood, a flight of ideas, and great physical activity. The case of primary depression finds all exertion exhausting; there is difficulty in thinking or acting and victim is very unhappy.

p., organic. The result of a pathological condition of the central nervous system, such as paresis.

p., postinfectious. P. following an infectious disease such as meningitis, pneumonia, typhoid fever.

p., puerperal. P. occurring during pregnancy or following childbirth.

p., reactive. SYN *situation psychosis*. P. presumably induced by an environmental condition.

p., senile. Due to old age.

p., situation. Transitory p. caused by an unpleasant situation [agents].

p., toxic. One resulting from toxic

p., traumatic. One resulting from head injuries and belonging to the organic group.

psychosomatic. Pert to interrelationship between the mind and body.

p. disorder. A pathological condition due to emotional or psychogenic factors.

p. medicine. The branch of medical science that emphasizes mental factors as the cause of functional and anatomical changes in disease processes.

psychosurgery (sī'kō-sur'jēr-l) [G. *psyche*, soul, + G. *cheirourgia*, handwork]. Brain surgery for mental illness. The term includes such procedures as lobotomy, *topectomy, and thalamotomy.

psychotechnics (sī'kō-tēk'nīks) [G. *psychē*, soul, + *technē*, art]. Application of psychological methods in the study of economic and social problems.

psychotherapy (sī'kō-thēr'ā-pl) [+ *therapeia*, treatment] Any mental

method of treating disease, esp. nervous disorders, by means such as suggestion, hypnotism, psychoanalytic therapy, etc.

psychralgia (sī'krō-āl'j-ā) [G. *psychros*, cold, + *algos*, pain]. Painful sensation of cold.

psychroesthesia (sī'krō-ēs-thē'zī-ā) [+ *aisthēsis*, sensation]. A sensation of cold in a part of the body, although it is warm.

psychrometer (sī'krōm'ē-tēr) [+ *metron*, a measure]. Device for measuring relative humidity of the atmosphere.

psychrophilie (sī'krō-fil'ik) [+ *philein*, to love]. Preferring cold, as bacteria which thrive best at low temperature.

psychrophobia (sī'krō-fō'bī-ā) [+ *phobos*, fear]. Abnormal aversion or sensitivity to cold.

psychrophore (sī'krō-fōr) [+ *phorein*, to carry]. Apparatus for applying cold to the urethra, or other canal.

psychotherapy (sī'krō-thēr'ā-pl) [+ *therapeia*, treatment]. Treatment of disease by administration of cold.

psyllium seed (sī'l'ūm). The dried, ripe seed of a plant grown in France, Spain and India.

Uses As a mild laxative.

DOSAGE 2 drams (8 Gm.) in orange or prune juice

ptarmic (tar'mīk) [G. *ptarmos*, a sneezing]. 1 Causing sneezing. SYN: *sternutatory*. 2 That which causes sneezing.

pterion (tēr'ī-ōn) [G. *pteron*, wing]. Point of suture of frontal, parietal, temporal, and sphenoid bones.

pteryoylgutamic acid. See *follic acid*.

pterygium (tēr'jī'ūm) [G. *pterygion*, wing]. ORTH. Triangular thickening of bulbar conjunctiva on the cornea with apex toward pupil.

p., progressive. Stage in which the growth extends toward center of cornea.

p., stationary. Stage in which the head of pterygium remains permanently attached to same point on the cornea.

TREATMENT Surgical

pterygoid (tēr'jī-goyd) [+ *eidōs*, appearance]. Wing-shaped. SYN: *alate*.

p. processes. Two large processes of sphenoid bone extending downward from junction of body and great wings, each consisting of lat and med. pterygoid plates.

pterygomaxillary (tēr'jī-gō-māk'sī-ā-rī) [+ *L. maxillaris*, pert. to upper jaw]. Concerning the pterygoid process and the upper jaw.

pterygopalatine (tēr'jī-gō-pāl'ā-tīn) [+ *L. palatinus*, pert. to the palate]. Relating to the pterygoid process and the palate bone.

ptilosis (tīl'ō'sis) [G. *ptilon*, feather, + *-ōsis*, disease]. Loss of eyelashes.

P.T.O. Abbr. for *Perlsucht tuberculin original*. Klemperer's tuberculin.

ptomaine (tō'mān) [G. *ptōma*, dead body]. One of a class of nitrogenous organic bases formed in the action of putrefactive bacteria on proteins and amino acids. Ex: *Cadaverine*, NH₂(CH₂)₅NH₂. See: *aporrhagma*.

They are poisonous substances resembling alkaloids resulting from decomposition of proteins. Many are very toxic. Ptomaines are poisonous bodies due to the action of microorganisms.

ptomainuria (tō'mā'ī-nū'rī-ā). Presence of ptomaines in urine.

ptosis (tō'sis) [G. *ptōsis*, a dropping]. Dropping or drooping of an organ or part, as the upper eyelid from paralysis, or the visceral organs from weakness of the abdominal muscles.

RS: *cataptonosis, phalangosis, viscerop-tosis.*

p., abdominal. Sagging of transverse colon; sometimes almost to the pelvic floor.

Etiol: Obesity or lack of abdominal muscle tone.

Treatment: A properly adjusted abdominal belt may help.

Contra: Dependence upon belt rather than on exercising and developing abdominal muscles.

ptyalagogue (tī-āl'ā-gōg) [*G. ptyalon, saliva, + agōgos, leading*]. Causing or that which causes a flow of saliva. **SYN:** *salagogue.*

ptyalin (tī-āl-līn) [*G. ptyalon, saliva*]. A salivary amylolytic enzyme converting starch into maltose and dextrin. **SEE:** *enzyme, ptyalogen, ptyalism, saliva.*

ptyalism (tī-āl-lizm) [*" + -ismos, condition*]. Excessive secretion of saliva.

Etiol: May be due to pregnancy, stomatitis, rables, exophthalmic goiter, menstruation and other disorders, including epilepsy, hysteria, nervous conditions and gastrointestinal troubles. May be induced by mercury, iodides, pilocarpine and other drugs. **SYN:** *salivation. SEE: zosterostomia.*

ptyalith (tī-āl-līth) [*" + lithos, stone*]. A calculus in a salivary gland.

ptyalocoele (tī-āl'ō-sēl) [*" + kēlē, hernia*]. A salivary cystic tumor or cystic dilatation of a salivary duct.

p., sublingual. **SEE:** *ranula*

ptyalogenic (tī-āl'ō-jēn'īk) [*" + gennan, to produce*]. Of salivary origin.

ptyalagogue (tī-āl'ō-gōg) [*G. ptyalon, saliva, + agōgos, leading*]. **SYN:** *ptyalagogue, q v; salagogue, q v*. An agent which causes the flow of saliva.

ptyalogram (tī-āl'ō-grām) [*G. ptyalon, saliva, + grama, a writing*]. An x-ray film of the salivary glands.

ptyalography (tī-āl'ō-grā-fī) [*" + graph-ein, to write*]. X-ray inspection of the salivary glands and ducts. **SYN:** *salatography.*

ptyalolith (tī-āl'ō-līth) [*" + lithos, stone*]. A salivary concretion.

ptyalolithiasis (tī-āl'ō-lī-thī-ā-sīs) [*" + -iasis, a condition*]. Presence of a concretion in a salivary gland or duct.

ptyalolithotomy (tī-āl'ō-līth-ōt'ō-mī) [*" + -tomē, a cutting*]. Surgical removal of a concretion from a salivary duct or gland.

ptyalorrhea (tī-āl'ō-rē-ā) [*" + roia, flow*]. An excessive flow of saliva.

ptysis (tī'sīs) [*" + -sis, a condition*]. Spitting; the ejection of saliva from the mouth.

ptysmagogue (tīz-mā-gōg) [*" + -agogos, leading*]. An agent that induces the flow of saliva.

P.U. Abbr. for *pregnancy urine* which contains chorionic gonadotrophin.

puber (pū'būr) [*L.*]. One at onset of puberty.

puberal (pū'bēr-āl) [*L. pubertās, puberty*]. Concerning puberty.

pubertas (pū'bēr-tās) [*L.*]. Puberty.

p. plena. Complete puberty.

p. praecox. Precocious puberty or puberty at an early age.

puberty (pū'bēr-tī) [*L. pubertās, puberty*]. Period in life at which 1 of either sex becomes functionally capable of reproduction.

A period of rapid change in boys and girls. It occurs in temperate climates bet. the ages of 13 and 16 in boys, and from 12 to 15 in girls, and ends in the attainment of sexual maturity.

In the boy it is marked by appear-

ance of hair on the face and chest, under the axilla, and on the pubes, change of voice, definite enlargement of the penis, and the appearance of erections and erotic dreams with ejaculation. Other physical and psychic disturbances are normal at this period, and end in the appearance of functional spermatozoa in the semen.

In the girl menstruation begins, the breasts enlarge, and hair appears in axilla and on the pubes.

RS: *hebephrenia, hebetic, interstitial, latency period, menaceme, nubility.*

pubes (pū'bēz) (sing. *pubis*) [*L. pubic hair*]. 1. Ant. part of innominate bone. 2. The pubic region. 3. Hair of the pubic region.

It is a sexual fetish, inspiring passion in the opposite sex.

pubescence (pū-bēs'sēns) [*L. pubescere, to become hairy*]. 1. Puberty or its approach. 2. Covering of fine, soft hairs on the body. **SYN:** *lanugo.*

pubescent (pū-bēs'ēnt) [*L. pubescere, to become hairy*]. 1. Reaching puberty. 2. Covered with downy hair.

pubetrotomy (pū'bē-trōt'ō-mī) [*L. pubes, pubic hair, + G. ētron, belly, + tomē, a cutting*]. Section through the pubes.

pubic (pū'bīk) [*L. pubes, pubic hair*]. Concerning the pubes.

p. bone. The lower ant. part of the innominate bone. **SYN:** *os pubis.*

p. hair. Hair over the pubes which appears at onset of sexual maturity.

It is usually lighter in color than hair on the head. It protects vital organs under the pubes. It is a fetish to some of the opposite sex, exciting the libido, and its abundance is claimed by some to be a mark of sexual vigor. **SEE:** *escutcheon, fetish, libido.*

pubio-, pubo- [*L.*]. Combining forms meaning the *pubic hair, pubic bone or region.*

pubiotomy (pū-bl-ōt'ō-mī) [*L. pubes, pubic hair, + tomē, a cutting*]. Incision across the pubis in order to enlarge the pelvic passage, facilitating the delivery of the fetus when pelvis is malformed.

pubis (pū'bīs) [*L. pubic hair*]. Pubic bone. **RS:** *os pubis.*

pubofemoral (pū'bō-fēm'or-āl) [*L. pubis, pubic hair, + femur, femor-, thigh bone*]. Pert. to the os pubis and the femur.

puboprostatic (pū'bō-prōs-tāt'īk) [*" + G. prostatēs, prostate*]. Relating to the os pubis and prostate gland.

pubovesical (pū'bō-vēs'ī-kāl) [*" + vesiculus, a little sac*]. Pert. to the os pubis and bladder.

pubunda (pū-dēn'dā) (sing. *pubendum*) [*L. pubendum, from pudere, to be ashamed*]. The ext. genitalia, esp. of the female. **SYN:** *vulva.*

pubendagra (pū-dēn-dāgr'ā) [*" + G. agra, seizure*]. Pain in the ext. genitalia.

pubendal (pū-dēn'dāl) [*L. pubendum, from pudere, to be ashamed*]. Relating to the ext. genitalia of female.

pubendum (pū-dēn'dūm) (pl. *pubenda*) [*L.*]. The ext. genitalia, esp. those of the female; the vulva.

p. mullebre. **BNA.** Ext. genitalia of the female.

pubic (pū'dīk) [*L. pudicus, modest*]. Concerning ext. female genitalia. **SYN:** *pubendal.*

Puente's disease. Simple glandular chelitis.

puericulture (pū-er'ī-kūl'chūr) [*L. puer, child, + cultura, a cultivating*]. Science concerned with prenatal care of

unborn children and the art of raising and training children.

puerile (pû-ê-ri) [L. *puer*, boy]. Concerning a child; childlike.

p. respiration. That heard in auscultation of healthy children.

puerilism (pû-êr-il-izm) [“ + G. *-ismos*, condition]. Childishness.

puerpera (pû-er-pêr-â) [L. *puer*, boy, + *parere*, to bear]. Woman during the period following the 3rd stage of labor, lasting until there is complete involution of the pelvic viscera.

puerperal (pû-er-pûr-âl) [L. *puer*, boy, + *parere*, to bear]. Concerning puerperium.

p. eclampsia. Convulsions during puerperium.

p. fever. Septicemia following childbirth. **SYN**: *childbed fever*.

p. insanity. A psychosis resulting during the puerperium.

p. period. Period immediately following childbirth.

p. sepsis. A toxemia of puerperium accompanied by a rise in temperature during the first 21 days.

CHARACTERISTICS: (a) Greatest single cause of death due to childbirth. (b) Lowered resistance a danger. (c) Toxemia, anemia, exhaustion in labor, abrasions and lacerations, loss of blood predisposing factors (d) May be autogenous or heterogeneous (e) Other foci aside from genitals may be responsible for invasion (f) Infection may remain localized or it may spread (g) Infected thrombi from veins of placental site may enter blood stream. (h) Metastatic areas of infection may be caused by (g) (i) Spreading along mucous membranes the infection may reach the tubes, ovaries and peritoneum (j) Thrombophlebitis in pelvic veins may lead to thrombophlebitis in veins of the leg. (k) Localized infections indicated by fever, rapid pulse, pain and pelvic tenderness. (l) Fever in (k) about 3rd day, 103° F to 104° F. (m) In endometritis, tenderness confined to uterus, lochia may be scant without odor (n) Lochia profuse and foul if any membranes are retained. (o) Parametritis in more severe infections (p) In (o) swelling due to inflammatory exudate, giving place to suppuration after a few days, accompanied by chill and rise in temperature. (q) Peritonitis possible, especially if gonococcus is present (r) Every spread of disease indicated by rise in temperature, and perhaps chills. (s) Drainage may be necessary. (t) Permanent sterility possible.

PREVENTION 1. Aseptic technic in all obstetric cases. 2. Masking of those who come in contact with patient. 3. Complete bacteriological survey following any infection to determine possible source. 4. Exclusion of all positive carriers from attendance upon maternity cases. 5. Better intrapartum care of case long in labor, use of least traumatizing type of delivery, avoidance of blood loss and wider use of blood transfusions.

TREATMENT: Active surgical intervention during infection seldom indicated. Good nursing care, high caloric and vitamin diet, restriction of visitors and sources of irritation. All manipulative procedures kept at a minimum. Excellent results have been obtained from use of sulfonamides and antibiotics.

puerperalism (pû-er-pûr-âl-izm) [L. *puer*, boy, + *parere*, to bear, + G. *ismos*, con-

dition]. Pathological conditions of the puerperal state.

p., infantile. Any pathogenic condition of the newly born.

p., infectious. Puerperal disease caused by infection.

puerperant (pû-er-pûr-ânt) [“ + *parere*, to bear]. A woman in labor or one who recently has been delivered.

puerperium (pû-er-pêr-i-um). Period following the 3rd stage of labor, lasting until involution of pelvic organs takes place, usually 3 to 6 weeks.

RS *childbed*, *Kellogg's inspiratory lift exercise*, *sepsis*, *puerperal*.

puerperous (pû-ur-pûr-ûs) [L. *puer*, boy, + *parere*, to bear]. In the period following childbirth. **SYN**: *puerperal*.

Pulex A genus of fleas belonging to the order Siphonaptera.

P. irritans. The human flea, which also infests dogs, hogs, and other mammals. May serve as intermediate host of the tape worms *Dipylidium caninum* and *Nymenolepis diminuta*.

pulicaris (pû-î-lî-kâr-is). Marked by spots resembling flea bites.

pulicatio (pû-î-lî-kâ-tî-ô). Infested with fleas.

Pulicidae (pû-lîs-i-dê) A family of fleas belonging to the order Siphonaptera which includes the genera *Pulex*, *Echidnophaga*, *Ctenocephalides*, and *Xenopsylla*. **SEE** flea.

pulicide (pû-î-lî-sîd). An agent which kills fleas.

pullulate (pûl-lû-lât) To bud or germinate.

pullation (pûl-lâ-shûn) The act of budding or germinating, as seen in yeast plant.

pulmo- [L.]. Combining form meaning lung.

pulmoaortic (pûl-mô-â-or-tîk) [L. *pulmô*, lung, + G. *aortê*, aorta]. 1. Concerning the lungs and the aorta. 2. Relating to the pulmonary artery and aorta.

pulmometer (pûl-môm-êt-êr) [“ + G. *metron*, a measure] Device for measuring the lung capacity. **SYN** *spirometer*.

pulmometry (pûl-môm-êt-ri) [“ + G. *metron*, a measure] Determination of capacity of the lungs.

pulmonary (pûl-mô-na-ri) [L. *pulmô*, *pulmon-*, lung] Concerning or involving the lungs. **SEE**: *caverniologu*.

DIAGRAM OF THE PULMONARY CIRCULATION.

The shaded areas represent the course of deoxygenated blood; the unshaded, oxygenated blood.

p. circulation. Passage of blood from heart to lungs and back again for purification.

The blood flows from the right cardiac ventricle through the lungs, there to be oxygenated, then back to the left cardiac auricle.

p. incompetence, p. insufficiency. Failure of the pulmonary valve to close properly.

p. stenosis. Narrowing of opening into the pulmonary artery from right cardiac ventricle

pulmonectomy (pŭl-mō-nĕk'tō-mĭ) [L. *pulmō*, *pulmon-*, lung, + G. *ektomē*, excision]. Removal of part or all of a lung's tissue. Syn *pneumectomy*.

pulmonitis (pŭl-mō-nĭ'tis) [P. + G. -itis, inflammation]. Inflamed condition of the lung. Syn *pneumonia*.

pulmotor (pŭl-mō'tor) [P. + motor, a mover]. Apparatus for inducing artificial respiration by forcing oxygen into the lungs, or for expelling gas in case of asphyxiation.

pulp (pŭlp) [L. *pulpa*, flesh]. 1. The soft part of fruit. 2. The soft part of an organ. 3. Chyme

p. cavity. Hollow space within a tooth containing dental pulp.

p. cells. Those in the pulp cavity of any organ.

p. cords. SYN *cords of Billroth*. Anastomosing cords of red pulp of the spleen traversed by venous sinuses

p., dental. The soft tissue filling the cavity of a tooth

p., digital. Elastic, soft prominence on the palmar or plantar surface of the last phalanx of a finger or toe.

p., enamel. Cells forming a stellate reticulum lying between outer and inner layers of the enamel organ of a tooth

p., red. The portion of splenic pulp consisting of venous sinuses plus pulp cords

p., splenic. The soft, spongelike tissue forming substance of the spleen

p., white. Portion of splenic pulp consisting of a compact type of lymphatic tissue which forms a sheath about certain arteries

pulpal (pŭl'pāl) [L. *pulpa*, flesh]. Relating to pulp

pulpefaction (pŭl-pĭ-fāk'shŭn) [P. + *facere*, to make]. Conversion into pulpy substance

pulpy (pŭl'pĭ) [L. *pulpa*, flesh]. Resembling pulp, flabby. SYN *pultaceous*.

pulsate (pŭl'sāt) [L. *pulsāre*, to beat]. To throb or beat in rhythm.

pulsatile (pŭl'sā-tĭl). Pulsating; characterized by a rhythmic beat. SYN *throbbing*.

pulsation (pŭl-sā'shŭn) [L. *pulsatiō*, a beating]. The rhythmic beat, as of the heart and blood vessels; a throbbing. SEE: *pulse*.

ABNORMAL CENTERS OF PULSATION: Epigastric p.: May result from: 1. Excited action of heart from any cause. 2. Enlargement of right ventricle. 3. A pulsating aorta noted in certain nervous and anemic patients. 4. Aortic aneurysm. 5. Tumors of left lobe of liver resting on the aorta. **P. in left axillary region.** May result from: 1. Enlargement of heart. 2. A tense purulent effusion in left pleural sac (pulsating empyema). 3. Aneurysm. 4. Chronic disease of left lung and pleura, associated with retraction.

Unnatural p. in carotids: May result from: 1. Excitement of heart from any cause. 2. Exophthalmic goiter. 3. An-

emia. 4. Valvular disease, especially aortic regurgitation. 5. Aneurysm or dilatation of the vessels. 6. Unnatural elasticity of the vessels, noted in certain nervous and anemic patients. **Jugular p.** The jugular vein often becomes distended in forced expiration and coughing. Sometimes distention noted in adherent pericardium. A true rhythmic venous pulsation usually results from tricuspid regurgitation. A pulsation may be transmitted to the jugular vein from the underlying carotid, but this false pulsation will continue when light pressure is made on root of neck, while the true venous pulse will cease.

DIAGRAM ILLUSTRATING THE COMMON TYPES OF PULSE. After Sears.

1 Normal Pulse. Showing fairly sharp onset with more gradual falling away of the beat. 2. Dicrotic Pulse. Showing secondary wave as the beat falls away. 3. Waterhammer Pulse. Showing abrupt onset and sharp falling away of the beat. 4. Pulse with Extra Systole. A small premature wave followed by a pause before the next normal beat. 5. Pulse in Auricular Fibrillation, with irregularity in rhythm and volume of all the beats. 6. Pulsus Alternans. Large and small beats alternate regularly with each other. 7. Pulsus Bigeminus. A coupling of two beats, followed by a pause.

pulse (pŭls) [L. *pulsus*, from *pulsāre*, to beat]. 1. Rate, rhythm, condition of arterial walls, compressibility and tension, and size and shape of the wave. 2. Rhythmical throbbing. 3. Throbbing caused by the regular contraction and alternate expansion of an artery; the periodic thrust felt over arteries in time with the heartbeat

Normal pulse rate of adult is 70 to 75 and is usually observed in radial artery of the wrist.

POINTS TO BE OBSERVED: Hour, frequency, pressure, regularity, force. Temperature and respiration are of clinical importance to the physician. Right and left radial arteries are usually tested, and differences, if any or absent, should be noted. Pressure should not be too great on artery and thumb should not be used. Count half a minute at a time per minute.

A tracing of this is called a sphygmogram and consists of a series of waves in which the upstroke is called the *anacrotic limb*, and the downstroke (on

**PULSE.**

After Sears.

A. Normal diastole. Mitral valve open. 1. Aortic valve. B. Normal systole. Mitral valve closed, aortic valve open. 1. Aorta. 2. Pulmonary veins. 3. Auricle. 4. Mitral valve. 5. Ventricle. C. Mitral stenosis. Hypertrophied left auricle forcing blood through narrowed mitral valve. D. Mitral regurgitation. Ventricular systole forcing blood into aorta, with regurgitation into left auricle owing to inadequate closure of mitral valve.

which is normally seen the diastolic notch), the *catacrotic*.

p., accelerated. A common symptom in all fevers. The pulse of the adult rarely exceeds 150 beats per minute even in acute inflammatory infections; when it runs above 170 it may portend a fatal issue.

A pulse of 170 is known as *tachycardia*, and in some diseases it is a common symptom. If such an acceleration does not diminish within a short time it is especially unfavorable. A rate of 150 is not necessarily fatal. When quick and bounding it indicates acute fever or inflammation, or may result from a toxic goiter; organic heart disease; pressure at the base of the brain sufficient to paralyze the pneumogastric nerve, as in clot, tumor, and advanced meningitis; shock; reflex irritation, as in ovarian or uterine disease; rheumatoid arthritis, independent paroxysmal neurosis, or be a result of the use of certain drugs, such as belladonna, nitrates, or alcohol.

p., alternating. One with alternating weak and strong pulsations

p., anacrotic. One showing a secondary wave on ascending limb of the main wave.

p., angry. SYN: *wiry pulse*, *q v*.

p., ardent. One that seems to strike the finger at a single point.

p., asymmetrical radial. SYN: *unequal pulse*, *q v*

p., bigeminal. Two regular beats followed by a longer pause. It has the same significance as an irregular pulse.

p., bounding. SYN: *collapsing*, *pulse P*. which reaches a higher level than normal then disappears quickly. Beat detected when arm is held aloft. Due

to shortened ventricular systole and reduced peripheral pressure.

p., capillary. Alternating redness and pallor of capillary region, as in the matrices beneath the nails, occurring chiefly where an excessive cardiac impulse coincides with general arterial narrowing.

p., catacrotic. One showing 1 or more secondary waves on descending limb of the main wave.

p., central. P recorded near the origin of the carotid or subclavian arteries

p., collapsing. One feebly striking the finger, then subsiding abruptly and completely.

p., Corrigan's. One of aortic insufficiency. SEE: *waterhammer pulse*.

p., decurtate. SYN: *myurous pulse* Pulse which progressively decreases in force

p., deficit. Lack of or an extremely weak pulse felt at the wrist as occurs in auricular fibrillation

p., dicrotic. A double beat, 1 heart-beat for 2 arterial pulsations, or a seeming weak wave bet. the usual heartbeats. This weak wave should not be counted as a regular beat. It is indicative of low arterial tension, and is noted in fevers, in low states of the nervous system, and sometimes in typhoid fever

p., entopic. Intermittent subjective sensations of light which accompany the heartbeat

p., febrile. A full, bounding pulse at onset of fever, becoming feeble and weak when fever subsides or on prostration

p., female. More frequent than male p. by 10 or 15 beats. There is an important correlation bet. the pulse, respiration and temperature which must be considered in most disease states.

p., filiform. SYN: *thready pulse*, *q v*

p., fine, scarcely perceptible. Denotes great exhaustion and approaching death. May be caused by wasting disease or by hemorrhage.

p., formicant. A small, feeble pulse

p., frequency. Depends upon sex, age, exertion, position of body and health. It is higher in children and increases with very old age. It is slower in tall persons than it is in short ones. It is 10 to 12 beats more frequent in standing than sitting. Muscular exertion, as dancing, will raise it from 75 to 125 or higher. Eating and drinking likewise increase heart action. It is less frequent when sleeping or lying down.

p., full. A distended one in an artery giving a tense feeling; observed in sthenic inflammation

p., gaseous. A soft, full pulse

p., goatleap. A weak pulsation following a strong one

p., hard. One with sensation of hardness due to changes in the arterial wall or to vascular distention.

p., hepatic. One due to expansion of veins of the liver at each ventricular contraction.

p., high-tension. One in which force of beat is relatively increased and which may be roughly estimated by noting the amount of pressure of the fingers that is required to arrest the beat. It is observed in many conditions, notably cardiac diseases, such as hypertrophy, chronic nephritis; cerebral affections; irritation of the vasomotor center, as in apoplexy, tumors, and beginning meningitis; also after the use of certain drugs, such as digitalis, ergot, and al-

coholic stimulants; and in chills, angina pectoris, epileptic and hysterical seizures, lithemia, gout, and uremia.

p., incident. One with 2nd beat weaker than 1st, the 3rd weaker than the 4th, followed by a stroke as strong as the 1st.

p., infrequent. Observed in organic heart disease, especially fatty degeneration, and fibroid induration; jaundice; pressure at base of brain sufficient to irritate the vagus, as in beginning meningitis; and at the close of febrile diseases, as in typhoid fever, and pneumonia. May follow the use of certain drugs, such as digitalis, aconite, and opium. Physiological slowness is noted in repose, during fasting, in the puerperium, and old age, it is habitual in certain people (40 to 60 beats per minute).

p., intermediate. That recorded in proximal portions of carotid, femoral, and brachial arteries.

p., intermittent. One in which occasional beats are skipped.

Caused by an apparent drop of a heartbeat. It is not inconsistent with health, yet it is commonly an indication of disease, frequently from gastric, hepatic, uterine, and renal causes. It is common in lithemia and fatty degeneration of the heart and is habitual in certain people after exercise, eating, excitement, or after the use of tobacco, tea, coffee, or other stimulants.

p., irregular. One when there is a variation in "force" and "frequency." Has same significance as intermittent pulse. Common in myocarditis and valvular diseases, esp. in mitral regurgitation. Heart trouble may be noted by long continued irregular pulse. Excess of tea, coffee, tobacco, or exercise may cause an irregular pulse.

p., jerky. That of aortic regurgitation, because from a state of emptiness the artery is suddenly filled with blood.

p., jugular. Venous pulse felt in jugular vein.

p., long. One in which duration of the systolic wave is comparatively long.

p., low-tension. One with sudden onset, short duration and rapid decline, esp. noted in degeneration of the heart, collapse, in debility, fevers, and low states of the nervous system.

p., male. From 70-75 beats per minute, but not an invariable rule, as some are healthy with a pulse rate of 50 or even 90.

p., monocrinous. One with a sphygmogram showing a simple ascending and descending, uninterrupted line and no dicrotism, indicative of a grave condition of the circulation and of impending death.

p., myurous. *SYN.* *decurtate p., q v*

p., paradoxical. One which is more or less suppressed at close of each full inspiration. Thought to be due to compression of the great vessels by inflammatory adhesions, the latter being stretched during act of inspiration. Frequently noted in adherent pericardium.

p., peripheral. Pulse recorded in arteries (radial or pedal) in distal portion of limbs.

p., pistol-shot. Pulse resulting from rapid distention and collapse of an artery as occurs in aortic regurgitation.

p., plateau. One slowly rising but which is maintained.

p., pressure. The difference bet. the systolic and the diastolic pressure.

This is really expressive of the tone of the arterial walls. *Ex:*

120 is systolic pressure.
100 is diastolic pressure.

20 is the pulse pressure.

130 is the systolic pressure.
90 is the diastolic pressure.

40 is the pulse pressure.

Normal pulse pressure: The systolic pressure must be about 40 points over the diastolic pressure in comparison. **Abnormal pulse pressure:** A pulse pressure over 50 points and under 30 points is considered abnormal.

p., quick, full, bounding. Indicates inflammation or fever of acute inflammatory character.

p., quick, hard. Characteristic of diphtheria and scarlatina. It also indicates inflammation or fever of acute inflammatory nature.

p., Quincke's. *SEE:* *p., capillary*

p., rapid. *SEE:* *accelerated p.*

p., rate.

Average Normal

P of embryo, average per minute	150
At birth	140-130
During 1st year	130-115
During 2nd year	115-100
During 3rd year	100-90
About 7th year	90-85
About 14th year	85-80
In middle life	75-70
Old age	65-50

p., regular. When the "force" and "frequency" are the same, that is, when the length of beat and number of beats per minute and the strength are the same.

p., respiratory. Alternate dilatation and contraction of the large veins of the neck occurring simultaneously with inspiration and expiration following rapid exercise.

p., running. A weak rapid pulse with one wave continuing into the next.

p., senile. That of the aged. The sphygmogram shows a high position of the secondary waves in descent with great size of the 1st secondary wave as compared with the 2nd.

p., short. One with a short, quick systolic wave.

p., shuttle. One that feels as though it is floating something solid as well as fluid.

p., slow. A very slow pulse, fully accentuated, often found among the aged, and it is a habitual rate among those inclined to be slow and easy in their actions. Such a pulse rate ranges bet. 40 and 60 beats per minute.

p., sluggish, full. Common in diseases attended with coma resulting from concussion or compression of brain and chronic softening.

p., small and rapid. Seen in great prostration from wasting diseases or hemorrhage.

p., soft. One which may be stopped by digital compression.

p., thready. A scarcely appreciable one observed in syncope.

p., tremulous. One in which a series of oscillations is felt with each beat.

p., trigeminal. Three regular beats followed by a pause. *SEE:* *irregular p.*

p., undulating. One that seems to have several successive waves.

p., unequal. Pulse in which rates are different in symmetrical arteries

p., vagus. A slow pulse resulting from vagus inhibition of the heart

p., venous. Pulse in a vein, esp one of the large veins near the heart such as the int and ext jugular Normally is undulating and scarcely palpable In conditions such as tricuspid regurgitation, it is pronounced

p., vermicular. A small, frequent one with a wormlike feeling

p., water-hammer. Characterized by a short, powerful, jerky beat which suddenly collapses The peculiar pulsation may be distinctly visible, not only in the carotids, but throughout the brachial artery It is diagnostic of aortic regurgitation during the period of compensation, and its force is due to excessive ventricular hypertrophy and to the large amount of blood expelled with each systole, its sudden recession is due to the incompetent valves failing to support the column of blood. **SYN** Corrigan's p.

p. wave. A wave in the blood column and the arterial walls which is initiated by the ejection of blood from the left ventricle into the aorta It travels at a rate of 7 to 9 m per sec

p., wiry. A tense one that feels like a wire or firm cord

pulse, words pert. to: acrotic, acrotism, Adams-Stokes syndrome, anacrotic, anadictotic, anadictotism, anatriotic, arrhythmia, artery, asphyctic, auricular, bisferious, bradycrotic, bradydiastole, bradysphygmia, cacopsphyxia, caprizant, cardiopuncture, catacrotism, catadiastole, catadiastotism, centesis, Corrigan's, diastasis, diastole, diastolic pressure, dicrotic, heart, -block, hemisystole, infant, intercadence, intercalary, phlebogram, pulsate, pulsation, pulsus, respiration, spinal, sphygmoid, sphygmogram, sphygmomanometer, systaltic, systole, systolic pressure, systolic temperature, thermometry, vein

pulsimeter (pŭl-sim'ēt-ēr) [L *pulsus*, a beat, + G. *metron*, measure]. Contrivance for measuring frequency and force of the pulse **SYN** sphygmometer

pul'sion [L *pulsus*] A veering of the individual from one side to another or forward

pulsus (pŭl'sūs) [L.]. Pulse

p. alternans. A succession of strong and weak beats alternating

p. bigeminus. Paired beats

p. celer. Fast pulse, particularly that associated with high pulse pressure in aortic regurgitation

p. paradoxus. One in which p. becomes weaker during inspiration

p. fardus. Slow pulse, particularly seen in aortic stenosis.

pulfaceous (pŭl-tā'shūs) [L *puls*, *pul-*, pap] Resembling a poultice **SYN** pulpy.

pulv. [L.]. Abbr. *pulvis*, powder.

pulverization (pŭl-vēr-i-zā'shūn) [L. *pulvis*, powder]. The crushing of any substance to powder or tiny particles.

pulverulent (pŭl-vēr'ū-lēnt) [L *pulvis*, *pulver-*, powder] Of the nature of, or resembling, powder. **SYN** powdery.

pulvinar (pŭl-vī'nār) [L. cushioned seat]. Part of the thalamus comprising a portion of the post nuclei Projects posteriorly and medially partially overlying midbrain

pulvinate (pŭl-vīn-āt) [L. *pulvinus*, cushion]. Very convex; shaped like a cushion.

pulvis (pŭl'vis) [L.]. Powder.

The 6 official powders are mixtures of powdered medicinal substances.

pump (pŭmp) [M.E. *pumpe*]. 1. Apparatus that transfers fluids or gases by pressure or suction. 2. To force air or fluid into a cavity, as heart pumps blood

p., air. Device for forcing air in or out of a chamber.

p., breast. Apparatus for removing milk from the breasts.

p., dental. Apparatus for removing saliva during operation on teeth or jaws

p., stomach. Apparatus for removing contents of stomach

pumpkin (pŭmp'kin) [G *pepōn*, ripe]. **AV**. SERVING. 120 Gm Pro. 12, Fat 0.1, Carbo. 48. **VITAMINS** A++, B+, C+ to ++. **ASH CONST** Ca 0.023 Mg 0.008, K 0.320, Na 0.065, P 0.059, S 0.021, Fe 0.0008. A base forming food, alkaline potentiality, 15 cc per 100 Gm. 57 cc per 100 Cal

puncta (pŭnk'tā) (sing. *punctum*) [L. *punctum*, point]. Points

p. dolorosa. Painful points in course of or at exit of nerves affected by neuralgia

p. lacrimalia. Orifices of lacrimal ducts situated at tip of lacrimal papillae located on inner margins of eyelids about 6 mm from medial canthus

p. vasculosa. Minute red areas which mark the cut surface of white central substance of the brain, from blood escaping from divided blood vessels

punctate (pŭnk'tāt) [L *punctum*, point]. Having pinpoint punctures or depressions on the surface; marked with dots.

p. rash. One with minute red points.

punctiform (pŭnk'ti-form) ["" + *forma*, shape]. 1 Formed like a point. 2. Bact Referring to pinpoint colonies of less than 1 mm in diameter.

punctograph (pŭnk'tō-grāf) ["" + G. *graphein*, to write]. Device employing radiography for localization of foreign bodies in the tissues.

punctum (pŭnk'tŭm) (pl. *puncta*) [L.]. Point

p. caecum. Spot in fundus of the eyeball where the optic nerve enters **SYN**: blind spot

p. lacrimale. Outlet of lacrimal cap.

p. nasale inferius. Lower portion of suture joining the nasal bones. **SYN**: rhinion.

p. proximum. Abbr P P. Near point

p. remotum. Abbr P R Far point

p. saliens. First trace of the embryonic heart.

puncture (pŭnk'chŭr) [L. *punctura*, a point]. 1 A hole or wound made by a sharp pointed instrument. 2. To make a hole with such an instrument.

p., diabetic. **SYN** Bernard's puncture Puncture in floor of 4th ventricle which results in glycosuria

p., exploratory. Removal of fluid or pus from a cavity or cyst for examination by piercing it.

p., lumbar. Puncture of the lumbar spinal membranes to relieve dropsy or for examination of spinal fluid. **SER**: cisternal p., lumbar p., spinal fluid, spinal puncture.

p., spinal. **SEE** lumbar p.

p., ventricular. Puncture of a ventricle of the brain for purpose of withdrawing fluid or introducing air for ventriculography.

p. wound. A wound made by piercing with a sharp instrument.

pungency (pŭn'jēn-sī) [L. *pungere*, to prick]. Quality of being sharp, strong or bitter, as an odor or taste.

pungent (pŭn'jēnt) [L. *pungere*, to prick].

Acrid, sharp, as applied to an odor or to taste.

P. U. O. Abbr. for *pyrexia of unknown origin*, or for *trench fever*.

pupa. Stage in complete metamorphosis of an insect which follows the larva and precedes the adult or imago. Insect does not feed in this stage and is usually inactive.

pupil (pū'pl) [*L. pupilla*, pupil]. The contractile opening at the center of the iris for the transmission of light.

It contracts when exposed to strong light, and when the focus is on a near object. It dilates in the dark, and when the focus is on a distant object. Average diameter is 4 to 5 mm. Both pupils should be equal.

CONSTRUCTION or **OCCURS** in old age, in photophobia. Also induced by morphine, pilocarpine, physostigmine, eserine and other miotic drugs.

DILATATION or **MAY** occur in blindness or deficient sight from any cause, from distress or strong emotion, in fevers and comatose states, oculomotor nerve paralysis, glaucoma.

May be induced by belladonna (atropine), cocaine, eucatropine, homatropine, hyoscine (scopolamine), and other mydriatic drugs.

RS' accommodation, adaptation, anisocoria, cat's eye pupil, cilio-spinal center, corectaxis, corenceleisis, eye, hippus, iridoplegia, isocoria, miosis, miotic, mydriasis, mydriatic, myosis, myotic, oculo-culo pupillae, reflex, seclusio pupillae.

p., Argyll Robertson. P. which reacts to accommodation but not to light. Seen in tabes dorsalis and occasionally in other diseases affecting midbrain.

p., artificial. P. made by iridectomy when normal pupil is occluded.

p., bounding. Rapid dilatation of pupil alternating with contraction.

p., cat's-eye. One narrow and slit-like.

p., occlusion of. One with opaque membrane shutting off the pupillary area.

p., pinhole. A pupil of minute size; one excessively constricted. Seen after use of miotics, in opium poisoning, and in certain brain disorders.

p., tonic. One which reacts slowly in accommodation-convergence reflexes.

pupillary (pū'pī-lēr'ī) [*L. pupilla*, a pupil]. Concerning the pupil.

p. reflex. 1. Constriction of pupil upon stimulation of retina by light. 2. **SYN accommodation reflex.** Constriction of pupil upon accommodation for near vision and dilatation upon accommodation for far vision. 3. **SYN commensal light reflex.** Constriction of pupil of one eye in response to stimulation of the other by light. 4. **SYN: Westphal's pupillary reflex.** Constriction of pupil upon attempted closure of eyelids which are held apart. Also called *hd* or *orbicularis reflex*. **SEE: cilio-spinal reflex, hippus**

pupillometer (pū-pīl-ōm'ēt-ēr) [*L. pupilla*, a pupil, + *G. metron*, a measure]. Device for measurement of pupil's diameter.

pupilloscopy (pū-pīl-ōs'kō-pl) [" + *G. skopein*, to examine]. 1. Measurement of eye refraction by effect of light and shadow on the retina. **SYN: skiascopy.** 2. Examination of the pupil.

pupillostatometer (pū'pīl-ō-sāt-ōm'ēt-ēr) [" + *G. statos*, placed, + *metron*, a measure]. Device for measuring distance between centers of the pupils.

pure. 1. Free from pollution; uncontaminated. 2. Chaste.

p. line. The progeny of a single homozygous individual obtained by self-fertilization. 2. The progeny of an individual reproducing asexually by simple fission or by buds, runners, stolons, etc. 3. The progeny of two homozygous individuals reproducing sexually.

purgation (pūr-gā'shūn) [*L. purgatio*, from *purgare*, to cleanse]. 1. Evacuation of the bowels caused by action of a purgative medicine. **SYN catharsis.** 2. Cleansing.

purgative (pūr-gā-tiv) [*L. purgare*, to cleanse]. 1. Cleansing. 2. An agent that will cause watery evacuation of the intestinal contents. **Ex calomel, castor oil, magnesium sulfate.** **SEE catharsis, cathartic.**

Simple. Produces free discharge from bowels with some griping. **Drastic.** Produces violent action of bowels with cramps and griping. **Saline.** Produces copious watery discharges. **Cholagogue.** Stimulates flow of bile, producing green stools.

p. enema. A strong, high one that produces evacuation when other enemas fail. **SEE enema.**

purge (pūrj) [*L. purgare*, to cleanse]. 1. To evacuate the bowels by means of a cathartic. 2. A drug that causes evacuation of the bowels.

puriform (pūr'ī-form) [*L. pus*, pur-, pus, + *forma*, shape]. Resembling pus.

purin(e) (pūr'ēn, -rīn) [*L. purum*, pure, + *uricum*, uric acid]. Parent of a group of heterocyclic nitrogen compounds including purine itself, $C_5H_4N_4$, and caffeine, theobromine, theophylline, xanthine, prepared from uric acid.

Purines are the end-products of nucleoprotein digestion and may be synthesized in the body. They are divided into the following groups: Xanthine, hypoxanthine, and uric acid, belonging to

the *oxypurines*; guanine and adenine, belonging to the *aminopurines*, and theophylline, theobromine, and caffeine, belonging to the *methylpurines*. Purines break down to form uric acid. Cereals without the germ are purine-free. **See:** *meat*.

p. body, base. Purine or any base derived from it.

Those mentioned in the foregoing plus paraxanthine and heteroxanthine.

p. endogenous. P. originating from nucleoproteins within the tissues.

p. exogenous. P. present in or derived from foods.

p. free diet. Any fruit excepting cranberries and prunes. Milk, butter, cream, cheese, rice, flour, tapioca, cabbage, cauliflower, sugar, macaroni, white bread.

p. low diet. Excludes meat, fish, fowl, spinach, lentils, mushrooms, peas, asparagus, coffee, tea, cocoa, spices, etc.

Purkinje cells (poor-kin'yé). Neurons whose cell bodies form a single layer between molecular and granular layers of the cerebellar cortex. Dendrites from an extremely rich arborization in molecular layer.

P. fibers. Atypical muscle fibers lying beneath endocardium of heart which constitute the impulse-conducting system of the heart.

P's. figures. Dark lines produced by the vessels of the retina.

P's. network. Fibrous network of large muscle cells found in cardiac muscle beneath the endocardium.

P. vesicle. The nuclear portion of an ovum. **SYN:** *germinal vesicle*.

Purkinje-Sanson's images (poor-kin'yé-sahn-son'). Three images of 1 object seen in the pupil of the eye.

purophepatitis (pür'pèp-à-ti'tis) [*L. pus, pur-, pus, + G. èpar, èpat-, liver, + -itis, inflammation*]. Purulent inflammation of the liver.

puromucous (pür'ró-mù'kùs) [*L. pus, pur-, pus, + mucus, phlegm*]. **SYN:** *mucopurulent*. Containing both mucous and pus.

purpura (pür'pü-rä) [*L. purple*]. An affection with various manifestations and obscure etiology, characterized by hemorrhages into the skin, mucous membranes, internal organs, and other tissues.

Hemorrhage into the skin shows red, darkening into purple, then brownish-yellow and finally disappearing in from 2 to 3 weeks. They do not disappear under pressure. A primary lesion and a type of macule may be arthritic or visceral as well as hemorrhagic and chronic.

p. annularis telangiectodes. Eruption of ring-shaped spots on lower limbs with pronounced telangiectasia.

p. fibrinolytic. P. resulting from abnormal proteolytic activity of blood.

p. fulminans. A rapidly progressing form occurring principally in children; of short duration and frequently fatal.

p., hemorrhagic. **See:** *p., idiopathic thrombocytopenic*.

p., idiopathic thrombocytopenic. **SYN:** *land scurvy, primary splenic thrombocytopenia, Werlhof's disease*. A hemorrhagic disorder in which there is a pronounced reduction in circulating blood platelets, due to presence in blood plasma of a substance which agglutinates platelets. Primary cause unknown.

SYN: Bleeding from mouth and skin

upon slight injury. Bleeding may also occur from mucous membranes, in serous membranes and sometimes into brain. Increased bleeding time, poor clot retractility.

purpuric (pür-pür-ik) [*L. purpura, purple*]. Pert. to, resembling, or suffering from, purpura.

p., nonthrombocytopenic. **SYN:** *p. simplex*. P. of intestine accompanied by bleeding. Associated with abdominal pain, diarrhea, and vomiting.

p., rheumatic. **SYN** *Schönlein's p. peliosis rheumatica*. P. with fever, swelling and severe rheumatic pains.

p., senile. In debilitated and aged persons; ecchymoses and petechiae on legs.

p., symptomatic. **SYN:** *secondary p.* P. which results from effects of various chemical, vegetable, animal, or physical agents, certain infectious diseases, or is a part of certain blood disorders.

p., thrombocytopenic. **See:** *p., idiopathic thrombocytopenic*.

purpurin (pür'pü-rin) [*L. purpura, purple*]. 1. An acid dye used to stain nuclei. 2. *Uroerythrin*, a red pigment sometimes present in urine.

purpurinuria (pür'pü-rin-ür'i-ä) [*" + G. ouron, urine*]. Purpurin in urine. **SYN:** *porphyrinuria*.

purring thrill (pür'ing). Thrill or vibration like a cat's purring, due to mitral stenosis, aneurysm, or valvular erosion of the heart felt by palpation over the precordium.

purulence, purulency (pür'ü-léns, pür'ü-lén-si) [*L. purulentia, a pussy condition*]. The state of containing pus. **SYN:** *suppuration*.

purulent (pür'ü-lént) [*L. purulentia, a pussy condition*]. Suppurative; forming or containing pus, *q.v.* **See:** *sputum*.

puruloid (pür'ü-loyd) [*L. pus, pur-, pus, + G. eidos, form*]. Like pus. **SYN:** *puriform*.

pus (püs) [*L.*]. Liquid product of inflammation composed of albuminous substances, a thin fluid, and leukocytes or their remains, generally yellow in color.

If red it suggests rupture of small vessels. If blue or green it indicates presence of *B. pyocyaneus*.

Etiol. Streptococci, staphylococci, gonococci, and pneumococci and other species of bacteria.

p. cells. Leukocytes, generally dead and showing degenerative changes. Found in suppurative inflammation.

p., cheesy. Very thick pus.

p., concrete. Fibropurulent coagula seen in infective endocarditis.

p., ichorous. P. that is thin with shreds of sloughing tissue. It may have a fetid odor.

p., sanious. Pus colored by blood.

p., serous. Pus mostly of thin serum containing flakes.

p. in urine. Condition when there are more than the normal number of pus or white blood cells in the urine. It may be due to cystitis, pyelitis, urethritis, tuberculosis of the kidney, or any infection of the genitourinary tract. May also be caused by trauma. **SYN:** *pyuria*.

TEST FOR PRESENCE OF: Fill a test tube half-full with urine and add some dilute potassium hydroxide. Slowly pour urine from one test tube into another; repeat two or three times. The mixture will become thick and ropy if pus is present.

Freshly passed urine may be cloudy

due to presence of phosphates or pus. If the former, the addition of acid will cause it to clear; if pus is present it will not clear but may become gelatinous. Known as *Donne's test*.

pus, words pert. to: apogonous, apyretous, apyous, archepyon, biocyotoculture, burrowing, cell, clasp threads, empyema, empyesis, pyemia, "pyo-" words, resorption, saprogenic, suppurate, suppuration.

pustulant (pūs-tū-lānt) [L. *pustulāre*, to blister]. 1. Causing pustules. 2. Agent which produces the formation of pustules, such as Croton oil and antimony; seldom used any more.

pustular (pūs-tū-lēr) [L. *pustulāre*, to blister]. Pert. to, or characterized by, pustules.

pustulation (pūs-tū-lā'shūn) [L. *pustulāre*, to blister]. The development of pustules.

pustule (pūs-tūl) [L. *pustulāre*, to blister]. Small elevation of skin filled with lymph or pus.

Pustules may be circumscribed, flat, rounded or umbilicated. They occur in eczema pustulosum, acne vulgaris, dermatitis herpeticiformis, impetigo simplex, ecthyma, varicella, syphilis, or in smallpox.

ES: *achor*, *Chaussier's areola*, *pus*, *pustulant*.

p., malignant. Severe infectious disease with formation of hard pustule and symptoms of collapse. SYN: *anthrax*.

pustulocrustaceous (pūs-tū-lō-krūs-tā'-shūs) [L. *pustulāre*, to blister, + *crusta*, a shell]. Characterized by formation of pustules and crusts.

pustulosis (pūs-tū-lō'sis) [+ G. -*ōsis*, disease]. A generalized eruption of pustules.

putamen (pū-tā'mēn) [L. shell]. BNA. The darker, outer layer of the lenticular nucleus.

putrefaction (pū-trē-fāk'shūn) [L. *putrefacere*, to putrefy]. Decomposition of animal matter, esp. protein, associated with malodorous and poisonous products, such as the ptomaines, mercaptans, and hydrogen sulfide, caused by certain kinds of bacteria and fungi.

Decomposition occurring spontaneously in sterile tissue after death is called autolysis. SEE: *intestinal putrefaction*, *sepsis*.

putrefactive (pū-trē-fāk'tiv) [L. *putrefacere*, to putrefy]. 1. Causing, or pert. to, putrefaction. 2. Agent promoting putrefaction.

p., alkaloid. A ptomaine, a base formed by action of bacteria on an amino acid.

putrefy (pū-trē-fī) [L. *putrefacere*, to putrefy]. To undergo putrefaction.

putrescence (pū-trēs'ēns) [L. *putrescere*, to grow rotten]. Decay; rottenness.

putrid (pū'trid) [L. *putridus*, rotting]. Decayed; rotten; foul.

putrilage (pū'tril-āj) [L. *putrilāgō*, putrefaction]. Product of putrefaction.

pyarthrosis (pi-ar-thrō'sis) [G. *pyon*, pus, + *arthron*, joint]. Pus in the cavity of a joint.

pycnemia (plk-nē'mī-ā) [G. *pyknos*, thick, + *aima*, blood]. Thickening of the blood. SYN: *pyknemia*.

pycno- (plk'no) [G.]. Combining form meaning *dense*, *thick*.

pycnomorphous (plk'no-mor'fus) [G. *pyknos*, compact, + *morphe*, form]. Term applied to condition in which chromophil substance of cytoplasm of nerve cells is compactly arranged.

pycnophrasia (plk-nō-fray'zi-ā). Thickness of speech.

pycnosis (plk-nō'sis) [G. *pyknos*, thick, + *-ōsis*, intensive]. 1. SYN: *inspissation*. Thickening. 2. Degenerative change occurring in nucleus of a cell in which nucleus shrinks and structural details are lost.

pyecchysis (pi-ēk'is-is) [G. *pyon*, pus, + *ek*, out, + *chein*, to pour]. An effusion of pus.

pyelectasis, **pyelectasis** (pi-ēl-ēk-tā'zi-ā, -ek'tāz-is) [G. *pyelos*, pelvis, + *ektasis*, dilatation]. Dilatation of the renal pelvis.

pyelitic (pi-ē-lit'ik) [+ -*itis*, inflammation]. Relating to or affected with pyelitis.

pyelitis (pi-ē-lit'is) [+ -*itis*, inflammation]. Inflammation of the kidney pelvis and its calices.

p., calculous. P. resulting from a calculus.

pyelo- [G.]. Combining form meaning the *pelvis*.

pyelocystitis (pi'ēl-ō-sis-tit'is) [G. *pyelos*, pelvis, + *cystis*, bladder, + *-itis*, inflammation]. Inflamed condition of the kidney, pelvis and bladder.

pyelocystostomosis (pi'ēl-ō-sis-tō-sto-mō'sis) [+ + + *stoma*, mouth, + -*ōsis*]. Establishment of surgical communication bet. the kidney and the bladder.

pyelogram, **pyelograph** (pi'ēl-ō-grām, -gráf) [+ *gramma*, a mark]. A roentgen picture of the ureter and renal pelvis.

pyelography (pi-ē-lōg'rā-fī) [+ + *graphein*, to write]. Radiography of a renal pelvis and ureter.

pyelolithotomy (pi'ēl-ō-lith-ōt-ō-mī) [+ + *lithos*, stone, + *tomē*, incision]. Removal of calculus from the pelvis of a kidney through an incision.

pyelometer (pi-ēl-ōm'ēt-ēr) [+ *metron*, a measure]. Device to measure the pelvic diameters. SYN: *pelvimeter*.

pyelometry (pi-ēl-ōm'ē-trī) [+ *metron*, a measure]. 1. Measurement of the kidney's pelvis. 2. Measurement of the diameters of the pelvis. SYN: *pelvimetry*.

pyelonephritis (pi'ēl-ō-nēf-rīt'is) [G. *pyelos*, pelvis, + *nephros*, kidney, + *-itis*, inflammation]. Inflammation of kidney substance and pelvis.

ETIOL: Bacterial, metastatic, urogenous (ascending from bladder), or by penetrating wounds.

SYM: Pain in the loins, vesical irritability, swelling, constitutional symptoms, urine cloudy and decreased in amount with increased frequency in acute p., increased in amount in chronic p. and pyelonephritis; albumin and sediment with pus cells, bacteria, and fatty or hyaline casts, and sometimes red blood corpuscles.

PROG: Depends upon character and virulence of infection, accessory etiological factors, drainage of kidney, presence or absence of complications, and general physical condition.

TREATMENT: Recognition and removal of cause (focal infection, etc.), measures to increase resistance of patient, bed rest, milk or buttermilk diet, avoidance of drugs irritating to kidney, condiments of alcohol. Hot water bag, antipyretic drugs, urinary antiseptics. Surgery if necessary (nephrotomy, nephrectomy, pyelotomy). If both kidney and pelvis are affected, urine generally is acid, and pus in form of slugs or balls pass in the urine.

pyelonephrosis (pi'ēl-ō-nēf-rō'sis) [+ + -*ōsis*, disease]. Disease of the pelvis of the kidney.

pyelopathy (pī-ēl-ōp'āth-l) [+ *pathos*, disease]. Any disease of the pelvis of the kidney. *Syn.* *pyelonephrosis*.

pyeloplasty (pī-ēl-ō-plās'tī) [+ *plastos*, formed]. Reparative operation on the kidney pelvis.

pyeloplication (pī-ēl-ō-plī-kā'shūn) [+ *L. plicāre*, to fold]. Shortening of the wall of a dilated renal pelvis by taking tucks in it.

pyeloscopy (pī-ēl-ōs'kō-pl) [+ *skopein*, to examine]. Examination of the pelvis of the kidney using an x-ray.

pyelostomy (pī-ēl-ōs'tō-mī) [+ *stoma*, mouth]. Creation of an opening into the renal pelvis.

pyelotomy (pī-ēl-ōt'ō-mī) [G. *pyelos*, pelvis, + *tomē*, incision]. Incision of renal pelvis.

NP: Keep patient dry, watch skin for decubitus. If retention catheter present, keep draining at all times. Accurate record of intake and output of urine.

pyelovenous backflow (pī-ēl-ō-vē'nūs) [+ *L. vena*, vein]. Drainage from the renal pelvis into the venous system because of back pressure.

pyemesis (pī-ēm'is-ls) [G. *pyon*, pus, + *emesis*, vomiting]. The vomiting of pus.

pyemia (pī-ē'mī-ā) [G. *pyon*, pus, + *aima*, blood]. A form of septicemia due to presence of pus-forming organisms in the blood, manifested by formation of multiple abscesses of a metastatic nature.

Sym. High intermittent temperature with chills—repeated following day—repetition of chills—development of metastatic abscesses—fever of intermittent type, with almost hourly variation; sweetish odor to breath. Metastatic processes in various parts of the body, esp. in lungs. Septic pneumonia, empyema. May result fatally.

Treatment. Antibiotics, esp. penicillin and streptomycin. Prophylactic treatment consists in prevention of suppuration. When possible all metastatic abscesses or suppurating joints should be laid open and thoroughly disinfected. Internal remedies. Easily digested food given unsparingly. Ventilation free—patient may be placed in a tent in certain cases.

P., arterial. P. resulting from dissemination of emboli from a thrombus in cardiac vessels.

P., cryptogenic. P., the focus of which is hidden in the deeper tissues.

P., metastatic. Multiple abscess resulting from infected pyemic thrombi.

P., portal. Suppurative inflammation of portal vein.

pyemic (pī-ē'mīk) [G. *pyon*, pus, + *aima*, blood]. Relating to or affected with blood poisoning.

pyencephalus (pī-en-sef'al-us) [+ *egkephalos*, brain]. A brain abscess with suppuration within the cranium. *Syn.* *pyocephalus*.

pyesis (pī-ē'sis) [G. *pyon*, pus]. The formation of pus. *Syn.* *suppuration*.

pygal (pī'gāl) [G. *pygē*, rump]. Concerning the buttocks.

pygalgia (pī-gāl'jī-ā) [+ *algos*, pain]. Pain in the rump or buttocks.

pygmalionism (pī'gmā-lī-ōn-lzm). Psychopathic condition in which a person is in love with a creation of his own. **pygo-** [G.]. Combining form meaning the rump.

pyin (pī'in) [G. *pyon*, pus]. A substance of albuminous nature sometimes present in pus.

pyknic type (pīk'nīk) [G. *pyknos*, thick].

One with broad head, thick shoulders, large chest, short neck and stocky body.

They are often happy, carefree persons whose emotional reactions are obvious. They are interested in others apart from themselves. They are extroverts. * *See* *asthenic body type*.

pykno- Combining form meaning *thick, compact, dense, frequent*. See also words beginning with *pycno*.

pyknocardia (pīk-nō-kar'dī-ā) [+ *kardia*, heart]. Rapid pulse. *Syn.* *tachycardia*.

pyknohemia (pīk-nō-hē'mī-ā) [+ *aima*, blood]. Thickening of the blood. *Syn.* *pyknemia*.

pyknolepsy (pīk-nō-lēp'sī) [+ *lēpsis*, seizure]. Attacks similar to petit mal or minor epileptic seizures, usually occurring in childhood.

pyknometer (pīk-nō-mē'tēr) [+ *metron*, measure]. 1 Device for determining specific gravity of anything. 2 Device for measurement of the thickness of a substance.

pyknomorphous (pīk-nō-morf'ūs) [+ *morphe*, form]. Characterized by compact arrangement of the stainable portions. said esp. of certain nerve cells.

pyknophrasia (pīk-nō-frā'zī-ā) [+ *phrasis*, speech]. Thickness of words uttered in speech.

pyknosis (pīk-nō'sis) [+ *-osis*, intensive]. Inspissation; thickness, esp. shrinking of cells through degeneration.

See *pycnosis*.

pyle- [G.]. Combining form meaning *orifice*, esp. that of the portal vein.

pylemphraxis (pī-lēm-frāk'sis) [G. *pylē*, gate, + *emphraxis*, stoppage]. Occlusion of the portal vein.

pylephlebectasia, **pylephlebectasis** (pī-lē-flē-bēk-tā'zī-ā, -bēk'tā-sis) [+ *phleps*, *phleb-*, vein, + *ektasis*, dilatation]. Distention of the portal vein.

pylephlebitis (pī-lē-flē-bītis) [+ *-itis*, inflammation]. Inflamed condition of the portal vein, generally suppurative.

P., adhesive. Thrombosis of the portal vein.

P., obturans. P. with obstructed flow in the portal vein.

pylethrombosis (pī-lē-thrōm-bō'sis) [+ *thrombos*, a clot, + *-osis*, intensive]. Occlusion of portal vein by a thrombus.

pylometer (pī-lōm-ē'tēr) [+ *metron*, a measure]. Device for measuring obstructions at vesical opening.

pyloralgia (pī'lō-rāl'jī-ā) [G. *pylōros*, gatekeeper, + *algos*, pain]. Pain around the pylorus.

pylorectomy (pī-lō-rēk'tō-mī) [+ *ektomē*, excision]. Surgical removal of the pylorus.

pyloric (pī-lor'īk) [G. *pylōros*, gatekeeper]. Pert. to the opening bet. the stomach and duodenum.

P. antrum. *Syn.* *p. vestibule*, *p. sinus*. The first part of the pyloric portion of the stomach; portion leading to pyloric canal.

P. canal. The narrow constricted region of pyloric portion of stomach which opens through pylorus into duodenum.

P. gland. A gland of the stomach near the pylorus.

P. orifice. Opening or passage bet. the stomach and duodenum.

P. stenosis. Narrowing of the pyloric orifice. Also due to excessive thickening of circular muscle of pylorus (*hypertrophic pyloric stenosis*), or hypertrophy and hyperplasia of mucosa and submucosa.

pyloristhenosis (pī'lō-rī-stēn-ō'sis) ["" + *stenōsis*, a narrowing]. Constriction of the pylorus.

pyloritis (pī-lō-rī'tis) ["" + *-itis*, inflammation]. Inflamed condition of the pylorus.

pyloro- [G]. Combining form meaning *gatekeeper*, applied to the pylorus.

pyloroduodenitis (pī'lōr-ō-dū'ō-dē-nī'tis) [G. *pylóros*, gatekeeper, + *L duodeni*, twelve, + *G. -itis*, inflammation]. Inflammation of the mucosa of the pylorus and duodenum.

pylorogastroctomy (pī-lō'rō-gās-trēk'tō-mī) ["" + *gaster*, belly, + *ektome*, excision]. Excision of pyloric portion of the stomach.

pyloromyotomy (pī-lō'rō-mī-ōt'ō-mī) ["" + *mys*, my-, muscle, + *tomē*, a cutting]. Incision and suture of the pyloric sphincter.

pyloroplasty (pī-lōr'ō-plās'tī) ["" + *plastēin*, to form]. Operation to repair the pylorus, esp 1 to increase the caliber of the pyloric opening by stretching.

pyloroptosis, pyloroptosis (pī-lō'rōp-tō'si-ā, -rōp'tō-sis) ["" + *pōsis*, a dropping]. Displacement downward of the pyloric end of the stomach.

pyloroschisis (pī'lōr-ō-shē'sis) Obstruction of pyloric orifice.

pyloroscopy (pī-lō-rōs'kō-pī) ["" + *skopein*, to examine]. Fluoroscopic examination of the pylorus.

pylorospasm (pī-lō'rō-spāzm) ["" + *spasmos*, a spasm]. Spasmodic contraction of the pyloric orifice.

pylorostenosis (pī-lō'rō-stēn-ō'sis) [G. *pylóros*, gatekeeper, + *stenosis*, narrowing]. Abnormal narrowing or stricture of the pyloric orifice. See *pyloric stenosis*.

pylorostomy (pī-lōr-ōs'tō-mī) [G. *pylóros*, gatekeeper, + *stoma*, opening]. Formation of an opening through the abdominal wall into the pylorus.

pylorotomy (pī-lōr-ōt'ō-mī) ["" + *tomē*, a cutting]. Incision of the pyloric submucosa to relieve hypertrophic stenosis.

pylorus (pī-lō'rūs) [G. *pylóros*, gatekeeper]. The lower orifice of the stomach opening into the duodenum. The pylorus is closed most of the time but opens at intervals permitting acid chyme to enter duodenum. The primary factor in the opening of pylorus is elevation of gastric pressure over duodenal pressure.

p., spasm of. SYN: *pylorospasm*. Usually due to a disturbance in motor mechanism of pylorus. May occur secondary to lesions of stomach and duodenum near to pylorus.

pyo-, py- [G.]. Combining forms meaning pus.

pyoceles (pī'ō-sēl) [G. *pyon*, pus, + *kēlē*, hernia]. A hernia or distended cavity containing pus.

pyocella (pī'ō-sē'lī-ā) ["" + *kōtla*, cavity]. Pus formation in the abdominal cavity.

pyocephalus (pī'ō-sēf'ā-lūs) ["" + *kephalē*, head]. Effusion of purulent nature within the cranium.

p., circumscribed. Abscess of the brain.

p., external. Suppuration of the meninges.

p., internal. Pus in the cerebrospinal fluid.

pyochezia (pī'ō-kē'zī-ā) ["" + *chezein*, to defecate]. Pus in the feces.

pyococcus (pī'ō-kōk'ūs) ["" + *kokkos*, berry]. A micrococcus which causes suppuration, as the *Streptococcus pyogenes*.

pyocolpocoele (pī'ō-kōl'pō-sēl) ["" + *kolpos*, vagina, + *kēlē*, mass]. A vaginal tumor containing pus. SEE *pyocolpos*.

pyocolpos ["" + *kolpos*, vaginal. Accumulation of pus in the vagina.

pyoculture (pī'ō-kul-chūr) [G. *pyon*, pus, + *L cultura*, growth]. Comparative tests for cultivation of pus from a wound, a portion being left in the collecting tube and a portion being cultivated on bouillon.

If the test is positive, it indicates a struggle bet. the bacteria and the body forces which need therapeutic assistance.

pyocyanase (pī'ō-sī'ā-nāse) An antibiotic obtained from *Pseudomonas aeruginosa*. Active principally against Gram-positive organisms on which it has a lytic action.

pyocyanic (pī'ō-sī-ān'ik) [G. *pyon*, pus, + *kyanos*, dark blue]. Pert to pyocyanin or blue pus.

pyocyanin (pī'ō-sī-ā-nīn). An antibiotic obtained from *Pseudomonas aeruginosa*, effective principally against Gram-positive organisms.

pyocyst (pī'ō-sist) ["" + *kystis*, sac]. A cyst holding pus.

pyoderma (pī'ō-der'mā) [G. *pyon*, pus, + *derma*, skin]. Any acute inflammatory skin disease caused by pus-forming bacteria.

p. faciale. P. of the face characterized by erythema (red or cyanotic) and deep abscesses.

p. gangrenosum. P. usually associated with ulcerative colitis. Occurs principally on the trunk.

pyodermatitis (pī'ō-dūr-mā-tī'tis) ["" + *derma*, skin, + *-itis*, inflammation]. Pyogenic infection of the skin causing a dermatitis.

pyodermatosis (pī'ō-dēr-mā-tō'sis) ["" + *-ōsis*, condition]. Any skin condition of pyogenic origin. SYN: *pyoderma*.

pyoderma (pī'ō-der'mī-ā) ["" + *derma*, skin]. Any suppurative skin disease.

pyofecia (pī'ō-fē'si-ā) ["" + *L faeces*, feces]. Pus in the stools.

pyogenesis (pī'ō-jēn'ēs-is) [G. *pyon*, pus, + *genesis*, formation]. The formation of pus.

pyogenic (pī'ō-jēn'ik) ["" + *gennan*, to produce]. Producing pus.

p. microorganisms. M forming pus. The principal ones are *Staphylococcus aureus*, *S albus*, *Streptococcus hemolyticus*, *Bacillus anthracis*, *B subtilis*, *B vulgaris*, *Clostridium welchii*, *Pseudomonas pyocyanica*, *Neisseria gonorrhoeae*, and many others.

pyohemothorax (pī'ō-hēm-ō-thō'rāks) ["" + *thōrax*, chest]. Pus and blood in the pleural cavity.

pyoid (pī'oyd) ["" + *eidōs*, like]. Resembling pus.

pyoktanin (pī-ōk'tān-in) ["" + *kleinein*, to kill]. Commercial preparation of methyl violet, a germicide used in cystitis, gonorrhea, and infections of the eyes, ears, nose, and throat.

pyolabyrinthitis (pī'ō-lāb-l-rīn-thī'tis) ["" + *labyrinthos*, a maze, + *-itis*, inflammation]. Inflammation with suppuration of the labyrinth of the ear.

pyometra (pī'ō-mē'trā) [G. *pyon*, pus, + *metra*, uterus]. Retained pus accumulation in the uterine cavity.

pyometritis (pī'ō-mē-trī'tis) ["" + *-itis*, inflammation]. Purulent inflammation of the uterus.

pyonephritis (pī'ō-nēf-rī'tis) ["" + *nephros*, kidney, + *-itis*, inflammation]. Inflammation of the kidney, suppurative in character.

pyonephrolithiasis (pī'ō-nēf-rō-līth-i'ās-is)

- [" + " + *lithos*, stone]. Pus and calculi formation in the kidney.
- pyonephrosis** (pi'ō-nēf-rō'sis) [" + " + *-osis*, condition]. Pus accumulation in the pelvis of kidney.
- pyoovarium** (pi'ō-ō-vā'ri-ūm) [G. *pyon*, pus, + L. *ovarium*, ovary]. Abscess formation in an ovary.
- pyopericarditis** (pi'ō-pēr-i-kar-di'tis) [" + *peri*, around, + *kardia*, heart, + *-itis*, inflammation]. Pericarditis with suppuration.
- pyopericardium** (pi'ō-pēr-i-kar'di-ūm) [" + " + *kardia*, heart]. Pus formation in the pericardium.
- pyoperitoneum** (pi'ō-pēr-i-tō-nē-ūm) [" + *peritonaeon*, peritoneum]. Pus formation in the peritoneal cavity.
- pyoperitonitis** (pi'ō-pēr-i-tō-nī'tis) [" + " + *-itis*, inflammation]. Purulent inflammation of the lining of peritoneum.
- pyophagia** (pi'ō-fā'ji-ā) [" + *phagem*, to eat]. Swallowing of purulent substance.
- pyophthalmia**, **pyophthalmitis** (pi'ōf-thāl-mi-ā, -thāl-mī'tis) [" + *ophthalmos*, eye, + *-itis*, inflammation]. Suppurative inflamed condition of the eye.
- pyophylactic** (pi'ō-fi-lāk'tik) [G. *pyon*, pus, + *phylaxis*, protection]. Guarding against formation of pus.
- p. membrane**. Lining membrane of an abscess cavity separating it from healthy tissue.
- pyophysometra** (pi'ō-fi-sō-mē'trā) [" + *physis*, air, + *metra*, uterus]. Pus and gas accumulation in the uterus.
- pyoplasia** (pi'ō-plā'ni-ā) [" + *planos*, wandering]. Spreading of pus by infiltration into tissue.
- pyopneumocholecystitis** (pi'ō-nū'mō-kō-lē-sis-tī'tis) [" + *pneuma*, air, + *cholē*, bile, + *kystis*, sac + *-itis*, inflammation]. Dilatation of the gallbladder with air and pus.
- pyopneumocyst** (pi'ō-nū'mō-sist) [" + " + *kystis*, a bladder]. A cyst enclosing pus and gas.
- pyopneumopericardium** (pi'ō-nū'mō-pēr-i-kar'di-ūm) [" + " + *peri*, around, + *kardia*, heart]. Pus and air or gas in pericardium.
- pyopneumoperitonitis** (pi'ō-nū'mō-pēr-i-tō-nī'tis) [" + " + *peritonaeon*, peritoneum]. Pus and air in the peritoneal cavity complicating peritonitis.
- pyopoesis** (pi'ō-poy-ē'sis) [G. *pyon*, pus, + *poien*, to make]. Formation of pus. SYN: *pyogenesis*, *suppuration*.
- pyopoeitic** (pi'ō-poy-ēt'ik) [G. *pyon*, pus, + *poiein*, to make]. SYN: *suppurative*.
- pyoptysis** (pi'ōp'tis-is) [" + *ptyein*, to spit]. Spitting of pus.
- pyorrhagia** (pi-ō-rā'ji-ā) [" + *rēgnunai*, to burst forth]. Profuse flow of pus, as when an abscess ruptures.
- pyorrhea** (pi-ō-rē-ā) [" + *roia*, a flow]. A discharge of purulent matter.
- p. alveolaris**. SYN *perioendostitis*, *Riggs' disease*. A periodontal disease characterized by inflammatory or degenerative changes of the periosteum, alveolar bone, and tooth cementum. Resorption of alveolar bone occurs resulting in loosening of teeth and recession of gums.
- pyosalpingitis** (pi'ō-sāl-pīn-jī'tis) [G. *pyon*, pus, + *salpīgē*, tube, + *-itis*, inflammation]. Retained pus in the oviduct with inflammation.
- pyosalpingoophoritis** (pi'ō-sāl-pīn-gō-ō-f-ō-rī'tis) [" + " + *oon*, ovum, + *phoros*, a bearer, + *-itis*, inflammation]. Inflammation of ovary and oviduct with suppuration.
- pyosalpinx** (pi'ō-sāl'pīnks) [" + *salpīgē*, tube]. Pus in the fallopian tube. SYN: *pyosalpingitis*.
- pyosis** (pi-ō'sis) [" + *-ōsis*, intensive]. Formation of pus. SYN: *suppuration*.
- pyospermia** (pi'ō-spēr'mī-ā) [" + *sperma*, seed]. Pus in the semen.
- pyostatic** (pi'ō-stāt'ik) [" + *statikos*, standing]. 1. Agent checking the development of pus. 2. Preventing pus formation.
- pyotherapy** (pi'ō-thēr-ā-pī) [" + *therapeia*, treatment]. Treatment of disease with pus.
- pyothorax** (pi'ō-thō'rāks) [" + *thōrax*, chest]. Pus in the pleural cavity. SYN: *empyema*.
- pyotorrhea** (pi'ō-tor-ē-ā) [" + *ous*, ot-, ear, + *roia*, flow]. Purulent discharge from the ear.
- pyotoxinemia** (pi'ō-tōk-sī-nē'mī-ā) [G. *pyon*, pus, + *toxikon*, poison, + *aima*, blood]. Infection from toxic products of pus organisms in the blood.
- pyoturia** (pi'ō-tū'ri-ā) [" + *ouron*, urine]. Pus cells in the urine. SYN: *pyuria*.
- pyourachus** (pi'ō-tū'rā-kūs) [" + *ourachos*, fetal urinary canal]. Accumulation of pus in the urachus.
- pyoureter** (pi'ō-tū'rēt-ēr, -ū-rēt'ēr) [" + *ourēter*, ureter]. Pus collection in a ureter.
- pyovesiculosis** (pi'ō-vēs-ik-ō-lō'sis) [" + L. *vesiculus*, a small vessel, + G. *-ōsis*, condition]. Pus collection in the seminal vesicles.
- pyoxanthin** (pi'ō-zānthīn). A yellow pigment resulting from oxidation of pyocyanin. Sometimes present in pus.
- pyramid** (pi'rām-id) [G. *pyramis*, a pyramid]. 1. A solid on a base with 3 or more sides, the triangular planes of which meet at an apex. 2. Any part of the body resembling a pyramid. 3. A compact bundle of nerve fibers in the medulla oblongata. 4. Petrous portion of temporal bone.
- p. of cerebellum**. A median ventral projection of vermis of cerebellum lying between tuber and uvula.
- p., malpighian**. A renal pyramid, *q. r.*
- p. of the medulla**. A pair of elongated tapering prominences on ant. surface of medulla oblongata, composed of descending corticospinal fibers.
- p., renal**. SYN *p. of Malpighi*, *malpighian* *p.* One of number 8-18 of cone-shaped structures comprising medulla of the kidney. Their apices (*papillae*) bear openings of *papillary* ducts through which urine enters renal pelvis.
- p. of the thyroid**. SYN: *pyramidal* or *median lobe*. A conical process sometimes present extending cephalad from the isthmus of the thyroid gland.
- p. of temporal bone**. The pyramid or petrous portion.
- p. of the tympanum**. SYN *pyramidal eminence*. A hollow projection on inner wall of the tympanum through which passes the stapedius muscle.
- pyramidal** (pi'rām'id-āl) [G. *pyramis*, *pyramid*, pyramid]. In the shape of a pyramid.
- p. cell**. Pyramid-shaped cell of cerebral cortex.
- p. tract**. SYN *corticospinal tract*. One of three descending tracts (lateral, ventral, ventrolateral) of the spinal cord. Consists of fibers arising from giant pyramidal cells of Betz present in motor area of cerebral cortex.
- pyramidalis** (pi'rām'id-āl'is) [G. *pyramis*, pyramid]. The muscle which arises from the crest of the pubis and is inserted

into the linea alba upward about half way to the navel.

p. auriculae. Small muscle inserted into auricle of ear. Often absent

p. nasi. SYN. *processus nasalis* Small muscle overlying nasal bone. Inserted into skin at root of nose

pyramidon (pī-rām'id-ōn). Proprietary preparation of amidopyrine, a yellowish-white powder.

Uses. As an antipyretic.

pyram'in. 2-methyl-4-amino-5-hydroxymethylpyrimidine, a product of thiamine metabolism and excreted in urine in cases of excess dosage of thiamine

pyran. C₆H₆O, a heterocyclic compound to which certain sugars are related

pyretic (pī-rēkt'ik) [G. *pyretikos*]. Feverish SYN *pyretic*.

pyrenemia (pī-rē-nēm'i-ā) [G. *pyrēn*, fruit stone, *aima*, blood] Condition in which there are nucleated red cells in the blood.

pyrenin (pī-rē'nin) [G. *pyrēn*, fruit stone]. The oxyphilic substance found in a nucleolus

pyrenoid (pī-rē-noyd) [+ *eidos*, like]. A colorless, highly refractive body in certain protozoan chromatophores

pyretic therapy (pī-rē-thēr'ā-pī) [G. *pyr*, fever, + *therapeia*, treatment] Artificial fever treatment

pyretic (pī-rēt'ik) [G. *pyretos*, fever] Concerning fever

p. therapy. Treatment of disease by artificial induction of fever, either by physical agents or the inoculation of malarial organisms

pyreticosis (pī-rēt-i-kō'sis) [+ *-osis*, intensive] Feverishness

pyreto- [G.] Prefix meaning *fever*.

pyretogen (pī-rēt-ō-jēn) [G. *pyretos*, fever, + *gennan*, to produce] A substance producing fever

pyretogenesis, pyretogenesis (pī-rēt-ō-jēn-ez'is, -jēn'ēs-is) [+ *genesis*, production]. Origin and production of fever

pyretogenic, pyretogenous (pī-rēt-ō-jēn'ik, -ō-jēn'ūs) [+ *gennan*, to produce] Producing or causing fever

p. bacteria. Pathogenic bacteria causing fever.

p. stage. Period in a fever when it is rising slowly.

pyretography (pī-rēt-ōg'rā-fī) [+ *graphem*, to write]. A treatise on fever

pyretology (pī-rēt-ōl-ō-jī) [+ *logos*, a study] Science of fevers and their characteristics

pyretolysis (pī-rēt-ōl'is-is) [+ *lysis*, a disintegration] 1. Reduction of fever. 2. Hastening of lysis by elevation of temperature.

pyretotherapy (pī-rēt-ō-thēr'ā-pī) [+ *therapeia*, treatment]. 1. Treatment by artificially raising the patient's temperature. 2. Treatment of fever

pyretotyphosis (pī-rēt-ō-tī-fō'sis) [+ *typhosis*, delirium]. The delirious or stuporous symptom of fever.

pyrexia (pī-rēk'si-ā) [G. *pyressein*, to be feverish]. Condition in which the temperature is above normal. SYN *fever*. Some classify it as.

Low 99°-101° F.

Moderate 101°-103° F.

High 103°-105° F.

p., local. Acute inflammation of a part.

pyrexial (pī-rēks'i-āl) [G. *pyressein*, to be feverish]. Concerning fever

pyrexin (pī-rēks'in). A substance extracted from inflammatory exudates which induces fever.

3-pyridinecarboxylic acid (pī'r'id-ēn-kar'-bōk-sil'ik). Organic substance obtained by oxidizing nicotine. SYN: *nicotinic acid*. SEE *pellagra*.

pyridium (pī-rīd'i-ūm). A commercial brick red powder, belonging to the group of azo dyes.

Uses In acute and chronic infections of the genitourinary tract.

DOSAGE 1½ gr. (0.1 Gm.) application, 0.125%-0.5% solution as irrigation.

pyridoxal (pī'r'i-dōks'āl). One of the vitamin B₆ group, a 4-formal analog of pyridoxine

p. phosphate. A derivative of pyridoxine which serves as a coenzyme of certain amino-acid decarboxylases in bacteria and, in animal tissues, of dioxyphenylalanine (DOPA) decarboxylase

pyridoxamine (pī'r'i-dōks'ā-mīn). One of the vitamin B₆ group; a 4-aminoethyl analog of pyridoxine

pyridoxic acid (pī'r'i-dōks'ik). The principal end-product of pyridoxine metabolism which is excreted in urine of humans

pyridoxine (pī-rī-dōks'ēn) SYN: *eluate factor*, *rat acrodynia factor*, *adernin*. One of the vitamin B₆ group of the B complex. Term used as a synonym of vitamin B₆. Its role in human nutrition has not been established but in rats and bacteria it is a growth factor. Deficiency in rats causes acrodynia and dermatitis. Called *antidermatitis vitamin*.

pyriform (pī'rī-form) [L. *pyrum*, pear, + *forma*, shape]. Shaped like a pear

pyrimidine (pī-rim'id-ēn). The parent of a group of heterocyclic nitrogen compounds C₄H₄N₂, including uracil, cytosine, and thymine, some of which are components of nucleic acid

pyrithiamine (pī'r'i-thi'ā-mīn). A synthetic analog of thiamine acts as an antithiamine substance. When administered, it produces many of the symptoms of thiamine deficiency.

pyro- [G.]. Prefix meaning *heat* or *fire*.

pyrocatechin (pī'rō-kāt'e-chin) Pyrocatechol. *q.v.*

pyrocatechinuria (pī'rō-kāt-ē-kn-ū-rī-āl) [G. *pyr*, fire, + *catechin*, a G. *ouron*, urine] Pyrocatechin in the urine

pyrocatechol (pī'rō-kāt-ē-kōl). A crystalline substance, C₆H₄(OH)₂, obtained from catechu. An astringent and antiseptic. Sometimes found in urine. Also called *catechol*.

pyrogallol, pyrogallie acid (pī'rō-gāl'ōl, -ik). USP. A substance obtained by the decomposition of gallic acid

Uses In skin diseases, as psoriasis, although an active irritant and internally a poison.

DOSAGE Externally, 2 to 10% ointment, with caution

INCOMPATIBILITIES: Alkalies, antipyrine, camphor

pyrogen (pī'rō-jēn) [G. *pyr*, fire, + *gennan*, to produce] A substance of unknown nature, but probably protein, found in distilled water used in preparation of blood substitutes and responsible for rise of temperature sometimes following blood transfusions.

pyrogenic (pī'rō-jēn'ik) [G. *pyr*, fire, + *gennan*, to produce] Producing fever.

pyrolagnia (pī'rō-lāg'nī-ā) [+ *lagneia*, lust] Insane desire to see or produce fires accompanied by sexual gratification.

pyrolysis (pī-rōl'is-is) [+ *lysis*, dissolution]. Disintegration of organic matter when there is a rise in temperature.

pyromania (pī'rō-mā'nī-ă) ["" + *mania*, madness]. Fire madness; mania for setting fires or seeing them

pyrometer (pī-rōm'ēt-ēr) ["" + *metron*, measure]. Device for measuring extreme degrees of heat.

pyronyx (pī-rō-nīks'is) ["" + *nyxis*, a piercing]. Treatment or cauterization by puncturing a part with hot needles. SYN: *ignipuncture*.

pyrophobia (pī-rō-fō'bī-ă) ["" + *phobos*, fear]. Abnormal fear of fire.

pyroptothymia (pī-rōp-tō-thī'mī-ă) [G. *pyr*, fire, + *ptoein*, to scare, + *thymos*, mind]. A psychosis in which one imagines himself surrounded by flames.

pyropuncture (pī'rō-pūnk'chūr) ["" + L. *punctūra*, a piercing]. Treatment by puncture of a part with hot needles. SYN: *pyronyx*.

pyrosis (pī-rō'sis) [G. *pyrōsis*, burning]. A burning sensation in the epigastric and sternal region, with raising of acid liquid from stomach. SYN: *heartburn*, *waterbrash*.

NP. Note whether it occurs before or after food is taken, the time and duration, and whether different foods give rise to it. **See**: *taste*.

pyrotic (pī-rō'tik) [G. *pyrōsis*, burning].
1. Caustic. 2. Pert. to pyrosis

pyrotoxin (pī-rō-tōks'in) [G. *pyr*, fire, + *toxikon*, poison]. A toxin generated by a febrile process.

pyroxylin (pī-rōk'sīl-in) ["" + *xylin*, wood] (soluble gun cotton). A product obtained by the action of a mixture of nitric and sulfuric acids on cellulose.

Uses. In the preparation of collodion.

INCOMPATIBILITIES. Sulfides, alkalies.

pyrrol cells. SYN: *histiocytes*. Cells of the reticuloendothelial system so called because of their ability to ingest colloidal dyes (pyrrol blue)

pyrolic amino acids. Proline and oxyproline

pyruv'ate. A salt of pyruvic acid

pyruvic acid. $\text{CH}_3\text{CO} \cdot \text{COOH}$, and organic acid which plays an important role in Kreb's cycle, it being an intermediate product in the metabolism of carbohydrates, fats, and amino acids. It increases in quantity in the blood and tissues in thiamine deficiency, thiamine being essential for its oxidation

pyuria (pī-ū'ri-ă) [G. *pyon*, pus, + *ouron*, urine]. Pus in the urine, evidence of renal disease.

ETIOL. Lesion of urethra, ureters, bladder, kidneys, infection.

RS. *cystitis*, *kidney*, *pyelitis*, *ureteritis*, *urethritis*.

- Q. 1.** Abbr. for *electric quantity*, *quart*. 2. Symb. for *coulomb*.
- Q_{CO₂}** Number of microliters of CO₂ given off per milligram of dry weight of tissue per hour
- Q_{O₂}** Number of microliters of O₂ taken up per milligram of dry weight of tissue per hour.
- Q. d., q. d.** Abbr. for *L. quater in die*, four times a day.
- Q disk.** SYN: *Q band*, *Q stripe*, *A disk* A dark, doubly refractile, anisotropic band of a striated muscle myofibril
- Q fever.** SYN: *Nine-mile fever*, *quadrilateral fever* An acute infectious disease characterized by headache, fever, malaise, myalgia, and anorexia Caused by *Rickettsia burneti* Contracted by inhaling infected dusts or drinking contaminated milk Common among individuals handling hides or products of animals Rarely fatal
- Q. h., q. h.** Abbr. for *L. quaque hora*, every hour
- Q. i. d., q. i. d.** Abbr. for *quater in die*, four times a day
- Q. L., q. l.** Abbr. for *quantum libet*, as much as one pleases [morning]
- q. m.** Abbr. for *L. quaque matin*, every
- q. n.** Abbr. for *L. quaque nox*, every night
- QRS complex.** The Q, R, and S waves or deflections of an electrocardiogram produced during the transmission of the excitation wave through the conductile tissue of the heart Normal duration is 0.06-0.08 sec
- QRST complex.** The Q, R, S, and T waves of an electrocardiogram Known as *electrical systole* Duration is approximately same as that of mechanical systole
- Q. S., q. s.** Abbr. for *quantum sufficit*, as much as necessary.
- qt.** Abbr. for *quart*
- Q wave.** A downward or negative wave of an electrocardiogram following the P wave It is usually not prominent and may be absent without significance
- quack** (kwāk) [Dutch *kwakzalver*, to quack salve] One who pretends to have knowledge or skill in medicine. SYN: *charlatan*.
- quackery** (kwāk'ēr-i) [Dutch *kwakzalver*, to quack salve] The practice or pretensions of a quack. SYN: *charlatanry*.
- quadrangular** (kwōd-rāng'ū-lēr) [*L. quadri*, four, + *angulus*, angle]. Having 4 angles and 4 sides.
- q. lobe.** A region forming sup portion of each cerebellar hemisphere
- q. membrane.** The upper portion of the elastic membrane of the larynx Extends from aryepiglottic folds above to level of ventricular folds below.
- quadrant** (kwōd'rānt) [*L. quadrans*, a fourth] 1. The 4th of a circle. 2. One of 4 corresponding regions, as of the abdomen, divided for diagnostic purposes.
- quadrantanopsia** (kwōd-rānt-ān-ōp'sī-ā) [' + *G. an-*, negative, + *opsis*, vision]. Loss of sight in approximately ¼ of the visual field.
- quadrate** (kwōd'rāt) [*L. quadratus*, squared]. Square or having 4 equal sides.
- q. lobe.** A small lobe of liver located on visceral surface and lying in contact with pylorus and duodenum.

- q. lobule.** The square lobule of the upper surface of the cerebellum.
- quadri-, quadr-** [*L.*]. Combining forms meaning *having four, consisting of four*.
- quadriceps** (kwōd'rī-sēps) [*L. quadri*, from *quattuor*, four, + *ceps*, from *caput*, head] Four-headed as a quadriceps muscle
- q. femoris.** A large muscle on anterior surface of thigh composed of four muscles, *rectus femoris*, *vastus lateralis*, *vastus medialis*, and *vastus intermedius*, which are inserted by a common tendon on tuberosity of tibia It is an extensor of the leg SEE *Table of Muscles in Appendix*
- q. reflex.** SYN: *Knee jerk*, *patellar reflex* Extension of the leg following contraction of the quadriceps muscle resulting from a quick tap of the patellar tendon
- quadrigemina** (kwōd-rī-jēm'in-ā) [' + *geminus*, twin]. The corpora quadrigemina.
- quadrigeminal** (kwōd-rī-jēm'in-āl) [' + *geminus*, twin] Fourfold, having 4 symmetrical parts
- quadrilateral** (kwōd-rī-lāt'ēr-āl) [' + *latus*, later-, side] Having 4 sides
- quadrifera** (kwōd-rīp'ā-rā) [' + *parēre*, to bear]. A woman in her 4th confinement or who has had 4 children.
- quadrifurcate** (kwōd-rī-part'it) [' + *partire*, to divide] Divided into 4 parts
- quadruplegia** (kwōd-rī-plē'jī-ā) [*L. quadri-*, from *quattuor*, four, + *G. plēgē*, a stroke]. Paralysis affecting all 4 limbs.
- quadrisect** (kwōd'rī-sēkt) [' + *sectio*, a cutting]. To divide into 4 parts
- quadrifurcular** (kwōd'rī-tū-bur'kū-lēr) [' + *tuberculum*, a tubercle]. Having 4 tubercles or cusps.
- quadrivalent** (kwōd-rī-vā'lēnt, -rīv'āl-ēnt) [' + *valens*, powerful]. Having ability to replace 4 atoms of hydrogen in a compound
- quadroon** (kwōd-rōōn') [Spanish *cuarterón*]. The offspring of a white person and a mulatto, thus having one-quarter Negro blood.
- quadrupedal reflex** (kwōd-rōōp'ēd-āl) [*L. quadri-*, from *quattuor*, four, + *pēs*, foot] Extension of flexed arm on assuming quadrupedal posture
- quadruplet** (kwōd'rū-plēt) [*L. quadruplus*, fourfold] One of 4 children born of the same mother at same labor. SEE: *Helin's law*.
- quale** (kwā'lē) [*L.* of what kind]. The quality of anything, as of a sensation
- qualimeter** (kwōl-im'ēt-ēr) [*L. qualis*, how constituted, + *G. metron*, a measure]. Device to determine hardness of the x-rays. SEE: *penetrometer*.
- qualitative** (kwōl'ī-tā-tiv) [*L. qualitativus*, pert. to quality]. Referring to the quality of anything
- q. analysis.** CHEM: One that determines the nature of the elements of a compound. SEE: *quantitative*.
- quality** (kwōl'ī-tī) [*L. qualitäts*, quality]. That which constitutes or characterizes a thing; nature.

quanta (kwōn'tā) [L. as much as]. Plural of quantum, *q.v.*

quantimeter (kwōn-tīm'ēt-ēr) [L. *quantus*, how great, + G. *metron*, a measure]. Colorimetric standard for measuring quantity of x-rays to which a subject is exposed.

quantipirquet (kwōn-tī-pēr-kā). Quantitative cutaneous test of amt. of sensitivity to tuberculin by use of graduated dilutions.

quantitative (kwon-tī-tā'tiv) [L. *quantitativus*, pert. to quantity]. Concerning quantity.

q. analysis. One that determines the proportionate parts of elements in a compound. *SEE qualitative*.

quantity (kwōn'tī-tī) [L. *quantitas*, quantity]. Amount, portion.

q., unit of. Coulomb, the measure of amt. of electric current passing a given point in a conductor in a given time.

quantum (kwōn'tūm) [L. how much]. 1. A unit of radiant energy. 2. A definite amount

q. libet. [L.] As much as desired.

q. limit. Shortest wave length in x-ray spectrum. *SYN minimum wave length*.

q. sufficit. [L.] As much as needed.

q. theory. Radiation is an intermittent emission of energy in varying multiples of quanta action, not continuous.

quarantine (kwor'ān-tēn) [Italian *quarantina*]. 1. The period of debarring from entrance to a country, or the isolation of persons exposed to infectious diseases; formerly 40 days. Period of isolation from public communication following onset of a contagious disease. 3. As defined by Amer. Pub. Health Assn. Limitation of freedom of movement of such well persons or domestic animals as have been exposed to a communicable disease, for a period of time equal to the longest incubation period of the disease, in such a manner as to prevent effective contact with those not so exposed. *SEE: contagious diseases, isolation*.

quart (kwort) [L. *quartus*, a fourth]. Abbr. *qt*. A unit of fluid or dry measure; one fourth part of a gallon or two pints; one eighth part of a peck

quartan (kwor'tān) [L. *quartus*, a fourth]. 1. Occurring every 4th day. 2. Malarial fever with a paroxysm every 4th day, figuring from and including the 1st day of paroxysm. *SEE fever, malaria*.

q., double. Malaria in which there are two concurrent cycles resulting in fever occurring on two successive days.

q., triple. Malaria in which there are three concurrent cycles resulting in fever occurring every day

quartile (kwor'tīl) [L. *quartus*, a fourth]. One of the 2 middle values of each half of a series of variables.

quartipara (kwor-tīp'ā-rā) [" + *parēre*, to bear]. A woman who has borne her fourth child

quartiparous (kwor-tīp'ār-ūs) [" + *parēre*, to bear]. Having given birth to 4 children or having been in labor 4th time

quartz (kwortz) [uncertain origin]. Silicon dioxide, the principal ingredient of sandstone (crystallized silica, rock crystal).

When crystal is clear and colorless it permits the passage of ultraviolet radiations in large proportions.

q. applicator. Quartz rod of various shapes and angles to conduct (by total internal reflection) ultraviolet radiation

from a water-cooled mercury arc quartz lamp.

q. glass. Crystalline quartz is used for prisms and lenses, fused quartz for windows, etc., through which ultraviolet radiations are freely transmitted.

quassation (kwā-sā'shūn) [L. *quassare*, to shake]. A beating, a shaking; breaking up of crude materials into small pieces.

quassia (kwōsh'ā). The wood of a tree grown chiefly in Jamaica.

Uses Once considered valuable as a bitter tonic, and as an injection for certain intestinal parasites.

Dosage: 8 gr. (0.5 Gm.).

For enema, an infusion of 2 oz. to a pint of water.

quassin. $C_{22}H_{40}O_6$ A bitter principle extracted from the wood of Quassia

quaternary (kwā-tēr'nā-rī) [L. *quaternus*, four each] 1. The 4th in order. 2. Composed of 4 elements.

Queckenstadt's sign. Upon compression of the veins of the neck, unilaterally or bilaterally, cerebrospinal fluid pressure rises rapidly in healthy persons, this disappears when pressure is released. In vertebral canal block, the pressure is scarcely affected by this procedure

querulent (kwēr'ū-lēnt) [L. *querulāri* to complain]. 1. Complaining, fretful 2. One who is dissatisfied, complaining, and suspicious.

quick. 1. A part susceptible to keen feeling, esp. part of a finger or toe to which nail is attached 2. Pregnant

quickening (kwīk'ēn-īng) [A.S. *cwīc*, living]. First movements of the fetus felt in utero.

Occurs from 16th to 20th week of pregnancy, with average about 16th week

quicklime. CaO Calcium oxide, unslacked lime Used as a deodorant and as a weak disinfectant

quicksilver (kwīk'sīl-vēr) [" + *silver*]. The metal mercury.

quillaja (kwīl-ā'yā) (soap bark). The inner bark of a tree grown in Chile

Uses As an emulsifying agent It has been used unwisely in the production of foam on nonalcoholic beverages.

quinacrine hydrochloride. *SYN: Atabrine q.v.* An agent used in the treatment of malaria Also used in infestations of *Giardia lamblia*

quince (kwīns) [ME *quyne*]. Comp Contains 3 times as much cellulose as cherries Also contains tannin.

Av. Serving: 240 Gm Pro 0.7, Fat 0.2, Carbo. 33.4. VITAMIN C trace

Action Astringent and tonic.

Quincke's disease (kwīng'kēh). Angioneurotic edema of skin; urticaria, giant hives

Q's pulse. Capillary pulse Seen under fingernails and indicated by alternate reddening and blanching; a sign of aortic insufficiency

Q's puncture. Lumbar p. to determine tension of, or to remove some of, the spinal fluid

quinidine sulfate (kwīn'id-ēn). USP. The sulfate of an alkaloid obtained from cinchona, being a white, crystalline substance with a bitter taste.

Action and Uses Heart depressant, to restore its normal rhythm

Dosage 3 gr (0.2 Gm.) with caution.

quinine (kwī'nīn, kwī'nēn) [Spanish *quina*]. Bitter, crystalline, white alkaloid derived from cinchona bark.

Uses: Analgesic, antipyretic, anti-malarial Usually administered in the form of its salts (on p. Q-3).

DOSAGE As tonic, 1½ gr (0.1 Gm.); as antimalarial, 15 gr (1.0 Gm.).

q. bisulfate. USP. The acid sulfate of quinine.

ACTION AND USES: Same as quinine sulfate, but having greater solubility.

DOSAGE Same as quinine sulfate.

q. dihydrochloride. The dihydrochloride of quinine, freely soluble in water 1 Gm dissolving in 0.6 cc of water. Suitable for intravenous injection.

q. hydrochloride. USP. The hydrochloride of quinine [quinine sulfate].

ACTION, USES AND DOSAGE Same as

q. sulfate. USP. The sulfate of an alkaloid obtained from cinchona.

ACTION AND USES: Antipyretic and specific in malaria.

DOSAGE 15 gr (1 Gm) for malaria; as a tonic, 1½ gr. (0.1 Gm.).

INCOMPATIBILITIES Tea (tannin), coffee (caffeine), magnesium sulfate, Fowler's solution, ferrous iodide, fluidextract of cascara sagrada.

q. fannate. USP. A nearly tasteless and odorless compound of quinine and tannic acid.

ACTION AND USES A means of administering quinine to young children.

DOSAGE 3 gr. (0.2 Gm.).

q. and urea hydrochloride. Local anesthetic and used in treatment of malaria, by intramuscular or intravenous injections. In solutions of 5% or higher, used as a sclerosing agent for injection treatment of hemorrhoids and varicose veins.

DOSAGE Antimalarial, 15 gr. (1 Gm) daily. Local anesthetic, 0.25 to 1% solution.

quininism (kwī'nīn-izm kwī-nēn'izm) [Spanish *quina*, + G -ismos, condition]. Poisoning by cinchona or its alkaloids. **SYN** *cinchonism*.

quinisal (kwīn'is-āl). A commercial compound of quinine and salicylic acid.

USES In rheumatism and other conditions where the effects of its components are desired.

DOSAGE From 5 to 8 gr. (0.3-0.5 Gm.)

quin'oline. C₁₀H₉N, a tertiary amine derived from coal tar. It is a solvent and antiseptic and many of its salts are used medicinally as antipyretics, analgesics, and in the treatment of amebic dysentery and other infections.

quinone (kwīn-ōn'). 1. Yellow, crystalline oxidation product of quinic acid. 2. Class of organic compounds in which 2 atoms of hydrogen are replaced by oxygen.

quinoxyl (kwīn-ōk'sill). **SEE** *chinoxon*.

quinqu- [L.]. Combining form meaning five.

Quinquad's disease (kān-kōz'). Purulent inflammation of scalp's hair follicles with bald patches as a result.

quinquina (kwīn-kwī'nā, kīn-kē'nā). Cinchona, q. v.

quinsy (kwīn'zē) [G. *kynanche*, sore

throat]. Acute inflammation of the tonsil and of the peritonsillar tissue usually forming an abscess. Peritonsillar abscess.

SYM Sore throat, pain on swallowing, sense of suffocation because of swelling of throat, the tonsil area being enlarged, inflamed and red. Usually unilateral. Local lymphatics swollen and tender.

TREATMENT Horizontal incision at point of greatest fluctuation. Incision need not be deep but blunt forceps are inserted and spread, which produce a large opening without danger of hemorrhage, anesthesia — cocaineization of sphenopalatine area on affected side.

NP Heat, mouthwashes, gargle if possible. Antibiotics and sulfonamide drugs by mouth. Warn against swallowing pus if abscess breaks.

SEE *angina tonsillans*.

q., lingual. Phlegmonous inflammation of the lingual tonsil.

quintan (kwīn'tān) [L. *quintanus*, pert. to a fifth] 1. Occurring every fifth day. 2. Intermittent fever, the paroxysms occurring every 5th day with intermission of three days.

quinti- [L.]. Combining form meaning fifth.

quintipara (kwīn-tīp'ā-rā) [L. *quintus*, fifth, + *parēre*, to bear]. A woman in her 5th confinement or who has had 5 children.

quintuplet (kwīn'tū-plēt) [L. *quintuplex*, fivefold]. One of 5 children born of 1 mother during the same confinement. **SEE** *Hellin's law, twins*.

quotidian (kwō-tīd'ī-ān) [L. *quotidianus*, daily]. Occurring daily.

q., fever. A malarial fever characterized by daily paroxysms.

quotient (kwō'shēnt) [L. *quotiens*, how many times]. Number of times 1 number is contained in another.

q., blood. A color index obtained by finding the number of erythrocytes in the percentage of hemoglobin shown by a percentage of the normal number in the same specimen.

q., caloric. Result obtained by dividing heat (in calories) by the oxygen consumed (in milligrams) in metabolism.

q., D. The ratio of glucose to nitrogen in the urine.

q., growth. Percentage of the food energy utilized for growth, estimated at 5%.

q., intelligence. Division of the patient's mental age by his actual age.

q., protein. The number obtained by dividing the amount of globulin by the albumin in a specimen of blood plasma.

q., respiratory. The result of dividing amt. of carbon dioxide in expired air by the oxygen inhaled, normally 0.9.

q. v. 1. Abbr for L. *quantum vis*, as much as you like. 2. Abbr. for L. *quod vide*, meaning which see.

R

R. Abbr. for *Réaumur*, *roentgen*, *respiration*, *right*. **℞.** Symb. for *L. recipe*, to take.

—**R.** Rinne negative **SEE** *Rinne's test* + **R.** Rinne positive **SEE** *Rinne's test*. **℞.** Symb. for *L. recipe*, to take.

Ra. Chemical symb. for *radium*.

rabbiting (răb'ēt-īng) [*Fr. raboter*, to plane]. Interlocking of the jagged edges of a fractured bone.

rabbit fever. Tularemia, *q.v.*

rabiate (ră'bi-ăt) [*L. rabere*, to rage]. Suffering from rabies. **SYN** *rabid*.

rabic (răb'ik) [*L. rabere*, to rage]. Concerning rabies.

rabicidal (răb-i-sī'dāl) [" + *cidus*, from *caedere*, to kill]. Destructive to causative agent of rabies (*Bacillus lyssae*).

rabid (răb'id) [*L. rabidus*, raving]. Pert. to or affected with rabies. **SYN** *rabute*.

rabies (ră'bēz) [*L. rabies*, to rave]. **SYN** *hydrophobia*, *lyssa*. An acute infectious disease of animals, esp. carnivores (dog, wolf, fox, cat), characterized by involvement of central nervous system resulting in paralysis and finally death. May be communicated to man through the bite of a rabid animal, usually a dog.

PERIOD OF INCUBATION. Usually 2-6 weeks, but sometimes longer, up to 1 year, depending on deepness of laceration and site of wound.

ETIOLOGY. A neurotropic filtrable virus present on saliva of rabid animals.

TREATMENT: After disease has set in, there is no specific treatment other than palliative measures.

PREVENTION. Thoroughly clean all bites or scratches made by any animal with strong (20%) medicinal soap solution. Deep puncture wounds should be opened to permit access of solution. Rabies vaccine is given to human beings with caution as it may result in fatal paralysis. Usually it is not given until it is certain that the animal that had bitten the person had rabies. In minor bites, the vaccine is given daily for 14 to 28 days, in severe bites, 2 doses are given daily for 7 days, followed by 1 dose daily for at least 7 days more.

SEE: *dog bite*.

race (rās) [*Italian razza*]. 1. A class of individuals with common interests, characteristics, appearance, habits, etc., as if derived from a common ancestor. 2. Division of mankind with traits sufficient to mark it as a distinct human type.

racemose (răs'ē-mōs) [*L. racemōsus*, full of clusters]. Resembling a clustered bunch of grapes, as a gland, divided and subdivided, ending in a bunch of follicles.

rachi-, rachio- [G.]. Combining forms meaning *rib of a leaf*, *ridge*, *spine*.

rachialbuminometer (ră'ki-ăl-bū-mīn-īm'-ēt-ēr) [G. *rhachis*, spine, + *L. albumen*, white of egg, + *G. metron*, measure]. Device for estimating amt. of albumin in the cerebrospinal fluid.

rachialbuminometry (ră'ki-ăl-bū-mīn-īm'-ēt-ri) [" + " + *G. metron*, measure]. The estimation of amt. of albumin in the cerebrospinal fluid.

rachialgia (ră'ki-ăl-jī-ă) [" + *algos*, pain]. Pain in the spine.

rachianesthesia (ră'ki-ăn-ēs-thē'zī-ă) [" + *an-*, negative, + *aisthēsis*, sensation]. Spinal anesthesia.

rachicele (ră'ki-sēl) Protrusion of contents of spinal canal in spina bifida.

rachicentesis (ră'ki-sēn-tēs'sis) [" + *ken-*, piercing]. Puncture into the spinal canal.

rachidian (ra-kīd'i-ăn) [G. *rhachis*, *rachid-*, spine]. Relating to the spinal column.

rachigraph (ră'ki-grăf) [" + *graphein*, to write]. Device for outlining the curves of the spine.

rachylisis (ră-kīl'is-is) [" + *lysis*, a loosening]. Mechanical treatment of lateral curvature of the spine.

rachiocampsis (ră-kī-ō-kamp'sis) [" + *kampsis*, a bending]. Curvature of spine.

rachiochysis (ră-kī-ok'is-is) [" + *chysis*, a pouring]. Accumulation of fluid within the spinal canal.

rachiodynia (ră-kī-ō-dīn'i-ă) [" + *odynē*, pain]. Painful condition of spinal column. **SYN** *rachialgia*.

rachimeter (ră-kī-ōm'ēt-ēr) [" + *metron*, measure]. Instrument for measuring a curvature of the spine.

rachioplegia (ră-kī-ō-plē'jī-ă) [" + *plēgē*, a stroke]. Paralysis of spine.

rachioscoliosis (ră'ki-ō-skō'li-ō-sis). Lateral curvature of the spine.

rachiotome (ră'ki-ō-tōm) [" + *tomē*, a cutting]. Instrument for dividing the vertebrae.

rachiotomy (ră-kī-ōt'ō-mī) [" + *tomē*, a cutting]. Surgical cutting of the vertebral column.

rachis (ră'kis) (pl. *rachises*) [G. spine]. The spinal column.

rachischisis (ră-kis'kis-is) [G. *rhachis*, spine, + *schisis*, cleft]. **SYN:** *Spina bifida*, *cleft spine*. Spinal column fissure, congenital.

rachitic (ră-kīt'ik) [G. *rhachis*, spine]. Pert. to or affected with rickets.

r. beads. Rachitic rosary, *q.v.*

r. flat pelvis. Pelvic deformity due to having had rickets in childhood.

r. rosary. Beadlike prominences at junction of the ribs with their cartilages.

rachitis (ra-kīt'is) [G. *rhachis*, spine, + *-itis*, inflammatory]. 1. Inflammation of the spine, commonly rickets. 2. Rickets, *q.v.* **SEE** *rachitic beads*.

r. fetalis annularis. Enlargement of epiphyses of long bones; congenital.

r. fetalis micromelica. Congenital shortness of the bones.

rachitism (ră'ki-tizm) Tendency towards rickets.

rachitogenic răk'ī-tō-jēn'ik) Causing or inducing development of rickets.

rachitome (ră'ki-tōm) [" + *tomē*, a cutting]. Instrument employed for opening spinal canal.

raciage (răk-kī-ăj) **SYN:** *raclement*. Destruction and removal of a soft growth by scraping or rubbing.

radectomy (ră-dēk'tō-mī). Surgical removal of a tooth or a part of one.

radiability (rā-dī-ā-bīl'ī-tī) [L. *radius*, ray]. Capability of being penetrated readily by the x-ray.

radiad (rā-dī-ād) [L. *radius*, spoke, + *ad*, toward]. In direction of the radial side

radial (rā-dī-āl) [L. *radius*, spoke]. 1. Radiating out from a given center. 2. Pert. to the radius.

r. reflex. Flexion of forearm resulting when lower end of radius is per-
cussed.

radiant (rā-dī-ānt) [L. *radiāre*, to emit rays]. 1. Emitting beams of light. 2. Transmitted by radiation. 3. Emanating from a common center.

RS: *energy, flux, heat, heater*.

radiate (rā-dī-āt) [L. *radius*, spoke]. 1. Spreading from a common center. 2. To spread from a common center

radiation (rā-dī-ā'shūn) [L. *radiāre*, to emit rays]. 1. Process by which energy is propagated through space or matter not affected by it. 2. Emission of rays in all directions from a common center. 3. Treatment with a radioactive substance. 4. In neurology, a group of fibers which diverge from a common origin.

A general term for any form of radiant energy emission or divergence, as of energy in all directions from luminous bodies, roentgen ray tubes, radioactive elements and fluorescent substances.

r., acoustic. SEE: *r., auditory*

r., auditory. SYN: *acoustic r thalamotemporal r*. A band of fibers which connects auditory areas of cerebral cortex with med geniculate body of thalamus

r. of corpus callosum. Total of fibers radiating from corpus callosum into each cerebral hemisphere

r., fractionation. Administration of roentgen rays or radium in portions or fractions of total dosage

r., heterogeneous. R containing waves of various wave-lengths

r., homogeneous. R containing waves of only one wave-length

r., infrared. Near or short infrared extends from 7200 A U. to 14,000 A U. Far or long infrared from 15,000 to 150,000 A U.

r., interstitial. R accomplished by insertion of radium or radon directly into tissues

r., ionizing. R which induce either directly or indirectly ionization of radiation absorbing material

r., irritative. Overdosage of ultraviolet irradiation resulting in erythema, and, in exceptional cases, blister formation

r., mitogenetic. SYN *Gurwicz*. Radiations given off by cells during mitosis which induce mitosis

r., occipitalthalamic. SEE *r., optic*

r., optic. SYN: *geniculocalcarine tract*. A system of fibers extending from lateral geniculate body of thalamus through sublentiform portion of internal capsule to the calcarine occipital cortex (striate area)

r., photochemical. From a therapeutic standpoint the electromagnetic spectrum divided into photothermal and photochemical radiations. Photochemical r's. penetrate only to fractions of millimeters, are absorbed by protoplasm, and cause physical and biological changes which manifest themselves after several hours from exposure.

r., photothermal. Photothermal radiations penetrate subcutaneous tissues, heat the blood, accelerate vital reactions

and act instantaneously. SEE: *photochemical radiation*.

r., solar. Radiations of the sun, 60% in infrared region and 40% visible and ultraviolet, shortest wave length is 2900 A U.

r., striomesencephalic. Fibers originating in corpus striatum and terminating principally in substantia nigra of midbrain.

r., striosubthalamic. SYN: *ansa lenticularis*. A system of fibers consisting of three groups emerging from medial aspect of lentiform nucleus and entering subthalamic region, most terminating there but some continuing into the midbrain

r., striothalamic. Groups of fibers connecting the corpus striatum with thalamus and subthalamus

r., sickness. SEE: *r. syndrome*

r., syndrome. SYN *radiation sickness*. 1. Illness resulting from exposure of body tissue to ionizing radiations from radioactive substances (radium, radon) or roentgen rays. Mild acute illness is manifested by anorexia, headache, nausea, vomiting, and diarrhea. Delayed effects resulting from repeated or prolonged exposure may result in amenorrhea, sterility, disturbances in blood-cell formation, cataract formation, carcinogenesis, and leukemia. 2. Illness resulting from effects of explosion of an atomic bomb. Effects include destruction of lymphatic tissue, extensive hemorrhages, aplastic bone marrow, prolonged clotting and bleeding times, loss of hair and teeth, and possible genetic changes

r., thalamic. SYN: *t. peduncles or stalks*. Groups of fibers which connect thalamus with cerebral hemispheres. Include frontal, centroparietal occipital, and optic radiations

r., ultraviolet. Radiant energy extending from 3900 to 1800 A U. Divided into "near ultraviolet," extending from 3900 to 2900 A U, and "far ultraviolet," from 2900 to 1800 A U.

r. unit. SEE: *angstrom unit, maché unit*.

r., visible. Visible spectrum may be broken up into different wave lengths representing different colors.

Violet	4000-4500 A U.
Blue	4500-4900 " "
Green	4900-5500 " "
Yellow	5500-5900 " "
Orange	5900-6300 " "
Red	6300-7800 " "

SEE *spectrum*.

RS: *heliotherapy, heliotropis, helium*.

radiator (rā-dī-ā-tor) [L. *radiator*]. Device for radiating heat or light.

r., infrared. Device for transmitting infrared rays. SEE: *heater, radiant*.

radial (rād'i-kāl) [L. *radix*, radic-, root].

1. A group of atoms acting as a single unit, passing without change from 1 compound to another one, but not able to exist in a free state. 2. Anything that reaches the root or origin; original. 3. A foundation or principle.

r. treatment. A treatment that seeks an absolute cure, as *r. surgery*; not palliative. Opp of *conservative treatment*.

radicle (rād'i-kl) [L. *radix*, radic-, root]. 1. A structure resembling a rootlet, as a *r. of a nerve* or vein. 2. Group of elements unaffected by chemical change, unable to exist in the free state. 3. SEE: *radical*.

radicotomy (rād-i-kōt'ō-mī) [' + G. *tomē*,

- a cutting]. Section of a nerve, esp post. spinal nerve roots. SYN. *rhizotomy*. SEE. *radicectomy*.
- radiculalgia** (rād-l-kū-lāl'ī-ā) [+ G. *algos*, pain]. Neuralgia of roots of nerves
- radicular** (rād-lk'ū-lar) [L. *radix*, *radic-*, root]. Concerning a root or radicle
- radicectomy** (rād-lk-ū-lf'k'tō-mī) [+ G. *ektomē*, excision] 1 Excision of a spinal nerve root 2 Resection of post. spinal nerve root SEE. *radicotomy*.
- radiculitis** (rād-lk-ū-lī'tis) [+ G. *-itis*, inflammation] Inflammation of spinal nerve roots, accompanied by pain and hyperesthesia
- radiculomeningomyelitis** (rād-lk'ū-lō-mē-nīn'gō-mī-ē-lī'tis) [+ G. *meninx*, membrane, + *myelos*, marrow, + *-itis*, inflammation]. Inflamed condition of nerve roots, meninges, and spinal cord. SYN. *rhizomeningomyelitis*.
- radiculomyelopathy** (rād-dīk'ū-lō-mī'ā-lōp'ā-thī) Any diseased condition involving spinal cord and roots of spinal nerves
- radiculoneuritis** (rād-dīk'ū-lō-nū-rī'tis) Inflammation of roots of spinal nerves
- radiculopathy** (rād-dīk'ū-lōp'ā-thī) Any diseased condition of roots of spinal nerves
- radio-** Combining form meaning *pert* to radiant energy, or radioactive substances
- radioactinium** (rād-dī-ō-āk-tīn'f-ūm) A radioactive product formed from disintegration of actinium
- radioactive** (rād-dī-ō-āk'tiv) [L. *radius*, ray, + *activus*, acting] Capable of emitting radiant energy
- r. decay.** The shift from high-energy-level unstable nuclei to low-energy-level stable nuclei accompanied by emission of energy or particles
- radioactivity** (rād-dī-ō-āk-tīv'itē) [L. *radius*, ray, + *activus*, acting] The ability of a substance to emit rays or particles (alpha, beta, gamma) from its nucleus
- r., artificial.** SYN. *induced r* Radioactivity resulting from bombardment of a substance with high-energy particles in a cyclotron, betatron, or other apparatus
- r., induced.** Temporary *r* of a substance which has been within the sphere of influence of a radioactive element.
- r., natural.** That possessed by a number of elements which are continuously disintegrating and emitting alpha particles (helium nuclei) or beta particles (electrons) atom by atom Ex radium
- radioautograph** (rād-dī-ō-aw'tō-grāf) A photograph of a histologic section of a tissue which shows the distribution of radioactive substances in the tissue
- radiocarpal** (rād-dī-ō-kar'pāl) [L. *radius*, spoke, + G. *karpous*, wrist]. Concerning the radius and carpus
- radiochemistry** (rād-dī-ō-kēm'īs-trī) [+ G. *chemia*, chemistry]. The phase of chemistry dealing with radioactive phenomena
- radiochromism** (rād-dī-ō-krō'zīm) [+ G. *chroma*, color]. The ability of a substance to absorb radioactive rays
- radiochrometer** (rād-dī-ō-krōm'ēt-ēr) [+ G. *chrōma*, color, + *metron*, measure] Device for testing penetrating powers of x-rays and the character of roentgen tubes. SEE. *penetrometer*.
- radiolobe.** A peculiar structure formed in sterilized bouillon as a result of radium radiation. It resembles bacteria in appearance.
- radiobiology** (rād-dī-ō-bī-ōl'ō-jī) Branch of biology which deals with the effects of radiations on living organisms
- radiocystitis** (rād-dī-ō-sīs-tī'tis) Inflammation of the bladder following treatment by radium or roentgen rays
- radiode** (rād-dī-ōd) [L. *radius*, ray]. Metal container for radium, used in therapeutic application.
- radiodermatitis** (rād-dī-ō-der'mā-tī'tis) [+ G. *derma*, skin, + *-osis*, condition]. Inflammation of the skin caused by roentgen rays or radiation from radioactive elements. SYN. *actinodermatitis*, *q.v.*
- radiodiagnosis** (rād-dī-ō-dī-āg-nō'sis) [+ G. *dia*, through, + *gnōsis*, knowledge]. Diagnosis by means of x-ray.
- radiodontia** (rād-dī-ō-dōn'shī-ā). Roentgenography of the teeth
- radioelement** (rād-dī-ō-ē-lē-mēnt) [+ G. *elementum*]. An element possessing power of radioactivity.
- radioepidermitis** (rād-dī-ō-ēp-l-der-mī'tis) [+ G. *epi*, upon, + *derma*, skin, + *-itis*, inflammation]. Irritation of the skin caused by radioactive rays
- radioepithelitis** (rād-dī-ō-ēp-l-thē-lī'tis) [+ G. *thēlē*, nipple, + *-itis*, inflammation]. Disintegration of epithelium due to exposure to irradiation.
- radiogram** (rād-dī-ō-grām) [+ G. *gramma*, a writing]. X-ray picture, esp. of internal organs. SYN. *actinogram*.
- radiograph** (rād-dī-ō-grāf) [+ G. *graphein*, to write] 1 A record produced on a photographic plate, film, or paper by the action of roentgen rays or radium; specifically an x-ray photograph 2 To make a radiograph of SEE. *skiagraph*.
- radiographer** (rād-dī-ōg'rā-fer) [+ G. *graphein*, to write]. A person skilled in making roentgenograms, or radiographs
- Usually, but at the present time not necessarily, applied to physicians who practice diagnostic roentgenology.
- radiography** (rād-dī-ōg'rā-fī) [+ G. *graphein*, to write]. The making of x-ray pictures SYN. *roentgenography*, *skiagraphy*.
- radiohumeral** (rād-dī-ō-hū'mēr-āl) [+ G. *humerus*]. Concerning the radius and humerus.
- radioiodine** (rād-dī-ō-ī-ō-dīn) A radioactive isotope of iodine Used in the diagnosis and treatment of thyroid disorders
- radioisotopes** (rād-dī-ō-ī-ō-tōps). Radioactive forms of chemicals such as radioactive cobalt
- radiologist** (rād-dī-ōl'ō-jist) [+ G. *logos*, a study]. One who practices diagnosis and treatment by radiant energy
- radiology** (rād-dī-ōl'ō-jī) [L. *radius*, ray, spoke, + G. *logos*, study]. The branch of science which deals with roentgen rays, radium rays, and other radiations, and their curative properties.
- radiolucency** (rād-dī-ō-lū'sēn-sī) [+ G. *lucere*, to shine]. Property of being partly or wholly permeable to radiant energy.
- radiolus** (rād-dī-ō-lūs) [L. *radiolus*, a little spoke]. A sound, a probe.
- radion** (rād-dī-ōn) [+ G. *ōn*, being]. One of the particles of the alpha, beta rays, or cathode rays, given off by radioactive matter.
- radionecrosis** (rād-dī-ō-nē-krō'sis) [+ G. *nekrosis*, death]. Disintegration of tissue by exposure to radiant energy.

radionetics (rā-dī-ō-nēt'iks). The application of electronics to the human body.

radioneuritis (rā'dī-ō-nū-rī'tis) ["" + *G. neuron*, sinew, + *-itis*, inflammation]. Neuritis caused by exposure to radioactive substance

radioopaque (rā-dī-ō-pāk') ["" + *opacus*, dark]. Impenetrable to the x-ray or other forms of radiation.

radioparent (rā'dī-ō-par'ēt) ["" + *parere*, to appear]. Penetrable by the x-ray or other rays.

radiopathology (rā-dī-ō-pā-thōl'ō-gī) Study of pathologic changes induced by radiation

radiopelvimetry (rā'dī-ō-pēl-vīm'ēt-rī) [*L. radius*, ray, spoke, + *pelvis*, basin, + *G. metron*, measure]. Measurement of the pelvis by the x-ray.

radioprazis (rā'dī-ō-prāk'sis) ["" + *G. praxis*, practice]. Diagnosis or use in treatment of some radioactive substance, as x-ray or ultraviolet ray. *SYN* *actinoprazis*

radioscopy (rā-dī-ō-skō-pī) ["" + *G. skopein*, to examine]. Inspection and examination of the inner structures of the body by means of roentgen rays. *SYN* *actinoscopy*.

radiosensitivity (rā'dī-ō-sēn'sī-bīl'ī-tī) ["" + *sensibilitās*]. Quality of sensitivity to radioactive substances

radiosensitive (rā'dī-ō-sēn'sī-tīv) ["" + *sensitivus*, feeling]. Capable of being destroyed by radiation, as a tumor by x-rays

radiosurgery (rā'dī-ō-sur'jer-ī) [*L. radius*, ray, + *G. cherrurgia*, handwork]. The use of radium in surgery

radiotherapist (rā'dī-ō-ther'ā-pīst) ["" + *G. therapia*, treatment]. One trained in use of radiant energy for therapeutic purposes

radiotherapy (rā'dī-ō-ther'ā-pī) ["" + *G. therapia*, treatment]. The treatment of disease by application of roentgen rays, radium, ultraviolet and other radiations

radiothermy (rā'dī-ō-ther'mī) [*L. radius* ray, + *G. thermē*, heat]. 1 Use of radiant heat or heat from radioactive substances for therapeutic purposes 2 Short-wave diathermy

radio toxemia (rā'dī-ō-tōks-ē'mī-ā) ["" + *G. tozikon*, poison, + *ama*, blood]. Toxemia produced by exposure to radioactive substance. *SYN* *actinotoxemia*.

radiotransparent (rā'dī-ō-trāns-par'ēt) ["" + *trans*, across, + *parere*, to appear]. Penetrable by x-ray or other forms of radiation

radiotropic (rā'dī-ō-trōp'īk) [*L. radius*, ray, spoke, + *G. tropos*, a turning]. Affected by radiation

radicular (rā'dī-ō-ul'nar) ["" + *ulna*, arm]. Concerning the radius and ulna.

radish (rād'ish) [*L. radix*, an edible root]. *COMP* Contain sulfocyanate of allyl, the active principle of mustard and arsenic. High in oxalic acid, little food value, but desirable for its minerals

AV. SERVING. 50 Gm. *PRO.* 0.7, *FAT* 0.1 *CARBO.* 1.7.

VITAMINS A— to +, B++ , C+++ .

ASH CONST Ca 0.021, Mg 0.012, K 0.218, Na 0.069, P 0.029, Cl 0.054, S 0.041, Fe 0.0006.

A base-forming food; alkaline potentiality, 2.9 cc. per 100 Gm, 9.8 cc. per 100 cal.

ACTION An acid stimulant. An appetizer, stimulates saliva, and antiseptic to intestinal tract.

radium (rā'dī-ūm) [*L. radius*, rays]. *SYMS* Ra. A metallic element found in very small quantities in pitchblende. *At. wt.* 226.4. *SEE* "actin-" words.

It does not seem to exist in a free state. It is radioactive and fluorescent, becoming darker on exposure to light.

Radiation is of 3 kinds (1) The *alpha* rays, (2) *beta* rays, (3) *gamma* rays, which are analogous to the x-rays

r. intratumoral application. Implanting radium into tumors for therapeutic purposes.

r. needles. Radium needles, contain from 2 to 12½ milligrams of radium element. The usual material employed for needle containers is a steel alloy. The wall thickness is from 0.2 to 0.4 millimeters

r. emanation. Heavy, colorless, gaseous element given off in disintegration of radium. *SYN* *radon*.

Its concentration is measured in terms of the maché unit, abbr. *m. u*

radiumization (rā'dī-ūm-ī-za'shūn) [*L. radius*, ray]. Exposure to action of radium rays

radiumologist (rā'dī-ūm-ōl'ō-jīst) ["" + *G. logos*, a study]. One who specializes in radium therapy

radiumology (rā'dī-ūm-ōl'ō-jī) ["" + *G. logos*, a study]. The science of radium therapy.

radium therapy (rā'dī-ūm ther'ā-pī) ["" + *G. therapia*, treatment]. The treatment of disease by means of radium, radon, its emanation, or its active deposit

radius (rā'dī-ūs) [*L. radius*, a spoke, ray]. 1. The outer and shorter bone of the arm which revolves partially about the ulna

Its head articulates with the *capitulum* of the humerus. Its lower extremity articulates by the ulnar notch with the ulna, and by another articulation with the navicular and lunate bones of the wrist 2 A line extending from a circle's center point to its circumference

r., fracture of. Colles' Fracture. A fracture and dislocation of lower end of radius, generally caused by falling on the outstretched hand

radix (ra'diks) (pl *radices*) [*L. root*] 1. The root portion of a cranial or spinal nerve 2 The root of a plant.

radon (ra'don) [*L. radius*, ray]. *SYN* Rn, At wt 222, At No 86 A radioactive gaseous element resulting from disintegration of radium. Also called *niton*, *radium emanation*

rag sorters' disease (rāg'sort'ers). A febrile pulmonary disease arising in persons who sort paper and rags due to inhalation of bacillus causing anthrax, *q.v.*

ragweed. One of several species of the genus *Ambrosia* whose pollen is an important allergen. Pollen producing period is from middle of August to frost.

Raillietina (rī'lē-i-tī'nā). A genus of cyclophyllidean tapeworms belonging to family Davaineidae

R. demerariensis. *SYN* *R. quitensis*. A species which infests humans, reported from several S American countries, esp Ecuador

railway sickness. Motion sickness resulting from movement of a train.

raised (rāzd) [*M.E. reisen*, to rise]. *BACK*: Having a thick, elevated growth with terraced edges.

raisin. AV. SERVING: 60 Gm. Pro. 1.6, Fat 0.1, Carbo. 48.5.
VITAMINS: B+
ASH CONST Ca 0.064, Mg 0.083, K 0.820, Na 0.133, P 0.132, Cl 0.082, S 0.051, Fe 0.0021.

RÂLES.

1. Death rattle. 2. Large moist râles. 3. Small moist râles. 4. Subcrepitant râles.

râle (rah) [Fr. rattle] An abnormal sound heard on auscultation of the chest produced by passage of air through bronchi which contain secretion or exudate or which are constricted by spasm or a thickening of their walls. May be heard on either inspiration or expiration.

CLASS. There is no general agreement as to classification of the sounds. They are designated *moist* and *dry*. Moist râles are also called *crackling* and these in turn, *coarse*, *medium*, or *dry*. If loud and sharp, they are *consonating*. Dry râles are sometimes designated *musical* and may be *tin kling*, *sonorous*, *snoring*, or *low pitched* or they may be *whistling*, *pinging*, and *high pitched*.

r., atelectatic. Crepitant r. qv

r., bronchiectatic. Heard over bronchiectatic cavities filled with accumulated secretion. Disappears with expectoration.

r., bubbling medium. Heard in inspiration and expiration, produced by passage of air through mucus in the larger tubes, character, larger than the small bubbling moist r.; heard in capillary bronchitis, esp. in children.

r., cavernous. Heard in inspiration and expiration, produced by passage of air through a small cavity with flaccid walls that collapse with expiration; character, hollow and metallic, heard in the 3rd stage of pulmonary tuberculosis.

r., clicking. Heard in inspiration only; produced by passage of air through softening material in smaller bronchi; character, small, sticky; heard in pulmonary tuberculosis, early stage.

r., coarse. Originates in the larger bronchi.

r., consonating. A loud, sharp râle sounding as though close to the ear. Usually associated with consolidation of tissues about bronchial tubes.

r., crackling, medium. Heard chiefly in inspiration; produced by fluid in the finer bronchi, character, larger than the small, crackling, dry; heard in softening of the tubercular deposit, or pneumonic exudation.

r., crepitant. Heard at end of inspiration; produced by passage of air into collapsed vesicles containing fibrinous exudation, usually at base of lungs, character, small, like rubbing hair bet the fingers, heard in pneumonia, in early stage edema of lungs, hypostatic pneumonia. It is localized in pulmonary tuberculosis.

r., dry. Heard in inspiration and expiration, produced by narrowing of the bronchial tubes from thickening of their mucous lining, from spasmodic contraction of the muscular coat, viscid mucus within or pressure from without, character, large and sonorous, small, hissing or whistling, heard in bronchitis, asthma, and localized in beginning pulmonary tuberculosis.

r., gurgling. Heard in inspiration and expiration, produced by passage of air through fluid in cavities of large bubbles, heard in pulmonary tuberculosis after formation of cavities.

r., moist. Produced by passage of air through bronchi containing fluid.

r., redux, r. de retour. Heard in inspiration and expiration, produced by passage of air through fluid in bronchial tubes, character, crackling, unequal, heard in pneumonia, in the stage of resolution.

r., sibilant. High pitched, whistling, and frequent at end of inspiration.

r., sonorous. Low snoring, greater in volume, continuing during inspiration.

r., subcrepitant. Heard in inspiration and expiration, produced by passage of air through mucus in the capillary bronchial tubes; character, small, moist; heard in capillary bronchitis.

r., submucous. Higher pitched and more numerous than large mucous râle. Heard in interscapular and supramammary regions and indicating involvement of many tubes of small caliber.

r., vesicular. Crepitant r., qv
rami (râ'mî) (L. ramus). Plural of ramus, a branch.

ramification (râm-i-fî-kâ'shün) [L. ramus, branch, + -ficâre, to make]. 1. Process of branching. 2. A branch. 3. Arrangement in branches.

ramify (râm'i-fî) [L. ramificâre, to make in branches]. To branch; to spread out in different directions.

ramisection (râm'i-sêk't'shün) [L. ramus, branch, + sectio, a cutting]. Surgical division of a ramus communicans between a spinal nerve and a ganglion of the sympathetic trunk.

ramisectomy (râm-is-êk'tô-mî) [' + G. êktomê, excision]. Excision of a ramus, specifically r. communicans. See. ramisection.

ramollissement (rah'mo-lês-mon') [Fr. ramollir, to soften]. Morbid softening of some organ or tissue, esp. of brain.

ramos. Branching. Having many branches.

ramulus (pl. ramuli). A small branch or ramus.

ramus (râ'mûs) (pl. rami) [L. ramus, a branch]. 1. A branch of 1 of the divisions of a forked structure. 2. Post. portion of lower jawbone. 3. BNA. Primary division of a blood vessel or nerve.

r., anterior. A primary division of a spinal nerve which supplies the lateral and ventral portions of body wall, the limbs, and perineum. Also called *ventral ramus*.

r., bronchial. Collateral branches of each primary bronchus.

r. communicans. One of the primary branches of a spinal nerve which connects with a sympathetic ganglion. Each consists of a *gray* portion (*gray ramus communicans*) of myelinated preganglionic sympathetic fibers and a *white* portion (*white ramus communicans*) composed of unmyelinated postganglionic fibers.

r., meningeal. SYN *recurrent branch*. One of the primary branches of a spinal nerve which reenters vertebral foramen and supplies meninges and vertebral column.

r., posterior. One of the primary branches of a spinal nerve which supplies muscles and skin of the back. Also called *dorsal ramus*.

rancid (răn'sid) [L *rancere*, to be rancid]. Offensive, having a sour smell or taste from partial decomposition, as a *fat*.

range. The difference between the highest and lowest values in a set of variables or in a series of values, or observations.

range of accommodation. Difference between least and greatest distance of distinct vision. SEE *accommodation*.

ranine (răn'nin) [L *rana*, a frog] 1. Pert. to a *ranula* or to the region beneath the tip of the tongue. 2. Branch of the lingual artery supplying that area.

ranula (răn'ü-lä) [L *ranula*, little frog]. A large cystic tumor seen on underside of tongue on either side of the frenum; a retention cyst of the submaxillary or sublingual ducts.

The swelling may be small or as large as an egg.

SYN: Semitranslucent; soft, large, dilated veins coursing over it. Fullness and discomfort. Usually no pain. Contains clear, glairy fluid, due to dilatation of ducts of salivary glands and to obstruction of those of sublingual mucous glands.

TREATMENT: Empty sac as it refills. Necessary to destroy lining membrane of cyst by caustic, after having excised part of cyst wall.

r., pancreatic. Cystic disease of pancreas due to obstruction of its ducts.

Ranvier's nodes (ron-vê-äs'). Constrictions in the medullary substance of a nerve fiber at more or less regular intervals. SEE: *nerve fiber*.

rape (răp) [L. *rapere*, to snatch] 1. Coitus with a female without her consent or when she is too young or without sufficient intelligence to give legal consent. SYN: *stupration*.

It is a crime punishable by death in some states. It is very difficult legally to prove rape. Rape of a vigorous girl by an unassisted male is considered almost impossible if the victim is conscious and free to defend herself.

Rape during sleep, under anesthesia, or hypnosis is considered questionable, although there are cases on record of those who claim to have been raped under such conditions. [tercourse, virginity.

RS: age of consent, coitus, sexual in-raphania (răf-ăn'i-ä) [G. *rhapnasia*, radish]. A spasmodic disease caused by eating seeds of the wild radish; allied to ergotism, q.v. SYN: *rhapnasia*.

raphe (răf'fê) [G. *rhaphe*, a seam]. A crease or ridge or seam noting union of the halves of a part.

r., buccal. R. on cheek indicating line of fusion of maxillary and mandibular processes.

r., palatine. A line or ridge in median line of palate.

r. of penis. A median ridge on post. surface of penis, a continuation of raphe of scrotum.

r., perineal. A line or ridge in midline of perineum.

r. of scrotum. A ridge in midline of scrotum.

r. of tongue. A median groove on dorsum of tongue.

rapport (Fr *rapporteur*, to bring back). PSY A relationship of sympathy and confidence.

raptus. A sudden seizure or attack; rape. **r. hemorrhagicus.** A sudden hemorrhage.

r. maniacus. A sudden maniacal attack.

r. melancholicus. A sudden attack of agitation occurring during melancholia.

r. nervosum. A sudden attack of extreme nervousness, a cramp or spasm.

rarefaction (rar'fê-făk'shün) [L *rarefacere*, to make thin]. Process of decreasing density and weight, as of *air*.

The farther from the surface of the earth, the less dense the atmosphere becomes.

r. of bone. The process of making bone more porous because of absorption of lime salts.

ETIO. Disturbed calcium-phosphorus metabolism possibly resulting from excess parathyroid hormone. SEE: *osteoporosis*, *parathyroid*.

rarefy (răr'fê-fl) To make less dense or to increase porosity of.

rarefy'ing os'teitis. Chronic bone inflammation marked by development of granulation tissue in marrow spaces with absorption of surrounding hard bone. SEE: *osteitis*.

rash (rash) [O Fr *rasche*, eruption]. SYN: *exanthema*. General term applied to any eruption of the skin, esp those associated with communicable diseases. Usually temporary. SEE: *eruption*, *lesion*, *roseola*.

NP. Color, usually a shade of red which varies with disease. *Ertent*, whether localized, discrete, diffuse, or confluent. *Character*, whether consisting of macules, papules, wheals, vesicles, pustules, bulla, or petechia. *Course*, whether onset is gradual or sudden. Note changes in character.

r., cable. An acneiform eruption caused by contact with chlorinated waxes.

r., canker. Scarlet fever, q.v.

r., diaper. SYN: *Erythema gluteale*. Inflammation of skin of buttocks and legs due to ammonia from urine in wet diapers of infants.

r., drug. SYN: *dermatitis medicamentosa*, q.v. One caused by use of certain drugs, such as bromide or iodine. SEE: *idiosyncrasy*, *drug rashes*.

r., ecchymotic. A hemorrhagic rash, q.v.

r., enema. One caused by too much soap in an enema; resembles measles.

r., gum. A red, papular eruption of the mouth, a form of miliaria, seen esp. in infants, due to intestinal disturbances. SYN: *strophulus*.

r., heat. Miliaria, q.v.

r., hemorrhagic. A rash consisting chiefly of hemorrhages or ecchymoses

r., mulberry. R. seen in typhus fever; dusky in color.

r., nettle. Smooth, elevated, itchy, white patches. SYN: *hives*, *urticaria*.

r., red. SEE: *gum rash*.

r., rose. Any rose-colored rash. SYN: *roseola*.

r., serum. Rash accompanying serum sickness resulting from injection of a foreign serum SEE *serum sickness*

r., tooth. SEE: *gum rash*.

r., vaccination. One that sometimes follows vaccination

r., wandering. SEE. *geographical tongue*.

After Sears.

RASH.

1. Smallpox 2. Vesicle of smallpox with umbilication. 3. Chickenpox 4. Vesicle of chickenpox, no umbilication.

raspatory (rās'pā-tō'rī) [L *raspatorium*].

File used in surgery, esp. for trimming surfaces of bone

raspberry (rāz'bēr-ī) (red). COMP: Contains 3 times as much cellulose and less ash than strawberry.

AV. SERVING 75 Gm. Pro. 0.8, Fat 0.4, Carbo. 7.3.

r. juice. AV. SERVING 120 Gm. Pro. 0.5, Carbo. 10.0.

ASH CONST: Ca 0.021, Mg 0.016, K 0.134, Na 0.005, P 0.012, S 0.009, no Fe or Cl.

rasura, rasure (rā-sū'rā, rā'zhur) [L *rasura*, a scraping]. 1. Process of scraping, or shaving. 2. Scrapings or filings.

rat (rāt) [A.S. *raet*]. A rodent (*rattus rattus*) found in and around human habitations. In addition to causing enormous economic loss, rats are of primary importance in the spread of human and animal diseases in that they serve as (1) hosts of various protozoans, flukes, tapeworms, and threadworms and (2) reservoirs of amebiasis, murine and scrub typhus, plague (bubonic, sep-

ticemic, pneumonic). The latter are transmitted to man principally through arthropods (rat flea). Rats also transmit *ratbite fever*. q v SEE *flea*

ratbite fever. An acute infectious disease caused by a *Spirillum minus* transmitted by the bites of infected rats. Also called *sodoku*.

r. f., mycotic. A systemic disease characterized by prolonged, irregular fever, arthritis, and abscess formation. Caused by *Streptobacillus moniliformis* transmitted by bites of infected rats. Also called *epidemic arthritic erythema*

rate (rāt) [L *rata*, a fixed amount] Valuation based on comparison with a standard

r., case fatality. The number of deaths per 100 cases of a specific disease

r., morbidity. The number of cases per year of a certain disease for a certain number of total population.

r., mortality. SEE *death rate*

ratio (rā'shī-ō) [L] Proportion

r., A-G. Albumin-globulin ratio, q v

r., albumin-globulin. Ratio of albumin to globulin in blood plasma or serum

Normally 1.2-2.5 1. Values less than one (1) are indicative of pathologic conditions

r., body-weight. Body weight in grams divided by body-height in centimeters

r., cell-color. Percentage of erythrocytes divided by percentage of hemoglobin

r., concentration. Concentration of a solid in urine divided by its concentration in blood

r., curative Therapeutic ratio, q v

r., D-N. Dextrose-nitrogen ratio, q v

r., dextrose-nitrogen. Ratio between dextrose and nitrogen in urine

r., G-N. Glucose-nitrogen ratio SEE: *ratio, dextrose-nitrogen*

r., mendelian. A ratio obtained between groups of offspring of parents which differ in certain unit characters. Ratios will vary depending on degree of dominance of one character over the other, whether parents are homozygous, etc

r., sex. Ratio of males to females in a given population. Usually expressed as number of males per 100 females. Approximate ratios are: at birth, 103 100, at maturity, 100 100; at age of 70, 76, 100

r., therapeutic. Ratio obtained by dividing effective therapeutic dose by minimum lethal dose

ration (rā'shūn) [L *ratio*, proportion]. Fixed allowance of food and drink for a certain period.

rational (rāsh'ūn-āl) [L *rationalis*, reasoning]. 1. Of sound mind. SYN: *sane*. 2. Reasonable or logical. 3. Employing treatments based on reasoning or general principles, opposed to empiric

r. symptom. One discovered by questioning instead of by physical examination. A subjective symptom, q v

rationalization (rāsh'ūn-āl-i-zā'shūn) [L *rationalis*, reasoning]. PSY: Rational or plausible explanation of behavior or belief activated by unknown motives.

rattle (rāt'l) [M.E. *ratelen*, probably of imitative origin]. A sound or rāle heard on auscultation.

r., death. A gurgling sound or subcrepitant rāle heard in the trachea of the dying.

raucous (raw'kūs) [L *racus*, hoarse]. Hoarse, strident, as the sound of a voice.

Rauwolfia. The dried roots of *Rauwolfia serpentina* containing not less than 0.8 per cent of total alkaloids. Extracts are potent hypotensive agents and sedatives with low toxicity. Derivatives are *serpentine*, *serpentinine*, and *reserpine*, *q.v.*

rave (rāv), [O.Fr. *raver*, to rave]. To talk irrationally, as in delirium.

raving (rāv'ing) [O.Fr. *raver*, to rave]. 1. Irrational utterance. 2. Talking irrationally.

ravish (rāv'ish) [Fr. *ravir*, to seize]. 1. To commit rape upon a girl or woman. 2. To remove or carry away by force.

ray (rā) [L. *radius*, a rod, spoke]. 1. One of a number of lines diverging from a common center. 2. Line of propagation of any form of radiant energy, esp. light or heat, loosely, any narrow beam of light.

RS. *energy, e., radiant, fluorescence, heat; radiation; "roentgen-" words, spectrum, x-ray.*

r., actinic. A solar ray of the spectrum capable of producing chemical changes.

r., alpha. Ray composed of positively charged particles of helium derived from atomic disintegration of radioactive elements.

Velocity from 1/10 to 1/3 that of light. They are completely absorbed by a thin sheet of paper, and possess powerful fluorescent, photographic and ionizing properties. They are less penetrative than the beta rays.

r., antirachitic. Ultraviolet ray from 2700 to 3020 Å.

r., bactericidal. Ray bet. 1850 and 2600 Å. U. which is strongly bactericidal.

r's., Becquerel's. Those from radium, uranium, and other radioactive substances.

r's., beta. Negatively charged electrons expelled from atoms of disintegrating radioactive elements.

r's., Blondlot's. SEE *n. rays*.

r's., border, r's., borderline, r's., Bucky. SEE *Grenz rays*.

r's., canal. Positive rays in a vacuum tube going from anode toward cathode. Old name for positive ray.

r's., cathode. Negatively charged electrons discharged by the cathode through a vacuum, moving in a straight line, and upon hitting solid matter produce roentgen rays.

r., characteristic. Secondary roentgen rays, the wave lengths of which are determined by the chemical constitution of the object that emits, transmits, or scatters them.

r., chemical. SEE *actinic ray*.

r., cosmic. SEE *Millikan's rays*.

r's., delta. Highly penetrative ether waves given off by radioactive substances.

r's., dynamic. Rays which are physically or therapeutically active.

r. fungus. Genus of parasitic fungi with radiating formation.

r., erythema-producing. Ray bet 1800 and 4000 Å. U., which produces erythema; those around 2540 and bet. 2050 and 3100 Å. U. being most effective.

r., Finsen (or light). Ultraviolet radiation from the Finsen lamp.

r's., fluorescent roentgen. Secondary rays whose wave lengths are characteristic of the substance which emits them.

r., gamma. Heterogeneous vibrations caused by electronic disturbance in atoms of radioactive elements during their disintegration and appear identical

with roentgen rays except that the wave lengths range from about 14 to 0.01 angstroms. They have high velocity and penetrative power. They lie bet. ultraviolet and roentgen rays.

r., grenz. Soft roentgen ray with an average wave length of 2 angstroms (range from 1 to 3 angstroms); obtained with peak voltage of less than 10 kilovolts.

r's., hard. X-rays of short wave length and great penetration.

r's., heat. Visible rays from 4000 to 7000 Å. U. and infrared rays from 6000 to 14,000 Å. U. The heating effect of visible rays on deeper tissue is proportionately stronger than that of infrared rays, on account of greater penetrating power. SEE *heat*.

r's., Hertizian. Electromagnetic waves of great wave length. Used in radio communication.

r's., infrared. Radiations just beyond the red end of the spectrum. Their wave lengths range bet 7700 and 500,000 angstroms. The therapeutic range extends from about 7700 to about 14,000 angstroms.

r's., Lenard's. Cathode rays that have passed outside the discharge tube. SEE: *cathode ray*.

r., luminous. Visible ray.

r., medullary. SYN: *pars radiata, processes or rays of Ferrein*. One of many slender processes composed of straight tubules which project into the cortex from the bases of renal pyramids.

r's., Millikan. Electromagnetic waves coming from unknown sources, resembling the gamma rays, but their penetration is greater and their wave length shorter.

r's., monochromatic. Rays characterized by a definite wave length, as secondary rays.

r's., pigment-producing. Rays at 2500 and 3000 Å. U. are most effective in causing pigmentation, a local response to irritation of cutaneous prickle-cells.

r., primary. Ray discharged directly from a radioactive substance, as the alpha, beta, and gamma rays.

r., positive. Ray of positively charged ions which, in a discharge tube, go from the anode toward the cathode.

r., roentgen. X-rays discovered by Wilhelm Konrad Roentgen. They have a penetrative power through opaque substances; used for photographing internal organs and parts, and for diagnostic and therapeutic purposes.

r's., scattered. Roentgen rays or gamma rays which, in their passage through a substance, have deviated in direction and also may have been changed by an increase in wave length.

r's., Schumann. Rays in the region bounded bet. 1220 and 1850 angstroms.

r's., secondary. Roentgen rays emitted in all directions by any matter irradiated with roentgen rays.

r's., ultraviolet. Invisible rays of the spectrum which are beyond the violet rays, and of varying wave lengths. Of luminous ether which may be refracted, reflected, and polarized, but which will not traverse many substances impervious to the rays of the visible spectrum. They do not affect the retina, but rapidly destroy the vitality of bacteria. They produce photochemical and photographic effects.

r's., x-. SEE: *roentgen rays*.

Raynaud's disease (rā-nōz'). Severe, paroxysmal, vascular disorder causing disturbances of the circulation in the extremities.

Venous stasis follows in 3 stages: Local syncope, asphyxia, and gangrene. A vasomotor neurosis, characterized by local anemia, congestion or gangrene.

Sym: In 1 form, the part, usually a finger or toe, becomes pale, cold, anesthetic. After a time these phenomena disappear and are followed by redness, heat and tingling. Attacks may be excited by cold and come and go without damaging the part. In another form, affected part becomes swollen, dark, red, painful; if attack persists bullae may appear and gangrene develop. Gangrenous areas often symmetrical, involving a finger on each hand, toe on each foot, or both ears. Hemoglobinuria may occur in, or replace an attack.

Prognosis: Attacks persist, but life not endangered. In rare instances extensive gangrene develops and death follows. Gangrene may be absent in mild forms.

Treatment: Patients liable to attacks should be well protected from cold, frequent bathing and friction. Raynaud advises use of a continuous current, 1 pole over spine, other over affected area. Nitroglycerin.

Rb. Symb. for *rubidium*.

R. C. P. Royal College of Physicians.

R. C. S. Royal College of Surgeons.

R. D. A. Right dorsoanterior presentation position of the fetus.

R. D. P. Right dorsoposterior presentation position of the fetus.

R. E. Abbr. for *radium emanation* and for *right eye*.

Re. Symb. for *rhenium*.

re- [L.]. Prefix meaning *back* or *again*.

reaction (rē-āk'shūn) [L. *re*, back, + *actus*, acting]. 1 Response of an organism or part of it to a stimulus. 2. In Chem., a chemical process or change, the result of a test to determine the pH (hydrogen-ion concentration) of a solution and designated acid, neutral, or alkaline. 3 An opposing or counteraction. For reactions not listed here or given under their name, see *method*, *reflex*, *response*, *test*. 4. Emotional and mental state created by a situation.

Forms or Reactions: *Anesthesia Dolorosa*: Pain associated with anesthesia of a part, as in thalamic lesions.

Dyesthesia: Retardation and fusion of sensations or prolonged sensation due to successive stimuli; addition of sensations, errors of location, perception only of the 1st of a series of sensations, disappearance of sensation during prolonged stimulation, polyesthesia when stimulus is single, pain far from point stimulated, perception at symmetrical points (allochiria?), false interpretation of a sensation.

Subjective Sensations: These may include causalgia, paresthesia, pseudomyelia paresthetica, a false sensation, as of movement in a paralyzed limb or part, or sensation of lack of movement in a moving limb.

r., affective. **Syn:** *affective psychosis*, *manic-depressive psychosis*.

r., alarm. The first stage in the general adaptation syndrome (G-A-S) which includes changes occurring in the body when subjected to stressful stimuli. Physiologic changes which occur are direct results of damage and/or shock or reactions of the body to defend itself

against shock. **Syn:** *syndrome*, *general adaptation*.

r., allergic. A reaction resulting from hypersensitivity to an antigen.

r., anamnestic. The more rapid appearance, greater concentration of, better combining quality, and longer life of antibodies which may occur when an antigen is injected a considerable time after the first injection.

r., anaphylactic. That which follows injection or administration of a foreign substance to an animal which has been sensitized to it. The principal manifestation of the antigen-antibody reaction, *q. v.* Also called *anaphylaxis*.

r., anaphylactoid. R. similar to an anaphylactic reaction but not as severe. Induced by introducing into subject a substance to which he has not become hypersensitive.

r., antigen-antibody. The combination of molecules of an antigen with one or more molecules of its specific antigen.

r., atopic. **Syn:** *sensitivity*, *atopic*.

r., complement-fixation. A test based on the principle that the complement enters into combinations formed between soluble or particulate antigens and antibody. Used for diagnosis of certain diseases, esp syphilis.

RB complement

r., consensual. 1. An involuntary action. 2. A crossed reflex.

r., cross. A reaction between an antibody and an antigen which is not specific for the antibody but closely allied to the one which is.

r., of degeneration. The change in muscle reactivity to electricity, seen in lower motor neuron paralysis.

r., delayed. One occurring a considerable time after stimulus, esp a reaction such as inflammation of the skin occurring hours or days after exposure to the allergen.

r., false-positive. A positive reaction in a test, esp. test for syphilis, which is due to faulty technic or to presence of another disease.

r., formation. The checking of infantile impulses and tendencies which might become those of an antisocial nature later, or which might hold the individual upon an infantile level and the attributes developed from such partial repressions, such as modesty, shame, or disgust.

r., immune. A reaction which demonstrates the presence of antibodies in the blood. Indicative of a high degree of immunity.

r., inflammatory. **Syn:** *inflammation*.

r., local. R. occurring at point of stimulation or injection of exciting substances.

r., myasthenic. Gradual decrease and eventually cessation of muscle contractions when a muscle is stimulated repeatedly by direct current.

r., neutral. The indicating neutrality, i.e., neither acid nor alkaline; pH 7.

r., ophthalmic. Local reaction of conjunctiva to introduction of toxins of tuberculosis and typhoid fever; more severe in those having the disease.

r., swelling. **Syn:** *Neufeld's reaction*. The swelling of capsules of bacteria when mixed with their specific immune serum.

r., time. Time elapsing between application of a stimulus and the response to it.

r., transfusion. Reaction following transfusion of incompatible blood resulting from agglutination and hemolysis of red blood cells.

reactivate. To make active again, esp. the process of reactivating immune serum which has lost its potency by the addition of fresh normal serum, thus restoring the complement which had become inactive through age, heat, or other factors

reactive depression (rê-âkt'iv dê-prêsh'un). **PSY:** A psychosis resulting from bereavement, sadness or a situation causing such emotions, lasting longer and more marked than the normal reaction.

reagent (rê-â'jönt) [L. *rê*, again, + *agere*, to act] 1. A substance involved in a chemical reaction 2. A substance used to detect the presence of another substance 3. **PSY** Subject of a psychological experiment, esp. one reacting to a stimulus

reag'in. 1. An antibody associated with atopic hypersensitivity; one associated with manifestations of hay fever, asthma, urticaria, angioedema, and infantile eczema. **SEE:** *sensitivity, atopic* 2. A substance present in serum and cerebrospinal fluid which induces flocculation in complement-fixation and similar tests.

r., atopic. An antibody which reacts with an atopen

reality principle (rê-âl'i-tî) [Fr. *réalité*]. The effect of necessity or external consideration, acting to control self-gratification, or of the ego's self-protective influences.

re'amina'tion. The restoration of an amino group to a compound from which one had previously been removed

reanimate. To reactivate, restore to life, revive, resuscitate

reapers' keratitis (rêp'êrs kêr-â-tî'tis). Keratitis caused by dust from grain.

Réaumur's thermometer (rê-ô-mur). A thermometric scale having ° for the freezing point, and 80° for the boiling point of water.

Readings changed to Centigrade by multiplying by 5/4, to Fahrenheit by multiplying by 9/4 and adding 32. **SEE:** *Thermometric Scale, Comparative*

rebound. Response seen in reflexes in which sudden withdrawal of stimulus is followed by fresh activity such as a strong contraction following a moderate one, marked relaxation following moderate relaxation, or contraction replacing inhibition.

r., phenomenon. When a limb or a part is acting against a resistance, if resistance is suddenly removed the limb will move forcibly in direction toward which effort was being directed

recalcification (rê-kâl-si-fi-kâ-shün). The restoration of lime salts to tissues from which they have been withdrawn

recall (rê-kaw') [' + A.S. *ceallan*, to call]. **PSY:** Act of bringing back to mind that which has been previously learned or experienced; reproduction.

recapitulation theory (rê-kâ-pit-ü-lâ-shün) [L. *rê*, again, + *capitulum*, a section] The theory that an individual in its development from the ovum to maturity passes through successive stages which approximate the series of adult ancestors from which that organism has descended. Summarized in the statement *ontogeny recapitulates phylogeny*.

receiver (rê-sêv'er) [L. *rê*, back, + *capere*, to take]. Container for holding a gas or a distillate.

receptaculum (rê-sêp-tâk-ü-lüm) [L. a container]. A vessel or cavity in which a fluid is contained.

r., chyl. **SYN:** *cisterna chyli*. Inferior, pear-shaped, expanded portion of the lower end of the thoracic duct, near 1st and 2nd lumbar vertebrae, into which the *rt* and *l* lumbar trunks, an intestinal trunk, and some thoracic vessels empty.

receptor (rê-sêp'tor) [L. a receiver]. 1. Molecular group in cells which have a special affinity for toxins, amboceptors, etc. **SEE:** *Ehrlich's side chain theory*. 2. Group of cells functioning in reception of stimuli, a sense organ; endings of afferent (sensory) nerves.

r., auditory. The hair cells in the organ of Corti in cochlea of ear

r., contact. A receptor which gives rise to a sensation such as touch, temperature, pain which can be localized in or on surface of body.

r., cutaneous. One which is located in the skin

r., distance. **SYN** *telereceptor*. A receptor which responds to stimuli originating at a distance from the body. Includes visual, auditory, and olfactory sense organs

r., gravity. The hair cells of macula of utricle and saccule which respond to changes in position of the head and linear acceleration

r., olfactory. The olfactory cells, bipolar nerve cells, found in olfactory epithelium, whose axons form fibers of olfactory nerve

r., optic. The rods and cones of the retina

r., proprioceptive. Muscle and tendon spindles, the receptors of the muscle or kinesthetic sense

r., rotary. The hair cells in the cristae of the ampulla of semicircular ducts, which are stimulated by angular acceleration or rotation

r., sensory. A sensory nerve-ending, a cell or group of cells, or a sense organ which, when stimulated, gives rise to an afferent or sensory impulse.

CLASSIFICATION (a) *Exteroceptors*, those located on or near surface which respond to stimuli of outside world. Include eye and ear (*distance receptors*) and touch, temperature, and pain receptors (*contact receptors*). (b) *Interoceptors*, those in mucous linings of alimentary and digestive tracts which respond to internal stimuli. Also called *visceroreceptors*. (c) *Proprioceptors*, those responding to stimuli arising within body tissues

Receptors are also classified on the basis of nature of stimuli to which they respond (a) *Chemo-r.*, those that respond to chemical substances (taste buds, olfactory cells, receptors in aortic and carotid bodies). (b) *Presso-r.*, those that respond to pressure (receptors in aortic arch and carotid sinus). (c) *Photo-r.*, those that respond to light (rods and cones) (d) *Tango-r.*, those that respond to touch (Meissner's corpuscles)

r., stretch. Neuromuscular and neurotendinous spindles and organs of Golgi which are stimulated by stretch. **SEE:** *receptor, proprioceptor*.

r., taste. The gustatory cells of the taste buds.

r., temperature. Krauses' end-bulbs (receptors of cold) and Ruffini's corpuscles (receptors for warmth).

r., touch. Merkel's disks, Meissner's corpuscles, and nerve plexus about the roots of hairs

recess. A small indentation, depression, or cavity. **SEE:** *recessus*

r., cochlear. A small concavity lying

between the two limbs of the vestibular crest in vestibule of ear which lodges the beginning of the cochlear duct

r., elliptical. A small concavity lying superiorly and posteriorly on medial wall of vestibule which lodges the utricle

r., epitympanic. SYN *attic*. That portion of the tympanic cavity which lies above level of tympanic membrane. It contains the head of malleus and short limb of incus

r., infundibular. A small projection of third ventricle which extends into infundibular stalk of hypophysis

r., lateral, of fourth ventricle. One of two lateral extensions of the 4th ventricle, forming narrow pockets on each side and around upper portions of the restiform bodies

r., lineal. SEE *recess, omental*

r., nasopalatine. A small depression on floor of nasal cavity near nasal septum. Lies immediately over incisive foramen

r., omental. One of three pocketlike extensions of the omental bursa. The *superior recess* extends upward behind caudate lobe of liver, the *inferior recess* extends downward into great omentum, the *hepatic recess* extends laterally to hilus of spleen

r., optic. A pocket of the 3rd ventricle lying anterior to infundibular recess. It is bound inferiorly by optic chiasma

r., pharyngeal. SYN. *fossa of Rosenmüller*. Recess in lateral wall of nasal pharynx lying above and behind opening to auditory tube

r., pineal. A recess of roof of 3rd ventricle extending into stalk of pineal body.

r., pyriform. A deep depression in wall of laryngeal pharynx lying lateral to orifice of larynx. It is bounded laterally by thyroid cartilage and medially by cricoid and arytenoid cartilages. It is a common site for lodgement of foreign objects.

r., sphenothmoidal. Small space in nasal fossa lying above sup concha. Lies between ethmoid bone and ant. surface of body of sphenoid bone and posteriorly receives opening of sphenoidal sinus

r., spherical. Recess on medial wall of vestibule of inner ear which accommodates the sacculus.

r., suprapineal. A posterior extension of roof of 3rd ventricle forming a small cavity above pineal body

r.'s of tympanic membrane. SYN: *pouches of Troitsch*. Two pouches of tympanic mucous membrane (ant and post.) lying between tympanic membrane and ant. and post. malleolar folds

r., umbilical. A dilatation on left main branch of portal vein which marks position where umbilical vein was originally attached

recession. The withdrawal of a part from its normal position.

r. of gums. SYN: *ulatrophia*. Shrinkage of gums away from necks of teeth

recessive. Tending to recede or go back; lacking control.

r. character. In genetics a character which is a cross between two pure races or species, does not express itself in the hybrid offspring being suppressed or "dominated over" by its allelomorph. **SEX:** *gene, factor, heredity*.

r. gene. A gene which in the presence of its dominant allelomorph does not express itself.

recessus (rê-sês'ûs) [L. cavity]. A small hollow or recess

recid'iva'tion. 1 The relapse of a disease. 2 The relapsing into crime.

recid'ivism. Habitual criminality; repetition of antisocial acts

recid'ivist. A confirmed criminal; a patient, esp. a mental patient, who returns to the hospital for treatment

recidiv'ity. Tendency to relapse or to return to a former condition

recipe (rês'tî-pê) [L. *recipere*, to receive].

1. [L.]. Take, indicated by the sign \mathcal{R} . 2. A prescription or formula for a medicine

recipient (rê-sîp'tî-ênt) [L. *recipient*, receiving]. One who receives anything, esp. the blood in transfusion. SEE *donor*.

reciprocal (rê-sîp'rô-kâl) [L. *reciprocus*, turning backward and forward]. Interchangeable in character.

r. reception. Articulation with convex surface in 1 direction and concave surface in another.

Recklinghausen's canals. Rootlets of the lymphatics, minute spaces in connective tissue

R's disease, and syndrome. 1 Pigmentation of skin, multiple small fibrous tumors on same with tenderness along nerves, pain in joints, sluggishness, multiple neurofibromatosis 2 *Osteitis fibrosa cystica*

R's tumor. An adenolomy fibroma on wall of the fallopian tube, or posterior uterine wall

reclination (rêk-ll-nâ'shûn) [L. *reclinare*, to lean back]. The turning of the eye lens covered with a cataract over into the vitreous to remove it from line of vision

recline (rê-klîn') [L. *reclinare*, to lean back]. To be in recumbent position, to lie down.

Reclus' disease (re-klû'). Multiple, benign, cystic growths in the mammary gland.

recomposition. The recombining of constituents or parts.

recompression. Resubjecting a subject to increased atmospheric pressure, a procedure used in the treatment of calcium disease (bends)

reconstituent (rê'kôn-stî'tû-ênt) [L. *rê*, again, + *constituens*, constituting]. An agent that improves or strengthens 1 or more parts or functions of the body by replacing lost material. **EX:** *calcium, iron, phosphorus*. **SYN:** *tonic*.

recover. To regain health after illness; to regain a former state of health. To regain a normal state as to *recover* from fright.

recovery. The process or act of recovering

recrement (rêk'rê-mênt) [L. *recrementum*, that which is separated back]. Secretion which, after having performed its function as the saliva or part of the bile, is reabsorbed into the blood.

recrementitious (rêk'rê-mên-tîsh'is) [L. *recrementum*, that which is separated back]. Of the nature of a secretion which, having performed its function, is reabsorbed into the blood.

recrudescence (rê-krû-dês'êns) [L. *recrudescere*, to become raw again]. Return of symptoms. **SYN:** *relapse*.

recrudescant (rê-krû-dês'ênt) [L. *recrudescere*, to become raw again]. Assuming renewed activity.

recruitment (rê-kroo'mênt). Condition in which response in a reflex action increases to a maximum when a stimulus is prolonged even though strength of stimulus is unchanged; due to activa-

tion of increasingly greater numbers of motor neurons.

r. of end-organs. Increase in discharge from sensory end-organs resulting from increase of stimulus accounted for by increase in number of end-organs discharging and increase in frequency in discharge from each

rectal (rĕkt'āl) [L. *rectus*, straight]. Pert. to the rectum

r. alimentation. Rectal feeding, *q.v.*

r. anesthesia. Introduction of anesthetic into rectum for local desensitization, used esp. in labor. SEE: *anesthesia*, *labor*.

r. crisis. Tenesmus and rectal pain in locomotor ataxia.

r. feeding. The introduction of nutrients in fluid form into the colon through the rectum SYN: *nutrient enema*, *q.v.*

r. reflex. The normal desire to evacuate feces present in rectum.

rectalgia (rĕk-tāl'ji-ā) [L. *rectus*, straight, + G. *algos*, pain] Pain in rectum.

rectotomy (rĕk-tĕk'tō-mī) [' + G. *ektomē*, excision]. Excision of the rectum or anus SYN *proctotomy*.

rectification (rĕk'ti-fi-kā'shun) [' + *-ficāre*, to make] 1 The process of refining or purifying a substance 2 Act of straightening or correcting

rectified (rĕk'ti-fid) [' + *-ficāre*, to make] Made pure or straight Set right

r. spirit. One resulting from fractional or repeated distillation of alcohol, as whisky.

rectifier (rĕk'ti-fi'ēr) [' + *-ficāre*, to make]. A device for obtaining a unidirectional current from an alternating current.

rectitis (rĕk-ti'tis) [' + G. *-itis*, inflammation] Inflamed condition of the rectum. SYN *proctitis*.

recto- [L]. Combining form meaning straight, the rectum.

rectocele (rĕk'tō-sēl) [L. *rectus*, straight, + G. *kēlē*, hernia] Protrusion of post vaginal wall with ant. wall of rectum through the vagina

rectoclysis (rĕk-tōk'k-lis) [' + G. *klysis*, a washing out]. Slow introduction of fluid into rectum. SYN *Murphy drip*, *proctoclysis*.

rectococcyxemia (rĕk'tō-kōk-si-pĕks'si-ā) [' + G. *kōkkyz*, coccyx, + *pēxis*, fixation] Fixation of rectum by suturing it to coccyx.

rectocolitis (rĕk'tō-kō-lī'tis) [' + G. *kōlon*, colon, + *-itis*, inflammation] Inflamed condition of rectum and colon. SYN. *proctocolitis*.

rectocystotomy (rĕk'tō-sis-tōt'ō-mī) [' + G. *kystis*, bladder, + *tomē*, a cutting]. Incision of the bladder through rectum, usually to remove a calculus

rectopexy (rĕk'tō-pĕks-i) [' + G. *pēxis*, fixation]. Fixation of rectum by suturing to another part. SYN: *proctopexy*.

rectophobia (rĕk'tō-fō-bi-ā) [' + G. *phobos*, fear]. Morbid fear in those patients with rectal disease.

rectoplasty (rĕk'tō-plās'tī) [L. *rectus*, straight, + G. *plassein*, to form]. Plastic operation on the anus and rectum. SYN. *proctoplasty*.

rectorrhaphy (rĕk-tor'rā-fi) [' + G. *raphē*, a sewing]. Suture of rectum and anus SYN *proctorrhaphy*.

rectoscope (rĕk'tō-skōp) [' + G. *skopein*, to examine]. A speculum to examine the rectum.

rectosigmoid (rĕk'tō-sīg'moyd) [' + G. *sigma*, letter S, + *eidos*, form]. Upper

part of rectum and adjoining portion of the sigmoid colon

rectostenosis (rĕk'tō-stĕn-ō'sis) [' + G. *stenōsis*, a narrowing]. Stricture of the rectum

rectostomy (rĕk-tōs'tō-mī) [' + G. *stoma*, a mouth]. Creation of an artificial opening into the rectum to relieve stricture. SYN *proctostomy*, *q.v.*

rectotomy (rĕk-tōt'ō-mī) [' + G. *tomē*, an incision]. Incision for stricture of the rectum or other purposes. SYN: *proctotomy*, *q.v.*

rectourethral (rĕk'tō-ū-rē'thrāl) [L. *rectus*, straight, + G. *ourēthra*, urethra]. Concerning the rectum and urethra.

rectouterine (rĕk'tō-ū'ter-in) [' + *uterus*, womb]. Concerning the rectum and uterus

rectovaginal (rĕk'tō-vā'j-n-āl) [' + *vagina*, sheath]. Concerning the rectum and vagina

rectovesical (rĕk'tō-vēs'ik-āl) [' + *vesica*, a small vessel]. Concerning the rectum and bladder

rectum (rĕk'tum) [L. straight] Lower part of large intestine, about 5 in. (12 cm.) long, bet. sigmoid flexure and the anal canal

The centers for the defecation reflex are located in the medulla and 2nd, 3rd and 4th sacral segments

PREPARATIONS SOMETIMES GIVEN BY RECTUM (1) *Sodium Bromide* Ten to 60 gr dissolved in 2 to 4 oz. of plain warm water

(2) *Chloral Hydrate* Ten to 30 gr. dissolved in 3 oz of warm olive oil, 3 oz of very warm milk, or 3 oz. of thin, boiled cornstarch water. This makes a good preparation or base in which to hold the medicine in suspension The patient's pulse should be taken 3 minutes before and at 5-minute intervals for one-half hour after the administration, to observe the heart action. If untoward effects are noticed, action should be taken to prevent further absorption

(3) *Paraldehyde* Dosage, 1 to 4 cc., may be mixed with water in the proportion of 1 to 8, and in this ratio it may be mixed with thin starch water for rectal medication. There should be about 3 oz. of starch water.

(4) *Sodium Bicarbonate* One teaspoonful, or 4 Gm to 500 cc., or 1 pint, of water aids in the expulsion of the bowel content The neutralizing action on the acidity of the bowel content brought about by the sodium bicarbonate solution leaves the bowel soothed and with a bland reaction

(5) *Glycerine* One oz. is added to a pint of plain water. It will cause a good evacuation One oz. of glycerine to 1 oz of water will cause irritation of the lower bowel and precipitate an evacuation. This may be given with a bulb syringe

(6) *Alum*: The alum enema consists of 1 quart of warm water and 1 oz. of powdered alum. This enema has a tendency to dry up intestinal flora and check fermentation.

RS: *anorectal*, *anus*, *archocele*, *archoptosis*, *archoptima*, *archorrhagia*, *archostenosis*, *caribi*, *cloaca*, *colon*, *feeding*, *hemorrhoid*, "proct" words, "rect" words, *sigmoid*.

rectus (rĕk'tis) [L straight], 1 Straight: not crooked. 2 Any straight muscle.

r. muscles. 1. Two ext. abdominal muscles, 1 on each side, from pubic bone

to the ensiform cartilage and 5th, 6th, and 7th ribs. 2. Four short muscles of the eye, *ext., int., sup., and inf.*

recumbency. State of leaning or reclining.

recumbent (rē-kūm'bēnt) [L *recumbere*, to lean back]. 1. Lying down. *SEE left lateral recumbent position, prone.* 2. Inactive, idle

recuperation (rē-kū'pēr-ā'shūn) [L *recuperare*, to recover]. Restoration to normal health

recurrence (rē-kūr'ēns) [L *rē*, again, + *currere*, to run]. Return of symptoms after a period of quiescence, as in recurrent fever and in yellow fever. *SYN: relapse.*

recurrent (rē-kur'ēnt) [“ + *currere*, to run]. Returning at intervals, as a fever.

r. fever. Relapsing fever, *q.v.*

re'curvation. The act of bending backwards

recurve (rē-kurv') [“ + *curvus*, curved]. Bend backward

red (rēd) [A.S. *rēad*]. A primary color of the spectrum

r. blindness. Inability to see red hues. The most frequent color blindness

r. blood cell. Blood corpuscle containing hemoglobin. *SYN erythrocyte, q.v.*

r. lead. Lead tetroxide, Pb_3O_4 ; minium.

r. line. One lasting more than 14 seconds when the skin is stroked with a pressure of about 10 oz by a hard object followed by a white line in a few seconds which lasts a minute or 2, a reflex vasodilatation.

r. nucleus. Gray matter in the tegmentum of midbrain. *SYN nucleus ruber*

r. precipitate. Red mercuric oxide. Poisoning. *SYM* Similar to mercuric chloride

r. softening. Hemorrhagic softening of the brain and cord

red. in pulv. Abbr for *reductus in pulverum*, reduced to powder

redia. Stage in life cycle of a trematode which follows the sporocyst. The organisms are sac-like structures possessing an oral sucker and a blind gut. They arise parthenogenetically from germ masses within the sporocyst and in turn give rise to 2nd or 3rd generation rediae or to cercaria

redintegration (rēd-in-tē-grā'shūn) [L *rē*, again, + *integrare*, to make whole]. 1. Restitution of a part 2. Restoration to health. 3. Recall by mental association

redressment (rē-drēs'mēnt) [Fr *redressement*]. 1. Correction of a deformity. 2. Dressing of a wound more than once.

redox. Abbr for *oxidation-reduction*

reduce (rē-dūs') [L *rē*, back, + *ducere*, to lead]. 1. To restore to usual relationship, as the ends of a fractured bone 2. To weaken, as a solution 3. To diminish, as in bulk or weight.

reducible (rē-dūs'i-bl) [“ + *ducere*, to lead]. Capable of being replaced in a normal position, as a dislocated bone, a hernia, etc.

reducing agent. A substance which loses electrons easily, hence causes other substances to be reduced. *Ex hydrogen sulfide, sulfur dioxide*

reductase (rē-dūktās) [“ + “ + *ase*, enzyme]. An enzyme accelerating process of reduction of chemical compounds.

reduction (rē-dūkt'shūn) [L *reductio*, a leading back]. 1. Restoration to normal position, as a hernia. 2. *CHEM* A type

of reaction in which hydrogen is taken up by the given compound, or oxygen is removed, or the valence of the metallic element is lowered. *Cf. oxidation.*

r. diet. One that eliminates fat-producing foods.

Normal metabolism must be preserved. Bulk, mineral, protein, vitamin, and water requirements must be maintained. Energy value should be 800 to 1500 calories below maintenance requirements. Not over 10 to 20 Gm of fat per day. Carbo., 52 Gm, Pro, 60 Gm; Fat, 45 Gm; Cal, 850

r., diet, modified, Evans-Strang. 970 Cal diet Carbo. 50 Gm, Pro, 80 Gm, Fat, 50 Gm 1500 Cal diet Carbo. 115 Gm; Pro, 80 Gm; Fat, 80 Gm 1800 Cal diet Carbo. 180 Gm, Pro, 85 Gm. Emphasis placed on avoidance of food poor in vitamins and minerals and high in calories. *SEE obesity diet.*

r. division. *SYN meiosis, mitosis* Division occurring in gametogenesis following synapsis in which diploid number of chromosomes is reduced to the haploid number (one half the diploid number)

reduplicated (rē-dū'plī-kā'shūn) [L *rē*, back, + *duplicare*, to double] 1 Doubled 2 Bent backward upon itself, as a fold

reduplication (rē-du'plī-kā'shūn) [“ + *duplicare*, to double] 1 A doubling, as of the heart sounds in some morbid conditions 2. A fold

Reduviidae (rēd'ū-vē'i-dē) A family of the order Hemiptera which includes the assassin bugs

Reduvius (rē-dū'vī-ūs) A genus of true bugs belonging to the family Reduviidae

R. personatus. *SYN masked hunter, kissing bug* A species which normally feeds on other insects but sometimes attacks man inflicting painful bites about face. In some individuals, these bugs may cause severe allergic symptoms

re-education (rē-rēd'ū-kā'shūn) [L *rē*, again, + *educare*, to educate] 1. Training of a disabled or mentally disordered individual to restore to him at least partial competence 2. Physical means for restoring muscular tone and activity.

refec'tion. 1 Act of restoring after fatigue or exhaustion 2 Recovery from symptoms of vitamin B-complex deficiency on a diet deficient in vitamin B. Thought to be due to bacterial synthesis of vitamins by intestinal bacteria

referred pain (rē-fēr'd' pān). Pain felt in a part removed from its point of origin. *SYN synalgia.*

refine (rē-fīn') [L *rē*, back, + *ME fīne*, finished]. To purify or render free from foreign material

reflexion (rē-flēk'shūn) [“ + *flectere*, to bend] 1 Condition of being turned back upon itself, as when the peritoneum passes from wall of a body cavity to and around an organ and back to the body wall. 2. The throwing back of a ray of radiant energy from a surface not penetrated. 3 Mental consideration of some subject matter

reflector (rē-flēk'tor) [“ + *flectere*, to bend]. Device or surface which reflects waves of radiant energy or sound

reflex (rē-flēks) [L *reflexus*, bent back]. An involuntary response to a stimulus, a reflex action. Reflexes are *specific* and *predictable* and are usually *purposeful* and *adaptive*. Reflexes depend upon an intact neural pathway between point of stimulation and responding organ (mus-

cle or gland). This pathway is called *reflex arc*. In a simple reflex this includes: (a) a sensory receptor, (b) afferent or sensory neuron, (c) reflex center in brain or spinal cord, (d) efferent neuron(s) and (e) an effector organ (muscle or gland). Most reflexes, however, are more complicated and include *internuncial* or *associative neurons* intercalated between afferent and efferent neurons.

RS: *Achilles jerk, areflexia, chemoreflex, chin jerk, conditioned, consensual, individual name, intestinal, jerk, reaction, reinforcement, Setschenow's center.*

r., acquired. A conditioned reflex, *q v*

r. action. An involuntary response to a stimulus, a reflex, *q v*

r., after-discharge of. Reflex activity which persists for a time after cessation of the stimulus

r's, allied. Reflexes initiated by several stimuli originating in widely separated receptors whose impulses follow the final common path to effector organ and reinforce one another

r's, antagonistic. Two or more reflexes initiated simultaneously in different receptors which involve the same motor center but produce opposite effects. The most important or adaptive response takes place

r. arc. The neural pathway or circuit between point of stimulation and responding organ in a reflex action. *See reflex*

r., autonomic. Any reflex involving the response of a visceral effector (cardiac muscle, smooth muscle, glands). Such reflexes always involve two efferent neurons (a preganglionic and postganglionic)

r., autonomic, true. A visceral response in which afferent impulses do not pass through central nervous system, but instead enter prevertebral ganglia where connections are made with efferent neurons

r., axon. A reflex which does not involve a complete reflex arc, hence is not a true reflex. The afferent and efferent limbs of the reflex are branches of a single nerve fiber, the axon (axon-like dendrite) of a sensory neuron. Ex vasodilation resulting from stimulation of skin

r., biceps. Flexion of forearm upon percussion of tendon of biceps brachii.

r. center. A region usually in brain or spinal cord where impulses from an afferent limb of a reflex arc initiate impulses in the efferent limb

r., conditioned. *SYN: conditioned response* A reflex acquired as a result of training in which the cerebral cortex is an essential part of the neural mechanism. Any reflex not inborn or inherited

r., consensual. *SEE: r. crossed.*

r., convulsive. Condition in which a weak stimulus will induce a convulsion resulting in widespread uncoordinated and purposeless actions. Seen in strychnine poisoning.

r., cranial. Any reflex whose center lies in the brain

r., crossed. Reflex in which stimulation of one side of body results in response on opposite side

r., darwinian. *SEE: palmar reflex.*

r., deep. One caused by stimulation of parts beneath skin, like tendons or bones, as the jaw, elbow, wrist, triceps, knee and ankle jerk reflexes.

r., delayed. One not taking place un-

til some seconds after application of stimulus.

r., elbow. Triceps reflex, *q v*

r., elementary. A typical reflex common to all vertebrates. Includes postural, flexion, stretch and extensor thrust reflexes

r., extensor thrust. A quick and brief extension of a limb upon application of pressure to plantar surface

r., inborn. An unconditioned reflex; an innate or inherited reflex.

r., indirect. A crossed reflex, *q v*

r's, inhibition of. The stoppage or prevention of a reflex action, as inhibiting a sneeze by pressure on facial nerve in lip or through action of higher cerebral centers.

r., intersegmental. One in which several segments of spinal cord are involved

r., intestinal. Myenteric reflex, *q v*

r., intrasegmental. One which involves only a single segment of the spinal cord

r's, irradiation of. The spreading of reflexes through the central nervous system whereby impulses entering the cord in one segment activate motor neurons located in many segments

r., kinetic. A labyrinthine reflex, *q v*

r., knee jerk. Extension of the leg resulting from percussion of patellar tendon. This is an example of a myotactic or stretch reflex of importance in the maintenance of posture.

The reflex is diminished or abolished in (a) lesions of the nerve supplying the muscle and tendon, (b) lesions of post roots involving sensory pathway as in tabes dorsalis, (c) lesions of ant. root involving motor pathways, or (d) lesions of lower motor neurons in ant. horns of gray matter of spinal cord, as in poliomyelitis. If, however, the upper motor neuron is destroyed, muscle tone and the motor response are greatly increased. So-called pathologic reflexes under these conditions may appear (see Babinski's sign). Reflexes are also modified by higher centers—e.g., emotional tension increases the knee jerk (and muscle tension generally).

r., labyrinthine. A reflex, esp. a postural reflex, resulting from stimulation of receptors in semicircular ducts, utricle, and sacculus of inner ear. Also called *kinetic* or *accelerator* reflex

r., local. One which does not involve the central nervous system. *EX: the myenteric reflex* which occurs even though extrinsic nerves to intestine have been cut

r., long. One involving many segments of the spinal cord

r., mass. Condition following a section of spinal cord in which a weak stimulus through irradiation brings about widespread responses due to release from inhibition of higher cortical centers.

r., monosynaptic. One involving only two neurons, an afferent and efferent.

r., myenteric. *SYN: intestinal reflex.* One caused by distention of intestine resulting in contraction above point of stimulation and relaxation below it.

r., myofascic. A stretch reflex, *q v*

r., nociceptive. A reflex initiated by a painful stimulus.

r., palmar. *SEE: palmar reflex.*

r., patellar. *SEE: knee jerk.*

r., pathologic. Abnormal reflex due to disease and seen as one of its symptoms.

r., postural. Any reflex which is concerned with maintenance of posture.

r., pressor. A reflex which results in elevation of blood pressure brought about by constriction of arterioles.

r., pupillary. A beam of light striking the retina normally causes the pupil to contract (protective against excessive stimulation). The same effect results with accommodation to near objects.

r., righting. Any of the many reflexes which enable an animal to maintain the body in a definite relationship to the head and thus maintain its body right side up.

r., sexual. Reflexes concerned with sexual activities, esp erection and ejaculation.

r., short. One involving one or a few segments of spinal cord.

r., somatic. One induced by stimulation of somatic sensory nerve endings.

r., spinal. A reflex whose center is in the spinal cord.

r., static. Those concerned with establishment and maintenance of posture when body is at rest.

r., statokinetic. Those occurring when body is moving, i.e., walking or running.

r., stretch. SYN *myotatic reflex*. Contraction of a muscle as a result of stretching the same muscle.

r., superficial (cutaneous). R. caused by irritation of the skin or areas depending upon the spinal cord as a motor center, such as the *scapular epigastric, abdominal, cremasteric, gluteal, and plantar reflexes*, or upon centers in the medulla, as *conjunctival, pupillary and palatal reflexes*.

r., tendon. Deep r. obtained by tapping skin over tendon of a muscle sharply.

It is exaggerated in disease of an upper neuron, and diminished or lost in disease of lower neuron.

r., unconditioned. A natural or inherited reflex action, one not acquired.

r., vascular. A vasomotor reflex, *q.v.*

r., vasomotor. Constriction or dilatation of a blood vessel in response to a stimulus.

r., visceral. Any reflex induced by stimulation of visceral nerves.

r., visceromotor. Contraction of or tenseness of skeletal muscles resulting from painful stimuli originating in visceral organs.

reflexogenic (rē-fleks'ō-jen'ik) [L. *reflexus*, bent back, + G. *gennan*, to produce]. Causing a reflex action.

reflexograph (rē-fleks'ō-gräf) [" + G. *graphein*, to write]. Device for charting a reflex.

reflexometer (rē-fleks'ōm'ēt-ēr) [" + G. *metron*, a measure]. Instrument for measuring force of the tap required to excite a reflex.

reflexophil (rē-fleks'ō-fil) [" + G. *philein*, to love]. Characterized by activity of, or exaggerated, reflexes.

reflexotherapy (rē-fleks'ō-ther'ä-pl) [" + G. *therapeia*, treatment]. Treatment by manipulation, anesthetizing, or cauterizing an area distant from seat of the disorder. SEE *spondylotherapy*, *zone therapy*.

reflux (rē-flüks) [L. *rē*, back, + *fluxus*, flow]. A return or backward flow. SYN *regurgitation*, 2.

refract (rē-frakt') [L. *refractus*, from *refringere*, to break back]. 1. To turn back. 2. To deflect a light ray. 3. To detect errors of refraction in the eyes and to correct them.

refracta dosi (rē-frak'tā dō'si) [L.]. In divided doses, denoting a definite amt. of a drug taken within a given time in a number of fractional equal parts.

refraction (rē-frāk'shun) [L. *refractio*, from *refringere*, to break back]. 1. Deflection from a straight path, as of light rays as they pass through media of different densities, the change of direction of a ray when it passes from one medium to another of a different density. 2. Determination of amount of ocular refractive errors and their correction.

RS: *ametropia, anisometropia, astigmatism, emmetropia, hypermetropia, myopia, presbyopia*.

r., angle (of). The angle formed by a refracted ray of light with a line perpendicular to surface at point of refraction.

r., coefficient of. The quotient or sine of angle of incidence divided by sine of angle of refraction.

r., double. Birefringence or possessing more than one refractive index.

r., dynamic. Static refraction of the eye plus that accomplished by accommodation, the reciprocal of the near-point distance.

r., errors of. SYN *ametropia*. Condition in which parallel rays of light are not brought to a focus upon the retina because of a defect in shape of eyeball or in refracting media of the eye.

r., index of. 1. Ratio of angle made by incident ray with the perpendicular (angle of incidence) to that made by emergent ray (angle of refraction). 2. The ratio of speed of light in air to its speed in another substance. The refractive index of water is 1.33 of crystalline lens, 1.413.

r., ocular. Refraction of the eye, *q.v.*
r. of the eye. Ocular refraction. Refraction brought about by refractive media of the eye (cornea, aqueous humor, crystalline lens, vitreous body).

r., static. Refraction of the eye when accommodation is at rest or paralyzed.

refractionist (rē-frāk'shun-ist) [L. *refractor*, from *refringere*, to break back]. One skilled in determining and correcting ocular refractive errors by means of glasses.

refractive (rē-frakt'iv) [L. *refractus*, from *refringere*, to break back]. Concerning refraction.

r. index. SEE *refraction*, *index of*.
r. power. The degree to which a transparent body deflects a ray of light from a straight path. SEE *dioptr*.

refractometer (rē-frāk-tōm'ēt-ēr) [" + G. *metron*, a measure]. Device for measuring the refractive power, as of the eye.

refractory (rē-frakt'ō-ri) [L. *refractus*, from *refringere*, to break back]. 1. Obstinate, stubborn. 2. Resistant to ordinary treatment. 3. Resistant to stimulation, said of muscle or nerve.

r. period, relative. Period during relaxation of a muscle during which excitability is depressed. If stimulated it will respond but a stronger stimulus is required and response is less.

refractoscope (rē-frāk'tō-skōp) [" + G. *skopein*, to examine]. Device for auscultation of heart sounds.

refracture (rē-frāk'chūr) [L. *rē*, again, + *frangere*, to break]. 1. To break again, as a bone set wrongly. 2. Rebreaking of a fracture united in the wrong position.

refrangible (rē-frān'jil-bl) [" + *frangere*, to break]. Capable of refraction.

refresh (rē-frēsh') [O.Fr. *refreschir*, to renew, from L. *rē*, again, + *friscus*,

new]. 1. To restore strength; to relieve from fatigue; to renew; to revive. 2. To scrape epithelial covering from 2 opposing surfaces of a wound to cause them to unite.

refrigerant (rē-frīj'ēr-ānt) [L. *rē*, again, + *frigerāre*, to make cold]. 1. Allaying heat or fever; cooling. 2. Medicine or agent which relieves thirst and is cooling or reduces a fever. SEE *algefacient*.
r. gases. A number of these gases are used in ordinary household mechanical refrigerators, poisoning due to leaks, faulty connections or breakage, and gas dissipated into atmosphere may occur.

refrigeration (rē-frīj'ēr-ā'shūn) [L. *rē*, back, + *frigerāre*, to make cool]. Cooling, reduction of heat.

r. anesthesia. A. resulting from cold such as that produced in a limb by immersion in cold water.

r. therapy. SYN: *cryotherapy*. Use of low temperatures as a therapeutic procedure. SEE *hypothermia*.

refrigrant. Refractive. *q.v.*

refusion (rē-fū'zhūn) [L. *rē*, back, + *fusio*, a pouring]. The return of blood into the circulatory system after having been removed from the same patient.

regeneration (rē-jen'ēr-ā'shūn) [' + *generare*, to beget]. Repair, regrowth, or restoration of a part, as tissues. Opp. of *degeneration*, *q.v.*

regimen (rēj'mēn) [L. *regere*, to rule]. 1. Regulation of diet, sleep, exercise, and manner of living to improve or maintain health. 2. Hygiene.
region (rē'jūn) [L. *regio*, a boundary line]. A portion of the body with natural or arbitrary boundaries. SEE *abdomen*.

RS *epigastrium, inguinal, Kiesselbach's area, temple*.

regional (rē'jūn-āl) [L. *regio*, a boundary line]. Concerning a region.

register. 1. The compass or range of a voice. 2. A series of tones of like quality or character as low or high register, chest or head register, etc.

registrant (rēj's-trānt) [L. *registrans* (registering)]. A nurse who is named on the books of a registry as being "on call" for duty.

registrar (rēj's-trar) [L. *registrans*, registering]. The official manager of a registry.

registration. The act of recording, such as births, deaths, etc.

registry (rēj's-tri) [Fr. *registrar*, from L. *registrum*]. An office or book where a list of nurses ready for duty is kept; a placement bureau for nurses.

re'glementation. The legal control of prostitution.

regression (rē-grēsh'ūn) [L. *regressio*, a going back]. 1. A turning back or return to a former state. 2. A return of symptoms. 3. Retrogression. 4. In Psy an abnormal return to earlier reaction, characterized by mental state and behavior inappropriate to the situation. Regression may occur as a result of frustration or in states of fatigue, dreams, hypnosis, intoxication, illness, and in certain psychoses (schizophrenia).

r., filial. In biology, tendency of offspring to deviate less from the average of a population than their parents.

regressive (rē-grē'ssiv) [L. *regressio*, a going back]. Concerning or marked by regression.

regular (rēg'ū-lar) [L. *regula*, a rule]. 1. Conforming to rule or custom. 2. Methodical, steady in course, as pulse. SYN: *normal*, *typical*.

regulation. 1. State of being controlled or directed. 2. The ability of an individual such as a developing embryo to develop normally in spite of experimental modifications.

r. development. IN EMBRYO, condition in which a single blastomere or a portion of an embryo can give rise to an entire whole embryo. Opp. of *mosaic development*, *q.v.*

regulative. Pert to regulation.

regurgitant (rē-gūr'jit-ānt) [L. *rē*, back, + *gurgitare*, to flood]. Throwing or flowing back.

regurgitation (rē-gūr-jī-tā'shūn) [L. *rē*, back, + *gurgitare*, to flood]. 1. Return of solids, or fluids to the mouth from the stomach. 2. Return of blood backward through a defective heart valve.

It may be a complication of diphtheria and it occurs in paralysis of the soft palate, and in some digestive disorders. SEE: *taste*.

r., aortic. Backflow of blood into left ventricle as a result of incompetent aortic valves.

r., cardiac. Backward flow of blood through the *aortic*, *mitral*, and *tricuspid* valves due to incomplete closure.

r., duodenal. Return flow of chyme from duodenum to stomach.

r., functional. R. not due to valvular disorder but to dilatation of ventricles, the great vessels, or valve rings.

r. mitral. Backflow of blood from left ventricle into left atrium resulting from imperfect closure of mitral or bicuspid valve.

r., pulmonic. Backflow of blood from pulmonary artery into r. ventricle.

r., tricuspid. Backflow of blood from r. ventricle into r. atrium.

rehabilitation (rē'hā-bil'it-tā'shūn) [L. *rehabilitare*]. Process of restoring, or of undergoing restoration, to health or efficiency, as a person physically handicapped.

rehalation (rē-hā-lā'shūn) [L. *rē*, again, + *halare*, to breathe]. Rebreathing process occasionally employed in anesthesia.

Reichert's cartilage (rī'kert's). The 2nd branchial arch of the embryo which gives rise to stapes, styloid process, stylohyoid ligament, and lesser cornua of hyoid bone.

Reichmann's disease (rīk'mahnz). Excessive gastric secretion without intermission. SYN: *gastrochronorrhea*, *gastrotrrhea*, *gastrosuccorrhea*.

Reid's base line (rēds). One extending from lower edge of the orbit to center of aperture of ext. auditory canal backward to center of occipital bone.

Reil's island (rīlz). Three or more small convolutions at bottom of fissure of Sylvius. SYN: *the insula*, *island of Reil*, *q.v.*

reimplantation (rē'im-plān-tā'shūn) [L. *rē*, again, + *in*, into, + *plantare*, to set]. Replacement of a part from where it has been taken out, as a tooth.

reinfection (rē'in-fēk'shūn) [' + *inficere*, to make into]. Infection after recovery or during convalescence from the original disease.

reinforcement (rē'in-fors'mēnt) [L. *rē*, again, + *fr.* *enforcere*, to strengthen]. Strengthening; augmentation of force.

r. of reflex. Strengthening of the response to one stimulus by concurrent action of another; the exaggeration of a reflex by nervous activity elsewhere.

Thus, during the raising of a heavy weight the knee jerk is stronger.

re'infu'sion. The reinfusion of blood serum or cerebrospinal fluid.

reinnervation (rē'in-ner-vā'shūn) [L. *rē*, again, + *in*, into, + *nervus*, nerve]. 1. Anastomosis of a paralyzed part with a living nerve. 2. Grafting of a fresh nerve for restoration of function in a paralyzed muscle.

reinoculation (rē'in-nōk-ū-lā'shūn) [L. *rē*, again, + *in*, into, + *oculus*, bud]. A second inoculation with the same virus or organism following a previous one. **See** *reinfection*.

Reinsch's test (rin'sh'ez). One for presence of arsenic.

re'inte'gration. In Psy., the resumption of normal behavior and mental functioning following disintegration of personality in mental illness.

re'inversion (rē'in-ver'shūn) [L. *rē*, again, + *in*, into, + *versio*, a turning]. Correction of an inverted organ, as of an inverted uterus, by pressure on the fundus.

Reissner's membrane. **SYN** *membrana vestibularis*. Delicate membrane separating the cochlear canal from scala vestibuli.

rejuvenation (rē-jū-ve-nā'shūn) [L. *rē*, again, + *juvenis*, young]. A return to youthful conditions or to the normal. The process of aging has been checked in many women by Dr. Wm H. Masters of the Washington Univ. Medical School of Medicine, by twice weekly injections of half a teaspoon of mixed hormones in oil one part estrogen to 20 parts androgen, evidently a replacement of substances naturally produced in younger women. Its continual use may be necessary as is insulin in diabetes.

rejuvenescence (rē-jū-ve-nēs'ēns) ["" + *juvenis*, young]. The renewal of youth or return to earlier stage of existence.

relapse (re-lāps') [L. *relapsus*, slipping back]. Recurrence of grave symptoms during convalescence.

relapsing (re-lāps'ing) [L. *relapsus*, slipping back]. Recurring after beginning of convalescence.

r., fever. **SYN** *recurrent fever*, *tick fever*, *spirillum fever*, *famine fever*. An infectious disease marked by intermittent attacks of high fever.

Error. Several species of spirochetes belonging to genus *Borrelia* and transmitted by head lice, body lice, and ticks of the genus *Ornithodoros*.

TREATMENT: Symptomatic treatment with bed rest. Penicillin and broad-spectrum antibiotics have replaced the use of arsenicals except in cases where spirochetes are resistant. The use of antipyretics and antinauseants may be indicated and dehydration and electrolyte imbalance should be combated by parenteral injections.

relaxant (rē-lāks'ānt) [L. *rē*, back, + *laxāre*, to loosen]. 1. Loosening, laxative. 2. An agent diminishing tension, or loosening the bowels.

relaxation (rē-lāks-ā'shūn) ["" + *laxāre*, to loosen]. 1. A lessening of tension or activity in a part. 2. Phase or period in a single muscle-twitch following contraction in which tension decreases, fibers lengthen, and muscle returns to resting position.

r., general. R. which includes practically the entire body lying down.

r., heat of. That portion of initial heat about 35% in muscle activity produced during relaxation.

r., local. R. limited to a particular muscle group or to a part.

relaxed movement (rē-lāks'd'). Form of

bodily movement which the operator carries through without the assistance or resistance of the patient. **SYN** *passive exercise*.

relaxin (rē-lāks'in). An ovarian hormone the lack of which causes premature labor. Its accumulation reaches its peak about the 38th to 40th week of pregnancy. It stretches the ligaments binding the halves of the pelvis where joined in front of the symphysis and in back at the spine. It also dilates the mouth of the uterus and reduces the severity of uterine contractions.

Relasin (rē-lēs'in). A drug that is the same as the natural hormone *relaxin*, *q.v.* It releases, slows, or stops uterine contraction preventing stillbirths.

relief (rē-lēf') [O.Fr. *relief*]. Alleviation or removal of a distressing or painful symptom.

Remak's axis cylinder (ra'māhk). The conducting part of a nerve.

R's. band. The axis cylinder of a neuron.

R's. fibers. The nonmedullated nerve fibers.

R's. ganglion. 1. A group of nerve cells in coronary sinus near its entry into r. atrium. 2. A ganglion in sinus of an amphibian heart from which impulses initiate heartbeat.

R's. sign. A double sensation after pricking with a needle, the 2nd one being painful. Seen in *tuberculosis*.

R's. symptom. Delayed appearance of pain.

remedial (rē-mē'dī-āl) [L. *remedialis*, pert. to a remedy]. Curative; intended for a remedy.

remedy (rēm'ēd-i) [L. *remedium*]. 1. Anything that relieves or cures a disease. 2. To cure or relieve a disease.

r., local. Agent to relieve a local condition, as a sore.

r., systemic. Agent to relieve or cure a disease affecting the entire organism.

remission (rē-mish'ūn) [L. *remissio*, a sending back]. Lessening of severity, or abatement of symptoms.

remittent (rē-mit'tēnt) [L. *rē*, back, + *mittere*, to send]. Alternately abating and returning at certain intervals.

r., fever. A persistent fever which has a diurnal variation of 2° F. or more. **SEE** *malaria*.

SYN: Malaise, moderate chilliness followed by a fever which daily remits. Maximum temperature ranges from 103°

to 106°; while this lasts face is flushed, eyes injected, pulse full and rapid, urine scanty—pain in head and limbs. Delirium sometimes noted, vomiting often occurs—jaundice may develop from destruction of red blood corpuscles. Spleen enlarged. Sometimes resembles typhoid, then termed typhomalaria.

PROG. Favorable—duration, 1-2 weeks.

TREATMENT: Absolute rest. Light diet. Quinine popular remedy. Remedies called for by special symptoms. SEE: malaria.

ren (pl. *renes*) [L.]. The kidney.

r. amyloidens. Amyloid degeneration of the kidneys

r. mobilis. Movable kidney.

r. unguiformis. Horseshoe kidney.

renal (rē'nāl) [L. *renālis*, pert to kidney] 1 Pert. to the kidney. 2. Shaped like a kidney.

RENAL TRACT. DIAGRAM OF THE

1. Kidney. 2. Ureter. 3. Bladder. 4. Prostate. 5. Urethra. A. Pyramid. B. Capsule. C. Cortex. D. Medulla. E. Glomerulus. F. Tubule. G. Pelvis.

r. clearance test. A kidney function test based on the ability of the kidney to eliminate a given substance in a standard time. Urea, inulin, Diodrast and other substances are employed. Normal urea clearance is 75, i.e., the quantity of urea removed from circulation in one minute equals that contained in 75 cc of blood. Inulin clearance is 120-130, Diodrast clearance is 500-600.

r. insufficiency. The reduced capacity of the kidney to perform its functions.

r. tubule. A nephron, *q.v.*

renifleur (rā-nī-flūr') [Fr.]. One stimulated sexually by certain odors, esp. by the urine of others.

reniform (rēn'f-ōrm) [L. *ren*, kidney, + *forma*, shape]. Shaped like a kidney.

ren'in. A protein formed in an ischemic kidney which acts as an enzyme converting an alpha globulin (*hypertensinogen*) of the blood into *hypertensin* (angiotonin), a powerful vasoconstrictor.

r. substrate. Alpha₂ globulin of the plasma. SYN: *hypertensinogen*.

renipuncture (rēn'f-pūnk'chūr) [' + *punctura*, a piercing]. Surgical puncture of capsule of kidney.

rennet (rēn'nēt) [M.E. *rennen*, to run]. 1. An infusion of inner coat of calf's stomach. 2. A fluid containing rennin,* a coagulating enzyme, used for making junket.

rennin (rēn'In) [M.E. *rennen*, to run] A coagulating enzyme found in the stomach of ruminants, which curdles milk. It is the active principle of rennet. It acts on caseinogen in the presence of calcium ions converting it to insoluble casein. Rennin has been considered to be present in the gastric juice of man but recent experimental evidence indicates that rennin is not produced by the adult human stomach. Coagulation of milk in the stomach is brought about by pepsin.

renninogen, rennogen (rēn'in-ō-jēn, rēn'ō-jēn) [A.S. *rennen*, to run, + G. *gennan*, to produce]. Antecedent or zymogen from which rennin is formed. The inactive form of rennin.

renogastric (rēn-ō-gās'trīk) [L. *ren*, kidney, + G. *gaster*, belly]. Concerning the kidney and stomach.

renography (rē-nō-grā-fī) [' + G. *graphēin*, to write]. Study of the kidney by means of an x-ray picture.

renointestinal (rēn'ō-in-tēs'tīn-āl) [' + *intestinum*, intestine]. Concerning the kidney and the intestine.

renopathy (rēn-ōp'āth-i) [' + G. *pathos*, disease]. Any pathological condition of the kidneys.

renotrophic (rēn-ō-trōf'īk). Having the ability to induce hypertrophy of the kidney.

repair (rē-pār') [L. *reparare*, to prepare again]. To remedy, replace or heal, as a wound or a lost part.

repellence. Condition in which certain individuals are relatively immune to bites of arthropods.

repellent (rē-pēl'ēt) [L. *repellere*, to drive back]. 1. Reducing a swelling. 2. That which lessens a swelling. 3. An agent which repels noxious organisms such as insects, ticks, and mites. Repellents may be applied to surface of body as a liquid, or dust, or they may be used to impregnate clothing.

repercolation (rē'per-kō-lā'shūn) [L. *re*, again + *percolare*, to filter]. Repeated percolation using same materials.

repercussion (rē-per-kūsh'ūn) [' + *percussio*, a striking]. 1. Reciprocal action. 2. Action involved in causing subsidence of a swelling, tumor or eruption. 3. Os. Diagnosis of pregnancy by insertion of a finger into the vagina to push the uterus, causing embryo to rise and fall. SYN: *ballotement*.

repercussive. Causing repercussion; an agent which repels, a repellent.

replacement. The act of replacing.

r. bone. SYN: *substitution bone*, *cartilage bone*, *endochondral bone*. Bone which is formed in cartilage which precedes the definitive bone.

replantation. Planting again.

r. of a tooth. Replacement of a tooth which has been removed accidentally or otherwise from its socket.

repletion (rē-plē'shūn) [L. *repletio*, a filling up]. 1. Condition of being full or satisfied. 2. Fullness of blood. SYN: *plethora*.

re'polariza'tion. Reestablishment of a polarized state in a muscle or nerve fiber following contraction or conduction of a nerve impulse.

reportable diseases. Diseases which must be reported by the physician to the health authorities.

List of Reportable Diseases

- 1 Actinomycosis
 - 2 Acute infectious conjunctivitis (ophthalmia neonatorum)
 - 3 Ankylostomiasis (hookworm).
 - 4 Anthrax.
 - 5 Botulism and other forms of food poisoning.
 - 6 Chancroid.
 - 7 Chickenpox.
 - 8 Cholera (Asiatic).
 - 9 Dengue.
 - 10 Diphtheria
 - 11 Dog bites.
 - 12 Dysentery (amebic).
 - 13 Dysentery (bacillary and other infectious types).
 - 14 Epidemic (lethargic) encephalitis.
 - 15 Erysipelas
 - 16 Favus
 - 17 German measles.
 - 18 Glanders
 - 19 Gonorrhea
 - 20 Granuloma inguinale
 - 21 Impetigo contagiosa (in institutions).
 - 22 Influenza, epidemic
 - 23 Leprosy.
 - 24 Malaria.
 - 25 Measles.
 - 26 Meningitis, epidemic (cerebrospinal fever, meningococcus meningitis).
 - 27 Mumps
 - 28 Pellagra
 - 29 Paratyphoid fever.
 - 30 Plague.
 - 31 Pneumonias, the primary and the pneumonias complicating influenza, measles, and whooping cough
 - 32 Poisonings, heavy metals, drugs, occupational and other poisonings
 - 33 Poliomyelitis, acute anterior (infantile paralysis).
 - 34 Psittacosis
 - 35 Puerperal septicemia
 - 36 Rabies
 - 37 Rocky Mountain spotted or tick fever.
 - 38 Scarlet fever
 - 39 Septic sore throat.
 - 40 Smallpox.
 - 41 Syphilis.
 - 42 Tetanus
 - 43 Trachoma.
 - 44 Trichinosis.
 - 45 Tuberculosis (pulmonary).
 - 46 Tuberculosis (other than pulmonary).
 - 47 Tularemia.
 - 48 Typhoid fever.
 - 49 Typhus.
 - 50 Undulant fever and Malta fever (brucellosis).
 - 51 Vincent's angina and other anginas.
 - 52 Whooping cough.
 - 53 Yellow fever.
- reposition** (rē-pō-sīsh'ūn) [L. *repositio*, a replacing]. Act of replacing a part.
- repositor** (rē-pōz'it-or) [L. *repositio*, a replacing]. Instrument for replacing a part.
- r., inversion.** Instrument for replacement of an inverted uterus
- r., uterine.** A lever to replace the uterus when out of normal position.
- repression** (rē-prēsh'ūn) [L. *repressus*, from *reprimere*, to check]. **PSY:** Refusal to entertain distressing or painful ideas, thus submerging them in the unconscious where they continue to exert their influence upon the individual.

Psychoanalysis seeks to discover and to release these repressions.

reproduction (rē-prō-dūk'shūn) [L. *rē*, again, + *productio*, production] 1. Process by which plants and animals give rise to offspring 2. The creation of a similar structure or situation; the act of duplicating

r., asexual. R in which sex cells are not involved, as by fission or budding
r., sexual. **SYN** *syngamy* R by means of sexual or germ cells Usually a male cell (spermatozoon) fuses with a female cell egg or ovum Sometimes ova may develop without fertilization
SEE *parthenogenesis*

reproductive (rē-prō-dūk'tiv) [L. *rē*, again, + *producere*, to produce] Concerning, or employed in, reproduction.

repulsion (rē-pū'shūn) [L. *repulsio*, a thrusting back] 1 Act of diving back. 2. The force exerted by one body on another to cause separation

RES. Abbr for *reticuloendothelial system*

resect. To cut off or to cut out a portion of a structure or organ, as to cut off the end of a bone or, to remove a segment of the intestine

resection (rē-sēk'shūn) [L. *resectio*, a cutting off]. Partial excision of a bone or other structure

r., window. Resection of a portion of the nasal septum after reflection of a flap of mucous membrane; also called *submucous resection*

resectoscope (rē-sēk'tō-skōp) [L. *resectus*, cutting back, + G *skopein*, to examine]. An instrument for resection of prostate gland through the urethra

resectoscopy (rē-sēk'tōs'kō-pi) [" + G *skopein*, to examine] Resection of the prostate through the urethra

reserpine (rē-serp'in) A chemically pure derivative of *Rauwolfia serpentina* An old snake root remedy used in India for centuries for snake bite, mental illness, anxiety states. It lowers blood pressure. It acts upon the hypothalamus, the seat of emotional behavior, having a tranquilizing action, beginning a reorganizing of the personality

reserve (rē-zerv') [L. *reservare*, to keep back]. 1 That which is held back for future use 2 Self control of one's feelings and thoughts

r. air. Additional amount of air that can be expelled from the lungs over the normal quantity, 1200-1600 cc.

r., alkali. Alkali content of body available for neutralization of acid. **SEE:** *alkaline reserve*.

r., cardiac. The ability of the heart to increase cardiac output to meet the needs of the body

reservoir of Pecquet (rēz'ār-vvor pē-kā') (Fr.). **SYN** *receptaculum chyli*. Expansion at beginning of thoracic duct lying at level of 1st and 2nd lumbar vertebrae

res'ident. A physician who continues living in a hospital after his internship in order to secure further training

r. physician. A resident in a hospital, *q.v.*

residual (rē-zīd'ū-āl) [L. *residuum*, that is left behind]. 1. Relating to that which is left as a residue. 2 **PSY:** Any internal aftereffect of experience influencing later behavior.

r. air. That remaining in the lungs after normal expiration.

r. urine. That left in bladder after urination; occurring in cases of enlarged prostate.

residue (rēz'id-ū) [L. *residuum*, that which

remains]. That which remains after a part is removed. [roughage.

r. free diet. One without cellulose or Purées and semisolids and bland foods are included.

r., high, diet. A diet with increased amounts of cellulose (fiber), water, mineral salts, and vitamins (esp vitamin B).

r., low, diet (solid). An inadequate diet including solid food in which residue is reduced to a minimum. SEE *non-laxative diet*.

residium (rē-zīd'ū-ūm) [L]. Residue, the remainder.

resiliēce (rē-zīl'ē-ēns) [L. *resiliens*, leaping back]. The quality of coming back to normal after straining, as a stretched rubber band when released. SYN *elasticity*.

resilient (rē-zīl'ē-ēnt) [L. *resiliens*, leaping back]. Elastic.

resin (rēz'in) [L. *resina*]. An amorphous, nonvolatile solid or soft solid substance, a natural exudation from plants, it is practically insoluble in water, but soluble in alcohol. Ex. *Guaicac*, *rosin*.

Resin-P.M.S. A combination of an antibiotic and an iron-exchange resin. The pure-iron, in the resin knock out and replace the harmful ones in the intestines. For relief in summer complaints, ulcerative colitis, irritable colon, and in after-effects of certain antibiotics.

resinous (rēz'in-ūs) [L. *resina*]. Of the nature of or pert to resin.

resistance (rē-zis'tāns) [L. *resistens*, standing back]. 1 Opposition to or the ability to oppose anything, as the power of a fluid to retard that which is passing through it, as the resistance of the air or opposition of the body to passage of an electric current. Incorrectly used in reference to immunity; or ability of the body to resist infection or disease. 2 The force exerted to penetrate the Unconscious, or to submerge memories in the Unconscious. 3 In Psy, condition in which patient avoids bringing into consciousness conflicts and unpleasant events responsible for his neurosis, or reluctance of subject to give up old patterns of thought and behavior.

resolution (rēz-ō-lū'shūn) [L. *resolutio*]. 1 Decomposition, absorption or breaking down of the products of inflammation. 2 Cessation of inflammation without suppuration. The return to normal. 3 The ability of the eye. A lens or series of lenses to distinguish fine detail.

resolve. To return to normal as after a pathologic process, to separate into component parts.

resolvent (rē-zōl'vent) [L. *resolvens*, dissolving]. 1 Promoting disappearance of inflammation. 2 That which causes dispersion of inflammation.

resonance (rēz'ō-nāns) [L. *resonantia*, an echo]. 1 Quality or act of resonating. 2 In physical diagnosis, the quality of the sound heard on percussion of a hollow structure such as chest or abdomen. Absence of resonance is termed *flatness*, diminished resonance, *dullness*. 3 In physics, modification of sound due to vibrations of a body which are set up by waves of another vibrating body. 4 In elect., state in which two electrical circuits are in tune with each other.

r., amphoric. Sound, as that when blowing across the mouth of an empty bottle.

r., bandbox. SEE *r., tympanitic*.

r., bell-metal. Sound heard in pneumothorax in auscultation when coin is

held against chest wall and it is struck by another coin.

r., cracked-pot. A sound having a peculiar "clinking" quality sometimes heard on percussion of chest in cases of advanced tuberculosis when cavities are present.

r., skodalc. Increased percussion sound over upper lung when there is pleural effusion in lower part.

r., normal. SEE *r., vesicular*.

r., tympanitic. That obtained by percussion of a hollow structure such as the stomach or colon when moderately distended with air.

r., vesicular. Normal pulmonary resonance.

r., vocal. The vibrations of the voice transmitted to the ear, normally more marked over the right apex.

Abnormally increased in: (1) Pneumonic consolidation, (2) phthisical infiltration, (3) cavities which freely communicate with a bronchus.

Vocal r is diminished or absent in:

(1) Pleural effusion — air, pus, serum, lymph or blood, (2) emphysema; (3) pulmonary collapse; (4) pulmonary edema; (5) cophony, a modified bronchophony, characterized by a trembling, bleating sound usually heard above the upper border of dullness of pleural effusions, occasionally heard in beginning pneumonia, (6) bronchophony, extreme exaggeration of vocal resonance, the sounds, but not words, are transmitted. Esp noted over marked consolidations and over certain cavities.

r., whispering. Auscultation sound heard when patient whispers.

resonating. Vibrating sympathetically with a source of sound or electrical oscillations.

r. cavities. The resonator of the human voice includes upper portion of larynx, pharynx, nasal cavity, paranasal sinuses, and mouth cavity.

resonator (rēz'ō-nā'tōr) [L. *resonare*, to resound]. 1 A structure which is capable of being set into sympathetic vibration when sound waves of the same frequency from another vibrating body strike it. 2 In elect., an apparatus consisting of an electrical circuit in which oscillations of a certain frequency are set up by oscillations of the same frequency in another circuit. When this occurs, the circuits are said to be in *syntony*.

resorbent (rē-sor'bent) [L. *resorbens*, sucking in]. An agent that promotes the absorption of abnormal matter, as exudates or blood clots. Ex. *Potassium iodide*, *ammonium chloride*.

resorption (rē-sorp'shūn) [L. *resorbere*, to drink in]. 1 Act of removal by absorption, as resorption of an exudate or pus. 2 Removal of hard parts of a tooth as a result of lysis and phagocytic action.

respirable (rē-spir'ā-bl, rē-s'pir-ā-bl) [L. *respirāre*, to respire]. Fit or adapted for respiration.

respiration (rē-s'pir-ā'shūn) [L. *respiratio*, breathing]. 1 The interchange of gases between an organism and the medium in which it lives. More specifically the taking in of oxygen and its utilization in the tissues and the giving off of carbon dioxide. 2 The act of breathing.

r., abdominal. R. where the diaphragm chiefly exerts itself, while walls of chest are nearly at rest. Utilized in normal quiet breathing, esp. by males, and in pathological conditions as in

pleurisy, pericarditis, and fracture of ribs. Also called *diaphragmatic breathing*.

r., absent. R in which respiratory sounds are suppressed

r., accelerated. Considered accelerated when more than 25 per minute, after 15 years of age.

Frequently occurs in disease. In disease it may be preternaturally frequent, or slow, rising to 60 or 80, or falling to 8 or 10 per minute. Increased frequency may, in health, result from exercise or physical exertion or from mental disturbances. It is present in many disorders of the *lungs*, as in pneumonias, bronchiectasis, advanced pulmonary tuberculosis, consolidation or compression of a lobe or of 1 entire lung, congestion, asthma, emphysema, tumors, aneurysms, diseases of the thorax, hernia, abscess of the diaphragm, and partial obstruction to the entrance of air into the lungs. It may be seen in diseases of the blood, such as the anemias, in *kidney troubles*, *febrile disease*, diseases of the *heart*, and as a result of drugs or nervous conditions.

RESPIRATORY SYSTEM

1. Sphincter ani. 2. Rectum. 3. Intestines. 4. Diaphragm. 5. Cardiac sphincter. 6. Esophagus. 7. Pharynx. 8. Soft palate. 9. Nose. 10. Tongue. 11. Larynx. 12. Trachea. 13. Lungs. 14. Diaphragm. 15. Liver. 16. Pylorus. 17. Stomach. 18. Abdominal muscles. 19. Bladder. 20. Sphincters of the bladder.

r., aerobic. R in which free oxygen is utilized

r., amphoteric. R having amphoteric resonance, *q.v.*

r., anaerobic. Internal respiration occurring in the absence of free oxygen.

r., apneustic. Breathing characterized by prolonged inspirations

r., artificial. Artificial methods to restore respiration in cases of suspended breathing. *SEE. artificial respiration*

r., Biot's. Breathing with alternating periods of apnea and hyperpnea. Occurs in meningitis and disorders of the medulla

r., cell. *SYN. biological or intracellular oxidation* The combination of oxygen with various substances within cells resulting in formation of CO_2 and H_2O and release of energy. There are many intermediary reactions in which substances other than oxygen act as oxidizing agents, *i.e.* hydrogen or electron acceptors. Reactions are catalyzed by respiratory enzymes which include the flavoproteins, cytochromes, and other enzymes. Certain vitamins (nicotinic amide, riboflavin, thiamine, pyridoxine, and pantothenic acid) are essential in the formation of components of various enzyme systems

r., Cheyne-Stokes. Respirations gradually increase in rapidity and volume until they reach climax, then gradually subside and cease entirely for from 5 to 50 seconds, when they begin again

Due to some disturbance of respiratory center, exact nature of which is as yet undetermined. Usually forerunner of death but may last several months, or few days, and disappear. Ratio between respirations and pulse beats is 1 to 4 or 4.5.

r., cogwheel. *SFR. r., interrupted*

r., costal. Costal breathing. R in which chest cavity is enlarged by raising the ribs

r., decreased. It obtains in uremia, diabetic coma, affections of the brain, in shock, hysteria, stenosis of the larynx, in chronic fibroid phthisis, on approaching death, and in poisoning with opium or its derivatives

r., diaphragmatic. Abdominal respiration, *q.v.* Also called *external respiration*

r., direct. R in which an organism such as a one-celled ameba secures its oxygen and gives up carbon dioxide directly to the surrounding medium

r., external. *SYN: pulmonary respiration* The processes involved in ventilating the lungs (breathing) and the exchange of gases (O_2 and CO_2) between the air in lungs and the blood within capillaries in the walls of alveoli

Inspiration or drawing in of air is accomplished by enlargement of the thoracic cavity. This is brought about by contraction of the diaphragm and by raising the ribs and sternum. *Expiration* or the expulsion of air may be active or passive. In ordinary breathing, it is passive, no muscular effort being needed to bring chest wall back to normal position. In forced or labored respiration, muscular effort is involved

The chemical changes in the air thus taken into the lungs are given under *air*. The volumes of air involved in respiratory movements are given under *spirometry*. If the aspiration of air is accomplished chiefly by contraction of the diaphragm, the abdomen will bulge with each inspiration, for the diaphragm, forming at once the floor of the thorax

and the roof of the abdominal cavity, is dome-shaped, with its concavity downward; in contracting, it pushes the abdominal viscera down. This type of respiration is called diaphragmatic or abdominal. Its opposite is the costal type, in which the ribs and sternum must be raised and which is seen when the abdomen is confined by tight clothing.

RS. breathing, diaphragm, expiration, inspiration, air, spirometry

r., fetal. Exchange of gases in the placenta between blood of fetus and maternal blood.

r., forced. Voluntary hyperpnea (increase in rate and depth of breathing).

r., forms of. Jerking, spasmodic, stertorous, whistling, wavy, lack of evenness, abdominal, or thoracic

r., frequent. Common in all febrile and inflammatory diseases, esp in children. As a rule, rapid breathing is a sign of thoracic disease. In hysteria patient often breathes 60 to 70 times per minute. It may occur in acute respiratory affections, lesions of medulla, or it may be induced by atropine, carbon dioxide, cocaine.

r., internal. The passage of oxygen from the blood into the cells, its utilization by the cells and the passage of carbon dioxide from cells into the blood

Oxygen is carried in combination with hemoglobin, oxyhemoglobin gives arterial blood its red color, reduced hemoglobin gives venous blood its blue color. Carbon dioxide is carried in combination with metallic elements in the blood as bicarbonates and also as carbonic acid.

The following table gives the number of cc. of each gas contained in 100 cc of blood. The higher of the 2 figures for carbon dioxide represents conditions during exercise.

Gas	Arterial Blood	Venous Blood
Oxygen	19.5 cc.	12-14 cc.
Carbon dioxide	48.0 cc.	58 cc.

r., interrupted. R. in which inspiration or expiration is not continuous

r., intrauterine. R. by fetus before birth. See: *r., fetal*

r., Kussmaul's. Deep gasping respiration seen in cases of severe acidosis. See: *air hunger*

r., labored. Dyspnea or difficult breathing, respiration which involves active participation of accessory inspiratory and expiratory muscles

r., method of counting. With the hand in the same position as when taking the pulse, watch the patient's chest, without his knowledge if possible, as breathing is controlled by both the voluntary and involuntary muscles. Count each inspiration and expiration as 1 breath for 1 full minute by watching rise and fall of chest or upper abdomen. When the movements are scarcely perceptible, place the hand gently but firmly on the chest or back and count in this manner. Note hour, frequency, any abnormal condition such as pain associated with breathing.

NORMAL EXPANSION: 2 in. in male, 2½ in. in female.

CAPACITY. Normal male 22 years of age, 5.8 feet, 230 to 240 cu. in., 3.5 cu. in. for each in. in height. Female, 19 years, 5.25 feet, 145 to 150 cu. in., 2.3 cu. in. for each in. in height.

r., muscles of. In *inspiration*, the

diaphragm, and external intercostals. In *forced inspiration*, the following accessory muscles may assist in elevating ribs and sternum: the scaleni, levatores costorum, sternocleidomastoideus, pectoralis major, and serratus posterior superior. In *expiration* (voluntary deep breathing or forced expiration), rectus abdominis, ext and int oblique, transverse abdominis. The following accessory muscles may assist in depressing the ribs: internal intercostals, serratus posterior inferior, quadratus lumborum.

See: diaphragm, expiration, inspiration
r., paradoxical. 1 R. occurring in open pneumothorax in which lung fills on expiration and is deflated on inspiration. 2 Condition seen in paralysis of diaphragm in which diaphragm ascends during inspiration

r., periodic. Breathing of uneven rhythm as in Cheyne-Stokes respiration, *q p*

r., pigment. A pigment that carries oxygen. Ex hemoglobin and hemocyanin.

r., placental. Fetal respiration, *q r*
quotient. See: *quotient, respiratory*

r., rate of. It may be preternaturally frequent, or slow, rising to 60 or 80, or falling to 8 or 10 per minute

In newly born 30-60 per m.
1st year, about 25-30 " "

2nd year, about 20-26 " "
15th year, about 20 " "

21st year:
Men 16-18 per m.
Women 18-20 " "

50th year 16 " "
70th year 14-16 " "

Usual ratio to pulse ... 1-4 " "

Respiration, Pulse and Temperature Ratio		
Respiration	Pulsations	Temperature
18	80	99° F.
19 (plus)	88	100
21	96	101
23	104	102
25 (minus)	112	103
27	120	104
28	128	105
30	136	106

r., slow. Generally result of some structural or functional derangement of the nervous system

Observed in apoplexy, in effusion of serum within cranium, softening of the brain and in most of the circumstances that occasion coma. It may occur in brain compressions and hemorrhage, and in uremia or be induced by carbon monoxide and opium or its derivatives.

r., stertorous. Rattling or bubbling sounds which obscure normal respiratory sounds. Usually caused by breathing with mouth open with resultant vibration of soft palate

r., stridulous. A high-pitched, crowing or barking sound heard during inspiration caused by an obstruction in vicinity of glottis or in respiratory passageway.

r., system. The lungs and the respiratory passages. The latter include nasal cavities, pharynx, mouth (if open), larynx, trachea, bronchi, and bronchioles.

r., thoracic. R. when abdomen does not move, being performed entirely by expansion of the chest. Observed when peritoneum, diaphragm or its pleural cavity is inflamed. Syn: *costal r.*

respiration, words pert. to: air, complementary; a., minimal, a., reserve; a.,

residual; a., supplemental; a., tidal; apnea; apnea; asphyxia; Biot's breathing; blowing; Buchut's, chest, auscultation of; Cheyne-Stokes, diaphragm, dyspnea; eupnea, hay fever, hyperpnea, hypopnea; infant; inspiration, oligopnea; orthopnea; polypnea, respirator; respiratory; stridor; stridulus; tachypnea; thermometry.

respirator (rēs'pī-rā'tor) [L. *respirāre*, to breathe]. 1 A device by which inspired air is purified, warmed, or medicated when passing through it. 2 A machine for prolonged artificial respiration. See *Drinker respirator*.

respiratory (rē-spir'ā-tō-rī, rēs'pī-rā-tō-rī) [L. *respirāre*, to breathe]. Pertaining to respiration.

r. center. A region in the medulla oblongata which regulates movements of respiration. Consists of an *inspiratory center* located in rostral half of reticular formation overlying olivary nuclei and an *expiratory center* located dorsal to inspiratory center. A *pneumotaxic center*, located in the pons; also is concerned with respiratory movements.

r. minute volume. ABR *RMV*. The amount of air breathed in one minute.

r. system. The lungs, pleura, bronchi, pharynx, larynx, tonsils, and the nose.

respirometer (rēs'pī-rōm'ēt-ēr) [' + G. *metron*, a measure] Instrument to ascertain character of respirations.

response. 1 A reaction such as contraction of a muscle or secretion of a gland resulting from a stimulus. See *reaction*. 2 The sum-total of reactions of an individual to specific conditions as the response (favorable or unfavorable) of a patient to a certain treatment.

r., inverse. The acquisition of a refractoriness to repeated injections of parathyroid hormone. Results in osteopetrosis, or marble-bone disease.

r., triple. Three phases of vasomotor reactions occurring when a pointed instrument is drawn across the skin. Includes (1) red reaction, (2) flare or spreading flush, (3) wheal.

rest (rēst) [A.S. *raestan*, to rest]. 1 Repose of body due to sleep. 2. Freedom from activity, as of mind or body. 3. To lie down; to cease from motion. 4. A remnant of embryonic tissue that persists in the adult. Also called *epithelial* or *fetal rest*.

restiform (rēs'tī-form) [' + *forma*, shape]. Rope-like; rope-shaped.

r. body. SYN *corpus restiforme*. Inferior cerebellar peduncle.

resting. Inactive, motionless, at rest.

r. cell. 1 A cell not in the process of dividing. 2 A cell when *not* performing its normal function, as a nerve cell which is not conducting an impulse, or a muscle cell which is not contracting.

r. potential. The potential difference which exists across a cell membrane between the outside and the inside of a resting cell.

restitutio ad integrum. Complete restoration to health.

restitution (rēs'tīt-ū'shūn) [L. *restitutio*]. 1. A return to a former status. 2. The act of making amends. 3. The turning of the fetal head to the right or left after it has completely emerged through the vagina.

restorative (rē-stōr'ā-tīv) [L. *restaurāre*, to fix]. 1. Pert. to restoration. 2. An agent that is effective in the regaining of health and strength.

restraint (rē-strānt') [O.Fr. *restraindre*].

1. Process of hindering from any action, mental or physical. 2. State of being hindered. 3. That which hinders or restricts; device or method used to keep a patient from injuring himself. See *knot*. Various states have laws concerning the restraint of patients.

r. in bed. Move bed against wall, place straight backed chairs along open side of bed. Tie them into place by interlacing with rope and then tying to foot and head of bed, or place a wide board the length of bed on either side and fasten through 3 or 4 holes bored near ends of the boards. Place a folded sheet across chest under each armpit with ends of sheet tied to end of bed. Bring patient's arms along sides and place them in a wide pillow slip under back with the open end of the slip pulled to armpits and closed end tucked under buttocks. The weight of body holds pillow slip in place.

r. (of the) lower extremities. Tie a sheet across knees and tie feet together with a figure-of-eight bandage. (Start loop under ankles, cross between feet and bring ends around feet and tie on top.)

r., mechanical. Restraint by physical devices, esp restraint of insane.

r., medicinal. Restraint of mentally ill who are violent by use of narcotics, or sedatives.

resuscitation (rēs-sūs-i-tā'shūn) [L. *resuscitatio*]. Act of bringing one back to full consciousness.

r. oral (mouth to mouth). Adopted by Red Cross. (a) Wipe from mouth any foreign matter. (b) Bend head back, chin pointing up. (c) Pull or push jaw outward moving tongue from back of throat. (d) Open mouth wide and place tightly over victim's mouth, pinching victim's nostrils. Blow into victim's mouth (or nose). (e) Remove your mouth, turn head to side and listen for return rush of air. Repeat blowing. (f) Blow vigorously at rate of 12 breaths a minute. For a child about 20 shallow breaths a minute. (g) If initial failure to get air exchange, recheck head and jaw position. Blow on back can be given after turning adult on side. A child can be up-ended holding ankles and slapping 2 or 3 times between shoulder blades.

RS: *anabiosis*, *anastasis*, *artificial respiration*, *revivification*.

resuscitator (rēs-sūs'i-tā'tor). An automatic breathing machine that forces oxygen into the lungs under pressure of 4 ounces per square inch when back pressure of 3 ounces trips the machine for exhalation. May be used for several patients at the same time.

retardation (rē-tar-dā'shūn) [L. *retardare*, to delay]. 1. A holding back or slowing down; delay. 2. Delayed mental or physical response due to pathological conditions.

retard'ed depress'ion. The depressed state of manic-depressive psychosis.

retch (rēch) [A.S. *hræcan*, to clear the throat]. To make an involuntary attempt to vomit, *q.v.*

retching (rēch'ing) [A.S. *hræcan*, to clear the throat]. An involuntary attempt to vomit.

rete (rē'tē) (pl. *retia*). A network. A plexus of nerves or blood vessels.

r., articular. R. about a joint, esp. a deep anastomosis at knee joint.

r., cutaneum. A network of blood vessels at junction of the corium and superficial fascia.

- r. mirabile.** BNA. A plexus formed by sudden division of a vessel into small twigs, which unite again to form 1 vessel, as in the glomeruli of the kidneys.
- r. olecrani.** A network of vessels at back of elbow formed by divisions of the recurrent ulnar arteries.
- r. ovarii.** A group of rudimentary cell-cords lying in broad ligament and mesovarium of ovary. They are homologous to rete testes in male.
- r., patella.** A superficial network of vessels lying about the patella. Formed by branches of genicular arteries.
- r. subpapillare.** A network of vessels between papillary and reticular layers of the dermis.
- r. testis.** A network of tubules in mediastinum testis which receive sperm through the *tubuli recti* from the seminiferous tubules. From the rete testis, *afferent ducts* convey sperm to the epididymis.
- r., vertebral.** SEE *retia, venous, of the vertebrae*.
- retention** (rê-tên'shūn) [L *retentio*, a holding back]. Retaining in the body that which does not belong there, or which should be excreted, as urine, feces, or perspiration. SEE *chloruremia*.
- r. cyst.** One caused by retention of a secretion in a gland.
- Retrol.** Closure of the gland's duct.
- r. defect.** Inability to recall a name, number, or fact shortly after the subject was requested to remember it.
- r. enema.** Enema to be retained to provide nourishment, medicate the mucosa or for anesthesia. SEE *enema, retention*.
- r. of urine.** This is failure to expel the urine in the bladder.
- This may be due to a number of causes, such as (a) loss of muscle tone of the bladder from anemia, old age, exposure to cold, prolonged operation, or a greatly distended bladder without voiding for a considerable length of time (b) lesions involving nervous pathways to and from the bladder; (c) lesions involving reflex centers in brain and spinal cord, (d) obstruction of the urethra which may result from inflammation, stricture, stones, diverticula, cysts, tumors, or pressure from the outside as in cases of hypertrophy of the prostate, (e) psychogenic factors.
- INDICATIONS:** Disease of spinal cord if not induced by obstruction such as that from calculi, enlarged prostate, or from nervousness.
- r. with overflow.** Spasm of sphincter, causing failure to empty the bladder at one voiding, only overflow dribbling away, due to above causes.
- retia.** Plural of rete
- r., venous, of the vertebrae.** Two plexuses within vertebral canal extending from foramen magnum to coccyx. They lie posteriorly and laterally to dura and between latter and arches of vertebrae.
- reticula.** Plural of reticulum
- reticular** rê-tik'û-lâr) [L *reticula*, net]. Meshed or in the form of a network
- r. apparatus of Golgi.** SEE *Golgi apparatus*
- r. cells.** 1. Phagocytic cells present in lymphatic and myeloid tissues. 2. The cells of reticular connective tissue. SEE: *reticular tissue*.
- r. fibers.** SYN: *lattice fibers, argyrophilic fibers*. Extremely fine argyrophilic fibers found in reticular tissue, q.v.

r. formation. SEE: *formation, reticular*.

r. layer. Layer of connective tissue forming deeper portion of dermis. Lies beneath papillary layer.

r. membrane. Membrane formed by cuticular plates of distal ends of supporting cells in the organ of Corti.

r. tissue. A form of connective tissue consisting of a network of reticular fibers and cells. Cells are stellate with protoplasmic processes anastomosing with adjacent cells. Protoplasm also encloses and extends along the fibers. Found principally in bone marrow and lymphatic organs (lymph nodes), spleen and also in various organs (liver, kidney), in tissue underlying mucous membranes, and in walls of blood vessels.

reticulate. Of the nature of a network.

r. substance. Reticular formation, q.v.

reticulated (rê-tik'û-lâ-têd) [L *reticula*, network]. Netlike; pert. to a reticulum. SYN *reticular*.

reticulation (rê-tik'û-lâ'shūn) [L *reticula*, a net]. The formation of a network mass.

reticulin (rê-tik'û-lîn) [L *reticula*, net]. An albuminoid or scleroprotein substance in the connective tissue framework of lymphatic tissues.

reticulocyte (rê-tik'û-lô-sit) [L *reticula*, net, + G. *kytos*, cell]. A red blood cell containing a network of granules or filaments representing an immature stage in development. Normally comprise about 1% of circulating red-blood cells.

reticulocytopenia (re-tik'û-lô-si'tô-pê-ni-â) [" + " + *penia*, lack]. Lowering of the number of the reticulocytes of the blood.

reticulocytosis (re-tik'û-lô-si'tô-sis) [L *reticula*, net, + G. *kytos*, cell, + *-osis*, intensive]. SYN *reticulosis*. Increase in number of reticulocytes in circulating blood. Indicative of active erythropoiesis in red bone marrow. Occurs after hemorrhage, in high altitudes, and following treatment for pernicious anemia.

reticuloendothelial. Pert. to the reticuloendothelial system, q.v.

r. cell. SYN *histiocyte, macrophage*. A phagocytic cell of the reticuloendothelial system, q.v.

r. system. Abbr RES. Term applied to those cells scattered throughout the body which have the power to ingest (phagocytose) particulate matter (bacteria, colloidal particles). Includes *macrophages* (*histiocytes, clasmatoctes, or resting wandering cells*) of loose connective tissue, *reticular cells* of lymphatic organs and myeloid tissues, *Kupffer cells* of the liver, cells lining blood sinuses of spleen, bone marrow, adrenal cortex and hypophysis, *microglia* of central nervous system, *adventitial cells* about blood vessels and *dust cells* of the lungs. The above types are called *fixed RE cells*. Under certain conditions, esp inflammatory stimuli, fixed cells may become *wandering RE cells*, i.e., they become actively motile. Monocytes of the blood also are included in this group. RE cells function in elimination of worn out cells, esp. red blood cells, in repair of injured tissue, and in defense mechanisms, both local and general, of the body.

Diseases of the RES. include lymphosarcoma, reticulum cell sarcoma, Hodgkin's disease, follicular lymphoma, mycosis, fungoides, Gaucher's disease, and Niemann-Pick's disease.

reticuloendotheliosis (re-tik'-ū-lō-ēn'-dō-thē-il-ō'sis) [" + " + " + -ō'sis, intensive]. Hyperplasia of reticuloendothelium.

reticuloendothelium (re-tik'-ū-lō-ēn'-dō-thē-il-ūm) [" + " + thēlē, nipple]. Tissue of the reticuloendothelial system.

reticulosis (re-tik'-ū-lō'-sis) [L. *reticula*, network, + G. -ōsis, intensive]. Reticulocytosis, *q.v.*

r., *leukemic*. A rare disease, usually fatal, characterized by hyperplasia of reticuloendothelial tissue.

reticulum (re-tik'-ū-lūm) [L. *reticulum*, a little net] A network.

r. of nucleus. A fine network of linin threads on which are arranged masses of chromatin.

r., stellate. The enamel pulp consisting of stellate cells lying between inner and outer epithelial layers of enamel organ of developing tooth.

retiform (rēt'i-form) [L. *rēte*, net, + *forma*, shape]. Resembling a network. **SYN.** *reticular*.

RETINAL VESSELS, DIAGRAM OF

1. Superior temporal artery. 2. Superior temporal vein. 3. Superior nasal vein. 4. Superior nasal artery. 5. Inferior nasal vein. 6. Inferior nasal artery. 7. Inferior temporal vein. 8. Inferior temporal artery. 9. Macula lutea. 10. Macular veins.

retina (rēt'i-nā) (pl. *retinae*) [L. *rētē*, a net]. Innermost or 3rd tunic of the eye which receives image formed by the lens and is immediate instrument of vision.

It is a light-sensitive structure upon which light rays come to a focus. It extends from the point of entrance of the optic nerve anteriorly to the margin of the pupil, completely lining the interior of the eye. It consists of three parts: (1) *pars optica*, the nervous or sensory portion extending from optic disc forward to *ora serrata*, a wavy line immediately behind ciliary process; (2) *pars ciliaris*, part lining inner surface of ciliary process; and (3) *pars iridica*, part forming post. surface of iris. Slightly lateral to post. pole of the eye is a small, oval, yellowish spot, the *macula lutea*, in center of which is a depression, the *fovea centralis*. This region contains only cones and is the region of most acute vision. About 3.5 mm nasally from the fovea is the *optic papilla* (optic disc), point at which nerve fibers from retina make their exit and form *optic nerve*. This region is devoid of rods and cones and is insensitive to light, hence named the *blind spot*.

The layers of the retina from without inward are

(1) Layer of pigment epithelium; (2) layer of rods and cones; (3) external limiting membrane; (4) external nuclear layer; (5) external plexiform layer; (6) internal nuclear layer; (7) internal plexiform layer; (8) layer of ganglion cells; (9) layer of nerve fibers; (10) internal limiting membrane.

Color. Normally a purplish red tint, varying with complexion. It is colorless in severe anemia or in ischemia. It is reddened in hyperemia.

Vessels: The arteries shown are branches of a single *central artery*, a branch of the *ophthalmic artery*. The central artery enters at the center of the optic papilla and it supplies the inner layers of retina. The outer layers, including rods and cones, are nourished by capillaries of the choroid layer. The veins lack muscular coats. They parallel the arteries, blood leaving by a *central vein* which leads to the *superior ophthalmic vein*.

r., coarctate. Condition in which there is an effusion of fluid between retina and choroid giving retina a funnel shape.

r., detachment of. Complete or partial separation of retina from the choroid. May follow trauma, or choroidal hemorrhages, or tumors.

r., shot silk. R. having an opalescent appearance sometimes seen in young persons.

r., tigroid. R. having a spotted or striped appearance seen in retinitis pigmentosa.

retinaculum (rēt-in-āk'-ū-lūm) (pl. *retinacula*) [L. halter]. A band or membrane holding any organ or part in its place. Thickenings of the deep fascia in distal portions of limbs which hold tendons in position when muscles contract. Called *retinaculum tendinum*.

r. cutis. A fibrous band connecting the corium with underlying fascia.

r., extensor, of ankle. 1. The *sup. extensor retinaculum*, a band which crosses the extensor tendons of foot and is attached to lower portion of tibia and fibula. 2. The *inf. extensor retinaculum*, a band located on dorsum of foot. Consists of two "limbs" having common origin or lat. surface of calcaneum. The *upper limb* is attached to medial malleolus; *lower limb* curves around instep and is attached to fascia of abductor hallucis on medial side of foot.

r., extensor, of wrist. An oblique band attached medially to styloid process of ulna, hamate bone, and medial ligament of wrist joint. Laterally it is attached to ant. border of radius. Contains 6 separate compartments for passage of extensor tendons to hand.

r., flexor, of ankle. R. extending from medial malleolus to medial tubercle of calcaneum.

r., flexor, of wrist. R. extending from trapezium and scaphoid bones laterally to hamate and pisiform bones medially.

r. of hip joint. Any one of three flat bands lying along neck of femur and continuous with capsule of hip joint. Also called *cervical ligaments*.

r. mammae. Strands of connective tissue in mammary gland extending from glandular tissue through fat towards the skin where they are attached to deep fascia. Over cephalic portion of mammae they are well developed and called *suspensory ligaments of Cooper*.

r., patellar. Two fibrous bands (*medial* and *lateral r.*) lying on either side of knee joint and forming part of joint capsule. They are extensions of the insertions of the medial and lateral vastus muscles

r., peroneal. Two fibrous bands on lateral side of foot which contain tendons of peroneus longus and brevis muscles. The *sup peroneal r.* extends from lat malleolus to lat. surface of calcaneum, the *inf peroneal r.* is attached below to calcaneum, above to lower border of inf. extensor retinaculum

r., tendinum. SEE *retinaculum*

retinal (rēt'in-āl) [L *rētē*, net] Concerning the retina

r., correspondence. Condition in which simultaneous stimulation of points in the retinas of two eyes results in formation of a single visual sensation. Such points are called *corresponding points*. These lie in the foveas of the two retinas or in the nasal half of one retina and the temporal half of the other.

Abnormal correspondence results in double vision (*diplopia*) and is usually the result of inequality of ocular muscles. SEE *strabismus*

r., purple. Rhodopsin or visual purple, *q v*

retinene. SYN *zanthoxin*, *visual yellow*
An orange-yellow carotenoid pigment formed in retina as a result of the action of light on rhodopsin, an aldehyde of vitamin A. In dark adaptation, rhodopsin is regenerated from retinene

retinitis (rēt'in-ī'tis) [+ G *-itis*, inflammation]. Inflamed condition of the retina

SYM Diminished vision, contractions of fields or scotomata, alteration in size of objects, photophobia

TREATMENT. Absolute rest of eyes, protection from light, treat underlying cause

r., actinic. R due to exposure to intense light or other forms of radiant energy.

r., albuminurica. R associated with chronic kidney disease and malignant hypertension

Shows not only general signs of retinitis but is distinguished by white patches in the fundus, esp. surrounding the papilla and in the macular region.

r., apoplectic. R associated with hemorrhaging of retinal vessels

r., circinata. R in which there is a circle of white spots about the macula

r., circumpapillaris. R in which there is a proliferation of outer layers of retina about optic disc.

r., diabetic. R occurring in diabetics, esp that of long duration. Characterized by aneurysmal dilatation of blood vessels, hemorrhages, and waxy and cotton-wool exudates.

r., disciformis. R accompanied by degeneration of retina in region of macula.

r., exogenous purulent. R following introduction of infectious organisms into eye as a result of perforating wound or ulcer.

r., external exudative. SYN: *Ext hemorrhagic r.*, *Coats' disease*. Condition in which large masses of white and yellow crystals occur beneath retina as a result of organization of hemorrhages.

r., metastatic. Acute purulent retinitis resulting from lodgement of infective emboli in retinal vessels.

r., pigmentosa. SYN *primary pigmentary degeneration of retina*. A

chronic progressive disease characterized by degeneration of retinal neuroepithelium, esp rods, atrophy of optic nerve, and widespread pigmentary change in retina. A degenerative condition without inflammation. Etiology unknown but a hereditary tendency is manifested. Usually appears in childhood

r., proliferans. Vascularized masses of connective tissue which project from retina into the vitreous. End result of recurrent hemorrhage from retina into the vitreous

r., punctata albescentis. SYN *degeneratio punctata albescentis*. A nonprogressive degenerative, familial disease characterized by presence of innumerable, minute, white spots scattered over entire retina and without pigmentary changes. Usually starts early in life

r., punctate, central. R characterized by numerous white or yellow spots in fundus of eye

r., septicæ. SYN *r. of Roth*. A mild benign condition occurring in patients with systemic infections

r., solar. R resulting from exposure of retina to rays of sun

r., stellate. SYN: *toxic exudative r.*, *pseudonephritic r.* R characterized by presence of exudates and hemorrhages, blurring of optic disc, and formation of a star-shaped figure about macula.

r., syphilitic. R resulting from or associated with syphilis. May involve not only retina but also optic nerve (syphilitic neuroretinitis)

retinoblastoma. A malignant glioma of the retina. Occurs in young children and shows a hereditary pattern. Usually unilateral

retinchoroiditis (rēt'in-ō-kō-royd-ī'tis) [L *rētē*, net, + G *chorioeīdēs*, sknlike, + *-itis*, inflammation]. Inflamed condition of retina and choroid.

retinocystoma (rēt'in-ō-sis-tō-mā) [+ G *kystis*, sac, + *-ōma*, tumor]. Glioma of the retina

retinoid (rēt'in-oyd) [+ *eidos*, resembling]. Like the retina

retinopapillitis (rēt'in-ō-pā-pīl-ī'tis) [+ *papilla*, nipple, + G *-itis*, inflammation]. Inflamed condition of retina and optic papilla. SYN: *papilloretinitis*.

retinopathy. Any disorder of the retina.

r., arteriosclerotic. R accompanying generalized arteriosclerosis and moderate hypertension

r., diabetic. R occurring in diabetics, usually 6-8 years after onset of disease

r., hypertensive. That associated with essential hypertension, toxemia of pregnancy, glomerulonephritis

r., syphilitic. R occurring in later stages of syphilis

retinoscope (rēt'in-ō-skōp) [+ G *skopein*, to see]. An instrument used in performing retinoscopy.

retinoscopy (rēt'in-ōs'kō-pī) [+ G *skopein*, to examine]. Shadow test or refraction of eyes by effect of lights and shadows. SYN: *skiascopy*.

retisolution (rēt-i-sō-lū'shūn) [L *rētē*, net, + *solutio*, dissolution]. Dissolution of the Golgi structures.

retispersion (rēt-i-sper'zhūn) [+ *sperstio*, a scattering]. Transference of Golgi structures to periphery of the cell.

retort (rē-tort') [L *retortus*, bent back]. A flasklike, long-necked vessel used for distilling.

retothelium (rē'thō-thē'l-ūm) [+ G *thēlē*, nipple]. Cellular layers covering

reticular tissue. SYN: *reticuloendothelium*, *reticulothelium*.

re'tract'. To draw back.

retractile (rē-trākt'īl) [L. *retractilis*, able to be drawn back]. Capable of being drawn back or in.

retraction (rē-trākt'shūn) [L. *retractio*, from *retrahere*, to draw back]. A shortening. The act of drawing backward or state of being drawn back.

r. ring. A ridge sometimes felt on uterus above the pubes, marking line of separation bet upper contractile and lower dilatable segments of the uterus. Seen in prolonged or obstructed labor. SYN *Bandl's ring*.

r., uterine. The process by which muscular fibers of the uterus remain permanently shortened to a small degree following each contraction or labor pain.

retractor (rē-trākt'tor) [L. from *retrahere*, to draw back]. 1. Instrument for holding back the margins of a wound. 2. Muscle which draws in any organ or part.

re'treat'. Act of retiring or withdrawing from difficult life situations. May be direct as in physical flight or indirect as in malingering, illness, abnormal preoccupation, and self-deception.

retro- [L.] Prefix meaning backward.

retroauricular (rē'trō-aw-rik'ū-lar) [L. *rētrō*, backward, + *auricular*, ear]. Behind the auricle or ear.

retrobuccal (rē'trō-būk'āl) [L. *rētrō*, backward, + *bucca*, cheek]. Concerning the back part of the mouth or aiea behind the mouth.

retrobulbar (rē'trō-būl'bar) [L. + *G. bolbos*, a bulb]. 1. Behind the eyeball. 2. Post. to the medulla oblongata.

retrocèdent (rē'trō-sē'dēnt) [L. + *cedere*, to go]. Going backward, returning.

retrocervical (rē'trō-sēr-vī-kāl) [L. + *cervix*, neck]. Back of the cervix uteri.

retrocession (rē'trō-sēs'hūn) [L. + *cessio*, from *cedere*, to go]. 1. A going back; a relapse. 2. Metastasis of a condition from the surface to an internal organ. 3. Indication of an abnormal (further back) position of the uterus.

retrocolic (rē'trō-kol'ik) [L. + *G. kolon*, colon]. Back of the colon.

retrocollic (rē'trō-kōl'ik) [L. + *collum*, neck]. Concerning the back of the neck.

r. spasm. Wryneck with spasms affecting post. muscles of neck.

retrocollis (rē'trō-kōl'is) [L. *rētrō*, backward, + *collum*, neck]. Spasm of post. muscles of the neck with torsion. SYN: *torticollis*.

retrocurive (rē'trō-kūr'siv) [L. + *curtio*, from *currere*, to run]. Stepping or turning backward.

retrodeviation (rē'trō-dē-vi-ā'shūn) [L. + *deviare*, to turn aside]. Backward displacement, as of an organ.

retrodisplacement (rē'trō-dis-plās'mēnt) [L. + *Fr. déplacer*, to displace]. Displacement backwards of a part.

retrosophageal (rē'trō-ē-sōf-ā'jē-āl) [L. + *G. oisophagos*, gullet]. Located behind the esophagus.

retroflexed (rē'trō-flēkst) [L. + *flexus*, bent, from *flectere*, to turn]. Bent backward.

retroflexion (rē'trō-flēkt'shūn) [L. *rētrō*, backward, + *flexio*, a bending]. A bending or flexing backward.

r. of uterus. A condition of the womb in which its body is bent backward at an angle with the cervix whose position usually remains unchanged.

SYM: Irritability of rectum with retention of stool. Neuralgia of uterus

and as consequence of the natural congestion and nervous compression, so-called uterine colic may result from retention of the secretion of the intra-uterine mucous membrane. If retroflexion is great enough to occlude uterine canal, dysmenorrhea and sterility result.

TREATMENT. Constitutional treatment to give strength and tone to tissues of the region. Postural treatment, the knee-chest position so that force of gravity may assist in throwing organ into proper position. Use of uterine elevator. Tampons.

retrogasserian (rē'trō-gās-sēr'i-ān) [L. *rētrō*, backward, + *gasserian*]. Referring to the post. root of the gasserian ganglion.

retrograde (rē'trō-grād, rē'trō-grād) [L. + *grad*, to step]. Moving backward, degenerating from better to worse state.

r. amnesia. Loss of memory for events and situations just preceding time of patient's illness.

retrography (rē'trō-grā'fi) [L. + *G. graphem*, to write]. Mirror writing, a symptom of certain brain diseases.

retrogression (rē'trō-grēs'hūn) [L. *rētrō*, backward, + *gressus*, stepping]. 1. A going backward as in the involution, degeneration, or atrophy of a tissue or structure. 2. Passing from a more complex to a simpler type of structure in the development of an organ, an individual, or a race. 3. The return of symptoms in recovery from a disease.

retrogressive changes (rē'trō-grēs'iv) [L. + *gressus*, stepping]. Changes to lower type of organization, such as in atrophy, degeneration, necrosis, hypertrophy, etc.

retroinfection (rē'trō-in-fēkt'shūn) [L. + *infectio*, infection]. Infection communicated by the fetus in utero to the mother.

retroinsular (rē'trō-in-sū-lar) [L. + *insula*, island]. Situated behind the island of Reil.

retrojection (rē'trō-jēkt'shūn). Washing out a cavity from within by injection of a fluid.

retrolabyrinthine (rē'trō-lāb-i-rin'thin) [L. *rētrō*, backward, + *G. labyrinthos*, a maze]. Situated behind the labyrinth of the ear.

retrolental. Behind the crystalline lens. **r. disease**. A disease of the eye often causing blindness in babies and children. Said to be due to the concentration of oxygen to premature babies. No higher than 40% should be used.

r. fibroplasia. Abbr RLF. Condition in which an opaque fibrous membrane develops on post. surface of the lens. Occurs chiefly in premature infants, weighing less than 2000 Gm., esp those subjected to high oxygen concentrations for a considerable period of time.

retrolingual (rē'trō-līng'gwāl) [L. + *lingua*, tongue]. Behind the tongue.

retromammary (rē'trō-mām-mā-rī) [L. + *mamma*, breast]. Located behind the mammary gland.

retromandibular (rē'trō-mān-dīb-ū-lar) [L. + *mandibulum*, jaw]. Located behind the lower jaw.

retromastoid (rē'trō-mās'toyd) [L. *rētrō*, backward, + *G. mastos*, breast, + *eidos*, like]. Situated behind the mastoid process.

retromorphosis (rē'trō-mor'fō-sīs) [L. + *G. morphē*, form, + *-ōsis*, intensive]. 1. Change in shape accompanying a transition from a higher to a lower type of structure. 2. Retrogressive changes within cells or tissues; catabolism. *q.v.*

retronasal (rē'trō-nās'āl) [L. + *nasus*, and

nose]. Relating to or situated at the back part of the nose.

retroocular (rē'trō-ōk'ul-lar) [L. *rētrō*, backward, + *oculus*, eye]. Located behind the eye.

retroperitoneal (rē'trō-pēr-i-tō-nē'āl) [" + G. *peritoneum*, peritoneum]. Located behind the peritoneum.

retroperitoneum (rē'trō-pēr-i-tō-nē'ūm) [" + G. *peritoneum*, peritoneum]. The space behind the peritoneum.

retroperitonitis (rē'trō-pēr-i-tō-nī'tis) [" + -itis, inflammation]. Inflammation behind the peritoneum.

retropharyngeal (rē'trō-fār-in'jē-āl) [" + G. *pharynx*, pharynx]. Behind the pharynx.

retropharyngitis (rē'trō-fār-in-jī'tis) [L. *rētrō*, backward, + G. *pharynx*, pharynx, + -itis, inflammation]. Inflammation of the retropharyngeal tissue.

retroplacental (rē'trō-plā-sen'tāl) [" + *placenta*, a flat cake]. Behind the placenta, or behind both the placenta and the uterine wall.

retroplasia (rē'trō-plā'zi-ā) [" + G. *plasma*, to form]. Degenerative change of a cell or tissue into a more primary form.

retroposed (rē'trō-pōsd') [" + *posus*, from *ponere*, to place]. Displaced backward.

retropulsion (rē'trō-pul'shūn) [L. *rētrō*, backward, + *pulsio*, a thrusting]. 1. Pushing back of any part, as of the fetal head in labor. 2. A walking or running backward, involuntarily, seen in some nervous disorders.

retrosternal (rē'trō-ster'nāl) [" + G. *sternon*, chest]. Behind the sternum.

r. pulse. Venous pulse felt over supraclavicular notch.

retroarsal (rē'trō-lar'sāl) [" + G. *tarsos*, edge of eyelid]. Located behind the tarsus of the eye.

retrouterine (rē'trō-ū'tēr-in) [" + *uterus*, womb]. Located behind the uterus.

retrovaccination. Vaccination with virus obtained from a calf inoculated with smallpox virus obtained from a human.

retroversion (rē'trō-ver'shūn, rē'trō-ver'shūn) [" + *versio*, a turning]. A turning or state of being turned back.

r. of uterus. Displacement of the uterus backward with cervix pointing forward toward symphysis pubis.

Normally, the cervix points toward the lower end of the sacrum with the fundus toward the suprapubic region. Retroversion may be met with in early months of pregnancy and serious complications may result if not corrected.

re'trude. To force inward or backward.

re'trusion. 1. Process of forcing backward, esp. with reference to teeth. 2. Condition in which teeth are retroposed.

Retzius, lines of (ret'zē-ūs). Brownish, concentric lines in the enamel of a tooth.

R., space of. SYN: *prepubic space*, *retropubic space*, *cavum Retzi*. Space in lower portion of abdomen between bladder and pubic bones and bounded superiorly by peritoneum. Contains areolar tissue, fat, and a plexus of veins.

R., veins of. SYN: *retroperitoneal veins*. Veins forming communications between the mesenteric veins and inf. vena cava.

Reuss's test (rois'ez). Test for atropine employing sulfuric acid and an oxidizing agent.

revellent (rē-vē'lent) [L. *rē*, back, + *velere*, to draw]. 1. Producing revulsion, the diversion of disease or blood from

one part of the body to another. 2. Agent producing revulsion.

re'verberation. Process by which closed chains of neurons when excited by a single impulse will continue to discharge impulses from collaterals of its cells.

re'vers'al. 1. A change or turning in the opposite direction. 2. In *Psych.* a change in an instinct to its opposite, as from love to hate.

re'vers'ion. 1. Return to a previously existing condition. 2. In genetics, the appearance of traits possessed by a remote ancestor. SEE *atavism*.

revivification (rē-viv'if-ikā'shūn) [" + *vivere*, to live, + -ficare, to do]. 1. Attempt to restore life to those apparently dead; restoration to life or consciousness. Also restoring life in local parts, as a limb after freezing. 2. Paring of surfaces to facilitate healing, as in a wound.

revulsant (rē-vūl'sānt) [" + *vulsio*, a pulling]. 1. Causing transfer of disease or blood from one part of the body to another. 2. Drug which draws blood to an inflamed part.

revulsion (rē-vūl'shūn) [L. *revulsio*, a pulling back]. 1. Act of driving backward, as diverting disease from one part to another by a quick withdrawal of the blood from that part. 2. PT. Circulatory changes obtained by sudden and intense reactions to heat and cold.

The Scotch douche is a powerful revulsive measure. SEE *counterirritation*.

revulsive (rē-vūl'siv) [L. *revulsio*, a pulling back]. 1. Causing revulsion. 2. A counterirritant.

Rh. 1. Chemical symbol for rhodium. 2. Abbr for *rhesus*, a monkey (*Macaca rhesus*) in which the Rh factor was first identified.

Rh antiserum. SYN: *anti-Rh-serum*. Human serum which contains Rh antibodies.

Rh-Hr agglutinogens (antigens). Substances present on red blood cells which stimulate antibody formation. There are 8 types—Rh, Rh', Rh'', Rh⁺, Rh⁻, Rh⁺, Rh⁻, Rh⁺—named after the genes which determine their existence.

Rh blood factor. A factor discovered in erythrocytes of the rhesus monkey and present in about 85% of human population, such individuals being designated Rh+ (Rh positive). In the remaining 15% (Rh-, or Rh negative) it causes, when injected, the formation of anti-Rh agglutinin. Subsequent transfusions of Rh+ blood may result in serious transfusion reactions (agglutination and hemolysis of red blood cells). A pregnant woman may become sensitized by blood of a Rh positive fetus. In subsequent pregnancies, if the fetus is Rh positive, Rh antibodies produced in maternal blood may cross the placenta and destroy fetal cells giving rise to *erythroblastosis fetalis*.

Subsequent study has revealed the existence of three primary Rh factors (Rh₀, Rh', and Rh''). Rh₀ is the one usually responsible for clinical reactions.

Rh genes. A series of eight allelic genes which are responsible for the various Rh blood types and designated r, r', r'', r⁺, r⁰, R¹, R², and R³. Genes represented by small r's are responsible for Rh-negative persons; those by large R's for Rh positive persons.

Rhabditis (rāb-dī'tis) [G. *rhabdos*, rod]. A genus of small nematode worms, some of which are parasitic.

rhabdo- [G. *rhabdos*, rod]. Combining form meaning *rod*.

rhabdomyoma (răb"ô-dô-mî-ô'mă) [+ *mys*, *my-*, muscle, + *-oma*, tumor]. A striated muscular tissue tumor.

rhabdophobia (răb-dô-fô'bi-ă) [+ *phobos*, fear]. Abnormal fear of being chastised, or of anything that might be used for such a purpose, as a *rod*.

rhachialgia (ră"ki-ăl'ji-ă) [G. *rhachis*, spine, + *algos*, pain]. Pain in the spine.

rhachiocampsis (ră"ki-ô-kămp'sis) [+ *kampsis*, a bending]. Curvature of spine.

rhachiooplegia (ră"ki-ô-plê'ji-ă) [+ *plêgê*, a stroke]. Spinal paralysis.

rhachioscoliosis (ră"ki-ô-skô-li-ô'sis) [+ *skoliosis*, a bending]. Curvature of the spine laterally.

rhachis (ră'kis) [G.]. Spinal column.

rhachischisis (ră-kis'kis-is) [G. *rhachis*, spine, + *schisis*, fissure]. A congenital cleft in the spinal column.

rhachitis (ră-ki'tis) [+ *-itis*, inflammation]. Constitutional disease of infancy marked by faulty nutrition and bone deformity. *SYN* *rachitis*, *rickets*, *q.v.*

rhacoma (ră-kô'mă) [G. *rhakoma*, to rend]. 1. Ragged, irregular abrasion, usually of the skin. 2. Relaxation of integument of scrotum.

rhagades (răg'ăd-êz) [G. *rhagadês*, tears]. Linear fissures appearing in skin, esp at the corner of the mouth or anus, causing pain.

If due to syphilis, they form a radiating scar on healing.

rhagadiform (răg-ădî-form) [+ *L. forma*, shape]. Fissured, having cracks.

-rhagia [G.]. Suffix meaning *bleeding*.

raphania (răf-ă'ni-ă) [G. *raphanos*, radish]. Spasmodic disease caused by eating the wild radish. *SYN* *raphania*.

raphe (ră'fê) [G. *raphê*, a seam]. A seam or ridge. *SYN* *raphe*.

rhagma (rêg'mă) [G. *rhêgma*, a tear]. Rupture, fracture or rent, as of vessel walls, a bone, or of an abscess.

rhembasmus (rêm-băs'mûs). Wandering of mind; indecision.

rheo- [G.]. Combining form meaning *current*, *stream*.

rheobase (rê'ô-băs) [G. *rheos*, current, + *basis*, step]. In unipolar testing with the galvanic current using negative as active pole, the minimal voltage required for a response when the make of the current is determined.

This is the rheobase, or threshold of excitation. *SEE* *chronaxie*.

rheochord (rê'ô-kord) [+ *chordê*, cord]. Type of rheostat used for measuring resistance of an electric current. *SEE* *rheostat*.

rheometer (rê-ôm'êr-êr) [+ *metron*, a measure]. 1. Instrument for qualitative determination of presence of an electric current. *SYN* *galvanometer*. 2. Device for measuring rapidity of the blood current.

rheonome (rê'ô-nôm) [+ *nemein*, to distribute]. Device for ascertaining the effect of irritation on a nerve.

rheophore (rê'ô-fôr) [+ *phoros*, a carrier]. A cord conducting an electrical current, as one bet. patient and electrical apparatus. *SYN* *electrode*.

rheoscope (rê'ô-skôp) [+ *skopein*, to examine]. Device indicating the existence of an electric current. *SYN* *galvanoscope*.

rheostat (rê'ô-stăt) [+ *statos*, standing]. A device maintaining fixed or variable resistance for controlling the amount of current entering a circuit.

rheostosis (rê-ôs-tô'sis) [G. *rheos*, current, + *osteon*, bone]. A hypertrophy and condensing osteitis in streaks, involving long bones.

rheotachygraphy (rê-ô-tă-kig'ră-fl) [+ *tachys*, swift, + *graphein*, to write]. Graphic recording of variation of electromotive force in a muscle.

rheotaxis (rê'ô-tăks'is) [+ *taxis*, arrangement]. Reaction to a current of fluid causing the part acted upon to move against the current.

rheotome (rê'ô-tôm) [+ *tomê*, a cutting]. An interrupter with an adjustable speed control.

rheotrope (rê'ô-trôp) [+ *tropos*, a turning]. An instrument for automatically reversing a current of electricity.

rhestocythemia (rês-tô-si-thê'mi-ă) [G. *rhaistos*, destroyed, + *kytos*, cell, + *aima*, blood]. Condition of degenerated red blood cells in the peripheral circulation.

rheum, rheuma (rûm, rûm'ă) [G. *rheuma*, a flowing]. Any catarrhal or watery discharge.

r. saif. Moist tetter and similar skin eruptions, chronic eczema.

rheumatic (rû-măt'ik) [G. *rheuma*, a flowing]. Pert. to rheumatism.

r. chorea. *SEE* *chorea*, *Sydenham's fever*. A systemic, febrile disease, inflammatory and nonsuppurative in nature, variable in severity, duration, and sequelae. It is frequently followed by serious heart disease.

Etiol. Unknown, but its onset usually follows a preceding infection by a strain of group A beta hemolytic streptococci. Attacks usually occur in childhood, an individual is especially susceptible to subsequent attacks. Onset gradual or acute.

SYM. Preceding streptococcal respiratory infection, fever, migratory polyarthritides, pain upon motion, abdominal pain, Sydenham's chorea (St. Vitus' dance), cardiac involvement (pericarditis, myocarditis, and endocarditis). Later gives rise to precordial discomfort and development of heart murmurs. Skin manifestations include *erythema marginatum* and development of subcutaneous nodules. Epistaxis is common.

TREATMENT: Enforced bed rest until signs of active rheumatic fever have disappeared. Salicylates to relieve pain and reduce fever. Sulfonamides, penicillin, and streptomycin are ineffective and should not be used. Hormone therapy (cortisone and ACTH) sometimes employed under carefully controlled conditions. Complications, esp those involving heart, require special treatment.

rheumatism (rû-măt-izm) [G. *rheuma*, a flowing, + *-ismos*, condition]. A general term commonly applied to conditions acute and chronic, characterized by soreness and stiffness of muscles and pain in joints and associated structures. It includes arthritis (infectious, rheumatoid, gouty), arthritis due to rheumatic fever or trauma, degenerative joint disease, neurogenic arthropathy and degenerative joint disease, hydroarthrosis, myositis, bursitis, fibromyositis, and many other conditions. *SEE* *arthritis*, *rheumatic fever*.

Etiol. Possibly a filtrable pleuropneumonia-like microorganism.

SYM. Generally begins abruptly or sometimes follows such prodromes as malaise, chilliness and sore throat. The large joints usually affected; are slightly reddened, swollen, intensely painful and tender to touch. Marked tendency not

only to spread from joint to joint but to disappear abruptly in one, while it attacks another. Knees, ankles, elbows and wrists most commonly involved, but no joint exempt. In severe cases intensely painful, tender and sometimes rigid.

Fever rises to 102° or 103° F., indefinite in its duration, irregular in course. Perspiration often copious; peculiar sour smell, acid reaction, urine scanty, high colored. On standing, throws down an abundant sediment of urates and uric acid. Tongue heavily coated, appetite lost, bowels constipated; face at first flushed, later becomes anemic.

r., acute articular. SEE: *rheumatic fever*.

r., chronic. R. associated with a joint disorder such as rheumatoid arthritis, gout, or degenerative joint disease which usually results in deformity of the joint.

r., gonorrheal. Arthritis resulting from gonorrheal infection. SEE: *gonorrhea*.

r., muscular. Term applied to a number of muscular conditions characterized by tenderness, soreness, pain, and local spasm. Includes such conditions as fibromyositis, myositis, myalgia, and torticollis, *q v*.

r., palindromic. Recurring attacks of acute arthritis and periartthritis at irregularly spaced intervals.

r., psychogenic. R. of psychic origin, esp. that occurring under emotional stress; common among soldiers.

rheumatoid (rū'mā-toyd) [" + *eidos*, like]. Of the nature of rheumatism.

r. arthritis. Form with inflammation of the joints, stiffness, swelling, cartilaginous hypertrophy, and pain. SEE: *arthritis*.

rhexis (rēks'is) [G. *rhexis*, a rupture]. The rupture of any organ, blood vessel, or tissue.

rhic'no'sis. Wrinkling of the skin due principally to atrophy of subcutaneous tissue, esp. elastic fibers.

rhinal (rī'nāl) [G. *rhis*, *rhin-*, nose]. Concerning the nose. SYN: *nasal*.

rhinalgia (rī-nāl'jī-ā) [" + *algos*, pain]. Pain in nose, nasal neuralgia.

rhinencephalon (rī-nēn-sēf'āl-ōn) [G. *rhis*, *rhin-*, nose, + *epēphalos*, brain].

Portion of brain concerned with reception and integration of olfactory impulses. Includes olfactory bulb, olfactory tract and striae, intermediate olfactory area, pyriform area, paraterminal area, hippocampal formation, and fornix. It constitutes the paleocephalon and archipallium.

rhinesthesia (rī-nēs-thē'zī-ā) [" + *aisthēsis*, sensation]. The sense of smell.

rhineurynter (rī-nū-rin'tēr) [" + *eurynein*, to dilate]. Elastic bag used for dilating the nostrils.

rhinion (rī'nī-ōn) [G. *rhinion*, nostril]. Lower end of the suture bet. nasal bones. A craniofacial point. SYN: *punctum nasale inferius*.

rhinitis (rī-nī'tis) [G. *rhis*, *rhin-*, nose, + *-itis*, inflammation]. Inflammation of the nasal mucosa. SEE: *endorrhinitis*, *ozena*.

r., acute. SYN: common head cold, *coryza*. Acute congested condition of nose with increased secretion of mucus.

ETIOLOGY: A filtrable virus.

TREATMENT: No specific treatment is known. General measures include rest, adequate fluids, well-balanced diet. Analgesics and antipyretics may be used to make patient comfortable. Sulphonamides and antibiotics are of no value.

Antihistamines may relieve early symptoms but do not "abort" or alter course. Vasoconstrictors in form of inhalants or nasal sprays or drops may give temporary relief.

r., allergic. SYN: *atopic rhinitis*, *vasomotor rhinitis*, *hay fever*. Rhinitis due to sensitivity of nasal mucosa to an allergen.

r., atrophic. Chronic inflammation with marked atrophy of mucous membrane with considerable dry crusting and disturbance in the sense of smell.

Usually accompanied by *ozena*. The throat is dry and, as a rule, contains crusts. A husky voice or hoarseness is often a common accompaniment.

SYM: Fetid odor from nose and throat, with considerable crusting.

TREATMENT: Irrigation of nose with warm alkalized saline solution twice daily. General hygienic measures. Correction of any associated disorders. Surgical treatment seldom helpful.

r., caseosa. Unilateral rhinitis characterized by accumulation in nose and sinuses of offensive cheese-like masses and accompanied by a seropurulent discharge.

r., chronic hyperplastic. Chronic inflammation of mucous membrane accompanied by polypoid formation and underlying sinus pathology. SEE: *sinus*.

r., chronic hypertrophic. Inflammation of the mucous membrane of the nose characterized by hypertrophy of the mucous membrane of the turbinates and the septum.

SYM: Those of nasal obstruction, post-nasal discharge and recurrent head colds.

TREATMENT: Consists in surgical removal of hypertrophic or mulberry ends of inf. turbinates and cauterization of mucosa of inf. turbinates and septum.

r., fibrinous. R. characterized by formation of a false membrane in nasal cavities.

r., hyperesthetic. Nonseasonal symptom complex depending on a conditioning predisposition of eyes and respiratory tract.

ETIOLOGY: Hyperplastic sinus disease, allergy, neuromotor instability, etc.

SYM: Nasal blockage, watery discharge from nose, sneezing.

TREATMENT: Extirpation of hyperplastic sinuses, skin tests for irritating substances with immunization, internal medication such as calcium, sedatives, etc. SYN: *vasomotor rhinitis*. SEE: *allergy*, *hay fever*.

r., perennial. SYN: *vasomotor r.*; *hyperesthetic r.* Rhinitis which is nonseasonal but continues indefinitely with variations in severity.

r., periodic. Allergic rhinitis, *q v*.

r., pseudomembranous. Fibrinous *r.*, *q v*.

r., vasomotor. SEE: *r., hyperesthetic*; *r., allergic*.

rhino- [G.]. Combining form meaning the nose.

rhinoantritis (rī'nō-ān-trī'tis) [G. *rhis*, *rhin-*, nose, + *antron*, cavity, + *-itis*, inflammation]. Inflamed condition of the nasal cavities and one or both maxillary antra.

rhinobyon (rī-nō-bī'ōn) [" + *byēnē*, to plug]. A tampon or plug for the nose.

rhinocanthectomy (rī'nō-kān-thēk'tō-mī) [" + *kanthos*, corner of the eye, + *ektomē*, excision]. Excision of inner canthus of the eye. SYN: *rhinomectomy*, *rhinocoele* (rī'nō-sē) [" + *kollos*, hollow].

The ventricle or hollow of the olfactory lobe or *rhinoencephalon*.

rhinochloplasty (rī'nō-kī'lō-plās-tī) [*+* *cheilos*, lip, *+* *plastos*, formed] Plastic surgery of the nose and upper lip

rhinocleisis (rī'nō-kī'lī'sis) [*+* *kleisis*, closure] Nasal obstruction

rhinodacryolith (rī'nō-dāk'rī-dō-lith) [*+* *dakryon*, tear, *+* *lithos*, stone] A nasal calculus.

rhinodynia (rī'nō-dīn'ī-ā) [G. *rhis*, *rhin-*, nose, *+* *odynē*, pain] Nasal pain SYN *rhinalgia*.

Rhinoestrous (rī-nēs'trūs). A genus of flies belonging to family Oestridae. Larvae inhabit nasal and buccal cavities of mammals

R. purpureus. Russian gad-fly, whose larvae sometimes cause naso- and ophthalmomyiasis in man

rhinogenous (rī-nōj'ēn-ūs) [*+* *gennan*, to produce]. Originating in the nose

rhinokyphosis (rī'nō-kī-fō'sis). A nose with an excessively prominent bridge

rhinolalia (rī'nō-lā-lī-ā) [*+* *lalia*, speech]. Nasal quality of voice

r. aperta. R. caused by undue patency of posterior nares

r. clausa. R. caused by closure of nasal passages.

rhinolaryngitis (rī'nō-lār-in-jī'tis) [*+* *laryx*, tube, *+* *-itis*, inflammation] Inflammation of mucosa of nose and larynx at the same time

rhinolite (rī'nō-līt) [*+* *lithos*, a stone]. A nasal calculus; stone in the nose

rhinolith (rī'nō-lith) [*+* *lithos*, stone]. Nasal concretion

rhinolithiasis (rī'nō-lith-i-ā-sis) [*+* *+* *-iasis*, condition]. The formation of nasal calculi.

rhinologist (rī'nō-lō-jist) [G. *rhis*, *rhin-*, nose, *+* *logos*, study]. A specialist in diseases of the nose.

rhinology (rī'nō-lō-jī) [*+* *logos*, study]. Science of the nose and its diseases.

rhinomanometer (rī'nō-mān-ōm'ēt-ēr) [*+* *manos*, thin, *+* *metron*, a measure]. A device for measuring the amount of nasal obstruction.

rhinometer (rī-nōm'ēt-ēr) [*+* *metron*, a measure]. Device for measurement of the nose.

rhinomiosis (rī'nō-mī-ō'sis) [*+* *meiōsis*, a lessening]. Surgical reduction in size of the nose.

rhinomectomy (rī-nōm-mēk'tō-mī) [*+* *omma*, eye, *+* *ektomē*, excision]. Surgical excision of the inner canthus.

rhinomycosis (rī'nō-mī-kō'sis) [*+* *mykēs*, fungus, *+* *-ōsis*, condition]. Fungi in mucous membranes and secretions of the nose.

rhinonecrosis (rī'nō-nē-krō'sis) [G. *rhis*, *rhin-*, nose, *+* *nekrosis*, death]. Necrosis of the nasal bones.

rhinopathy (rī-nōp'ā-thī) [*+* *pathos*, disease]. Any nasal diseases.

rhinopharyngitis (rī'nō-fār-in-jī'tis) [*+* *pharyx*, *pharyng-*, pharynx, *+* *-itis*, inflammation]. Inflamed condition of the nasopharynx.

rhinopharyngecele (rī'nō-fār-in-gō-sēl) [*+* *+* *kelē*, a mass]. A nasopharyngeal tumor.

rhinopharyngolith (rī'nō-fār-in-gō-lith) [*+* *+* *+* *lithos*, stone]. Concretion in the nasal pharynx.

rhinopharynx (rī'nō-fār'inks) [*+* *pharyx*, pharynx]. Upper portion of pharynx continuous with the nasal passages.

rhinophonia (rī'nō-fō'nī-ā) [*+* *phōnē*, voice]. A nasal tone in speaking.

rhinophyma (rī'nō-fī'mā) [G. *rhis*, *rhin-*, nose, *+* *phyma*, growth]. Lobular hypertrophy of nose, with red coloration, congestion and retention of sebum. SYN. *acne rosacea*

rhinoplasty (rī'nō-plās-tī) [*+* *plastos*, formed]. Plastic surgery of the nose.

rhinopolypus (rī'nō-pōl'ip-ūs) [*+* *polys*, many, *+* *pos*, foot]. Polypus of the nose.

rhinoreaction (rī'nō-rē-āk'shūn) [*+* *L. rē*, back, *+* *actio*, an acting]. Moeller's test for tuberculosis, a nasal tuberculin reaction

rhinorrhagia (rī'nō-rā-jī-ā) [*+* *rhēg-nūnai*, to burst forth]. Profuse hemorrhage from nose. SYN *epistaxis*, *nose-bleed*.

rhinorrhea (rī'nō-rē-ā) [*+* *rhoia*, a flow]. Thin, watery discharge from nose.

r. cerebrospinal. Discharge of spinal fluid from nose due to defect in cribriform plate.

rhinosalpingitis (rī'nō-sāl'pīn-jī'tis) [*+* *salpiz*, *salpigg-*, tube, *+* *-itis*, inflammation]. Inflammation of the mucosa of the nose and eustachian tube.

rhinoscleroma (rī'nō-skīl-ō-rō-mā) [G. *rhis*, *rhin-*, nose, *+* *sklēros*, hard, *+* *-ōma*, tumor] A chronic, infectious disease involving nose and upper portions of respiratory tract in which growths of almost stony hardness develop, sometimes leading to marked deformity.

ETIOL. *Klebsiella rhinoscleromatis*. A gram-negative encapsulated bacillus. SYN. The disease presents a hard, nodular growth, which usually begins at ant end of nose and spreads to the lower respiratory tract. There is usually no pain and no tendency to ulceration

TREATMENT. Variable. Surgery is of little value. Tracheotomy may be necessary. Roentgen rays and radium have been used with some success

rhinoscope (rī'nō-skōp) [*+* *skopem*, to examine]. Instrument for examination of the nose

rhinoscopy (rī-nōs'kō-pī) [*+* *skopein*, to examine]. Examination of nasal passages.

r. anterior. E. through anterior nares. **r. posterior**. E. through posterior nares usually with small mirror in nasopharynx.

rhinosporidiosis (rī'nō-spō-rīd'ī-ō'sis). Condition caused by a fungus, *Rhinosporidium seberi*, which causes development of pedunculated polyps on mucous membranes of nose, larynx, eyes, vagina and sometimes skin of various parts of body.

Rhinosporidium (rī'nō-spō-rīd'ī-ūm) A genus of fungi which is pathogenic to man

R. seberi. Causative agent of rhinosporidiosis, q.v.

rhinostenosis (rī'nō-sten-ō'sis) [*+* *stenōsis*, a narrowing]. Obstruction of the nasal passages. SYN: *rhinocleisis*.

rhinotomy (rī-nōt'ō-mī) [*+* *tomē*, incision]. Incision of the nose

rhinovaccination (rī'nō-vāk-sīn-ā'shūn) [*+* *L. vaccinus*, pert. to a cow]. Vaccine applied to the mucosa of the nose.

Rhipicephalus (rī'pī-sēf'ā-lūs). A genus of ticks belonging to the family Ixodidae. Several species, esp. *R. sanguineus*, serve as vectors for the organisms of spotted fever, boutonneuse fever, and other rickettsial diseases.

rhitidectomy (rī-tī-dēk'tō-mī) [G. *rhitis*, wrinkle, *+* *ektomē*, excision]. Removal of wrinkles by operation. SYN: *rhytidectomy*.

rhitidosis (rī-tī-dō'sis) [r' + -ōsis, condition]. 1. Wrinkling of face without corresponding signs of age. 2. Wrinkling of the cornea, indicating its disintegration. SYN: *rhytidosis*.

rhizo- [G.]. Combining form meaning *root*.

rhizodentropy (rī-zō-dōn'trō-pl) [G. *rhiza*, root, + *odont-*, tooth, + *tropē*, a turning]. Process of pivoting an artificial crown upon the root of a tooth.

rhizodentripy (rī-zō-dōn'trī-pl) [r' + " + *trypē*, a hole]. Puncture of root of a tooth.

rhizoid (rī'zoyd) [G. *rhiza*, root, + *eidōs*, form] 1. Rootlike. 2. A rootlike structure, usually one-celled, occurring in lower forms of plant life. 3. In bacteriology, term applied to a colony showing an irregular rootlike system of branching.

rhizome (rī'zōmē) [G. *rhizōma*, a mass of roots]. SYN: *root*, *stock*. An underground stem.

rhizomelic (rī-zō-mēl'ik) [G. *rhiza*, root, + *melos*, limb]. Concerning the hips and shoulders, in man the roots of the extremities.

Rhizopoda (rī-zōp'ō-dā) [G. *rhiza*, root, + *pous*, pod-foot]. A subclass of the class Sarcodina, phylum Protozoa, characterized by possession of lobose pseudopodia and lacking a central filament. Includes the amebae and foraminifera.

Rhizopus (rī'zō-pūs). The common bread mold, a genus of fungi belonging to the Phycmycetes. It is a common allergen.

rhizotomy (rī-zōt'ō-mī). [G. *rhiza*, root, + *tomē*, a cutting]. SYN: *Dana's operation*. Section of a root, as of a nerve or tooth.

r., *anterior*. Section of ventral root of spinal nerve.

r., *posterior*. SYN: *Dana's operation*. Section of dorsal root of spinal nerve for the relief of pain.

rhodogenesis (rō'dō-jēn'ēs-īs) [r' + *genesis*, formation]. Regeneration of visual purple bleached by light.

rhodophane (rō'dō-fān) [r' + *phainein*, to show]. A red pigment found in retinal cones of birds and fishes.

rhodophylaxis (rō'dō-fī-lāks'is) [r' + *phylaxis*, protection]. Ability of the retinal epithelium to regenerate visual purple which has been bleached by light.

rhodopsin (rō-dōp'sin) [r' + *opsis*, vision]. Visual purple, a pigment in outer segment of retinal rods.

rhombencephalon (rōm-bēn-sēf'ā-lōn) [G. *rhombos*, rhomb, + *egkephalos*, brain]. SYN: *hindbrain*. A primary division of the embryonic brain which gives rise to metencephalon and myelencephalon.

rhombocoele (rōm'bō-sēl) [G. *rhombos*, rhomb, + *kōilos*, a hollow]. The cavity of the rhombencephalon.

rhomboid (rōm'boyd) [r' + *eidōs*, shape]. Shaped like a rhomb.

r., *fossa*, r., *sinus*. The 4th ventricle of the brain.

rhomboldeus (rōm-boi'dē-ūs) [L.]. One of 2 muscles beneath the trapezius muscle. SEE: *Muscles*, *Table of*, in *Appendix*, *muscles*, *back*, for illustration.

rhoncal, **rhonchial** (rōng'kal, rōng'ki-āl) [G. *rhogchos*, a snore]. Pert. to or produced by a rhonchus, or rattle in the throat.

rhonchus (rōn'kūs) [G. *rhogchos*, a snore]. A rale or rattling in the throat, esp. when it resembles snoring.

rhoclacism (rō'tās'izm) [G. *rhōtakizein*, to overuse letter r]. Overuse or improper utterance of r sounds, with too much emphasis upon this letter.

rhubarb (rū'barb) [L. *rhobarbarum*, wild rhubarb]. USP Extract made from roots and rhizome of *Rheum officinale*, *R. palmatum*, and other species.

ACTION AND USES: Cathartic and astringent.

DOSAGE: 15 gr. (1.0 Gm.).

COMP: High in oxalic acid. Of little food value but desirable for its mineral content.

AV. SERVING: 90 Gm. Pro. 0.5, Fat 0.6, Carbo. 2.3.

VITAMINS: C+++ to +++++.

ASH CONST. Ca 0.044, Mg 0.017, K 0.325, Na 0.025, P 0.031, Cl 0.038, S 0.013, Fe 0.0010.

rhyostomatouria (rī'ō-sto-mā-tū'ri-ā) [G. *rhys*, fluid, + *stoma*, mouth, + *ouron*, urine]. The elimination of urinary elements by the salivary glands.

rhyparia (rī-pā'ri-ā) [G. *rhypparia*, filth]. 1. Foul substance in mouth in low fevers. SYN: *sordes*. 2. Filth.

rhypphagy (rī-pōf'ā-jī) [G. *rhypos*, filth, + *phagem*, to eat]. The eating of filth. SYN: *scatophagy*.

rhyphobia (rī-pō-fō-bī-ā) [r' + *phobos*, fear]. Abnormal disgust at the act of defecation, feces, or filth.

rhythm (rith'm) [G. *rhythmos*, measured motion] 1. A measured time or movement, regularity of occurrence. 2. Marking the intermenstrual periods of fertility and sterility in the female. SEE: *cacorrhythmic*.

r., *alpha*. SYN: *Berger rhythm* or *wave*, *alpha wave*. In electroencephalography, rhythmic oscillations in electric potential occurring at a rate of 8 to 10 per sec. Characteristic of inattentive brain or in drowsiness or narcosis.

r., *atrioventricular nodal*. SYN: *A-V nodal rhythm*. Rhythmic discharge of impulses from atrioventricular (A-V) node which occurs when activity of S-A node is depressed or abolished. If impulses arise in upper or atrial portion of node, the atria are activated slightly before ventricles (*upper nodal rhythm*); if in middle portion, atria and ventricles contract simultaneously (*middle nodal rhythm*); if in lower or ventricular portion, atria are activated slightly before ventricles (*lower nodal rhythm*).

r., *Berger*. Alpha rhythm, *q.v.*

r., *beta*. SYN: *beta waves*. In electroencephalography, waves ranging in frequency from 15 to 60 per sec and of low voltage (5-10 microvolts). More pronounced in frontomotor leads.

r., *bigeminus*. The coupling of extrasystoles with previously normal beats.

r., *cantering*. Gallop rhythm, *q.v.*

r., *coupled*. One in which every other heartbeat produces no pulse at the wrist.

r., *delta*. SYN: *delta waves*. In electroencephalography, slow waves with a frequency of 1 to 5 per sec and of relatively high voltage (20 to 200 microvolts). Occur in sleep.

r., *ectopic*. A cardiac rhythm originating outside S-A node. May be *homotropic* or *heterotropic*, *q.v.*

r., *gallop*. Abnormal heart rhythm with three sounds in each cycle resembling gallop of a horse.

r., *gamma*. SYN: *gamma waves*. In electroencephalography, rapid waves with a frequency of 40 to 50 per sec.

r., *idioventricular*. Rhythm of ventricles occurring in heart block resulting from establishment of a new center of rhythmicity in ventricular myocardium, usually in bundle of His.

r., *nodal*. SEE: r., *atrioventricular*.

r., pendulum. R. with the 2 heart sounds alike, with the sound of a ticking clock.

r., sinus. The normal cardiac rhythm proceeding from the sinoauricular node.

r., ventricular. Very slow ventricular contractions in heart block.

rhythm. Rhythmical; pertaining to or marked by rhythm.

rhythmicity (ritm-*mī*'tī). Characterized by rhythmic activity

rhytidectomy (rit-id-*ék*'tō-mī) [*G. rhytis*, wrinkle, + *ektomē*, excision]. Excision of wrinkles by plastic surgery.

rhytidosis (rit-id-*ōs*'is) [*1*' + -*ōsis*, condition]. 1. Wrinkling of the skin. 2. Wrinkling of cornea.

Occurs in cases of great diminution in tension of eyeball, particularly after the escape of aqueous or vitreous, usually near death. **Syn:** *rhytidosis*

rib (rib) [*A.S. ribb*]. One of a series of 12 pairs of narrow, curved bones extending laterally and anteriorly from sides of thoracic vertebrae and forming a part of the skeletal thorax. With the exception of the floating ribs, they are connected to the sternum by means of costal cartilages

r., asternal. A false rib, *q.v.*

r., bicipital. Condition usually involving the first rib. Results from fusion of two ribs.

r., cervical. A supernumerary rib sometimes developing in connection with a cervical vertebra, usually the lowest

r.s., false. Five ribs on each side not directly attached to the sternum.

r.s., floating. Two lower ribs not attached to the sternum

r., lumbar. A rudimentary rib which develops in relation to a lumbar vertebra

r., sternal. A true rib

r.s., true. The upper 7 ribs on each side which join the sternum by separate cartilages.

riboflavin (rib'ō-flāv-in). **Syn:** *vitamin B₂*, *vitamin G*, *lactoflavin*, *ovoflavin*, *hepatoflavin*. A water-soluble vitamin of the B complex group. It is an orange-yellow crystalline powder ($C_{17}H_{20}NO_6$), comparatively stable to heat and air but unstable in light.

Sources: Milk and milk products, leafy green vegetables, liver, beef, fish, dry yeast. Also synthesized by bacteria in body.

Daily Requirement: 15 to 20 mg depending on activity. For pregnant and lactating women, should be doubled.

Effects of Deficiency: Eye disorders, cheilosis, glossitis, seborrheic dermatitis, esp. of face and scalp.

Functions: It is a constituent of certain flavoproteins which function as coenzymes in cellular oxidations. Essential for tissue repair

ribonuclease (rib-ō-nū'kle-ās). An enzyme which catalyzes the depolymerization of ribonucleic acid (RNA) with formation of mononucleotides. **Abbr:** *RNA-ase*.

rib'omū'cle'ic' acid. **Abbr:** *RNA*. A nucleic acid found principally in the nucleolus, microsomes, and mitochondria of cells. It appears to play an important role in synthetic reactions within cells.

ribose. $C_5H_{10}O_5$, a pentose sugar present in ribonucleic acids, riboflavin, and some nucleotides

rice (ris) [*G. oryza*]. 1. A cereal grass (*Oryza sativa*) raised extensively in warm climates for its seed or grain. 2. The seeds of rice plant widely used as a food.

Comp: Poor in nitrogen and fats; high in carbohydrates. Lowest of all cereals in albumin. Shelled rice contains half as much phosphorus and lime as white bread, while magnesium is lower and iron a little higher. Potassium much higher than in other cereals. Cellulose is higher than in bread and residue greater.

Av. Serving (brown and white). 20 Gm. Pro. 1.3, Fat 0.5-0.1, Carbo. 15.3-16.2.

Vitamins (brown): A+, B+, G+; (white): C+.

ASH CONST. (brown): P 0.207, Fe 0.0020, 0.033, K 0.070, Na 0.025, P 0.096, Cl 0.054, S 0.117, Fe 0.0009. An acid-forming food.

POTENTIAL ACIDITY. 9 cc. per 100 Gm., 2.6 cc. per 100 cal.

Action: Easier to digest than bread, but large quantities tax the digestive system. In cooking, the starch is partly converted into dextrin. It is highly nutritive and strengthening.

r. water stools. Those of cholera which resemble water in which rice has been boiled

ric'in. A white, amorphous, highly toxic protein (albumin) present in the seed of the castor bean, *Ricinus communis*

ricinine (ris'in-in) A poisonous alkaloid present in the leaves and seeds of castor bean plant *Ricinus communis*

ricinoleic acid. 12-hydroxy-9-octadecenoic acid. An unsaturated hydroxy acid comprising about 80% of fatty acids in the glycerides of castor oil. Has a strong laxative action

rickets (rik'ets). **Syn:** *rachitis*, *avitaminosis D*. A form of osteomalacia in children resulting from deficient deposition of lime salts in developing cartilage and newly formed bone, resulting in abnormalities in shape and structure of bones

Error: Due primarily to vitamin D deficiency which affects the absorption of calcium and phosphorus from the intestine and the reabsorption of phosphorus by the renal tubules. May also result from inadequate intake or excessive loss of calcium

Sym. Restlessness and slight fever at night (101-102° F.), free perspiration about head, diffuse soreness and tenderness of body, pallor, slight diarrhea, enlargement of liver and spleen, delayed dentition and eruption of badly formed teeth, head large and more or less square in outline, craniotabes or skull bones often so thin they crackle like parchment.

Sides of thorax flattened; sternum prominent; nodules can be felt at sternal ends of ribs, forming "rachitic rosary." Deformity may be kyphosis, lordosis or scoliosis. Liver and spleen may be considerably enlarged, long bones are curved and prominent at their extremities. Bowels constipated, abdomen distended.

Progn. Serum phosphatase studies are helpful in making diagnosis and prognosis. Usually favorable. Deformity disappears in 80% of cases.

PROPHYLAXIS AND TREATMENT: Exposure to ultraviolet light (sunlight or artificial light) and administration of vitamin D in quantities to provide 400 to 800 International Units of vitamin D activity per day are effective in prevention of rickets.

For active rickets, careful regulation of diet to meet nutritive requirements of the child plus administration of 4000 to 5000 I.U. of vitamin D per

day is usually effective. Some bone deformities may require surgery.

CAUTION: Excessive use of vitamin D (in infants, over 20,000 IU daily, in adults over 100,000 IU daily) is to be avoided because of danger of hypervitaminosis D.

r., renal. SYN *renal osteitis fibrosa generalisata*. A disturbance in epiphyseal growth during childhood due to severe chronic renal insufficiency resulting in persistent acidosis.

Dwarfism and failure of gonadal development result.

PROG: Poor.

TREATMENT: Diet low in meat, milk, cheese and egg yolk and adm of calcium lactate or calcium gluconate in large doses.

rickettsia (rik-ët'si-ä). Term applied to any of the microorganisms belonging to the genus *Rickettsia*, q v

Rickettsia. Generic name applied to a group of microorganisms, family Rickettsiaceae, order Rickettsiales, which occupy a position intermediate between viruses and bacteria. They differ from bacteria in that they are obligate parasites requiring living cells for growth and differ from viruses in that with one exception (*R. burnetti*) they are retained by the Berkfield filter. They are the causative agents of many diseases and are usually transmitted by arthropods (lice, fleas, ticks, mites) which serve as vectors. SEE *rickettsial diseases*, *rickettsiosis*.

rickettsial disease. A disease caused by an organism of the genus *Rickettsia*. R diseases fall into four groups: spotted-fever group (Rocky Mt. spotted fever, African tick fever, rickettsial pox), typhus group (endemic typhus, epidemic typhus, Brill's disease, and scrub typhus); Q fever, trench fever.

rickettsialpox (rik-ët'si-äl-pöks). An acute, febrile, self-limited disease caused by *Rickettsia akari*. It is transmitted from mouse to man by a small colorless mite, *Allotheria-anysus sanguineus*.

rickettsiosis. Infection with *Rickettsia*.

Riddock's mass reflex. Flexion of 1 or both lower extremities with involuntary emptying of bladder and sweating in lower regions when stimulation is applied below level of a spinal cord injury.

riders' bone (ri'derz). Bony formation in adductor muscle of leg from pressure on the saddle. SYN *cavalry bone*.

r. leg. r. sprain. Sprain of adductor muscles of the thigh.

ridge (ri) [ME. *rigge*, from AS *hrycg*, back of an animal]. An elongated projecting structure or crest.

r., carotid. A sharp ridge between carotid canal and jugular fossa.

r., epicondylar. One of 2 ridges for muscular attachments on the humerus.

r., gastrocnemial. A ridge on post. femoral surface for attachment of gastrocnemius muscles.

r., genital. R. which develops on ventromedial surface of urogenital ridge and gives rise to gonads.

r., gluteal. A ridge extending obliquely downward from great trochanter of femur for the attachment of the gluteus maximus muscle.

r., interosseous. A ridge on the fibula for attachment of the interosseous membrane.

r., mesonephric. Ridge which develops on lat. surface of urogenital ridge and gives rise to mesonephros.

r., pronator. Oblique ridge on the ant.

surface of ulna, giving attachment to the pronator quadratus.

r., pterygoid. One at angle of junction of temporal and infratemporal surface of great wing of the sphenoid bone.

r., superciliary. **r., supraorbital.** Curved ridge of the frontal bone over supraorbital arch.

r., supracondylar. One of two ridges (lateral and medial) on distal end of humerus extending upward from lat. and med. epicondyles.

r., tentorial. One on upper inner surface of the cranium to which is attached the tentorium.

r., trapezoid. An oblique ridge on the upper surface of the clavicle giving attachment to the trapezoid ligament.

r., urinogenital. SYN *urogenital fold*, *wolfian ridge*. Ridge on dorsal wall of coelom which gives rise to genital and mesonephric ridges, q v.

r., wolfian. *Mesonephric ridge*, q v. **ridgel**, **ridgill**, **ridgling** (ri'jél, -il, -ling) [origin uncertain]. One with 1 testicle removed.

Riedel's lobe (rē'dél). A tongue-shaped process of liver, frequently found protruding over gallbladder in cases of chronic cholecystitis.

Riegel's test meal (rē'gēl). Mutton broth, 200 cc.; beefsteak, 200 Gm.; mashed potato, 50 Gm.; bread or rolls, 50 Gm.; water, 200 cc. The stomach contents are expressed in 6 hours.

Riga's disease (rē'gā). Ulceration of frenum of the tongue with membrane formation.

Rigo's disease (rig). Formation of pus in teeth sockets with inflammation of the gums. SYN: *pyorrhea alveolaris*, q v.

right. Dextral; pert to side of body opposite to that on which apex beat of heart is heard or felt, the opposite of left. Abbr. R.

rigid. Stiff, hard, unyielding.

rigidity (rij-id'ti) [L. *rigidus*, stiff]. Tenseness, immovability; stiffness; inability to bend or be bent.

r., cadaveric. Rigor mortis.

r., cerebellar. Stiffness of body and extremities resulting from lesion of middle lobe of cerebellum.

r., cogwheel. Condition noted upon passively stretching a hypertonic muscle in which resistance is jerky.

r., decerebrate. Sustained contraction of extensor muscles of limbs resulting from a lesion in the brain stem between sup. colliculi and vestibular nuclei.

rigor (ri'gōr, rig'or) [L. *rigor*, stiffness].

1. A sudden, paroxysmal chill with high temperature, called the *cold stage*, followed by a sense of heat and profuse perspiration, called the *hot stage*. 2. A state of hardness and stiffness, as in a muscle. Rigor chillis may be coarse, fine, diffuse, trembling.

r. mortis. The stiffness seen in corpses.

The rigidity of death which begins after 8, 10 or 20 hr. and may last 9 days. SEE: *dead*, *care of the*; *Nysten's law*.

rima (ri'ma) (pl. *rimae*) [L. *rima*, a slit]. A slit, fissure, or crack.

r. corneal. Groove in the sclera holding edge of the cornea. SYN: *corneal cleft*.

r. glottidis. An elongated slit between the vocal folds.

r. oris. Aperture of the mouth.

r. palpebrarum. Slit bet. the eyelids.

r. pudendi. Space bet. the labia

majora. SYN: *puddendal slit, vulvar slit, urogenital cleft*.

r. respiratoria. Space behind the arytenoid cartilages

r. vestibuli. BNA. Space bet. the false vocal cords SYN: *glottidis spuria*.

r. vocalls. SEE *r. glottidis*

rimose, rimose (rīm'ōs, rīm'ōs) [L. *rimōsus*, full of cracks]. Fissured or marked by cracks.

rimous (rīm'ūs) [L. *rimōsus*, full of cracks]. Filled with cracks or fissures SYN: *rimose*.

rimula (rīm'ū-lā) [L. *rimula*, a little crack] A minute fissure or slit, esp. of the spinal cord or brain.

rind (rind) [A.S. *bark*]. The skin or cortex of an organ or person

r. tumor. Neoplasm arising from lining membrane tissue of the embryo SYN: *lepidoma*.

ring (ring) [A.S. *hring*]. 1 Any round organ or band around a circular opening 2 BACT A growth like a ring around upper margin of a liquid culture, adhering to the glass more or less closely SEE: *annulus*

r., ciliary. SYN: *orbicularis ciliaris* Portion of ciliary body consisting of a bandlike zone lying directly anterior to ora serrata

r., femoral. The sup. aperture of femoral canal

r., inguinal, abdominal. SYN: *internal abdominal ring* The abdominal opening of the inguinal canal

r., inguinal, subcutaneous. SYN: *external abdominal ring* The external opening of inguinal canal

r., tympanic. SYN: *tympanic annulus* A ring of bone formed by three elements, squamous, petro-mastoid and tympanic which develops into tympanic plate

Ringer's solution (ring'er) An aqueous solution containing 0.7% sodium chloride, 0.03% potassium chloride, and 0.025% calcium chloride

Uses: In forms of dehydration, and for improving circulation

Dosage: From 500 to 1000 cc., all parenteral routes, chiefly subcutaneously

RINGWORM OF HAIR.

Granular threads of the parasite invade and destroy the hair shaft.

ringworm (ring'würm) A dermatomycosis due to various species of fungi belonging to the genera *Microsporum* and *Trichophyton*.

Ringworms of the scalp is called *Tinea capitis*; of the body, *Tinea corporis*; of the beard, *Tinea barbae*; of the nails, *Tinea unguium* SEE: *tinea*

SYM: Red ringed patch of vesicles, itching, pain, scaling.

TREATMENT: Paint affected parts with iodine 3 times a day Expose affected

patches to the x-ray. Also powder composed of salicylic acid, 5 Gm.; menthol, 2 Gm.; camphor, 8 Gm.; boric acid, 50 Gm., starch, 35 Gm., applied 3 times daily for ringworm of the feet. SEE: *athlete's foot*.

r., crusted. SYN: *favus, tinea favosa* Q.v.

r., honeycomb. SEE: *r., crusted*

Rinne's test (rin'nēh). A test to ascertain condition of various parts of the ear with a vibrating tuning fork held over the mastoid process. SEE: *test*

Riolan's arch (rî-ô-lahn'). Arch of transverse mesocolon

R's, bouquet. Two ligaments and 3 muscles attached to styloid process of temporal bone

R's, muscle. Ciliary portion of orbicularis cilli SYN: *musculus ciliaris*

ripa (rî'pā) [L. *ripa*, bank]. Any line of reflection of the endyma of the brain from a ventricular surface.

Ripault's sign (rî-pôz') Change in shape of pupil produced by unilateral pressure upon eyeball, transitory phase during life, but permanent after death

risorius (rî-sô'ri-ūs) [L.] Muscular fibrous band arising over masseter muscle and inserted into tissues at the corner of the mouth. SEE: *Muscles, Table of, in Appendix*.

risus (rî'ūs) [L.] Laughter, a laugh **r. sardonius.** A peculiar grin, as seen in tetanus, caused by acute spasm of facial muscles

Ritter's disease (rî'tēr). 1 Severe inflammation of skin with scaling, seen in infants. SYN: *dermatitis exfoliativa infantum*. 2 Fatal disease of infants marked by hemorrhage, jaundice and cyanosis.

Ritter-Valli law (rî'tēr-vāl'l). Increased irritability from center outward if a nerve is cut off from its center or if the latter is destroyed

Irritability is soon lost

ri'valry strife. Alternate sensations of color and shape when the fields of vision of the 2 eyes cannot combine in 1 visual image

Rivalta's disease (rē-val'tā). Chronic inflammation with lumpy formations and suppuration about the jaws. SYN: *actinomycosis, lumpy jaw*.

Rivinus' canals or ducts (rî-ve'nūs). Ducts of sublingual gland.

R's, glands. Sublingual glands.

R's, ligament. Small portion of the drum membrane in notch of Rivinus SYN: *Shrapnell's membrane*.

R's, notch. Cleft in upper part of long tympanic ring, filled by Shrapnell's membrane.

riziform (rîz't-form) [Fr. *riz*, rice, + *forma*, form]. Resembling rice grains.

RLF. Abbr. for *retrolental fibroplasia*, q.v.

RLS person. One who stammers and usually mispronounces these letters

R. M. A. Abbr. of *right mentoanterior presentation of the fetal face*.

R. M. P. Abbr. of *right mentoposterior presentation of the fetal face*.

R. N. Abbr. for *Registered Nurse*.

RNA. Abbr. for *ribonucleic acid*, q.v.

Robertson's pupil. Same as *Argyll-Robertson pupil*

roborant (rôb'ô-rānt) [L. *roborans*, strengthening]. 1. A tonic. 2. Strengthening.

Rochelle salt (rô-shēll'). USP. Potassium and sodium tartrate, a colorless, transparent powder, having a cooling and saline taste.

ACTION AND USES Saline cathartic.

DOSAGE From 1 to 4 drams (4-15 Gm.).

Rocky Mountain spotted fever. An infectious disease caused by a parasite and transmitted by a wood tick, marked by fever, pains in bones and muscles, and profuse reddish eruption.

In the Rocky Mountains and on the Pacific Coast the mortality is no longer high. *See spotted fever, tick fever.*

rod (rôd) [A.S. *rodd*, club]. 1. Slender, straight bar. 2. One of the slender, long sensory bodies in retina responding to faint light. 3. Bacterium shaped like a rod.

r's. and cones. The light-sensitive portions of rod and cone visual cells of the retina. They form the 2nd layer lying between ext. limiting membrane and pigment epithelium. The rods contain visual purple (rhodopsin), essential for vision in dim light.

r's., enamel. Minute calcareous rods or prisms laid down by ameloblasts and forming enamel of a tooth.

rodent ulcer (rô'dên-t). [L. *rodere*, to gnaw] A slow growing, gnawing cancer which steadily eats into tissues, causing great destruction.

The most usual sites are on outer angle of the eye, near side and on tip of nose, and edges of the scalp. *See: ulcer, rodent*

rodenticide. An agent which kills rodents.
rododalgia (rô-dôn-âl'jî-â) [G. *rhodon*, rose, + *algos*, pain] Vasomotor condition marked by redness and neuralgic pain of the extremities and swelling, and fever. *SYN erythromelalgia.*

roentgen (rênt'gên). The international unit of quantity of roentgen rays adopted by the Second International Congress of Radiology at Stockholm in 1928.

roentgenologist (rênt'-gên-ôl'ô-jist) [roentgen + G. *logos*, study]. A physician skilled in roentgen diagnosis, roentgen therapy, or both.

roentgenology (rênt'-gên-ôl'ô-jî) [roentgen + G. *logos*, study]. The science of applying roentgen rays for diagnostic and therapeutic purposes.

roentgenotherapy, roentgentherapy (rênt'-gên-ô-ther-â-pî, rênt'-gên-ther-â-pî) [roentgen + G. *therapeia*, treatment]. The treatment of disease by exposure of the patient to roentgen rays.

r., radicular. The application of roentgen rays to the roots of nerves where they emerge from the spinal cord.

roentgenography (rên-tôg'râ-flî) [roentgen + G. *graphein*, to write]. The making of x-ray pictures. *SYN roentgenography, skiagraphy.*

roeteln, roetheln (ret'ên). German measles, *q.v.* *SYN rubella.*

Rokitansky's disease (rô-kît-ân'skî). Acute yellow atrophy of the liver.

Rolando's area. Motor area in the cerebral cortex.

R. fissure. Fissure bet. parietal and frontal lobes. *SYN sulcus centralis.*

roller (rôl'er) [L. *rotula*, a little wheel]. 1. Strip of muslin or other cloth rolled up in cylinder form for surgeon's use. 2. A roller bandage. *See: bandage.*

Rollier technic (rôl'ê-â). Method of using heliotherapy in which the body is gradually exposed to the sun's rays.

romaine (rô-mân') [Fr. *romaine*, Roman].
AV. SERVING 50 Gm. Pro. 0.5, Carbo. 1.5.
VITAMINS: A++, B++.

ASH CONST: Ca 0.045, Mg 0.032, K 0.306, Na 0.016, P 0.053, Cl 0.073, S 0.019, Fe none.

Roman numerals. Those used by the Romans in contradistinction to the Arabic numerals which we now use.

In Roman notations values are increased either by adding 1 or more symbols to the initial symbol, as III for 3, or by subtracting a symbol from 1 or more to the right of it, as IV for 4, IX for 9, etc., as shown in the following table:

Arabic	Roman	Arabic	Roman
1	I	18	XVIII
2	II	19	XIX
3	III	20	XX
4	IV	30	XXX
5	V	40	XL
6	VI	50	L
7	VII	60	LX
8	VIII	70	LXX
9	IX	80	LXXX
10	X	90	XC
11	XI	100	C
12	XII	500	D
13	XIII	900	CM
14	XIV	1,000	M
15	XV	1,900	MCM
16	XVI	1,000,000	M
17	XVII		

A line placed over a letter increases its value 1000 times, as \overline{M} is equal to 1000 times 1000 for which the M stands.

romanopexy (rô-man'ô-pêks'î) [L. *romanum*, the sigmoid, + G. *pêxis*, fixation] Fixation of the sigmoid flexure for prolapse of the rectum. *SYN sigmoidopexy.*

romanoscope (rô-mân'ô-skôp) [“ + G. *skopein*, to examine] Instrument for examining the sigmoid flexure.

Romberg's sign (rôm'bêrg) Inability to maintain the body balance when the eyes are shut and the feet close together, seen in tabes dorsalis, severe alcoholic neuritis, etc.

rongeur (ron-zhûr') [Fr. *ronger*, to gnaw] A gouge forceps, an instrument for removing tiny fragments of bone.

roof nucleus (rûf nu'kle-us). Small mass of gray matter in white substance of vermis of the cerebellum. *SYN nucleus fastigii.*

root (rût) [A.S. *rôt*]. 1. The underground part of a plant. *Ex Stillingia, Glycyrrhiza, Belladonna.* 2. Proximal end of a nerve. 3. Portion of an organ implanted in tissues.

r., anterior. *SYN ventral root* One of two roots by which a spinal nerve is attached to spinal cord. Contains efferent nerve fibers. Also called motor root.

r. arteries. A accompanying nerve roots into the spinal cord. *SYN radicular vessels.*

r. canal. Pulp cavity of root of tooth.

r., posterior. *SYN dorsal root* One of two roots by which a spinal nerve is attached to spinal cord. Contains afferent nerve fibers. Also called sensory root.

r. sheath. Epithelium covering the hair follicle.

r. zone. Burdach's column of the spinal cord. Outer tract of post. funiculus or white column of the cord. *SYN: fasciculus cuneatus.*

R. O. P. Abbr. for *right occipitoposterior presentation*, i.e., the occiput of fetus being in relation to the right sacroiliac joint of the mother.

rosa (rô'zâ) [L.]. Rose.
r. asturica. Deficiency disease due to lack of vitamin B₉. *SYN: pellagra.*

rosacea (rō-zā'sē-ā) [L. *rosaceus*, rosy]. Chronic hyperemic disease of the skin, esp. of the nose. SYN. *acne rosacea*.

rose cold or **rose fever**. Summer or June cold; hay fever of early summer attributed to inhaling rose pollen. SEE. *hay fever*.

Rosenbach's sign (rō'zēn-bāhk). One of 4 signs: absence of abdominal reflex in intestinal inflammation.

Rosenheim's enema (rō'zēn-hīm). A nutrient enema containing cod liver oil, sugar and peptone in a 3% soda solution. SEE. *enema*.

Rosenmüller's body (rō'zēn-mū-ler). Rudimentary tubule in the mesosalpinx bet. the fallopian tube and ovary. SYN: *epoophoron, parovarum*.

R's. cavity, R's. fossa. Slitlike depression in the pharyngeal wall behind opening of the eustachian tube.

roseo- [L.]. 1. Combining form meaning *rose-colored*. 2. A prefix in chemical terms.

roseola (rō-zē'ō-lā) [L. *roseus*, rosy]. 1. Skin condition marked by maculae or red spots of varying sizes on the skin; a rose-colored rash. 2. Measles or German measles. SEE. *roseolous, rose rash*.

r. idioopathica. Macular eruptions not associated with any well-defined symptoms.

r. infantum. SYN. *exanthem subitum*. A noninfectious roseola occurring in infants, characterized by high fever and splenomegaly.

r. symptomatica. Macular eruption occurring in well-defined diseases.

roseolous (rō-zē'ō-lūs) [L. *roseus*, rosy]. Resembling or pert. to roseola.

rose rash (rōz rāsh). Any red colored eruption. SYN. *roseola*.

Roser's position (rō'zer). Head downward for operations on the air passages.

R's. sign. No pulsation of dura mater after trephining, indicative of a subcortical lesion.

rosette. 1. Something that resembles a rose. 2. A spherical group of fine red vacuoles surrounding cytocentrum of a monocyte.

rose water (rōz wau'ter). Saturated aqueous solution of the oil of rose. ACTION AND USES. To impart agreeable odor to lotions, etc.

rosin (rōz'īn) [L. *resina*]. Substance distilled from oil of turpentine and used as adhesive and stimulant on plasters.

Rossbach's disease (rōs'bāhks). Excessive secretion of gastric juice. SYN. *gastrozysis, hyperchlorhydria*.

Rossolima's reflex (rōs-ō-lē'mō). Plantar flexion of 2nd to 5th toes in response to percussion of plantar surface of the toes.

Ross' bodies (rōs). Bodies sometimes found in tissue fluids in syphilis. They are copper-colored, round and dark granules sometimes exhibiting amoeboid movements.

rostellum (rōs-tē'lūm) [L. *rostellum*, little beak]. A fleshy protrusion on anterior end of scolex of tapeworms bearing one or more rows of spines or hooks.

rostral (rōs'trāl) [L. *rostrum*, beak]. 1. Resembling a beak. 2. Toward the front or cephalic end of the body.

rostrate (rōs'trāt) [L. *rostrum*, beak]. Having a beak or hook formation.

rostrum (rōs'trūm) [L. *beak*]. Any hooked or beaked structure.

rosulate (rōs'ū-lāt) [L. *rosulatus*, like a rose]. Shaped like a rosette.

rot. To decay or decompose.

r., jungle. Common term for certain fungus diseases of the skin occurring in the tropics.

rotate (rō'tāt) [L. *rotāre*, to turn]. To twist or revolve.

rotation (rō-tā'shūn) [L. *rotatio*, a turning]. Process of turning on an axis.

r., fetal. Twisting of the fetal head as it follows the curves of the birth canal, downward.

rotator (rō-tā'tor) (pl. *rotatores*) [L. that which turns]. A muscle revolving a part on its axis.

r., uterine. An elevator or replacer used to push or rotate the uterus when it is out of its natural position.

röteln, rōtheln (re'teln) [Ger. *rot*, red]. German measles. SYN. *rubella*.

Rothera's test (rōth'ē-rā). Method for finding acetone bodies in urine. SEE. *acetone*.

Rouget cells. Contractile cells which surround the capillaries, observed in frogs and salamanders.

roughage (rūf'ij) [M.E. *rough*, from A.S. *rūh*]. Indigestible fiber of fruits, vegetables, and cereals which acts as a stimulant to aid intestinal peristalsis.

Plenty of water should be added to consumption of roughage. Should not be used in colitis or in intestinal irritation. SEE. *cellulose*.

r. diet. Diet with large amounts of cellulose, water, mineral salts and vitamins. SYN. *high residue diet*.

rough on rats. A proprietary rat poison.

POISONING SYM. Pain and burning in stomach. Vomiting and diarrhea which cause great thirst, shock. Extremities are cold, cold sweats; pulse weak and rapid, exhaustion.

P. A. TREATMENT. Empty stomach with stomach pump, or give emetic. Wash stomach out with large quantities of soapy water. SEE. *arsenic, barium*.

rouleau (roo-lō') (pl. *rouleaux*) [Fr. *roll*]. A group of red blood corpuscles arranged like a roll of coins.

round (rownd) [L. *rotundus*, round]. Circular in shape.

r. ligament. 1. Curved fibrous cord attached to center of articular surface of head of femur. 2. Two round cord-like structures passing from front of the body of the uterus in ant. wall of broad ligament, below the fallopian tubes, outward through the inguinal canals to soft tissues of the labia majora. 3. Fibrous cord which is the remnant of umbilical vein.

roundworm. SYN. *threadworm*. Any member of the phylum Nematelminthes (Aschelminthes), esp. one belonging to the class Nematoda. *q.v.*

RPF. Abbr. for *renal plasma flow*.

RFS. Abbr. for *renal pressor substance*. SEE. *renin*.

R. Q. Abbr. for *respiratory quotient*.

-rrhagia (rā'ij-ā) [Gr. *-rrhōgō*, from *rhēgnai*, to burst forth]. Combining form indicating abnormal discharge, hemorrhage.

R.S.A. Abbr. for *right sacroanterior position of fetus*.

R.T. Abbr. for *reading test, registered technician*.

R.U. Abbr. for *rat unit*.

Ru. Chem symbol for *ruthenium*.

rubber dam. Thin rubber tissue used by dentists, and as covering for dry dressings.

rubedo (rū-bē'dō) [L.]. Temporary redness of the skin. SYN: *blushmg*.

rubefacient (rū'be-fā'shēnt) [L. *rubefa-*

ciens, making red]. 1. Causing redness, as of the skin. 2. Agent which reddens the skin, producing a local congestion, the vessels becoming dilated and the supply of blood increased.

The rubefacients include. (a) *mustard*; (b) *turpentine*; (c) *capsicum*; (d) *flaxseed*, (e) *arnica*, and (f) *liniments*. **rubella** (rû-bêl'lâ) [L. *rubellus*, reddish]. Acute infectious disease, resembling both scarlet fever and measles, but differing from these in its short course, slight fever and freedom from sequelae. **SYN.** *German measles*, *roteln*.

INCUBATION: 5-21 days. It produces a maculopapular rash which vanishes by slight desquamation in from 2 to 3 days.

SYM. Prodromes, slight or altogether absent. Drowsiness, slight fever, sore throat. Eruption 1st or 2nd day. In some cases, rash composed of pale red, scarcely elevated papules, more or less discrete rubella morbilliforme, in others, rash is bright red and diffuse like that of scarlet fever, rubella scarlatiniforme.

Begins on face, spreads rapidly over whole body, but fades so rapidly that face may be clear before extremities are affected. Slight desquamation frequently present, though not always. Superficial cervical and posterior auricular glands more swollen than in measles. Duration, 3 to 5 days.

COMPLICATIONS. Rubella in pregnant women, esp in first two or three months of gestation, is serious in that it may give rise to fetal anomalies, esp. congenital cataract.

PROG. Good.

TREATMENT. Rest. Liquid diet. Refrigerants. Sponging with tepid water.

rubecula (rû-bê-ô-lâ) [L. *rubescens*, reddish]. 1. Acute, contagious disease, marked by fever, catarrhal symptoms and a typical cutaneous eruption. **SYN.** *measles*. 2. Term occasionally applied to acute infectious disease with mild symptoms and rose-colored macular eruption. **SYN:** *German measles*, *rubella*.

rubescence (rû-bê-sênt) [L. *rubescere*, to grow red]. Growing red; flushing.

rubidum (rû-bid'ûm) [L. *rubidus*, red]. A soft, silvery metal which decomposes water with violence and bursts into flame spontaneously in air. Its salts are used medicinally. **SYMB:** Rb. At. Wt. 85.44.

rubiginous (rû-bij'in-ûs). Rusty or rust-colored. [mildew].

rubigo (rû-bi-gô) [L. *rust*, mildew]. Rust; **Rubin's test** (rû-bin). Transuterine insufflation with carbon dioxide to test the patency of the fallopian tubes. **SEE:** *sterility*.

rubor (rô-ôr) [L. *redness*]. Discoloration or redness due to inflammation.

One of the classical symptoms of inflammation. **RS:** *color*, *dolor*, *tumor*.

rubrospinal (rû-brô-spî-nâl) [L. *ruber*, red, + *spina*, thorn]. A descending tract consisting of a small bundle of nerve fibers in lateral funiculus of spinal cord. Fibers arise in cells of the red nucleus of midbrain and terminate in ventral horn of gray matter.

rubrum (rû-brum) [L. red]. Reddish nucleus of gray matter in crus cerebri near optic thalamus.

r. scarlatinum. N.F. Scarlet red, a substance used as a healing agent and stain.

ruetus (rûk'tûs) [L.]. Belching of wind from stomach.

rudiment (rû-dim-ênt) [L. *rudimentum*, a wild thing]. 1. That which is undevel-

oped. 2. **Biot:** A part just beginning to develop. 3. An organ arrested in an early stage of development. 4. Remains of a part functional only at an earlier stage of an individual or in his ancestors.

rudimentary (rû-dim-ên-tâ-ri) [L. *rudimentum*, a wild thing]. 1. Elementary. 2. Undeveloped; not fully formed; remaining from an earlier stage. **SYN:** *vestigial*.

Ruffini's corpuscles. Encapsulated sensory nerve endings found in subcutaneous tissue, thought to mediate sense of warmth.

rufous (rû-fûs) [L. *rufus*, red]. Ruddy; having a ruddy complexion and reddish hair.

ruge (rû-gâ) (pl. *rugae*) [L.]. A fold or crease, esp. one of the folds of mucous membrane seen on internal surface of stomach.

r. of the vagina. **SYN:** *rugae vaginales*. Small ridges on inner surface of vagina extending laterally and upward from the *columna rugarum* (long ridges on ant and post walls).

Ruggeri's reflex. Increase in pulse rate when eyes are strongly converged on a near object.

rugose, **rugous** (rû-gôs, -gûs) [L. *rugosus*, wrinkled]. Wrinkled and rough in short, irregular folds. **SYN:** *corrugated*.

rugosity (rû-gôs'tî-tî) [L. *rugositas*, wrinkled condition]. 1. Condition of being folded or wrinkled. 2. A ridge or wrinkle.

R.U.L. Abbr. for *right upper lobe* (of lung).

rumination (rû-mîn-â-shûn) [L. *ruminare*, to chew the cud]. 1. Regurgitation, esp with rechewing, of previously swallowed food. 2. In *psych*, obsessional preoccupation of mind by a single idea, or a set of thoughts and inability to dismiss or dislodge them.

rump (rûmp) [M.E. *rumpe*]. Post. end of the back; the gluteal region or buttocks.

Rumpf's symptom (rûmpf). 1. In *neurasthenia*, the pulse is quickened to 20 beats per minute if pressure is exerted over a painful spot. 2. Twitching, after strong faradization, in traumatic neuroses.

run (rûn) [A.S. *rinnan*, to flow]. To exude pus or mucus.

run-around, **runround** (rûn-â-rownd, -rownd). Superficial infection encircling the fingernail. **SYN:** *felon*, *paronychia*, *whitlow*.

rupia (rû-pî-â) [G. *rhypos*, flth]. A cutaneous eruption, usually of tertiary syphilis, which manifests itself at first by large elevations of the epidermis, filled with a clear or bloodstained serum, soon becoming turbid and purulent.

The bulla bursts, allows some fluid to escape and as it desiccates is covered with a crust, which dries, accumulates new layers and becomes covered with greenish-brown scales, sometimes to depth of 1/2 in. Thickest of all syphilides and presents most extensive ulcerations.

TREATMENT: Constitutional, antisyphilitic.

rupophobia (rû-pô-fô-bî-â) [' + *phobos*, fear]. Abnormal dislike for dirt or filth. **SYN:** *rhyphophobia*.

rupture (rûp'tûr) [L. *ruptura*, a breaking]. A breaking apart, as of an organ. **SYN:** *hernia*, *q.s.*

r. of membranes. R. of amniotic sac as normal result of dilatation of the cervix uteri in labor.

- r. of perineum.** Rupture of p. in labor, a condition the obstetrician seeks to avoid, more frequent in *primiparae*.
- r. of tubes.** Rupture of a fallopian tube; a serious event in extrauterine pregnancy which may occur without the woman's knowledge of her pregnancy.
- r. of uterus.** Rare and due to unrelieved obstructed labor.
- Russell's bodies** (rūs'ēl). Hyaline, small, spherical bodies in cancerous and simple inflammatory growths.
- Russian bath.** Hot vapor bath followed by friction and plunge in cold water.
- rusts.** Members of an order of parasitic fungi (Uredinales) all of which are parasitic on plants, many are allergens.
- Rust's disease** (rüst). Tuberculosis of 2 upper cervical vertebrae and their articulations.
- rusty** (rüst'i) [*A.S. rustig*]. Reddish in color. Resembling or containing rust. *SYN. rubiginous.*
- r. sputum.** Reddish sputum expectorated in pneumonia.
- rut.** *SYN. estrus, heat* Period of sexual excitement in lower animals during which ovulation and mating usually take place.
- rutabaga** (rū'tā-bā'gā) [*Swedish rotabagge*]. *AV. SERVING.* 120 Gm. *PRO.* 1.3, Fat 0.1, Carbo 8.7.
- VITAMINS:** A— to +, B++, C+++.
- ASH CONST:** Ca 0.074, Mg 0.018, K 0.399, Na 0.083, P 0.056, Cl 0.058, S 0.083, Fe trace.
- A base forming food, alkaline potentiality 8.5 cc. per 100 Gm., 29.8 cc per 100 cal.
- rut-formation.** Loss of interest in environment, fixation upon a single object, and concentration of emotional or other interests in a groove or rut.
- ruthenium** (rū-thē-ni-um). A hard, brittle, metallic element of platinum group *SYMB Ru.* At. wt 101.7
- rutherford.** Abbr. *rd* A unit of radioactivity representing 10^6 disintegrations per sec
- rutidosus** (rūt-i-dō'sūs) [*G. rhytis, wrin-*

kle]. Contraction or puckering of cornea just before death.

rutilism (rūt'il-izm) [*L. rutilus, red. + G. -ismus, condition*]. Red-headedness.

rutin. A crystalline glucoside of quercetin, closely related to hesperidin. Derived from buckwheat; said to be a constituent of thirty-eight specific plants.

Uses To restore increased capillary fragility to normal, preventing vascular accidents in patients with hypertension, in various hemorrhagic conditions in which permeability, or capillary fragility is involved.

Dosage 1 tablet (20 mg) three times daily, more in refractory cases (40 mg or more).

Rx. Symbol for "take," "recipe" Simple method for writing Rx in metric system. Write for 15 capsules or powders, or for 2 ounces of liquid (60 cc). Then the dose in grains or minims equals the amount of the drug in the entire Rx.

EXAMPLE Sodium salicylate is to be given in doses of 10 grains, morphine sulfate in doses of $\frac{1}{4}$ grain.

Rx	Sodii salicylas	10		
	Morphinae sulphas			25
	Elixir lactoep. qsad	60		
	M. Sig. A teaspoonful (4 cc) every four hours			

If the Rx is to be for 4 ounces or 6 ounces, multiply the dose in grains by 2 or 3 respectively for the total amount of grams in the Rx.

rye (ri) [*A.S. ryge*] *COMP.* Contains cellulose and sometimes ergot.

AV. SERVING. 30 Gm. *PRO.* 3.2, Fat 0.5, Carbo 21.2

VITAMINS A+, B++, G+.

ASH CONST. (whole grain): Ca 0.055, Mg 0.150, K 0.453, Na 0.035, P 0.385, Cl 0.025, S 0.170, Fe 0.0039

ACTION Hard to digest. Cellulose may be desirable in constipation.

rytidosis (rit-i-dō'sis) [*G. rhytis, a wrinkle, + -osis, condition*]. Wrinkling or contraction of cornea preceding death. *SYN. rutidosus.*

S. Abbr. for *signa*, mark, term used in prescription writing; *sinister*, left; *semis*, half; *spherical* or *spherical lens*.

S. Symb for *sulfur*, also *L sine*, without.

Sa. Chem symbol for *samarium*.

saber shin. Ant. border of the tibia marked with sharp convexity found in hereditary syphilis.

sabulous (săb'ū-lūs) [L. *sabulum*, sand]. Gritty; sandy.

saburra (să-būr'ra) [L. *saburra*, sand]. Foulness of stomach or mouth; vitiated matter accumulated in stomach from indigestion. SYN *sordes*.

saburral (să-būr'āl) [L. *saburra*, sand]. 1. Pert to foulness of mouth or stomach due to accumulation of undigested material. 2 Pert. to sand, as in application of a hot sand bath for relief from pain, as in muscular rheumatism.

sac (sāk) [G. *sakkos*, a bag]. A baglike part of an organ, a cavity or pouch, sometimes containing fluid. SEE *cyst*.

s., alr. An alveolar cell in the lung
s., allantoi. SYN *vesicle*, *allantoi.* The expanded end of the allantois, well developed in birds and reptiles

s., alveolar. SYN *air sac*. The terminal portion of an air passageway within the lung. Its wall contains pocketlike structures (*alveoli*) and each alveolar sac is connected to a respiratory bronchiole by an *alveolar duct*

s., amniotic. A thin membrane, containing a serous fluid, enclosing the embryo. SYN *amnion*.

s., chorionic. SYN *chorionic vesicle*. Saclike structure consisting of chorion which encloses the developing embryo

s., conjunctival. The cavity lined with conjunctiva which lies between the eyelids and ant. surface of the eye.

s., dental. The mesenchymal tissue surrounding a developing tooth

s., endolymphatic. The expanded distal end of the endolymph duct

s., hernial. A saclike protrusion of the peritoneum containing a herniated organ. SEE *hernia*, *hernial sac*.

s., lacrimal. Upper dilated portion of the nasolacrimal duct

s., lesser peritoneal. SYN *omental bursa*. A large sacculatation developing from an invagination of the dorsal mesogastrium which gives rise to the great omentum. It communicates with greater peritoneal cavity through the epiploic foramen

s., vitelline. The yolk sac, *q v*

s., yolk. SYN *umbilical vesicle*. An extra-embryonic membrane which encloses the yolk in reptiles, birds, and monotremes. It is formed of an inner layer of endoderm invested by splanchnic mesoderm. In marsupials and placental mammals which lack a yolk mass, the yolk sac is a rudimentary vesicle lying within the chorionic sac

saccate (sāk'āt) [L. *saccatus*, baglike]. 1. Pert. to, like, or enclosed in a sac. SYN: *encysted*. 2. Bact: Marking a sac-shaped form, as in a type of liquefaction.

saccharase. An enzyme which catalyzes the breakdown of disaccharides to monosaccharides, esp. the hydrolysis of sucrose to dextrose. Ex. *sucrase*, *invertase*.

saccharide (sāk'ā-rīd) [G. *sakcharon*, sugar]. One of the carbohydrate group containing sugar, made up of monosaccharoses, disaccharoses, and polysaccharoses, *q v*

sacchariferous (sāk'ā-rīf'ēr'ūs) [" + L. *ferre*, to carry]. Producing or containing sugar.

saccharin (sāk'ā-rīn) [G. *sakcharon*, sugar]. USP. (C₆H₅SO₃-NHCO) A sweet, white, powdered, synthetic product derived from coal tar, 300 to 500 times as sweet as sugar.

USES In diabetes as sugar substitute. **DOSEAGE:** ½ gr. (0.03 Gm.) in place of 1 lump of sugar; 2 ½ gr. tablets will sweeten 4 oz of fluid. SYN *gluside*

saccharine (sāk'ā-rīn, -rīn) [G. *sakcharon*, sugar]. Of the nature of, or having the quality of, sugar. SYN *sweet*

saccharo- [G.]. Combining form meaning *sugar*.

saccharogalactorrhoea (sāk'ā-rō-gāl'āk-tō-rē'ā) [G. *sakcharon*, sugar + *gala*, *galakt*, milk, + *rhoa*, flow]. Excessive lactose secreted in milk

saccharolytic (sāk'ā-rō-lī'tīk) [" + *lysis*, dissolution] Able to split up sugar.

Saccharomycetes (sāk'ā-rō-mī'sēz) (pl *saccharomycetes*) [" + *mykēs*, fungus] A genus of fungi, reproducing by budding. SYN *yeasts*.

saccharomycosis (sāk'ā-rō-mī-kō'sīs) [G. *sakcharon*, sugar, + *mykēs*, a fungus, + *-ōsis*, condition] SYN *blastomycosis* Any disease or pathologic condition due to yeasts or *Saccharomycetes*

s. hominis. Pyemia induced by a pathogenic yeast.

saccharorrhoea (sāk'ā-rō-rē'ā) [G. *sakcharon*, sugar, + *rhoa*, flow]. Secretion of sugar in the body fluids, as in urine or perspiration. SEE *diabetes mellitus*, *glycosuria*.

saccharose (sāk'ār-ōs) [G. *sakcharon*, sugar] 1. Sucrose, cane, beet, or maple sugar 2. One of the group of carbohydrates having the same chemical formula, C₁₂H₂₂O₁₁.

saccharosuria (sāk'ā-rō-sū'rī'ā) [" + *ouron*, urine] Saccharose in the urine

saccharum (sāk'ār-ūm) [L. sugar] Sugar, the term being used in the pharmacopeia

s. album. Pure or white crystallized sugar.

s. canadense. Maple sugar.

s. candidum. Rock candy.

s. lactis. Sugar of milk. SYN *lactose*.

s. purificatum. Pure white sugar.

saccharuria (sāk'ā-rū'rī'ā) [G. *sakcharon*, sugar, + *ouron*, urine]. Sugar in the urine.

saccliform (sāk'sī-form) [G. *sakkos*, bag, + *L forma*, shape] Bag-shaped or like a sac. SYN: *saccate*.

sacculated (sāk'ū-lāt'ēd) [L. *sacculatus*, baglike]. Consisting of small sacs or sacculi

sacculatation (sāk'ū-lā'shūn) [L. *sacculus*, a little bag]. 1. Formation into a sac or sacs. 2. Group of sacs, collectively.

sacculle (sāk'ūl) [L. *sacculus*, a little bag]. 1. A small sac 2. The smaller of two sacs comprising the portion of the membranous labyrinth occupying the vesti-

bule of inner ear. It communicates with the utricle, cochlear duct and endolymphatic duct all of which are filled with endolymph. In its wall is the *macula sacculi*, a sensory area.

s. of the larynx. *SYN: ventricular appendix.* A small diverticulum extending ventrally from the laryngeal ventricle lying between ventricular fold and thyroarytenoid muscle.

s. vestibular. *SEX: sacculæ, 2.*

sacculus (săk'û-lûs) (pl. *sacculi*) [L. a small bag]. A sacculæ or little sac.

sacculus (săk'ûs) [L. a bag]. A sac or pouch.

s. endolymphaticus. *BNA.* Dilated, blind end of the *ductus endolymphaticus*.

s. lacrimalis. *BNA.* The lacrimal sac, into which empty the 2 lacrimal ducts.

sacrad (să'krăd) [L. *sacrum*, sacred, + *ad*, toward] In the direction of the sacrum.

sacral (să'krāl) [L. *sacrum*, sacred] Relating to the sacrum.

s. bone. A triangular bone made up of 5 vertebrae just above the coccyx.

s. canal. Continuation of the vertebral canal in the sacrum.

s. flexure. Rectal curve in front of the sacrum.

s. index. Sacral breadth multiplied by 100 and divided by sacral length.

s. nerves. Five pairs of spinal nerves, the upper four of which emerge through the post sacral foramina, the 5th pair through the sacral hiatus (termination of sacral canal). All are mixed nerves (motor and sensory).

s. plexus. Plexus of sacral nerves from which sciatic nerve originates. It is a part of the lumbosacral plexus.

s. vertebra. Fused segments forming the sacrum.

sacralgia (să'krāl-jī-ă) [' + G. *algos*, pain]. Pain in the sacrum. *SYN: hieralgia.*

sacralization (să'krāl-i-ză'shûn) [L. *sacrum*, sacred] Union of the sacrum and the 5th lumbar vertebra.

sacra media (să'kră mē'dī-ă) [L.]. Middle sacral artery.

sacrectomy (să'krēk'tō-mī) [' + G. *ektomē*, excision]. Excision of part of sacrum.

sacrificial operation. One in which some organ is removed for the patient's good.

sacro- (să'krō) [L.]. Prefix denoting the sacrum.

sacroanterior (să'krō-ăn-tē'rī-or) [L. *sacrum*, sacred, + *anterior*, comparative of *ante*, before]. Denoting a fetus having the sacrum directed forward.

sacrocaecalization (să'krō-kō-kăn-i-ză'shûn) [' + *cocaine*]. Injection of cocaine through the sacrolumbar space into the spinal cord.

sacrococcygeal (să'krō-kōk-sīj'ē-ăl) [' + G. *kokkyx*, coccyx]. Concerning the sacrum and coccyx.

sacrococcygeus (să'krō-kōk-sīj'ē-ûs) One of two small muscles (ant. and post.) extending from sacrum to coccyx.

sacrocoxalgia (să'krō-kōks-ăl-jī-ă) [' + *coxa*, hip, + G. *algos*, pain]. Pain in sacroiliac joint, usually due to inflammation. *SEE: sacrocoxitis.*

sacrocoxitis (să'krō-kōks-ī'tīs) [' + " + G. *-itis*, inflammation]. Inflammation of the sacroiliac joint, frequently tuberculous.

sacrodynia (să'krō-dīn'ī-ă) [' + *odynē*, pain]. Pain in the region of the sacrum.

sacroiliac (să'krō-īl'ī-ăk) [L. *sacrum*, sacred, + *iliacus*, pert. to the hipbone]. Of, or pert. to the sacrum and ilium.

s. disease. Tuberculous disease of the sacroiliac joint.

s. joint. The articulation bet. the hipbone and sacrum.

It is a diarthrodial joint, a narrow joint cavity being present; however, joint movement is limited because of interlocking of articular surfaces. In pregnant women, parturition is facilitated by the action of a hormone, relaxin, which induces relaxation of pelvic ligaments.

sacrolumbar (să'krō-lūm'bar) [L. *sacrum*, sacred, + *lumbus*, loin]. Of, or concerning the sacrum and loins.

s. angle. Angle formed by articulation of the last lumbar vertebra and the sacrum.

sacroposterior (să'krō-pōs-tē'rī-or) [' + *posterior*, comparative of *posterus*, coming after]. Having the fetal sacrum directed backward.

sacrosciatic (să'krō-sī-ăt'īk) [' + *sciaticus*, pert. to hip joint]. Concerning the sacrum and ischium.

sacrospinalls. A large muscle lying on either side of vertebral column extending from sacrum to head. Its two chief components are the iliocostals and longissimus muscles. *SEE: Table of Muscles in App.*

sacrotoomy (să'krōt'ō-mī) [' + G. *tomē*, a cutting]. Surgical excision of the lower part of the sacrum.

sacrouterine (să'krō-ūt'ēr-in) [' + *uterus*, womb]. Concerning the sacrum and uterus.

sacrovertebral (să'krō-ver'tē-brāl) [' + *vertebra*, vertebra] Concerning the sacrum and the vertebrae.

s. angle. Angle formed by base of sacrum and 5th lumbar vertebra.

sacrum (să'krūm) [L. *sacrum*, sacred]. The triangular bone situated dorsal and caudal from the 11th bet the 5th lumbar vertebra and the coccyx.

It is formed of five united vertebrae and is wedged between the two innominate bones, its articulations forming the sacroiliac joints. It forms the base of the vertebral column and, with the coccyx, forms the post. boundary of the true pelvis. The sacrum in a male is narrower and more curved than in a female.

sactosalpinx (săk'tō-sāl'pīnks) [G. *saktos*, stuffed, + *salpīgx*, tube]. Dilated fallopian tube due to retention of secretions, as in pyosalpinx or hydrosalpinx.

saddle joint (săd'ī). Joint with articulating surfaces convex in 1 direction and concave in the other. *Ex: carpometacarpal joint of the thumb.*

s. nose. A nose with a depressed bridge.

sadism (să'dīzm, säd'īzm) [Fr. *sadisme*]. A morbid phenomenon named after the Marquis de Sade, a French pervert of the 18th century, in which gratification is obtained by hurting a loved person.

Sadism is a part of the make-up of a neurotic, a short cut whereby an inferior person acquires a brief superiority over his sexual partner. The suffering of the sadist's victim produced by physical violence, supplies an artificial stimulation which normal sex desire produces in the normal male.

Sadism is not confined to sex expression, it is a mob characteristic, and may be found in slave-driving bosses. *SEE: masochism, algolagnia.*

Saemisch's ulcer (să'mish). Serpiginous, infectious ulcer of the cornea.

safety symbolism. Engagements to marry, the engagement ring, the wedding, the wedding ring, marriage itself, the public announcement of wedding anniversaries, the advent of children, are all symbols which announce to the world that a man or a woman is the possession of one or the other, a warning, as it were, to protect the other partner from the attentions of one of the opposite sex.

sagittal (saj'it-tál) [L. *sagitta*, arrow]. Arrowlike, in an anteroposterior direction

s. plane. A vertical plane through the longitudinal axis of the trunk dividing the body into right and left portions. If it is through the midaxis dividing body into right and left halves, it is called a *median* or *midsagittal plane*.

s. sinus. The sup longitudinal sinus.

s. sulcus. Groove on inner surface of parietal bones which forms a channel for the sup sagittal sinus

s. suture. Suture bet the 2 parietal bones

sago (sá'gō) [Malay *sagu*] A substance prepared from various palms, consisting principally of starches. Used as a demulcent and as a food with little residue.

ACTION Easy to digest. Fattening. Leaves little residue

IND Convalescence, emaciated conditions and when little residue is desired. **SEE** starch, carbohydrate.

Saint Anthony's fire. Any of certain inflammations or gangrenous skin conditions, esp erysipelas, hospital gangrene, and ergotism, q.v.

Saint Gotthard's disease. Condition due to presence of hookworms in intestinal tract. **SYN** *ankylostomiasis*.

Saint Vitus' dance. Nervous disease with involuntary, jerking motions. **SYN:** chorea.

sal (sál) [L salt] Salt, or a substance resembling salt

s. ammoniac. Chloride of ammonia

salaam convulsion (sa-lahm') [Arabic *salaam*, pence] Clonic muscular spasm of the trunk resulting in a bowing movement. **SYN** nodding spasm.

salacious (sa-lá'shus) [L. *salax*, salacious, lustful]. Lustful or inciting to lust.

salicylate (sál'i-sil'át, sál-is'il-át). Any salt of salicylic acid

s. methyl. The principal constituent of oil of wintergreen. It is applied externally for acute rheumatism

s., sodium. White crystalline substance with disagreeable taste, in some cases even nauseating.

Uses. To reduce pain and temperature.

DOSAGE: 15-30 gr (1-2 Gm.).

salicylated (sál-is'il-át-éd). Impregnated with salicylic acid

salicylism (sál'is-il-izm) [*salicylic acid* + G. *-ismos*, condition] Toxic condition caused by salicylic acid or its derivatives

salicyl-sulfonic acid test. Test for albumin in urine. **SEE** *albumin*.

salicyluric acid (sál-is-il-u'rik). Acid in urine after taking salicylic acid or its derivatives.

salifiable (sál-if-fá-bl) [L. *sal*, salt, + *fieri*, to be made] Capable of forming a salt by combining with an acid.

salimeter (sál-im'it-er) [L *sal*, salt, + G. *metron*, a measure]. Device for testing strength of saline solutions.

saline (sá'lin) [L. *salinus*, of salt]. 1. Containing or pert. to salt; salty. 2. A mineral salt that produces evacuation

of the intestinal contents. **EX.** *magnesium sulfate*, *sodium sulfate*, and *potassium citrate*

s. enema. E used to excite peristalsis and evacuation

Magnesium sulfate, 1 oz. in 2 oz. of very warm water (115° F.), given with a small bore tube. **SEE** *enema*, *physiological salt solution*

s. purgative. Any salt producing evacuation, as Epsom salts

s. solution. A solution of sodium chloride and distilled water, in biological laboratory parlance, a 0.9% solution of sodium chloride. An isotonic solution

A normal saline s. consists of 0.85% salt solution, which is necessary to maintain osmotic pressure and the stimulation and regulation of muscular motion. **SYN** *physiological salt solution*, q.v.

saliva (sá-liv'vá) [L *saliva*]. The 1st digestive secretion emitted from the salivary glands into the mouth. **SYN** *spittle*

CHARACTER It is tasteless, clear, odorless, viscid, and weakly alkaline, being neutralized after being acted upon by the gastric juice in the stomach. **Sp gr.** 1.002-1.006. **Amount secreted** in 24 hr., 1000-1500 cc

CONSTITUENTS Saliva consists of *inorganic substances* including water, 99.5% salts (chlorides, carbonates, phosphates, and sulfates), gasses in solution, and sometimes abnormal substances being excreted from body, e.g., acetone. *Organic substances* include enzymes (ptyalin, maltase, lysozyme), proteins (serum albumin and globulin, mucin) and small amounts of urea, uric acid, creatine and amino acids

FUNCTION (a) To moisten food facilitating mastication and deglutition, (b) to moisten and lubricate mouth parts, (c) to act as a solvent, (d) for excretion of waste products, (e) to initiate digestion of starches, (f) to assist in regulation of water balance

RS *angiositis*, *aptyalia*, *aptyalism*, *asialia*, *glycosialia*, *insalivation*, *parotid*, *ptyalin*, *ptyalino-gen*, *ptyalism*, *salivary digestion*, *s. glands*, *salagogogue*.

salivary (sál'iv-ér-i) [L *saliva*, -saliva]. Pert. to, producing, or formed from, saliva.

s., amylase. Ptyalin, q.v. Also see *Salivary digestion*

s. calculus. Concretion in a salivary duct

s. corpuscles. Nucleated, spherical bodies in saliva thought to be modified leukocytes from lymphatic tissue

s. digestion. That occurring in the mouth resulting from action of salivary enzymes. *Ptyalin*, a salivary amylase, acts on boiled starch converting it successively by hydrolysis to *erythroderin*, *achydroderin*, *maltose*, and *isomaltose*. Small quantities of maltose may be converted to glucose by action of *maltase* in saliva. Digestion is limited because of the short time food remains in the mouth but is continued in the stomach until food becomes acidified by gastric juice. Ptyalin is active at a pH of 6.7 to 6.8 but inactivated by a pH below 6.

s. glands. Three pairs of glands including the (1) *Parotid* glands, 1 on each side of the face below the ear; secrete *ptyalin*. (2) *submaxillary* glands, principally in the floor of mouth; secrete *ptyalin* and *mucin*; (3) *sublingual* glands, principally in floor of mouth, secrete *mucin* and *mucinogen*; (4) *duc-*

cal glands, scattered beneath the mucous membrane of lips and cheeks. They form a secretion that is mixed with the saliva.

Salivary secretion is under nervous control being reflexly initiated by mechanical, chemical, or radiant stimuli acting on taste buds [gustatory receptors] in the mouth, olfactory receptors, visual receptors (eyes) or other sense organs. Secretion may also occur as a result of conditioned reflexes as when one thinks about food or hears a dinner bell.

Nerves: Facial and glossopharyngeal, also the autonomic system.

Blood Supply: Branches from the ext. carotid artery. SEE *saliva*, *salvary digestion*.

salivation (sál-l-vá'shün) [L. *salivatio*, a secreting of saliva] Excessive secretion of saliva. SYN. *ptyalism*.

salivatory (sál-l-vá'tō-rī) [L. *salivatio*, a secreting of saliva] Producing secretion of saliva.

sallow (sál'ō) [A.S. *salu*]. Of a pale, yellowish color, usually said of complexion or skin.

sallowiness (sál'ō-nēs) [A.S. *salu*]. Brownish-yellow tint combined with pallor of skin, normal to brunettes. SEE *skin*, *face*, *facies*.

salmin(e) (sál'mēn, -mln) $C_{20}H_{27}N_1O_6$ A protamine obtained from spermatozoa of salmon. SEE *protamine*, *protein*.

salmon (sám'un) (pl. *salmon*) [M.E. *salmon* from L. *salmo*, *salmon*-, salmon]. AV. SERVING (canned): 230 Gm. Pro. 50.6, Fat 29.4.

VITAMINS: A+, B+, D+++ G+++. ASH CONST. Ca 0.109, Mg 0.133, K 1.671, Na 0.373, P 1.148, Cl 0.528, S 1.119, Fe 0.0055.

salmon patch (sám'un). Salmon-colored area of the cornea in syphilitic keratitis. SYN. *Hutchinson's patch*.

Salmonella (sál-mō-nē'lā) [L.] A genus of bacteria belonging to the family *Enterobacteriaceae*. They are Gram-negative, nonmotile rods. Several species are pathogenic, some producing mild gastroenteritis, others producing a severe and often fatal food-poisoning. Also called *paratyphoid bacilli*.

S. aertrycke (ā-ēr'trik-ē). A medium-sized, motile, Gram-negative rod present in meat poisoning and in paratyphoid fevers.

S. enteritidis. Gartner's bacillus, a species causing gastroenteritis in both man and lower animals.

S. paratyphi A. Causative agent of paratyphoid fever in man.

S. paratyphi B. Causative agent of paratyphoid fever and certain acute food poisonings in man.

S. paratyphi C. Causative agent for certain enteric fevers in Europe, Asia, and Africa.

S. schottmüller. Species causing paratyphoid fever, Type B.

S. typhi. SYN. *Ebertheila typhosa*. The causative agent of typhoid fever.

salmonellosis (sál-mō-nē-lō'sis) [L. *salmonella* + G. -ōsis, condition]. Infestation with bacteria of genus *Salmonella*.

Salmon's operation (sám'un). Incision along an anal fistula, back-cut of Salmon.

salpingectomy (sál-pín-jék'tō-mī) [G. *salpiz*, *salpigg*-, tube, + *ektomē*, excision]. Excision of an oviduct.

salpingemphaxis (sál-pín-jēm-frāks'is) [G. + *emphaxis*, a stoppage]. Obstruction of the eustachian tube causing deafness, or of a fallopian tube.

salpingian (sál-pín'jī-ān) [G. *salpiz*, *salpigg*-, tube]. Concerning an oviduct, or the eustachian tube.

salpingion (sál-pín'jī-ōn) [G. *salpiz*, *salpigg*-, tube]. A point at inf. surface of the apex of the petrous portion of temporal bone.

salpingitis (sál-pín-jī'tis) [G. *salpiz*, *salpigg*-, tube, + -itis, inflammation] Inflammation of the fallopian tube, or, less commonly, of the eustachian tube.

Etiol. The condition may be acute, subacute, or chronic. The organisms most often associated with salpingitis are the gonococcus, staphylococcus, streptococcus, colon bacillus, and tubercle bacillus. The latter is the etiological factor in about 8% of the cases, while the gonococcus is responsible for about 75%.

S. eustachian. SYN. *eustachitis*. Inflammation of the eustachian tube.

salpingo- [G.] Combining form meaning *trumpet* or *tube*.

salpingocatheterism (sál-ping'gō-kāth'ēt-ēr-izm) [G. *salpiz*, *salpigg*-, tube, + *kathetēr*, catheter, + -ismos, process]. Application of a catheter to the eustachian tube.

salpingocele (sál-ping'gō-sēl) [G. + *kēlē*, hernia] Hernial protrusion of an oviduct.

salpingocyesis (sál-ping'gō-sī-ēs'is) [G. + *kýsis*, pregnancy] Pregnancy where fetus begins to develop in an oviduct, tubal pregnancy.

salpingo-oophorectomy (sál-ping'gō-ō'ō-for-ēk'tō-mī) [G. + *ōōn*, ovum, + *phoros*, a bearer, + *ektomē*, excision] Excision of an oviduct and ovary.

OPER. NP. The needle layout, sutures and operating procedure identical with those for hysterectomy. In the operation for a ruptured ectopic pregnancy it is well to have 3 times the usual number of laparotomy pads and packs ready, as well as an extra amount of very warm saline solution for flushing out the abdominal cavity. This is because there may be a great quantity of both fresh and clotted blood to be removed. POSITION: Horizontal.

salpingo-oophoritis (sál-ping'gō-ō'ō-for-ī'tis) [G. *salpiz*, tube, + *ōōn*, ovum, + *phoros*, a bearer, + -itis, inflammation] Inflammation of the tube and ovary. SYN. *salpingo-oophoritis*.

salpingo-oophorectomy (sál-ping'gō-ō'ō-for-ēk'tō-mī) [G. + *ōōn*, ovum, + *phoros*, a bearer, + -itis, inflammation] Inflammation of the tube and ovary. SYN. *salpingo-oophoritis*.

salpingo-oöthecocoele (sál-ping'gō-ō'ō-thē-kō-sēl) [G. + *kēlē*, hernia]. Hernia of both ovary and fallopian tube.

salpingo-ovaricectomy (sál-ping'gō-ō'ō-var-ī-ēk'tō-mī) [G. + *L. ovarium*, ovary, + *G. ektomē*, excision]. Surgical removal of an oviduct and ovary. SYN: *salpingo-oophorectomy*.

salpingopexy (sál-ping'gō-pēks'ī) [G. + *pēxis*, fixation]. Fixation of a fallopian tube.

salpingopharyngeus (sál-ping'gō-fār-in'jē-ūs) [G. + *pharygz*, *pharyng*-, pharynx]. The muscle arising in cartilage of the eustachian tube which raises soft palate.

salpingorhaphy (sál-ping'gō-rāf'ī) [G. + *rhaphē*, a seam]. Suture of an oviduct.

salpingosalpingostomy (sál-ping'gō-sál-ping-gōs'tō-mī) [G. + *salpiz*, tube, +

stoma, a mouth]. The operation of attaching 1 fallopian tube to the other.

salpingscope (sál-píng'gò-skóp) [G. *salpiz*, *salpizg*, tube, + *skopein*, to see]. Device for examining the nasopharynx and eustachian tube.

salpingostaphylinus (sál-píng'gò-stáf-lí-nús) [" + *staphylé* uvula]. The muscle which tightens soft palate. SEE: Table of Muscles in Appendix.

salpingostenochoria (sál-pín-gò-stén-ò-kor'i-á). Stenosis or stricture of auditory tube.

salpingostomatomy (sál-píng'gò-stò-mát'ò-mí) [" + *stoma*, a mouth, + *tomé*, a cutting]. Creation of an artificial opening in a fallopian tube after it has been occluded by inflammation.

salpingostomy (sál-píng-òs'tò-mí) [" + *stoma*, a mouth]. Surgical opening of a fallopian tube which has been occluded, or for drainage.

salpingotomy (sál-píng-òt'ò-mí) [" + *tomé*, a cutting]. Section of a fallopian tube.

salpingo-ureterostomy (sál-píng'ò-úr-èt'-ér-òs'tò-mí) [" + *uréter*, ureter, + *stoma*, opening]. Surgical connection of the ureter and the fallopian tube.

salpingocystocysis (sál-pín-jís'ter-ò-sí-è-sís) [" + *hystera*, uterus, + *cýsis*, pregnancy]. Pregnancy partly in a fallopian tube and partly in the uterus.

salpinx (sál'pínks) (pl. *salpinges*) [G. *salpiz*]. The fallopian or eustachian tube.

salsify (sál'sí-fi) [Italian *sassifraga*, goat's beard]. Comp. Contains a compound of inulin. It is a fibrous food, heavier in carbohydrates, protein and fat than carrots, turnips, beets or celery, but it contains less ash than any of them.

AV. SERVING 100 Gm. PRO. 3.5, FAT 10, CARBO. 15.

ACTION: Laxative.

salt (sawlt) [A.S. *sealt*]. SYMS NaCl. 1. White crystalline compound occurring in nature, known chemically as sodium chloride. 2. Containing, tasting of, or treated with salt. 3. To treat with salt. 4. *plural*. Any mineral salt or saline mixture used as an aperient or cathartic, esp. Epsom salts or Glauber's salt. 5. **CHEM** A compound consisting of a positive ion other than hydrogen, and a negative ion other than hydroxyl. 6. A chemical compound, usually crystalline, resulting from the interaction of an acid and a base.

Salts and water are the inorganic or mineral constituents of the body. They play specific roles in the functions of cells and are indispensable for life. The principal salts are chlorides, carbonates, bicarbonates, sulfates, and phosphates which are compounds of sodium, potassium, calcium, magnesium, and iron with chlorine, CO₂, sulfur, and phosphorus. In general, salts serve the following roles in the body: 1. Maintenance of proper osmotic conditions. 2. Maintenance of water balance and regulation of blood volume. 3. Maintenance of proper acid-base balance. 4. Provide essential constituents of tissue, esp. bones and teeth. They are essential for normal irritability of muscle and nerve cells and essential for coagulation of the blood. 5. They are essential components of certain enzyme systems, respiratory pigments, and hormones. 6. They regulate cell membrane and capillary permeability.

RS: chlorite, normal, rheum. sal, saline, salt-free diet, salt glow, secretion, "sial-" words.

s. buffer. A salt found in the blood which fixes excess amounts of acid or alkali, without a change in hydrogen-ion concentration.

s. Epsom. Magnesium sulfate.

s. Glauber's. Sodium sulfate.

s. iodized. Salt containing 1 part sodium or potassium iodide to 5000 parts of sodium chloride.

s. Rochelle. Sodium and potassium tartrate.

s. rock. Native sodium chloride.

s. solution, normal. SEE physiological salt solution.

s. s. physiological. A sterile solution containing 0.85% of sodium chloride in chemically pure distilled water (8.5 gms sodium chloride in 1000 ml. or one liter of distilled water).

NP When salt solution is given intravenously or hypodermically, rigid aseptic precautions must be observed. Usually injected in front of thighs or under breasts, as loose tissue is found in these areas. The temperature of the solution is about 100° F., so that when the blood is reached solution will be at body temperature. If the disadvantage of slowness is not very important, injection by rectum is the least risky, as it is not painful and there is no risk of infection. The patient placed on left side, hips are elevated by a pillow, and the solution, by means of a rectal tube, is injected into the rectum. The solution is allowed to run in at the rate of about 1 quart per hour.

saltation (sál-tá'shún) [L. *saltatio*, a leaping]. 1. Act of leaping or dancing, as in chorea. 2. Abrupt variation in character of a species. SYN *mutation*. 3. A spurting forth of arterial blood.

saltatory (sál'ta-tò-ri) [L. *saltatio*, a leaping]. Marked by dancing or leaping.

s. conduction. Skipping from node to node, said of movement of the potential along myelinated neurons.

s. spasm. Tic of muscles of lower extremity, causing convulsive leaping upon attempt to stand. SEE *palmus*.

salt-free diet. One with no more than 2 Gm of salt allowed, as in *edema*.

Bread and butter must also be salt-free. No salt added to food eaten. Permissible foods: 1. Milk. 2. Eggs. 3. Custards. 4. Bread. 5. Omelettes. 6. Gelatin and jellies. 7. Meat jelly. 8. Butter (salt-free). 9. Fat meat. 10. Cheese. 11. Sugar. 12. Vegetables. 13. Buttermilk. 14. Whey. 15. Fruit jellies. 16. Chocolate or cocoa. 17. Flavors and spices.

NOTE The stage of fever in which the heavier of these foods may be taken depends upon the physician's orders.

RS *salt*, sodium chloride.

salt glow. Name given to a rub of the entire body with moist salt for stimulation.

saltling out. A method of separating a specific protein from a mixture of proteins by the addition of a salt (e.g., ammonium sulfate).

salt, low, diet. No salt allowed on patient's tray. No salty food served.

salt-peter (sawlt'pé'ter) [O.Fr. *salpêtre*, from L. *sal*, salt, + *pétra*, rock]. A common name for potassium nitrate.

s. Chile. A common name for sodium nitrate. NaNO₃. Crystalline powder, saline in taste and soluble in water.

salt-poor diet. All food prepared and served without the addition of salt, including salt-free bread and butter. Milk intake is limited. Protein caloric fluid level governed by orders of physician.

salt rheum (sawlt room). Any one of a variety of skin affections of the eczematous type. SEE *eczema*.

salts. Plural of salt. SEE *salt*, 4.

salubrious (sál-'ú-brí-'ús) [L. *salubris*, healthy]. Promoting or favorable to health. SYN: *wholesome*.

salutary (sál-'ú-ta-rí) [L. *salutaris*, healthy]. Healthful, promoting health; curative.

salvarsan (sál-'var-sán) [L. *salvus*, saved, + G. *arsen*, arsenic]. An arsenical, yellowish powder preparation (606) given intramuscularly or intravenously for syphilis.

RS arsphebamine, autoserosalvarsan
salve (sáv) [AS. *sealf*]. 1. An ointment applied to wounds. 2. PHARM. Any ointment or cerate made with a base of a fat, oil, petrolatum, resin, etc.

samarium. A rare metallic element. SYM: Sm or Sa. At wt 150.35 Sp gr 7.7-7.8

salvative (sán-'á-tív) [L. *salvare*, to heal]. Of a healing nature. SYN: *curative*.

sanatorium (sán-'á-tó-rí-'úm) (pl. *sanatoria* or *-ria*) [L. *sanatōrius*, healing]. An establishment for preservation of health or the treatment of the chronically sick; esp. a private one. SYN: *sanitarium*.

sanatory (sán-'á-tó-rí) [L. *sanatōrius*, healing]. Curative, conducive to health.

sand (sánd) [AS]. Fine grains of disintegrated rock.

s., auditory. Calcareous concretion in labyrinth of the ear. SYN: *otolith*.

s., bath. Therapeutic covering of the body with hot sand.

s., brain. Concretion of matter near base of the pineal gland. SYN: *acervulus cerebri*.

s., tumor. One in membrane of the brain, choroid plexus, and other areas made up of calcareous particles. SYN: *psammoma*.

sandflies. Flies of the order *Diptera* belonging to the genus *Phlebotomus*. They transmit sandfly fever, Oroya fever and various types of leishmaniasis.

sandfly fever. SYN: *three-day fever*, *pappataci fever*. A mild virus disease similar to dengue fever and transmitted by *Phlebotomus papatasi*.

Sand'with's bald tongue. Abnormally clean tongue seen in late stages of pellagra.

sane (sán) [L. *sanus*, sane, healthy]. Sound of mind, mentally normal.

Sänger's operation (seng'er). A form of cesarean section by which the uterus is taken out before the fetus.

sanguiculous (sáng-'gwí-'ó-lús) [L. *sanguis*, blood, + *colere*, to dwell]. Inhabiting the blood, as a parasite.

sanguifacient (sáng-'gwí-'á-'shént) [' + *facere*, to make]. Making blood.

sanguiferous (sáng-'gwí-'ér-'ús) [' + *ferre*, to carry]. Conducting blood, as the circulatory organs.

sanguification (sáng-'gwí-'ík-'á-'shùn) [' + *facere*, to make]. Conversion into, or formation of, blood. SYN: *hematopoiesis*.

sanguimotor, sanguimotory (sáng-'gwí-'mó-'tor, -tò-rí) [' + *motor*, a mover]. Pert. to the blood circulation.

sanguine (sáng-'gwín) [L. *sanguineus*, bloody]. 1. Hopeful. 2. Plethoric, bloody; marked by abundance and active blood circulation. 3. Pert. to or consisting of blood.

sanguineous (sáng-'gwín-'é-'ús) [L. *sanguineus*, bloody]. 1. Bloody; relating to blood. 2. Having an abundance of blood. SYN: *plethoric*.

sanguinolent (sáng-'gwín-'ó-'lént) [L. *sangui-*

guinolentus, from *sanguis*, blood]. Containing, or tinged with, blood.

sanguinopoietic (sáng-'gwín-'ó-'poy-'ét-'ík) [L. *sanguis*, blood, + *poiesis*, to form]. Generating blood. SYN: *hematopoietic*, *sanguifacient*.

sanguirenal (sáng-'gwí-'rén-'ál) [' + *rén*, kidney]. Pert. to the blood supply of the kidneys.

sanguis (sáng-'gwís) [L.]. Blood.

sanguisuga (sáng-'gwís-'ú-'gá) [L. *sanguis*, blood, + *sugere*, to suck]. A leech or bloodsucker. SEE *Hirudo*.

sanies (sá-'ní-'éz) [L. diseased blood]. A thin, fetid, greenish discharge from a wound or ulcer, presenting appearance of pus tinged with blood.

sanio-purulent (sá-'ní-'ó-'pú-'rú-'lént) [L. *sanies*, diseased blood, + *purulentus*, full of pus]. Having characteristics of sanies and pus, pert. to a fetid, serous, blood-tinged discharge containing pus.

sanioserous (sá-'ní-'ó-'sér-'ús) [' + *serum*, whey]. Composed of sanies* and serum.

sanious (sá-'ní-'ús) [L. *sanies*, diseased blood]. Of the nature of fetid, purulent fluid from an ulcer, sanies.

sanitarium (sán-'í-'tá-'rí-'úm) (pl. *sanitariums* or *-ria*) [L. *sanatōrius*, giving health]. Institution for treatment and recuperation of persons having physical or mental disorders, occasionally limited to place where conditions are prophylactic rather than therapeutic. SYN: *sanatorium*.

sanitary (sán-'í-'tar-'í) [L. *sanitas*, health]. Promoting, or pert. to conditions improving health.

sanitation (sán-'í-'tá-'shùn) [L. *sanitas*, health]. The use of measure to promote and establish conditions favorable to health, esp. public health. SEE: *assanation*, *hygiene*.

sanity (sán-'í-'l-'í) [L. *sanitas*, health, from *sanus*, sound]. Soundness of health or mind; normal mentality. SEE: *sane*.

santal oil (sán-'tál) [L. *santalum*, sandalwood]. USP. Sandalwood oil. A volatile oil distilled from the wood of the plant.

ACTION AND USES: Expectoant, local and genitourinary irritant with possible antiseptic properties.

DOSAGE 8 m (0.5 cc) in capsules

INCOMPATIBILITIES Alkalies

santonin (sán-'tò-'nín) [L. *santonium*] USP. A colorless crystalline substance obtained from the dried flower heads of the plant *santonica*.

ACTION AND USES: A vermifuge against the roundworm.

DOSAGE 1 gr (0.06 Gm).

sap (sáp) [AS. *saep*]. 1. Any fluid essential to life and vitality of a living structure. 2. To cause gradual exhaustion of, as the strength.

s., cell. Hyaloplasm. q.v.

s., nuclear. Liquid portion of a cell nucleus. SYN: *karyolymph*.

saphena (sá-'fé-'ná) (pl. *saphenae*) [G. *saphēnēs*, manifest]. Name given to two large veins of the leg.

saphenous (sáf-'é-'nú's) [G. *saphēnēs*, visible]. Pert. to or associated with a saphenous vein or nerve in the leg. **Superficial**, manifest.

s., nerve. A deep branch of the femoral nerve. In lower leg, it follows the long saphenous vein supplying medial side of leg, ankle, and foot.

s., opening. An aperture in the fascia, oval in shape, in inner and upper part of thigh transmitting the saphenous vein below Poupart's ligament. SYN: *fossa ovalis*.

s., veins. Two veins, long and short,

passing up the leg, the long from the foot to the saphenous opening, the short one behind outer malleolus up back of leg joining the popliteal. **SEE:** vein.

sapid (săp'id) [L *sapidus*, tasty]. Savory; tasty; opp. of insipid.

sapo (să'pō) [L]. USP. Soap prepared from pure olive oil and sodium hydroxide.

saponaceous (săp-ō-nă'shūs) [L. *sapona-ceus*, soapy]. Soapy; resembling soap in feel or quality.

saponatus. (să-pō-nă'tūs). Mixed with soap.

saponification (sa-pōn'i-fi-kă'shūn) [Fr. *saponifier*, from L *sapo*, *săpōn-*, soap, + *-ficāre*, to make]. 1. Conversion into soap, chemically, the hydrolysis or the splitting of fat by an alkali yielding glycerol and 3 molecules of alkali salt of the fatty acid, the soap. 2. Chem. Hydrolysis of an ester into corresponding alcohol and acid (free or in form of a salt).

s. number. In analysis of fats, the number of milligrams of potassium hydroxide needed to neutralize the fatty acids in 1 Gm of oil or fat Also called *saponification-value*.

saponify (sa-pōn'i-fi) [L *sapo*, *săpōn-*, soap, + *-ficāre*, to make]. To convert into a soap, as when fats are treated with an alkali to produce a free alcohol plus the salt of the fatty acid.

Thus, stearin, saponified with sodium hydroxide, yields the alcohol glycerol plus the soap sodium stearate

saponin (e) (săp-ō-nin, -nen) [L. *sapo*, *săpōn-*, soap]. Unabsorbable glucoside contained in the roots of some plants forming a lather in an aqueous solution.

They are irritative and produce vomiting and diarrhea if taken internally.

saporific (săp'ō-rif'ik) [L. *saporificus*, producing taste]. Imparting a taste or flavor.

sapphism (săf'izm) [G *Sapphō*, Greek poetess]. Sexual desire of women for their own sex.

From Sappho, the reputed instigator of lesbianism.

RS: amor lesbicus, homosexual, tribadism, urningism.*

sapremia (săp-rē'mi-ă) [G. *sapros*, rotten, + *aima*, blood]. A toxic condition caused by the absorption into the blood of toxins or poisons produced by saprophytes or putrefactive bacteria. **SEE:** septicemia.

sapro- [G.]. Combining form meaning putrid.

saprodontia (săp-rō-dōn'shi-ă) [G. *sapros*, rotten, + *odont-*, tooth]. Caries of the teeth; tooth decay.

saprogen (săp'rō-jēn) [+ *gennan*, to produce]. Any microorganism causing or produced by putrefaction.

saprogenic (săp'rō-jēn'ik) [+ *gennan*, to produce]. Causing putrefaction or resulting from it.

saprophilous (săp-rof'il-ūs) [+ *philein*, to love]. Living on decaying or dead substances, as a microorganism. **SYN:** saprophytic.

saprophyte (săp'rō-fit) [G. *sapros*, rotten, + *phyton*, plant]. Any organism living on decaying or dead organic matter.

Most of the higher fungi are saprophytes **SEE:** parasite.

saprophytic (săp-rō-fit'ik) [+ *phyton*, growth]. Living or growing in decaying or dead matter; characteristic of a saprophyte.

saprozoic (săp-rō-zō'ik) [+ *zōon*, ani-

mal]. Living on decaying or dead organic matter.

sarcitis (sar-si'tis) [G. *sarz*, flesh, + *-itis*, inflammation]. Inflammation of muscle tissue. **SYN:** myositis.

sarco- [G.]. Combining form meaning flesh.

sarcoadenoma (sar'kō-ăd'en-ō'mă) [G. *sarz*, *sark-*, flesh, + *aden*, gland, + *-ōma*, tumor]. A fleshy tumor of a gland. **SYN:** adenosarcoma.

sarcoblast (sar'kō-blăst) [+ *blastos*, a germ]. **SYN:** myoblast Embryonic cell which develops into a muscle cell.

sarcocarcinoma (sar'kō-kar-sin-ō'mă) [+ *karkinos*, crab cancer, + *-ōma*, tumor] A tumor of malignant growth of sarcomatous and carcinomatous types.

sarcocele (sar'kō-sēl) [+ *kēlē*, a mass]. A fleshy tumor of the testicle.

Sarcocystis (sar'kō-sis'tis) [+ *kystis*, bladder] A genus of sporozoans found in the muscles of higher vertebrates (reptiles, birds, and mammals).

S. lindemanni. A species infesting muscles of man.

Sarcodina (sar-kō-dī'nă) [+ *erdos*, form] A class of Protozoa characterized by absence of a thick pellicle and movement by pseudopodia They are typically holozoic and reproduce principally by asexual method. Includes the families Amoebidae and Endamoebidae, the latter including many parasitic and pathogenic forms.

sarcogenic (sar'kō-jēn'ik) [+ *gennan*, to produce]. Producing flesh or muscle.

sarcoid (sar'koyd) [+ *eidosis*, form] 1. Resembling flesh 2. A small epithelioid tubercle-like lesion characteristic of sarcoidosis *qv*

sarcoidosis (săr'koid-ō'sis). A chronic granulomatous disease of unknown etiology characterized by the formation of tubercle-like lesions in the organs most generally affected, which are the skin, lymph nodes, lungs, and bone marrow. The term now includes a number of diseases previously considered as separate entities (Borck's sarcoid, Pseudotuberculosis, Benign lymphogranulomatosis, Schaumann's disease, Uveoparotid fever, Osteitis tuberculosa multiplex cystoides, Lupus pernio of Besnier).

sarcolemma (sar'kō-lēm'ă) [+ *lemma*, a rind] A delicate membrane surrounding each striated muscle fiber. **SEE:** muscle.

sarcology (sar-kōl'ō-jī) [G *sarz*, *sark-*, flesh, + *logos*, a study] Branch of medicine dealing with study of the soft tissues of the body.

sarcolysis (sar-kōl'i-sis) [+ *lysis*, a dissolution]. Decomposition of the soft tissues or flesh.

sarcolytic (sar'kō-lit'ik) [+ *lyein*, to dissolve]. Decomposing flesh.

sarcoma (sar-kō'mă) (pl. *sarcomas*, -mata) [G *sarz*, *sark-*, flesh, + *-ōma*, tumor] A tumor of nonepithelial, modified, embryonic, connective tissue, esp. a malignant one.

Sarcoma may affect the bones, bladder, kidneys, liver, lungs, parotids, and spleen.

RS: chloroma, sarcoid, words ending in "-sarcoma."

s., botryoid. S. of uterus composed of polypoid mass of soft edematous tissues

s., chondro-. One composed of masses of cartilage.

s., Ewing's. A diffuse endothelioma or endothelial myeloma forming a fusiform swelling on a long bone.

s., fibro-. A malignant tumor with

fibrous tissue and many spindle cells and dilated vessels.

s., giant-cell. S from cancellous bone tissue with large cells with many nuclei. A special type called an epulis is seen in the jaw

s., lipo-. A rare tumor of bone containing cells of various types containing small vacuoles of fat

s., lymphangio-. S arising from endothelium of lymph vessels in a lymph gland.

s., myeloid. Same as giant-celled sarcoma.

s., myxo-. SYN *myroma* A benign tumor of mucoid tissue such as that of the umbilical cord

s., osteogenic. One composed of osseous tissue containing variously shaped cells

s., reticulum cell. SYN *Hodgkin's sarcoma*. A variety of malignant lymphoma involving the lymph nodes and other lymphatic tissue

s., rhabdomyo-. An embryonal tumor of striated muscle containing multinucleated cells with a striated cytoplasm

s., spindle-cell. One consisting of small and large spindle-shaped cells.

sarcomatoid (sar-kō'mā-toyd) [G. *sarx*, *sark-*, flesh, + *-ōma*, tumor, + *eidos*, form] Resembling a sarcoma

sarcomatosis (sar-kō-mā-tō'sis) [“ + “ + *-ōsis*, condition] Condition marked by presence and spread of a sarcoma, sarcomatous degeneration

sarcomatous (sar-kō-māt-ūs) [“ + *-ōma*, tumor]. Of the nature of, or like, a sarcoma.

sarcemere (sar-kō-mēr) [G. *sarx*, *sark-*, flesh, + *meros*, a part] The portion of a striated muscle fibril lying between two adjacent dark lines considered to be the structural and functional muscular unit

sarcophalacele (sar-kōm-fāl-ō-sēl) [“ + *omphalon*, umbilicus, + *kēlē*, mass]. Fleshy tumor at the umbilicus.

sarcomyces (sar-kō-mī'sēez) A fleshy growth having the appearance of a fungus.

Sarcophagidae (sar-kō-fād'i-dē) The family of the order *Diptera* which includes the flesh flies. Females deposit their eggs or larvae on decaying flesh of dead animals. Larvae of two genera *Sarcophaga* and *Wohlfahrtia* frequently infest open sores and wounds of man giving rise to cutaneous myiasis

sarcophagy (sar-kōf-ā-jī) [“ + *phagein*, to eat] Practice of eating flesh

sarcoplasm (sar-kō-plāzm) [“ + *plasma*, a thing formed] Hyaline, semifluid, interfibrillary substance of striated muscle fibers.

sarcopoietic (sar-kō-poy-ēt'ik) [“ + *poiēin*, to form]. Forming muscle or flesh.

Sarcoptidae (sar-kōp'tī-dē) A family of mites of the order *Acarina*, class *Arachnida*, which includes *Sarcoptes scabiei*, the causative agent of scabies or itch in man and mange and scab in other animals.

sarcosis (sar-kō'sis) [“ + *-ōsis*, condition]. 1. The development of multiple fleshy tumors. 2. Abnormal formation of flesh.

sarcosome (sar-kō-sōm) [G. *sarx*, *sark-*, flesh, + *sōma*, body]. A minute granular element found in sarcoplasm of skeletal and cardiac muscle

Sarcosporidia (sar-kō-spō-rīd'i-ā) [G. *sarx*, *sark-*, flesh, + *sporos*, a seed]. An order of protozoa belonging to the class *Sporozoa* which are parasitic in

the muscles of higher vertebrates. Includes the genus *Sarcocystis*

sarcosporidiosis (sar-kō-spō-rīd-i-ō'sis) [“ + “ + *-ōsis*, condition]. Infestation with *Sarcosporidia* or condition produced by them

sarcostosis (sar-kōs-tō'sis) [“ + *osteon*, bone, + *-ōsis*, condition]. Ossification of fleshy or muscular tissue

sarcostyle (sar-kō-stīl) [G. *sarx*, *sark-*, flesh, + *stylos*, a column]. Any one of the fine longitudinal fibrillae of a striated muscle fiber.

sarcotic (sar-kōt'ik) [G. *sarx*, *sark-*, flesh]. 1. Producing or pert to flesh formation. 2. Agent producing growth of flesh.

sarcous (sar'kus) [G. *sarx*, *sark-*, flesh] Concerning flesh or muscle

s. substance. Substance of a sarcous element.

sardine (sar-dēn') [L. *sardina*] Av. SERVING: 50 Gm. Pro. 9.6, Fat 12.8. VITAMINS: B+.

sardon'ic laugh. Old term for a spasmodic affection of facial muscles, giving an appearance of laughter SYN *risus sardoniacus*.

sartorius (sar-tō-rī-ūs) [L. *sartor*, tailor]. A long, ribbon-shaped muscle of the thigh.

It aids in flexing the knee, longest muscle in the body. So-called from its use in crossing the legs, as tailors do. SEE: *Table of Muscles in Appendix*.

SAT. 1 Abbr for *satellite 2* Abbr for *L sine acido thymonucleumico*, without thymonucleic acid

SAT-chromosome. One possessing a satellite

SAT-zone. SYN *nucleolar zone*, *nucleolar organizer* One of several constrictions in a nucleolar chromosome which give rise to the nucleoli

satellite (săt'el-it) [L. *satelles*, companion] A small structure attached to a larger one, esp a minute body attached to a chromosome by a slender chromatic filament. Also called *trabant*

s. cells. SYN *capsular cells* 1. Certain astrocytes which lie close to bodies of neurons in central nervous system. 2. Neuroglial cells enclosing the cell bodies of neurons in spinal ganglia. Also called *amphicytes*

satellitosis (săt-ēl-i-tō'sis) [L. *satelles*, companion, + *-ōsis*, condition] The accumulation of satellite cells about neurons of the central nervous system, seen in certain degenerative and inflammatory conditions

satiety (sa-tī-ēt-i) [Fr. *satiété*, from L. *satis*, enough]. Fullness or gratification beyond desire.

saturated (săt'ū-rā-tēd) [L. *saturare*, to saturate]. 1. Holding all that can be absorbed, received, combined, etc. 2. Term applied to a solution in which no more of a substance can be dissolved. 3. Term applied to carbon compounds in which all the atoms are linked by single bonds

s. compounds. Those incapable of additional products, as any in the methane series. SEE *unsaturated compounds*.

s. solution. One containing as much of the solid drug as it can dissolve.

s. time. Time required for peripheral blood of a person inhaling pure oxygen to become saturated. Normal time is 10-15 sec.

saturation (săt'ū-rā'shūn) [L. *saturatio*]. The holding in solution of all of a solid that can be dissolved therein.

saturnine (săt'ūr-nīn) [L. *saturnus*, lead]. Concerning or produced by lead.

s. breath. Sweet breath produced by lead* poisoning.

saturnism (săt'ŭrn-izm) ["" + G. *ismos*, condition]. Lead poisoning, *q. v.* **SYN:** *plumbism*

satyriasis (sat-i-rĭ'ă-sis) [G. *satyriasis*]. Great mental excitement with abnormal sex desire in the male.

It is an acute abnormal psychosexual state, aggravated by psychical or peripheral irritation, neurasthenia, masturbation* and morbid ideas.

Same as nymphomania* in the female. The symptoms are a partial expression of a general psychosis. The imagination calls forth sensual associations. Satyriasis is less frequent than nymphomania. Priapism* is frequently manifested.

Sauerbruch's cabinet (sow'ër-brook) An airtight cabinet for operation on the chest under negative pressure.

The patient's head is outside the cabinet and his body and the surgeon's are within it.

sauerkraut (sow'ër-krowt) [Ger. *sauer*, sour, + *kraut*, cabbage]. **AV. SERVING.** 100 Gm. **Pro** 1.5 **Fat** 0.4, **Carbo** 3.5 **VITAMINS** A, B, C + to ++ **Ca** 0.040, **P** 0.010, **Fe** 0.0032

sausage (saw'saj) (pork) [M.E. *sausage*]. **AV. SERVING** 35 Gm **Pro** 4.6, **Fat** 15.5, **Carbo.** 0.4

VITAMINS A— to +, B++.

savory (să'vō-ri) [O.Fr. *savouré*, tasty]. Having a pleasant or appetizing taste or odor.

saw (saw) [A.S. *sagu*]. Instrument for cutting, esp. bone, its cutting edge being toothed

saxifragant (săks-İf'ră-gănt) [L. *saxum*, rock, + *frangere*, to break]. Dissolving or breaking calculi, esp. in the bladder.

Sayre's jacket (sărz). A jacket of plaster-of-Paris worn to support the spine in vertebral diseases.

Sb. Symb. for *antimony*.

SbCl₃. Antimony trichloride.

Sb₂O₅. Antimonious oxide; antimony pentoxide

Sb₂O₃. Antimonious oxide.

Sc. Chemical symbol for *scandium*

scab (skăb) [M.E. *scabbe*]. 1. Crust of a cutaneous sore, wound, ulcer or pustule formed by drying up of the discharge 2. To become covered with a crust.

scabicide (skă'bl-sid). An agent which kills mites, esp. the causative agent of scabies, *q. v.*

scabies (skă'İ-ēs) [L. *scabere*, to scratch] **SYN.** *itch, seven-year itch*. A highly communicable skin disease caused by an arachnid, *Sarcoptes scabiei*, the itch mite

SYM. Papules, vesicles, pustules, burrows and intense itching resulting in eczema

The impregnated females live in burrows which appear as slightly discolored lines several millimeters to several centimeters in length. Eggs deposited within the tunnel hatch within 4-8 days

Parts most commonly affected are hands, bet. the fingers, the wrists, axillae, genitalia, beneath the mammae and inner aspect of the thighs. Face and scalp never involved.

PROG. Favorable.

TREATMENT. Sulfur ointment is the most effective treatment. Parts affected should be soaked in warm water and scrubbed with green soap. Apply ointment and leave on overnight. In the morning use fresh clean clothing. Sterili-

ze all used clothing and bed linens. In mild cases one treatment is usually adequate. In severe cases, a 2nd treatment applied 6-10 days later may be necessary. In persons sensitive to sulfur, a pyrethrin ointment or an ointment containing benzene hexachloride may be substituted. Benzyl benzoate lotion is also effective. The effectiveness of treatment is dependent principally on the thoroughness of application.

scabiphobia (skă'bl-fō-bl'ă). **SYN.** *acarophobia* Morbid fear of acquiring scabies

scabrities (skă-brish'f-ēz) [L.]. 1. Scaly, roughened condition of the skin 2. A morbid roughness of inner surface of eyelids, causing sensation as if sand were in eyes

s. ungulum. Morbid degeneration of the nails, making them rough, thick, distorted and separated from the flesh at the root. Symptomatic of syphilis and leprosy.

scala (skă'lă) [L. ladder]. Any one of the 3 spiral passages of the cochlea. **SEE** *cochlea*

s. media. The cochlear duct, which lies between the s. tympani and s. vestibuli. Its floor contains the spiral organ of Corti. It extends from sacculus to tip of cochlea and is filled with endolymph

s. tympani. Canal filled with perilymph lying below spiral lamina of cochlea. Extends from tip of cochlea to round cochlear window.

s. vestibuli. A canal forming the upper portion of the osseous canal of the cochlea. It lies above the spiral lamina and extends from floor of vestibule to tip of cochlea where it communicates with *scala tympani* through an aperture, the *helicotrema*

scald (skawid) [M.E. *scalden*, from L. *ex*, out, + *calidus*, hot] 1. Burn to skin or flesh caused by moist heat and hot vapors, as steam 2. To cause a burn with hot liquid or steam 3. Cutaneous disease marked by scab formation on the head.

It is deeper than dry heat, and should be treated as a burn, *q. v.* Healing is slower and scar formation greater. **SEE** *burn*

scale (skāl) [A.S. *scale*, scale] 1. A small, thin, dry exfoliation shed from upper layers of skin. 2. Film of tartar incrusting the teeth 3. To form a scale on. 4. To shed scales.

5. [M.E. *scole*, balance]. An instrument for weighing.

6. [L. *scala*, ladder]. A graduated or proportioned measure, series of tests, or instrument for measuring quantities or for rating, as individual intelligence. **SEE** *Binet*

Shedding of scales from skin in small amounts is normal. It is also seen in cutaneous disorders such as squamous eczema, seborrhea sicca, psoriasis, ichthyosis, syphilis, lupus erythematosus, pityriasis rosea, and tinea tonsurans.

SEE: *macule, rash*.

s., absolute. A scale used for indicating low temperatures based on absolute zero. **SEE:** *absolute temperature, a. zero*.

s., centigrade. Thermometric scale running from 0°, the melting point of ice, and 100°, the boiling point of water. **SEE:** *centigrade; thermometer, comparative scale*.

s., Fahrenheit. One in which the freezing point of water is 32° and the boiling

ing point is 212°. SEE: Fahrenheit; thermometer, comparative scale

s. Réaumur. Scale which runs bet. freezing point of water at 0° and the boiling point at 80°. SEE: Réaumur; thermometer, comparative scale.

scalene (skā-lēn') [G. *skalēnos*, uneven]. 1. Having unequal sides and angles, said of a triangle. 2. Designating a scalenus muscle

s. tubercle. One on upper surface of 1st rib, the insertion of the scalenus anticus muscle SYN. tubercle, Lisfranc's

scaleniotomy (skā-lēn'ī-ōt'ō-mī) [" + tomē, a cutting]. Incision of scalenus muscles near their insertion to check expansive movements in tuberculosis of the apex of the lung

scalenus (skā-lē-nūs) [L. from G. *skalēnos*, uneven]. One of 3 deeply situated muscles on each side of the neck, extending from the transverse processes of 2 or more cervical vertebrae to the 1st or 2nd rib; known as scalenus anterior, medius, posterior. SEE: Table of Muscles in Appendix.

s. anticus syndrome, s. syndrome. A symptom complex characterized by brachial neuritis with or without vascular or vasomotor disturbance in the upper extremities.

SYM. Not clearly defined, but pain, tingling and numbness may occur anywhere from shoulder to fingers. Atrophy of small muscles of the hand or even the deltoid or other muscles of arm.

TREATMENT: Correction of posture, avoidance of fatigue and sometimes immobilization of arm and shoulder. When relief is not obtained, operative interference may be considered

scalp (skālp) [M.E.]. The hairy integument of the head.

In anat. includes skin, dense subcutaneous tissue, occipitofrontalis muscle with the galea aponeurotica, loose subaponeurotic tissue and the cranial periosteum.

scalpel (skālpēl) [L. *scalpellum*, little knife]. A straight, small surgical knife with a convex edge and thin, keen blade.

scalpriform (skālp'ri-form) [L. *scalprum*, chisel, + *forma*, shape]. In the shape of a chisel.

scalprum (skālp'rūm) (pl. *scalpra*) [L. *scalprum*, knife]. 1. A toothed instrument for removal of carious bone or for trephining. 2. A large scalpel. 3. Cutting edge of an incisor tooth.

scaly (skā'li) [A.S. *scale*, scale]. Resembling or characterized by scales.

scandium. SYMB: Sc. At wt. 44.96. At. no. 21. A rare metal belonging to the aluminum group.

scanning speech. Pronunciation of words in syllables, or slowly and hesitatingly; a symptom of disseminated sclerosis.* SEE: speech.

scanty (skān'ti) [M.E. *skant*, short]. Not abundant; insufficient, as a secretion.

scapha (skā'fā) [L. from G. *skaphē*, boat]. BNA. Elongated depression of the ear bet the helix and anthelix.

scapho- [G.]. Combining form meaning boat.

scaphocephalic, scaphocephalous (skāf'ō-sēf'āl'ik, -sēf'āl'ūs) [G. *skaphē*, boat, + *kephalē*, head]. Having a deformed head, projecting like a boat's keel.

scaphocephalism (skāf'ō-sēf'āl'izm) [" + -ismos, condition]. Condition of having a deformed head, projecting like the keel of a boat.

scaphoid (skāf'oyd) [G. *skaphē*, boat, + *eidos*, resemblance]. SYN: *os scaphoides*, *navicular bone*. A proximal, boat-shaped bone of the carpus on radial side 2 SYN: *navicular bone*. A boat-shaped bone on inner side of the tarsus between the talus and three cuneiform bones 3. Boat-shaped, navicular, hollowed

s. abdomen. One with hollowed anterior wall.

s. bone. SEE: scaphoid, 1 and 2.

scaphoiditis (skāf'oyd-ī'tis) [G. *skaphē*, boat, + *eidos*, form, + -itis, inflammation]. Inflamed condition of the scaphoid bone

SCAPULA.

1. Inferior angle. 2. Infraspinatus fossa. 3. Supraspinatus fossa. 4. Superior angle. 5. Spine. 6. Coracoid process. 7. Acromion process. 8. Anterior angle.

scapula (skāp'ū-lā) (pl. *scapulae*, -as) [L. shoulder blade]. The large, flat, triangular bone of the shoulder.

It articulates with the clavicle and the humerus SYN: *shoulder blade*. SEE: *triceps* for illustration.

s., winged. SYN. *scapula alata*. Condition in which medial border of scapula is prominent, usually the result of paralysis of serratus anterior or trapezius muscles.

RS: acromial, a. angle, acromioclavicular, acromioclavoid, acromion, angel's wing, glenoid cavity.

scapulargia (skāp'ū-lā'jī-ā) [L. *scapula*, + G. *algos*, pain]. Pain in the region of the shoulder blade.

scapular (skāp'ū-lar) [L. *scapula*, shoulder blade]. Of or pert. to the shoulder blade.

s. reflex. Scapular muscular contraction following percussion or stimulus bet. the scapulas.

scapulary (skāp'ū-lar-ī) [L. *scapula*, shoulder blade]. A shoulder bandage bifurcated with the 2 ends over the shoulders, the single end passing down the back, the 3 fastened to a body bandage.

scapulectomy (skāp'ū-lēk'tō-mī) [" + G.

ektomē, excision]. Surgical excision of the scapula.

scapulo- [L.]. Combining form meaning *shoulder*.

scapuloclavicular (skāp'ū-lō-klā-vīk'ū-lar) [L. *scapula*, shoulder blade, + *clavicula*, a little key] Concerning the scapula and the clavicle

scapulodynia (skāp'ū-lō-dīn'ī-ā) [“ + *odynē*, pain]. Inflammation and pain in the shoulder muscles.

scapulohumeral (skāp'ū-lō-hū'mer-āl) [“ + *humerus*, shoulder] Concerning the scapula and the humerus

s. reflex. When vertebral border of scapula is percussed upper arm is adducted and rotated outwards.

scapulopexy (skāp'ū-lō-pēks'ī) [“ + G. *pēxis*, fixation] Fixation of the scapula to the ribs

scapulothoracic (skāp'ū-lō-thō-rās'tik) [“ + G. *thōrax*, *thōrak-*, chest]. Concerning the scapula and the thorax.

scapus (skā'pus) [L. *scapus*, stalk]. The shaft or body of a hair (*s. pilis*) or the penis (*s. penis*)

scar (skar) [G. *eschara*, scab] Mark left in skin or internal organ by healing of a wound, sore or injury because of replacement by connective tissue of the injured tissue

Scars may result from wounds that have healed, lesions of diseases, or surgical operations

When first developed it is red or purple, later whitish and glistening. When on the head they may be the result of wounds which have healed or of skin disease. On the skin they may be the result of trauma or of surgical operation. SYN *cicatriz* SEE *cicatricotomy*, *keloid*.

s., cicatricial. A scar or cicatrix with considerable contraction.

It may be necessary to divide the scar and graft on new skin, as in burns

s., keloid. A red, raised, smooth scar containing blood vessels, often irritable.

Seen in the tuberculous, after superficial septic wounds, as from infected vaccination scars. TREATMENT Removal

s., painful. One due to involvement of a nerve during healing

The end of the nerve may become bulbous. TREATMENT Dissection of scar or excision of nerve.

scarabiasis. SYN *Bretle disease* Condition in which intestine is invaded by the dung beetle. Occurs principally in children

scarfskin (skarfs'skin) [Fr. *écharpe*, scarf, + O. Norse *skinn*]. Epidermis* or outermost layer of the skin

scarification (skār'ī-fī-kā'shūn) [L. *scarificatio*, from G. *skariphasthai*, to scratch]. Making of numerous slight incisions in the skin, over a part

scarificator (skār'ī-fī-kā-tor) [L. from G. *skariphasthai*, to scratch]. Instrument for making small incisions in the skin.

scarlatina (skar-lā-tē'nā) [L. *scarlatina*, from *scarlatum*, red] Scarlet fever, *q. v.*

s. simplex. Mild type of scarlet fever.

scarlatinall (skar-lā-tīn-el'lā) [L. *scarlatum*, red] Concerning or due to scarlatina.

scarlatinella (skar-lā-tīn-el'lā) [L.]. A mild disease resembling measles and scarlet fever. SYN: *fourth disease*, *rubella scarlatinosa*.

scarlatiniform, **scarlatinoid** (skar-lā-tīn'ī-form, -lāt'ī-noyd) [L. *scarlatina* + *forma*, shape, + G. *eidos*, form]. Resembling scarlatina or its rash.

scarlet fever (skar'lēt) [L. *scarlatum*, red]. An acute contagious disease char-

acterized by sore throat, fever, punctiform scarlet rash, and rapid pulse. SYN: *scarlatina*

ETIOLOG: Many strains (over 40) of Type A hemolytic, toxin-producing streptococci have been recovered from scarlet fever patients.

The erythema-producing toxin was discovered by Dick and Dick (1924-25).

INCUBATION: Probably never less than 24 hr. May be from 1 to 10 days, with average time of from 2 to 4 days.

SYM Onset sudden, rarely with a chill, but sometimes with a convulsion in very young children. As a rule, begins with sore throat, temperature from 103° to 104° F., frequent vomiting, followed within 12 to 36 hr by a rash, first on neck and chest, rapidly extends over body, lastly involving the extremities. Face flushed and may be characterized by the well-known circumoral pallor, the punctiform rash on the remainder of the body, seldom seen on face.

With first eruption, throat is markedly injected, tonsils are swollen, tongue heavily coated, and the papillae are enlarged, projecting through it, the tongue properly described as a "strawberry" tongue. In mild or average case duration of rash is from 2 to 3 days. By the end of 3rd day, the coating has disappeared from tongue, though the papillae are still enlarged, the remainder of tongue presenting a deep red appearance. In this stage, the tongue may be referred to as the "raspberry" tongue.

With disappearance of rash in an uncomplicated case, the temperature closely approaches normal and recovery is uneventful. Extremely mild cases occur in which the rash is very faint and of very short duration, possibly not exceeding 24 hr. Scarlet fever may actually occur without any rash whatsoever. In any form, a leukocytosis is to be expected in the average case. Number of leukocytes may range from 14,000 to 16,000.

SPECIFIC TREATMENT Penicillin is the agent of choice although other antibiotics may be used to combat the septic factor in the disease, however these have little effect on toxic manifestations. Immune serum and antitoxin are effective against toxic manifestations but exert little effect against the streptococcal organisms. Serum therapy has largely been abandoned because of dangers of serum sickness. It is reserved for rare cases in which toxic manifestations suggest a possible fatal outcome.

GENERAL TREATMENT Isolation, rest, and diet are of utmost importance. REST Keep the uncomplicated case in bed for a minimum of 2 weeks. The course of attack will determine whether this period of rest should be prolonged. While antiseptic mouthwashes often have a place for cleansing purposes, and serve to refresh the patient to some extent, gargles are not advisable. Occasionally, when itching of the skin is troublesome, olive oil or cocoa butter may be applied. Except in the case of nephritis, hot packs or cold sponging for purpose of lowering temperature should not be used. Laxatives or cathartics must not be neglected when indicated. Routine use of sodium citrate in 10- to 15-gr. doses 3 times daily throughout the course of the disease is beneficial. This may be augmented by addition of an equal amount of sodium

bicarbonate. Complications will necessarily be treated as they arise in accordance with their requirements. No surgical interference that would be required in a noncontagious case should be avoided because of the presence of s. f.

s. f., *afebrile*. S. f. without fever.

s. f., *anginal*. S. f. with severe throat symptoms

s. f., *hemorrhagic*. S. f. with blood extravasated into mucous membranes and the skin

s. f., *latent*. S. f. without rash but complicated by nephritis

s. f., *malignant*. S. f. with great prostration and severe symptoms

s. f., *rheumatic*. S. f. with joint pain

s. f., *without angina*. S. f. without sore throat

RS *Amato bodies*, *Borsieri's line*, *Dick method*

scarlet rash. A rose-colored rash, specifically that of German measles

scarlet red. An azo dye, of the color its name suggests

Uses: To stimulate healing of indolent ulcers, burns, wounds, etc

Dosage: 4 to 8% ointment SYN *rubrum scarlatinum*

Scarpa's fascia (skar'pa). Deep layer of superficial abdominal fascia around edge of the subcutaneous inguinal ring

S's. *fluid*. Fluid in membranous labyrinth of the ear. SYN *endolymph*.

S's. *foramina*. Bony passages opening into the incisor canal for passage of the nasopalatine nerves.

S's. *ganglion*. The vestibular ganglion, q.v.

S's. *liquor*. SEE S's *fluid*.

S's. *membrane*. Membrane that closes the fenestra rotunda of the tympanic cavity

S's. *triangle*. Triangular space bounded laterally by inner edge of sartorius, above by Poupard's ligament, and medially by the adductor longus

scatocrafiā (skāt-ā-krā'shi-ā) [G. *skōr*, *skat-*, dung, + *akratia*, lack of control]. Fecal incontinence

scatemia (skāt-ē'mi-ā) [' + *aima*, blood]. Intestinal toxemia from retained fecal matter.

scatology (skāt-ōlō-jī) [' + *logos*, a study]. 1. Scientific study and analysis of the feces SYN *coprology*. 2. Interest in obscene things, esp literature

scatoma (skā-tō'mā) [' + *ōma*, tumor]. Mass of inspissated feces in colon or rectum resembling an abdominal tumor. SYN *coproma*, *fecaloma*, *stercoroma*.

scatophagy (skā-tōf'ā-jī) [' + *phagein*, to eat]. The eating of excrement. SYN: *coprophagy*.

scatopsy (skā-tōs'kō-pī) [' + *skochein*, to examine]. Examination of excreta for diagnostic purposes.

scavenger cell (skāv'en-jer) [O Fr. *escavage*, inspection]. A phagocytic cell such as a macrophage or a neutrophil leukocyte which functions in the removal of disintegrating tissues

Schäfer's method of artificial respiration (shā'fer). A method of artificial respiration in which the subject lies prone with both arms extended forward with one flexed so that hand rests under cheek and mouth. Operator kneels astride one or both thighs and places palms of hands on back over lower ribs. Operator rhythmically applies pressure on the hands by raising body at a rate of 12 times per minute.

This method was formerly widely used but has been replaced by more effective methods such as back pressure-arm lift

(Nielsen) method, and mouth-to-mouth breathing SEE: *artificial respiration*

Schäffer's reflex (shā'fer). Dorsal flexion of toes and flexion of foot resulting when middle portion of tendo achillis is pinched.

schematic (skē-māt'ik) [L *schematicus*, planned]. Pert to a diagram or model; showing part for part in a diagram.

scheroma (shē-rō'mā). Xerophthalmia, q.v.

Schick test (shik) Injection intradermally of 0.1 ml. of dilute diphtheria toxin (1/50 MLD). MLD—minimum lethal dose or the amount of diphtheria toxin which would kill a small guinea pig in four days

Results 3 to 4 days later. Susceptibility (*positive test*) is indicated by the development of a red, inflamed area at point of injection, which slowly disappears after a few days. A *negative test*, (little or no reaction) indicates the presence of antibodies sufficient to neutralize the toxin, hence the person is immune SEE *diphtheria*

Schilder's disease. Encephalitis periaxialis diffusa, a progressive familial paraplegia. Also called *progressive subcortical encephalopathy*

Schiller's test (shil'er). One for superficial cancer, esp. of the cervix uteri. Paint with solution of iodine. Cancer cells not containing glycogen fail to stain, thus revealing their presence

Schilling's method. SYN *Schilling's hemogram*, S's *count*. Method of taking a differential blood count by separating the polymorphonuclear neutrophils into four categories according to number and arrangement of the nuclei in the cells

schindylisis (skin-dī-lē'sis) [G *schindylē-sis*, a splintering]. A form of synarthrosis (wedge and groove suture) in which a crest of one bone fits into a groove of another

schistocelia (skis-tō-sē'lī-ā) [' + *kollia*, belly]. Congenital abdominal fissure.

schistocyte (skis'tō-sit) [' + *kytos*, a cell]. 1. A blood cell in process of segmentation. 2. A very tiny red blood corpuscle.

schistocytosis (skis'tō-si-tō'sis) [' + ' + *-osis*, condition]. 1. Schistocytes in the blood. 2. Segmentation process of blood corpuscles.

schistoglossia (skis'tō-glos'i-ā) [' + *glōssa*, tongue]. A cleft tongue

schistoprosopia (skis'tō-prō-sō'pī-ā) [' + *prosōpon*, face]. Congenital fissure of the face.

schistorrhachis (skis'tor'ā-kis) [' + *rachis*, spine]. Protrusion of membranes through a congenital cleft in lower vertebral column. SYN *spina bifida*.

Schistosoma (skis'tō-sō'mā) [G. *schistos*, a cleft, + *soma*, body]. A genus of blood flukes belonging to the family *Schistosomatidae*, class *Trematoda*. Adults live in blood vessels of visceral organs. Eggs make their way into bladder or intestine and are discharged in urine or feces. Eggs hatch into miracidia which enter snails and transform into sporocysts. These develop daughter sporocysts which give rise to fork-tailed cercaria. These leave snail and enter final host directly through skin.

S. *haematobium*. A species common in Africa and southwestern Asia. Adults infest pelvic veins of vesicle plexus. Eggs work their way through bladder wall and are discharged through urine.

S. *japonicum*. A species common in many parts of Orient. Adults live principally in branches of sup. mesenteric

vein. Eggs work their way through intestinal wall into lumen and are discharged with feces.

S. mansoni. A species occurring in many parts of Africa and tropical America (W. Indies, northern part of S.A.). Adults live in branches of inf. mesenteric veins. Eggs discharged through either intestine or bladder.

schistosome dermatitis (skis'tō-sōm). SYN swimmer's itch. Dermatitis resulting from penetration of skin of humans by cercariae of non-human blood flukes. Common in lake region of northern U.S.

schistosomiasis (skis'tō-sō-mi'ās-is) [G. *schistos*, a cleft, + *sōma*, body, + -*iasis*, infection]. SYN *bilharziasis*. A parasitic disease due to infestation with blood flukes belonging to the genus *Schistosoma*. *q.v.* The disease is widespread throughout Asia, Africa, and tropical America. Man becomes infested by wading or bathing in water containing cercaria which have issued from snails.

schistothorax (skis'tō-thō'raks) [+ *thō-rax*, chest]. Fissure of the thorax.

schizamnion (skiz-ām'ni-on). An amnion formed by development of a cavity in the inner cell mass.

schizaxon (skis-aks'on). An axon that divides in 2 equal or nearly equal branches.

schizo- [G]. Combining form meaning to split.

schizoblepharia (skiz-ō-blē'fā-ri-ā). Fissure of an eyelid.

schizocytosis (skis'ō-si-tō'sis) [+ + -*osis*, condition]. SYN *schistocytosis*.

schizogenesis (skiz'ō-jēn'ēs-is) [+ *genesis*, production]. BIOL. Reproduction by fission.

schizogyria (skiz-ō-jī'ri-ā) [+ *gyros*, a circle]. A break or cleft in the cerebral convolutions.

schizoid (skiz'oid) [G. *schizein*, to split, + *eidos*, resemblance]. Resembling schizophrenia.

s. personality. The type of person characterized by solitudinism, inability to develop close emotional attachments to others, reduced initiative, morbid introspection, and oftentimes queer behavior. The so-called "shut-in" type.

Schizomycetes (skiz'ō-mi-sē'tēz) [+ *mykēs*, fungus]. Class of plant microorganisms or fungi which multiply by fission. Includes the bacteria.

schizont (skiz'ont) [G. *schizein*, to split].

1. Form appearing in the life cycle of a

sporozoan protozoan resulting from multiple division or schizogony. 2. Stage in asexual phase of life cycle of *Plasmodium* found in red blood cells. By schizogony, each gives rise to 12-24 or more merozoites. (See Plg. of Human cycle of tertian malaria, p. M-5). An early schizont is called a *prescoper*, a mature schizont is called a *rosette* or *segmenter*.

schizonychia (skiz'ō-nīk'i-ā) [G. *schizein*, to split, + *onyx*, onych-, nail]. Split condition of the nails.

schizophasia (skiz-ō-fā'zi-ā) [+ *phasis*, speech]. Muttered and incomprehensible speech of the schizophrenic.

schizophrenia (skiz-ō-frē'nī-ā) [G. *schizein*, to split, + *phrēn*, mind]. The most important of the psychoses, characterized by loss of contact with the environment and by disintegration of personality.

This term includes all cases of dementia precox of the older writers. Possibly, it may also apply to numerous borderline cases which would not have been included in dementia precox.

Four types of schizophrenic reactions are usually differentiated although the dominant reaction in any patient may vary from time to time. The types are *simple*, *paranoid*, *catatonic*, and *hebephrenic*. In the simple type, the patient becomes dull emotionally, loses ambition, and tends to withdraw, however, there is no serious intellectual impairment. The paranoid type develops extensive delusions of persecution, the catatonic may show stereotyped excitement or simulate a stupor, though lucid and clearly recalling the episode if recovery occurs. A vague sense of being 2 personalities and "changed" occurs in all types. The hebephrenic shows mannerisms, speech anomalies, hysteroid symptoms, delusions, hallucinations, and often a dreamy, ineffectual reaction.

ETIOL. Unknown.

PROG. Always guarded.

NP. Expert and careful nursing care is required during the administration of shock treatment, as patient's blood sugar is at a low level in insulin therapy and delay may have serious consequences. Constant watching is required while patient is unconscious because of the violent twitchings during convulsions.

TREATMENT: Hospitalization is essential in most cases. Psychotherapy and

Schizophrenia (Symptoms)

- Occurs in young men and women.
- Poor general health.
- Memory better than it seems.
- Hallucinations common, especially of hearing.
- Loss of emotion or, if shown, it is out of place.
- Affection absent.
- May revert to stereotype.
- Impulsive destructive acts.
- Negativism.
- May be catatonic.
- May be hebephrenic.
- May recover sufficiently to be discharged.
- Pulse feeble.
- Cold, blue, and edematous extremities.
- Muddy complexion.
- Conscious, but takes little cognizance of what is going on about them.
- Delusions frequent but absurd, often of grandeur and persecution.
- May have attacks of tears or laughter.
- Facial grin while describing tortures.
- May have excited activity.
- May remain in stupor.
- Grimaces and mannerisms frequent.
- May pay no attention to calls of nature if disease is advanced.
- May be paranoid.
- Disease sometimes changes its form.
- Complete recovery rare.

Principal Signs: Moodiness, solitary habits, stupor and excitement, delusions and hallucinations.

shock treatment (insulin, metrazol, and electric) are utilized. Drug therapy involving use of tranquilizing agents such as chlorpromazine or reserpine is showing promise in certain cases. **See:** *hypoglycemic shock, insulin shock therapy, shock therapy.*

schizophrenic (skiz'ō-frēn'ik) [*G. schizēn, to split, + phrēn, mind*]. Afflicted with or person afflicted with schizophrenia.

schizoprosopia (schiz'ō-prō-sō'pi-ā). Fissure of the face as harelip, or cleft palate.

schizotrichia (skiz'ō-trik'i-ā) [*' + thriz, trich-, hair*]. Splitting of the hair.

Schlemm's canal (shlēm). **Syn** *sinus venosus sclera*. Irregular space or spaces in the sclerocorneal region of the eye. It receives the aqueous humor from the ant. chamber of the eye.

Schmidt's intestinal test (shmit). Test diet given for indigestion.

For breakfast the following may be served: Milk, ½ liter, or an equal quantity of cocoa made with milk, 1 cooked or raw egg, zwieback or roll, 50 Gm., butter, 10 Gm.

The midmorning meal consists of ½ liter of oatmeal gruel, made from oatmeal, 40 Gm., water, 200 cc., and milk, 300 cc.

Dinner consists of chopped beef, 125 Gm., lightly broiled in butter and raw inside, strained potato purée made from mashed potato, 190 Gm.; milk, 100 cc., and butter, 10 Gm.

The midafternoon meal is the same as the breakfast, and supper is the same as the midmorning meal.

This diet is usually maintained for about 3 days. All the food used must be weighed or measured *accurately*. Should the patient not eat the entire amount the portion not eaten must be weighed or measured. All the urine and feces passed are measured and sent to the laboratory for examination. It is also sometimes required that the foods used must first be analyzed.

scheidarian membrane (shni-dē'ri-ān). The nasal mucosa. **Syn** *pituitary membrane*.

Schönlein's disease (shen'lin). **Syn:** *Schönlein-Henock purpura, purpura hemorrhagica*. An allergic or anaphylactic purpura occurring in individuals, esp. children with drug sensitivities, serum sickness, and other allergic disorders. It is usually accompanied by pains in joints and abdomen.

Schoff method (shōt). Resisting exercises and special baths in the treatment of heart disease.

Schroeder's method (shrōd'er) (resuscitation). A manner of resuscitating asphyxiated infants by placing the patient in a bath and then bending the body over the abdomen. This movement compresses the thorax and produces a forceful expiration.

Schueller's method (shu'er) (Karl Heinrich Anton Max Schueller, Berlin surgeon, 1843-1907) (artificial respiration). A manner of performing artificial respiration by a series of rhythmic raisings of the thorax by the operator hooking his fingers under the lower ribs.

Schultze's bundle. Longitudinal mass of descending fibers shaped like a comma, in the fasciculus cuneatus of spinal cord.

S's. cells. Olfactory cells.

S's. granule masses. Fine, granular masses formed by breaking up of plaques in the blood.

S's. method. A method of resuscitating an asphyxiated infant at birth.

The 1st and 2nd fingers are placed in child's axillae, with thumbs over shoulders. The child is held firmly, and swung at arm's length above head of nurse, which brings the legs of the infant on to the abdomen, thereby compressing the chest. On swinging child down again, the chest becomes expanded, and so inspiration takes place.

Schwabach test (shvah'bakhk). A test for hearing by use of 5 tuning forks, each of a different tone. **See** *test*.

Schwann's cells. Cells of ectodermal origin which comprise the neurilemma.

S's. sheath. The neurilemma of a nerve fiber. **Syn.** *neurilemma*.

S's. white substance. Myelin of a medullated nerve fiber.

sciage (se-ahzh') [*Fr. a sawing*]. A movement in massage resembling that in sawing.

sciatic (sī-āl'ik) [*G. ischiadikos, pert. to the ischium*]. 1 Pert to the hip or ischium. 2 Pert to, due to, or afflicted with, sciatica.

s. nerve. Largest nerve in the body arising from sacral plexus on either side, passing from pelvis through greater sciatic foramen, down back of thigh, where it divides into tibial and peroneal nerves. **See** *Table of Nerves in Appendix*.

s. n., great. Lesions cause paralysis of flexion and of adduction of toes, abduction and adduction of toes, rotation inward and adduction of foot; of plantar flexion and lowering of ball of foot; anesthesia in cutaneous distribution (ext. popliteal nerve); paralysis of dorsal flexion and adduction of foot, of rotation of ball of foot outward and of raising external border of foot and of extension of toes, also anesthesia in cutaneous distribution.

s. n., small. The posterior femoral cutaneous nerve, a cutaneous nerve supplying skin of buttocks, perineum, popliteal region, and back of thigh.

sciatica (sī-āl'i-kā) [*L. from G. ischiadikos, pert to the ischium*]. Severe pain in the leg along the course of the sciatic nerve felt at back of thigh running down the inside of the leg. **See:** *meralgia, sciatic nerve, lesions of.*

Error: 1 Compression or trauma of the sciatic nerve or its roots, esp. that resulting from ruptured intervertebral disk or osteoarthritis of lumbosacral vertebrae. 2 Inflammation of sciatic nerve resulting from metabolic, toxic, or infectious disorders. 3 Pain referred to sciatic nerve from other parts of body.

Sym: May begin abruptly or gradually and is characterized by a sharp, shooting pain running down back of thigh. Movement of limb generally intensifies the suffering. Pain may be uniformly distributed along the limb, but not infrequently there are certain spots where it is more intense; numbness, tingling; nerve may be extremely sensitive to touch. Symptoms grow worse at night and on approach of stormy weather. Duration of attack varies from few days to several months. In long standing cases, muscles grow atrophied and rigid.

Prog. Recovery follows in majority of cases when treatment is instituted early, and is persistently carried out.

Treatment. In acute stage, rest is essential. Hot fomentations. Deep injections of morphine or cocaine may be required to relieve the pain. In rheumatic cases full doses of salicylate of sodium are useful. In chronic case prolonged rest. Deep injections along course of

nerve of morphine and atropine, cocaine or plain water; electricity. Improve general health; good, nourishing diet; bags of hot salt; covering part with flannel and running hot iron over it often relieves. Some cases relieved by cold. Nerve stretching by pulling affected leg. Lift in shoe of affected limb.

scleropia (skl-ēr-ō'pī-ā) [G. *sklēros*, shadow, + *opsis*, vision]. Abnormal vision in which things appear to be in shadow.

scintillascope (sīn-tīl'ā-skōp) [L. *scintilla*, spark, + G. *skopein*, to examine]. Device for estimating physical properties of radium. SYN *spintariscope*.

scintillation (sīn-tīl-lā-shūn) [L. *scintilla*, spark]. Sparkling; a subjective sensation, as of seeing sparks.

scirrhus [G.]. Combining form meaning *hard*, as *scirrhus*, a hard tumor.

scirrhard (skīr'oyd) [G. *skirrhos*, hard, + *eidos*, form] Pert. to or like a hard carcinoma or scirrhus.

scirrhomia (skīr-ō'mā) [+ *-ōma*, tumor]. A hard carcinoma or scirrhus.

scirrhomia (skīr-ō-sar'kā) [+ *sarx*, *sark-*, flesh] Hardening of the flesh, esp. of the newly born. SYN *sclerema neonatorum*, *scleroderma*.

scirrhus (skīr'ūs) [G. *skirrhos*, hard]. Hard, like a scirrhus.

scirrhus (skīr'ūs) [G. *skirrhos*, hard]. A hard, cancerous tumor due to overgrowth of fibrous tissue. A hard form of cancer.

scissor leg (siz'or lēg) Abnormal crossing of both legs, the result of adduction at both hips. SYN *x-leg*.

s. *l. gait*. Crossing the legs in walking. SEE: *gait*.

scissors (siz'ors) [L. *cisorium* from *caedere*, to cut] A cutting instrument composed of 2 opposed cutting blades with handles, held together by a central pin.

seissura. A fissure or cleft; a splitting.

sciera (skīē'rā) (pl. *scierae*) [G. *sklēros*, hard]. BNA. The white or sclerotic outer coat of the eye.

It extends from optic nerve to cornea. SYN *sclerotic*.

scleradenitis (sklē-rād-ēn-ī'tīs) [+ *adēn*, gland, + *-itis*, inflammation] Inflammation and induration of a gland.

scleral (sklē'rāl) [G. *sklēros*, hard]. Concerning the sclera.

sclerectasia (sklē-rēk-ā'zī-ā) [+ *ek-tasis*, dilatation]. Protrusion of the sclera.

sclerectoliridectomy (sklē-rēk'ō-īr-ī-dēk'-tō-mī) [+ *iris*, *īrid-*, iris, + *ektomē*, excision]. Formation of a filtering cleatrix in glaucoma by combined sclerectomy and iridectomy.

sclerectoliridodialysis (sklē-rēk'ō-īr-īd-ō-dī-ā'ī-sīs) [+ *dialysis*, a loosening]. Sclerectomy and iridodialysis for relief of glaucoma.

sclerectomy (sklē-rēk'tō-mī) [+ *ektomē*, excision]. 1. Excision of a portion of the sclera. 2. Removal of adhesions in chronic otitis media.

scleredema (sklē'rē-dē'mā). SYN: *scleredema adultorum* of Buschke, *scleriosis*. A condition usually following an acute infection characterized by edema and induration of the skin. It is a benign, self-limited disease occurring more frequently in females than males. It is often confused with scleroderma, q.v.

sclerema (sklē-rē'mā) [G. *sklēros*, hard]. Hardening of the skin. SYN: *scleroderma*.

s. *adiposum*. S. neonatorum, q.v.

s. *adultorum*. Scleroderma, q.v.

s. *neonatorum*. Progressive hardening

of the skin in the newly born; usually fatal.

sclerencephalia (sklē'rēn-sēf-ā'īl-ā). Sclerosis of the brain.

scleriosis (sklē-rī'ās-īs) [+ *-iasis*, disease]. Progressive hardening of the skin. SYN: *scleroderma*.

scleritomy (sklē-rī-tō-mī) [+ *iris*, iris, + *tomē*, a cutting]. Incision of iris and sclera.

scleritis (sklē-rī'tīs) [+ *-itis*, inflammation]. Inflammation of the sclera; superficial and deep. SEE: *episcleritis*.

s., *annular*. Inflammation of the sclera at the corneoscleral limbus.

scleroblastema (sklē'rō-blās-tē'mā) [+ *blastema*, a sprout]. The embryonic tissue from which formation of bone takes place.

scleroblastic (sklē'rō-blās-tēm'ik) [+ *blastema*, a sprout]. Relating to or derived from scleroblastema.

sclerocataracta (sklē'rō-kāt-ā-rākt-ā) [+ *kataraktēs*, a pouring down]. A hard cataract.

sclerorhoiditis (sklē'rō-rōy-dī'tīs) [G. *sklēros*, hard, + *chorioeides*, skinlike, + *-itis*, inflammation] Inflammation of the sclera and choroid coat of the eye.

s., *posterior*. Myopic choroiditis, posterior staphyloma.

scleroconjunctival. Pertaining to the sclera and conjunctiva.

sclerocornea (sklē'rō-kor-nē-ā) [+ *L. cornu*, a horn] The sclera and cornea together considered as one coat.

sclerodactylia (sklē'rō-dāk-tīl'ī-ā) [+ *daktylos*, digit]. Induration of the skin of the fingers and toes.

scleroderma (sklē-rō-der'mā) [G. *sklēros*, hard, + *derma*, skin] SYN *dermatosclerosis*, *sclerema adultorum*, *hide-bound skin*, *progressive systemic sclerosis*. A progressive disease of the skin involving collagen tissue resulting in diffuse leathery induration of the skin frequently followed by atrophy and pigmentation. The localized form is known as *morphea*.

Etiol. Unknown. Endocrine, nervous, and vasomotor factors as well as hypersensitivity and infections have been considered as possible causes.

SYM. Diffuse symmetrical form, occurring in adults, following exposure to cold or wet. Smooth, waxy, edematous skin, later becomes hard, yellowish, and adherent to underlying tissue, causing masklike expression (face) or clawlike appearance of hands (sclerodactylia). When chest is involved respiration may be interfered with.

PROG. Better in circumscribed form than in extensive s.

TREATMENT: Tonics; warm, moist, equable climate; endocrine medication in some. Locally, mildly stimulating ointments (salicylic acid, mercurials), chloroform, liniment.

s., *circumscribed*. Skin disease with pink, firm patches which atrophy, leaving scars. SYN: *morphea*.

s. *neonatorum*. Hardness and tightness of the skin in early infancy. SYN: *sclerema*.

sclerodermatitis (sklē'rō-der-mā-tī'tīs). Inflammation of the skin accompanied by thickening and hardening.

sclerogenous (sklē-rōj-ēn-ūs) [+ *genesis*, to produce]. Causing sclerosis or hardening of tissue.

scleroid. Having a hard or firm texture.

scleroiditis (sklē'rō-ī-rī'tīs) [+ *iris*, iris, + *-itis*, inflammation]. Inflammation of both sclera and iris.

sclerokeratitis (sklē'rō-ker-ā-tī'tis) [' + *keras*, *kerat-*, horn, + *-itis*, inflammation]. Cellular infiltration with inflammation of the sclera and cornea.

sclerokeratiritis (sklē'rō-ker-ā-tō-i-rī'tis) [' + + *iris*, iris, + *-itis*, inflammation]. Inflamed condition of the sclera, cornea, and iris.

scleroma (sklē-rō'mā) [' + *-ōma*, tumor]. Indurated, circumscribed area of granulation tissue in mucous membrane or skin. **SEE:** *sclerosis*.

scleromalacia (sklē'rō-mā-lā'si-ā). Softening of the sclera.

s. perforans. Scleromalacia accompanied by perforation.

scleromere (sklē'rō-mēr) [G *sklēros*, hard, + *meros*, a part]. The caudal half of a sclerotome, *q v*

scleronychia (sklē'rō-nīk-i-ā). Thickening and hardening of the nails.

scleronyxis (sklē'rō-nīks'is) [G. *sklēros*, hard, + *nyxis*, a piercing]. Puncture of the sclera.

scleroophoritis (sklē'rō-ō'f-or-i'tis) [' + *oon*, egg, + *phoros*, a bearer, + *-itis*, inflammation]. Induration and inflammation of the ovary.

sclerophthalmia (sklē'rō-thāl'mī-ā) [' + *ophthalmos*, eye] Congenital condition in which opacity of the sclera advances over the cornea.

scleroplasty (sklē-rō-plāst'i). Plastic surgery of the sclera.

scleroprotein (sklē'rō-prō'tē-in) [' + *prōtos*, first]. One of group of simple proteins* forming the skeletal structure of animals marked by their insolubility.

They are not suitable for food. Elastin and keratin are examples. **SYN:** *albuminoid*.

sclerosed (sklē-rōsd', sklērōsd) [G. *sklēros*, hard]. Having scleritis, hardened. **SYN:** *indurated*.

sclerosing (sklē-rō'sīng) [G. *sklēros*, hard]. Causing or suffering from sclerosis.

sclerosis (sklē-rō'sis) [G. *sklērosis*, a hardening] 1 A hardening or induration of an organ or tissue, esp that due to excessive growth of fibrous tissue. 2 Hardening within nervous system, esp brain and spinal cord resulting from degeneration of nervous elements, as the myelin sheath. 3 Thickening and hardening of the layers in wall of an artery. **SEE:** *atherosclerosis* and *arteriosclerosis*.

RS *cerebroscclerosis*, *Charcot's disease*, *scleritis*.

s. Alzheimer's. Hyaline degeneration affecting the small blood vessels of brain.

s. amyotrophic lateral. Progressive muscular atrophy resulting from disease conditions, degenerative in nature, involving anterior horn cells and the pyramidal tracts. It is rapidly progressive, usually ending in bulbar paralysis.

s. annular. S in which sclerosed substance forms a band about spinal cord.

s. arterial. Hardening of the coats of the arteries. **SYN:** *arteriosclerosis*.

s. arteriolar. S. of arterioles.

s. diffuse. S. affecting large areas of the brain and spinal cord.

s. disseminated. Sclerosis, multiple, *q v*

s. hyperplastic. Sclerosis, medial, *q v*.

s. insular. Multiple sclerosis, *q v*.

s. intimal. Atherosclerosis, *q v*

s. lateral. S. of a lateral column of the spinal cord. **SEE:** *sclerosis*, *amyotrophic lateral*.

s. lobar. Sclerosis of cerebrum resulting in mental disturbances.

s. medial. **SYN:** *Monckeberg's sclerosis*.

s. S. Involving the tunica media of

arteries, usually the result of involutinal changes accompanying aging.

s. multiple. A chronic, slowly progressive disease of the central nervous system characterized by development of disseminated demyelinated glial patches called *plaques*. Symptoms and signs are numerous, but common in later stages are those of Charcot's triad (nystagmus, scanning speech, and intention tremor). Occurs in the form of many clinical syndromes, the most common being the *cerebral*, *brainstem-cerebellar*, and *spinal*. A history of remissions and exacerbations is diagnostic. Etiology is unknown and there is no specific therapy.

s. neural. S. with chronic inflammation of a nerve trunk with branches.

s. posterior spinal. **SEE:** *tabes dorsalis*.

s. renal. Nephrosclerosis, *q v*

s. vascular. Sclerosis of the walls of blood vessels, arterial and venous sclerosis.

s. venous. Phleboscclerosis, *q v*.

scleroskeleton (sklē'rō-skēl'ē-tōn) [G *sklēros*, hard, + *skeleton*, skeleton]. Skeletal parts resulting from ossification of fibrous structures, such as ligaments, fasciae, and tendons.

sclerostenosis (sklē'rō-stēn-ō'sis) [G *sklēros*, hard, + *stenōsis*, a narrowing]. Contraction and induration of tissues, esp those about an orifice.

s. cutanea. Induration of the skin. **SYN:** *scleroderma*.

sclerostomy (sklē-rōs'tō-mī) [' + *stoma*, an opening]. Formation of an opening in the sclera.

sclerothrix (sklē'rō-thrīks) [' + *thrīx*, hair]. Brittleness of the hair.

sclerotic (sklē-rō'tik) [L *scleroticus*, from G. *sklēros*, hard] 1 Pert. to or affected with sclerosis 2. Hard.

s. acid. An amorphous, brown powder from ergot. A hemostatic and oxytocic.

s. coat. The membrane forming the ext coat of the eye. **SYN:** *sclera*, *sclerotica*.

s. teeth. Hard, yellowish ones almost immune to caries.

sclerotica (sklē-rōt'i-kā) [L from G. *sklēros*, hard]. The ext. white coat of the eye. **SYN:** *sclera*, *sclerotic coat*.

scleroticectomy (sklē-rōt-i-sēk'tō-mī) [L. *scleroticus*, sclerotic, + G *ektomē*, excision]. Excision of a part of the sclera. **SYN:** *sclerectomy*.

scleroticochoroiditis (sklē-rōt'ī-kō-kō'roy-dītis) [' + G *choroideis*, skin-like, + *-itis*, inflammation]. Inflammation of sclerotic and choroid coats of the eye. **SYN:** *sclerochoroiditis*.

scleroticonyxis (sklē-rōt-īk-ō-nīks'is) [' + G. *nyxis*, a piercing]. Puncture of the sclera. **SYN:** *scleronyxis*.

scleroticopuncture (sklē-rōt'īk-ō-pūnk'tūr) [' + *punctūra*, a piercing]. Surgical puncture of the sclera. **SYN:** *scleronyxis*, *scleroticonyxis*.

scleroticotomy (sklē-rōt-īk-ōt'ō-mī) [' + G. *tomē*, a cutting]. Incision of the sclerotic coat of the eye. **SYN:** *sclerotomy*.

sclerotitis (sklē-rō-tītis) [G. *sklēros*, hard + *-itis*, inflammation]. Inflammation of the sclera. **SYN:** *scleritis*.

sclerotium (sklē-rōshl'ūm) [L. from G. *sklēros*, hard]. Hardened mass formed of mycelium and food debris, the resting stage of certain fungi.

sclerotome (sklē'rō-tōm) [G. *sklēros*, hard, + *tomē*, a cutting]. 1. Knife used in incision of the sclera. 2. One of a series of segmentally arranged masses of

mesenchymal tissue lying on either side of the notochord. They give rise to the vertebrae and ribs.

sclerotomy (sklē-rōf'ō-mī) [+ + tomē, a cutting]. Simple division of sclera.

s., anterior. Incision at angle of anterior chamber in glaucoma.

s., posterior. Opening through sclera into the vitreous for detached retina, removal of foreign body, etc.

sclerotrachia (sklē-rō-trīk'ī-ā). Hardness and brittleness of the hair.

sclerous (sklē-rōs). Hard, indurated.

scobinate (skō'bīn-āt). Rough.

scolex (skō'lēks). The portion of a tapeworm, the so-called "head," by which it attaches itself to the wall of the intestine. They usually possess holdfast organs such as hooks, suckers or grooves (bothria).

scoliometer (skō-lī-ōm'ēt-ēr) [G. skolios, crooked, + metron, measure]. Device for measuring curves, esp. lateral ones of the spine.

scoliorachitic (skō'lī-ō-rā-kīt'ik) [+ + rachis, spine]. Pert to or afflicted with spinal curvature from rickets.

scoliosimetry (skō'lī-ō-sī-ōm'ēt-ri) [+ + metron, a measure]. Measurement of degree of spinal curvature.

scoliosis (skō-lī-ō'sis) [G. skoliosis, curvature]. Lateral curvature of the spine.

Usually consists of 2 curves, the original one and a compensatory curve in the opp. direction.

s., cicatricial. S. due to cicatricial contraction resulting from necrosis.

s., congenital. That present at birth, usually the result of defective development of the spine.

s., coxific. S. in the lumbar spine due to tilting of the pelvis in hip disease.

s., empyematic. S. following empyema and retraction of one side of the chest.

s., habit. S. due to habitually assumed improper position.

s., inflammatory. S. due to disease of the vertebrae.

s., ischiatic. S. due to hip disease.

s., myopathic. Weakening of spinal muscles causing a lateral curvature.

s., ocular, s., ophthalmic. S. from tilting of the head in astigmatism.

s., osteopathic. Same as s., myopathic, q.v.

s., paralytic. Lateral curvature of the spine due to paralysis of the muscles.

s., rachitic. S. due to rickets.

s., rheumatic. S. due to rheumatism of dorsal muscles.

s., sciatic. Lateral curvature in sciatica.

s., static. That due to difference in length of legs.

scoliosometry (skō'lī-ō-sōm'ēt-ri) [G. skoliosis, curvature]. Determination of degree of spinal curvature. Syn: *scoliosimetry*.

scoliotic (skō-lī-ōt'ik) [G. skoliosis, curvature]. Suffering from or related to scoliosis.

scoliotone (skō'lī-ō-tōn) [G. skolios, curved, + tonos, a stretching]. An apparatus for correcting the curve in scoliosis by stretching the spine.

-scope. Combining form meaning an instrument or device for viewing or examining.

scoop (skōöp) [M.E. scope, a ladle]. Surgical spoon-shaped instrument.

s., bone. Instrument for scraping or removing necrosed bone or contents of suppurative tracts. Volkmann's, Schede's, Von Brun's, Hebras, Treves.

s., bullet. Instrument for dislodging bullets.

s., cataract. Instrument for removing fluids, foreign growths, for exerting pressure or center pressure.

s., ear. Instrument for removing middle ear granulations.

s., lithotomy. Instrument for dislodging encysted calculi, removing stones, débris, etc.

s., mastoid. Instrument used in mastoid operations.

s., renal. Instrument to dislodge or remove small stones from pelvis of kidney.

scopolamine hydrobromide (sko-pol'ā-mēn hī'drō-brō'mid) [G. skopolamin] USP. The hydrobromide of alkaloids obtained from plants of the nightshade family.

ACTION AND USES. As a cerebral sedative and locally as a mydriatic, and with morphine and pentobarbital in labor to produce twilight sleep. Syn: *hyoscine hydrobromide*.

DOSAGE. 1/120 gr (0.5 mg.).

scopophobia (skō'pō-fō'bī-ā) [G. skopos, a watcher, + phobos, fear]. Abnormal fear of being seen.

scopophbiac (skō'pō-fō'bī-āk) [+ + phobos, fear]. One who is afraid of being seen.

scopelagniac (skōp-tō-lāg'nī-āk) [G. skopein, to see, + lagneta, lust]. One who derives sexual gratification from observing objects or situations. Syn: *voyeur*, q.v. Sex: *scopophilia*.

scopophilia (skōp-tō-fī'lī-ā) [+ + philein, to love]. Sexual pleasure derived from visual sources, such as nudity, obscene pictures, etc.

scopophobia (skōp-tō-fō'bī-ā) [+ + phobos, fear]. Aversion to being seen.

scopophbiac (skōp-tō-fō'bī-āk) [+ + phobos, fear]. One who dreads being seen.

-scopy [G.]. Combining form meaning examination.

scoracratia (skōr-āk-rā'shī-ā) [G. skōr, dung, + akratia, lack of control]. Inability to retain the feces. Syn: *scatocratia*.

scorbatic (skor-bū'tik) [L. scorbutus, scurvy]. Concerning or affected with scurvy.

scorbutus (skor-bū'tūs) [L. scurvy]. A deficiency disease due to lack of vitamin C in fresh vegetables and fruits. Syn: *scurvy*, q.v. Sex: *deficiency disease*, *vitamin*.

scordinema (skor-dīn-ē'mā) [G. yawning]. Yawning and stretching with heaviness of the head, a prodrome of an infectious disease.

scoretemia (skōr-ē-tē'mī-ā) [G. skōr, dung, + aima, blood]. Autointoxication resulting from absorption of feces in the intestine or absorption of substances from feces retained in the intestine.

scorpion. An arachnid belonging to the order *Scorpionida* confined principally to warm countries. They are capable of inflicting a dangerous and sometimes fatal sting by means of a caudal fang, the venom containing neurotoxins, hemolysins, cardiac toxins and agglutinins.

s., sting. Symptoms resemble those of black widow spider bite or strychnine poisoning. Severity of symptoms depends on age of victim. Stings often are fatal to children under 3, adults usually recover.

TREATMENT. Same as for black widow spider* bite. Apply tourniquet with

caution. Apply ice or freeze with ethyl chloride to slow dissemination of venom. Specific antivenom should be administered if available. In S W United States, it can be secured from Poisonous Animals Research Laboratory, Arizona State College, Tempe, Arizona.

scotodinia (skō-tō-dīn'ā) [G. *skotos*, darkness, + *dinos*, a whirl]. Vertigo with black spots before the eyes and faintness.

scotoma (skō-tō-mā) (pl. *scotomata*) [G. *skōtōma*, darkness]. Islandlike blind gap in the visual field.

s., **absolute**. An area in the visual field in which there is absolute blindness.

s., **annular**. A scotomatous zone which encircles the point of fixation like a ring, not always completely closed, but leaves the fixation point intact.

s., **central**. One which involves the point of fixation, seen in lesions of the macula.

s., **color**. Color blindness in a limited portion of visual field.

s., **flittering**. Same as scintillating scotoma.

s., **negative**. One not perceptible by the patient.

s., **physiological**. Blind spot due to absence of rods and cones where optic nerve enters retina.

s., **positive**. One which patient perceives in his visual field as a dark spot.

s., **relative**. One in which perception of the object is impaired but not completely lost.

s., **scintillating**. An irregular outline around a luminous patch in the visual field following mental or physical labor or eyestrain or in migraine.

scotomata (skō-tō-mā-tā) [G.]. Plural of *scotoma*.

scotomatous (skō-tōm'ā-tūs) [G. *skōtōma*, darkness]. Relating to, of the nature of, or afflicted with, *scotoma*.

scotometer (skō-tōm'ēt-ēr) [+ *metron*, a measure]. Device for detecting and measuring a dark spot in visual field.

scotometry (skō-tōm'ē-trī) [+ *metron*, a measure]. The locating and measurement of *scotomata*.

scotomization (skō-tō-mīz-ā'shūn) [G. *skōtōma*, darkness]. Psy. A sadistic expression seen in compulsive neuroses and schizophrenia by which the victim indulges in self-punishment as an expression of hatred for another.

scotophilia (skō-tō-fīl'ā) [G. *skotos*, darkness, + *philein*, to love]. Preference for darkness or for the night. SYN: *nyctophilia*.

scotophobia (skō-tō-fō-bī'ā) [+ *phobos*, fear]. Abnormal dread of darkness.

scotopia (skō-tō-pī'ā) [+ *ops*, eye]. The adjustment of vision for darkness.

scotopic (skō-tōp'ik) Pert to *scotopia*.

s., **vision**. Dark adaptation, the adjustment of the eyes for vision in dark or dim light.

scotосcopy (skō-tōs'kō-pī) [+ *skopein*, to examine]. Examination of internal organs by use of the fluoroscope. SYN: *skiascopy*.

scratch (skrātsh) [M.E. *cracchen*]. A mark or superficial injury produced by scraping with the nails or a rough surface.

screeatus (skre-ā'tūs) [L. *screeatus*, a hawking]. A neurosis characterized by paroxysmal fits of hawking.

scriveners' palsy (skriv'ner). Occupational neurosis caused by excessive use of the hand in writing. SYN: *writers' cramp*.

scrobiculate (skrō-blk'ū-lāt) [L. *scrobiculus*, a little pit]. Having shallow depressions; pitted.

scrobiculus (skrō-blk'ū-lūs) [L. a little pit]. A small groove or pit.

s., **cordis**. Pit of the stomach; precordial or epigastric depression.

scrofula (skrōf'ū-lā) [L. *scrofula*, a breeding sow]. A constitutional, tuberculous condition characterized by glandular swelling in the neck and inflammations of joints and mucous membranes followed by cheesy degeneration, tuberculosis of the glands, joints, bones.

A term formerly applied to all tuberculous affections except those of lungs. Most common in childhood. Two types of the affection.

RS. *king's evil, struma*.

TREATMENT Such children should be placed under most hygienic conditions and exposures and fatigues of all kinds should be avoided. Should not be subjected to too rigorous a school discipline. Adults should seek most favorable climate. Deep acting constitutional remedies, as proper diet, heliotherapy.

scrofuloderma (skrōf'ū-lō-der'mā) [L. *scrofula*, a breeding sow, + G. *derma*, skin]. SYN: *tuberculous colliquata, cutaneous tuberculosis*. Lesions of the skin and subcutaneous tissues resulting from extension of infection from an underlying structure, usually infected bone or lymph nodes. Occurs most commonly on chest or neck as an indolent ulcer.

scrofulous (skrōf'ū-lūs) [L. *scrofula*, a breeding sow]. Of the nature of, or afflicted with, *scrofula*.

scrotal (skrō'tāl) [L. *scrotum*, a bag]. Concerning the scrotum.

s., **reflex**. Slow vermicular contraction of scrotal muscle when perineum is stroked or cold applied.

s., **tongue**. A furrowed tongue.

scrotoectomy (skrō-tēk'tō-mī) [+ G. *ektomē*, excision]. Excision of part of the scrotum.

scrotoitis (skrō-tī'tīs) [+ G. -itis, inflammation]. Inflamed condition of the scrotum.

scrotocele (skrō'tō-sēl) [+ G. *kēlē*, hernia]. Hernia in the scrotum.

scrotum (skrō'tūm) (pl. *scrota*) [L. *scrotum*, bag]. The double pouch containing the testicles and part of the spermatic cord.

RS: *chimney-sweeps' cancer, chyloderma, dartos, oscheal, oscheitis, oscheocnus, rhacoma, urocele*.

scrubbing. Term applied to sterilization of the hands for surgical operations.

METHOD Scrubbing with soap and water and a nail brush, immersion in a mild germicidal solution and the wearing of sterilized rubber gloves. SEE: *sterilization*.

scrub nurse. Term applied to operating room nurse who hands instruments to the surgeon, and who has previously sterilized her hands and wears sterile rubber gloves.

scrub typhus. SYN: *tsutsugamushi disease, mite-borne typhus, tropical typhus, rural typhus, Japanese river fever*. A self-limited, febrile illness caused by *Rickettsia tsutsugamushi* transmitted by two species of mites, *Thrombicula akamushi* and *T. deliensis*. Common in the Asiatic-Pacific area.

scruple (skrū'pl) [L. *scrupulus*, a small stone]. Twenty grains, apothecaries' weight; 1/3 dram. SYMS: ♂.

scultetus bandage (skül-tët'üs). A many-tailed bandage used in compound fractures.

Scultetus' position. One with head low and the body on an inclined plane

scum (skum) [M.E. *scume*]. Bact. Slimy floating islands of bacteria or impurities on the surface of a culture; an interrupted pellicle of bacterial growth.

scurf (skurf) [A.S. *scurf*, a gnawing]. A branny desquamation of the epidermis, esp. on the scalp. Syn: *dandruff*.

scurvy (skur'vi) [origin uncertain]. A deficiency disease characterized by hemorrhagic manifestations and abnormal osteoid and dentine formation.

Errol. Deficiency of vitamin C usually resulting from lack of fresh fruits and vegetables in diet

Sym. Preceded by period of ill-health; pallor; loss of energy, pains in legs, limbs and joints. Anemic, great weakness, spongy, bleeding gums; fetor of breath, and loosening of teeth, subcutaneous hemorrhages and hemorrhages from mucous membranes; painful, brawny indurations of muscles.

Prog. Favorable in early stages.

Treatment: For infants, 300 mg of vitamin C (ascorbic acid) daily for one week, then 150 mg daily for one month, or 4-8 oz of orange juice or 12-24 oz of tomato juice daily. For adults, 1000 mg of ascorbic acid daily for one week, then 500 mg. until symptoms have disappeared

s. infantile. A form of scurvy which sometimes follows the prolonged use of condensed milk, sterilized milk or proprietary foods. Syn: *Barlow's disease*.

Sym. Anemia, immobility of legs, pseudoparalysis, extreme tenderness, swelling without pitting, thickening of bones from subperiosteal hemorrhage, ecchymoses and tendency to epiphyseal fractures at epiphyses of bones

scute (sküt) [L. *scutum*, shield] 1 A thin plate or scale, esp the horny plates found on the carapace of turtles 2 Term formerly applied to the tegmen tympani, *q v*

scutiform (sküt'i-form) [“ + *forma*, a shield]. Shield-shaped.

scutulum (sküt'ü-lum) (pl. *scutula*) [L. a little shield] 1. Any of the thin crusts of fava. 2. The shoulder blade. Syn: *scapula*.

scutum (sküt'üm) [L. shield] Plate of bone resembling a shield

scybalous (sib'al-us) [G. *skybalon*, dung]. Of the nature of hard fecal matter.

scybalum (sib'al-üm) (pl. *scybalæ*) [G. *skybalon*, dung] A hard, rounded mass of fecal matter

scypho- [G.]. Combining form meaning cup

scyphoid (si'foyd) [G. *skyphos*, cup, + *eidōs*, like]. Cup-shaped.

Se. Chemical symbol for selenium.

searcher (ser'cher) [M.E. *serchen*, from L. *circāre*, to go about]. Instrument for locating opening of ureter previous to inserting catheter, exploring sinuses, and esp. for detecting stones in the bladder. Syn: *sound*.

seasickness (sē'sik-nēs) [A.S. *sae*, sea, + *sēocness*, illness]. Disorder due to motion of a vessel at sea, or riding in cars, trains, and elevators. A similar condition affects some air travelers.

Errol. Unknown. Supposed to be due to temporary disorder of middle ear mechanism affecting one's equilibrium.

Sym: Giddiness, vomiting, headache,

nausea, and often extreme drowsiness, retching, prostration.

Prevention. Select position in craft where up and down motion is least; avoid dietary and alcoholic excesses; avoid reading or unusual visual stimuli; assume a supine or recumbent position.

Treatment: Inhalation of oxygen has been quite successful. Following prescription also has been helpful to many:

Soda bromide, 3j, ammon. bromide, 3ij; aqua menth. p.p. fl., flüss. Sig—A teaspoonful before meals and at bedtime. Begin 3 days before going on board. Dimenhydrinate (dramamine), 50 mg 4 times daily, beginning four days before embarkation is effective, scopolamine, extract of belladonna are also effective. Sedatives such as barbiturates or chloral hydrate may be desirable

RS *naupathia*, nausea, motion sickness, seasickness

seatworm (sēt'worm). Syn: *pinworm*. A species of nematode worms, *Enterobius vermicularis*, which occurs commonly in man. Adult worms inhabit large intestine in region of cecum and appendix. Gravid females migrate nightly to anus where they deposit eggs in perianal region. Movement of the worms about anus causes intense itching

sebaceous (sē-bā'shūs) [L. *sebaceus*, fatty]. Containing or pert. to sebum, an oily, fatty matter secreted by the sebaceous glands.

s. cyst. A cyst filled with sebaceous material from a distended sebaceous gland

These are sometimes known as *wens*. They frequently form on the scalp, and consist of a small sac containing sebaceous matter, which may grow to a large size. They may result from impairment of localized circulation and closure of sebaceous glands or ducts. Drainage does not remove them per-

SEBACEOUS GLAND.

A. Epidermis of hair follicle. B. Germinating layer. C. Sebaceous cells in stage of beginning fatty metamorphosis. D. Particles of sebaceous material.

SEBACEOUS GLAND FROM HUMAN SKIN.

manently, as they will recur unless entirely extirpated,* which should be done with an electric current or cutting knife. One should never attempt to drain such a cyst without taking every precaution against infection.

s. gland. Oil-secreting gland of the skin. They are simple or branched alveolar glands most of which open into hair follicles. They are holocrine glands, their secretion, sebum, arising from disintegration of cells filling the alveoli.

sebomania (sē-bās-tō-mā'nī-ā) [G *sebastos*, reverend, + *mania*, madness]. Religious insanity.

sebiagogic (seb-i-ā-gō'jīk) [L *sebum*, tallow, + G *agōgos*, leading]. Forming fat or sebaceous matter. SYN *sebiferous*, *sebiparous*.

sebiferous (sē-blī'ēr-ūs) [F + *ferre*, to carry]. Producing fatty or sebaceous matter. SYN *sebiagogic*, *sebiparous*.

sebiparous [F + *parère*, to produce]. Producing sebum or sebaceous matter. SYN: *sebiagogic*, *sebiferous*.

sebolite, **sebolith** (sēb'ō-līt, -līth) [F + G *lithos*, a stone]. Concretion in a sebaceous gland.

seborrhagia (sēb-ō-rā'jī-ā) [F + G *rhēgnai*, to burst forth]. Excessive secretion of sebaceous glands. SYN: *seborrhea*.

seborrhea (sēb-ōr-ē'ā) [L *sebum*, tallow, + G *rhoia*, a flow]. Functional disease of the sebaceous glands marked by increase in the amount and often alteration of the quality of the sebaceous secretion.

Etiol. Reflex venous congestion of skin predisposes, therefore, indigestion, constipation, etc., are contributory.

Progn. Favorable, under prolonged and judicious treatment.

Treatment. Constitutional. Keep up general health, avoid constipation. The

gastrointestinal tract often requires especial attention. Crusts should be removed by applications of oil, followed by shampooing with alcohol and green soap. Cleanliness, and a thorough rinsing off of the soap used, will effect a great deal. Underlying factor to be remedied or removed. Skin cleansed with soap and water, benzine or carbon tetrachloride. X-rays, sulfur, resorcin.

RS: *dermatitis seborrhoica*, *sebaceous*, *sebum*.

s. capiti. Scalp seborrhea.

s. congestiva. Facial form with elevated patches with red borders and covered with crusts and scars. SYN *lupus erythematosus*.

s. corporis. S. of the trunk.

s. faciei. S. of the face.

s. furfuracea. Seborrheic dermatitis, *q v*

s. nigra, **s. nigricans.** Dark-colored crusts in seborrhea.

s. oleosa. S. in which fat elements predominate. Shows shiny skin with widely dilated follicular orifices, many of which contain comedones.

s. sicca. S. with grayish-brown or yellow scale and crust formation in addition to abnormal oiliness.

Differentiation from seborrheic dermatitis is difficult. This form most frequently observed on scalp and constitutes what is popularly called dandruff.

Examination reveals an incrustation composed of thin, yellowish-gray scales. In uncomplicated cases the skin is pale, but often from irritation may become hyperemic or inflamed. When allowed to continue, nutrition of hair is interfered with, and baldness results. On the body *s. sicca* appears as yellowish-gray, slightly elevated patches covered with greasy scales. Outlets of follicles are often dilated. There is generally more or less redness of the skin from hyperemia (seborrheic eczema).

seborrheic (sēb-ōr-rē'īk) [L *sebum*, tallow, + G *rhoia*, flow]. Afflicted with or like seborrhea.

s. dermatitis. SYN *dermatitis seborrhoica*, *seborrhea furfuracea*, *seborrhea sicca*.

seborrheic (sēb-ōr-rē'īk) [F + G *rhoia*, a flow]. Suffering from or like seborrhea.* SYN: *seborrheic*.

sebum (sē'būm) [L *sebum*, tallow]. A fatty secretion of the sebaceous glands of the skin.

It varies in different parts of the body; that from the ears is called *cerumen*,* that from the foreskin is called *smegma*,* *præputii*, and that which covers the body of the newborn is called *vernix*,* *caseosa*.

RS *sebaceous*, *seborrhea*, *smegma*.

secrent (sē-ser'nēt) [L *secrenus*, secreting]. 1 Secreting. 2 A secreting organ.

seclusio pupillae [L] Shutting off of the pupil due to adherence of iris to the lenticular capsule. SYN *synechia*, *annular posterior*.

s. p. siderosis bulbi. Deposit of iron pigment within the eyeball.

Seen in cases of retained iron foreign body in the eye.

seconal (sē-kōn-āl) A proprietary barbituric acid derivative.

Uses: Same as for the barbiturates.

second cranial nerve (sēk-ūnd) [L *secunda*]. A sensory nerve which conveys visual impulses from eye to thalamus. The two optic nerves undergo

partial decussation at the optic chiasma *See* Table of nerves in appendix.

s. intention. Healing by granulation or indirect union *See* healing

Granulation tissue is formed to fill the gap bet. the edges of the wound with a thin layer of fibrous exudate. It bars out bacteria and aids in checking bleeding by the coagulation of the blood. Connective tissue cells support the new capillaries. This form of healing is slower than that by first intention and its grayish-red surface may become pale and flabby if the healing is too long delayed. If the granulations show above the surface they may have to be removed with caustics. If the granulations first form at the top instead of the bottom of the wound, it may have to be kept open with drainage

RS: healing, intention, resolution.

s. sight. Alteration in refractive powers of the lens so that reading again is possible without glasses in incipient cataract *SYN* *gerontopia*.

s. stage of labor. Period bet complete dilatation of cervix and delivery of the child *See* labor

During this stage pains become severe. It lasts normally 2-4 hr. in primiparae and up to 1 hr. in multiparae

s. wind. Condition occurring following strenuous exercise in which breathlessness and a feeling of distress subside and the heart beats more regularly. Thought to be the result of the adjustment of the various organs of the body to the increased oxygen demands of the muscles

secondary (sek'un-dar-i) [L. *secundarius*, second] 1 Next to or following, second in order 2 Produced by a primary cause *SYN* *subordinate*.

s. areola. Pigmentation around the nipples during pregnancy *See* areola

s. disease. One following a previous disease

s. hemorrhage. 1 One after an injury or operation coming on more than 24 hr afterward and which is due to sepsis and septic ulceration into a blood vessel 2 Uterine bleeding due to septic infection or from infant's umbilicus due to same cause. *See* hemorrhage.

secreta (se-krē'tā) [L]. The products of secretion

secretagogue (sē-krē'tā-gog) [L. *secretum*, secretion, + G *agogos*, leading] 1 Causing secretion 2 That which stimulates secreting organs as "substances present in food or produced by the digestion or decomposition of food which excite the secretion of digestive juice either by acting locally or by being absorbed into the blood or lymph or by causing a hormone to be formed" (A. C. Ivy.)

secrete (sē-krē't) [L. *secretus*, separated] To separate from the blood, more specifically to form a secretion, *q* 1

secretin (sē-krē'tin) [L. *secretio*, a separation]. 1 A hormone formed in the mucous membrane of the duodenum through the influence of acid contents from the stomach whose function is to stimulate the flow of pancreatic juice 2 A substance of unknown chemical composition, prepared by extraction from the mucous membrane of the duodenum and causing when injected intravenously, an increased secretion of pancreatic juice.

Probably formed from a precursor, prosecretin.*

See: digestion, duodenal and intestinal, gastrin

secretion (sē-krē'shūn) [L. *secretio*, a separation] A process in physiology whereby certain materials are separated by the activity of a gland, from the blood and (a) made into something useful to the body or (b) eliminated 2 Substance secreted

If the useful material flows out through a duct (e. g., saliva) it is called an *external secretion*. If it is returned to the blood or lymph (e. g., insulin) it is called an *internal secretion* or *auto-coid*.*

FLUIDS OF BODY

(With amount for 24 hours)

Blood Is composed of 14 elements, 79% water, 21% solids, 500 to 600 red corpuscles to 1 white.

BILE Emulsifies fats and precipitates soluble peptones. 20 to 24 oz Sp. gr. 1.026-1.032 Reaction alkaline

CHYLE Absorbed by lacteals, resembles lymph. Begins to be formed in duodenum, 4-5 lb Sp. gr. 1.015. Alkaline

CHYME Food that has undergone gastric digestion only.

GASTRIC JUICE An antiseptic juice in the stomach that converts proteids into peptones. Six to 8 lb Sp. gr. 1.010 Reaction acid

INTESTINAL JUICE Has combined action of saliva, gastric and pancreatic juices. Converts cane into grape sugar and maltose into glucose. Also contains a milk curdling ferment, 10 oz Sp. gr. 1.011 Reaction alkaline

LYMPH. Clear, transparent, yellowish fluid devoid of smell with saline taste. Four to 5 lb Sp. gr. 1.012 to 1.022, alkaline

MENSTRUAL Menstrual blood. Two to 4 oz. in entire period

PANCREATIC JUICE Contains enzymes which act on fats, proteins, or products of protein digestion, and carbohydrates. 500-800 ml per day Sp. gr. 1.010 to 1.015 Alkaline

PERSPIRATION The secretion of sweat glands of skin. About 500-1000 cc., under normal conditions.

SALIVA Converts starch into sugar. Secreted by salivary glands, 30-40 oz. Sp. gr. 1.002-1.006. Alkaline.

URINE Forty to 50 oz Sp. gr. 1.015-2. Acid. Contains 1½ oz solids, 30-50 gr. urea, 1 gr uric acid to 33 gr. urea. *See: urine*.

s., antilytic. Watery saliva excreted continuously by submaxillary gland with intact nerves after division of the chorda tympani of the other side.

s. antiparalytic. Secretion, antilytic, *q* 1

s., apocrine. That in which the apical end of a secreting cell is broken off and its contents extruded, as in the mammary gland

s., external. A secretion which passes through duct and is discharged upon an epithelial surface, either internal or external

s., holocrine. That in which the entire cell and its contents are extruded as a part of the secretory product, as in sebaceous glands.

s., internal. S. imparted to the blood instead of being eliminated by a duct

s., merocrine. That in which the product is elaborated within cells and discharged through the cell membrane, the cell itself remaining intact.

s., paralytic. Abundant watery secretion continuously from a gland after section of its secretory nerves

secretion, words pert. to: acrinia, amyxia, anorrhoea, apoplexis, asteatosis, athyrea, athyria, athyroidism, cerumen, ceruminous, ceruminosis, ceruminous, cholelasis, chromocrinia, crinogenic, diacrisis, errhine, exscent, hormone, interstitial, saliva, sebum, secretagogue, secrete, secretin, semen, smegma, suc-corrhea.

secretagogue (sê-kre'tô-gôg) [“ + G. *agogos*, leading] 1. Causing secretion. 2. That which stimulates secretion.

secretor. An individual in which certain blood-group substances (A & B factors) can be extracted with aqueous solutions from tissues and organs, esp. salivary glands and gastric mucosa.

secretory (sê-kre'tô-ri, sê-kre-tô-ri) [L. *secretio*, a separation]. Pert. to or promoting secretion, secreting.

s. **capillaries**. Very small canaliculi receiving secretion discharged from gland cells.

s. **fibers**. Centrifugal nerve fibers which excite secretion.

s. **granules**. SEE *granules*, *zymogen*.

sectarian (sêk-târ'i-ân) [L. *sectum*, from *secare*, to cut]. A medical man who “follows a dogma, tenet, or principle based on the authority of its promulgator to the exclusion of demonstration and practice” (Judicial Council A. M. A.).

sectile (sêk'til) [L. *sectilis*, able to be cut] Capable of being cut.

section (sêk'shun) [L. *sectio*, from *secare*, to cut]. 1. Process of cutting. 2. A division or segment of a part. 3. A surface made by cutting.

s., **abdominal**. Any abdominal operation. SYN *laparotomy*, *q.v.*

s., **cesarean**. Incision of uterus for delivery of a fetus through abdominal wall or through the vagina. SEE *cesarean section*.

s., **coronal**. A frontal section, *q.v.*

s., **frontal**. One dividing the body into 2 parts, *dorsal* and *ventral*.

s., **frozen**. A thin section of the body, an organ, or a piece of tissue which has been frozen before being sectioned.

s., **midsagittal**. One which divides the body into right and left halves.

s., **paraffin**. A section of a tissue which has been infiltrated with paraffin.

s., **perineal**. External incision into urethra to relieve stricture.

s., **Pitras'**. One of a series of sections made through the brain for postmortem examination.

s., **sagittal**. A section cut parallel to the median plane of the body.

s., **serial**. Microscopic sections made and arranged in consecutive order.

s., **vaginal**. Incision into the abdominal cavity through the vagina.

sectioning (sêk-shun'ing) [L. *sectio*, a cutting]. The slicing of thin sections of tissue for examination under the microscope.

RS: *microtome*

s., **ultrathin**. The cutting of sections extraordinarily thin (less than 1 micron in thickness) especially for use in electron microscopy.

sector (sêk'tor) [L. *sector*, a cutter] The area of a circle included bet. 2 radii and an arc.

sectorial (sêk-tô-ri-âl) [L. *sector*, a cutter]. Having cutting edges, as teeth.

secundigravida (sê-kun'di-grâv'id-â) [L. *secundus*, second, + *gravida*, a pregnant woman]. A woman in her 2nd pregnancy.

secundines (sêk'un-dins) [L. *secundinae*, things following]. The placenta and fetal membranes expelled during the 3rd stage of labor. SYN: *afterbirth*.

secundipara (sêk'un-dip'â-râ) [L. *secundus*, second, + *parere*, to give birth]. A woman who has borne 2 children at separate labors.

secundum artem (sê-kun'dum ar'têm) [L.]. In an approved manner, according to rule or science.

S. E. D. Abbr. for *skin erythema dose*.

Sed. [L.]. Abbr. of *sedes*, stool.

sedation (sê-dâ'shun) [L. *sedatio*, from *sedare*, to calm]. 1. Process of allaying nervous excitement. 2. State of being calmed.

Usually effected by means of a drug.

sedative (sêd'a-tiv) [L. *sedativus*, calming]. 1. An agent allaying irritability or nerve action. 2. Quieting.

They may be *general*, *local*, *nervous*, or *vascular*.

TYPES AND EX. *Cardiac* Bromides, chloral, pilocarpine. *Respiratory* Chloral, opium. *Gastric* Bismuth, belladonna. *Nervous* Antipyrine. *Cerebral* Bromides and all hypnotics. *Intestinal* Bismuth, opium. *General* Opium and all hypnotics.

s., **cardiac**. One that decreases the heart's force.

s., **enema**. Retention enema given for its soothing action and to allay irritability. SEE *enema*, *sedative*.

s., **nervous**. S. affecting nervous system.

s., **poisons**. TREATMENT Administer large amounts of fluids and induce vomiting.

Tea made by boiling to extract the tannic acid should be given repeatedly, a solution of tannic acid, a teaspoonful to a pint may be used, if available. Strong coffee, caffeine, citrate, aromatic spirits of ammonia or other available stimulants should be used. Induce diaphoresis, diuresis and catharsis. Oxygen and artificial respiration may be necessary. The patient should be kept in the Trendelenburg position. External heat, flagellation, massage, talking and other methods of keeping the patient awake are temporarily useful. There is always associated shock.

sedentary (sêd'en-ta-ri) [L. *sedentarius*, from *sedere*, to sit]. 1. Sitting. 2. Pert. to an indoor occupation in which physical exercise is impossible.

sediment (sêd'i-mênt) [L. *sedimentum*, a settling]. The substance settling at bottom of a liquid. SYN *hypostasis*. SEE: *precipitate*.

sedimentation (sêd'i-mên-tâ'shun) [L. *sedimentum*, a settling]. Formation or depositing of sediment.

s., **rate**. Speed at which erythrocytes settle when an anticoagulant is added to blood. SYN *suspension stability*.

In this test, blood to which an anticoagulant has been added is placed in a long, narrow tube, and the speed at which the red cells settle is observed. Various methods of determining the rate have been devised. Some pathologists determine the time required for the cells to settle a certain distance (sedimentation time), while others determine the distance the cells settle in a given time (sedimentation rate), both normally about 5 min. per millimeter. The speed at which the cells settle depends upon the size of the clumps into which the red cells aggregate, and the size of the clumps appears to depend upon the amount of fibrinogen in the blood. The speed of settling is increased in a variety of infections, in cancer, and in preg-

- nancy, and may be decreased in liver disease.
- sedimentator** (séd-i-mén-tā'tor) [L. *sedimentum*, a settling]. A centrifuge for separating urinary sediment.
- seed** (séd) [A.B. *saed*, seed]. 1 The ripened ovule of a spermatophyte plant usually consisting of the embryo (germ), and a supply of nutrient material enclosed within the seed coat. It is a resting sporophyte. 2 Sperm; semen. 3 Capsule containing radon, radium, etc. for use in treatment of cancer. 4 Offspring. 5 To introduce microorganisms into a culture medium.
- segment** (sэг'mént) [L. *segmentum*, a portion]. 1 A part or section, esp. a natural one, of an organ or body. 2 One of the serial divisions of an animal.
- s., body.** SYN: *metamere*, *somite*. In the embryo, a somite; in the adult, a portion derived from a somite.
- s., interannular.** Portion of a neuron between two nodes of Ranvier.
- s., mesodermal.** A somite.
- segmental** (sэг-mén'tál) [L. *segmentum*, a portion]. Pertaining to, resembling, or composed of segments.
- s. reflex.** A reflex action in which afferent impulses enter the cord in the same segment or segments from which the efferent impulses emerge.
- s. static reactions.** Postural reflexes in which movements of one extremity results in a movement in an opposite extremity.
- segmentation** (sэг'mén-tā'shün) [L. *segmentum*, a portion]. 1 Division into similar parts. 2 SYN: *cleavage*. The division of a fertilized egg into many smaller cells or blastomeres. SEE: *embryo*, *cleavage*, *blastomere*.
- s. cavity.** Central space in blastula stage of segmentation of an ovum.
- s., rhythmic.** Division of the intestine and the chyme within it into segments by contraction of circular muscle fibers, also called *segmenting contractions*.
- segmenter.** SYN: *rosette*, *mature schizont*. Stage in development of the malarial organism (*Plasmodium*) in which the organism is undergoing schizogony.
- segregation.** 1. Setting apart, separating. 2 In genetics, the process which takes place in the formation of germ cells (gametogenesis) in which each gamete (egg or sperm) receives only one of each pair of genes.
- segregator** (sэг'rэг-gā-tor) [L. *segregare*, to separate]. Instrument composed of 2 catheters for securing urine from each kidney separately.
- Séguin's signal symptom** (sa-ganz'). Contraction of muscles constituting a forerunner of an epileptic attack.
- Selditz powder** (séd'īts, síd'īts). Effervescent cathartic composed of tartaric acid, sodium bicarbonate, and sodium and potassium tartrate.
- seisesthesia** (sī-zēs-thē'zī-ā) [G. *seists*, concussion, + *aisthēsis*, sensation]. The perception of a concussion.
- seismesthesia** (sīz-mēs-thē'zī-ā) [G. *seismos*, earthquake, + *aisthēsis*, sensation]. Perception of vibrations.
- seismotherapy** (sīz-mō-thēr'ā-pī) [" + *therapeia*, treatment]. Treatment of disease by vibratory massage. SYN: *sismotherapy*.
- seizure** (sē'zhür) [M.E. *seizen*, to take possession of]. A sudden attack of pain or of a disease, or of certain symptoms.
- s., convulsive.** 1 A convulsion, *qv*. 2 An attack of epilepsy.
- s., larval.** A seizure indicated by ab-

- normal brain waves in an electroencephalogram but not evidenced by clinical symptoms.
- selection.** 1 Choice; the process of choosing or selecting. 2 In biology, any process by which a group of individuals such as a species is enabled to survive or to avoid extermination.
- s., artificial.** Process by which man selects individuals possessing desirable characteristics and endeavors to produce through selective breeding a race or strain homozygous for these characteristics.
- s., natural.** 1. Process by which individuals possessing characteristics which adapt them to their environment survive, whereas those lacking these characteristics die or fail to leave progeny. 2 Darwin's theory of evolution or origin of species. SEE: *natural selection*.
- s., sexual.** A theory originated to account for differences in secondary sex characteristics between males and females. It assumes that individuals preferentially select for mating individuals of the opposite sex which possess these characteristics.
- selenium.** A chemical element resembling sulfur. SYMS: *Se*. At. wt. 78.96, at no 34. Selenium is poisonous to certain animals which feed on plants grown on seleniferous soil.
- self-abuse.** Unnatural method of bringing about the venereal orgasm by mechanical friction, in either sex. SYN: *masturbation*.
- self-digestion.** Destruction or disintegration of a cell or tissue by its own juice, as that of the walls of the stomach by the gastric juice occurring in certain diseases of that organ. SYN: *autodigestion*.
- self-limited disease.** Disease that, without treatment, runs a definite course within a limited time.
- self-pollution.** Sexual self-abuse. SYN: *masturbation*.
- sella turcica** (sél'ā tur'sī-kā) [L. Turkish saddle]. SYN: *hypophyseal or pituitary fossa*. A concavity on superior surface of body of sphenoid bone which houses the hypophysis cerebri (pituitary gland).
- Seiter's disease.** Feer's disease, erythredema polynuropathy.
- semeiology** (sēm'ī-ōl'ō-jī) [G. *semeion*, sign, + *logos*, study]. The branch of medicine dealing with the study of symptoms. SYN: *symptomatology*.
- semelosis** (sēm'ī-ō'sīs) [" + -ōsis, intensive]. Study of disease by symptoms.
- semeiotic** (sēm'ī-ōt'īk) [G. *semeiōtikos*, pert. to a sign]. Of or pert to symptoms. SYN: *symptomatic*.
- semeiotics** (sēm'ī-ōt'īks) [G. *semeiōtikos*, pert. to a sign]. 1 Phase of medical science treating of symptoms. 2 Symptoms of a disease in a particular case considered as a whole. SYN: *semiotics*, *symptomatology*.
- semel** (sēm'ēl) [L.]. Once. SEE: *charting*, *prescription writing*.
- semelincident** (sēm-ēl-in'sīd-ēnt) [L. *semel*, once, + *incidens*, falling upon]. Occurring only once in the same person.
- semen** (sēm'en) (pl. *semina*) [L. *semen*, seed]. A thick, opalescent, viscid secretion discharged from the urethra of the male at the climax of sexual excitement (orgasm) which fertilizes the female ovum.
- It is the mixed product of various glands (prostate and bulbourethral) plus the spermatozoa which, having been

produced in the testicles, are stored in the seminal vesicles.

RS: *aspermatic, aspermaticism; aspermous, azoospermia, bradyaspermism; coition; coitus, coitus interruptus; copulation, ejaculation, emissio seminis, emission, erection; excitation; fertilization, insemination, libido; orgasm, penis, prostate, sexual intercourse, sperm, sperma; spermatemphrazis, spermatic, spermatorrhoea, spermatozoon, vesicle, seminal.*

semenuria (sēm'mēn-ū'rī-ā) [L *sēmen*, seed, + G. *ouron*, urine] Excretion of semen in the urine **SYN** *seminuria, spermaturia*.

semi- [L.] Prefix meaning *half*.

semicanal (sēm'i-kān-āl') [L *semis*, half, + *canalis*, passage]. A duct open on one side.

semicircular (sēm'i-sīr'kū-lār) [“ + *circulus*, a ring]. In the form of a half circle.

s. canals. Sup. post., and inf. passages forming back part of ear, *q.v.*

semicoma (sēm'i-kō-mā) [“ + G. *kōma*, lethargy] Mild degree of coma from which it is possible to arouse the patient.

semicomatose (sēm'i-kō-māt-ōs) [“ + G. *kōma*, lethargy] In a condition of unconsciousness from which patient may be aroused.

semilunar (sēm'i-lū-nār) [“ + *luna*, moon]. Crescentic in shape.

s. bone. Halfmoon-shaped bone of carpus

s. cartilages. Two crescentic cartilages (int. and ext.) in the knee joint bet. the femur and tibia.

s. ganglions. Two small nervous ganglions of the abdominal cavity, supplying solar plexus. The gasserian g.

s. lobe. One on upper surface of the cerebellum.

s. notch. A notch at proximal end of ulna for articulation with trochlea of humerus

s. valves. Valves of aorta and pulmonary artery. **SEE** *Arantius' body*.

semimembranosus (sēm'i-mēm-brān-ō'sūs) [L *i*. Large muscle of inner and back part of thigh. **SEE** *Table of Muscles in Appendix*.

seminal (sēm'in-āl) [L. *sēmen*, semen, seed]. Concerning the semen

s. duct. **SYN** *spermatic duct*. Any duct which conveys sperm, especially the ductus deferens and the ejaculatory duct

s. emission. Involuntary loss of seminal fluid, usually during sleep, esp. in the adolescent male

s. filament. Male seed. **SYN** *spermatozoon*.

s. fluid. Semen, male fertilizing fluid.

s. vesicle. One of two sac-like structures in the male lying behind the bladder and connected to the ductus deferens on each side. They secrete a thick viscus fluid which forms a part of the semen.

semination (sēm-in-ā'shūn) [L. *seminatio*, a begetting]. Introduction of semen into the uterus during sexual intercourse or artificially. **SYN** *insemination*.

s., artificial. Introduction of prepared semen into the uterus. **SYN** *artificial insemination*.

seminiferous (sēm-in-if'er-ūs) [L. *sēmen*, semen, seed, + *ferre*, to produce]. Producing or conducting semen, as the tubules of the testes.

seminoma (sēm-i-nō-mā) [“ + G. *-ōma*, tumor]. A tumor of the testis.

seminormal (sēm'i-nor'māl) [L. *semis*,

half, + *norma*, rule]. One-half the normal standard.

s. solution. One having half the quantity of the substance in the normal solution “Indicated thus 0.5 N or N/2.”

seminuria (sēm'mīn-ū'rī-ā) [L *sēmen*, seed, + G. *ouron*, urine]. Seminal discharge present in the urine. **SYN** *semenuria, spermaturia*.

semiology (sēm'mī-ō'l-ō-jī) [G. *sēmeion*, sign, + *logos*, a study] Phase of medicine dealing with study of symptoms. **SYN** *semeiology, symptomatology*

semiotic (sēm-mī-ōt'ik) [G. *sēmeiōtikos*, pert. to a sign]. Like or pert. to symptoms of disease. **SYN** *semeiotic, symptomatic*.

semiotics (sēm'mī-ōt'iks) [G. *sēmeiōtikos*, pert. to a sign]. Scientific study of symptoms as a whole or in one particular case. **SYN** *semeiology, symptomatology*

semipermeable (sēm'i-per'mē-ā-bil) [“ + *per*, through, + *meare*, to pass]. Half permeable, said of a membrane which will allow fluids but not the dissolved substance to pass through it. **SEE** *membrane, osmosis*

semiprone (sēm-i-prōn') [“ + *pronus*, prone]. In a position on left side and chest, with both thighs flexed on abdomen, the right higher than the left, and left arm back. **SYN** *Sims' position, q.v.*, for illustration.

semirecumbent (sēm'i-rē-kum'bent) [“ + *recumbere*, to lie down] Reclining, but not fully recumbent

semis (sēm'is) [L *semis*, half]. Half. Abbreviated to *ss* after sign indicating the measure in prescriptions.

semisideratio, semisideration (sēm'i-sīd-ēr-ā'shī-ō, -ā'shūn) [“ + *sideratio*, a blight] Paralysis on one side of the body. **SYN** *hemiplegia*.

semisopor (sēm-i-sō'por) [“ + *sopor*, deep sleep] Light coma from which patient can be roused. **SYN** *semicoma*.

semispinalis (sēm'i-spi-nāl'is) [L *i*] Deep layer of muscle of back on either side of spinal column, divided into 3 parts. **SEE** *Table of Muscles in Appendix*

semisupination (sēm'i-sū-pin-ā'shūn) [“ + *supinus*, bent back] A position halfway bet. supination and pronation

semitendinosus (sēm'i-tēn-dīn-ō'sūs) [L *i*], Fusiform muscle of post. and inner part of thigh. **SEE** *Table of Muscles in Appendix*.

semper- [L.] Combining form meaning *always*.

senescence (sēn-es'ēns) [L *senescere*, to grow old] The process of growing old, or the period of old age.

senile (sē'nīl, -nīl) [L. *senilis*, old]. Pert. to growing old or to the aged

Absence of vitamin G in diet has hastened premature senility. Vitamins A, C, and G with liberal amounts of calcium help to insure nutritional conditions through the life cycle.

senilism (sē'nīl-izm, -nīl-izm) [“ + G. *-ismos*, condition]. Old age, particularly when premature. **SEE** *progeria*.

senility (sē-nīl'i-tī) [L *senilis*, old] 1. The state of being old 2. Weakness of old age, mental or physical.

s., premature. Onset of characteristics before the normal time, as early as 40 years

May be due to dissipation, privation, or congenital structural defects.

s., psychosis of. Mental disorder in old age.

SYN General impairment of all special senses. Many imagined pains. **SKIN**

is undernourished and inelastic and wrinkled. Memory and comprehension fail, as well as judgment and mental ability. Marked motor restlessness and often delusions of persecution. Delirium may occur.

See *caducity*, *canties*, *progeria*.

senium (sē'nī-um) [L.] Old age, esp. its debility.

s. precox. Psy. Mental disorder resembling senile dementia occurring before 60, usually showing incoherent delusions.

senna (sē'nā) [Arabic *sana*] USP The dried leaves of the plant *Cassia acutifolia* and *C. angustifolia*.

ACTION AND USES. As a purgative acting on the large intestine.

DOSAGE. 30 gr. (2 Gm.).

senopia (sēn-ō'pī-ā) [L. *senilis*, old, + G. *ōps*, eye]. Improvement in visual power of old people usually due to incipient cataract. SYN *gerontopia*.

sensation (sēn-sā'shūn) [L. *sentatio*, a feeling] A feeling or awareness of conditions within or without the body resulting from the stimulation of sensory receptors.

s., common. The sum total of all bodily sensations.

s., cutaneous. S. through medium of the skin.

s., delayed. S. not experienced immediately following a stimulus.

s., epigastric. A sinking feeling in the stomach.

s., external. Effect upon the mind of any stimuli from peripheral nerves.

s., girdle. A painful s. as a bandage tightened about a limb or the trunk as in spinal disease. SYN *zonesthesia*.

s., internal. A subjective one.

s., palmethetic. S. felt in the skin from vibration.

s., referred. Same as reflex sensation.

s., subjective. S. not resulting from any external stimulus and perceptible only by the subject.

s., tactile. S. produced through the sense of touch.

sense (sēns) [L. *sensus*, a feeling]. 1. To perceive through a sense organ. 2. The general faculty by which conditions outside or inside the body are perceived. 3. Any special faculty of sensation connected with a particular organ. 4. Normal power of understanding.

The most important of the senses are: (1) Sight, (2) hearing; (3) smell, (4) taste, (5) touch and pressure, (6) temperature, (7) weight, resistance, and tension (muscle sense), (8) pain, (9) visceral and sexual sensations, (10) equilibrium; (11) hunger and thirst.

s., color. The perception of various colors.

s., cutaneous. Sensation felt through the skin.

s., genic. The sexual instinct.

s., kinesthetic. SEE *s., muscular*.

s., light. Perception of degree of light.

s., muscle, muscular. Consciousness of muscular movement required in a given act.

s., organ. The organ which gives rise to a nerve impulse which reaching the brain registers in consciousness as a particular sensation.

s., posture. Ability through muscle sense to differentiate positions of the body or its structures.

s., pressure. Faculty of feeling various degrees of pressure on the body surface.

s., seventh. Subjective sensations of internal organs.

SENSE ORGAN, CUTANEOUS

Transverse section of pacinian corpuscle. Sole of foot of man. A. Connective tissue. B. Outer lamellous sheath. C. Central core. D. Axis cylinder.

s., sixth. General feeling of normal functioning of the bodily organs. SYN *cenesthesia*.

s., space. That sense by which we recognize objects in space, their relationship and dimensions.

s.s., special. Sight, hearing, smell, touch, and taste.

s., stereognostic. Ability to judge consistency and shape of objects held in the fingers.

s., temperature. Ability to detect differences of temperature.

s., time. Ability to detect differences in time intervals, as in sound.

s., tone. Ability to distinguish between different tones.

s., visceral. Perception of the sensations of the internal organs. SYN *seventh sense*.

sensibilin (sēn'sī-bīl-in) [L. *sensibilis*, feeling] A specific antibody formed at first injection of a foreign protein, derived from sensibilisinogen.

sensibility (sēn-sī-bīl'ī-tī) [L. *sensibilitas*]. Capacity to receive and respond to stimuli.

s., deep. 1. The sensibility existing after an area is made anesthetic. 2.

Sensation by which the position of a limb and estimation of difference in weight and tension is apparent.

s., mesoblastic. SEE *s., deep*.

s., palmethetic. The sensibility existing in the skin following vibration.

s., protopathic. The sensibility to strong stimulations of pain and temperature, which exists in the skin and in the viscera.

sensibilization (sēn-sī-bīl-iz-ā'shun) [L. *sensibilitas*, feeling]. 1. The process of making sensitive. 2. Production of hypersusceptibility to a foreign substance by injecting it into the body. SYN. *anaphylaxis*, *sensitization*.

sensibilizer (sēn'sī-bīl-ī-zēr) [L. *sensibilitas*, feeling]. Substance in blood serum normally or after inoculation which is active in cytotoxicity. SYN *amboceptor*, *immune body*, *sensitizer*.

sensible (sēn'sī-bl) [L. *sensibilis*, feeling]. 1. Capable of being perceived by the senses; perceptible. 2. Capable of receiving sensations. SYN *sensitive*. 3.

Having reason. SYN *intelligent*. 4. Conscious, as opposed to insensible.

sensiferous (sēn-sīf'ēr-ūs) [L. *sensus*, a feeling, + *ferre*, to bear]. Conducting or transmitting sensations.

sensigenous (sên-sî'jên-ûs) [“ + *G. gennan*, to produce]. Producing sensation.

sensimeter (sên-sim'ê-ter) [“ + *G. metron*, a measure]. Machine for recording the degree of sensitiveness of various areas of the body.

sensitogen (sên-sî-tîn'ô-jen) [*L. sensus*, feeling, + *G. gennan*, to produce]. The antigens collectively which sensitize the body.

sensitive (sên-sî-tiv) [*L. sensitivus*, feeling]. 1. Capable of transmitting a sensation. 2. Able to respond to a stimulus. 3. Subject to destructive action of a complement. 4. Susceptible to suggestions, as a hypnotic. 5. Abnormally susceptible to a substance, as a drug or foreign protein.

sensitization (sên-sî-tî-zâ'shûn) [*L. sentire*, to feel]. 1. A condition of being made sensitive to specific stimulus. 2. Rendering of a cell sensitive to the action of a complement by uniting it with a specific amboceptor. 3. Process of making a person susceptible to a substance by repeated injections of it, as a serum. *SYN* *anaphylaxis*.

sensitized (sên-sî-tîz'd). Made susceptible to a specific substance.

s. vaccine. A live culture which has been mixed with its antiserum before introduction.

sensitizer (sên-sî-tî'zer) [*L. sensitivus*, feeling]. An antibody producing susceptibility to cytolysis. *SYN* *amboceptor*.

sensitometer (sên-sî-tôm'ê-t-ër) [*L. sensitivus*, perceiving, + *G. metron*, a measure]. Device for determining the penetrating power of light.

sensorial (sên-sô'ri-âl) [*L. sensus*, a sensation]. Pert. to the sensorium, the seat of sensation.

sensorimotor (sên-sô-ri-mô'tor) [“ + *motor*, motion]. Both sensory and motor. *SYN*: *sensomotor*.

sensorium (sên-sô'ri-ûm) (pl *sensoriums*, -ria) [*L. sensorium*, from *sentire*, to perceive]. 1. That portion of the brain which functions as a center of sensations. 2. The sensory apparatus of the body taken as a whole.

s. area. The precentral and postcentral areas of the cerebral cortex taken as a whole.

sensory (sên'sô-ri) [*L. sensorius*]. 1. Conveying impulses from sense organs to the reflex or higher centers. *SYN*: *afferent*. 2. Pert. to sensation.

s. amusia. Musical deafness; inability to comprehend music or musical sounds.

s. aphasia. *SYN* *perceptive aphasia*. Inability to understand or perceive speech.

s. area. Any area of the cerebral cortex in which sensations are perceived.

s. area, somesthetic. Area occupying postcentral gyrus of cerebral cortex and extending into adjacent areas in which sensations of general somatic sensibility are perceived.

s. decussation. The sup. pyramidal decussation.

s. ending. *SYN*: *sensory end-organ, receptor*. A termination of an afferent nerve fiber which upon stimulation gives rise to a sensation.

s. epilepsy. Disturbances of sensation that replace epileptic convulsions.

s. nerve. An afferent nerve conveying sensory impulses to the sensorium, or one composed of sensory fibers.

s. unit. A single sensory nerve fiber with all its branches and their terminal nerve endings.

sensual (sên'shû-âl) [*L. sensus*, sense]. Concerning or consisting in the gratification of the senses; indulgence of the appetites; not spiritual or intellectual; carnal, worldly.

sensualism (sên'sû-âl-izm). State or condition of being sensual; condition in which one's actions are dominated by primitive instincts.

sensuous (sên'shû-ûs) [*L. sensus*, sense]. Pert. to or affecting the senses, susceptible to influence through the senses.

sensient (sên'shi-ênt) [*L. sentire*, to perceive]. Capable of sensation. *SYN*: *sensitive*.

sentiment (sên'tî-mënt). Feeling, sensibility, esp susceptibility to tender feelings; an emotional attitude toward an object or a group of objects.

separation. The process of disconnecting, disuniting, or severing.

s., epiphyseal. S of the epiphysis from the diaphysis or shaft of a bone.

separator (sépar-â-tor) [*L. separator*, a separator]. 1. Anything which prevents 2 substances from mingling. 2. Any device or instrument used for bringing about a separation of two objects.

separatorium (sépar-â-tô'ri-ûm) [*L. separatorium*, from *separare*, to separate]. Instrument for separating pericranium from skull.

sepsis (sép'sis) [*G. sepsis*, putrefaction]. *SYN*: *septicemia, bacteremia*. Pathologic state usually febrile, resulting from the presence of microorganisms or their poisonous products in the blood stream. May be manifested as *cellulitis* (local dissemination of infection), *lymphangitis* or *lymphadenitis* (dispersion along lymphatic channels) or *bacteremia* (widespread dissemination by way of blood stream). The latter is commonly called ‘blood poisoning’.

s. gas. That resulting from infection by gas gangrene bacilli (*Clostridium welchii*) and others.

s. puerperal. *SYN* *puerperal infection, childbed fever*. Infection of the genital tract following childbirth.

The infection may be brought about by exogenous or endogenous means. The organisms most commonly associated with this type of infection are *streptococcus*, *staphylococcus*, *gonococcus*, *bacillus coli*, *diphtheria bacillus*, and a putrefactive group of *saprophytic organisms*. The infection may be localized in the uterine cavity, lymphatics, veins and mucous membrane of the vaginal tract.

PATH: In the minor cases of ulceration in the vaginal tract covered by a dirty membrane. In streptococcal infection the endometrium is smooth, and the lymphatics are congested with the invading organism. As a rule, the uterine cavity is filled with very little lochia. There is very little or no leukocytic barrier. The saprophytic type shows an endometrial cavity filled with greenish, purulent, foul-smelling shreds. Microscopically, there is a thick layer of leukocytes under the necrotic layer. The uterus shows poor involution. In the event that the infection extends further than the uterus, the parametrium or cellular tissues show edema, serum and in the saprophytic cases, purulent infiltration. Extension of the process to the veins produces infectious thrombi which in turn produce localized abscesses in other parts of the body.

SYM: On the 3rd to the 7th day the patient begins to have general malaise, headache, chilly sensations or true rigors

and rise in temperature. The uterus is tender, there is some abdominal distention, and the lochia in the saprophytic type is profuse and foul-smelling, while in the streptococic type it is decreased in amount and of a serous character. Occasionally there is swelling of the lower limb accompanied by high fever, rapid pulse rate and chills. Upon palpation the femoral vein is found to be tender and cordlike. This is an infectious thrombosis of the femoral vein, and the condition is known as phlegmasia alba dolens.

COURSE In most instances, after 7 to 10 days, the symptoms subside and the patient's condition is greatly improved, although involution is delayed. In a very severe septicemic case with rapid onset, the prognosis is bad and frequently convalescence is delayed for months. In cases where multiple abscesses develop, the prognosis is very favorable once the abscesses are drained.

TREATMENT General measures include absolute bed rest, light or liquid diet, maintenance of fluid balance by parenteral injections if necessary, blood transfusion if hemoglobin content of blood is below 12 sp gm/100 sp cc., analgesics for pain. Check for nutritional deficiencies, esp of vitamins or minerals.

septal (sĕp'tāl) [L. *saepium*, a dividing wall] Concerning a septum.

septan (sĕp'tān) [L. *septem*, seven]. Recurring every 7th day, as the paroxysms of malarial fever.

septate (sĕp'tāt) [L. *saepium*, a partition]. Having a dividing wall.

septicomy (sĕp-tĕk'tō-mī) [“ + G. *ektomē*, excision]. Excision of a septum, esp. the nasal septum or a part of it.

septicemia (sĕp-tĕ'mī-ā) [G. *septos*, putrid, + *aima*, blood] Invasion of the blood by pathogenic bacteria or their toxins. **SYN:** *septicemia*.

septic (sĕp'tik) [G. *septos*, putrid]. 1. Pert to sepsis. 2. Pert to pathogenic organisms or their toxins.

s. fever, s. infection. Fever or infection due to presence of pathogenic organisms or their products in the blood. **SYN:** *septicemia*.

s. sore throat. Streptococcal inflammation of throat with fever and marked prostration.

septicemia (sĕp-tī-sĕ'mī-ā) [G. *septikos*, putrid, + *aima*, blood]. Morbid condition from absorption of septic products into blood and tissues or of pathogenic bacteria which may rapidly multiply there.

Experiments on animals show there are 2 varieties of this form of blood poisoning.

Sapremia, toxemia, or septic intoxication, in which symptoms supervene immediately upon the inoculation. Frequently seen in obstetrical cases in which putrefaction of retained clots or placenta has taken place within uterus.

Poison may be absorbed through mucous membrane of vagina or uterus or through open wounds in these regions or the uterine sinuses. **SEE** *sepsis*. Conditions favorable for such a type of poisoning are rare in general surgery, although a large, ill-drained wound or decomposition occurring in the contents of a psoas, or other abscess, is a common cause. May be found in abdominal wounds where extensive injury of peritoneum has favored oozing and accumulation of blood clot in peritoneal cavity.

Since the existence of ptomaines as a product of decomposition has been understood it is generally recognized that the poisons elaborated by bacteria play a prominent part in production of disease. The method is through the diffusion and multiplication of the bacteria from an infected wound even of a trivial character.

The development of the disease is more gradual in this form. Fever curve is of the continuous type, as in sapremia, and as fatal end approaches will range higher. In some cases, as seen occasionally in strangulated hernia, or in gunshot wounds of abdomen, is abnormal.

SYM. Temperature, 105° F or more. Fever intermittent, some chills, pulse weak and rapid, freedom from pain unless localized. Delirium common and diarrhea not infrequent. Great prostration, headache, anorexia, and a typhoid condition supervene. May be accompanied by vomiting. Tendency to enlargement of lymphatic glands throughout body and more particularly of spleen. Skin pale; dusky, scarlet eruption may occur. Skin hot, dry; later bathed in perspiration; finally becomes cold and clammy. Senses dulled, countenance listless, tongue covered with brownish fur, diarrhea increases; urine concentrated and scanty. Delirium followed by coma, patient becomes moribund.

PROC: Grave.

TREATMENT General measures include bed rest and hospitalization. Maintain adequate nutrition and fluid intake. Proper electrolyte balance must be maintained. Sedatives and analgesics as needed. Blood transfusions if anemia or hypoproteinemia exist. Adequate drainage of all wounds or injuries should be maintained.

s., bronchopulmonary. S following operation on the larynx resulting in infected secretions from the wound entering the bronchial tubes.

s., cryptogenic. S. in which cannot be found any primary focus of infection.

s., puerperal. S. occurring following childbirth due to a lesion in the genital tract. **SEE:** *puerperal sepsis*.

septicemic (sĕp-tī-sĕ'mīk) [G. *septikos*, putrid, + *aima*, blood] Relating to, resulting from, or of the nature of, septicemia.

septicophlebitis (sĕp'tī-kō-flĕ-bī'tīs) [“ + *phleps*, vein, + *-itis*, inflammation]. Septic inflammation of a vein.

septicopyemia (sĕp'tī-kō-pī-ē'mī-ā) [“ + *pyon*, pus, + *aima*, blood]. Septicemia and pyemia together.

septimetritis (sĕp'tī-mē-trī'tīs) [G. *septos*, putrid, + *metra*, uterus, + *-itis*, inflammation]. Inflammation of uterus due to sepsis.

septipara (sĕp-tīp-ā-rā) [L. *septem*, seven, + *parĕre*, to bring forth]. A woman who has borne 7 children separately or is pregnant for the 7th time.

septivalent (sĕp-tī-vā-lĕnt, -tīv-ā-lĕnt) [“ + *valĕre*, to be strong]. Having a valency of 7 or combining with or replacing 7 hydrogen atoms.

septomarginal. Pert to the margin or the border of a septum.

septometer (sĕp-tōm-ĕt-ēr) 1. [L. *saepium*, a partition]. Calipers for measuring nasal septum. 2. [G. *septos*, putrid, + *metron*, a measure]. Device for determining atmospheric impurity.

septotome (sĕp'tō-tōm) [L. *saepium*, a

partition, + G. *tomē*, a cutting]. An instrument for cutting or removing a section of the nasal septum.

septotomy (sēp-tōt'ō-mī) [' + G. *tomē*, a cutting]. Incision of a septum, esp. the nasal septum.

septula. Plural of *septulum*, *q.v.*

s. festis. Thin partition extending inward from mediastinum testis and separating testis into the *lobuli testis*

septulum. A small partition or septum

septum (sēp'tūm) (pl. *septa*) [L. *saeptum*, a partition]. A membranous wall dividing two cavities

s., atrial. A wall bet. the atria of the heart

s. atriorum, BNA, **s. auricularum**. A wall bet. the atria of the heart.

s., crural. A mass of fat obstructing the femoral ring

s., femoral. Mass of fatty connective tissue closing femoral ring

s., interatrial. The atrial septum, *q.v.*

s., intermuscular. 1 A connective tissue septum which separates two muscles, esp. one from which muscles may take their origin 2 One of two connective tissue septa which separate the muscles of the leg into ant., post and lat groups.

s., interventricular. The ventricular septum, *q.v.*

s., lingual. A sheet of connective tissue separating the halves of the tongue

s. lucidum. 1. A translucent s., the int. boundary of lateral ventricles of the brain. 2 The stratum corneum layer of the epidermis.

s., mediastinal. SEE: *mediastinum*

s., nasal. The partition which divides the nasal cavity into two nasal fossa.

Bony portion formed by the perpendicular plate of ethmoid and the vomer bone; cartilaginous portion formed by septal and vomeronasal cartilages and medial crura of greater alar cartilages

s., orbital. A fibrous sheet extending partially across the anterior opening of the orbit partially closing it

s. pectiniforme. Comblike partition that separates the corpora cavernosa

s. pellucidum. A thin triangular sheet of nervous tissue consisting of two lamina attached to corpus callosum above and the fornix below It forms the medial wall of the lateral ventricles The two lamina enclose a cavity, the so-called fifth ventricle

s., rectovaginal. Partition bet the rectum and the vagina.

s. scroti. BNA, **s. of scrotum**. Partition dividing the 2 chambers of the scrotum

s., ventricular. Partition between the ventricles of the heart

septuplet (sēp'tūp-lēt) [L. *septuplum*, a group of seven]. One of 7 children born from the same gestation.

séquardin (sā-kwar'din). Commercial sterilized testicular extract.

sequela (sē-kwē'lā) (pl. *sequelae*) [L. a following]. A condition following and resulting from a disease.

sequence. The order or occurrence of a series of phenomena as symptoms.

sequester (sē-kwēs'tēr) [L. *sequestrāre*, to separate]. 1. To isolate. 2. A piece of necrosed bone separated from surrounding tissue SYN: *sequestrum*.

sequestration (sē-kwēs-tra'shūn) [L. *sequestratio*, a separation]. 1 The formation of sequestrum. 2. Isolation of a patient for treatment or quarantine. 3. Reduction of hemorrhage of head or

trunk by temporarily stopping circulation with bands on the thighs and arms.

sequestrectomy (sē-kwēs-trēk'tō-mī) [' + G. *ektomē*, excision]. Excision of a necrosed piece of bone.

sequestrotomy (sē-kwēs-trōt'ō-mī) [' + G. *tomē*, a cutting]. Operation for removal of a sequestrum, a fragment of necrosed bone. SYN *sequestrectomy*

sequestrum (sē-kwēs'trūm) [L. *sequestrum*, from *sequestrāre*, to separate]. Fragment of a necrosed bone that has become separated from surrounding tissue. Designated *primary* if piece is entirely detached, *secondary* if still loosely attached, and *tertiary* if it is partially detached but still remaining in place

sera (sē'rā) [L.]. Plural of *serum*.

seralbumin (sēr-āl-bū'min) [L. *serum*, whey, + *albumen*, white of egg]. Albumin of the blood.

serial (sēr'i-āl) [L. *series*, a succession]. In numerical order, in continuity or sequence, as in a series.

sericeps (sēr'i-sēps) [L. *sericus*, silken, + *caput*, head]. Silk sac used in making traction on fetal head.

series (sēr'ēz) [L. *series*, a succession]. 1. Arrangement of objects in succession or in order. 2. Elect. A mode of arranging the parts of a circuit by connecting them successively end to end to form a single path for the current. The parts so arranged are said to be "in series"

ser'in. α -amino-B-hydroxypropionic acid, an amino acid present in many proteins including casein, vitellin, and others

seriscission (sēr-i-sish'ūn) [L. *sericum*, silk, + *scindere*, to cut]. Division of soft tissues, as a pedicle, by tying a silk ligature around it.

sero- [L.]. Combining form *pertaining to serum*.

seroalbuminuria (sēr'ō-āl-bū-mīn-ū-rī-ā) [L. *serum*, whey, + *albumen*, white of egg, + G. *ouron*, urine]. Serum albumin in the urine

serobacterin (sēr'ō-bāk'ter-in) [' + G. *bakterion*, a small rod]. Bacterial vaccine sensitized with serum from an animal partially immunized against the same microorganism. SEE *vaccine*.

serochrome (sēr'ō-krōm) [' + G. *chrōma*, color]. The pigment which colors the normal serum. SYN *lipochrome*, *lutein*.

serocolitis (sēr'ō-kō-lī'tis) [' + G. *kōlon*, colon, + *-itis*, inflammation]. Inflammation of serous coat of the colon. SYN *pericolicitis*.

seroculture (sēr'ō-kūl-chūr) [' + *cultura*, cultivation]. A bacterial culture on blood serum.

serocystic (sēr'ō-sis'tik) [' + G. *kystis*, a cyst]. Composed of cysts containing serous fluid.

serodermatosis (sēr'ō-der-mā-tō'sis) [' + G. *derma*, skin, + *-osis*, condition]. Skin disease with serous effusion into tissues of the epidermis.

serodiagnosis (sēr'ō-dī-āg-nō'sis) [L. *serum*, whey, + G. *diā*, through, + *gnōsis*, knowledge]. Diagnosis by observing the reactions of blood serum.

seroenteritis (sēr'ō-ēn-ter-itis) [' + G. *enteron*, intestine, + *-itis*, inflammation]. Inflammation of serous covering of the intestine.

serofibrinous (sēr'ō-fīb'rīn-ūs) [' + *fibra*, fiber]. 1. Composed of both serum and fibrin. 2. Denoting a serofibrinous exudate.

serohepatitis (sēr'ō - hēp - ā - tī'tis) [L. *serum*, whey, + G. *hēpar*, *hepat-*, liver,

+ *-itis*, inflammation]. Inflammation of the peritoneal covering of the liver.
serolipase (sê'rô-lîp'ās) [L. *serum*, whey, + G. *lipos*, fat, + *ase*, enzymel. Lipase found in blood serum

serologic, **serological** (sê'rô-lôj'îk, -āl) [" + G. *logos*, a study]. Pert. to or the study of sera

serologist (sê'rô-lô-jîst) [" + G. *logos*, a study]. One versed in serology

serology (sê'rô-lô-jî) [L. *serum*, whey, + G. *logos*, a study] The science of serum reactions, diagnosis and treatment.

It treats of the relation of antibodies and antigens, an antigen being a substance which, inoculated into the body, is capable of causing the creation of antibodies

serolysin (sê'rô-lîs-in) [" + G. *lysis*, dissolution]. A bactericidal substance or lysin found in the blood serum

seromembranous (sê'rô-mêm-brân-ûs) [" + *membrana*, membrane] Both serous and membranous, relating to a serous membrane

seromucous (sê'rô-mû-kûs) [L. *serum*, whey, + *mucus*, mucus] Pert. to or composed of both serum and mucus

seroperitoneum (sê'rô-pêr-i-tô-nê-ûm) [" + G. *peritonion*, peritoneum] Fluid in the peritoneum SYN *ascites*, *hydroperitoneum*.

seroprognois (sê'rô-prôg-nô'sîs) [L. *serum*, whey, + G. *prô*, before, + *gnôsis*, knowledge]. Prognosis of disease determined by seroreactions

seroprophylaxis (sê'rô-prô-fî-lâks'îs) [" + G. *prô*, before, + *phylaxis*, protection]. Prevention of a disease by injection of serum SYN *seroprevention*

seropurulent (sê'rô-pû-rû-lênt) [L. *serum*, whey, + *purulentus*, full of pus]. Composed of serum and pus, as an exudate.

seroreaction (sê'rô-rê-âk'shûn) [L. *serum*, whey, + *re*, back, + *actio*, action] SYN *serum sickness* 1 Any reaction taking place in or involving serum. SEE *denatation* or *complement*, *fixation of complement*. 2 Reaction to an injection of serum marked by rash, fever, pain, etc.

serosa (sê'rô-sâ) [L. from *serum*, whey]. SYN *tunica serosa*. A serous membrane, q.v. Examples are peritoneum, pleura, and pericardium

serosamucin (sê'rô-sâ-mû'sîn) [L. *serosus*, serous, + *mucus*, mucus]. Mucoid in serous fluids

serosanguineous (sê'rô-sân-gwîn-ê-ûs) [L. *serum*, whey, + *sanguineus*, bloody]. Containing or of the nature of serum and blood

seroscopy (sê'rô-skô-pl) [" + G. *skopein*, to examine] Examination of serum for diagnostic purposes

seroserous (sê'rô-sê-rûs) [L. *serosus*, serous, + *serum*, whey]. Pert. to 2 serous surfaces

serositis (sê'rô-sî'tîs) [" + G. *-itis*, inflammation]. Inflamed condition of a serous membrane

serosity (sê-rô-sî'tî) [Fr. *serosité*, from L. *serum*, whey]. The quality of being serous

serosynovitis (sê'rô-sîn-ô-vî'tîs) [L. *serum*, whey, + G. *syn*, with, + *don*, egg, + *-itis*, inflammation] Synovitis with increase of synovial fluid

serotherapy (sê'rô-thêr-â-pî) [L. *serum*, whey, + G. *therapeia*, treatment]. The injection of blood serum, either human or animal, containing antibodies as a therapeutic measure in the treatment of disease

Concerned with producing artificial immunity in a person by injecting the

blood serum of an animal which has acquired active immunity* to the disease in question. The degree of protection is not great, usually being limited to days or weeks

serotonin (sê'rô-tôn'in). 5-Hydroxytryptamine, a vasoconstrictor principle originally isolated from mammalian blood serum. It has since been found to be widely distributed in animal tissues, said to be a brain hormone that inhibits signals across the synapses.

serous (sê'rûs) [L. *serum*, whey]. 1 Having the nature of serum 2 Producing a serous secretion, or containing serum or a serumlike substance

s. cavity. A cavity lined by a serous membrane, specifically the pleural, peritoneal, and pericardial cavities.

s. cell. A cell which secretes a thin, watery, albuminous secretion

s. effusion. One of serum.

s. exudate. One consisting mostly of serum.

s. fluids. Liquids of the body, similar to blood serum, which are in part secreted by serous membranes.

s. gland. A gland secreting a watery, albuminous fluid Ex. parotid gland

s. inflammation. One with a serous exudate or inflammation of a serous membrane

s. membrane. A membrane lining a serous cavity.

RS. *membrane, serous*

serozymogenic (sê'rô-zî-mô-jên'îk) Pert. to a serous fluid and enzymes.

s. cell. A cell which produces a serous secretion containing an enzyme

serpiginous (ser-pîj'in-ûs) [L. *serpere*, to creep] Creeping from one part to another.

s. ulcer. One extending in one direction, while healing in another direction.

serpigo (ser-pî'gô) [L. *serpere*, to creep]. A creeping eruption, esp. ringworm. SYN *herpes*, *ringworm*.

serrate (sê'rât) [L. *serratus*, toothed]. Notched, toothed. SYN: *dentate*.

serration (ser-â'shûn) [L. *serratio*, a notching]. 1. Formation with sharp projections like the teeth of a saw. 2. Notch resembling one bet. teeth of a saw.

serratus muscle (sê-râ'tûs) [L. *serratus*, toothed]. Any of several muscles arising from the ribs or vertebrae by separate slips. SEE: *Table of Muscles in Appendix*.

serrefine (sâr-fên') [Fr. 1. A small, spring wire forceps for compressing bleeding vessels.

serrenoed (sâr-nôöd) [Fr. *serrer*, to squeeze, + *noeud*, knot]. Device employed for constricting uterus near os internum with strong steel wire, used for ligating.

Sertoli's cells (sêr-tô-lê). Supporting, elongated cells of seminiferous tubules which nourish spermatids

serum (sê'rûm) (pl. *serums*, *sera*) [L. *serum*, whey]. 1. Any serous fluid, esp. the fluid which moistens the surfaces of serous membranes 2. The watery portion of the blood after coagulation; a fluid found when clotted blood is left standing long enough for the clot to shrink. 3. Serum from an animal rendered immune against a pathogenic organism, to be injected into a patient with the disease resulting from the same organism. It consists of plasma minus fibrinogen.

s. albumin. A protein found in blood serum. For properties, see *proteins*; for amount, see *blood*.

s., anticrotalus. S. to overcome the effect of rattlesnake poison.

s., antidiaphtheritic. One used to overcome the effects of diphtheria.

s., antimeningococcus. S. antagonistic to meningococcus infection.

s., antiphtidic. S. antagonistic to snake poisons.

s., antipneumococcus. S. for pneumococcus infection.

s., antitetanic. S. given to overcome tetanus toxin.

s., antitoxic. One containing the antitoxin of the microorganism against which it is supposed to be protective.

s., antityphoid. S. containing antibodies of the typhoid bacillus.

s., bactericidal. One having no effect on toxins but which destroys bacteria.

s., bacteriolytic. A serum containing a lyxin that destroys certain bacteria.

s., Behring's. An antidiaphtheritic one.

s., blood. The liquid clear portion of blood without its fibrin and corpuscles.

s., convalescent. Blood serum from one convalescent from an infection to be used on others having the same disease.

s., foreign. Serum from one animal injected into another animal of another species, or into man.

s., globulin. A protein found in blood serum. SEE *globulin, serum*.

s., immune. A serum containing antibodies for specific antigens.

s., pooled. Blood s. from several persons, which has been mixed.

s., pregnancy. Blood serum from pregnant women given to premature infants in food.

s., pregnant mare's. Abbr PMS A source of hormones, esp chorionic gonadotrophin.

s., protein. Any protein in blood serum.

Serum p. forms weak acids mixed with alkali salts and this increases the buffer effects of the blood but to a lesser extent than cell protein.

s., rash. One first seen at site of an injection of serum.

It remains thickest there but it may invade other parts of the body. It resembles a combination of *urticarial, morbilliform* and *scarlatiniform rashes*.

Sym: Severe irritation; marked swelling of skin, esp. of the face; malaise, and constitutional symptoms.

s., sickness. An eruption of purpuric spots, with pain in limbs and joints, following administration of serum, esp. horse serum.

Sym: Supposed to be anaphylactic. Symptoms appear 5 to 12 days after the injection. Slight fever, skin eruptions, swelling and pain in joints may develop. Hay fever and asthma victims are hypersensitive to serum injections. Adrenalin is used to combat such reactions. Histaminase is a prophylactic and also relieves the condition, as does epinephrine in oil. SYN *serum reaction*.

s., test. Uhlenhuth's test. q.v.

serum, words pert. to: agglutinin, agglutininogen, aggrassin, antigen, antitropin, antivenin, autoerosodiagnosis, autoerosotherapy, autoerosus, autoerosum, chromodiagnosis, complement, icteric index, isohemagglutinin, "lymph-" words, opsonic index, opsonin, orrhorrea, serology, serous.

serumal (sê-rû'mäl) [L. *serum*, whey]. Relating to serum.

s., calculus. One formed about the teeth from serous exudate.

sesamoid (sês'am-oyd) [G. *sêsamon*,

sesame, + *eidos*, form]. Resembling in size or shape a grain of sesame.

s., bone. An oval nodule of bone or fibrocartilage in a tendon playing over a bony surface.

The patella is the largest one.

s., cartilage. SYN. *accessory nasal cartilages*. One or more small cartilage plates present in fibrous tissue between lateral nasal and greater alar cartilages of the nose.

sesqui- [L.]. Prefix meaning one and a half.

sesquihora (sês-kwî-hô'râ). Every hour and a half.

sessile (sês'îl) [L. *sessilis*, low]. Having no peduncle but attached directly by a broad base.

set. 1. To fix firmly in place, as to set a bone in reduction of a fracture. 2. To allow an amalgam or plaster to harden.

setaceous (sê-tâ'shûs) [L. *setaceus*, bristly]. Resembling a bristle, bristly, hairy.

seton (sê'tôn) [L. *seto*, *seton*-, a thread]. A thread or threads drawn through a fold of skin to act as a counterirritant, or a fistulous tract so produced.

setose (sê'tôs) [L. *seta*, bristle]. Having bristlelike appendages.

Settschenow's inhibitory centers (sêts'hên-ôf). Centers in the spinal cord and oblongata for inhibiting reflex movement.

seven basic foods. 1. Leafy green and yellow vegetables. 2. Citrus fruit, tomatoes, raw cabbage. 3. Potatoes and other vegetables and fruits. 4. Milk, cheese, ice cream. 5. Meat, poultry, fish, eggs, dried peas, beans. 6. Bread, flour, cereals, whole-grain, enriched or restored. 7. Butter and fortified margarine.

s., year itch. Scabies, q.v.

sev'enth cran'ial nerve. Facial nerve*, *nervus facialis*.

sevum (sê'vûm) [L. *suet*]. Tallow or suet.

sewer gas. Foul air of a sewer. SYN *carbon monoxide gas*.

sex (sêks) [L. *sextus*, sex]. 1. The distinctive quality which differentiates bet male and female. 2. Males or females, collectively.

s., chromosomes. Chromosomes in a cell determining sex.

sexdigital (sêks-dij'î-tâl) [L. *sex*, six, + *digitus*, digit]. Having 6 fingers or toes.

sexivalent (sêks-l-vâ'lênt, -îv'âl-ênt) ["" + *valere*, to be strong]. Capable of combining with 6 atoms of hydrogen.

sextan (sêks'tân) [L. *sextantus*, of the sixth]. Occurring every 6th day.

sextigravida (sêks-tî-grâv'îd-â) [L. *sextus*, six, + *gravida*, a pregnant woman]. A woman pregnant for the 6th time.

sextipara (sêks-tîp'â-râ) ["" + *parere*, to bear a child]. A woman who has borne 6 children at different pregnancies.

sextuplet (sêks'tû-plê't) [L. *sextus*, six]. One of 6 children born of a single gestation.

sexual (sêks'û-âl) [L. *sextualis*, pert. to sex]. 1. Pert. to sex. 2. Having sex.

s., bondage. An abnormal phenomenon (not perverse) of dependence of one person upon another of the opposite sex, one dominating the other.

s., intercourse. Sexual congress bet. a male and a female. SYN: *coition*, *cotus*, *concupitus*, *copulation*.

RS: *clitoris*, *coitus interruptus*, *dyspareunia*, *ejaculation*, *emission*, *excitation*, *penis*, *semen*, *telephony*, *vagina*.

s., inversion. A perversion in which an abnormal affection for one of the same sex is experienced.

s., involution. The menopause.

- s. metamorphosis.** A perversion in which one adopts the habits and dress of the opposite sex.
- s. psychopathy.** A term for the group in which exist perversions of sex, such as *bestiality*, *coprolagnism*, *exhibitionism*, *fetichism*, *frottage*, *homosexualism*, *lesbianism*, *masochism*, *masturbation*, *onanism*, *pedophilia*, *renifieurs*, *sadism*, *sodomy*, *transvestism*, *voyeur*.
- s. reflex.** Erection and ejaculation resulting from genital stimulation or indirectly from emotion whether asleep or awake.
- sexuality** (sèks-ù-àl'ti) [L. *sexus*, sex].
1. State of having sex; the collective characteristics which mark the differences bet. the male and the female. 2. Undue concern with what is sexual. 3. Constitution and life of individual as related to sex; all the dispositions related to the love life whether associated with the sex organs or not.
- shad** (shád) [A.S. *scædd*] A herringlike fish having a comparatively deep body. It is valuable as a food fish. COMP. E. P. Pro. 18.8%, Fat 9.5%. FUEL VALUE: 100 Gm. equal 164 Cal.
- shadow.** Syn. *phantom cell*, *ghost cell*. A hemolyzed erythrocyte.
- shadowgram, shadowgraph** (shád'ô-grám, -gráf) [M.E. *shadowe*, darkness, + G. *graphiein*, to write]. A print on a photographic plate exposed to x-rays. SYN: *skiagraph*.
- shaft.** 1. The principal portion of any cylindrical body. 2. The diaphysis of a long bone.
s. hair. The keratinized portion of a hair which extends from a hair follicle beyond the surface of the epidermis.
- shakes** (sháks) [A.S. *scacan*, to shake].
1. Shivering caused by a chill, esp. in an intermittent fever. 2. SYN. *jitters*. State of tremulousness and extreme irritability often seen in chronic alcoholics.
- shaking** (shák'ing) [A.S. *scacan*, to shake]. A passive movement in Swedish massage.
- s. palsy.** A basal ganglion disease with progressive rigid tremulousness, peculiar gait, muscular contraction and weakness. SYN: *paralysis agitans*.
- shank** (shángk) [A.S. *seanca*]. The tibia or leg from knee to ankle. SYN: *shin*.
- shape** (sháp) [A.S. *sceapan*, to shape]. 1. To mold to a particular form. 2. Outward form; contour.
RS. *aliform*, *arcate*, *arciform*, *arcuation*, *arenoid*, *asbestiform*, *asteroid*, *baciform*, *belemnoid*, *bilateralism*, *bosse-lated*, *bosselation*, *bulbiform*, *calculus*, *capreolari*, *capreolate*, *carinate*, *caudate*, *circle*, *circumvallate*.
- sharkskin.** Condition seen in pellagra (nicotinic acid deficiency) in which openings of sebaceous glands become plugged with a dry yellowish material.
- Sharpey's intercrossing fibers** (shar'pé). Fibers forming the lamellae constituting the walls of the haversian canals in bone.
- S. perforating fibers.** 1. Fibers extending from the periosteum into the lamellae of bone. 2. F. extending from peridental membrane into cementum of a tooth.
- sheath** (shéth) [A.S. *scéath*]. A covering structure of connective tissue, usually of an elongated part, such as the membrane covering a muscle, etc.
s. arachnoid or **arachnoidéan.** Delicate partition bet. pia sheath and dura of the optic nerve.
- s., axon.** The myelin sheath and (or) neurilemma.
- s., carotid.** Portion of cervical or pretracheal fascia enclosing carotid artery, int. jugular vein, and vagus nerve.
- s., cranial.** The femoral sheath.
- s., dental.** One lining the dental canals.
- s., dural.** A fibrous membrane or ext. investment of the optic nerve.
- s., femoral.** The fascial covering of femoral vessels.
- s. of Henle.** The endoneurium, a delicate sheath enveloping nerve fibers within a fasciculus.
- s. of Key and Retzius.** The endoneurium, *q. v.*
- s., lamellar.** Connective tissue sheath covering bundle of nerve fibers. SYN: *perineurium*.
- s., medullary.** Myelin s. surrounding the axis cylinder.
- s., myelin.** A fatty, semifluid covering of a nerve fiber which serves to insulate the fiber and to speed the rate of impulses. It is interrupted at intervals by constrictions, the nodes of Ranvier. SEE *neuron*, *nerve fiber*.
- s., nerve.** SEE: *s., lamellar*.
- s. of Neumann.** A layer of dentine which lies adjacent to a dental tubule.
- s., pial.** Extension of the pia, closely investing surface of the optic nerve.
- s., roof.** The layers of a hair follicle derived from the epidermis, includes the outer root sheath which is a continuation of the stratum germinativum and the inner root sheath which consists of three layers of cells closely investing the root of the hair. SEE: *hair*.
- s. of Schwann.** Membranous covering of myelin sheath of a nerve fiber. SYN: *neurilemma*.
- s. of Schweigger-Seidel.** The thickened wall of a sheathed artery of the spleen.
- s., synovial.** A double-walled tubelike bursa which encloses a tendon. Consists of an inner *visceral* layer lying to and adhering to a tendon and an outer *parietal* layer the two being separated by a space filled with synovial fluid. Found especially in the hands and feet where tendons are confined to osteofibrous canals or pass over bony surfaces.
- s., tendon.** A dense fibrous sheath which confines a tendon to an osseous groove converting it into an osteofibrous canal.
Found principally in the wrist and ankle. SEE: *synovial sheath*.
- shedding.** 1. The loss of deciduous teeth.
2. Casting off of surface layer of the epidermis.
- sheet** (shét) [A.S. *sciete*, piece of cloth]. Linen or cotton bedcovering next to the sleeper.
- s., draw.** One folded under patient so it may be withdrawn without lifting the patient.
- shell shock.** PSY: Any one of the disorders of motor, sensory and special sense centers; a form of psychoneurosis which occurs during military service and in training camps, but not as a result of exploding shells. SYN: *war neurosis*.
- shield** (shéld) [A.S. *scild*, shield]. 1. Any protecting device. 2. Biol.: A protective plate.
s. bone. The scapula.
- s., Buller's.** A watch glass to be worn over the eye to protect it from gonorrheal or ophthalmic infection.
- s., embryonic.** SYN: *embryonic disk*,

q.v. The two layered blastoderm or blastodisk from which a mammalian embryo develops.

s., nipple. A protective covering to protect sore nipples.

s., phallic. An antiseptic covering for the male genitals during operations.

shift. A change in position or direction.

s., chloride. The shift of chloride ions (Cl⁻) from the plasma into red blood cells upon the addition of carbon dioxide from the tissues and the reverse movement when carbon dioxide is released in the lungs. It is a mechanism for maintaining constant pH of the blood.

Shiga's bacillus (shē'gā). **Syn** *Shigella dysenteriae*. The bacillus causing a form of dysentery.

Shigella (shi-gel'lä). A genus of nonlactose fermenting, nonmotile, Gram-negative rods belonging to the family *Enterobacteriaceae*. It contains a number of species which cause digestive disturbance ranging from mild diarrhea to a severe and often fatal dysentery.

S. dysenteriae. The Shiga bacillus, a virulent form isolated during a severe epidemic of dysentery in Japan in 1896.

shin (shin) [A.S. *scinu*, shin]. Anterior edge of tibia. Also, leg bet. the ankle and knee. **Syn** *shank*.

s., saber. Condition seen in congenital syphilis in which anterior edge of tibia is extremely sharp.

shingles (shing'ls) [*L. cingulus*, a girdle]. Eruption of acute inflammation, herpetic vesicles on the trunk of the body along a peripheral nerve; occasionally elsewhere. **Syn** *herpes zoster*, *q.v.*

ship fever. A fever due to unhygienic conditions aboard ship, usually typhus fever or yellow fever occasionally.

shiver (shiv'ér) [M.E. *chiveren*]. 1. A slight tremor of the skin, as from cold, or from fear. 2. To tremble or shake, as from fear or cold.

shock (shök) [M.E. *schokke*]. A state of collapse resulting from acute peripheral circulatory failure. It may occur following hemorrhage, severe trauma, surgery, burns, dehydration, infections, or drug toxicity.

It may be immediate or delayed, slight or severe, even fatal. Other form resembling faintness, but may be restless and excited. The result of an injury, bleeding, pain, fear, fright, anesthesia, the result of an operation and many other causes.

Every injury is accompanied by some degree of shock and so should be treated promptly. Syncope is caused by an anemia of the brain in certain persons and resembles shock in symptoms and treatment.

RS: anaphylactic, catalepsy, cataleptic, insulin.

Sym Five "P's" denote the outstanding symptoms of shock: Prostration, pallor, perspiration, pulselessness, pulmonary deficiency. They vary in intensity, depending upon patient and injury.

The most outstanding symptoms are: (a) Marked paleness of the skin; (b) a bluish or grayish discoloration (cyanosis) of the lips, nails, tips of the fingers and lobes of the ears; (c) the face is pinched and without expression. (d) there may be a staring of the eyes which often lose their characteristic luster; and (e) the pupils are dilated; (f) the pulse is weak, rapid and irregular; (g) the breathing is increased in rate and it is shallow; and (h) the blood pressure is instantly lowered; (i) there may be

urinary retention and incontinence of feces, (j) occasionally there is an unusual restlessness or excitement, and (k) very often the patient expresses an extreme thirst. If conscious the patient seems quite disinterested in the surroundings and complains little of pain even though he may be groaning.

Treatment Keep patient lying down with head lower than body. The lower extremities can be slightly elevated by placing the patient on a box, stool or a folded blanket.

External heat should be applied in the form of hot water bottles, blankets, hot plates, etc. A simple means of applying heat is by placing ordinary electric light bulbs within a foot or two of the patient. Avoid disturbing by any noise, questions, or transportation. Do not move patient unnecessarily.

If able to swallow, should be given hot drinks. If bleeding is present it should be controlled. If internal hemorrhage is suspected, or presence of head injuries, no stimulants are permissible. In any other instance they may be given hot, black coffee; hot, strong tea, or other warm drinks. A half teaspoonful of aromatic spirits of ammonia in a glass of warm water may likewise be given by mouth. If the patient cannot swallow, spirits of ammonia may be held to the nostrils intermittently for a few breaths.

A physician should be called promptly. The use of hypodermics and intramuscular and intravenous injections, such as epinephrine, ephedrine, caffeine, strychnine etc. or hot enemata, may be recommended by the doctor.

Oxygen may be necessary. Blood transfusion or even artificial respiration may be required, depending on the seriousness of the condition.

Relieve pain by splints, posture, supporting bandages and drugs. Morphine is valuable and when injection is impossible may be placed under tongue for prompt absorption. Alcoholic stimulants are occasionally helpful. Maintain circulation by posture, have patient flat. Lower head and shoulders, elevate all extremities and, if possible, apply snub bandages of all extremities beginning with the lower ones - this forces blood into the general circulation and prevents further peripheral stagnation. Administer fluids by all routes, by mouth, by rectum and intravenously (saline with dextrose is best). Blood transfusion when possible (6% gum acacia in saline when compatible blood is not available).

Respiration may be aided by administration of oxygen preferably mixed with 4 to 10% carbon dioxide as a respiratory stimulant. Constant, kindly, tactful encouragement and extreme gentleness in all procedures are of importance. Atropine sulfate is used in doses of 1/150 to 1/50 gr. to diminish perspiration.

F. A. TREATMENT Depends on accuracy of diagnosis. In general, treat specific etiologic factor, maintain body heat by hot blankets, water bottles, etc. If permissible, a hot bath, hot enemata and hot drinks, and massage (do not expose patient unduly). Stimulants used generously except in presence of suspected bleeding or head injury. Strong and moderately hot black coffee or tea by mouth and/or by rectum are esp recommended.

s., aerial. Condition in soldiers from exposure to bursting shells.

s., anaphylactic. Reaction from injection of protein substance to which patient is sensitized.

s., anesthesia. This is not surgical shock, but is due to an overdosage of anesthetic and calls for the immediate cessation of anesthesia.

Artificial respiration and various stimulants should be given at once. The condition is manifested by a weak, rapid pulse; a fall or drop in blood pressure, by cold, clammy skin, and by shallow respirations.

s. (from) burns. SEE: Burn, treatment

s., colloid. One causing symptoms of anaphylaxis when colloids are injected.

s., deferred or delayed. Late manifestation following injury or burns.

May appear in 3 to 30 hours and may be due to transportation, emotional stress, hemorrhage, dehydration, acidosis, or toxemia.

s., electric. The result of passage of electric current. SEE: electric shock.

s., epigastric. Result of a blow or other trauma (surgery) in upper abdomen

s., hypoglycemic. SEE: insulin shock

s., insulin. Condition resulting from overdosages of insulin.

F. A. TREATMENT. Give orange juice, glucose, candy, lump of sugar, etc. If unconscious, inject glucose intravenously. SEE: insulin.

s., mental. SEE: s., psychic Due to emotional stress or seeing injury, accidents, etc.

s., peptone or protein. Reaction resulting from parental administration of a protein.

s., psychic. S. due to excessive fear, joy, anger, grief

s., secondary. Same as deferred shock.

s., sense. A mild nightmare.

s., serum. One occurring as part of reaction to injection of serum.

s., shell. An indefinite nervous condition found in soldiers.

s., surgical. Following operations and including traumatic shock, q.v.

s. therapy. Form of treatment in mental illness. Three types are widely used. 1. *Electric shock therapy*, in which convulsions are induced by passage of electricity through the brain; used chiefly in manic depressive psychoses, anxiety states, depression, involutional melancholia, and certain types of schizophrenia. 2. *Insulin shock therapy*, in which hypoglycemia and coma are induced by injection of insulin; used chiefly in schizophrenia. 3. *Metrazol shock therapy*, in which convulsions are induced by injection of metrazol; used chiefly in schizophrenia.

s., traumatic (broad interpretation). Shock due to injury or surgery.

May occur as result of abdominal injury from any cause. Shock is proportional to extent of injury. Esp. severe in upper abdomen and more marked when viscera are damaged.

If prolonged, indicates hemorrhage or peritonitis or both.

Cerebral injury: Concussion of brain or skull fracture. May come on immediately or later from edema or intracranial hemorrhage.

Chemical injury: Esp. corrosives, due to pain and effect of chemical and absorption of altered tissue.

Crushing injuries: The nearer the body the greater the shock.

Fracture: Esp. in compound fracture. Often extensive blood loss into tissues and hence body is not able to maintain circulation.

Heart damage: As in angina pectoris, coronary occlusion, or acute dilatation.

Inflammation: As acute general peritonitis or fulminating sepsis anywhere in the body

Intestinal obstruction: Shock is present when obstruction is acute.

Nerve injury. Contusion of highly sensitive parts, as testicle, solar plexus, eye, urethra, etc.

Operations: May occur even after minor operations, as paracentesis, catheterization, etc.

Perforation or rupture of viscera, as: Acute pneumothorax, ruptured aneurysm, perforated peptic ulcer, perforation in appendicitis, ectopic pregnancy.

Strangulation: As in hernia, intussusception, volvulus.

Thermal injury: As burns, frostbite, heat exhaustion.

Torsion of viscera: As of an ovary, testicle.

s., wound. Same as traumatic shock.

shoemakers' cramp or spasm. Spasm of muscles of hand and arm occurring in shoemakers.

shortsightedness (short-sit'ed-nēs). A condition of not being able to see very far. Due to light rays coming to a focus in front of the retina. SYN. *myopia*, *nearsightedness*.

shotgun prescription. One containing many drugs given with hope that one of them may prove effective.

shoulder (shōl'dēr) [A.S. *sculdor*]. The junction of the clavicle and scapula where the arm meets the trunk.

RS. *omalgia*, *omarthrititis*, *omitis*, *scapula*.

s., blade. The scapula.

s., dislocation of. Displacement of shoulder joint.

Very frequently accompanied by a fracture. It is believed by all surgeons that it is wiser to have an x-ray examination of the affected bones because fractures are so often present and attempts to reduce fractured dislocations without knowing of fractures present are very dangerous, sometimes resulting in serious paralysis of the entire upper extremity, or of grave damage to the large blood vessels in the armpit.

Causes: The causes of a dislocation of a shoulder are usually those of falling on an outstretched arm, or a blow to the arm in some unusual position. It is very common among athletes, esp. among football and basketball players. A patient with a dislocated shoulder usually has a deformity with a hollow in place of the normal bulge of the shoulder. There seems to be a slight depression at the outer end of the clavicle, and the patient cannot place his hand at his opposite shoulder and still place his elbow onto his chest. Always compare both sides.

TREATMENT: Send for a doctor as soon as possible. Lay the patient on the back, with a pillow bet. the shoulders (or folded pad). Place a large, soft pad under the elbow on the affected side and then bind the forearm horizontally across the chest, using an open sling which is reinforced by a broad cravat; bandage, and then apply cold applications to the affected shoulder. Treat for shock.

s., girdle. The 2 scapulae and 2 clavi-

cles attaching the bones of the upper extremities to the axial skeleton.

s. joint. Formed by humerus and glenoid cavity of scapula.

show (shô) [A.S. *scēawan*, to look]. The sanguiniferous discharge from the vagina during the first stage of labor or just preceding menstruation.

Shrapnell's membrane (shrăp'nĕl). **SYN:** *pars flaccida*. A small triangular portion of the tympanic membrane lying above the malleolar folds. It is thin and lax and attached directly to the petrous bone at the tympanic notch (notch of Rivinus).

shred'ded wheat. Av. SERVING: 100 Gm. Pro. 10.5, Fat 14, Carbo 77.9 ASH CONST. Ca 0.041, Mg 0.144, K none, Na none, P 0.324, Cl none, S none, Fe 0.0045.

shreds. Slender strands of mucus seen in urine indicative of inflammation of urinary tract or associated organs.

shrimp (shrimp) [M.E. *shrimpe*]. Any of numerous, small, long-tailed crustaceans, many varieties of which are used for food. Av. SERVING: 65 Gm. Pro 14.1, Fat 0.5 VITAMINS A+, ASH CONST. Ca 0.096.

shud'der. A temporary convulsive tremor resulting from fright, horror, or aversion.

shunt (shünt) [M.E. *shunten*, to avoid]. 1 To turn away from, to divert. 2 Anomalous passage or one artificially constructed to divert flow from one main route to another. 3 Electric conductor connecting two points in a circuit to form a parallel circuit through which a portion of the current may pass.

Si. Symb. of *silicon*.

siagonantritis (si'ăg-ôn-ăn-tri'tis) [G. *siagon*, jawbone, + *antron*, cavity, + *-itis*, inflammation]. Inflammation within the antrum of Highmore.

sialaden (si-ăl-ăd-ĕn) [G. *sialon*, saliva, + *aden*, gland]. A salivary gland.

sialadenitis (si-ăl-ăd-ĕn-i'tis) ["" + *-itis*, inflammation]. Inflamed condition of a salivary gland.

sialadenoncus (si-ăl-ăd-ĕn-ông'kūs) ["" + *-ogkos*, tumor]. Tumor of salivary gland.

sialagogue (si-ăl-ă-gôg) ["" + *agôgos*, leading]. Agent increasing flow of saliva. Ex. *pitocarpine*, *potassium iodide*, *citric acid*.

sialaporia (si'ăl-ap-ô-ri-ă) ["" + *aporia*, lack]. Deficiency in secretion of saliva.

sialemesis (si'ăl-ĕm-ĕs-ĭs) ["" + *emesis*, vomiting]. Vomiting of saliva or vomiting caused by an excessive secretion of it.

sialine (si'ăl-in) [G. *sialon*, saliva]. Concerning the saliva.

sialism, **sialismus** (si'ăl-iz-m, si-ăl-iz-mūs) ["" + *-ismos*, condition]. An excessive secretion of saliva. **SYN:** *ptyalism*, *salivation*.

sialoadenitis (si'ăl-ô-ăd-ĕn-i'tis) ["" + *aden*, gland, + *-itis*, inflammation]. Inflammation of a salivary gland. **SYN:** *sialadenitis*.

sialoacrophagy (si'ăl-ô-ă-ĕr-ôf-ă-jī) ["" + *aēr*, air, + *phagein*, to eat]. Constant swallowing, thus taking saliva and air into the stomach.

sialoangitis (si'ăl-ô-ă-ŋ-jī'tis) ["" + *aggeion*, vessel, + *-itis*, inflammation]. Inflamed condition of the salivary ducts.

sialodochitis (si'ăl-ô-dô-ki'tis) ["" + *doche*, receptacle, + *-itis*, inflammation]. Inflamed condition of salivary ducts.

s. fibrinosa. S. with duct obstructed by a fibrinous exudate.

sialoductitis (si'ăl-ô-dûk-ti'tis) ["" + *L. ductus*, duct, + *G. -itis*, inflammation]. Inflamed condition of Stensen's duct.

sialogenous (si-ăl-oj'en-us) [G. *sialon*, saliva, + *gennan*, to produce]. Forming saliva.

sialogogic, **sialogogue** (si-ăl-ô-gôj'ĭk, -ăl-ô-gôg) ["" + *agôgos*, leading]. Producing or promoting a secretion of saliva, or that which stimulates its secretion.

sialography (si-ăl-ôg'ră-fi) ["" + *graphein*, to write]. Examination of salivary ducts and glands with x-rays. **SYN:** *ptyalography*.

sialolith (si-ăl-ô-lith) ["" + *lithos*, a stone]. A salivary concretion or calculus.

sialolithiasis (si-ăl-ô-lith-i-ăs-is) ["" + *-iasis*, condition]. Presence of salivary calculi.

sialolithotomy (si'ăl-ô-lith-ô-tô-mī) ["" + *-tome*, a cutting]. Removal of a calculus from a salivary gland or duct.

sialoncus (si-ăl-ông'kūs) ["" + *ogkos*, tumor]. A tumor under the tongue caused by obstruction of a salivary gland or duct.

sialoporia (si'ăl-ô-pô-ri-ă) [G. *sialon*, saliva, + *aporia*, lack]. Deficient secretion of saliva.

sialorrhea (si-ăl-or-ĕ-ă) ["" + *rhoa*, a flow]. Excessive flow of saliva. **SYN:** *sialism*.

sialoschesis (si-ăl-ôs-kĕs-ĭs) ["" + *schesis*, suppression]. Suppression or retention of saliva.

sialosemeiology (si'ăl-ô-sĕ-mĭ-ôl'ô-jī) ["" + *semeion*, sign, + *logos*, a study]. Diagnosis based upon examination of the saliva.

sialosis (si-ăl-ô-sĭs) ["" + *-ôsis*, condition]. The flow of saliva.

sialostenosis (si'ăl-ô-stĕn-ô'sis) ["" + *stenôsis*, a narrowing]. Closure of a salivary duct.

sialosyrinx (si'ăl-ô-sĭr'ĭnks) ["" + *syrinx*, a pipe]. 1 Fistula into the salivary gland. 2 A syringe for washing out salivary ducts. 3 Drainage tube for a salivary duct.

sialotic (si-ăl-ô-tĭk) [G. *sialon*, saliva]. Concerning the flow of saliva.

sialozemia (si'ăl-ô-zĕ-mĭ-ă) ["" + *zĕmia*, loss]. Involuntary loss of saliva. **SYN:** *salivation*.

Siamese twins (si-ă-mĕz'). Congenitally united twins, usually at the hips or buttocks, the members being capable of activity.

sib. **SYN:** *sibling*. A brother or sister.

sibilant (sib'l-ănt) [L. *sibilans*, hissing]. Hissing or whistling, as a sound heard in a certain rale, *q.v.*

sibilantion. Pronunciation in which the sound of "s" is predominant.

sibilism, **sibilism**. A hissing sound.

s. aurium. Tinnitus, *q.v.*

sibilus (sib'l-ŭs) [L. a hissing]. A hissing rale.

sibling (sib'lĭng) [A.S. *stibb*, kin, + *-ling*, having the quality of]. One of 2 or more children of same parents.

sibship. Brothers and sisters of a single family considered as a single group.

siccant (sik'ănt) [L. *siccus*, dry]. Drying.

siccative (sik'ă-tĭv) [L. *siccativus*, drying]. Drying or that which dries. **SYN:** *siccant*.

sicchasia (si-kă'shĭ-ă). Nausea.

siccus (sik'ūs) [L. dry]. Not moist; dry.

sick (sik) [A.S. *seoc*, ill]. 1. Not well. **SYN:** *ill*. 2. Nauseated or "sick at the stomach." 3. Menstruating.

s. headache. One with nausea, vomiting, anorexia, etc. **SYN:** *migraine*, *q.v.*

s. at the stomach. Inclined to vomit. SYN. *nauseated*.

sickle cell. Abnormal red blood corpuscle of crescent shape.

s. c. anemia. A form of anemia in which are present abnormal sickle or crescent-shaped erythrocytes. SEE: *anemia*.

Etiol. Said to be caused by presence of hemoglobins produced by defective genes

sickleleukemia (sik-lē'mī-ā) [A.S. *sicol*, sickle, + G. *aima*, blood]. Sick cells in the blood.

sick'ness [A.S. *seōc*, ill]. State of being unwell. SYN. *illness*.

s., bleeding. Abnormal tendency to bleed. SYN. *hemophilia*.

s., car. Nausea and malaise from riding in vehicles such as trains or automobiles

s., falling. Epilepsy.

s., green. Form of anemia with greenish pallor. SYN. *chlorosis*.

s., monthly. Menstruation.

s., morning. Nausea of early pregnancy.

s., mountain. Nausea and dyspnea caused by being on great elevations.

s., sea. S caused by motion of a vessel while at sea

s., serum. S. following injection of serum

s., sleeping. 1. Infection with genus of Trypanosomes with involvement of central nervous system and ultimately continuous sleeping. SYN: *trypanosomiasis* 2. Acute infectious disease with increasing lethargy. SYN. *lethargic encephalitis*.

side (sid) [A.S. *side*]. 1. Left or right part of wall of trunk of body. 2. An outer portion considered as facing in a particular direction

s.-chain theory. Theory concerning cell dissolution and immunity, complex molecules react with one another through their side chains when they have definite correspondence in structure. SEE: *Ehrlich's side-chain theory*.

s. position. Lying on one side, thighs flexed, with underarm behind back. SYN: *Sims' position*, *q.v.*

sideration (sid-ēr-ā-shūn) [L. *siderāri*, to be struck by a planet]. 1. Therapeutic application of electric sparks. 2. A sudden stroke of disease, as in apoplexy. 3. Lightning stroke.

siderism, siderismus (sid-ēr-izm, -iz'mūs) [G. *sideros*, iron + -ismos, condition]. Therapeutic application of metals to the skin. SYN. *metallotherapy*.

sidero- [G]. Combining form meaning iron or steel, as *siderosis*.

siderocyte (si-dēr-ō-sit). A red blood cell containing iron in a form other than hematin.

sideroderma (sid-ēr-ō-der'mā) [G. *sideros*, iron, + *derma*, skin]. Bronzed coloration of the skin from disordered hemoglobin disintegration.

siderodromophobia (sid-ēr-ō-drō'mō-tō-bī-ā) [" + *dromos*, a way, + *phobos*, fear]. Morbid fear of railway travel.

siderofibrosis (sid-ēr-ō-fl-brō'sis) [" + L. *fibra*, fiber, + G. -ōsis, condition]. Fibrosis associated with deposits of iron.

siderogenous (sid-ēr-ōj'en-ūs) [" + *genesis*, to produce]. Producing or forming iron.

siderophilous (sid-ēr-ōf'il-ūs) [" + *philein*, to love]. Having a tendency to absorb iron, as the red blood corpuscles.

sideroscope (sid-ēr-ō-skōp) [" + *skopein*, to examine]. Instrument for finding metal particles in the eye.

siderosis (si'dēr-ō'sis). [G. *sideros*, iron, + -ōsis, condition]. A form of pneumoconiosis resulting from inhalation of dust or fumes containing iron particles. It is benign and constitutes no serious health hazard. Also called *arc-welders disease*.

Sigault's operation (sē-go'). Division of the symphysis pubis to aid delivery. SYN: *symphyseotomy*.

sigh. SYN. *suspirium*. A deep inspiration followed by a slow audible expiration

sight (sit) [A.S. *sith*]. 1. Power or faculty of seeing. SYN. *vision*. 2. Range of sight 3. A thing or view seen.

s., day. Night blindness. SYN. *nyctalopia*.

s., far-. Rays of light focusing behind the retina. SYN: *hypermetropia*.

s. meter. Device for measuring intensity of light in foot candles.

s., near-. Rays of light focusing before the retina. SYN. *myopia*.

s., night. Day blindness. SYN. *hemeralopia*.

s., old. Loss of accommodation of near point. SYN. *presbyopia*.

s., second. Improvement of vision in the aged usually due to incipient cataract

sight, words pert. to: achromatopsia, afterimage, alexia, amaurosis, amblyopia, ametropia, aniseikonia, anisocoria, anisocolia, anisometropia, anorthopia, aprosexia, asthenopia, astigmatism, blindness, brachymetropia, Burns' amaurosis, hemeralopia, hypermetropia, hyperopia, myopia, nyctalopia, photophobia, presbyopia, squint.

sigmatism (sig'mā-tizm) [G. *sigma*, letter S, + -ismos, condition]. Excessive or defective use of s sounds in speech.

sigmoid (sig'moyd) [G. *sigma*, letter S, + *eidos*, form]. 1. Shaped like the Greek letter sigma, s. 2. Pert. to the sigmoid flexure of the colon.

s. flexure. The lower part of descending colon bet. iliac crest and the rectum, shaped like the letter S.

RS. *cecostigmoileostomy*, *colon*, "*sigmoido-*" words.

sigmoidectomy (sig-moy-dēk'tō-mī) [" + " + *ektomē*, excision]. Removal of all or part of the sigmoid flexure.

sigmoiditis (sig-moy-d'tīs) [" + " + -itis, inflammation] Inflammation of the sigmoid flexure of the colon.

sigmoidopexy (sig-moyd'ō-pēks'ī) [" + " + *pēxis*, fixation] Fixation of the sigmoid to an abdominal incision for prolapse of the rectum.

sigmoidoproctostomy (sig-moyd'ō-prōk-tōs'tō-mī) [" + " + *prōktos*, rectum, + *stoma*, passage]. Establishment of artificial passage by anastomosis of the sigmoid flexure with the rectum.

sigmoidorectostomy (sig-moyd'ō-rēk-tōs'tō-mī) [" + " + L. *rectus*, straight, + G. *stoma*, passage]. Anastomosis of sigmoid flexure with the rectum to establish an artificial passage. SYN: *sigmoidoproctostomy*.

sigmoidoscope (sig-moyd'ō-skōp) [" + " + *skopein*, to examine]. Tubular speculum for examination of sigmoid flexure.

sigmoidostomy (sĭg-moyd-ŏs'tō-mī) [G. *sigma*, letter S, + *eidos*, form, + *stoma*, passage]. Creation of an artificial anus in the sigmoid flexure.

sign (sĭn) [L. *signum*, mark]. 1. Symbol or abbreviation, esp. one used in pharmacy. 2. Any objective evidence of an abnormal nature in the body or its organs.

They are more or less definitive and obvious, and apart from the patient's impressions. Symptoms* are subjective.

s., objective. One recognized by an observer. SYN: *physical s.*

s., physical. One revealed by auscultation, percussion, inspection, etc.

signa (sĭg'nā) [L. *signa*, mark] A term used in writing prescriptions,* meaning mark. Usually designated S or sig.

signature (sĭg'nā-tūr) [L. *signatura*]. The part of a prescription giving instructions to the patient.

silent. Free from noise, mute, still

s. period. Period in a tendon reflex which immediately follows the contraction of the responding muscles during which the motor neurons do not respond to afferent impulses entering the reflex center.

silica (sĭl'ī-kā) [L. *silex*, flint]. Silicon dioxide, SiO_2 .

silicate (sĭl'ī-kat) [L. *silicus*, flintlike]. A salt of silicic acid

silicic (sĭl'īs'īk) [L. *silex*, flint] Pert. to silica or silicic.

s. acid. One of a number of colloid acids.

silicon (sĭl'ī-kon) [L. *silex*, flint]. SYMS. SI. A nonmetallic element found in the soil. At. wt. 28.09, at. no. 14 Sp. gr. 2.42

Silicon comprises approximately 25% of the earth's crust being exceeded only by oxygen. It occurs in traces in skeletal structures (bones and teeth). Its physiological significance is unknown. Silicon is commonly combined with oxygen to form silicon dioxide, SiO_2 , which occurs in many forms, both crystalline and amorphous. In a pure state it forms *quartz* or *rock crystal*. It is present in many abrasive materials and is the principal constituent of glass.

silicosis (sĭl'ī-kō'sĭs) [L. *silex*, *silic-*, flint, + G. *-ōsis*, condition] A form of pneumoconiosis resulting from inhalation of silica (quartz) dust, characterized by formation of small discrete nodules. In advanced cases, a dense fibrosis and emphysema with impairment of respiratory function may develop.

silicotic (sĭl'ī-kōt'īk) [L. *silex*, *silic-*, flint]. 1. Relating to silicosis. 2. One affected with silicosis.

silicotuberculosis (sĭl'ī-kō-tū-bēr-kū-lō'sĭs) [L. + *tuberculus*, a tubercle, + G. *-ōsis*, condition] Silicosis associated with pulmonary tuberculosis.

silique (sĭl'ī-kwōs) [L. *siliqua*, pod]. Resembling a 2-valve capsule.

s. cataract. Cataract with a dry, wrinkled capsule.

s. desquamation. Shedding of dried vesicles from the skin.

silver (sĭl'vēr) [A.S. *siolfor*]. SYMS. Ag. At. wt. 107.880, at. no. 47. A white soft ductile malleable metal, its salts being widely used in medicine for their caustic, astringent, and antiseptic effects.

s. arspenamine. A brownish black arspenamine derivative, containing 19% arsenic and 14% silver.

Uses: Same as those of arspenamine.

DOSAGE (adult): From 0.1 Gm. to 0 Gm. given with caution.

s. nitrate. USP. A toxic preparation made from silver. Most of its former uses have passed out of vogue, but remains important as a germicide and local astringent.

DOSAGE: As an antiseptic in the eye of newly born, 1/6 m (0.01 cc.); topically as an astringent to the mucous membrane of the throat, from 5 to 10%.

INCOMPATIBILITIES. Aspirin, sodium chloride.

POISONING: When taken by mouth causes a grayish discoloration of mucous membranes.

SYM. Burning in throat and stomach rather prompt vomiting. When small amounts of silver are taken over a long period, as in nose or eye drops, patient develops argyria, a peculiar bluish discoloration of all the exposed tissues of body.

F. A TREATMENT Large volumes of ordinary table salt in water precipitate the silver as a slightly soluble chloride; follow with egg whites, oils, and other demulcents.

s. picrate. A compound of silver and picric acid, containing 30% silver. Useful as an antiseptic, similar to other preparations of silver.

DOSAGE Dilutions from 1 to 2%.

s. protein. USP. A combination of silver and protein, containing from 1 to 19% silver. Two strengths are official, the strong and mild.

silver-fork deformity or fracture. Deformity in Colles' fracture of wrist a hand resembling curve on back of a fork.

Silvester's method. A method of artificial respiration in which patient lie on back, and arms are raised to side of head, held there temporarily, then brought down and pressed against chest. Movement repeated 16 times per minute.

RS artificial respiration.

simesthesia (sĭm-ēs-thē'zī-ā) [G. *αἰσθησις*, sensation]. Sensibility felt in a bone.

similia similibus curantur (sĭm-īl'ī-ā sĭm-īl'ī-būs ku-rah'n'tūr) [L. likes are cured by likes]. The homeopathic doctrine that a drug producing pathological symptom in those who are well will cure such symptoms in disease states.

Simmonds' disease or syndrome (sĭm'mond) Condition in which complete atrophy of the pituitary body causes premature senility and psychic symptoms. SYN *cachexia, pituitary, q.v.*

Simon's position (zē'mōn). An exaggerated lithotomy position in which the hip are somewhat elevated with thigh strongly abducted. Employed in operations on the vagina.

simple (sĭm'pl) [L. *simplex*, simple]. 1. Not complex; not compound. 2. Deficient in intellect. 3. A medicinal plant.

s. fracture. Fracture without rupture of ligaments and skin.

s. inflammation. Inflammation without pus or other inflammatory exudates.

s. mixed enema. A soapuds enema to which is added 1 dram of salt and ½ oz. of molasses.

s. reflex. A reflex in which only two or possibly three neurons are interposed between receptor and effector organ.

Sims' position (sĭmz). A semiprone position. For detailed description see: *position, Sims'.*

SIMS' POSITION.

simul. (sî'mûl) [L.]. At once or at the same time.

simulation (sîm-û-lă'shûn) [L. *simulatio*, imitation]. Pretense of having a disease; feigning of illness. Imitation of symptoms of 1 disease by another. **See:** *malingerer*

Simuliidae. A family of insects of the order *Diptera* which includes the black flies (buffalo gnats) which are important annoyers of domestic animals and man. The females are vicious blood suckers

S. damnosum. Species which serves as intermediate host of a filarial worm *Onchocerca volvulus*.

S. venustum. A very annoying species common in eastern portions of the U S

Sinapis (sîn-ă'pls) [G *sinapi*, mustard] A genus of plants, the mustard plant.

sinapiscopy (sîn-ăp-is'kô-pl) ["" + *skopein*, to examine] Use of mustard in testing for sensory disturbance

sinapism (sîn-ăp-izm) ["" + *-ismos*, process] A mustard plaster

Used to relieve congestion or pain, headache, neuralgia, flatulence, nausea, etc

PROPORTIONS: *Adult* 3-4 parts wheat flour to 1 of mustard flour *Child* 8-10 parts wheat flour to 1 of mustard flour *Infant:* 10-12 parts wheat flour to 1 of mustard flour

sinapized (sîn-ăp-izd) [G *sinapi*, mustard]. Containing mustard

sinicipital (sîn-sîp'î-tăl) [L *siniciput*, half a head] Concerning the siniciput.

siniciput (sîn-sîp-ût) [L *siniciput*, half a head]. 1. Fore and upper part of the cranium. 2. Upper half of the skull. **SYN** *calvaria*.

sinew (sîn'û) [AS *sinu*] A tendon.

sing. [L.]. Abbr. of *singulorum*, meaning of each.

singer's node or **nodule** (sîn'gerz nôd, nôd'-ûl). A swelling bet the arytenoid cartilages of singers **SYN** *chorditis nodosa*. **singultus** (sîng-gûl'tûs) [L *singultus*, hiccup]. Hiccups, q v.

sinistrad (sîn'is-trăd) [L. *sinister*, *sinistr-*, left, + *ad*, toward]. Toward the left.

sinistral (sîn'is-trăl) [L. *sinister*, *sinistr-*, left] 1 Pert to or showing preference for the left hand, eye, or foot in certain actions. 2. On the left side.

sinistrality (sîn'is-trăl'tî-tî) [L. *sinister*, *sinistr-*, left]. Left-handedness.

sinistralural (sîn'is-traw'răl) ["" + *auris*, ear]. Having better hearing with the left ear.

sinistro- (sîn'is-trô) [L.]. Prefix meaning left.

sinistrocardia (sîn'is-trô-kar'dî-ă) [L. *sinister*, *sinistr-*, left, + G. *kardia*, heart]. Displacement of the heart to left of the medial line, opp of *dextrocardia*.

sinistrocerebral (sîn'is-trô-sēr'ô-brăl) ["" + *cerebrum*, brain] Located in the left cerebral hemisphere

sinistrotocular (sîn'is-trok'û-lar) ["" + *oculus*, eye]. Having stronger vision in the left eye.

sinistrotocularity (sîn'is-trok'û-lăr'tî-tî) ["" + *oculus*, eye]. Condition of having better vision in the left eye.

sinistroygyration (sîn'is-trô-jî-ră'shûn) ["" + G *gyros*, a circle] Inclination to the left.

sinistromanual (sîn'is-trô-măn'û-ăl) ["" + *manus*, hand] Left-handed.

sinistropedal (sîn'is-trôp'êd-ăl) ["" + *pes*, *ped-*, foot] Left-footed.

sinistrosis (sîn'is-trô'sis) [L. *sinister*, *sinistr-*, left, unlucky, + G. *-osis*, condition]. Shell shock.

sinistrotorsion (sîn'is-trô-tor'shûn) ["" + *torsio*, a turning]. A twisting or turning toward the left.

sin'istrous. Awkward, clumsy, unskilled, the opposite of dextrous

sinoatrial (sîn'ô-ă'tri-ăl). **SYN:** *sinoauricular*. Pertaining to the sinus venosus and the atrium

s. node. **SYN:** *S-A node*, *sinoauricular node*, q v

sinoauricular (sî'nô-aw-rik'û-lar) [L. *sinus*, a curve, + *auricula*, a little chamber]. Pert. to the right cardiac auricle and the sinus venosus

s. node. One at entrance of the sup vena cava into right auricle, regarded as starting point of the heartbeat. **SYN** *sinuauricular node*.

sinuauricular (sî'nû-aw-rik'û-lar) ["" + *auricula*, a little chamber]. Concerning the sinus venosus and the right cardiac auricle.

s. node. Node at junction of sup vena cava with right cardiac auricle, regarded as starting point of the heartbeat.

sinuitis (sî-nû-î'tîs) [L. *sinus*, a curve, + G. *-itis*, inflammation]. Inflammation of a sinus **SYN** *sinusitis*.

sinuotomy (sîn-û-ôt'ô-mî) ["" + G. *tomê*, a cutting]. Surgical incision into a sinus

sinuous (sîn'û-ûs) [L. *sinôsus*, winding]. Winding; wavy; tortuous.

sinus (sî'nûs) (pl *sinuses*, *sinûs*) [L. *sinus*, a curve]. 1. A canal or passage leading to an abscess. 2. A cavity within a bone 3. Dilated channel for venous blood. 4. Any cavity having a relatively narrow opening.

RS: *antritis*, *antranasal*, *antrotympanic*, *antrum*, *cephalhematocele*, *lateral sinus*, *sinusitis*, *transillumination*.

s's., accessory nasal. The paranasal sinuses; frontal, maxillary, ethmoidal, and sphenoidal. *Anterior group* Frontal, maxillary and anterior ethmoids. *Posterior group*: Posterior ethmoids and sphenoid

Sinuses develop embryologically from nasal cavities, are lined with same type of epithelium, are filled with air, and communicate with nasal cavities through their various ostia.

Function of sinuses not definitely known. Various theories give them the same function as nasal cavities, viz. (warming, moistening and filtering the air); aid in resonance and make the skull lighter.

s., aortic. Saclike dilatation of the aorta.

s., arrhythmia. Irregularity of heart-beat due to interference with impulses from the sinoatrial node

s., basilar. See *transverse s.*

s., cavernous. A large s. from sphenoidal fissure to apex of petrous portion of temporal bone.

s., circular. A venous s. around the pituitary body, communicating on each side with the cavernous s.

s., coronary, of the heart. A vein in transverse groove bet left cardiac auricle and ventricle.

s's., cranial. Venous canals bet. folds of the dura.

s's., ethmoidal. Air cavities in the ethmoid bone.

s., frontal. An irregular cavity in frontal bone on each side of midline above the nasal bridge. One may be larger than the other. A duct carries secretions to upper part of nostrils.

s., genitourinary. See *s., urogenital*

s., inferior longitudinal. A venous s. along post. half of lower border of the falx cerebri.

s., inferior petrosal. A large venous s. from cavernous s., running along lower margin of the petrous portion of the temporal bone.

s's., intercavernous. The ant. and post. halves of the circular s.

s., lateral. One of 2 large venous s's. in inner side of skull passing near the mastoid antrum, emptying into the jugular vein

s's., lymph. Small spaces throughout the parenchyma of a lymphatic gland.

s., maxillary. A cavity in the maxillary bone opening at upper part of antrum into the nose. Syn *antrum* or *antrum of Highmore*.

s., occipital. A small venous s. in attached margin of the falx cerebelli extending to margin of the foramen magnum.

s's., paranasal. Accessory nasal sinuses

s's., pleural. Spaces in pleural sac along the lower and inf. portions of lung which the lung does not occupy.

s. pocularis. Lacuna in prostatic part of the urethra.

s. prostaticus. See: *s. pocularis*.

s., rhomboid. The 4th cranial ventricle.

s. rhythm. Normal cardiac rhythm commencing at the sinoatrial node.

s's., sphenoidal. Air s's which occupy the body of sphenoid bone and connect with nasal cavity.

s., sphenoparietal. 1. A vein uniting the cavernous s. and a meningeal vein. 2 The portion of the cavernous s. below the ensiform process.

s., straight. One which is continuous with the inf longitudinal s. and running along junction of the falx cerebri and tentorium

s., superior longitudinal. A triangular one along upper edge of the falx cerebri.

s., superior petrosal. A venous canal running in a groove in the petrous portion of the temporal bone

s., terminal. A vein encircling the vascular area of the blastoderm.

s., transverse. 1. S that unites the 2 inf. petrosal sinuses 2 Venous network in the dura over basilar process of occipital bone

s., urogenital or urogenital. 1. Duct into which, in the embryo, the wolffian ducts and bladder empty and which opens into the cloaca 2 The common receptacle of genital and urinary ducts.

s's., uteroplacental. Slanting venous channels from the placenta serving to convey the maternal blood from the intervillous lacunae back into the uterine veins.

s. of Valsalva. A dilatation of the aorta or pulmonary artery opp. segment of the semilunar valve Syn *aortic s.*

s., venous. One conveying venous blood.

s's., vertebral. Veins within the vertebrae.

sinusitis (sī-nū-sī'tis) [L *sinus*, a curve, a hollow, + G *-itis*, inflammation]. Inflammation of a sinus, esp. a paranasal sinus

Etiol. A number of causative agents including viruses, streptococci, staphylococci, and pneumococci. May be manifestation of an allergic reaction.

PREDISPOSING FACTORS Inadequate drainage which may result from presence of polyps, enlarged turbinates, deviated septum, etc.; chronic rhinitis, general debility, or dental abscess in maxillary bone.

s., acute catarrhal. Inflammation accompanying a similar process in the nose.

s., acute suppurative. Purulent inflammation with symptoms of pain over the sinus, fever, chills, headache, etc.

TREATMENT: Conservative, shrinkage in the nose for ventilation, and drainage of the sinus, aeration, constitutional treatment, capillary suction. Rest in bed, catharsis, force fluids, anodynes for pain.

s., chronic hyperplastic. Polyp present in sinuses and nose and underlying osteitis of sinus walls.

TREATMENT: *Surgical:* Conservative; removal of polyp and intranasal opening into sinuses for adequate ventilation and drainage. *Radical:* Complete removal of sinus mucosa either through external or intranasal route.

s., chronic hypertrophic. Inflammation found in conjunction with chronic hypertrophic rhinitis

Ideal treatment in these cases is change of climate where the temperature fluctuations are not extreme.

sinusoid (sī'nūs-oyd) [L. *sinus*, a hollow, a curve, + G. *eidōs*, like]. 1. Resembling a sinus 2. A minute blood vessel found in such organs as the liver, spleen, adrenal glands, and bone marrow. They are slightly larger than capillaries and they lack a continuous lining endothelium.

sinusoidal (sī'nūs-oyd'āl) [' + G. *eidōs*, like]. Pert. to a sinusoid.

s. current. Alternating induced electric current, the 2 strokes of which are equal

sinusoidalization (sī'nūs-oyd-al-i-zā'shūn) [' + G. *eidōs*, like]. Use of a sinusoidal current.

sinusotomy (sī-nū-sōt'ō-mī) [' + G. *tomē*, a cutting]. The operation of incising a sinus

SiO₂. Silicon dioxide

siphon (sī'fōn) [G. *siphōn*, tube]. A tube bent at an angle to form 2 unequal lengths for removing liquids by atmospheric pressure

Siphonaptera (sī'fō-nāp'ter-ā). An order of insects which includes the fleas. They are wingless, undergo complete metamorphosis, and have piercing and sucking mouth parts, their food being the blood of birds and mammals. The body is compressed laterally and their legs are adapted for leaping. In addition to being annoying pests, they transmit the causative organisms of several diseases (bubonic plague, endemic or murine typhus, and among rodents, tularemia). They also serve as intermediate hosts of certain tapeworms. **SEE: flea**

siphonoma (sī-fon-ō'mā) [' + -ōma, tumor]. A tumor made up of fine tubes.

Sippy diet (sīp'ē). Treatment of gastric ulcer by diet checking acidity of gastric juice.

Small amounts of milk and cream every hour and alkaline powders every ½ hr.

Average mixture 1½ oz each of cream and milk given from 7 A. M. to 7 P. M., 13 feedings, for 3 to 4 days when an egg is given for breakfast. Next day, 3 oz. soft cereal added to afternoon feeding; another egg the next day, and finally 3 servings of cereal and 3 eggs per day added to the milk and cream. Purée, custards, toast added the next week. Decreased feedings as amt. of each feeding is increased until 6 feedings are given per day.

sirlasis (sī-rī'ā-sīs) [G. *seirian*, to be hot]. Sunstroke, q.v.

sismothrapy (sīs-mō-ther'ā-pī) [G. *seismos*, a shake, + *therapeia*, treatment]. Therapeutic employment of vibration. **SYN: seismotherapy, vibrotherapeutics.**

siteligia (sīt-i-lī'jī-ā) [G. *sition*, food, + *eirgein*, to bar out]. Hysterical refusal to take food.

sitio-, sito- [G.]. Combining forms meaning *bread, or made from grain; food, as sitomania.*

sitology (sīt-i-ōl'ō-jī) [G. *sition*, food, + *logos*, a study]. Science of nutrition. **SYN: sitology.**

sitomania (sīt-i-ō-mā'nī-ā) [' + *mania*, madness]. Periodic abnormal appetite or craving for food. **SYN: sitomania.**

sitology (sīt-ōl'ō-jī) [G. *sitos*, food, + *logos*, a study]. Science of nutrition and food. **SYN: sitology.**

sitomania (sīt'ō-mā'nī-ā) [' + *mania*, madness]. 1. Periodic abnormal craving for food. **SYN sitomania.** 2. Periodic abnormality of appetite.

sitophobia (sīt'ō-fō'bī-ā) [' + *phobos*, fear]. Psychoneurotic abhorrence of food, or morbid dread of, or repugnance to food, whether generally or only to specific dishes.

sitotherapy (sīt'ō-ther'ā-pī) [' + *therapeia*, treatment]. The therapeutic use of food

sitotoxism (sīt'ō-tōks'īzm) [' + *toxikon*, poison, + *ismos*, condition]. Poisoning by vegetable foods infested with molds or bacteria.

sitotropism (sīt-tōt'rō-pīzm) [' + *tropos*, a turning, + *-ismos*, condition]. Response of cells to the attraction or repulsion of food elements.

situs (sīt'ūs) [L. position]. A position.

s. inversus viscerum. Displacement of viscera abnormally to opposite side of the body.

s. perversus. Malposition of any visceral structure

sitz bath (sītz bath). Bath to sit in with water above and covering the hips. **SYN: hip bath. SEE bath**

sixth cranial nerve. Abducens nerve which supplies the external rectus of the eye. **SEE cranial nerves**

skatole (skāt'ōl) [G. *skōr*, skat-, dung]. Beta-methyl indole. C₈H₇N, a malodorous, solid, heterocyclic nitrogen compound found in feces, formed by protein decomposition in the intestines and giving them their odor

skelalgia (skē-lā'ljī-ā) [G. *skelis*, leg, + *algos*, pain]. Pain in the leg

skeletal (skēl'ē-tāl) [G. *skeleton*, skeleton]. Pert. to the skeleton.

s. muscle. **SYN: striated muscle, voluntary muscle.** Muscle fibers which with few exceptions are attached to parts of the skeleton, and involved primarily in movements of the parts of body.

s. traction. Traction exerted directly on long bones

skeletalization (skēl-ēt-i-zā'shūn) [G. *skeleton*, skeleton]. 1. Excessive emaciation. 2. Removal of soft parts of the body leaving only the skeleton

skeleto- [G.]. Prefix meaning *skeleton.*

skeletogenous (skēl-ēt-ōj'ēn-ūs) [G. *skeleton*, skeleton, + *gennan*, to produce]. Forming skeletal structures or tissues.

skeleton (skēl'ēt-ōn) [G. *skeleton*]. The bony framework of the body, consisting of 206 bones, as follows:

AXIAL GROUP (80 Bones)

- 8 cerebral cranials.
- 14 visceral cranials.
- 1 os hyoideum (hyoid).
- 6 ossicula auditus (ossicles, ear bones).
- 26 columna vertebralis (vertebrae).
- 24 costae (ribs).
- 1 sternum (chest).
- 80 Total

APPENDICULAR GROUP (126 Bones)

64 extremitas sup. (32 in each upper extremity).

62 extremitas inf. (31 in each lower extremity).

126 Total**TRUNK (51 Bones)***Columna vertebralis* (vertebrae), 26 Bones

7 cervicales (cervicals).

12 thoraces (dorsals).

5 lumbales (lumbar).

1 os sacrum

1 os coccygis.

26 Total*Ribs* (24 Bones)

14 costae verae (true ribs).

6 costae spuriae (false ribs).

4 costae vertebrales (floating ribs).

24 Total

1 sternum (chest bone).

HEAD (29 Bones)*Cerebral cranials* (8 Bones)

1 os frontale (frontal).

2 ossa parietalia (parietals).

1 ossa occipitale (occipital).

2 ossa temporales (temporal).

1 os sphenoidale (sphenoid).

1 os ethmoidale (ethmoid).

8 Total*Visceral cranials* (facial) (14 Bones)

2 ossa maxillae (sup. maxillary).

1 os mandibula (inf. maxillary).

2 ossa zygomatica (malar).

2 ossa lacrimales (lacrimal).

2 ossa nasalia (nasal).

2 conchae nasales inferiores (turbinates).

1 os vomer.

2 ossa palatina (palate).

14 Total

1 os hyoideum (hyoid).

**THE SKELETON.**

1. Tibia. 2. Fibula. 3. Patella. 4. Femur. 5. Innominate. 6. Ulna. 7. Radius. 8. Humerus. 9. Clavicle. 10. Maxilla. 11. Frontal. 12. Parietal bone. 13. Great wing of sphenoid. 14. Temporal. 15. Mandible. 16. Sternum. 17. Rib. 18. Sacrum. 19. Coccyx. 20. Scapula.

Ear: *Ossicula auditus* (ossicles of the tympanum).

- 2 malleus.
- 2 incus.
- 2 stapes.

6 Total

EXTREMITAS SUPERIOR (upper extremities)
(64 Bones)

- (Arm, 5 bones, 10 in both arms)
- 2 clavicularae (clavicle).
- 2 scapulae (shoulder blade).
- 2 humeri (arm bone).
- 2 radii (forearm).
- 2 ulnae (elbow bone).

10 Total

- Ossa carpi* (wrist bones, 16)
- 2 ossa naviculare manus (scaphoid).
- 2 ossa lunatum (semilunar).
- 2 ossa triquetrum (cuneiform).
- 2 ossa pisiforme (pisiform).
- 2 ossa multangulum majus (trapezium).
- 2 ossa multangulum minus (trapezoid—like a trapezium).
- 2 ossa capitatum (os magnum).
- 2 os hamatum (unciform).

16 Total

- Hands* (38 Bones)
- 10 metacarpalia (metacarpus).
- 28 phalanges digitorum manus.

38 Total

- 10 both arms.
- 16 ossi carpi.

64 Total

EXTREMITAS INFERIOR (lower extremities)
(62 Bones)

- (Leg, 5 bones each, or total of 10)
- 2 os coxae (hipbone).
- 2 femur.
- 2 tibia.
- 2 fibula.
- 2 patella (knee cap).

10 Total

- Ossa tarsi* (ankle, 7 bones each, total 14)
- 2 talus (astragalus).
- 2 calcaneus (os calcis, heel bone).
- 2 os naviculare pedis (scaphoid).
- 2 os cuboideum (cuboid).
- 2 os cuneiforme primus (int. cuneiform).
- 2 os cuneiforme secundum (middle cuneiform).
- 2 os cuneiforme tertium (ext. cuneiform).

14 Total

- 14 ossa tarsi (as above).
- 10 ossa metatarsalia (metatarsal).
- 28 phalanges digitorum pedis.
- 10 leg and hip.

62 Total

SUMMARY

28 Head.

- 1 Hyoid.
- 51 Trunk.

64 Extremitas superior.

62 Extremitas inferior.

206 Total bones in skeleton.

s., *axial*. Bones of the head and trunk.

s., *cartilaginous*. Structure from which the bones have been formed through ossification.

Skene's glands (skēn). SYN. *paraurethral glands*. Glands lying just inside of and on the post. floor of the urethra, in the female.

If the margins of the urethra are drawn apart and the mucous membrane gently averted, the 2 small openings of Skene's tubules or glands, 1 on each side of the floor of the urethra, become visible. Trauma frequently causes a gaping of the urethra and ectropion of the mucous membrane. In acute gonorrhea these glands are almost always infected.

skenitis (skē-nī'tis) [G. -itis, inflammation]. Inflamed condition of Skene's glands.

skeocytosis (skē-ō-sī-tō'sis) [G. *skaios*, left, + *kytos*, cell, + -osis, condition]. Immature white corpuscles in the peripheral blood. SYN. *neocytosis*.

skew. Turned to one side; asymmetrical. s. *deviation*. Condition in which one eyeball is directed upward and outward, the other inward and downward.

skigram (skī'ā-grām) [G. *skia*, shadow, + *gramma*, a mark]. An x-ray picture. SEE. *roentgenogram*.

skiagraph (skī'ā-grāf) [+ *graphein*, to write]. An x-ray picture. SYN. *roentgenograph*.

skiagraphy (skī-āg'rā-fī) [+ *graphein*, to write]. Process of taking pictures with roentgen rays. SYN. *radiography*, *roentgenography*.

skiameter (skī-ām'ēt-ēr) [+ *metron*, a measure]. Device for determining differences in density and penetration of x-rays.

skiascope (skī'ā-skōp) [+ *skopein*, to examine]. 1. Device for examination by the fluoroscope. 2. Examination of the eye employing movement of shadow and light.

skiascopy (skī-ās'kō-pī) [+ *skopein*, to examine]. 1. Retinoscopy or shadow test used in determining the refractive error of an eye. 2. Fluoroscopic inspection of the body.

skin (skīn) [Old Norse *skinn*]. The integument or external covering of the body.

The skin consists essentially of 2 layers, the *epidermis* and the *corium*. The epidermis (cuticle, scarf skin) is composed of 4 main layers of stratified epithelium. The outermost, the *stratum corneum*, is formed of several layers of flattened cells which have become horny and lost their nuclei and which contains keratin.* They form a protective covering for the body surfaces. Underneath this layer is the *stratum lucidum*, which is formed of translucent flattened cells. The 3rd layer, the *stratum granulosum*, consists of two or three layers of flattened cells containing granules of *eleidin*, the precursor of *keratin*. The 4th and last layer is the *stratum germinativum* (*stratum mucosum*, *stratum Malpighi*). The cells in upper portion of this layer are cuboidal, those nearest the corium are columnar. Cells of this layer possess well-defined intercellular bridges which appear as "spines" projecting from the surface hence these cells are often called *prickle cells* and the entire layer, *stratum spinosum*. These cells contain peculiar fibrils, *tonofibrils*, which pass through the intercellular bridges. The color of the skin is due principally to the presence of a pigment, *melanin*, present as granules in *stratum germinativum*.

The corium (cutis, dermis, derma, true skin) is formed of connective tissue containing lymphatics, nerves and nerve endings, blood vessels, sebaceous and sweat glands, and elastic fibers. It is divided into 2 layers, a *superficial papil-*

LAYERS OF SKIN.

1. Dermis and subcutaneous layer.
2. Epidermis 3 Subcutaneous layer or superficial fascia 4 Sweat gland.
5. Hair follicle 6 Sebaceous gland.
7. Corium. 8. Duct of sweat gland

lary layer and a *deep reticular layer*. The papillary layer contains conical protuberances, the papillae, which fit into corresponding depressions in the epidermis. Within each papilla is a capillary loop which furnishes the epidermis with a blood supply. The reticular layer is made up in the main of white fibrous tissue supporting the blood vessels and other structures in it. It rests on the subcutaneous connective tissue.

Appendages of the skin are the hair* and nails*.

FUNCTION: 1. Protection against injuries and parasitic invasion. 2 Regulation of body temperature. 3 Aids in elimination. 4. Prevention of dehydration 5. Reservoir for food and water. 6 Sense organ for the cutaneous senses. 7. Source of antirachitic vitamin (vitamin D)

DIAGNOSIS: *Ashy:* Malignant diseases, cancer, scrofula, chronic interstitial nephritis.

Bronzing: Addison's disease, dyes or metals, early stages of pellagra

Brownish-yellow Spots (liver spots): Noted in pregnancy (chloasma uterinum), in exophthalmic goiter, and uterine and liver malignancies; also freckles, sunburn, cosmetics, mustard, turpentine, and other irritants.

Cold Sweats: Indicate great prostration, fear or depression of spirits.

Cyanosis: May be congenital, if acquired may be due to asthma, pulmonary tuberculosis, whooping cough, advanced emphysema, croup, tracheal obstruction, aneurysm, foreign body, tumor, dilated heart, goiter, flushing (hyperemia), emotion, febrile disorders, pulmonary tuberculosis, during convulsions, large ovarian tumor, plethora.

Cyanosis Alternating with Pallor: Cerebrospinal diseases, typhoid, vasomotor disturbances, menopause, Gray's argyria, silver salts. May be noted in lips, mucous membranes, fingertips and external ear. If extreme, entire body shows dusky, leaden tint. Indicates lack of oxygen and excess of carbon dioxide

in blood. May be due to inflammation of pharynx and larynx, abscess of same, angina Ludovici, croup and disorders affecting respiration. Also to overdose of drugs and asphyxiation by gas.

Discolorations: Seen in icterus, chlorosis, leprosy, resulting from administration of silver nitrate, malignant diseases, and asphyxia from gas.

Edema: Due to imbalance of fluids from capillaries and absorption by lymphatics. Seen in anemia, hydremia, obstruction, inflammation, cardiac, circulatory and renal decompensation. If local, may be due to obstruction of return circulation, heart failure, in which case it will be evident in ankles and often legs, esp. at night. May also be due to renal diseases.

Emphysema. Due to air or gas in cellular tissue.

Hot and Dry. Indicates fever, mental excitement, or excessive use of salted provisions.

Moisture. Lack of noted in ichthyosis. Increased perspiration (hyperhidrosis) may be due to malarial fever, rheumatic, relapsing and septic fever, pneumonic crisis, pulmonary tuberculosis, Graves' disease, neuralgia, migraine, drugs, hot drinks.

Paleness: Nervous prostration, dropsy, paralysis, malnutrition.

Pallor Obtains in those living an indoor life, esp. in prisoners and night workers. May be due to lowered circulation. decrease of red blood corpuscles, nonfilling capillaries. Obtains in all anemias. Temporary pallor occurs in syncope, heart weakness, chills, shock, rigors and some vasomotor spasms. If

VERTICAL SECTION OF SKIN OF THE SOLE OF FOOT (Diagrammatic)

1. Duct of sweat gland. 2. A groove. 3. Stratum corneum. 4 Stratum lucidum. 5. Granular layer. 6. Dermal papilla. 7. Basal layer of stratum germinativum.

sudden and persistent may be sign of int. hemorrhage. Also seen in lead poisoning, toxic febrile affections. If it gradually becomes permanent may indicate chronic febrile disease, chronic gastrointestinal disease, cancer, arsenical poisoning, chronic suppuration, chronic mercurial poisoning, hemorrhages, leukemia, cachexia, nephrosis, nephritis, syphilis, parasitic diseases, tuberculosis, malaria

Purplish: Interference of circulation common in asthma and typhus

Rashes. SEE: rash.

Temperature: Usually corresponds with internal temperature, unless raised by local applications of heat. If generally cold may be due to poor circulation or obstruction of same, vasomotor spasms, venous or arterial thrombosis, exposure to cold. General abnormal heat seen in febrile disorders, although some of them present a cold and clammy skin.

Redness. Red spots upon pale cheeks, tubercular involvement, worms. Local redness seen in inflammation, skin diseases, chronic alcoholism, vasomotor disturbances, pyrexia and chlorosis. One side of face, lobar pneumonia. Local redness with pain indicates inflammation

Sallowness: Cachexia, syphilis, chronic gallbladder disease, arthritis deformans, constipation, some anemias, gastric, pancreatic, enteric, or hepatic disorders.

Yellow: Absorption of bile, jaundice, liver derangements. If jaundiced, plethoric, hyperemic, or pigmented, it should be noted in any examination. Rashes, scars, and their cause are also diagnostic. Texture and temperature of skin are important signs. Undue moisture, cold or hot spots on body, dryness of skin are other points to look for in diagnosis. SEE: face.

..alligator. Severe scaling of the skin with formation of thick plates resembling hide of an alligator.

..deciduous. Shedding of the epidermis. SYN: *keratolysis*

..elastic. Skin which has property of great elasticity

..fish. SEE: *ichthyosis*.

..glossy. Shining atrophy of the skin.

..grafting. Grafting of skin from another part of body to repair a defect or trauma. SEE: *Thiersch's graft*.

ONP: Position of patient indicated by location of graft. The area to receive graft requires little or no preparation, the area from which graft is to be taken is washed thoroughly with alcohol (70%). Patient is draped with sterile sheets and towels so that both areas are exposed. A continual saline drip is used while skin is being removed. A wet dressing is applied to area from which the skin is removed and is covered with rubber dam. The area receiving skin is covered with a paraffin-coated mesh

..hidebound. Scleroderma, *q v*

..loose. Hypertrophy of the skin.

..parchment. Atrophy of the skin with stretching

..plebald. SEE: *vitiligo*.

..scarf. **..scurf.** Cuticle, epidermis, the outer layer of the skin.

..true. Corium or inner layer of the skin, *q v.*, p. S-41

skleriasis (sklĕ-rĭ'ās-ĭs) [G. *sklēros*, hard, + *-iasis*, condition]. Progressive hardening of the skin in patches. SYN: *scleroderma*.

sklero- [G.]. See words beginning with *sklero-*.

Skoda's râles (skô'dă). Bronchial ones heard through consolidated tissue of the lungs in pneumonia.

S's. resonance. S's. **tympany.** Tympanic resonance above the line of fluid in pleuritic effusion, or above consolidation in pneumonia.

S's. sign. Same as *Skoda's resonance*. **skull** (skül) [M.E. *skulle*, bowl]. The bony framework of the head, composed of 8 cranial bones and the 14 bones of the face. SYN: *calvaria*, *cranium*. SEE: *skeleton*.

..cap. Upper round portion of skull covering the brain.

..fractured. Fractures of the skull can be classified according to whether the fracture is in the vault or the base, but from the point of view of treatment a more useful classification is as follows:

(1) *Simple Uncomplicated Fractures* Not common.

(2) *Compound Fractures.* If in vault of skull, the bone is depressed and driven inwards with possible damage to brain. Treatment is operative.

sleep (slĕp) [A. S. *slāep*, sleep]. A condition characterized by more or less periodic loss of consciousness accompanied by reduced cortical and physical activities.

It is easily differentiated from the lessened consciousness of stupor, in that normal awareness can completely reassert itself when danger threatens and ordinarily continue until sleep can again safely reassert itself.

Emotionalism (e. g., fear) is the great enemy of sleep, and the most common cause of insomnia. Hypersomnia may be a symptom of hypopituitarism.

..crescendo. Normal sleep with increased movement during the night.

..drunkenness. The stupor of sleep in drunkenness. SYN: *somnolentia*.

..epilepsy. Uncontrollable desire to sleep at periodic intervals. SYN: *narcolepsy*.

..hypnotic. S. induced by hypnotic suggestion.

..paralysis. Temporary p. of a part due to pressure during sleep.

..paroxysmal. SEE: *sleep epilepsy*.

..pathologic. A term used in encephalitis lethargica (sleeping sickness); here sleep reasserts itself excessively and under conditions not to the best interests of the patient.

..physiologic standards. Metabolic rate reduced 10-15% below basal level. Systolic pressure falls 10 to 30 mm of mercury. Pulse rate slows from 10 to 30 beats. Respiration slowed and typically irregular. Temperature drops sharply, lowest about the middle hours of sleep. Muscles relax. Pupils constricted, eyeballs turned upward and outward. Increased sweating. Lacrimal, salivary secretions and volume of urine reduced. Spec. gr. raised. Newborn sleeps 18-20 hrs. a day; growing child 12-14 hrs., adult 7-9 hrs. Older persons 5-7 hrs. Women require more sleep than men. Depth of sleep varies from hour to hour. Lessens from the second hour.

..twilight. A procedure of spinal injection of scopolamine and morphine to abolish the subsequent memory of pain felt during childbirth, but it does not abolish pain at the time. The patient is delivered in deliriumlike state.

..walking. Walking in one's sleep. SYN: *somnambulism*.

sleep, words pert. to: *agrypnia*, *ahypnia*, *antilethargic*, *anypnia*, *carotic*, *carus*,

SKULL, FRONT VIEW.

1, Mental tubercle; 2, body of mandible; 3, ramus of mandible; 4, anterior nasal spine; 5, canine fossa; 6, infraorbital foramen; 7, zygomaticofacial foramen; 8, orbital surface of maxilla; 9, squamous temporal; 10, lateral surface of ethmoid; 11, superior orbital fissure; 12, lacrimal bone and groove; 13, optic foramen; 14, ethmoidal foramina; 15, temporal line; 16, supraorbital notch; 17, glabella; 18, frontal eminence; 19, superciliary arch; 20, parietal bone; 21, nasofrontal suture; 22, pterion; 23, great wing of sphenoid; 24, orbital surface of great wing; 25, squamous part of temporal; 26, left nasal bone; 27, zygomatic bone; 28, inferior orbital fissure; 29, zygomatic arch; 30, apertura piriformis; 31, mastoid process; 32, incisive fossa; 33, angle of mandible; 34, mental foramen; 35, symphysis menti (Robinson, Editor: *Cunningham's Textbook of Anatomy*, 6th Ed., Oxford University Press, New York City, 1931)

hallucination, hypnagogic, hypnogenic, hypnoidal, hypnosis, hypnotic, hypnotism, incubus, insomnia, narcohypnia, narcolepsy, noctambulism, oneirodynia, somnambulism, somnifacient, somniloquy, somnolence, somnolent, sopor, soporific, twilight sleep.

sleeping pills. Most are derivatives of barbituric acid and may be habit forming or may be taken in excess resulting in acute poisoning. Habitual use may result in psychiatric disorders, esp

psychoneuroses, liver and kidney disorders. The drugs most commonly involved are Nembutal, Seconal, Amytal, phenobarbital, and barbitol. The action of *seconal* is quick but brief. *Nembutal* has a slower but longer action. The effect is cumulative, lasting as long as nine days, so repeated doses may become fatal. In nonfatal cases, respiratory disorders (atelectasis and bronchopneumonia) are common. Alcohol should not be taken with them. Sudden

withdrawal of drug from a person taking 0.8 gm. or more daily may result in marked withdrawal symptoms (abstinence syndrome).

sleeping sickness. 1. Acute, infectious disease marked by increasing lethargy, drowsiness, muscular weakness and cerebral symptoms. **SYN:** *encephalitis lethargica*, *q.v.* 2. African trypanosomiasis caused by a protozoan introduced into the blood and cerebrospinal fluid by the bite of a tsetse fly, characterized by fever, protracted lethargy, weakness, tremors, and wasting.

slimy (slim'y) [A.S. *slim*, smooth]. Resembling slime or a viscid substance; of a growth, adhering to needle so it can be drawn out as a long thread.

sling (sling) [A.S. *slingan*, sling]. A support for an injured upper extremity.

s. clove hitch. Make clove hitch in center of roller bandage. Fit to hand and carry ends over shoulder. Tie beside neck with square knot, making longer ends. They may be carried over the shoulder, brought under each axilla and tied over chest.

s. cravat. The center of cravat is placed under wrist or forearm and ends tied around neck.

s. folded cravat (lesser arm sling). Place broad fold in position on chest with one end over affected shoulder and other hanging down in front of chest. Flex arm as desired across sling. Bring lower end up over sound shoulder. Knot with other end on affected shoulder.

s. open. The point of the triangle is placed at tip of elbow. The ends are brought around at back of neck and tied. The point should be brought forward and pinned or tied in a single knot, forming a cup to prevent elbow from slipping out.

s. simple figure-of-eight roller arm. Flex arm on chest in desired position, then fix bandage with single turn toward uninjured side around arm and chest, crossing elbow just above external epicondyle of humerus. Make 2nd turn overlapping 2/3 of 1st and bring bandage forward under tip of elbow, then upwards, along flexed forearm to root of neck of sound side. Then bring downward over scapula and cross chest and arm horizontally, overlapping, turn above and continue as in progressive figure-of-eight.

s. St. John's. Apply triangle with point downwards under elbow, upper end over sound shoulder. Flex arm acutely on chest. Bring lower end under affected arm and around back to knot with upper end on sound shoulder. Bring point up over elbow and fasten to base. Support is wholly for injured shoulder.

s. swathe arm or cravat. (Use wide cravat or folded muslin band.) Place center under acutely flexed elbow, carry front and upwards across the forearm and over affected shoulder. Proceed obliquely across back to sound axilla. Bring other end around front of arm and across body to sound axilla, where it is pinned to other end, continuing around back to part of sling surrounding affected elbow and pinned again.

s. triangular. With suspension from uninjured side (brachioscapular sling). Place triangle on chest with one end over sound shoulder, the point under affected extremity, fold the base. Flex injured arm outside of triangle. Carry lower end upward under axilla of in-

jured side, back of shoulder and tie with upper end behind back. Bring point of triangle anteriorly and medially around back of elbow and fasten to body of bandage. (This bandage changes point of carrying and also relieves clavicle of injured side of a load.)

s. triangular, reversed (reversed brachio cervical sling). Apply with one end over injured shoulder, point toward the sound side, base vertical under injured elbow. Flex arm acutely over triangle. Lower end is brought upwards over front of arm and over sound shoulder. Pull ends taut and tie over sound shoulder. The point is pulled taut over forearm and fixed to anterior and posterior layers between forearm and arm. (Holds elbow more acutely flexed—the weight is supported by the elbow.)

slit. A narrow opening.
s. vestibular. The opening between left and right ventricular folds of the larynx.

slough (slūf) [M.E. *slughe*, a skin]. 1. Dead matter or necrosed tissue separated from living tissue or an ulceration. 2. To separate in the form of dead or necrosed parts from living tissue. 3. To cast off, as dead tissue. **SEE** *eschar*.

sloughing (slūf'ing) [M.E. *slughe*, a skin]. The formation of a slough, separation of dead from living tissue.

s. phagedena. Hospital gangrene.

slow (slō) [A.S. *slāw*, dull]. 1. Mentally dull. 2. Exhibiting retarded speed, as the pulse. 3. Of a morbid condition or fever, not acute. **SEE** "brady" words.

slows (slōz). An infectious disease of cattle transmitted to man through milk or butter, marked by severe neural symptoms, constipation, vomiting, frequently fatal. **SYN:** *milk sickness*, *trembles*.

sludge (slujh). The semisolid matter deposited in sewage.

s. activated. Sludge from well-aerated sewage, exposed to oxidizing bacteria, supplying oxidizing organisms sufficient to activate another supply of sewage.

s. dewatered. Sludge that has been dried.

sludged blood. Condition of the blood in certain abnormal states such as tissue injury or shock in which volume of plasma is reduced and the cells show a pronounced tendency to agglutinate and form large clumps or masses which move slowly through the vessels and sometimes clog the smaller vessels.

Sm. Chemical symbol for *samarium*.
smallpox (smaw'pōks) [A.S. *smæl*, tiny, + *poc*, pustule]. An acute, contagious, febrile disease, the constitutional symptoms of which are followed by successive stages of eruptions. **SYN:** *variola*, *q.v.*
RS. *alastrim*, *alices*, *amaas*, *variolate*, *varioloïd*.

smear, smear culture (smēr) [A.S. *smieran*, to anoint]. 1. Bact. Material spread on a surface, as a microscopic slide or a culture medium. 2. One obtained from infected matter spread over a solidified medium.

smegma (smēg'mā) [G. *smēgma*, soap]. Secretion of sebaceous glands, specifically, the thick, cheesy, ill-smelling secretion found under the labia minora about the glans clitoridis and under the male prepuce from Tyson's glands. **SYN:** *sebum*.

s. clitoridis. BNA. Odoriferous secretion of the glands of the clitoris.

s. praeputii. BNA. Cheesy odoriferous substance collecting under prepuce in the male, secreted by Tyson's glands.

Differential Diagnosis Between Smallpox and Chickenpox¹

	Smallpox	Chickenpox
General symptoms	May be severe, with pyrexia, backache, etc., for 3 days before appearance of eruption.	Mild. Appear at same time as rash.
Eruption Type	Third day of illness. Papules before vesicles. Deep, often "shotty." Umbilication of vesicles.	Vesicles from start. Superficial. First day.
Shape	Circular.	No umbilication.
Appearance	All spots at same stage of development. Pustules appear on the 8th day.	Successive crops, therefore, all stages present at the same time. Pustules on 2nd day
Distribution	Maximum on distal parts, not in axillae or groins.	Maximum on trunk, present in axillae.

¹Sears.

smegmatic (smĕg-măt'ĭk) [G. *smĕgma*, soap]. Pert. to or made up of smegma.

smegmolith (smĕg'mō-lĭth) [" + *lithos*, a stone]. Calcareous mass in the smegma.

smell (smĕl) [M.E. *smellen*, to reek]. 1. To perceive by stimulation of the olfactory nerves. 2. To emit an odor, pleasant or offensive. 3. A chemical sense dependent upon end organs on the surface of the upper part of the nasal septum and the superior nasal conch. 4. Property of a thing affecting the olfactory organs, pleasant or unpleasant. *Syn.* odor, scent, stench.

The sense of smell may be affected by many conditions, some of which are the following.

Anosmia*: A loss of the sense of smell. It may be a local and a temporary condition resulting from acute and chronic rhinitis, mouth breathing, nasal polyp, dryness of the nasal mucous membrane, pollen, or very offensive odors. It may also result from the following causes: Disease or injury of the olfactory tract, bone disease near the olfactory nerve, disease of the nasal accessory sinuses, basal meningitis, or tumors or gumma affecting the olfactory nerve. It is sometimes found in locomotor ataxia, and frequently in hysteria and neurasthenia. Disease of 1 cranial hemisphere or of 1 nasal chamber may account for anosmia, and it may be the result of scarlet fever.

Hyperosmia. An increased sensitivity to odors. It occurs among the hypersensitive type and among those susceptible to certain odors.

Kakosmia*: The perception of bad odors where none exist and it may be due to head injuries or occur in hallucinations in certain psychoses.

Parosmia*: A perverted sense of smell. Odors that are considered agreeable are assumed to be offensive and disagreeable odors may be found pleasant to those suffering from certain functional derangements and in some catarrhs.

smell, words pert. to: anosmia, anosmatic, anosmia, anosphrasia, aroma, aromatic, cacosmia, dysosmia, hyperosmia, jumentous, kakosmia, odor, odoriferous, olfaction, olfactory, osmethesia, osphresis, oxyosphresia, parosmia.

smoker's cancer or tongue. Cancer of the lip or throat due to irritation from a pipe stem or excessive smoking.

smudging. A speech defect in which difficult consonants are omitted.

Sn. [L. *stannum*]. Symb. of tin.

snail. A small mollusk having a spiral shell and belonging to the class *Gastropoda*. They are important as intermediate hosts of many species of parasitic flukes.

snake. *Syn.* serpent. A creeping reptile possessing scales and lacking limbs, external ears, and functional eyelids.

s. bite. All snakes should be considered poisonous, although there are only a few that secrete an amount of venom sufficient to inoculate poison deeply into the tissues.

F. A. TREATMENT Apply tourniquet, incise and induce bleeding. If swelling persists, incise again. This may be necessary repeatedly. Inject antivenin. If the type of snake cannot be determined, use mixed antivenin. Release tourniquet cautiously at 15- to 20-minute intervals and observe effect.

A tourniquet should not be applied too tightly or remain on too long. Alcoholic stimulants must not be taken and nothing should be done to increase circulation. Do not cauterize with strong acids or depend upon home remedies.

s., poisonous. A venom-producing snake. Venom is produced in a poison gland which is connected by a tube or groove to a poison fang, one of two sharp, elongated teeth present in upper jaw. The following are poisonous snakes of the U S: coral snake, copperhead, water moccasin (cottonmouth), and rattle-snake, of which there are 15 species. All except the coral snake belong to a group known as pit vipers because of presence of a distinct pit between eye and nostril. *See* venom, snake.

A polyvalent antivenin serum for bites by pit vipers is prepared by Wyeth, Inc. Philadelphia, Penna. No antivenin for coral snake bite is available.

RS: antivenene, antivenom, antivenomous, ophidiophobia, ophidism, ophiothexia, venenation, venene, veneniferous, venom.

snapping hip. Slipping of the hip joint with a snap due to displacement over the great trochanter of a tendinous band.

snares (snär) [A.S. *sneare*, noose]. Device for excision of polyp, tumors, etc., by tightening wire loops around them.

sneeze (snez) [M.E. *snesen*, from A.S. *snēosan*, to pant]. 1. To expel air forcibly through the nose and mouth by spasmodic contraction of muscles of expiration due to irritation of nasal mucosa. 2. The act of sneezing.

RS: *sternutation, sternutator, sternutatory.*

Snellen's chart (sně'l'én). One used for testing visual acuity.

S's reflex. Congestion of ear on same side resulting when distal end of the divided auriculotemporal nerve is stimulated.

snore (snór) [A.S. *snora*, snoring]. 1. To breathe noisily during sleep, due to vibration of the uvula and soft palate. 2. Noisy breathing in sleep or coma. SYN: *rhonchus, stertor*.

snoring rale (snór'ing rahl) A sonorous rale, low in pitch, resembling a snore.

snow blind'ness. Irritation of the conjunctiva caused by reflection of the sun on the snow.

SYM. Photophobia, blepharospasm, burning pain in the eyes, hyperemia or temporary blindness. SYN: *chionablepsia, nuphalepsia, nuphotyphlosis*.

snuffles (snúf'ls) [Middle Dutch *snuffen*, to snuff]. Obstructed nasal breathing with discharge from the nasal mucosa, esp. in infants, chiefly in congenital syphilis.

soap (sóp) [A.S. *sápe*, soap] A cleansing chemical compound formed by an alkali acting on a fatty acid, example: sodium stearate, $\text{NaC}_{17}\text{H}_{35}\text{O}_2$. SEE *saponification*.

Castile soap is made by saponifying olive oil with sodium hydroxide, and contains mainly sodium oleate, $\text{NaC}_{18}\text{H}_{33}\text{O}_2$.

s., green. SEE *soap, soft medicinal*.

s. liniment. USP. Liquid opodeldoc. A solution of soap and camphor in alcohol and water.

ACTION AND USES: Stimulant and rubefacient.

s., soft medicinal. SYN *green soap*. A liquid soap made by saponification of vegetable oils excluding coconut oil and palm kernel oil and without removal of glycerine. Used in the treatment of skin diseases.

s. suds enema. One given so that the irritating action of the soap will start bowel motion. SEE *enema*.

sob. 1. To weep with convulsive movements of the chest. 2. A cry or wail resulting from a sudden consultive inspiration accompanied by spasmodic closure of glottis.

sociology (sō-si-ól'ō-jī) [L. *socius*, companion, + G. *logos*, a study]. Science of the forms, institutions and functions of human groups.

sociomedical. Pertaining to sociology and medicine, esp. the interrelationships between the two.

socket (sók'et) [M.E. *soket*, a spearhead]. A hollow in a joint or part for another corresponding organ, as a bone socket or an eye socket.

s., dry. Alveolitis following tooth extraction characterized by extreme pain but without suppuration.

s., tooth. A dental alveolus of the maxilla or mandible; a cavity which contains the root of a tooth.

soda (sō'dā) [Middle Latin *soda*, head-ache]. 1. Term loosely applied to various salts of sodium, esp. to caustic soda (sodium hydroxide) and baking soda (sodium bicarbonate). SEE *sodium*, 2. Short for soda water, which is water charged with carbon dioxide.

s. ash. Commercial sodium carbonate.

s., baking. Sodium bicarbonate.

s., caustic. Sodium hydroxide.

s. lime. A white granular substance consisting of a mixture of calcium hydroxide and sodium hydroxide or, potas-

sium hydroxide or both. Used to absorb carbon dioxide.

s., lye. Sodium hydroxide.

s., niter. Nitrate of soda.

s., washing. SYN: *sal soda*, sodium carbonate.

s. water. A solution of carbon dioxide under pressure, carbonic acid.

sodic (sō'dík) [Middle Latin *soda*, head-ache]. Relating to or containing soda or sodium.

sodio- Prefix denoting a compound containing sodium.

sodium (sō'di-úm) [Middle Latin *soda*, head-ache] SYMS. Na At wt. 22.991, at. no. 11. Sodium constitutes approximately 0.15% of elements of the body. Sodium (Na^+), K^+ , Ca^{++} , and Mg^{++} constitute the principal cations of the body, their relative concentration determining the integrity of cell membranes and the bioelectric potentials of tissues. Na^+ is the principal cation found in extracellular fluids.

FUNCTIONS. Sodium salts are found in the fluids of the body, serum, blood, and lymph, and in the tissues, the concentration being lower in the tissues. They are necessary to preserve a balance between calcium and potassium to maintain normal heart action and the equilibrium of the body. They regulate osmotic pressure in the cells and fluids, act as an ion balance in tissues, produce a buffer action in the blood, and guard against an excessive loss of water from the tissues.

DEFICIENCY SYM. Weakness, nerve disorders, loss of weight, "salt hunger," miner's cramps, disturbed digestion.

SOURCES. SEE *names of foods*.

s. acetate. USP. Colorless, odorless, translucent crystals, saline in taste and soluble in water. NaCH_3CO_2 .

ACTION AND USES: Diuretic and laxative.

DOSAGE: 25 gr. (1.5 Gm.).

s. aleurate. The monosodium salt of allyl isopropyl barbituric acid.

ACTION AND USES: Oral or rectal adm. as preanesthesia medication.

DOSAGE: 1 gr. for each 15 lb. of body weight (10 mg. per Kg.).

s. amylal. The monosodium salt of isoamylethylbarbituric acid.

ACTION AND USES: Sedative and hypnotic in control of insomnia; preliminary to surgical anesthesia and in labor.

DOSAGE: 3 gr. (0.2 Gm.) as sedative or hypnotic. 3-9 gr. (0.2-0.6 Gm.) as preliminary anesthetic, depending upon many factors.

s. barbital. SEE *barbital*.

s. benzoate. USP. A white, odorless powder with sweet taste.

ACTION AND USES: Internally in treatment of rheumatism and as a food preservative.

DOSAGE: Internally, 15 gr. (1 Gm.).

s. bicarbonate. USP. White, odorless powder with saline taste. NaHCO_3 .

ACTION AND USES: In hyperacidity and for acidosis. Externally, mild alkaline wash.

DOSAGE: 15 gr. (1 Gm.).

INCOMPATIBILITIES: Acids, acid salts, ammonium chloride, lime water, epinephrine, hydrochloride, iron chloride.

s. biphosphate. USP. Sodium acid phosphate.

ACTION AND USES: To render urine acid, thereby assisting the action of urotropin.

DOSAGE: 10 gr. (0.6 Gm.).

s. bisulfite. Granular or crystalline powder, sulfurous taste and odor, soluble in water.

ACTION AND USES. Gastric and intestinal fermentation.

DOSEAGE: 10-20 gr. (0.6-1/3 Gm.).

s. borate. USP. Borax

ACTION AND USES: Antiseptic and astringent.

DOSEAGE: 1 to 2% solution used as an eyewash

s. bromide. USP. NaBr. White crystalline powder with saline taste.

ACTION AND USES: Nerve sedative and cerebral depressant.

DOSEAGE: 15 gr. (1 Gm.).

INCOMPATIBILITIES: Tincture ferric chloride

s. cacodylate. USP. The sodium salt of cacodylic acid.

ACTION AND USES: Similar to arsenic.

DOSEAGE: Hypodermically, 1 gr. (0.06 Gm.).

s. carbonate. USP. Na_2CO_3 . White crystalline powder (washing soda)

ACTION AND USES: An alkali employed chiefly in alkaline baths.

DOSEAGE: 5-20 gr. (0.33-1.333 Gm.).

s. chloride. USP. NaCl. Common salt.

ACTION AND USES: In preparation of normal saline solution, emetic and in metabolism

DOSEAGE: 10-60 gr. (0.666-4 Gm.).

INCOMPATIBILITIES: Silver nitrate.

s. citrate. White granular powder, saline in taste and soluble in water

ACTION AND USES: Diuretic and antihypertensive.

DOSEAGE: 15 gr. (1.0 Gm.).

s. fluoride. White crystalline powder saline in taste, soluble in 25 parts of water.

ACTION AND USES: Epilepsy, tuberculosis, and malaria. In drinking water and in solution for local application to teeth for prevention of dental caries. Commercially, in etching glassware, for eradication of rats, insects, ants, and other pests, or as a food preservative.

DOSEAGE: 1/12-1/6 gr. (0.005-0.01 Gm.).

POISONING. **SYM.** Optical conjunctivitis; oral: retching, vomiting, nausea, later cardiac weakness, kidney disturbances, and interference with coagulation of blood.

F. A. TREATMENT. In addition to washing affected areas, precipitate by addition of soluble calcium salts, as lime water, calcium gluconate, calcium lactate. Give emetics and soothing drinks, as milk, cream, egg whites, etc.

s. hexametaphosphate. A salt of metaphosphoric acid.

ACTION AND USES: Water softener, antiperspirant, and in dermatoses due to oil or soap irritation.

DOSEAGE: 1-2% solution.

s. hydroxide. A whitish solid; soluble in water, making a clear solution.

USES: Antacid and caustic. In the laundry and in commercial compounds, in cleaning sink traps, toilets, etc., and in the preparation of soap.

ACTION. Use great care in handling it as it rapidly destroys organic tissues.

POISONING. SEE *potassium hydroxide*.

DOSEAGE: 15 m (1 cc.).

s. hyposulfite. Same as s. thiosulfate.

s. iodide. USP. NaI. A salt resembling in appearance and action potassium iodide.

DOSEAGE: 5 gr. (0.3 Gm.).

s. morrhuate. The sodium salt of the fatty acids, found in cod-liver oil.

USES: For the obliteration of varicose veins.

DOSEAGE: 0.5-1 cc. of 5% solution.

s. nitrate. SEE: *saltpeter*, *Chile*.

s. nitrite. USP. NaNO_2 . White crystalline powder, characteristic properties of nitroglycerine; effects more lasting.

DOSEAGE: 1 gr. (0.06 Gm.).

s. oleate. A white, soft mass; sodium salt of oleic acid.

USES: As a cholagogue.

DOSEAGE: 2-10 gr. (0.12-0.6 Gm.).

s. pentothal. SEE *pentothal s.*

s. phosphate. USP. $\text{Na}_2\text{HPO}_4 \cdot 12\text{H}_2\text{O}$. White crystalline powder.

ACTION AND USES: Similar to magnesium sulfate, but with less disagreeable taste.

DOSEAGE: 1 dram (4 Gm.).

s. phosphate effervescent. USP. A mixture of sodium phosphate, sodium bicarbonate, and tartaric acid.

DOSEAGE: 2½ drams (10 Gm.).

s. salicylate. USP. White powder or scales with sweet saline taste.

ACTION AND USES: As an analgesic and antipyretic.

DOSEAGE: 15 gr. (1 Gm.).

INCOMPATIBILITIES: Caffeine citrate, caffeine sodium benzoate

s. sulfate. (Glauber's salt). USP. Resembles magnesium sulfate in appearance and action.

DOSEAGE: 4 drams (15 Gm.).

s. tartrate. $\text{Na}_2\text{C}_4\text{H}_4\text{O}_6 \cdot 2\text{H}_2\text{O}$. White soluble crystals.

USES: Diuretic and laxative.

DOSEAGE: 15-60 gr. (1-4 Gm.); 4-8 drams (15-30 Gm.).

s. faurocholate. Extract of bile from carnivora; a yellowish gray powder soluble in water.

USES: Cholagogue.

DOSEAGE: 2-6 gr. (0.12-0.4 Gm.).

s. thiocyanate. NaSCN . A sodium salt.

USES: Reducing high blood pressure, relieving insomnia due to hypertension, in narcotic addiction, and in crises of tabes dorsalis.

DOSEAGE: 5 gr. (0.3 Gm.).

s. thiosulfate. USP. White crystalline substance, having a cooling taste.

ACTION AND USES: Externally, for ringworm, in dermatitis, to remove stains of iodine. Intravenously, as an antidote for metallic poisons.

DOSEAGE: 15 gr. (1 Gm.).

s. valerianate. White crystalline powder with faint odor and taste of valerian.

Soluble in water and of unctuous feel.

USES: Nerve tonic.

DOSEAGE: 2-5 gr. (0.13-0.3 Gm.).

sodokosis (sōd-ō-kō'sis) [Japanese, rat poison]. Infectious febrile disease caused by infection from bite of a rat. **SYN** *ratbite fever, sodoku*.

sodoku (sō-dō-koo) [Japanese, rat poison]. Infectious febrile disease due to rat bite.

SYN *ratbite fever, sodokosis*.

sodomy (sōd-ō-mī) [O Fr. *Sodomie*, Sodom]. Anal coitus, usually bet males; bestiality (*concubitus cum bestia*) and pederasty* (*concubitus cum persona erusdem sexus*).

Saemmering's bone. Marginal process of malar (zygomatic) bone.

S's. foramen. The fovea centralis, q 1.

S's. spot. The macula lutea of the retina.

soft or convalescent diet. Fish, egg and cheese dishes, chicken, cereals, bread, toast, butter, nothing not soft, semi-solid or liquid. No red meats, vegetables or fruits having seeds or thick skins. No cellulose, raw fruits, or salads.

s. diet, cold. Suitable for tonsillectomies. All forms of milk and cream, iced cocoa, coffee and tea iced, gelatin, junket, custard, strained cereals and fruits if not seeded, such as berries. No fruit juices unless ordered.

s. d., light. Medical liquids; cream soups, strained, toast; cream, poached or coddled eggs; mashed potatoes, carrots, peas, and spinach purées, gelatins; junkets; custards, stewed fruits; soufflés; jellies; gruels, cereals if strained; ice cream; sherbets.

s. d., l., surgical. Fluids plus thick water gruels, toast, stewed fruits if strained but no seeded fruits.

s. d., modified. Small meals, frequent feedings, gradual additions to full liquid diet—crackers, baked potato, soft cooked egg, cream of wheat, farina, strained oatmeal, applesauce, puréed pears, jelly, simple desserts; later, cottage cheese, puréed vegetables, minced tender meat.

soft (sôft) [A.S. *sôfte*]. Not hard, firm or solid.

s. palate. The soft post. part of the palate. SYN: *palatum molle, velum pendulum palati*.

s. sore. A venereal sore, not due to syphilis, caused by Ducrey's bacillus. SYN: *chancroid*.

softening (sôf'tên-ing) [A.S. *sôfte*, soft]. Process of becoming soft. SYN *malacia, mollities*. RS words ending in *malacia*.

s., anemic. While softening of the brain from lack of blood.

s. of bones. Osteomalacia.

s. of brain. Paresis with progressive dementia. SYN *encephalomalacia*.

s. colloquative. The liquefying of tissues.

s., gray. S. of the brain with absorption of fat following yellow s.

s. of heart. Myomalacia cordis.

s., hemorrhagic. Red softening. q.v.

s., mucoid. Myxomatous degeneration.

s., red. S. of the brain with bleeding into necrosed portions.

s. of stomach. Gastromalacia.

s., white. Same as anemic s.

s., yellow. S. of brain in a late stage with deposit of changing pigment and fatty degeneration of cells.

sol (sôl, sôl) [G *sole*, salt water] 1. Abbr. for *solution* 2. State of a colloid system in which the dispersion medium or solvent forms a continuous phase in which the particles of the solute are dispersed forming a fluid mass. It is called a *hydrosol* if dispersion medium is a liquid, *aerosol* if a gas.

solanine (sô'lân-in) A poisonous narcotic alkaloid obtained from potatoes.

solar (sô'lar) [L. *sol*, sun]. Pert. to the sun or its rays.

s. plexus. The celiac plexus behind the stomach and bet the suprarenal glands, and consisting of 2 large ganglia, the *celiac* and *sup mesenteric ganglia*, from which sympathetic fibers pass to visceral organs.

s. therapy. Treatment with the sun's rays. SYN *heliotherapy*.

solargentum (sol-ar-jên'tum). A brand of mild silver protein, containing 19-23% colloidal silver.

solarium (sô-lâ'ri-ûm) [L. from *sol*, sun]. A room designed for heliotherapy or for the application of artificial light.

solution (sô-lû'shûn) [L. *sol*, sun]. In colloidal chemistry, the transformation of a gel into a sol.

solbisminol (sôl-biz'mîn-ôl). An antisyphilitic drug which can be taken by mouth.

soldier's heart. SEE: *asthenia, neurocirculatory*.

sole (sôl) [A.S. *sole*, from L. *solum*, ground]. SYN: *planta*. 1. Underpart of the foot. 2. The portion of a motor endplate at termination of a motor nerve fiber which is directly adjacent to the

contractile substance of a muscle fiber. Here are usually aggregated a large number of muscle nuclei. SEE: *antithenar, thenar*.

s. reflex. SYN: *plantar reflex*. Contraction of muscles when tickling the sole.

solepism (so'le-pizm) [L. *solus*, alone, + G. -*ismos*, condition]. The theory that nothing may be known objectively, because only may one's own mental processes be known.

soleus (sô'lê-ûs) [L. *solea*, sole of foot]. A flat, broad muscle of calf of leg. SEE: *Table of Muscles in Appendix*.

solid (sôl'id) [L. *solidus*, a solid]. 1. Not gaseous, hollow, or liquid. 2. A substance not gaseous, liquid, or hollow.

s. carbon dioxide therapy. Therapeutic application of solid carbon dioxide. SEE *refrigeration*.

solitary (sô'l'i-târ-i). Alone; single or existing separately.

s. lymph nodules or follicles. Small spherical lymphatic nodules found in lamina propria of small and large intestine.

solubility (sô'l'û-bîl'i-tî) [L. *solubilis*, from *solvere*, to dissolve]. Capability of being dissolved.

soluble (sô'l'û-bl) [L. *solubilis*, from *solvere*, to dissolve]. Able to be dissolved.

solum tympani. The floor of the tympanic cavity.

solute (sô'l'ût) [L. *solutus*, dissolved]. The substance that is dissolved in a solution.

solution (sô-lû'shûn) [L. *solutio*, a dissolving]. 1. Liquid containing dissolved substance. 2. Process by which a solid is homogeneously mixed with a fluid, or a solid or gas, so that the dissolved substances cannot be distinguished from the resultant fluid. 3. Mixture so formed. 4. Termination of a disease.

The liquid in which the substances are dissolved is called the *solvent* and the substance dissolved, the *solute*. The strength represents the amt. of substance dissolved, represented by ratio, percentage, or grains to the ounce.

s., buffer. A solution of a weak acid and its salt (for ex, carbonic acid sodium bicarbonate) of importance in maintaining a constant pH, esp. of the blood.

s., colloidal. That in which the solute is suspended and not dissolved, such as gelatin, albumin.

s., hypertonic. One which has a greater osmotic pressure than that of cells or body fluids; a solution which draws water out of cells thus inducing plasmolysis.

Ex. A concentrated solution of sodium chloride.

s., hypotonic. A solution having an osmotic pressure less than that of cells or body fluids; a solution which will cause water to enter cells thus inducing turgor, and possibly hemolysis.

Ex. A sodium chloride solution containing less than 0.9 Gms. of NaCl in each 100 ml. of water.

s., isohydric. A solution having the same hydrogen-ion concentration or pH as another.

s., isotonic. An isotonic solution, q.v.

s., isotonic. One which has the same osmotic pressure as that of body cells or fluids.

Ex. A sodium chloride solution containing 0.9 Gms. of NaCl in each 100 ml. of water.

s., Locke-Ringer's. A buffered isotonic solution containing sodium chloride, 9.0 Gm; potassium chloride, 0.43 Gm.;

calcium chloride, 0.24 Gm.; sodium bicarbonate, 0.5 Gm.; magnesium chloride, 0.2 Gm.; dextrose, 0.5 Gm.; distilled water, to make 1000 ml.

s., molar. One containing a gram molecular weight or mole of the reagent dissolved in one liter (1000 ml) of solution. Designated 1M.

s., normal. One containing one gram equivalent weight of reagent in one liter (1000 ml.) of solution. Designated 1N.

s., normal saline. An isotonic saline solution. **See.** solution, isotonic.

s., physiological saline. An isotonic solution of sodium chloride. **See.** solution, isotonic.

s., Ringer's. A solution containing chlorides of sodium, calcium, and potassium in most favorable concentration. For mammals it contains sodium chloride, 8.6 Gm.; calcium chloride, 0.93 Gm.; potassium chloride, 0.3 Gm.; distilled water to make one liter (1000 ml.).

s., saline. A solution of a salt; usually sodium chloride. **See.** s., isotonic; s., physiological saline; s., normal saline.

s., saturated. A solution that contains all the solute it can dissolve. This limit is called the saturation point.

s., seminormal. Abbr. 0.5N or N/2 A solution containing one-half of a gram equivalent weight of reagent in one liter (1000 ml) of solution.

s., standard. A solution containing a definite amount of a substance as a normal solution.

s., supersaturation. S. in which the saturation point is reached, but when heated it is possible to dissolve more of the solute.

s., test. Abbr. TS A reagent solution; one used in performing a particular test.

s., Tyrode's. A modified Ringer's solution containing, in addition, a small amount of magnesium-chloride and acid and sodium phosphates.

s., volumetric. Abbr. VS A standard solution containing a definite amount (1/2, 1/10, etc.) gram-equivalent of a substance in one liter (1000 ml.) of solution. Used in volumetric analysis.

solv. [L.]. Abbr. of solve, meaning dissolve.

solvate (söl'văt). A compound formed by reaction between solvent and solute.

solvation (söl-vă'shün). The formation of a solvate.

solvent (söl'vent) [L. *solvens*, from *solvere*, to dissolve]. 1. Producing a solution; dissolving. 2. A liquid holding another substance in solution. 3. A liquid which reacts with a solvent bringing it into solution.

soma (sô'mă) [G. *sôma*, body] 1. Body tissues distinguished from germinal or reproductive ones. 2. The body without its appendages. 3. Psy. The body as differentiated from the psyche.

somasthenia (sô-măs-thē'nī-ă) [G. *sôma*, body, + *astheneia*, weakness]. A condition of chronic bodily weakness. **SYN:** somatasthenia.

somatasthenia (sô-măt-ăs-thē'nī-ă) ["" + *astheneia*, weakness]. Chronic bodily weakness usually with low blood pressure, but not neurasthenia. **SYN:** somasthenia.

somatesthesia (sô-măt-ăs-thē'zī-ă) ["" + *aisthēsis*, sensation]. The consciousness of the body; bodily sensation.

somatic (sô-măt'ik) [G. *sôma*, body]. 1. Pertaining to nonreproductive cells or tissues. 2. Pert. to the body. 3. Pert. to structures of the body wall, e.g. skeletal

muscles (*somatic musculature*) in contrast to structures associated with the viscera, e.g. visceral muscles (*splanchnic musculature*).

somatoceptors (sô-măt-ô-sept'ors). Term applied to proprioceptors and exteroceptors collectively.

somatochrome (sô-măt-ô-krôm) [G. *sôma*, body, + *chrôma*, color]. Term applied to neurons which possess abundant cytoplasm containing Nissl bodies. **See:** gyrochrome and stichochrome.

somatology (sô-măt-ô-lô-jī) [G. *sôma*, body, + *logos*, a study]. Comparative study of structure, functions and development of the human body.

somatopathic (sô-măt-ô-păt'h'ik) ["" + *pathos*, disease]. Organically ill, as distinguished from neuropathic or psychopathic diseases.

somatoplasm (sô-măt-ô-plăzm) [G. *sôma*, body, + *plasma*, a thing formed]. The protoplasm of all the body cells as distinguished from that of the germ plasma; the soma.

somatopleure (sô-măt-ô-plūr) [G. *sôma*, body, + *pleura*, a side]. The lateral and ventral body wall of an embryo consisting of the outer ectoderm and a layer of somatic mesoderm underlying it. It continues beyond the embryo as the amnion and chorion.

somatopsychic (sô-măt-ô-sī'k'ik) [G. *sôma*, body, + *psyche*, mind]. Pert. to both body and mind.

somatopsychosis (sô'mă-tô-sī-kô'sis) ["" + "" + *-osis*, condition]. Any mental disorder which is a symptom of a bodily disease.

somatoscopy (sô-măt-ôs'kô-pī) [G. *sôma*, body, + *skopein*, to examine]. Physical examination of the body.

somatotropic (sô'măt-ô-trôf'ik) ["" + *tropos*, a turning]. Having selective attraction for, or influencing body cells.

2 Stimulating growth.

s. hormone. Abbr. STH. Hormone produced by ant lobe of hypophysis which regulates growth of body.

somatotype (sô'mă-tô-tip) A particular build or type of body.

s. theory. A theory that certain body types (endomorphism, mesomorphism, actomorphy) are associated with certain personality types.

somatropin (sô-măt-rô-pīn) [G. *sôma*, body, + *tropos*, a turning]. The anterior pituitary lobe's growth-stimulating principle.

somesthesia (som-es-the'sī-ă) [G. *sôma*, body, + *aisthēsis*, sensation]. Awareness of bodily sensations. **SYN:** somatesthesia.

somesthetic (sô-mês-thēt'ik) ["" + *aisthēsis*, sensation]. Pert. to sensations and sensory structures of the body.

s. area. The region in the cortex in which lie the terminations of the axons of general sensory conduction-paths.

s. path. General sensory conduction-path leading to the cortex.

somite (sô'mit) [G. *sôma*, body]. 1. Embryonic blocklike segment formed on either side of the neural tube and its underlying notochord. 2. Any one of the embryonic segments.

Each somite gives rise to a muscle mass supplied by a spinal nerve and each pair gives rise to a vertebra.

somnambulism (sôm-năm'bū-ilizm) [L. *somnus*, sleep, + *ambulare*, to walk]. 1. A form of hysteria in which behavior and purposeful actions are not subsequently remembered. 2. Sleepwalking, an affection that prompts the sleeping person to perform, unconsciously, acts

that naturally belong to the waking state. SYN: *noctambulism*, *q.v.*

Sym Half of the subjects are chronically ill. They have a history of bedwetting, temper-tantrums, or epilepsy. Behavior is aggressive and they may seem to have a dual personality. They are agreeable during the day but quarrelsome at night.

The term has a more comprehensive meaning in psychiatry than that of *noctambulism*.

somniaambulist (sōm-nām'bū-lyst). One who is subject to sleepwalking

somnarium (sōm-nā'ri-um) [L *somnus*, sleep]. A sanitarium in which sleep therapy is employed in the treatment of neuroses.

somnificient (sōm-nī-fā-shēnt) [+ *facere*, to make]. 1 Producing sleep SYN: *hypnotic*. 2 A medicine producing sleep. SYN: *soporific*, *q.v.*

somniferous (sōm-nī-ēr-ūs) [+ *ferre*, to bear]. Sleep-producing, pert to that which promotes sleep.

somnific (sōm-nī-fik) [+ *facere*, to make]. Producing sleep.

somniloquist (sōm-nī-lō-kwist) One who talks in his sleep.

somniloquy (sōm-nī-lō-kwi) [+ *loqui*, to speak]. Act of talking during sleep or in a hypnotic condition

somnipathy (sōm-nī-pā-thī) [+ *G pathos*, disease]. 1 Any disorder of sleep. 2 Hypnotism

somnokinematograph (sōm-nō-sin-ē-māt'ō-grāf) [+ *G kinema*, motion, + *graphem*, to write]. Device for recording motions of those who are asleep

somnolence (sōm-nō-lēns) [L *somnolentia*, sleepiness] Prolonged drowsiness or a condition resembling trance which may continue for a number of days, sleepiness

somnolent (sōm-nō-lēnt) [L *somnolentus*, sleepy]. Sleepy; drowsy.

somnolentia (sōm-nō-lēn-shī-ā) [L *somnolentia*, sleepiness]. 1 Drowsiness. 2 The sleep of drunkenness in which the faculties are only partially in repose.

sone. A unit of loudness

sonic boom (sōn'ik) [L *sonus*, sound]. Noise caused by shock waves from nose of a plane flying faster than sound When they hit the ground they may break windows and affect the hearing. They occur when the plane dives They are imperceptible at 30,000 ft At 5000 ft the noise drops to 78 decibels, *q.v.*

sonitus (sōn'i-tūs) [L *sonitus*, sound] Subjective noises in the ear. SYN: *tinnitus aurium*, *q.v.*

sonometer (sō-nōm'ētēr) [L *sonus*, sound, + *G metron*, a measure]. Device for testing the hearing.

sonorous (sō-nō-rūs) [L *sonor*, sound]. Giving forth a loud and rounded sound.

s. rāle. A dry or low pitched rāle often caused by vibration of mucous secretion in a bronchus

sophistication (sō-fis-tī-kā-shūn) [G *sophistikos*, deceitful]. Adulteration of any substances.

sopor (sō'por) [L *sopor*, deep sleep]. Deep, lethargic sleep. SYN: *stupor*.

soporific (sō-por-if'ik) [+ *facere*, to make]. 1 Inducing sleep. 2 Narcotic; a drug producing sleep.

soporose, **soporous** (sō'por-ōs, -ūs) [L *sopor*, deep sleep]. Marked by or resembling sound sleep or coma.

sorbefacient (sor'bē-fā-shēnt) [L *sorbere*, to suck, + *facere*, to make]. Causing or that which causes or promotes absorption.

sordes (sor'dēz) [L *sordere*, to be dirty].

1 Foul, brown crusts or accumulations on the teeth and about the lips from foul stomach or secretions of the mouth in low forms of fever 2 Filth.

NP: Wash carefully with soft linen moistened with glycerin and borax. Burn the linen after using.

sore (sōr) [A S *sār*, sore]. 1 Tender; painful 2 A tender or painful ulcer or lesion of the skin

s., bed. Gangrene of skin due to pressure. SYN: *decubitus*, *q.v.* **pressure sore**.

s., canker. SYN: *aphthous ulcer*, *aphthous stomatitis*. A small lesion of the mucous membrane of the mouth. They often accompany a number of systemic conditions Cause unknown.

s., cold. Bilster on the lips. SYN: *herpes* facialis*

s., hard. Syphilitic chancre, * primary lesion of syphilis.

s., Oriental. SYN *tropical sore*, *Delhi boil* Cutaneous leishmaniasis.

s., pressure. A bedsore, *q.v.*

s., soft venereal. Soft, nonsyphilitic, venereal sore occurring on the genitalia. SYN: *chancroid*.

s. throat. Any inflammation of the tonsils, pharynx or larynx.

s. f., diphtheritic. Croupous tonsillitis

s. f., quinsy. Peritonsillar abscess. SEE: *quinsy*

s. f., septic. Severe, epidemic, pseudo-membranous inflammation of fauces and tonsils caused by the hemolytic streptococcus.

s. f., spotted. Follicular tonsillitis.

s. f., ulcerated. Pharyngitis with formation of gangrenous patches

s., tropical. SEE *Oriental sore*

s., venereal. SEE *soft venereal sore*

soroche (sō-rō'kā, or skō-). Mountain sickness, esp. that occurring in the Andes.

sororiation (so-ror-i-ā-shūn) [L *sororiāre*, to increase together]. Growth of the breasts at puberty.

s.o.s. Abbr. for *si opus sit*, if necessary or required.

souffle (soof'fl) [Fr. *souffle*, a puff]. A

soft blowing sound heard in auscultation; a bruit; an auscultatory murmur.

s., cardiac. Heart murmur.

s., fetal. The soft blowing sound heard over the location of the umbilical cord of the fetus in *utero* and synchronous with the fetal heartbeat during late pregnancy.

s., funic, **s., funicular**, **s., umbilical**. Same as fetal souffle.

s., splenic. Sound heard over spleen in malaria

s., uterine. Sound caused by blood entering dilated arteries of uterus in last months of pregnancy, synchronous with maternal pulse. It is more frequent than the fetal souffle and is heard as a loud blowing murmur along left side of uterus, and frequently all over it. An enlarged uterus may cause it. That of pregnancy is variable, whereas other forms are constant.

sound (sownd) [L *sonus*, sound]. 1 Auditory sensations produced by vibrations; noise. It is measured in decibels, *q.v.* and advances geometrically; thus 20 d. represents not twice 10 d, but ten times as much. Conversation represents 90 d's. Exposure to 130 d. for ten minutes in any 24 hrs. should call for a weekly hearing test A 90 d noise over an extended period may permanently injure one's hearing. SEE: *decibel*, *noise*, *sonic boom*. 2 A form of vibrational energy that gives rise to auditory sensa-

tions SEE: *sonic boom*, *cochlea*, *ear*, *organ of Corti* 3. Healthy, not diseased.
4. Heart sounds. 5. [Fr. *sonder*, to probe] Instrument for introduction into a cavity or canal for diagnosis or treatment SEE: *diastole*, *systole*, *sonic boom*

s., anasarca. Moist sound heard on auscultation when skin is edematous.

s., blowing. Organic murmur as of air from an aperture expelled with moderate force

s., bottle. Noise as of fluid in a bottle SYN *amphoric** *murmur*.

s's., breath. Respiratory sounds heard on auscultation of the chest In a normal chest they are classified as *vesicular*, *tracheal*, and *bronchovesicular*

s., bronchial. Sound not heard in normal lung but occurring in pulmonary disease indicating infiltration and solidification of lung

s's., bronchovesicular. A mixture of bronchial and vesicular sounds

s., cracked-pot. A tympanic resonance heard over pulmonary cavities

s., fetal heart. One made by the fetal heart

s., friction. One produced by rubbing together of 2 inflamed mucous surfaces.

s's., heart. The two sounds, "lubb" and "dupp" resulting from closure of atrioventricular and semilunar valves SEE *heart*, *auscultation of*

s., to and fro. Rasping friction sounds of pericarditis.

s., tracheal. That normally heard over the trachea of larynx

s., tubular. Sound heard over the trachea, or large bronchi

s., vesicular. Sound heard over entire lung during inspiration resulting from distention of alveoli with air

sound, words pert. to: *amphoric*, *anacampsis*, *apthongia*, *aspirate*, *auscultation*, *bell-metal resonance*, *bourdonnement*, *capotement*, *caverniloquy*, *clang*, *clapotage*, *clapotement*, *heart*, *hyperacustis*, *murmur*, *r  le*, *resonance*, *souffle*, *stridulous*, *succussion*, *uterus*

soybean (sol'b  n) [Japanese *sh  y  *] (dried, flour, milk in this order). Av. Servino: 100 Gm. each Pro. 30 2, 45 0, 3 5; Fat 15.3, 11.0, 2.4; Carbo 33 1, 8.0, 0 6.

VITAMINS B++, ++, none. G++, none, none. (Milk) Ca 0 034, P 0.040.

sp. Abbr. for 1. *L spiritus*, spirit. 2. *Species*

spa. A mineral spring, esp one having healing properties

space (sp  s) [L. *spatium*, space]. An area, region, or segment

RS: *chondroporosis*, *circumscribed*.

s., axillary. The axilla or space beneath the arm.

s., circumlental. Space between equator of lens and ciliary body

s., epidural. S. bet the dura mater and vertebral periosteum, or bet. the bones of the cranium and the dura mater, assumed to be lymph spaces.

s's. (of) Fontana. Spaces in scleral meshwork in angle of iris through which aqueous humor passes from anterior chamber to canal of Schlemm

s., interfascial. Space of Tenon, *q.v.*

s., intervillous. Space in placenta which develops from early chorionic trophoblast. It forms a blood sinus in which chorionic villi of fetus are bathed in maternal blood received from uterine vessels.

s., Nuel's. Space bet. outer hair cells and rods in the organ of Corti.

s., perforated. S. pierced by blood

vessels at base of brain. SYN: *substantia perforata*.

s's. perivascular. SYN: *Spaces of Virchow-Robin*. Spaces within adventitia of larger blood vessels of the brain. They communicate with subarachnoid space

s., plantar. S. (1 of 4) bet. fascial layers of the foot. When the foot is infected, pus may be found here.

s., popliteal. S. back of knee joint containing the popliteal artery and vein, and small sciatic and popliteal nerves

s., prezonular. The ant. portion of the posterior chamber of the eye.

s., Prussak's. S. in tympanum behind Shrapnell's membrane.

s., retropharyngeal. SYN: *retropharyngeal fascial cleft*. Space behind pharynx separating prevertebral from visceral fascia

s's., subarachnoid. SYN *intraleptomeningeal spaces* S. bet the pia mater and arachnoid containing the cerebrospinal fluid The spaces, esp in the cranium, are transversed by numerous trabeculae

s., subdural. Narrow space between dura and the arachnoid

s., suprasternal. SYN *space of Burns*. Triangular space immediately above sternum between layers of deep cervical fascia

s., Tenon's. Lymph s bet. the sclera and Tenon's capsule.

s., thenar. SYN *lateral palmar space*. A deep fascial space in the hand lying anterior to adductor pollicis muscle

s., tissue. Any space within tissues, not lined with epithelium and containing tissue fluid

s's., zonular. Spaces within zonule (suspensory ligament of lens).

spaghetti (sp  -g  t'i) [Italian *spaghetto*, little cord] Av SERVINO 100 Gm. Pro 12 1, Fat 0 4, Carbo 75 9, Ca 0 004 P. 0 025

Spanish fly (sp  n'ish fli). A strong rubefacient and blistering agent, diuretic stimulant to reproductive and urinary organs. SYN *cantharides*.

spanogyny (sp  n-  j'i-ni) [G. *spanos*, scarce, & *gyn  *, a woman] More males than females, decrease in female births

sparer (sp  r'er) [AS *sparian*, to refrain]. A substance destroyed by catabolism, but which, nevertheless, lessens catabolic action upon other substances.

s., protein. Carbohydrates and fats, so designated because their presence in diet prevents tissue proteins from being utilized as a source of energy.

sparganosis (spar-g  n-  s'is). Infestation with a variety of *Sparqanum*.

Sparganum. The plerocercoid larva of tapeworms, esp. those of the genus *Dibothriocephalus*.

S. mansoni. An elongated plerocercoid, 3-14 in. in length found in muscles and connective tissue, esp. that around eye. Common in Far East.

S. mansonioides. Species occasionally occurring in US. Adult unknown.

S. proliferum. Minute form infesting man and producing acne-like nodules. It is thought to proliferate by means of budlike outgrowths. Adult unknown

spargosis (spar-g  s'is) [G. *sparg  sis*, swelling]. 1. Distention of the female breasts with milk. 2. Swelling or thickening of the skin. SYN: *elephantiasis*

spark coil. Coil consisting of primary and secondary coils with an interrupted current passing through them. SYN: *induction coil*.

s. gaps. Arrangement of opposed

points or surfaces, between which an electric spark may jump.

An adjustable gap between needle points or between spheres is used to measure high potentials. For spark-over voltages see American Institute of Electrical Engineers Standardization Rules.

s. g., quenched. A multiple spark gap with numerous electrodes about 0.3 mm. apart and equipped with a copper air-cooling device.

sparteine sulfate (spar'tén) [L. *spartium*, broom]. The salt of an alkaloid obtained from *Scoparius*.

Uses. Once regarded as of value in cardiac diseases, and as a diuretic.

Dosage $\frac{1}{2}$ gr. (0.03 Gm.).

spasm (spáz'm) G. *spasmos*, a convulsion]. An involuntary, sudden movement or convulsive muscular contraction.

Spasms may be *clonic* (characterized by alternate contraction and relaxation) or *tonic* (sustained). They may involve either visceral (smooth) muscle or skeletal (striated) muscle. When contractions are strong and painful, they are called *cramps*.

The effect depends upon the part affected. *Asthma* is assumed to be due to spasm of muscular coats of smaller bronchi, *renal colic* to spasm of muscular coat of the ureter.

Treatment: General measures to reduce tension, induce muscle relaxation and improve circulation. Specific measures include analgesics for relief of pain, physiotherapy (heat, diathermy, electrical therapy). Special orthopedic supports or braces are sometimes effective. For spasm of visceral muscles, psychotherapy is often necessary. For vascular spasm, chemical sympathectomy may give relief. Dietary and hygienic factors should be checked.

s., Bell's. Convulsive tic of the face.

s. center. Point in the oblongata where it meets the pons.

s., choreiform. Spasmodic movements resembling chorea.

s., clonic. Intermittent contractions and relaxation of muscles.

s. of esophagus. Paroxysmal dysphagia (inability to swallow), often associated with a sense of constriction in the chest. Little or no loss of flesh.

Proc. For life, good, but indefinite as regards duration.

Treatment: Search for exciting cause and remove. Treatment largely dietetic, hygienic and psychologic. Systematic passage of a bougie may be of great value. A mild electrical current may be applied through the bougie.

Characterized by intense dyspnea and occurs in spasmodic croup, true croup, ulceration of larynx, laryngismus stridulus, whooping cough, tetany, hysteria, hydrophobia. Laryngeal crises of locomotor ataxia, when foreign bodies have lodged in larynx, when aneurysms or mediastinal tumors press on recurrent laryngeal nerve and irritate it.

s., habit. Spasms due to habit.

s., nodding. A psychogenic condition in adults, causing nodding of the head from clonic spasms of the sternomastoid muscles. A similar nodding in babies with head turning from side to side.

s., saltatory. Term employed to designate a condition allied to hysteria, in which a violent spasm seizes the muscles of the leg as soon as the feet touch

the ground and as a result patient is thrown violently in the air.

s., tetanic. S. in which contractions continue for a time without interruption.

s., tonic. Continued involuntary contractions.

s., torsion. Spasm characterized by a turning of a part, esp. the turning of the body at the pelvis.

s., toxic. S. due to poison.

s., winking. *Spasmus nictitans*, *q v*

spasm, words perf. to: camptospasm, carpopedal, child crowing, chirospasm, Chvostek's sign, clonic, clonuspasm, clonus, facial, habit, hypertonus, mobile, Raynaud's disease, spasticity, tetanus, tetany, tic douloureux, tonic spasm, trismus.

spasmodic, spasmodic (spáz-mát'ík, -mód'ík) [G. *spasmos*, a convulsion]. Pert. to, like, or marked by, spasm. See *cholepathia spastica*.

s. asthma. A. caused by spasm of the bronchioles.

s. croup. *Laryngismus stridulus*.

s. stricture. Temporary narrowing of any canal, as the urethra, due to localized spasmodic muscular contraction of its coat.

spasmology (spáz-mól'ō-jī) [" + *logos*, a study]. The study of spasms, their nature and cause.

spasmolygmus (spáz-mō-līg'mús) [" + *lygmōs*, a sob]. 1. Spasmodic hiccup. 2. Spasmodic sobbing.

spasmolytic (spáz-mō-līt'ík) [" + *lysis*, dissolution]. Checking or that which checks spasms.

spasmodomyorrhea (spáz'mō-mīks-or-re'ā) [" + *myxa*, mucus, + *rhoia*, flow]. Excessive secretion of intestinal mucus. Syn. *myzorrhoea intestinalis*.

spasmophemia (spáz-mō-fē'mī-ā) [G. *spasmos*, convulsion, + *phēmē*, speech]. A spasmodic disorder of speech. Syn. *stuttering*.

spasmophilia (spáz-mō-fīl'ī-ā) [" + *philein*, to love]. A tendency to tetany and convulsions; almost always associated with rickets.

spasmodic (spáz'mús) [G. *spasmos*, convulsion]. Of the nature of a spasm.

spasmus (spáz'mús) [L. from G. *spasmos*, convulsion]. A spasm.

s. agitans. Paralysis agitans, *q v*.

s. bronchialis. Bronchial asthma.

s. caninus. Spasm of face causing a constant grin. Syn. *risus sardonicus*.

s. coordinatus. Imitative or compulsive movements, as mimic tics or festination.

s. cynicus. Spasmodic contraction of muscles on both sides of the mouth.

s. Dublini. Rhythmic contractions, in rapid succession, of a group or groups of muscles, starting at an extremity or half of the face, and covering a large part or all of the body. Proc. Usually fatal. Syn. *electric chorea*.

s. glottidis. Spasm of larynx. Syn. *laryngismus stridulus*.

s. intestinum. Pain in intestines. Syn. *enteralgia*.

s. nictitans. A winking movement of the eyelid.

s. nutans. Nodding spasm.

s. oculi. Nystagmus, *q v*.

spastic (spás'tík) [G. *spastikos*, convulsive]. Resembling or of the nature of spasms or convulsions.

s. gait. A stiff movement with toes seeming to catch together and to drag.

s. hemiplegia. Partial hemiplegia with spasmodic muscular contractions.

s. paralysis. Muscular rigidity ac-

companied partial paralysis. Usually due to a lesion involving upper motor neurons.

s. paraplegia. P. due to transverse lesions of the cord or sclerosis.

spasticity (spás-tis'ti-lí) [G. *spastikos*, convulsive]. Hypertension of muscles causing stiff and awkward movements; the result of upper motor neuron lesion.

spatial (spá'shál). Pertaining to space.

s. discrimination. Syn. *two-point discrimination*. Ability to perceive as separate points of contact the two blunt points of a compass when applied to the skin.

spatula (spát'ú-lá) [L. *spatula*, a little sword]. Instrument for spreading or mixing semisolids.

It is usually flat, thin, somewhat flexible and shaped like a knife.

s. eye. Blades for separating lips of corneal wounds, arresting hemorrhage or for making pressure, sheet metal or rubber.

s. nasal. Device for holding mucous flaps in place or to guard against burning from cautery.

spay (spá) [Gael. *spoth*, castrate]. Surgical removal of ovaries, usually said of animals. See *castration*.

specialist (spesh'ál-ist) [L. *specialis*, special]. A physician who treats a special type of disease.

species (spé'shēz) [L. *species*, a kind]. Biol. Category of classification, a subdivision between a genus and a variety in which all the individuals are almost identical.

specific (spé-sif'ík) [L. *specificus*, pert. to a kind]. 1. A remedy having a curative effect on a particular disease or symptom. 2. Pert. to a species. 3. A disease always caused by the same organism. 4. Restricted, explicit, not generalized.

s. dynamic action. Abbr SDA. The increase in metabolic rate resulting from absorption of food. For protein it amounts to about 30%, for carbohydrates, 7%, and for fats, 4%.

s. gravity. Weight of a substance compared with an equal volume of water. Water is represented by 1 000.

specificity (spé-sif-itis'ti) [L. *specificus*, pert. to a kind]. State of being specific; having a relation to a definite result, or to a particular cause.

specillum (spé-sil'lum) [L. *specillum*]. 1. Lens. 2. Button-shaped silver probe.

specimen (spēs'ti-mén) [L. from *specere*, to look]. A part of a thing intended to show kind and quality of the whole, as a specimen of urine.

spectacles (spék'ták-lz) [L. *spectare*, to see]. Two lenses supported by a nose bridge and side pieces passing over the ears, to aid vision or protect the eyes.

spectro- [L.]. Combining form meaning appearance, image, form, spectrum.

spectrocolorimeter (spék-tró-kul-or-im'ët-ér) [L. *spectrum*, image, + *color*, color, + G. *metron*, measure]. Device for detecting color blindness by isolating a single spectral color.

spectrograph (spék'tróm-ëf-gráf) [G. *graphein*, to write]. An instrument designed to photograph spectra on a sensitive photographic plate.

spectrometer (spék-tróm-ët-ër) [G. *metron*, a measure]. A spectroscopic device constructed that angular deviation of a ray of light produced by a prism or by a diffraction grating thus indicates the wave length.

spectrophotometer (spék'trô-fô-tóm-ët-ër) [G. *phôs*, light, + *metron*, a

measure]. Device for measuring amt. of color in a solution by comparison with the spectrum.

spectrophotometry (spék'trô-fô-tóm-ët-ri) [G. + *metron*, a measure]. Estimation of coloring matter in a solution by use of the spectroscopic, or spectrophotometer.

spectrophotometer (spék'trô-pír-hē-ll-ôm-ët-ër) [G. *pyr*, fire, + *hēlios*, sun, + *metron*, a measure]. Instrument to measure solar radiation.

spectroscope (spék'trô-skóp) [G. + *skopein*, to examine]. An instrument for separating radiant energy into its component frequencies or wave lengths by means of a prism or grating to form a correct spectrum for inspection.

spectroscopy (spék-trôs'kô-pli) [G. + *skopein*, to examine]. The branch of physical science that treats of the phenomena observed with the spectroscopic, or those principles on which its action is based; also, the art of using the spectroscopic.

spectrum (spék'trum) [L. image]. Charted band of wave lengths of electromagnetic vibrations obtained by refraction and diffraction of ray of white light.

The visible spectrum consists of the colors from red to violet with wave lengths of 3900 Å to 7700 Å. When white light is passed through a prism, the various colors, because of different wave lengths, are refracted to various degrees giving rise to the diverse colors of the rainbow. These are violet, indigo, blue, green, yellow, orange, and red.

The invisible spectrum includes rays less than 3900 Å in length (ultraviolet, roentgen or X, gamma, and cosmic rays) and those exceeding 7700 Å in length. The latter include infra-red rays, high frequency oscillations used in short and long wave diathermy, radio, hertzian and very long electric waves. These range in length from 7700 Å to 5,000,000 meters.

s. invisible. Spectral portion either below the red (infrared) or above the violet (ultraviolet), which is invisible to the eye, the waves being too long or too short to affect the retina.

s. visible. Seven colors from red to violet.

speculum (spék'û-lum) (pl. *specula*) [L. *speculum*, a mirror]. 1. Instrument for examination of canals. 2. Membrane separating ant. cornua of lateral ventricles of brain. Syn: *septum pellucidum*.

s. ear. Short, funnel-shaped tubes, tubular or bivalve; former preferable.

s. eye. Device for separating eyelids. Plated steel wire, plain. Von Graefe's, Steven's or Luer's, most common.

speech. 1. Verbal expression of one's thought. 2. The act of uttering articulate words or sounds. 3. Words that are spoken. Primatively, certain crude sounds served as warnings or threats in much the same way as did facial and bodily expressions. As sounds became highly differentiated, each became associated, and gradually identified with a certain idea.

These word-symbols are a most valuable tool in ideation and thinking is very largely dependent on this internal speech. Further identifications have made possible visual symbols (written language); though primitive written language was entirely unrelated to series of pictures and crude representations.

External speech requires the coordination of larynx, mouth, lips, chest, and abdominal muscles. These have no special innervation for speech but the upper neurons respond to complex motor pattern fields which convert the idea into suitable motor stimuli.

s. abnormalities. Speech failure results in *motor aphasia* in which the patient is speechless but there is no paralysis of muscles of articulation. Although unable to express his thoughts in words, the patient can still understand what he hears and reads.

Labialism is the excessive use of labial sounds.

Absent speech or hoarseness may be part of a hysteria, in epilepsy one finds a monotonous "woody" sound. Aphasias are also described as sensory.

When a word is heard, but the patient has no idea of its meaning, we speak of word-deafness. Similarly, word-blindness means that the written symbol might as well be a foreign word. This is sometimes called *alexia*. * *Aphasia* * in right-handed patients is classically referable to left-handed brain lesions, but the concept of centers for internal speech esp. is rather misleading. It is probably a diffuse cortical activity and countless minor distortions occur in addition to those mentioned. Chief of those not enumerated is the slurring speech of *paresis*; here letters and syllables are omitted without recognition of defect, and this further identifies the abnormality *Dysarthria* * describes any defect of articulation; muscular tone disturbances as seen in cerebellar disease, chorea, paralysis agitans, lenticular degeneration, multiple sclerosis producing jerky, monotonous or scanning speech.

Paralysis due to bilateral medullary pathology results in indistinct enunciation (mouthful speech) often entirely unintelligible. *Pseudobulbar palsy* (as in cases of double hemiplegia) adds a myastasic characteristic. Peripheral nerve lesions, cleft palate, adenoids, myasthenia gravis, merely suggest the many possible modifications.

Stammering and stuttering are probably psychogenic.

Emotional values may be added to speech qualities; tremulousness and tension may render the voice high-pitched, irritating, or unsustained and broken. Emotional flattening may occur in the neuroses and psychoses. In the latter, diagnostic changes may occur in the stream of talk.

Slowing is common in all depressed states. When complete (mutism) it suggests the negativism esp. likely to occur in schizophrenia. Aphonic-like aphasia patients will find some means of communication.

Excessive talk flow is seen in mania and excited states generally. When merely voluble but relevant, it constitutes circumstantiality. If the goal ideal is lost, irrelevancy is associated with a "flight of ideas"—in extreme form a "word salad." The manner of speech often mirrors the mood.

Neologisms are words created by the patient, often of no apparent significance.

Stereotyped speech is constant repetition of a word or phrase. It should be distinguished from *perseveration* in which the repetition is against the intention or wishes of the patient.

Amentia * invariably delays speech ap-

pearance and its faulty development is of diagnostic value. Its delayed or non-appearance may be referable to deafness (deaf-mutism). Childish indistinctness (e. g., r's replaced by w's) may persist in feeble-minded adults (*lalling-smudging*).

s., aphonic. Whispering.

s., ataxic. Defective speech resulting from muscular incoordination usually the result of cerebellar disorder.

s., clipped. Same as scamping speech.

s., echo. Parrotlike repetition of words spoken by others. **SYN:** *echolalia*.

s., interjectional. Speech characterized by inarticulate sounds.

s., mirror. Reversing the order of syllables of a word.

s., scamping. Omission of consonants or syllables when unable to pronounce them.

s., scanning. A staccato-like speech with pauses bet. syllables.

s., slurring. Slovenly articulation of letters difficult to pronounce.

s., staccato. Slow and laborious speech with each syllable pronounced separately, as in multiple sclerosis.

speech, words pert. to: *acataphasia*, aliteration, allolalia, alogia, anarthria, literalis, anchone, angophrasia, aphasia, aphemia, aphonia, aphrasia, aphthenia, apthongia, articulation, asaphia, ataxophrasia, baryglossia, baryllia, baryphonia, betacism, bradyarthria, bradylalia, bradyphrasia, bradyphrenia, bredouillement, cataphasia, deaf mute, divagation, dysllalia, dysphasia, dysphemism, dysphonia, egophony, hyperplasia, labialism, lallation, latopathy, laloplegia, monophasia, mute, mutism, nyctophonia, onomatomania, onomatopoeism, oxyllalia, pallinphrasia, perseveration, scanning speech, speech center, stammering, stutter, tachyphasia, Wernicke's syndrome.

spend (spënd) [L. *dispendere*, to expend]. To ejaculate semen in coitus or masturbate, or during sleep.

sperm (sperm) [G. *sperma*, seed]. 1. The male germ cell. 2. Male fertilizing secretion. **SYN:** *semen*.

s., cell. A spermatozoon or spermatid.

s., center. The spermatozoon's centrosome during fertilization.

s., nucleus. That of a spermatozoon.

sperma (sper'mä) [G. *sperma*, seed]. 1. Testicular secretion containing the male reproductive cells. **SYN:** *semen*. 2. Individual male germ cell.

spermacrasia (sper'mäk-rä'zi-ä) [" + *akrasia*, bad mixture]. Lack of spermatozoa in the semen.

spermatemphraxis (sper-mät-ëm-fräks'is) [" + *emphraxis*, stoppage]. An obstruction to emission of semen.

spermatic (sper-mät'ik) [G. *sperma*, semen]. Pert. to semen or sperm.

s., arteries. Two long, slender vessels, branches of the abdominal aorta, following each spermatic cord to the testes.

s., cord. The cord suspending the testis composed of *veins*, *arteries*, *lymphatics*, *nerves*, and the *vas deferens*. **SEX:** *cord*, *infundibuloform*, *varicocele*.

s., duct. Canal for passage of semen, esp. the *ductus deferens* and the *ejaculatory duct*.

s., vein. One of two veins draining the testes. The right one empties into the inferior vena cava, the left one into the left renal vein. In the spermatic cord, each forms a dilated *pampiniform plexus*.

spermatoidal (sperm'ät-i-sld'äl). De-

- structive to or causing the death of spermatozoa.
- spermatid** (sper-mā-tīd) [G. *sperma*, seed]. A cell arising by division of the secondary spermatocyte to become a spermatozoon.
- spermatin** (sperm-ā-tin) [G. *sperma*, seed]. A mucilaginous substance in the semen.
- spermatism** (sper-mā-tizm) [G. *sperma*, seed, + *-ismos*, condition]. Ejaculation of semen, voluntarily or otherwise.
- spermatitis** (sper-mā-tī'tis) [“ + *-itis*, inflammation]. Inflammation of the spermatic cord or of the vas deferens. SYN: *deferentitis*, *funiculitis*.
- spermato-** [G.]. Combining form meaning *sperm*, to sow seed.
- spermatoblast** (sper-māt-ō-blāst) [G. *sperma*, spermato-, seed, + *blastos*, germ]. The rudimentary spermatozoon. SYN: *spermatid*.
- spermatocele** (sper-māt-ō-sēl) [“ + *kēlē*, mass]. A cystic tumor of the epididymis containing spermatozoa.
- spermatocidal** (sper-mā-tō-sī-dāl) [“ + *L. cidus*, from *caedere*, to kill]. Destroying spermatozoa.
- spermatocyst** (sper-māt-ō-sist) [“ + *kystis*, a sac]. 1 A seminal vesicle. 2 Tumor of epididymis containing semen. SYN: *spermatocele*.
- spermatocystectomy** (sper-māt-ō-sis-tēk-tō-mī) [“ + *ektomē*, excision]. Removal of the seminal vesicles.
- spermatocystitis** (sper-māt-ō-sis-tī'tis) [“ + *-itis*, inflammation]. Inflammation of a seminal vesicle. SYN: *seminal vesiculitis*.
- spermatocystotomy** (sper-māt-ō-sis-tōt-ō-mī) [“ + *tomē*, a cutting]. Incision into a seminal vesicle for drainage.
- spermatocyte** (sper-māt-ō-sīt) [“ + *kytos*, cell]. A cell originating from a spermogonium, and which forms by division the spermatids which give rise to spermatozoa.
- s. primary**. Cell arising by growth and development from a spermogonium.
- s. secondary**. Cell arising from primary spermatocyte by a mitotic division. It undergoes a second mitotic division, giving rise to two spermatids with haploid number of chromosomes.
- spermatogenesis** (sper-māt-ō-jēn-ē-sis) [“ + *genesis*, produce]. The formation of mature functional spermatozoa. In the process, undifferentiated spermogonia become primary spermatocytes each of which divides to form two secondary spermatocytes. Each of these divide to form two spermatids which transform into functional motile spermatozoa. In the process the chromosome number is reduced from the diploid to the haploid number. SEE *gametogenesis*, *maturation*, *mitosis*.
- spermogonium** (sper-māt-ō-gō-nī-ūm) (pl. *spermogonia*) [“ + *gonē*, generation]. A large unspecialized germ cell which in spermatogenesis gives rise to a primary spermatocyte. SEE: *spermatogenesis*.
- spermatoid** (sper-māt-ōyd) [“ + *eidōs*, form]. Resembling a spermatozoan.
- spermatology** (sper-mā-tō-lō-jī) [“ + *logos*, a study]. The study of the seminal fluid.
- spermolysis** (sper-māt-ō-lī-tin) [“ + *lysis*, dissolution]. A lysis destroying spermatozoa.
- spermolysis** (sper-māt-ō-lī-tis) [“ + *lysis*, dissolution]. Dissolution or destruction of spermatozoa.
- spermatolytic** (sper-māt-ō-līt'ik) [“ + *lysis*, dissolution]. Destroying spermatozoa.
- spermatothia**, **spermatothia** (sper-mā-tō-pāth'ī-ā, sper-māt-ōp'ā-thī) [“ + *pathos*, disease]. Disease of sperm cells or their secreting glands or ducts.
- spermatothobia** (sper-māt-ō-fō-bī-ā) [“ + *phobos*, fear]. Abnormal fear of being afflicted with spermatorrhea, involuntary loss of semen.
- spermatothia** (sper-māt-ō-plā-nī-ā) [“ + *planē*, a wandering]. An assumed metastasis of semen.
- spermatothetic** (sper-māt-ō-poy-ēt'ik) [“ + *poiein*, to make]. Promoting the formation and secretion of semen.
- spermatorrhea** (sper-māt-ōr-ē-ā) [“ + *rhoia*, a flow]. Abnormally frequent, involuntary loss of semen without orgasm.
- spermatothysis** (sper-māt-ōs-kē-sis) [“ + *schesis*, a checking]. Suppression of the seminal fluid.
- spermatothys** (sper-māt-ō-spōr) [“ + *sporos*, a seed]. A primitive cell from which spermatozoa arise. SYN: *spermogonium*.
- spermatothys** (sper-māt-ō-tōks'in) [“ + *toxikon*, poison]. A toxin which destroys spermatozoa. SYN: *spermatothys*.
- spermatothys** (sper-māt-ō-vūm) [“ + *L. ovum*, egg]. A fecundated or impregnated ovum.
- spermatothys** (sper-mā-tōks'in) [“ + *toxikon*, poison]. A toxin which causes destruction of spermatozoa.
- It is formed by injecting spermatozoa from animal of another species.
- spermatothys** (sper-māt-ō-zō-ā) [“ + *zōon*, life]. Plural of spermatozoon.
- spermatothys** (sper-māt-ō-zō-ōn) (pl. *spermatozoa*) [“ + *zōon*, life]. The mature male sex or germ cell formed within the seminiferous tubules of the testes.
- The spermatozoon has a broad, oval, flattened head with a nucleus and a protoplasmic neck or middle piece and tail. It is about 1/500 in. in length and resembles a tadpole.
- It has the power of self-propulsion by means of a flagellum. Developed after puberty from the spermatids in the testes in enormous quantities. The head pierces the envelope of the ovum and loses its tail when fusion of the 2 cells takes place.
- RS: *acrosome*, *fertilization*, *gamete*, *ovum*, *semen*, *sperm*, *zoosperm*, *zygote*.
- spermaturia** (sper-māt-ō-rī-ā) [G. *sperma*, seed, + *ouron*, urine]. Semen discharged with the urine.
- spermectomy** (sper-mēk'tō-mī) [“ + *ektomē*, excision]. Resection of a portion of the spermatic cord and duct.
- spermic** (sper'mik) [G. *sperma*, seed]. Concerning sperm, male reproductive cells.
- spermicidal** (sper'mī-sī-dāl) [“ + *L. cidus*, from *caedere*, to kill]. Killing spermatozoa.
- spermicide** (sper'mī-sīd) [“ + *L. cidus*, from *caedere*, to kill]. An agent which kills spermatozoa.
- spermidine**. A protein isolated from spermatozoa.
- spermiduct** (sper'mī-dūkt) [“ + *L. ductus*, a duct]. The ejaculatory duct and vas deferens considered as one.
- spermine**. A protein isolated from spermatozoa.
- spermogenesis**. The processes involved in the transformation of a spermatid to a functional spermatozoon.
- spermium**. A spermatozoon, *q.v.*
- spermoblast** (sper-mō-blāst) [“ + *blastos*, a germ]. A cell developing into a sper-

matoozon. SYN: *spermatoblast* or *spermatid*.

spermolith (sper'mō-lith) [+ lithos, stone]. A calculus in the seminal vesicle or spermatic duct.

spermolysin (sper-mō-'līs'in). A cytolytic formed following the inoculation of spermatozoa.

spermolytic (sper-mō-lī'tik) [+ lysis, dissolution]. Causing the destruction of spermatozoa.

spermoneuralgia (sper'mō-nū-rāl'jī-ā) [+ neuron, nerve, + algos, pain]. Neuralgic pain in the testicles and spermatic cord.

spermophlebectasia (sper'mō-nē-bēk-tā'-zī-ā) [+ phleps, phleb-, vein, + ek-tasis, dilatation]. Varicosity of the spermatic veins.

spermoplasm (sper'mō-plāzm) [+ plasma, a thing formed]. The protoplasm of a male germ cell.

spermosphere (sper'mō-sfēr) [+ sphaira, a circle]. Mass of spermatoblasts derived from spermatogonia.

spermospore (sper'mō-spōr) [+ sporos, seed]. A primitive cell from which spermatozoa originate. SYN *spermatogonium*, *spermatospore*.

sp. gr. Abbv for *specific gravity*
spes phthisica (spēs' tīz'ik-ā) [L *spēs*, hope, + *phthisis*, consumption]. A sense of well-being, happiness, and hopefulness in patients ill with tuberculosis.

The cause may be an underlying fear from which the patient tries to escape, and accomplishes it by repression, which manifests itself by characteristic behavior of the opposite extreme.

sphacelate (sfās-ēl-āt) [G *sphakelos*, gangrene]. 1. To affect with gangrene. 2. Gangrenous. SYN *mortified*, *necrosed*.

sphacelation (sfās-ēl-ā'shūn) [G *sphakelos*, gangrene]. Mortification, formation of a mass of gangrenous tissue. SYN *gangrene*, *necrosis*.

sphacelism (sfās-ēl-izm) [+ -ismos, condition]. Condition of being affected with sphacelus, or gangrene. SYN *necrosis*.

sphaceloderma (sfās-ēl-ō-der'mā) [+ derma, skin]. Gangrene of the skin, esp. when symmetrical. SEE *Raynaud's disease*.

sphacelotoxin (sfās-ēl-ō-tōks'in) [+ toxikon, poison]. Poisonous principle obtained from ergot used as an abortifacient. SYN *spasmodin*.

sphacelus (sfās-ēl-ūs) [G *sphakelos*, gangrene]. Pert to a slough or patch of gangrene. SYN *gangrenous*, *necrosed*, *necrotic*.

sphacelus (sfās-ēl-ūs) [G *sphakelos*, gangrene]. 1. A necrosed mass of tissue. SYN: *slough*. 2. Process of becoming gangrenous. SYN *gangrene*, *mortification*, *necrosis*.

sphaglasmus (sfā-jē-āz'mūs) [G *sphaglasmos*, a slaying]. Spasm of neck muscles occurring in an epileptic seizure.

sphagitis (sfā-jī'tīs) [G *sphagē*, throat, + -itis]. Inflammation of the throat.

sphenon (sfē'nī-ōn) [G *sphēn*, wedge]. Point at apex of the sphenoidal angle of the parietal bone.

spheno- [G.]. Combining form meaning a wedge, the sphenoid bone.

sphenothmoid (sfē'nō-ēth'moyd) [+ ēthmos, sieve, + eidos, form]. Pert. to the sphenoid and the ethmoid bones.
a. recess. Groove back and above the sup. concha, or turbinate bone.

sphenoid (sfē'noyd) [G *sphēn*, wedge, + eidos, form]. Cuneiform, or wedge-shaped.

s. bone. Large bone at base of skull

bet. occipital and ethmoid in front, and the parietals and temporal bones at the side.

s. fissure. Fissure in sphenoid and frontal bones for nerves and blood vessels.

SPHENOID BONE.
(superior side)

1. Body. 2. Sella turcica. 3. Small wing. 4. Anterior clinoid process. 5. Tuberculum sella. 6. Great wing. 7. Pterygoid process.

sphenoiditis (sfē-noy-dī'tīs) [G. *sphēn*, wedge, + *eidos*, form, + -itis, inflammation]. 1. Inflammation of the sphenoidal sinus. 2. Necrosis of the sphenoid bone.

sphenoidotomy. Incision into sphenoid bone.

sphenomaxillary (sfē'no-māks'ī-lā-rī) [+ L. *maxilla*, jaw]. Concerning the sphenoid and the maxilla.

sphenopalatine (sfē'nō-pāl'āt-ēn) [+ L. *palatum*, palate]. Concerning the sphenoid and palatine bones.

sphenosis. Condition in which fetus becomes wedged in pelvis.

sphenotresia (sfē'nō-trē'zī-ā) [+ *trēsīs*, a boring]. Perforating of the basal part of the fetal skull in craniotomy.

sphenotribe (sfē'nō-trīb) [+ *tribeire*, to crush]. Instrument for breaking up basal part of fetal cranium.

sphere (sfēr) [G. *sphaira*, a globe]. 1. A ball or globelike structure. 2. The limited space of one's action, esp. that in which one is most capable.

s., attraction. SYN *cell center*. A clear region in cytoplasm close to nucleus and usually containing a centriole or diplosome (a divided centriole).

spheresthesla (sfē-rēs-thē'zī-ā) [+ *asthēsis*, sensation]. A morbid sensation, as of swallowing a globe in the throat.

spherical (sfēr'ī-kāl) [G. *sphaira*, a globe]. Having the form of, or pert. to, a sphere. SYN: *globular*.

spherocyte. An erythrocyte which assumes a spheroid shape.

spherocytosis (sfēr-ō-sī-tō'sīs). Condition in which erythrocytes assume a spheroid shape. Occurs in certain hemolytic anemias.

spheroid (sfēr'oyd) [+ *eidos*, form]. 1. A body shaped like a sphere. 2. Sphere-shaped.

spherolith (sfēr-ō-lith) [+ lithos, a stone]. A minute concretion in the kidney of the newly born.

spheroma (sfēr-ō-mā) [+ -ōma, tumor]. A tumor of spherical form.

spherometer (sfēr-rōm-ēt-ēr) [+ *metron*, a measure]. Device to ascertain curvature of a surface.

spherospermia (sfēr-rō-sper'mī-ā) [+ *sperma*, seed]. Round spermatozoa without tails.

spherule (sfēr'ūl) [L *sphaerula*, a little

globe]. 1. A very small sphere. 2. A minute granule found in center of a centromere of a chromosome.

sphincter (sfɪŋk'tər) [G. *sphigktēr*, a binder]. Circular muscle constricting an orifice. *See: tenesmus*.

s. ampullae. Delicate network of fibers about ampulla of Vater, occasionally present in adults, a part of *s. of Oddi*.

s. ani. S. that closes the anus, the external one being of striated muscle, the internal one, of plain muscle.

s. bladder. Plain muscle about opening of bladder into the urethra.

s. cardiac. Plain muscle about the esophagus at cardiac opening into the stomach.

s. choledochus. Smooth muscle investing common bile duct just before its junction with pancreatic duct; a part of *s. of Oddi*.

s. ileocecal. Plain muscle about the ileum at its opening into the cecum.

s. of Oddi. Contracted region in common bile duct at ampulla of Vater.

s. pancreaticus. Smooth muscle encircling pancreatic duct just before it joins ampulla.

s. pyloric. A thickening of the muscular wall around the pyloric orifice.

sphincteralgia (sfɪŋk-tər-āl'j-ā) [G. *sphigktēr*, a binder, + *algos*, pain]. Pain in the sphincter and muscles.

sphincterectomy (sfɪŋk-tər-ēk'tō-mī) [" + *ektomē*, excision]. 1. Dissection of any sphincter muscle. 2. Excision of part of the iris' pupillary border, oblique blepharotomy.

sphincterismus (sfɪŋk-tər-iz'mūs) [" + *ismos*, condition]. Spasm of sphincter and muscles.

sphincteritis (sfɪŋk-tər-ī'tis) [" + *-itis*, inflammation]. Inflammation of any sphincter muscle.

sphincterolysis (sfɪŋk-tər-ōl't-sis) [" + *lysis*, dissolution]. Freecing of the iris from the cornea in anterior synechia affecting only the pupillary border.

sphincteroplasty (sfɪŋk'tər-ō-plās'tī) [" + *plastēin*, to form]. Plastic operation upon any sphincter muscle.

sphincteroscope (sfɪŋk'tər-ō-skōp) [" + *skopein*, to examine]. Instrument for inspection of a sphincter.

sphincterotomy (sfɪŋk-tər-ōt'ōmī) [" + *tomē*, a cutting]. Cutting of a sphincter muscle.

sphygmīc (sfɪg'mīk) [G. *sphygmos*, pulse]. Relating to the pulse.

sphygmo- [G. *sphygmos*, pulse]. Combining form meaning the pulse.

sphygmobolometer (sfɪg'mō-bō-lōm'ē-tēr) [G. *sphygmos*, pulse, + *bōlos*, mass, + *metron*, a measure]. Device to measure force of the pulse rather than the blood pressure.

sphygmocardiogram (sfɪg'mō-kar'dī-ō-grām) [" + *kardia*, heart, + *gramma*, a mark]. A tracing made by a sphygmocardiograph of the heartbeat and radial pulse.

sphygmocardiograph (sfɪg'mō-kar'dī-ō-grāf) [" + " + *graphein*, to write]. Device for recording the radial pulse and the heartbeat.

sphygmocardioscope (sfɪg'mō-kar'dī-ō-skōp) [" + " + *skopein*, to examine]. Device for recording the action of the pulse and heart. *SYN: sphygmocardiograph*.

sphygmochronograph (sfɪg'mō-krō'nō-grāf) [" + *chronos*, time, + *graphein*, to write]. A sphygmograph recording graphically time bet. the heartbeat and the pulse.

sphygmogram (sfɪg'mō-grām) [" + *gramma*, a mark]. A tracing of the pulse made by using the sphygmograph.

sphygmograph (sfɪg'mō-grāf) [" + *graphein*, to write]. Instrument for recording differences of pulse beat in disease and health.

sphygmoid (sfɪg'moyd) [" + *eidōs*, form]. Resembling the pulse.

sphygmology (sfɪg'mō-lō-jī) [" + *logos*, a study]. The study of the pulse.

sphygmomanometer (sfɪg'mō-mān-ōm'ēt-ēr) [" + *manos*, thin, + *metron*, a measure]. Instrument for determining arterial pressure.

sphygmometer (sfɪg'mōm'ēt-ēr) [" + *metron*, a measure]. Instrument for measuring the pulse. *SYN: sphygmograph*.

sphygmophone (sfɪg'mō-fōn) [" + *phōnē*, a voice]. Instrument for hearing the pulse beat.

sphygmoplethysmograph (sfɪg'mō-plēth-iz-mō-grāf) [" + *plēthysmos*, increase, + *graphein*, to write]. Device which traces the pulse with its curve of fluctuation in volume.

sphygmoscope (sfɪg'mō-skōp) [" + *skopein*, to examine]. Instrument for showing the heart's movements or pulsations of arteries and veins.

sphygm systole (sfɪg'mō-sis'tō-lē) [" + *systolē*, contraction]. The segment of the pulse wave that corresponds to the heart's systole.

sphygmotonograph (sfɪg'mō-tō-nō-grāf) [" + *tonos*, tone, + *graphein*, to write]. An instrument for recording both blood pressure and pulse pressure.

sphygmotonometer (sfɪg'mō-tō-nōm'ēt-ēr) [" + " + *metron*, a measure]. Instrument for ascertaining elasticity of walls of an artery.

sphygmus (sfɪg'mūs). A pulse or pulsation.

sphryectomy (sfī-rēk'tō-mī) [G. *sphrya*, malleus, + *ektomē*, excision]. Surgical excision of the malleus.

sphryotomy (sfī-rōt'ō-mī) [" + *tomē*, a cutting]. Partial excision of the malleus.

spica (spī'kā) [L. *spica*, ear of grain]. A reverse spiral bandage, the turn of which crosses like letter V. *See: bandage*.

spicular (spīk'ū-lar) [L. *spiculum*, a dart]. Pert. to, or resembling, a spicule; dart-like.

spicule (spīk'ūl) [L. *spiculum*, a dart]. A small, needle-shaped body.

s. bony. A needle-shaped fragment of bone.

spiculum (spīk'ū-lūm) (pl. *spicula*) [L. *spiculum*, a dart]. A sharp, small spike. *SYN: spicule*.

spider (spī'dər). An insect, belonging to the order *Araneae*, sub-class *Arachnida*, class *Arachnoidea*, phylum *Arthropoda*. Body is divided into cephalothorax and abdomen joined by narrow waist, usually possess four pairs of legs, poison fangs, breathes by both lungs and trachea, and often possesses spinnerettes.

s. bites or poisoning. All spider bites are not dangerous.

SYN: In general, the victim is often bitten about the genitalia. Local symptoms are slight burning followed in about half an hour by severe radiating pains, often extending long distances from puncture. Sloughing at site and along lymphatics may occur. Collapse, uncon-

sciousness, convulsions, and death sometimes follow.

s., black widow. The female of *Latroctes mactans*. It is glossy black in color with a brilliant red or yellow spot, usually shaped like an hour-glass or two triangles, on under surface of the abdomen. Its bite causes excruciating pain and may prove fatal.

SYM. Initially, the sensation resembles the prick of a pin. From a few minutes to several hours later, severe pain radiates from the wound, becoming general and resulting in paroxysmal cramps, often accompanied by nausea, cold sweats, urinary retention and perhaps delirium. The symptoms may last for hours or for 2 or 3 days.

Avoid all stimulants. Suction is of little value as the toxin is rapidly absorbed. Calcium gluconate intravenously often gives relief from pain. Large doses of morphine, repeated when necessary, given slowly by vein, also controls pain. Heat, a hot tub, and forcing fluids also recommended. Serum treatment is not satisfactory. **SEE bites**

s. cells. Branching cells in neuroglia. **SEE: Deiter's cell, neuroglia cell.**

s. fingers. Abnormally long phalanges of the fingers. **SYN: arachnodactyly.**

s. nevus. A branched growth on the skin of dilated capillaries, resembling a spider. **SYN: nevus araneus.**

Spies' diet. One for pellagra

Brewer's yeast, milk eggs, lean meat and perhaps calves' liver, all in greater abundance than in Goldberger's diet.

spigelian line (spi-jel'ian) **SYN: linea semilunaris or semilunar line.** Line on abdomen lying parallel to median line and marking edge of rectus abdominis muscle.

s. lobe. A small lobe behind right lobe of liver. **SYN: lobus caudatus of liver.**

spill (spil) [A.S. *spillan*, to squander] An overflow.

s., cellular. Dissemination of cells through lymph or the blood resulting in metastasis.

spiloma, pilus (spi-lō'mā, spi'lūs) [G. *spilōma*, spot]. A mole or discoloration of skin. **SYN: nevus**

spiloplasia (spi'lō-plāk'si-ā) [G. *spilos*, spot, + *plax*, plate]. A red spot appearing in leprosy.

spina (spi'nā) (pl. *spinæ*) [L. *spina*, thorn]. 1 Any spinelike protuberance. 2 The spine.

s. bifida. Congenital defect in walls of spinal canal caused by lack of union bet. the laminae of the vertebrae.

Lumbar portion is part chiefly affected, 50% of all cases occurring in this region, 12% in lumbosacral, and 27% sacral.

SYM: As result of this deficiency the membranes of the cord are pushed through the opening, forming a tumor known as *spina bifida*, on account of condition of spine which gives rise to the deformity, and as *hydrorrhachis* on account of the fluid contained in the tumor.

s. bifida occulta. Failure of vertebrae to close but lacking hernial protrusion.

spinach (spin'ach) [Spanish *espinaca*]. **COMP:** Oxalates prevail. **AV. SERVING:** 75 Gm. **PRO. 1.6, Fat 0.2, Carbo. 0.8.** **VITAMINS:** A+++ , B++ , C+++ , G+++.

ASH CONST: Ca 0.067, Mg 0.027, K

0.774, Na 0.125, P 0.068, Cl 0.074, S 0.038, Fe 0.0036.

ACTION: Laxative, antitoxic and valuable for its mineral content. **SEX: atriplicism.**

spinal (spi'nāl) [L. *spina*, a thorn]. Pert. to the spine or spinal cord.

s. anesthesia. An anesthetic injected into the spinal canal.

RS: anesthesia, cisternal puncture, lumbar puncture, spinal puncture.

s. canal. Canal of the vertebral column. **RS. intrathecal, spina bifida, spinal puncture.**

s. column. The vertebral column enclosing spinal cord. Thirty-three bones in all, 7 cervical, 12 dorsal or thoracic, 5 lumbar, 5 sacral vertebrae forming 1 bone and 4 coccygeal vertebrae which, like the sacrum, are fused into 1 bone.

1
SPINAL CORD, CROSS SECTION OF

1. Thoracic Portion

A. Central canal B. Anterior horns. C. Anterior roots D. Posterior horns. E. Posterior roots F. Posterior columns. G. Lateral columns. H. Anterior columns. I. Clarke's columns.

2. Cervical Enlargement.

A. Central canal B. Anterior horns. C. Anterior roots D. Posterior horns. E. Posterior roots F. Posterior columns. G. Lateral columns. H. Anterior columns.

s. cord. An ovoid column of nervous tissue about 44 cm. long, flattened anteroposteriorly, extending from the medulla to the 2nd lumbar vertebra in the spinal canal. From the spinal cord issue all nerves to the trunk and limbs. It serves as a center for spinal reflexes and as a conducting pathway to and from the brain.

In cross section, it does not fill the vertebral space, being surrounded by the pia mater, the cerebrospinal fluid, the arachnoid, and the dura mater, which latter fuses with the perosteum of the inner surfaces of the vertebrae.

The gray substance forms an "H," there being a post. and ant. horn in either half. The ant. horn is composed of motor cells from which the fibers making up the motor portions of the peripheral nerves arise. Sensory neurons enter posteriorly.

The "H" also divides the surrounding white matter into post., lateral and ant. bundles. These serve to connect brain and cord in both directions as well as various portions of the cord itself.

From the s. c. issue all nerves to the trunk and limbs, and it is the center of reflex action containing the conducting paths to and from the brain.

s. curvature. Abnormal curvature of the spine, frequently constitutional in children.

It may be angular (caries), or lateral (scoliosis), or anteroposterior (kyphosis, lordosis).

s. c., angular. Caries of the spine. **SYN: Pott's disease, q.v.**

SPINAL CORD.
A. Anterior View of Spinal Cord.
 1. Cervical nerves 2 Thoracic nerves 3 Lumbar nerves 4 Sacral nerves 5. Hypoglossal nerves 6. Anterior funiculus 7. Cervical enlargement 8. Anterior medial fissure 9. Anterior lateral sulcus 10. Lumbar enlargement 11. Coccygeal nerve.

B. Lateral View of Spinal Cord.
 1. Cervical portion of spinal cord. 2. Thoracic portion 3. Lumbar portion. 4. Sacral portion 5. Filum terminale. 6. Spinal portion of accessory nerve. 7. Cervical enlargement 8. Eighth cervical nerve 9. Lateral funiculus 10. Twelfth thoracic nerve. 11. Fifth lumbar nerve.

s. c., lateral. Deviation of spine to one or other side causing a twist of the spine.

s. fluid. Cerebrospinal fluid, *q. v.*

It contains 55 to 75 mg of sugar per 100 cc. when normal. The sugar content is lower than that in the blood.

DIAG: Cell count. If normal, 0 to 6 cells per cmm. Increased in all diseased states, several hundred or thousands in meningitis, when fluid becomes opaque.

Lymphocytes found in encephalitis and tuberculous meningitis; polymorphonuclears predominate in septic meningitis and epidemic meningitis.

Bloody fluid. Brain hemorrhages due to arteriosclerosis, high blood pressure, tumors and other causes.

Encephalitis: Sugar content is increased, fluid clear, cell count 100 plus. Forms a spider web clot on standing. **SEE: meningitis.**

Globulin: Absent during health, positive in disease.

Microorganisms: Meningococci, streptococci, pneumococci, tubercle bacilli, and influenza bacilli may be present, any of which may be indicative of meningitis. Epidemic meningitis indicated by Gram-negative, intracellular diplococcus, biscuit-shaped microorganisms. Typhoid bacilli may produce meningeal symptoms in typhoid fever. Long chains of hemolytic, green-producing streptococci enter the meninges through the ear, the lungs being the invading point of pneumococci, influenza bacilli, and pneumobacilli. All these may be found in smears, though sometimes missed and found in cultures.

Meningitis*. Lower spinal fluid sugar than sugar content of blood; 25 to 15 mg. If suppurative m. spinal fluid is puslike and turbid, but it is clear in tuberculous m., encephalitis and poliomyelitis.

Poliomyelitis*: Same as in encephalitis, *q. v.*

RS anhydromyelia, calcinorrhachia, cerebrospinal fluid.

s. fusion. After removal of herniated disks, methylacrylic has been molded into an interspace for spinal stabilization.

s. ganglion. Enlargement on dorsal or posterior root of a spinal nerve composed principally of cell bodies of somatic and visceral afferent neurons.

s. nerves. Those arising from the spinal cord; 31 pairs, consisting of 8 cervical, 12 thoracic, 5 lumbar, 5 sacral, and 1 coccygeal, corresponding with the spinal vertebrae. **SEE: skeleton.**

Each spinal nerve is attached to the spinal cord by two roots: a **dorsal** or **posterior sensory root** and a **ventral** or **anterior root**. The former consists of afferent fibers conveying impulses to the cord, the latter of efferent fibers conveying impulses from the cord. A typical spinal nerve, on passing through the intervertebral foramen, divides into four branches, a **recurrent branch**, a **dorsal ramus** or post. primary division, a **ventral ramus**, or ant. primary division, and two **rami communicantes** (white and gray) which pass to ganglia of the sympathetic trunk.

s. puncture. Puncture of the spinal cavity with a needle to extract the spinal fluid for diagnostic purposes, or to relieve tension aroused by pressure of the fluid, or to induce anesthesia, or to prevent an excess of fluid when a liquid is to be injected.

SITE OF PUNCTURE: To prevent injury of the nerve fibers, the puncture usually made at the junction bet. the 3rd and 4th lumbar vertebrae. A line drawn posteriorly from the crest of one ilium over the crest of the other will usually pass over the tip of the spinous process of the 4th lumbar vertebra. The point for the needle injection is directly above this line.

BLOOD PRESSURE: The blood pressure drops with the removal of the fluid from

the spinal canal. If the puncturing is made for the purpose of lowering the blood pressure, or to remove fluid "under pressure," a manometer should show the reading as the fluid escapes. If 10 mm. of mercury decrease, the withdrawal of the fluid should be discontinued. The dripping of the fluid under normal conditions may be estimated as one drop every 3 to 5 seconds, which is merely a rough estimate. *See: cisternal puncture.*

NP Drape a small table with a sterile sheet. Doctor's gown and gloves, flat gauze and iodine sponges are placed on the table. Sterile sponges and adhesive plaster should be in readiness. Patient should sit with feet over side of table, arms crossed with elbows on knees and head well forward. After injection of anesthetic patient is slowly placed in dorsal position. Then table is slowly tipped into Trendelenburg position. The patient's head and shoulders must be kept lower than the pelvis.

s. reflex. Any reflex centering in the spinal cord.

s. shock. Effects resulting from transverse section of spinal cord and which occur in segments below level of section. Principal effects are (a) anesthesia, (b) paralysis, (c) loss of muscle tone, and (d) suppression of reflexes, both visceral and somatic.

spinalgia (spi-nāl'jī-ā) [*L. spina*, thorn, + *G. algos*, pain]. Pain in a vertebra under pressure.

spinalis (spi-nāl'is). A muscle attached to the spinal process of a vertebra. *See Table of Muscles in Appendix.*

spinant (spi'nānt) [*L. spina*, thorn] Any agent which increases spinal cord excitability.

spinate (spi'nāt) [*L. spina*, thorn]. Having spines or shaped like a thorn.

spindle (spin'dl) [*AS spinel*] 1 A fusiform-shaped body. 2 The portion of the achromatic apparatus seen in mitosis consisting of a bundle of delicate fibrils which connect the two centrosomes or asters. The chromosomes arrange themselves on the spindle in an equatorial plate.

s. aortic. A dilatation of the aorta following the aortic isthmus.

s. cells. Fusiform cells.

s. legged. Having long, thin legs.

s. neuromuscular. A complex sensory nerve ending consisting of muscle fibers enclosed within a capsule and supplied by an afferent nerve fiber. It mediates proprioceptive sensations and reflexes.

s. neurotendinous. *See: Golgi tendon organ.* A proprioceptive nerve ending found in a tendon, in muscle septa or sheaths, in a muscle tissue, or at junction of a muscle or tendon.

spine (spin). 1 A sharp process of bone. 2 The spinal column, consisting of 33 vertebrae. Cervical 7, thoracic 12, lumbar 5, sacral 5, coccyx 4. The bones of the sacrum and coccyx are ankylosed in adult life and counted as one each. *SYN: backbone.*

RS *cephalorhachidian*: cord, *spinal*: cramp, *curvature*: rachialgia, *rachitis*, "rach-" words, *scoliosis*.

s. alar, s. angular. Spinous process of the sphenoid bone. *SYN: spina angularis.*

s. anterior nasal. Projection formed by anterior prolongation of inferior border of nasal notch of maxilla.

s. bifid. *See: spina bifida.*

s. fracture of. A fractured spine is often treated in a plaster jacket with

the spine hyperextended to reduce the fracture. A window is cut over the abdomen. If the fracture is high the neck is included in the jacket, which must be short enough to allow flexion of the thighs. The patient is allowed to walk in the jacket, which is left on for 3 or 4 months. A vest is put on under this plaster, and the prominences are padded with felt. The muscles of the back are exercised by weight carrying on the head.

If the fracture involves the cord with paralysis below the injury, a plaster bed lined with felt is made. In nursing these cases, bedsores and cystitis must be prevented, both being dangerous from the point of view of septic absorption, which may cause the patient's death. An enema is given every other day. Traction to the legs to take the weight off the sacrum and prevent bedsores may be employed.

s., frontal. *SYN: nasal spine.* Sharp-pointed medial process extending downward from nasal process of frontal bone.

s., hemal. That part of the hemal arch of a typical vertebra that closes it in.

s., Henle's. *See: suprarenal s.*

s., iliac. One of four spines of the ilium, namely the *ant* and *post*, *inferior* spines and the *ant*, and *post* *superior* spines.

s., ischial. Spine of the ischium, a pointed eminence on its post border.

s., mental. Small process on inner surface of mandible at back of symphysis formed of one or more small projections (*genital tubercles*).

s., nasal. A sharp process descending in middle line from inf surface of frontal bone bet the sup maxillae.

s., neural. Spinous process of a vertebra. The post. projection of the neural arch.

s., pharyngeal. Ridge under basilar process of the occipital bone.

s., posterior nasal. Spine formed by medial ends of horizontal processes of palatine bones.

s. of the pubes. A prominent tubercle on upper border of the pubis.

s. of the scapula. An osseous plate projecting from the post. surface of the scapula.

s., sciatic. Same as ischial spine.

s. of the sphenoid. Spinous process of greater sphenoid wing.

s., suprarenal. A small spine at junction of sup and post. walls of the ext auditory meatus. *SYN: Henle's spine.*

s., typhoid. Acute arthritis due to infection causing spinal ankylosis during or following typhoid fever.

spinifugal (spi-ni'fū-gāl) [*L. spina*, thorn, + *fugere*, to flee]. Moving away from the spinal cord.

spinobulbar (spi'no-būl'bar) [*" + G. bulbos*, a bulb]. Concerning the spinal cord and medulla oblongata.

spinocellular (spi'no-sēl'ū-lar) [*" + celula*, a little chamber]. Pert. to or like prickly cells.

spinocerebellar (spi'no-sēr-ē-bēl'ar) [*" + cerebellum*, little brain]. Concerning spinal cord and cerebellum.

spinocortical (spi'no-kōr'ū-kāl) [*" + cortex*, cortic-, *rind*] Pert to the spinal cord and cerebral cortex. *SYN: cortico-spinal.*

spino-glenoid (spi'no-glen'oyd) [*L. spina*, thorn, + *G. glēnē*, cavity, + *eidōs*, form]. Relating to the spine of scapula and glenoid cavity.

s. ligament. Ligament joining spine of the scapula to the border of the glenoid cavity.

spinous (spī'nūs) [L. *spina*, thorn]. Pert. to or resembling a spine.

s. point. Spot over a spinous process very sensitive to pressure.

s. process. Prominence at post. part of each vertebra.

spinotectal (spīn-ō-tēkt'āl) Pertaining to the spinal cord and the tectum, the dorsal portion (corpora quadrigemina) of the midbrain

spinthariscopes (spīn-thār'ī-skōp) [G. *spintharis*, spark, + *skopein*, to see]. Apparatus for examining the emanations of radium.

spintherism (spīn'ther-izm) [G. *spintherizein*, to emit sparks]. Sensation of sparks before the eyes.

spintheropia (spīn-thēr-ō-pī-ā) [“ + *ōps*, eye]. Subjective sensation of sparks before the eyes

spiradenitis (spī-rād-ēn-ī'tīs). A tuniculus beginning in coil of a sweat gland SYN: *hidrosadenitis phlegmonous*.

spiradenoma (spī-rād-en-ō-mā) [G. *speira*, coil, + *adēn*, gland, + *-ōma*, tumor]. Tumor of the sweat glands

spiral (spī'rāl) [G. *speira*, coil]. Coiling like the thread of a screw

s. bandage. Roller bandage to be applied spirally.

s. canal of the cochlea. The osseous (bony) cochlea enclosing the scala tympani, scala vestibuli, and cochlear duct.

s. canal of modiolus. One that runs spirally around the modiolus and containing spiral ganglion

s. lamina. SYN: *lamina spiralis*. A thin bony plate projecting from the modiolus into the cochlear canal dividing it into two portions, the upper scala vestibuli and lower scala tympani

s. organ of Corti. SEE *organ of Corti*. Structure in floor of cochlear duct resting on basilar membrane. It contains *hair cells* which serve as receptors for the sense of hearing

spirilla (spī-rī'lā) [L.]. Plural of *spirillum*.

spirillifugal (spī-rī'lī-sīd'āl) [L. *spirillum*, coil, + *cidus*, from *caedere*, to kill]. Destroying spirochetes or spirilla.

spirillifuge (spī-rī'līs-īd) [“ + *cidus*, from *caedere*, to kill]. Destructive to spirilla.

spirillolysis (spī-rī-lōl'ī-sīs) [“ + G. *lysis*, dissolution]. The destruction of spirilla.

spirillosis (spī-rī-lō'sīs) [“ + G. *-ōsis*, condition]. A disease caused by presence of spirilla in the blood

spirillotropic (spī-rī-lō-trōp'īk) [“ + G. *trōpē*, a turning]. Having an attraction to spirilla.

spirillotropism (spī-rī-lōt'rō-pīzm) [“ + “ + *ismos*, condition]. The ability to attract spirilla.

Spirillum (spī-rī'lūm) (pl. *Spirilla*) [L. coil]. A genus of spiral shaped motile microorganisms bacilli belonging to the family Pseudomonadaceae, tribe Spirillaceae. Found in fresh and salt water.

S. minus. Found in the blood of rats and mice. The causative agent of rat-bite fever.

spirit (spī'rīt) [L. *spiritus*, breathing]. 1. Any distilled or volatile liquor or a solution of volatile liquid in alcohol. 2. Alcohol.

s. [off] ammonia. A mixture of ammonia, alcohol, and distilled water, employed as an antispasmodic and stimulant.

s. [off] bitter almond. A mixture of oil of bitter almond, almond, and dis-

tilled water, employed as flavoring agent.

s. [off] camphor. A mixture of camphor and alcohol, employed locally in treatment of sprains and similar painful conditions

s. [off] chloroform. A mixture of chloroform and alcohol, employed in relief of pain due to colic and similar affections

s. [off] ether. A mixture of ether and alcohol, employed as a stimulant and carminative

s. [off] ethyl nitrite. SYN: *sweet s of niter*. An alcoholic solution of ethyl nitrite, employed as sedative, diuretic, and diaphoretic

s. [off] glyceryl trinitrate. An alcoholic solution of glyceryl trinitrate, employed in angina pectoris, asthma, and as a relaxant in arterial spasm

s. [off] juniper. A mixture of oil of juniper and alcohol, employed as a diuretic

s. [off] lavender. A mixture of oil of lavender flowers and alcohol, employed as a carminative and as a flavoring agent

s. [off] mustard. A solution of volatile oil of mustard in alcohol, employed as a counterirritant

s. [off] peppermint. A mixture of oil of peppermint, peppermint and alcohol, employed as a carminative

s., rectified. Alcohol with 16% water.

spiritual therapy [L. *spiritus*, breathing, + G. *therapeia*, treatment]. The application of spiritual knowledge in the treatment of all mental and physical disorders, based upon the assumption that man is a spiritual being living in a spiritual universe, that in proportion to his acceptance of this idea, and in proportion to his success in demonstrating it, he may control the body and the material elements in harmony with a Divine plan.

spirituous (spī'rīt-ū-ūs) [L. *spiritus*, breathing] Alcoholic, pert. to alcohol.

spiritus (spī'rīt-ūs) [L. breathing] Alcoholic solution of a volatile substance. Usually, 5-10% strength. Thirteen are official. SYN: *spirit*.

s. frumenti. Whisky.

s. juniperi. Gin.

s. myrciae. Bay rum.

s. vini gallici. Brandy.

Spirochaeta (spī'rō-kē'tā) [G. *speira*, coil, + *chaîtē*, hair]. A genus of slender spiral motile microorganisms belonging to the family Spirochaetaceae, order Spirochaetales.

S. icterohaemorrhagiae. SYN: *Lep-tospira icterohaemorrhagiae*. Species found in Weil's disease or acute febrile jaundice.

S. nodosa. SYN: *Spirillum minus*, q.v. Assumed pathogenic organism of Weil's disease

SPIROCHAETA PALLIDA.

S. pallida. Species which is the cause of syphilis. SYN *Treponema pallidum*.

Spirochaetales (spī'rō-kī-tā'les). An order of slender, flexuous spiral organisms belonging to the class Schizomycetes. It includes the families Spirochaetaceae and Treponemataceae.

spirochetal (spī'rō-kē'tāl) [G. *spira*, coil, + *chaitē*, hair] Pert. to spirochetes, esp. infections caused by them.

spirochetalytic (spī'rō-kē-tā-lit'ik) ["" +

"" + *lysis*, dissolution]. Destructive of spirochetes.

spirochete (spī'rō-kēt) [G. *spira*, coil, + *chaitē*, hair] Any member of the order Spirochaetales.

spirochetemia (spī'rō-kē-tēm'ī-ā) ["" + "" + *ama*, blood]. Spirochetes in the blood.

spirocheticidal (spī'rō-kē-tī-sī'dāl) ["" + "" + *L. cidus*, from *caedere*, to kill]. Destructive to spirochetes.

spirocheticide (spī'rō-kē'tī-sīd) ["" + "" + *L. cidus*, from *caedere*, to kill]. Anything which destroys spirochetes.

spirochetolysis (spī'rō-kē-tō'lī-sis) ["" + "" + *lysis*, dissolution]. The destruction of spirochetes by specific antibodies.

spirochetosis (spī'rō-kē-tō'sis) [G. *spira*, coil, + *chaitē*, hair, + *-ōsis*, condition]. Any infection caused by spirochetes.

spirochetotic (spī'rō-kē-tōt'ik) ["" + "" + *-ōsis*, condition]. Pert. to or marked by spirochetosis.

spirocheturia (spī'rō-kē-tū'rī-ā) ["" + "" + *ouron*, urine]. Spirochetes in the urine.

spiogram (spī'rō-grām) [L. *spirāre*, to breathe, + G. *gramma*, a mark]. A tracing made by a spiograph of respiratory movements.

spiograph (spī'rō-grāf) ["" + G. *graphein*, to write] Device for recording graphically respiratory movements.

spiroid (spī'royd) [G. *spira*, coil, + *eidōs*, form]. Resembling a spiral.

spiroma (spī-rō'mā) [G. *spira*, coil, + *-ōma*, tumor]. Multiple, benign, cystic epithelioma of the sweat glands. SYN *spiradenoma*.

spirometer (spī-rōm'ēt-ēr) [L. *spirāre*, to breathe, + G. *metron*, measure] An apparatus consisting of a cylindrical bell immersed in water and so equipped with outlets that gases can be exhaled into it or inhaled out of it while measurements of volume are made.

The following are typical measurements made on normal men by using the spirometer:

Complemental air: 1600 cc., the amount which a subject can still inhale, by a special effort, after a normal inspiration.

Dead air: 150 cc., the air which, taken in through the nose, gets only as far as nasopharynx or trachea and does not reach the lungs.

Minimal air: Less than 1000 cc., that which remains in the lungs after complete collapse, as in pneumothorax.

Reserve air: 2800 cc., the sum of the supplemental and residual air.

Residual air: 1000 cc., that are left in the lungs after a complete expiration.

Supplemental air: 1600 cc., which can still be exhaled after a normal exhalation.

Tidal air: 500 cc., the amount exhaled in a normal inhalation.

spirometry (spī-rōm'ē-trī) [L. *spirāre*, to breathe, + G. *metron*, a measure]. Measurement of air capacity of the lungs.

spirophore (spī'rō-fōr) [L. *spirāre*, to

breathe, + G. *phoros*, a bearer]. Device for artificial respiration. SYN: *iron lung*.

spiroscope (spī'rō-skōp) [L. *spirāre*, to breathe, + G. *skopein*, to examine]. Device for measuring air capacity of the lungs.

spiroscopy (spī-rōs'kō-pī) [L. *spirāre*, to breathe, + *skopein*, to examine]. The use of the spiroscope to measure respiratory capacity of the lungs.

spissated (spīs'ā-ted) [L. *spissāre*, to

thicken]. Thickened. SYN *insspissated*. **spissitude** (spīs'ī-tūd) [L. *spissitudo*, a thickening]. Condition of being inspissated, as a fluid thickened by evaporation almost to a solid, thickness.

spit (spit) [A.S. *spittan*, to spit]. 1. Saliva. SYN: *expectoration*, *sputum*, *spittle*. 2. To expectorate spit.

spittle (A.S. *spætan*). The digestive fluid of the mouth. SYN *saliva*.

splanchna. The intestines or the viscera. **splanchnapophysis** (splāngk-nā-pōf'ī-sis) [G. *spagchnon*, viscus, + *apo*, from, + *physis*, shoot]. 1. Any skeletal element connected with the alimentary canal, as the hyoid bone. 2. Outgrowth of a vertebra on opp side of a vertebral axis, enclosing some viscus.

splanchnectopia (splāngk-nēk-tō'pī-ā) ["" + *ektōpos*, out of place]. Dislocation of a viscus or of the viscera.

splanchnemphraxis (splāngk-nēm-frāks'is) ["" + *emphraxis*, stoppage]. Obstruction of any internal organ, particularly of the intestine.

splanchnesthesia (splāngk-nēs-thē'zī-ā) ["" + *aisthēsis*, sensation]. Visceral sensation.

splanchnesthetic (splāngk-nēs-thēt'ik) ["" + *aisthesis*, sensation]. Relation to visceral consciousness or sensation.

splanchnic (splāngk'nīk) [G. *spagchnon*, viscus]. Pert to the viscera.

s. nerves. Three nerves from the thoracic sympathetic ganglia distributed to the viscera.

splanchnicotomy (splāngk-nī-kōt'ō-mī) ["" + *tomē*, a cutting]. Section of a splanchnic nerve.

splanchnoblast (splāngk'nō-blāst) ["" + *blastos*, germ]. Incipient rudiment of a viscus. SEE *anlage*, *proton*.

splanchnoceles (splāngk'nō-sēl) ["" + *kōilos*, a hollow]. 1. That part of the celom persisting in the adult, giving rise to the visceral cavities. SYN: *splanchnocoele*. 2. ["" + *kēlē*, hernia]. Protrusion of any abdominal viscus.

splanchnocoele (splāngk'nō-sēl) ["" + *kōilos*, a hollow]. Rudimentary embryonic cavity from which the visceral cavities arise.

splanchnocranium (splāngk'nō-kra'nī-ūm) The portion of the skull derived from the visceral or branchial skeleton.

splanchnodiastasis (splāngk-nō-dī-ās'tās-is) ["" + *diastasis*, dilatation]. Displacement or dislocation of a viscus.

splanchnodynia (splāngk-nō-dīn'ī-ā) ["" + *odynē*, pain]. Pain in the abdominal region.

splanchnography (splāngk-nōg'rā-fī) ["" + *graphein*, to write]. Descriptive treatise on anatomy of the viscera.

splanchnolith (splāngk'nō-lith) ["" + *lithos*, stone]. An intestinal calculus.

splanchnology (splāngk-nōl'ō-jī) [G. *spagchnon*, viscus, + *logos*, a study]. The study of the viscera.

splanchnopathia (splāngk-nō-pāth'ī-ā) ["" + *pathos*, disease]. Pathological conditions of the viscera.

splachnopleure (splängk'nō-plūr) ["" + *pleura*, a side]. The embryonic layer formed by the union of the visceral layer of the mesoderm with the endoderm. **See** *somatopleure*.

splachnoptosis, splanchoptosis (splängk-nōp-tō'sl-ā, -sīs) ["" + *ptōsis*, a dropping]. Prolapse of the viscera. **SYN:** *abdominal ptosis, enteroptosis, visceroptosis, Glénard's disease*.

splachnosclerosis (splängk-nō-skīē-rō'sīs) ["" + *sklerōsis*, a hardening]. Hardening of any of the viscera through overgrowth of connective tissue.

splachnoscapy (splängk-nō'kō-pl) [G. *spilachnon*, viscus, + *skopein*, to examine]. Examination of the viscera with aid of roentgen rays or transillumination.

splachnoskeleton (splängk'nō-skēl'ē-tōn) [G. *spilachnon*, viscus, + *skeleton*, skeleton]. **SYN** *visceral or branchial skeleton* 1. In primitive vertebrates, such as fishes, the cartilaginous or bony arches (branchial) which encircle pharyngeal portion of digestive tract. 2. In higher vertebrates, the bones derived from the branchial arches which include the maxilla, mandible, malleus, incus, stapes, hyoid bone, and cartilages of the larynx.

splachnotomy (splängk-nōt'ō-mī) ["" + *tomē*, a cutting]. Dissection of the viscera.

splachnotribe (splängk'nō-trīb) ["" + *tribein*, to crush]. An instrument for obliterating the lumen of the intestine temporarily before resection.

playfoot (splā'foot) [M.E. (*dis*)*platen*, to spread out, + A.S. *fōt*, foot]. A flatfoot or the deformity flatfoot. **SYN:** *pes planus, talipes valgus*.

spleen (splēn) [G. *splēn*]. The largest of the lymphatic organs of the body, an elongated, dark red, ovoid body lying in upper left quadrant of abdomen posterior and inferior to the stomach. It is composed of spongelike tissue (*splenic pulp*) consisting of trabeculae capable of differentiating into white pulp and pulp infiltrated with red blood cells (*red pulp*). It is enclosed by a dense capsule from which trabeculae extend into substance of spleen. On one side is the *hilus* through which enter splenic vessels and nerves.

FUNCTIONS: 1. *Blood formation*. In the embryo all types of blood cells are formed but in the adult only lymphocytes and monocytes. 2. *Blood storage*. Smooth muscle and elastic tissue fibers in capsule and trabeculae enable spleen to contract and discharge blood cells into circulation. 3. *Blood filtration* by which bacteria and particulate matter, esp worn-out red blood cells are removed from circulation. From the hemoglobin of the latter, iron is recovered and stored and *bilirubin*, one of the bile pigments, is formed. 4. *Formation of antibodies*.

DISORDERS OF: Acute and chronic infections and certain infection-like states, hypersplenism, primary splenic thrombocytopenia, primary splenic neutropenia, Felty's syndrome, Banti's disease, congestive splenomegaly, tumors, etc.

s. accessory. Splenic tissue nodules near the spleen.

s. floating or wandering. An enlarged movable one not protected by the ribs.

s. lardaceous. Enlargement of spleen from lardaceous matter. **See:** *degeneration, amyloid*.

s. pulp. The spleen's soft parenchyma.

s. sago. One having appearance of sago* grains.

spladenoma (splē'nad-en-ō'mā) [G. *splēn*, spleen, + *adēn*, gland, + *-ōma*, tumor]. Enlargement of the spleen caused by hyperplasia of its pulp.

splenalgia (splē-nāl'jī-ā) ["" + *algos*, pain]. Pain in the spleen. **SYN:** *splenodynia*.

splenceratosis (splēn-sēr-ā-tō'sīs) ["" + *keras*, kerat-, horn, + *-ōsis*, condition]. Induration of the spleen.

splenectasia (splē-nēk-tā'zī-ā) [G. *splēn*, spleen, + *ektasis*, dilatation]. Enlargement of the spleen.

splenectasis (splē-nēk'tā-sīs) ["" + *ektasis*, dilatation]. Enlargement of the spleen. **SYN** *splenectasia*.

splenectomy (splē-nēk'tō-mī) ["" + *ektomē*, excision]. Surgical excision of the spleen.

splenectopia, splenectomy (splē-nēk-tō'pī-ā, -nēk'tō-pl) ["" + *ektōpos*, out of place]. Displacement or mobility of the spleen. **SYN** *spleen, floating*.

spleneclerosis (splē-nēl-kō'sīs) ["" + *elkōsis*, ulceration]. Ulceration or abscess of the spleen.

splenemia (splē-nē'mī-ā) ["" + *aima*, blood] 1. Leukemia with splenic hypertrophy. 2. Splenic congestion.

splenemphraxis (splē'nēm-frāks'īs) ["" + *emphraxis*, stoppage]. Congested condition of the spleen.

splenepatitis (splēn-ēp-ā-tī'tīs) [G. *splēn*, spleen, + *epat-*, liver, + *-itis*, inflammation]. Inflammation of both spleen and liver.

splenic, splenic (splē-nēt'ik, splēn'ik) [G. *splēn*, spleen]. 1. Pert. to the spleen. 2. Suffering with chronic disease of the spleen. 3. Surly, fretful, impatient.

s. cords. **SYN:** *cords of Billroth*. Poorly defined cords of red pulp of the spleen.

s. flexure. Junction of transverse and descending colon, making a bend on the left side near the spleen.

s. nodule. **SYN:** *splenic corpuscle, Malpighian corpuscle*. A concentrated mass of white pulp in the spleen.

s. sinus. **SYN:** *Terminal veins, cavernous veins*. One of a series of wide channels with thin walls forming an anastomosing plexus throughout red pulp of spleen.

s. vein. One carrying blood from spleen to the portal vein.

splenicterus (splē-nīk'tēr-ūs) ["" + *ikteros*, jaundice]. Inflammation of spleen associated with jaundice.

splénification (splēn-īf-ī-kā'shōn) ["" + L. *facere*, to make]. Change in a structure whereby it resembles splenic tissue. **SYN:** *splénization*.

splenitis (splē-nī'tīs) ["" + *-itis*, inflammation]. Inflamed condition of the spleen.

Comprises acute and chronic hypertrophy, proliferative splenitis and suppurative inflammation, result of acute infectious disease.

SYN: Indefinite or absent, usually little pain or tenderness unless perisplenitis exists. Considerable enlargement may be attended by sense of weight, tension or distress in left hypochondrium, accompanied perhaps by slight dyspepsia, sudden pain appearing in gastric region followed by vomiting of pus and blood in course of infectious disease with splenic enlargement which may be due to abscess of spleen.

Proog: Depends upon systemic condition.

splenium (splē-nī-ūm) [G. *splēnton*, band-

age]. 1. A compress or bandage. 2. A structure resembling a bandaged part.

s. corporis callosi. The thickened post. end of the corpus callosum.

splenius (splē'nī-ūs) [G. *spēmion*, bandage]. A flat muscle on either side of back of neck and upper thoracic area. See *muscles, back, for illustration, Table of Muscles in Appendix.*

splenization (splēn-l-zā-shūn) [G. *splēn*, spleen]. The change in a tissue, as of the lung, when it resembles splenic tissue.

splenocoele (splē'nō-sēl) [' + *kēlē*, mass, hernia]. 1. A hernia of the spleen. 2. A splenic tumor.

splenicceratosis (splē'nō-sēr-ā-tō'sis) [' + *keras, kerat-*, horn, + *-ōsis*, condition]. Induration of the spleen.

spleniccleisis (splē'nō-klē'sis) [' + *kleisis*, a closure]. Friction on the surface of the spleen or wrapping with gauze to induce the formation of fibrous tissue.

splenocolle (splē'nō-kōl'ik) [' + *kōlon*, colon]. Pert. to the spleen and colon or reference to a fold of peritoneum bet. the two viscera.

splenoocyte (splē'nō-sīt) [' + *kytos*, cell]. A unicellular leukocyte or lymphocyte of the spleen, which probably originates elsewhere in the body.

splenodiagnosis (splē'nō-dī-ā-gnō'sis) [' + *dia*, through, + *gnōsis*, knowledge]. Injection of typhoid bacilli extract in the spleen to diagnose typhoid fever.

splenodynin (splē'nō-dīn'ī-ā) [' + *odynē*, pain]. Pain in the spleen. SYN *spelnalga*.

splenogenic, splenogenous (splē'nō-jēn'ik, splē'nō-jēn-ūs) [' + *gennan*, to produce]. Originating or found in the spleen.

splenography (splē-nog'rā-fī) [' + *graph-ein*, to write]. A treatise on or a description of the spleen.

splenoemia (splē'nō-hē'mī-ā) [' + *haima*, blood]. Congestion of the spleen. SYN *splenemia*, 2.

splenohepatomegaly (splē'nō-hēp'ā-tō-mēg'ā-lī) [' + *hēpar, hēpat-*, liver, + *megas, megal-*, large]. Enlargement of both spleen and liver.

splenoid (splē'nōyd) [' + *eidos*, resemblance]. Resembling the spleen.

splenicokeratosis (splē'nō-kēr-ā-tō'sis) [' + *keras*, horn, + *-ōsis*, condition]. Induration of the spleen.

splenology (splē'nōl'ō-jī) [' + *logos*, study]. The study of the spleen, its functions and diseases.

splenolysin (splē'nōl'ī-sīn) [' + *lysis*, dissolution]. An antibody which destroys splenic tissue.

splenolysis (splē'nōl'ī-sis) [' + *lysis*, dissolution]. Destruction of splenic tissue.

splenoma (splē'nō-mā) [' + *ōma*, tumor]. A tumor of the spleen. SYN *splenocoele*.

splenomalacia (splē'nō-māl-ā-sī-ā) [' + *malakia*, softening]. Softening of the spleen.

splenomegalia, splenomegaly (splē'nō-mēg'ā-lī-ā, -mēg'ā-lī) [G. *splēn*, spleen, + *megas, megal-*, large]. Enlargement of the spleen.

splenomylomalacia (splē'nō-mī'ēl-ō-māl-lā-sī-ā) [' + *malakia*, softening]. Abnormal softening of the spleen and the bone marrow.

spleneonephric (splē'nō-nēf'rīk) [' + *nephros*, kidney]. Relating to the spleen and the kidney. SYN: *lienorenal*.

spleneonephropsis (splē'nō-nēf-rōp-tō'sis) [' + *-psis*, a dropping]. Displacement of the spleen and kidney downward.

splenopancreatic (splē'nō-pān-kre-āt'ik)

[' + *pagkreas*, pancreas]. Relating to the spleen and pancreas.

splenoparectasis (splē'nō-pā-rēk'tā-sis) [' + *parektasis*, a stretching out]. Abnormal enlargement of the spleen.

splenopathy (splē'nōp'ā-thī) [' + *pathos*, disease]. Any disorder of the spleen.

splenopexy (splē'nō-pēks-ī) [' + *pēxis*, fixation]. Artificial fixation of a movable spleen.

splenopneumonia (splē'nō-nū-mō-nī-ā) [' + *pneumōnia*, inflammation of lung]. Pneumonia with splenization of the lung.

splenoptosis (splē-nop-tō'sis) [' + *ptōsis*, a dropping]. Displacement of the spleen downward.

splenorenal (splē'nō-rē'nāl). Pert. to the spleen and kidney.

s. shunt. Anastomosis of splenic vein to renal vein to enable blood from portal system to enter general venous circulation. Performed in cases of portal hypertension resulting from obstruction.

splenorrhagia (splē'nō-rā'jī-ā) [' + *-rrhagia*, from *rhēgynnai*, to burst forth]. Hemorrhage from a ruptured spleen.

splenorrhaphy (splē-nor'āf-ī) [G. *splēn*, spleen, + *rhaphe*, a seam]. Suture of wound of the spleen.

splenotomy (splē-nōt'ō-mī) [' + *tomē*, a cutting]. Incision of spleen.

splenulus (splē'nū-lūs) [L. *splenulus*, a little spleen]. A rudimentary or accessory spleen.

splint (splint) [Middle Dutch *splinte*, a wedge]. An appliance made of bone, wood, metal and/or plaster of Paris, used for the fixation, union, or protection of an injured part of the body.

They may be movable or immovable.

s., aeroplane. An appliance usually used on ambulatory patients in the treatment of fractures of the humerus, and it takes its name from the elevated (abducted) position in which it holds the arm suspended in air.

s., Agnew's. A splint for fracture of the patella and metacarpus.

s., anchor. A splint for fracture of the jaw, with metal loops fitting over the teeth and held together by a rod.

s., Ashhurst's. A bracketed splint of wire with a footpiece to cover the thigh and leg after excision of the knee joint.

s., Balkan. One for extension in fracture of the femur.

s., banjo traction. Made out of a steel rod bent to resemble the shape of a banjo, and is used for the treatment of contractures and fractures of the fingers.

s., Bavarlan. An immovable dressing in which the plaster is applied bet. 2 layers of flannel.

s., Bond's. A splint for fracture of the low end of the radius.

s., Bowby's. One for fracture of shaft of humerus.

s., bracketed. A splint composed of 2 pieces of metal or wood united by brackets.

s., Cabot's. A posterior wire splint.

s., Carter's intranasal. A steel bridge with wings connected by a hinge; used for operation of depressed nasal bridge.

s., coaptation. Small splint adjusted about a fractured limb to produce coaptation of fragments.

s., Dupuytren's. A splint to prevent eversion in Pott's fracture.

s., Fox's. A splint for fractured clavicle.

s., Gibson walking. Modification of Thomas' splint.

s., Gordon's. A side splint for the arm and hand in Colles' fracture.

s., Jones' nasal. A splint for fracture of the nasal bones.

s., Kanavel. One for stiff hands.

s., Levis'. A splint of perforated metal extending from below the elbow to the end of the palm; shaped to fit the arm and hand.

s., McIntire's. A post. splint for the leg and thigh like a double inclined plane.

s., Sayre's. One of 3 varieties of splint, for the ankle, for the knee, and for use in hip joint disease.

s., Stromeyer's. A splint of 2 hinged portions which can be fixed at any angle.

s., technology. The scientific study of splints.

s., Thomas' knee. A splint for removing the pressure of the body weight from the knee joint by transferring it to the ischium and perineum.

s., Thomas' posterior. A splint used in hip joint disease.

s., Volkman's. One for fracture of lower extremity.

splitter (splin'ter) [Middle Dutch *splitte*, a wedge] 1. A fragment from a fractured bone 2. A slender, sharp piece of wood piercing the skin

splitting (splint'ing) [Middle Dutch *splitte*, a wedge]. Fixation of a fracture or dislocation with a splint

split (split) [Middle Dutch *splitten*, to divide]. 1. A longitudinal fissure. 2. Characterized by a deep fissure

s. foot. Congenital deformity, the division of the toes extending into the metatarsal region.

s. hand. Congenital deformity, the division bet. the fingers extending into the metacarpal region. **SYN:** *cleft hand*.

s. pelvis. Congenital failure of pubic bones to form a union at the symphysis.

s. tongue. A cleft or bifid tongue resulting from developmental arrest.

splitting (split'ing) [Middle Dutch *splitten*, to divide] A change in a complex substance whereby more simple products are produced chemically. **SYN:** *hydrolysis*, *q.v.*

spodiomyelitis (spō'di-ō-mī-ō-lī'tis) [G. *spodios*, ash colored, + *myelos*, marrow, + *-itis*, inflammation]. Inflammation of spinal cord's anterior cornua. **SYN:** *poliomyelitis*.

spodogenous (spō-dōj'ēn-ūs) [+ *gennan*, to produce] Caused by waste material

s. splenomegaly. Enlargement of the spleen due to degenerated red blood cells.

spodogram (spōd'ō-grām) [G. *spodos*, ashes, + *gramma*, mark]. The pattern formed of the ash on microincineration of tissue or other matter.

spodophagous (spō-dōf'ā-gūs) [+ *phagein*, to eat]. Destroying the waste matters in the body; said of scavenger cells.

spondyialgia (spōn'dīl-āl'jī-ā) [G. *spondylos*, vertebra, + *algos*, pain]. Painful condition of a vertebra.

spondylarthritis (spōn'dīl-ar-thrī'tis) [+ *arthron*, joint, + *-itis*, inflammation]. Inflammation of a vertebra.

spondylarthrocace (spōn'dīl-ar-thrōk'ā-sē) [+ *akē*, badness]. Tuberculous condition of the vertebrae.

spondylite (spōn'dīl) [G. *spondylos*, a vertebra]. A vertebra.

spondylaxarthrosis (spōn'dīl-ēks'ar-thrō'sis) [+ *ax*, out, + *arthron*, joint, + *-osis*, condition]. Displacement of a vertebra.

spondylitis (spōn-dīl-ī'tis) [+ *-itis*, inflammation]. Inflammation of one or more vertebrae, esp. tuberculous disease of the vertebrae, Pott's disease.

s. ankylosing. **SEE:** *spondylitis, rheumatoid*

s. deformans. Inflammation of the vertebral joints resulting in the outgrowth of bonylike deposits on the vertebrae which may fuse and cause rigid and distorted spine.

s., hypertrophic. Condition occurring in most people over 50 in which bodies of vertebrae hypertrophy and bony changes, such as slipping at their bases, development of bony outgrowths on articular processes, etc. occur.

s., Kummell's. Traumatic spondylitis in which the symptoms do not appear until some time after the injury.

s., Marie-Strumpell. Ankylosing or rheumatoid spondylitis, *q.v.*

s., rheumatoid. A chronic progressive disease involving the joints between articular processes, costovertebral joints, and sacroiliac joints. Bilateral sclerosis of sacroiliac joints is a diagnostic sign. Changes occurring in joints are similar to those seen in rheumatoid arthritis. Ankylosis may occur giving rise to stiff back (poker spine).

s. rhizomelica. Progressive rigidity of the spine caused by ankylosis of the vertebrae from below upward

s. tuberculosa. Tuberculosis of the vertebral joints. **SYN:** *vertebral caries, Pott's disease*.

spondylizema (spōn'dīl-i-zē'mā) [G. *spondylos*, vertebrae, + *izēma*, depression]. Downward settlement of a vertebra caused by the disintegration of the one below it.

spondylo- [G.]. Combining form meaning a vertebra

spondylocace (spōn-dī-lōk'ā-sē) [G. *spondylos*, vertebrae, + *kakē*, badness]. Tuberculosis of the vertebrae. **SYN:** *spondylarthrocace*.

spondylo diagnosis (spōn'dī-lō-dī-āg-nō'sis) [+ *dia*, through, + *gnōsis*, knowledge]. Diagnosis by means of visceral reflexes obtained by percussion of the vertebrae.

spondylo dymia (spōn'dīl-ō-dīn'ī-ā) [+ *odynē*, pain]. Pain in a vertebra.

spondyliosthesis (spōn'dīl-ō-līs-thē'sis) [+ *osthēsis*, a slipping]. Forward subluxation of the lower lumbar vertebrae, usually on the sacrum, with consequent pelvic deformity.

spondyliolysis (spōn-dī-lōl'ī-sis) [+ *lysis*, a dissolution]. The breaking down of a vertebral structure.

spondylopathy (spōn'dīl-ōp'ā-thī) [+ *pathos*, disease]. Any disorder of the vertebrae.

spondylopyosis (spōn'dīl-ō-pī-ō'sis) [+ *pyōsis*, suppurative]. Suppuration with inflammation of a vertebra.

spondyloschisis (spōn-dīl-ōs'kl-sis) [G. *spondylos*, vertebra, + *schisis*, a cleft]. Congenital fissure of one or more of the vertebral arches. **SYN:** *rhachioschisis*.

spondylosis (spōn-dī-lō'sis) [+ *-osis*, condition]. Vertebral ankylosis.

s., rhizomelic. Ankylosis interfering with movements of hips and shoulders.

spondylosyndesis (spōn'dī-lō-sīn'dē-sis) [+ *syndesis*, a binding together]. Surgical formation of an ankylosis bet. vertebrae.

spondylotherapy (spōn'dīl-ō-thēr'ā-plī) [+ *therapeia*, treatment]. Spinal therapeutics; spinal manipulation in the treatment of disease.

spondylotomy (spôn-dîl-ô't-ô-mî) ['' + *tomê*, a cutting]. Removal of part of the vertebral column to correct a deformity or facilitate delivery of a fetus.

sponge (spûnj) [G *spongos*, sponge]. 1. Elastic, porous mass forming internal skeleton of certain marine animals, or rubber or synthetic substance having absorbent qualities, used in bathing or in surgery to mop up fluids. 2. An absorbent pad made of gauze and cotton. 3. Short for sponge bath.

s., abdominal. Flat sponges from ½ to 1 in. thick, 3 to 6 in. in diameter, used as packing, to prevent closing or obstruction by intrusion of viscera, as covering to prevent tissue injury, and as absorbents.

s., artificial. Constructed of antiseptic gauze.

s. bath. Bathing of the body with a wet sponge.

s. gelatin. Spongy substance prepared from gelatin. It is a nonantigenic, readily absorbable material and used especially to stop internal bleeding. Sold under trade name of Gelfoam.

s. graft. S placed in an ulcer to cause granulation.

s. sterilization. Should be chemical, not by steam or boiling water. Clean or soak in cold water, wrap in linen towel or sack, immerse in 1% hot soda solution, 20 to 30 minutes. Remove, immerse in sack in sterilized water, then preserve in an antiseptic solution.

s. tent. One impregnated with mucilage of acacia, dried in desired shape, to dilate the os uteri or sinuses by absorbing moisture and expanding.

spongiform (spûn'jî-form) ['' + *L. forma*, form]. Having the appearance or quality of a sponge.

spongioblast (spûn'jî-ô-blást) ['' + *blastos*, germ]. Cell which develops from embryonic neural tube and serves as forerunner of ependymal cells and astrocytes.

spongioid (spûn'jî-ôyd) ['' + *eidós*, resemblance]. Resembling a sponge. **SYN:** *spongiform*.

spongioplasm (spûn-jî-ô-pláz-m) ['' + *plasma*, a thing formed]. Fibrillar network supporting protoplasm. **SYN:** *cytoreticulum*.

spongy (spûn'jî) [G *spongos*, sponge]. Resembling a sponge in texture.

spontaneous (spôn-lá'né-ús) [L *spontaneus*, voluntary]. Occurring unaided or without apparent cause, voluntary.

s. evolution. A rare method by which the fetus is expelled from the uterus while lying in the transverse position. Only possible (a) when the fetus is very small and pelvis large, (b) when fetus is dead.

s. fracture. Fracture due to the state of the bone and causing little or no injury.

ETIOL. *Fragilitas ossium*, nerve conditions, i. e., *tubercles*, secondary malignant growths, *atrophy* in bones of the aged.

s. version. The unaided conversion of a transverse presentation into a vertex or breech presentation.

spoon (spôon) [A.S. *spôn*, a chip]. Instrument consisting of a small bowl on a handle, used in scooping out tissues, tumors, etc., or in measuring quantities.

s. nail. A nail having a concave outer surface.

sporadic (spô-rád'ík) [G. *sporadikos*, scattered]. Occurring occasionally or in scattered instances, as a disease.

RS: *endemic, epidemic, pandemic*.

sporangiophore (spô-rân'jî-ô-fôr) [G. *sporos*, seed, + *aggeion*, vessel, + *phoros*, a bearer]. **BACT:** The supporting stalk for a spore sac of certain fungi.

sporangium (spô-rân'jî-ûm) ['' + *aggeion*, vessel]. A sac enclosing spores, seen in certain fungi.

spore (spôr) [G. *sporos*, a seed]. 1. A reproductive cell, usually unicellular, produced by plants and some protozoans. Spores are usually asexual but sexual spores (oospores, zygospores, or ascospores) are formed by certain fungi. Spores usually possess a thick wall enabling the cell to withstand unfavorable environmental conditions.

Sporing is an asexual method of reproduction in many unicellular animals and plants. Certain bacteria also form spores, but more in the nature of a defensive mechanism than for reproduction.

The spores of bacteria are difficult to destroy, as they are very resistant to heat and require prolonged exposure to high temperatures to destroy them.

RS: *apospory, asporogenic, asporous*.

sporicide (spôr-is-îdál) ['' + *L. cidus*, from *caedere*, to kill]. Destructive to spores.

sporicide (spôr-is-îd) ['' + *L. cidus*, from *caedere*, to kill]. An agent which destroys spores.

sporiferous (spôr-if'êr-ûs) ['' + *L. ferre*, to bear]. Producing spores.

sporoblast (spôr-ô-blást) ['' + *blastos*, germ]. Structure within the oocyst of certain parasitic protozoans (Eimeria and Isospora) which gives rise to a sporocyst, and eventually a spore.

sporocyst (spôr-ô-síst) ['' + *kystis*, sac]. 1. Sac secreted by certain protozoans prior to spore production. 2. Stage in life cycle of a trematode worm usually found in tissues of 1st intermediate host, a mollusk. It develops from a miracidium and is essentially a germinal sac containing germ cells. It gives rise to daughter sporocysts or redia.

sporogenesis (spôr-ô-jên-ê-sís) ['' + *genesis*, production]. The production or formation of spores.

sporogenic (spôr-ô-jên-Tk) ['' + *gennan*, to produce]. Having the ability of developing into spores.

sporogony (spôr-ôg-ô-nî) ['' + *gonê*, generation]. Reproducing by development of spores. **SYN:** *sporogenesis*.

sporophyte (spôr-ô-ft) ['' + *phyton*, plant]. The spore-bearing stage of a plant exhibiting alternation of generation.

sporotrichin (spôr-â-trîk'in) Antigenic substance derived from *Sporotrichum* and used for diagnostic purposes.

sporotrichosis (spôr-ô-trîk-ô-sís) A chronic granulomatous infection usually involving the skin and superficial lymph nodes characterized by formation of abscesses, nodules and ulcers. It is caused by a fungus *Sporotrichum schenckii*, q.v.

Sporotrichum (spôr-rôt'ri-kûm) (pl. *Sporotricha*) ['' + *thrîx*, *trîch-*, hair]. A yeastlike genus of microorganisms.

Of the pathogenic species, one is the causative agent of sporotrichosis.

S. schenckii. The causative agent of sporotrichosis.

Sporozoa (spôr-ô-zô-â) [G. *sporos*, seed, + *zôon*, animal]. A subphylum of the Phylum Protozoa which includes a miscellaneous assortment of organisms which are parasitic, usually with complicated life-cycles including sexual and asexual forms and lacking loco-

motor organs in the adult forms. It includes the classes Telosporidea, Cnidosporidea, and Acnidosporidea.

sporozoan. Pert. to the sporozoa; a sporozoan.

sporozoon. A protozoan belonging to the subphylum Sporozoa.

sporozoite (spor'ō-zō'it) [*"* + *zōon*, animal]. 1 An animal spore 2 An elongated sickle-shaped cell which develops from a sporoblast within the oocyst in the life cycle of the malaria organism (*Plasmodium*). Upon bursting of oocyst, sporozoites are released into body cavity and make their way to salivary gland. They are introduced into human blood by a mosquito and almost immediately enter tissue cells. Here they go through two schizogonic divisions and then reenter blood stream and infect erythrocytes.

sport (spōrt) [O Fr (*de*) *sporter*, to carry away]. An individual organism which spontaneously differs from its parents or from type. SYN *mutation*.

sporulation (spor-ū-lā'shūn) [L. *sporula*, little spore]. Production of spores or method of reproduction of unicellular organisms.

spot (spōt) [M.E. a small bit]. A small area of surface differing from surrounding parts in appearance. SYN: *loculus*, *macula*, *papule*, *pustule*.

s., **blind**. The optic disk where optic nerve enters the retina.

s., **blue**. Spot, Mongolian, *q v*.

s., **cherry-red**. Red spot occurring on retina in cases of amaurotic familial idiocy.

s., **cold**. An area on surface of skin which, when stimulated, gives rise to sensation of coldness.

s., **corneal**. SYN: *leukoma*. An opaque area on the cornea.

s.s., **Filatow's**; *s.s.*, **Flindt's**. SEE *spots*, *Koplik's*.

s., **genital**. Area on nasal mucosa which tends to bleed during menstruation. Menstruation, vicarious, *q v*.

s., **germinal**. Old term for nucleolus of ovum.

s., **hot**. SEE *spot*, *warm*.

s., **hypogonic**. A point which, when pressed, will throw a susceptible person into hypnosis or sleep.

s., **hystero-genic**. A point which, upon pressure, will induce in a susceptible subject an attack of hysteroepilepsy.

s.s., **Koplik's**. Minute white spots or bluish-white ones on mucous membrane of mouth before appearance of the rash of measles.

s., **liver**. SYN: *chloasma*, *q v*.

s., **milk**. 1. A thickened and opaque area seen on epicardium in post-mortems 2. A dense area of macrophages in the omentum.

s., **Mongolian**. Bluish or mulberry colored spots usually located in sacral region.

s.s., **rose**. Rose-colored maculae of eruption in typhoid fever.

s., **ruby**. A senile angioma. SEE *angioma*.

s., **temperature**. A cutaneous area which responds to temperature changes. SEE *spot*, *warm*.

s., **warm**. Areas on surface of skin which when stimulated give rise to sensation of warmth.

s., **white**. Light-colored, elevated areas of various sizes occurring on ventricular surface of ant. leaflet of mitral valve.

s., **yellow**. Area surrounding and including the fovea centralis in the retina. SYN: *macula lutea*.

spot/ed fe'ver. Popular name for various eruptive fevers: 1. Typhus 2. Tick fever. 3. Cerebrospinal meningitis.

s. f., **Rocky Mountain**. SYN: *tick fever*. A febrile disease occurring in eastern and northwestern United States caused by *Rickettsia rickettsii*, transmitted by dog and wood ticks.

s. f., **South American**. SYN: *San Paulo or Colombian fever*. A febrile disease occurring in South America, esp. Brazil. It is caused by *Rickettsia piperti* transmitted by the dog tick.

spotting. Appearance of blood-tinged discharge from the vagina usually between menstrual periods.

sprain (sprān) [O Fr. *espreindre*, to wring]. 1 To wrench a joint 2. The forcible wrenching of a joint, with partial rupture or other injury of its attachments, and without luxation of bones.

A few fibers may be torn, or tendons or ligaments at the joint may be wrenched or torn. The ankle joint is most often sprained. SEE *fracture*, *strain*.

SYM: The signs of a sprain are rapid swelling, heat, and disability, often discoloration and limitation of function, frequently associated with small fractures. The pain is usually great, and is much increased by moving.

TREATMENT: Hot or cold compresses and bandaging, elevate the joint. If recovery proves slow, immobilization of the joint is indicated followed by careful massage. Very cold water with salt or injections of procaine into injured ligament alleviate the condition quickly.

s., **of back**. Overstretching of muscles, ligaments or other structures of spinal mechanism, often associated with small fractures.

SYM: Pain, esp. on extreme movements, tenderness, muscle spasm.

F. A. TREATMENT: Have patient lie down on rigid support, do not allow to sit up or walk until fracture is ruled out; intermittent heat, rest, with adhesive strapping, brace, etc.

s., **of foot**. Usually a fracture or tearing of the ligaments of the foot or ankle.

SYM: Pain, tenderness, swelling, discoloration.

TREATMENT: Sprain is best treated as a fracture, by complete immobilization until proven otherwise by x-ray examination.

s., **fracture**. The separation of a tendon or ligament from its insertion, taking with it a piece of the bone.

s., **riders**. Sprain of the adductor longus muscles of the thigh, resulting from strain in riding horseback.

spray (sprā) [Middle Dutch *sprayen*, to sprinkle]. 1. A jet of fine medicated vapor applied to a diseased part or discharged into the air. 2. An instrument for applying such a spray. SYN *atomizer*, *3*. To discharge fluid in a fine stream.

s., **tube**. Device for converting liquid into a spray.

spreading (sprēd'ing) [A.S. *sprædan*, to strew]. BACT: Noting a growth extending much (several mm. or more) beyond the site of inoculation.

s., **factor**. SYN: *hyaluronidase*. *Duran-Reynal's factor*. A substance produced by staphylococci which increases the permeability of connective tissue.

spring (spring) [A.S. *spring*, a rising].

1. The 1st of the 4 annual seasons. SYN: *vernal season*. 2. A flying back of a body

to its original position through its elasticity.

s. conjunctivitis. A form recurring each year in the spring but disappearing with the first frost. *Syn:* *vernal catarrh.*

s.-Anger. Arrested movement of a finger in flexion or extension followed by a jerk. *Syn:* *trigger finger.*

s. ligament. Int. calcaneoscaphoid ligament of the sole of the foot.

It joins the os calcis to the scaphoid bone

spurge (sprū) [*Dutch sprouw*] *Syn:* *psoriasis* A disease, endemic in many tropical regions and occurring sporadically in temperate countries, characterized by weakness, loss of weight, steatorrhea, and various digestive disorders, esp impaired absorption of glucose, fats, and vitamins. It occurs in two forms, *tropical* and *idiopathic steatorrhea*. Its cause is unknown

spud (spūd) [*M.E. a knife*]. Short, flattened, spadlike blade to dislodge a foreign substance.

spur (spūr) [*A.S. spora*, a pointed instrument] *Syn:* *calcar* A sharp or pointed projection. 2 A sharp horny outgrowth of the skin

s., calcaneal. An exostosis of the heel, often painful and resulting in disability

s., femoral. Spur sometimes present on medial and underside of neck of femur

s., scleral. A pointed portion of sclera which projects into the deeper part of cornea immediately behind canal of Schlemm at angle of iris

spurious (spū'ri-ūs) [*L. spurius*, false]. Not true or genuine, adulterated, false.

sputum (spūtūm) (pl. *sputa*) [*L. sputum*, from *spuere*, to spit] Substance ejected from the mouth containing saliva and mucus, and sometimes pus

Its appearance depends upon the underlying condition as follows

AMOUNT: *Copious:* This is seen in chronic inflammations of bronchial and pulmonary systems

Scanty: This obtains in all pulmonary bronchial acute inflammations, and in the early stages of lobar pneumonia, and beginning bronchopneumonia.

COLOR: This depends upon its origin, cause, and amount of decomposition.

CONDITIONS: *Anthraxis* (coal dust) The sputum is black

Bronchiectasis. The sputum is mucopurulent, and foul if expectoration is infrequent.

Bronchial asthma: Scanty sputum and frothy, later becoming purulent and grayish, containing eosinophiles

Bronchitis. The sputum is mucous, later purulent, and in chronic cases, greenish-yellow and thick

Bronchopneumonia. It is frothy, mucoid, thin, mucopurulent, copious, often with blood, or prune juice in color.

Calcinosis. Shows a sputum containing particles of lime, or chalky deposits such as plaster of Paris.

Empyema. If accompanied by perforations, the sputum resembles that of pulmonary abscess.

Gangrene of lung and putrid bronchitis: The sputum has an obnoxious odor and is purulent, separates on standing into 3 layers containing pus cells, hematin crystals and leukocytes.

Lobar pneumonia. It is scanty and viscid, yellowish, and somewhat mucopurulent during early stages, and in later stages, rusty, bloody, tenacious and viscid, esp. near or soon after crisis

Pulmonary abscess. Usually purulent and fetid with many pus cells, and pieces of lung tissue.

Pulmonary tuberculosis. In early stages, scanty, whitish, or grayish-yellow, frothy and expectorated in small quantities during coughing. Later, when consolidation takes place, it becomes

Sputum: Varieties of
The Character and Diseases in Which They Occur

Variety of Sputum	Character of Sputum	Diseases in Which the Various Types Occur
Mucoid.	Clear, thin, may be somewhat viscid.	Early stages of bronchitis.
Mucopurulent.	Thick, viscid, greenish color, inoffensive, frothy, may have sweetish odor.	Later stages of bronchitis, phthisis, pneumonia.
Purulent.	Thick, viscid yellow; often offensive.	Abscess of lung, empyema, advanced phthisis, bronchiectasis.
Nummular.	Mucopurulent, with small, round, semisolid masses which sink in water.	Advanced phthisis.
Rusty.	Mucopurulent, very viscid and gelatinous; rusty tinge.	Pneumonia.
Prune juice.	Dark brown, offensive, often semisolid.	Later stages of pneumonia, gangrene of lung, new growth of lung.
Red currant jelly.	Blood clots resembling currant jelly.	New growth in lung.
Blood (hemoptysis).	Bright red, frothy, with air bubbles; blood may be in streaks or mixed with sputum, fluid or clotted, or sputum may consist of pure blood.	Phthisis (ulceration of a vessel in a cavity); other diseases of the lung (pneumonia, new growth, gangrene, abscess, bronchiectasis); mitral stenosis; aneurysm rupturing into the bronchial tubes

¹ *Faber's Nurses' Pocket Encyclopedia.*

more copious, tenacious and yellowish-gray, and in the late stages, it becomes mucopurulent, musty and fetid, containing fibers and tubercle bacilli, sometimes blood-tinged or mixed with blood.

Pneumonoconiosis: Depends upon the character of dust inhaled.

Siderosis: It contains particles of iron or other metals, and it resembles that of chronic bronchitis. It also contains alveolar cells.

Silicosis: Produces a sputum containing particles of silica, or other stone dusts.

NP: Instruct patients to cough or sneeze into paper napkins, and to expectorate into a sputum box, which should be burned. Cotton and linen handkerchiefs when used should be immersed in boiling water for 20 minutes. Sputum may be disinfected with 5% phenol or 5% formalin by 1 hour's exposure.

Paper sputum cups should be disposed of if there is any evidence of dried sputum on them. Handkerchiefs and gauze should not be used unless disposed of immediately after using. A paper bag should be attached to the bed or the bedside table and the patient instructed how to use it as a receptacle for sputum. Paper wipes or squares of cloth, or soft tissues may be used for wiping away the discharge and disposing of it in the bag. The bag may be made of newspaper in a conical shape and pinned on, then, as the deposit accumulates, it is removed and another bag replaced. The patient should be instructed to fold the paper well over the material deposited. When removing, the paper should be well folded over and placed in the waste can or burned at once.

RS: albuminoptysis, albuminoreaction, Charcot-Robin crystals.

s., bloody. This is seen, of course, in hemorrhages. If the blood is mixed with the sputum the hemorrhage is in the finer bronchioles. Large quantities of blood indicate rupture of larger vessel.

s., currant jelly or raspberry. Indicates tumor of a lung. If of a fetid odor, bronchitis.

s., fruity. This precedes rupture of an echinococcus cyst. The sputum may be bloody, mucous, mucopurulent, purulent, serous, frothy and in plugs, or it may contain elastic fibers and fibrinous bronchial casts; also bacteria, tubercles, pneumococci, influenza bacteria, diphtheria bacteria, staphylococci, streptococci, and pneumococci.

s., nummular. Round, coin-shaped, flat forms which sink in water; seen in bronchiectasis and advanced pulmonary tuberculosis.

s., prune juice. Thin, reddish, bloody s. in gangrene, cancer of the lung and certain pneumonias.

s., rusty. This is seen in lobar pneumonia.

s., septemicia. S. acquired from inoculation with organisms in saliva or sputum.

squama (sqwā'mā) (pl. *squamae*) [L. *squama*, a scale]. 1. A thin plate of bone. 2. A scale from the epidermis.

squamoparietal (skwā'mō-pā-rī'ē-tāl) [" + *paries*, *pariet-*, wall]. Relating to the squamous and parietal bones.

squamosa (skwā-mō'sā) [L. *squamosa*, scaly]. The squamous part of temporal bone.

squamous (skwā'mūs) [L. *squama*, scale]. Scalelike.

s. bone. Upper anterior portion of temporal bone.

s. cell. Flat, scaly, epithelial cell.

s. epithellum. Flat form of epithelial cells.

s. suture. Line uniting squamosa and parietal bone.

square knot (skwār). Double knot in which ends and standing parts are together and parallel to each other.

This is used universally because it holds well and because of ease in tying and untying it.

Hold one end in each hand, carry right end over left end and make a loop or simple knot. Now reverse, carry left end over right end and again tie, thus forming a simple symmetrical knot. If this is not done a false or "granny" knot results which usually slips. To untie, steady the knot, take one end and draw it over knot and then continue pulling this direction until knot slips or jumps, forming 2 half hitches, when it may be slipped off.

s. lobe. 1. The quadrate lobe of the liver. **SYN:** *lobus quadratus*. 2. A lobe on upper surface of the cerebellum.

squarrose, squarrous (skwār'ōs, -ūs) [L. *squarrosus*, scurly]. Scurly or scaly; full of scabs or scales.

squash (skwōsh) [Algonquin *asquash*, raw]. **AV. SERVING** (summer and winter): 200-100 Gm. **Pro.** 0.5-1.00, **Fat**—0.3, **Carbo.** 3.5-4.00.

VITAMINS A+++ for both, B+ both, G+ both.

ASH CONST. (summer s. without seeds and winter s.) Ca 0.018-0.019, Mg 0.008-0.011, K 0.150-0.320, Na 0.002-0.004, Fe 0.0008-0.0006.

squatting position. One in which patient stoops with knees pressed on abdomen.

SYN: kneeling-squatting position.

squill (skwīl) [G. *skilla*]. **USP.** A drug once popular as an expectorant and diuretic.

DOSAGE: ½ m (0.1 cc)

s., syrup and s., compound syrup. Used to some extent at present.

DOSAGE: 30 m (2 cc.).

squint (skwint) [origin uncertain]. 1. Abnormality in which both the visual axes do not bear toward an objective point simultaneously. **SYN:** *strabismus*. 2. To close the eyes partly, as in excess light. 3. To be unable to direct both eyes simultaneously toward a point.

s., convergent. Condition existing when eyes are turned toward the medial line. **SYN:** *esotropia*.

s., divergent. Condition existing when eyes are turned outwards. **SYN:** *exotropia*.

s., external. Same as *divergent*.

s., internal. Same as *convergent*.

St. **Symb.** of *strenitum*.

ss. [L.]. Abbr. for *semis*, half.

s. & p. enema. A mixture of 1 dram of peppermint added to a soapuds solution given to relieve flatulence. **See enema.**

s. s. & t. enema. Compound cleaning enema using a mixture of thick liquid soap and turpentine. **See: enema**

ST. 37. Proprietary germicide and disinfectant. **SYN:** *caprokol, hexylresorcinol, q.v.*

stab (stāb) [Gaelic *stab*, to pierce]. 1. To pierce with a knife. 2. Inoculum plunged deeply into a solid culture medium with a wire or needle; also, the culture so produced.

s. culture. Bacterial culture in which organism is introduced into a solid gelatin medium with a wire or needle.

stable (stā'bīl) [L. *stabilis*, standing]. Not moving; fixed.

s. current. An electric current generated by holding stationary electrodes in a fixed position.

stable (stā'bīl) [L. *stabilis*, standing]. Firm; steady.

staccato speech or utterance (stah-kaht'ō) [Italian *staccato*, separated] Jerky pronunciation with words and syllables separated by pauses. **SYN:** scanning speech. **SEE:** speech.

stactometer (stāk-tōm'ēt-ēr) [G. *staktos*, dropping, + *metron*, a measure] Instrument for counting drops.

stadium (stā'di-ūm) [G. *stadion*, a measure]. A stage or period, as of a disease.

s. acmes. The height of a disease

s. augmenti. Period of rising temperature or other symptoms

s. decrementi. Period of defervescence or decrease of symptoms

s. florescentiae. Stage of eruption in an exanthematous disease.

s. frigoris. Cold stage in intermittent fevers, as malaria.

s. incrementi. Period of increase of fever or symptoms.

s. invasionis. Incubative stage of an infectious disease

s. sudoris. Sweating stage of a paroxysm of malaria.

staff (stāf) [AS. *staeƿ*, a stick] 1. An instrument to be introduced into the urethra and bladder as a guide to a surgical knife. 2. The medical corps attached to a hospital.

s. attending. Attending physicians and surgeons of a hospital.

s. consulting. Physicians and surgeons attached to a hospital who may be consulted by members of the attending staff.

s. of Wrisberg. Prominence of the cuneiform cartilage seen in the normal larynx during examination.

stage (stāj) [O.Fr. *estage*, from L. *stāre*, to stand]. 1. A period in the course of a disease. **SYN:** stadium. 2. The platform of a microscope.

s. algid. The cold stage or s. of collapse in cholera.

s. amphibolic. Stage which intervenes bet. acme of a disease and its outcome.

s. asphyxial. Preliminary stage of Asiatic cholera.

s. cold. Chill or rigor of a malarial paroxysm.

s. defervescent. Period in which temperature is declining

s. eruptive. Period in which an exanthem appears.

s. expulsive. Stage of dilatation of the cervix uteri during which the child is expelled from uterus.

s. first. Period when the fetal head is molded and the cervix dilated

s. hot. Febrile s. in a malarial paroxysm.

s. of invasion. Period in which a morbid influence precedes the onset of a disease.

s. of latency. The incubation period of an infectious disease

s. placental. Period of labor during which placenta and fetal membranes are discharged. Also called *third stage*.

s. preëruptive. Stage following infection and before appearance of eruption.

s. pyrogenetic. Stage of invasion in a febrile disease.

s. resting. A stage of relative inactivity between periods of activity as

in a cell between mitotic divisions; a dormant stage.

s. second. Stage, expulsive, *q.v.*

s. sweating. The 3rd or terminal s. of malaria during which sweating occurs.

s. third. Stage, placental, *q.v.*

stagnation (stāg-nā'shun) [L. *stagnāre*, from *stagnum*, pool] 1. Cessation of motion 2. **PATH.** A stoppage of motion of any fluid in the body, as blood. **SYN.** stasis.

stain (stān) [M.E. (*di*) *steinen*, from L. *dis*, apart, + *tingere*, to color]. 1. Any discoloration 2. A pigment or dye used in coloring microscopic objects and tissues. 3. To apply pigment to a tissue or microscopic object

s. acid. One in which the color-bearing ion (*chromatophore*) is the anion

Ex eosin. Commonly used for staining the cytoplasmic or basic elements of cells

s. acid-fast. **SYN:** Ziehl-Neelsen stain. A stain used in bacteriology especially for staining tuberculosis bacteria. A special solution of carbol fuchsin is used which the organism retains in spite of washing with acid alcohol, a decolorizing agent

s. basic. One in which the color-bearing ion is the cation

Ex methylene blue Commonly used to stain the nucleic or acidic elements of cells

s. Commission Certified. Abbr C C A stain that has been certified by the Biological Stain Commission

s. contrast. One used to color one part of a tissue or cell unaffected when another part is stained by another color.

s. counter. A stain, usually a contrast stain, which is used following the staining of specific elements of a tissue

s. differential. In bact., a stain such as Gram's stain which enables one to differentiate between different types of bacteria

s. double. A mixture of two contrasting dyes, usually an acid and a basic stain

s. Gram's. **SEE** Gram's method

s. intravital. **SYN** vital stain. A non-toxic dye which when introduced into an organism selectively stains certain cells, or tissues

s. inversion. A basic stain which, under the influence of a mordant, acts as an acid stain

s. metachromatic. A stain which stains the constituents of cells or tissues a color different from the stain itself.

s. neutral. A combination of an acid and a basic stain.

s. nuclear. A basic stain affecting nuclei.

s's. removal from linen. **SEE:** anti-stain formula.

s. substantive. A stain which is directly absorbed by the tissues when they are immersed in the staining solution.

s. supravital. A stain which will color living cells or tissues which have been removed from the body

s. vital. An intravital stain, *q.v.*

s. Wright's. A polychrome stain used for staining blood smears. **SEE:** staining, Wright's technic.

staining (stāning) [M.E. (*di*) *steinen*, from L. *dis*, apart, + *tingere*, to color]. Process of impregnating a substance, esp. a tissue, with pigments so that its component parts may be visible under a microscope.

Wright's technic for blood smears. 1.

Cover the dried blood smear with 5 to 10 drops of Wright's stain. Let stand one minute. 2. Add to the stain an equal amount of neutral distilled water. Let diluted stain stand for 3 to 10 minutes. A metallic sheen should appear. 3. Remove stain by gently washing with distilled water. 4. Stand slide on end and allow to dry. 5. Mount in dammar or balsam. If staining results are good, red cells will have a pinkish or copper color; white cells will have densely stained blue nuclei, and the cytoplasmic granules will stain variously in the different types of leukocytes. **See leukocytes**

staircase phenomenon. **SYN** *trappe, staircase effect*. That exhibited by skeletal and heart muscle when subjected to rapidly repeated maximal stimuli following a period of rest. In the resulting series of contractions each is greater than the preceding one until a state of maximum contraction is reached

stalgmometer (stäl-läg-möm'ë-tër) [*G. stalgmos, dropping, + metron, a measure*] Instrument for measuring number of drops in a given amount of fluid

stalk. An elongated structure usually serving to attach or support an organ or structure

s., belly. Structure in embryo which develops into umbilical cord

s., body. A bridge of mesoderm which connects the caudal end of embryo with chorion. Into it grow the allantois and embryonic blood vessels, the latter forming the umbilical arteries and vein which connect the embryo with placenta

s., cerebellar. One of the cerebellar peduncles which connect the cerebellum with brain stem

s., infundibular. **SYN** *infundibulum*. Stalk which connects diencephalon with neural lobe of hypophysis

s., optic. Structure which connects optic vesicle or cup to the forebrain

s., yolk. **SYN** *vitelline duct*. The narrow constricted portion by which the yolk sac is connected to mid-gut of embryo

stamina (stäm'in-ä) [*L. stamina, fibers*]. Inherent force, constitutional energy, strength, endurance

stammering (stäm'er-ing) [*A.S. stam-erian*]. Hesitant or faltering speech disorder.

May be due to hesitation, mispronunciation, transposing the letters l, r, or s, and repetition. **See speech.**

RS *tallng, mytactism*.

s. of bladder. Interrupted and irregular flow of urine, the muscles acting spasmodically.

standard (stän'dard) [*O Fr. estandard*]. That which is established by custom or authority as a model, criterion or rule for comparison of measurement.

s. deviation. **ABBR** *SD*. **SYM:** σ (small sigma). A commonly used measure of scatter or variability from the mean.

s. error. **ABBR** *SE*. A measure of variability which could be expected of a statistical constant following the taking of random samples of a given size in a particular set of observations. An important *SE* is that of the difference between the means of two samples.

standardization. The process of standardizing, esp. that of determining the strength or scale value of a substance or device by comparing with some standard, as standardization of solutions or thermometers.

s., biological. The standardization

of drugs or biological products (vitamins, hormones, antibiotics) by testing their effects upon animals. Utilized when chemical analysis is impossible or impracticable.

standstill. A cessation of activity.

s., atrial. **SYN** *auricular standstill*. Cessation of atrial contractions.

s., cardiac. Cessation of contractions of heart.

s., inspiratory. Temporary cessation of inspiration normally following each inspiration resulting from stimulation of proprioceptors in alveoli of lungs. **SEE** *Hering-Breuer reflex*.

s., respiratory. Cessation of respiratory movements.

s., ventricular. Cessation of ventricular contractions.

stannum (stän'üm) [*L.*]. Tin, a metallic element. **SYMS** *Sn*. **At. wt.** 118.70, at no 50.

stapedectomy (stä-pë-dëk'tö-mi) [*L. stapes, stirrup, + G. ektomë, excision*]. Excision of the stapes in the ear.

stapedial (stä-pë'di-äl) [*L. stapes, stirrup*]. Relating to the stapes.

stapediotomy (stä-pë'di-ö-tën-öt'ö-mi) [*' + G. tenön, tendon, + tomë, a cutting*]. Division of the tendon of the stapedius muscle.

stapediovestibular (stä-pë'di-ö-vës-tib'ü-lar) [*' + vestibulum, an antechamber*]. Relating to the stapes and vestibule of the ear.

stapedius (stä-pë'di-üs) [*L. stapes, stirrup*]. A small muscle of the middle ear inserted in the stapes. **SEE** *Table of Muscles in Appendix*.

stapes (stä'pës) [*L. stapes, stirrup*]. Ossicle in middle ear which articulates with the incus. Commonly called *stirrup*.

The footplate of the stapes fits into oval window. **SEE** *car*.

staphyle (stäf'i-lë) [*G. staphylë, bunch of grapes*]. Pendulous, fleshy mass hanging from the soft palate. **SYN:** *uvula, q.r.*

staphylectomy (stäf-il-ëk'tö-mi) [*' + ektomë, excision*]. Amputation of the uvula. **SYN** *staphylotomy, uvulotomy*.

staphyledema (stäf-il-ë-dë'mä) [*' + oidëma, swelling*]. Swelling of the uvula.

staphylene (stäf'i-lin) [*G. staphylë, a bunch of grapes*]. 1. Relating to the uvula. **SYN** *uvular*. 2. Resembling a bunch of grapes. **SYN** *botryoid*.

staphylinopharyngeus (stäf-il-lin'fär-in-jë-us) [*' + pharygg, pharynx*]. Muscle in undersurface of soft palate which contracts the fauces and elevates back of the tongue. **SEE** *Table of Muscles in Appendix*.

staphylinus (stäf-i-lin'üs) [*G. staphylë, a bunch of grapes*]. One of 2 muscles which elevate the soft palate and make it tense. **SEE** *Table of Muscles in Appendix*.

staphyllon (stäf-il-lin'ön) [*G. staphyllon, little grape*]. Craniometric point at median line of posterior border of hard palate.

staphylitis (stäf-il-lit'is) [*G. staphylë, a bunch of grapes, + -itis, inflammation*]. Inflammation of uvula.

staphylo- [*G. l.*]. Combining form meaning 1. Pert. to the uvula. 2. Pert. or resembling a bunch of grapes. 3. Pert. to *Staphylococcus*.

staphyloangina (stäf'il-ö-än-jin'ä) [*G. staphylë, bunch of grapes, + L. angina, sore throat*]. Sore throat due to staphylococcus.

staphylococcal (stäf-il-ö-kök'äl). Pert. to or caused by staphylococci.

s. actinophytosis. Botryomycosis; a condition characterized by granulomatous lesions, resembling those of actinomycoses, however, organisms, recovered from the lesions and cultured, grow as staphylococci

s. food poisoning. Poisoning by food containing a heat-stable enterotoxin produced by certain strains of staphylococci. When ingested the toxin causes nausea, vomiting, diarrhea, intestinal cramps, and in severe cases prostration and shock. Attack usually lasts 3 to 6 hours. Fatalities are rare

staphylococcemia (stáf-il-ô-kôk-sé-mi-â) [" + kokkos, berry, + aima, blood]. The presence of staphylococcus in the blood. SEE *staphylococcosis*.

staphylococci (stáf-il-ô-kôk'si). Plural of staphylococcus

Staphylococcus (stáf-il-ô-kôk'ûs) [G. *staphylê*, bunch of grapes, + kokkos, berry]. SYN: *Micrococcus*. A genus of micrococci belonging to the family Micrococcaceae, order Eubacteriales. They are Gram-positive and on agar produce white, yellow, or orange colored colonies. Some species are pathogenic causing suppurative conditions and elaborating endotoxins destructive to tissue cells. Some produce *enterotoxins* and are the cause of a common type of food poisoning

S. albus. SYN: *Micrococcus pyogenes* var. *albus*. A form of low pathogenicity characterized by formation of white colonies

S. aureus. SYN: *Micrococcus pyogenes* var. *aureus*. A species commonly present on skin and mucous membranes, esp. those of nose and mouth, characterized by production of a golden-yellow pigment. A cause of suppurative conditions such as boils, carbuncles, and internal abscesses in man

S. cereus aureus. Species found in nasal mucus in coryza

S. cereus flavus. Species found in pus causing yellow color.

S. citreus. SYN: *Micrococcus citreus*. A form producing pale yellow colonies. Mildly pathogenic.

S. pyogenes albus. Form causing supuration.

S. pyogenes aureus. A pus-producing form.

S. viridis flavescens. Species found in lesions of varicella, causing greenish-yellow color.

staphylococcus (stáf-il-ô-kôk'ûs). Term applied loosely to any pathogenic micrococci, esp. *Micrococcus pyogenes* var. *albus* and *aureus*. SEE: *Staphylococcus*.

staphylo-dermatitis (stáf-il-ô-dêrm'â-ti'-tis). A dermatitis caused by staphylococci

staphylo-dialysis (stáf-il-ô-di-â-ti'-sis) [G. *staphylê*, a bunch of grapes, + *dialysis*, a loosening]. Relaxation of the uvula.

staphylohemia (stáf-il-ô-hé-mi-â) [" + haima, blood]. Staphylococci in the blood. SYN: *staphylococcemia*.

staphylolysis (stáf-il-ô-li'-sin) [" + *lysis*, dissolution]. The hemolysis thrown off by a staphylococcus.

staphyloma (stáf-il-ô-mâ) [G. *staphylôma*, grape tumor]. A protrusion of the cornea or sclera of the eye.

s., anterior. Globular enlargement of ant. part of the eye. SYN: *keratoglobus*.

s., ciliary. S. in region of ciliary body.

s., corneae. Thinning and bulging of the cornea.

s., equatorial. S. in equatorial region of the eye.

s., intercalary. S. in the region of union of sclera with periphery of iris

s., partial. Extends in one direction displacing the pupil; the remainder of the cornea is clear.

s., posterior. *s. posticum*. Bulging of sclera backward.

s., total. Opaque, protuberant cicatrix found in place of cornea.

ETIOI: Perforation of cornea. RESULT: Poor vision, increased tension, rupture of thin scar.

TREATMENT: Prophylaxis, incision, excision, ablation.

s. uveale. Protrusion of any portion of the uvea through the sclera.

staphylocus (stáf-il-long'cûs) [G. *staphylê*, a bunch of grapes, + *ogkos*, tumor]. A tumor or enlargement of the uvula

staphylopharyngeus (stáf-il-ô-fâr-in'jê-ûs) [" + *pharynx*, pharynx]. SYN: *pharyngopalatinus*, *palatopharyngeus*.

q.v. Muscle of soft palate narrowing fauces and occluding nasopharynx

staphyloplasty (stáf-il-ô-plâs-ti) [" + *plassein*, to form]. Plastic surgery of the uvula or soft palate.

staphyloptosis, staphyloptosis (stáf-il-ô-ptô'si-â, -sîs) [" + *ptôsis*, a dropping]. Relaxation or elongation of the uvula. SYN: *staphylo-dialysis*.

staphylo-rhaphy (stáf-il-ô-râ-fl) [" + *rhaphê*, a seam]. Suture of a cleft palate.

staphyloschisis (stáf-il-ô-ski-sîs) [" + *schisis*, a fissure]. Fissure of the uvula. SYN: *cleft palate*.

staphylo-tomy (stáf-il-ô-tô-mi) [" + *tomê*, a cutting]. Amputation of the uvula

staphylo-toxin (stáf-il-ô-tôks'in). A toxin elaborated by one of the staphylococci. Among some of the toxins produced are an *enterotoxin*, a cause of food poisoning, and exotoxins including a hematoxin which lyses red blood cells, a lethal toxin, a dermonecrotic toxin, and leukocidins.

star. Any structure resembling a star. SYN: *aster*.

s., lens. A starlike structure developing in lens of eye as a result of unequal growth of lens fibers.

s's. of Verheyen. Star-shaped masses of veins in renal cortex. SYN: *venae stellatae*.

starch [M.E. *starche*, from A.S. *stearc*, stiff]. Noncrystalline carbohydrate of the polysaccharose* group found in plants.

The polysaccharoses include *vegetable starches*, animal starch (glycogen), *celluloses*, *pectins*, *dextrins*, and *gums*, among which it is difficult to make distinctions. All of them are rather easily decomposed, have high molecular weights and yield monosaccharoses on complete hydrolysis.

Those which the body is able to hydrolyze into hexoses are useful as concentrated energy giving foods. They all must be reduced to simple sugars, except cellulose, before they may be absorbed. What is not needed is stored in the liver as glycogen. They are heat and energy producing foods. In some fruits the starch is changed to sugar when they ripen, while some vegetables (peas and corn) change sugar into starch as their seeds develop.

The amylases of saliva and pancreatic juice hydrolyze starches to dextrins and maltose. These in turn are hydrolyzed to glucose, which is absorbed into the blood stream. Glucose not immediately needed for energy is converted into

Classification of Starches

Groups		
I. Potato Group	(a) Canna	(b) Potato (c) Arrowroot
II. Leguminous Group	(a) Beans	(b) Peas (c) Lentils
III. Wheat Group	(a) Wheat	(b) Barley (c) Rye
IV. Sago Group	(a) Sago	(b) Cassava (c) Arum
V. Rice Group	(a) Rice	(b) Maize (c) Oats

Starches	
Name	From
1. Cornflour	Maize or corn.
2. Arrowroot	Maranta
3. Cassava	Brazilian arrowroot.
4. Curcuma	East Indian arrowroot.
5. Arum	Portland arrowroot.
6. Tous-les-mois	Canna (West India).
7. Sago	Palm (East India).
8. Inulin	Dahlia tubers
9. Lichen	Iceland moss.
10. Glycogen	Animal livers.

NOTE Starch is soluble at 150° F. Only slightly so in cold water
 IODINE acting on starch paste gives a deep blue.
 BROMINE acting on starch paste gives an orange-yellow.

The Percentage of Starch in Various Foods			
Article	Per cent	Article	Per cent
Acorns	43	Lentils	57
Arrowroot	23	Oatmeal	68
Bananas	22	Potatoes	18
Barley	62	Potatoes, sweet	15
Beans	57	Peas, green	29
Beans, green	29	Peas, dried	55
Bread fruit	14	Peanuts	24
Buckwheat flour	77	Rye flour	78
Chestnuts	42	Rice	79
Cassava (sweet)	31	Wheat flour	75

glycogen, a form of starch which is stored in the liver or in muscle tissue

Pure starches, having the formula $(C_6H_{10}O_5)_n$, if normally metabolized, leave no residue and give rise only to carbon dioxide and water. Starches yield an acid ash

s., animal. Glycogen

s., corn. Starch obtained from ordinary corn or maize (*Zea mays*). It is used as a dusting powder and an absorbent and is a constituent in many pastes and ointments. It is widely used in industry and as a food

stare (stâr) [A.S. *starian*, to stiffen]. To gaze fixedly at anyone or anything.

Starling's law of Intestine. A stimulus within the intestine, as the presence of food, initiates a band of constriction on proximal side and relaxation on distal side. This results in a peristaltic wave.

S's. law of heart. The force of the heart beat is determined primarily by the length of the fibers comprising its muscular wall, i.e., an increase in diastolic filling increases force of heart-beat

starter. A pure culture of bacteria or other microorganism used to initiate a particular fermentation as in the making of cheese.

starvation (star-vâ'shûn) [A.S. *steorfan*, to die]. 1. The condition of being without food for a long period of time.

When everything but air and water is withheld, the sequence of events is as follows: (a) *Hunger*, beginning about 4 hours after the last meal, accompanied by special activity of the stomach and general restlessness, becoming more acute periodically, esp. at times when meals were customarily taken; (b) *loss*

of weight; (c) *utilization of glycogen* stored in liver and muscles, (d) *utilization of stored fat*, (e) *spells of nausea*, and *diminishing acuteness of the sensation of hunger*; (f) *destruction of body protein*. The greatest loss of weight is in: (a) The fatty tissues, (b) the spleen, and (c) the liver. The nervous system loses little and the heart least of all 2. Condition in which the supply of a specific food or food accessory is below minimum bodily requirements (Ex: *protein starvation*) 3 Condition resulting from failure of the body to digest and absorb essential foodstuffs. *Sx:* diet, dietetics, deficiency disease.

stasisbasiphobia (stâ'si-bâ'si-fô'bî-â) [G. *stasis*, a standing, + *basis*, step, + *phobos*, fear]. Delusion of one's inability to stand or walk or fear to make the attempt

stasiphobia (stâ-si-fô'bî-â) [+ *phobos*, fear]. Delusion of one's inability to stand erect or to make the attempt.

stasis (stâ'sis) [G. *stasis*, halt]. Stagnation of normal flow of fluids, as of the blood, urine, or of the intestinal mechanism.

s., diffusion. S. with diffusion of lymph or serum.

s., intestinal. Condition in which peristaltic movements fail to move food along the intestine.

s., venous. S. of blood caused by venous congestion.

stat [L.]. Abbr. of *statim*, immediately

state. 1. A condition. 2. A mode or condition of being.

s., anxiety. A condition characterized by more or less continuous anxiety and apprehension. *Sx:* anxiety neurosis.

s., central excitatory. ABBR: c.e.s. A

- condition of increased excitability in the central nervous system, esp in the spinal cord, following an excitatory stimulus.
- s. central inhibitory.** Abbr. c.i.s. A condition of decreased excitability in the central nervous system, esp in the spinal cord, resulting from an inhibitory stimulus.
- s. fatigue.** Neurasthenia, *qv*.
- static** (stăt'ik) [G. *statikos*, standing]. At rest; in equilibrium; not in motion.
- s. electricity.** Electricity produced by friction.
- s. equilibrium.** Equilibrium concerned with recognition of position of head in relation to gravity. Opp. of *dynamic equilibrium*.
- s. reflex.** A reflex action having to do with maintenance of posture or maintenance of muscle tone.
- statics** (stăt'iks) [G. *statikos*, standing]. Study of matter at rest and forces bringing about equilibrium. See *dynamics*.
- statim** (stăt'im) [L.]. Immediately; at once.
- station** (stă'shūn) [L. *statio*, a standing]. 1. The manner of standing. 2. A stopping place.
- s. aid.** One in the army for collecting the wounded in battle.
- s. dressing.** A temporary one for wounded soldiers in the field.
- s. rest.** A temporary relief station for the sick on a military road or railway.
- stationary** (stă'shūn-ar-ī) [L. *stationarius*, belonging to a station]. Not moving.
- statistical.** Pert to statistics.
- s. constant.** A value such as the mean, standard deviation, coefficient of variation, or standard error which characterizes a particular series of numerical data.
- statistics.** The systematic collection of numerical data pertaining to any subject.
- s. medical.** S. pertaining to medical sciences, esp. data pert. to human disease.
- s. morbidity.** S. pertaining to sickness.
- s. vital.** SYN: *biostatistics*. That which deals with births, deaths, marriages, etc.
- statokinetic** (stăt-ō-kin-ēt'ik) Pertaining to reactions of the body produced by movement.
- s. reflexes.** SYN: *kinetic* or *accelerator reflexes*. Reactions which are the result of movement of the body (positive or negative acceleration) or movements of the head.
- statometer** (stăt-ōm-ēt-ēr) [G. *statos*, standing, + *metron*, a measure]. Instrument for measuring amount of abnormal protrusion of eyeball.
- stature** (stăt'ūr) [L. *statura*, size of body]. Natural height of the body.
- status** (stă'tūs) (pl. *statuses*) [L. *status*, from *stare*, to stand]. 1. A state or condition. 2. A long sustained abnormal or pathological condition.
- s. anginosus.** A sustained attack of angina pectoris.
- s. arthriticus.** Predisposition toward having attacks of gout.
- s. asthmaticus.** Persistent and intractable asthma.
- s. dysgraphicus.** Condition resulting from imperfect closure of neural tube of embryo.
- s. dysmyelinitisatus** (of Vogt). Condition marked by demyelination of the globus pallidus, and various nuclei of the brain, esp. the hypothalamic nuclei and dentate nucleus of cerebellum.
- s. epilepticus.** Rapid succession of epileptic attacks without regaining consciousness during the intervals.
- s. lymphaticus.** A hyperplastic condition of all lymphatic tissue, the spleen, bone marrow, and thymus, resulting in lowered vitality.
- The thymus enlarges together with lymph glands and lymphoid tissue elsewhere in the body. It is often unsuspected and may cause sudden death.
- Such individuals have a delicate framework, slight musculature, delicate cardiovascular system, low blood pressure, low blood sugar, and lymphocytosis. They are particularly susceptible to shock and infections, and are frequently weaklings mentally as well as physically.
- Proc. Sudden death possible, esp. in surgical anesthesia. SYN *lymphatim*.
- s. parathyreoprivus.** Condition resulting from loss of parathyroid tissue.
- s. praesens.** The state of a patient under observation.
- s. raptus.** A state of ecstasy.
- s. thymicolymphaticus.** Condition resembling *s. lymphaticus*, but with enlarged thymus as primary factor.
- s. thymicus.** Same as *s. thymicolymphaticus*.
- s. typhosus.** Condition in wasting fevers in which symptoms are stupor, great prostration, coma; vigil or muttering delirium, feeble frequent pulse, involuntary discharge of urine and feces, sordes, and dry brownish tongue.
- s. vertiginosus.** Persistent condition of vertigo.*
- staurion** (stăw'ri-ōn) [G. *stauros*, across]. Craniometric point where transverse palatine suture crosses the median one.
- stauroplegia** (stăw-rō-plē'j-ā) [+ *plēgē*, a stroke]. Hemiplegia of a part on one side of the body and another part on the other side. SYN: *hemiplegia, crossed*.
- S.T.D.** Abbr for *skin test dose*. See: *Dick test*.
- steam** (stēm) [A.S. *stēam*, vapor]. 1. Invisible vapor into which water is converted at boiling point by heat. 2. Mist formed by condensation of water vapor. 3. Any vaporous exhalation.
- s. tent.** A device for inhalation of vapors.
- Various methods of inhaling vapors may be improvised: 1. Tie an old umbrella to the head of the bed, place a pitcher of boiling water in a box alongside of the patient. Vapors tend to fill the umbrella. Solution may be kept hot by placing in a double boiler or wrapping pitcher in an old woolen cloth or newspapers.
2. Window screens may be used by fastening them about head of bed and then covering with a blanket or sheet lined with newspapers. Solution may be used as above or a steaming teakettle placed alongside of bed with the spout directed under tent.
3. A rod or rope fastened across head of bed and down to foot of bed. Place a blanket across rod to cover patient and use inhalation as above.
4. Fasten ropes to all 4 corners of bed, covering with blankets, etc., forming enclosure for patient. Numerous variations will quickly suggest themselves.
- Solutions to be used are about a quart of boiling water to which is added a teaspoonful of compound tincture of benzoin or a teaspoonful of tincture benzoin (this does not contain aloe), a

few crystals of menthol or camphor, or a few drops of methyl salicylate. These ingredients are pleasant but have relatively little therapeutic effect. Most of the value is in the water vapor. SEE: *croup*.

steapsin (stē-āp'sin) [G. *stear*, fat, + *pepsis*, digestion]. SYN: *pancreatic lipase*. A lipolytic enzyme present in pancreatic juice that hydrolyzes fats to fatty acid and glycerine.

The bile salts prepare the fats for the action of steapsin by emulsifying them. SEE: *enzyme*, *pancreas*.

stearate. An ester or salt of stearic acid.

stearic acid (stē-ār'ik) [G. *stear*, fat] A white, fatty acid found in solid animal fats and a few vegetable fats.

steariform (stē-ār'ī-form) [L. *forma*, shape]. Resembling fat.

stearin (stē-ār'in) [G. *stear*, *stear*, fat]. $C_{18}H_{36}O_2$. A white, crystalline solid in animal and vegetable fats, any of the esters of glycerol and stearic acid, specifically glyceryl tristearate.

One of the commonest fats in the body, esp. the solid ones. It breaks down into stearic acid and glycerol.

steatodermis (stē-ār-ō-der'mī-ā) [L. + *derma*, skin]. Disease of the sebaceous glands of the skin.

stearoptene (stē-ār-ōp'tēn) [G. *stear*, *stear*, fat, + *ptēnos*, volatile]. The more solid portion of a volatile oil as distinguished from the more fluid portion or eleoptene. EX: *menthol*, *thymol*.

steatrrhea (stē-ār-ē-ā) [L. + *rhoia*, flow] Excessive secretion of sebum or fat. SYN: *seborrhoea olucosa*.

s. *flavescens*. S. with yellow sebaceous matter deposited on the skin.

s. *nigricans*. S. with black sweat due to presence of indican. SEE: *chromidrosis*, *chromodermatosis*.

s. *simplex*. Excessive discharge of sebum.

steatadenoma (stē-āt-ād-en-ō'mā) [L. + *aden*, gland, + *-oma*, tumor]. Tumor of the sebaceous glands.

steatitis (stē-ā-tīt'is) [L. + *-itis*, inflammation] Inflammation of adipose tissue.

steato- (stē-āt-ō) [G.] Prefix meaning fatty.

steatocele (stē-āt-ō-sēl, stē-āt-ō-sēl) [G. *stear*, *stear*, fat, + *kēlē*, tumor]. Fatty tumor within the scrotum.

steatocryptosis (stē-āt-ō-krip-tō'sis) [L. + *kryptē*, a sac, + *-osis*, disorder]. Any disease of sebaceous glands. SEE: *steatodermis*.

steatocystoma multiplex (stē-āt-tō-sis'-tō-mā). SYN: *steatomatosis*. A skin disorder characterized by development of many sebaceous cysts.

steatogenous (stē-āt-toj'en-ūs) [L. + *gennan*, to produce]. Causing fatty degeneration or any sebaceous gland disease.

steatolysis (stē-āt-ōl'is-is) [G. *stear*, *stear*, fat, + *lysis*, dissolution]. SYN: *lipolysis*. 1. The process by which fats are first emulsified and then hydrolyzed to fatty acids and glycerine preparatory to absorption. 2. The decomposition of fat.

steatolytic (stē-āt-ō-lit'ik) [L. + *lysis*, dissolution]. Concerning steatolysis.

steatoma (stē-āt-ō'mā) [G. *stear*, *stear*, fat, + *-oma*, tumor]. 1. Sebaceous cyst. SYN: *wen*. 2. Benign tumor composed of fat cells. SYN: *lipoma*.

Called a chalazion when on eyelid and meibomian gland.

Smooth, shiny, globular, cutaneous or subcutaneous tumor from pea to orange size arising from sebaceous glands,

single or multiple, usually on neck, scalp, back, or scrotum.

ETIO. Exciting cause unknown. Duct occlusion is causative in some.

PROG. Prolonged irritation may cause suppuration.

TREATMENT. Surgical excision by dissection without perforating sac. Packing in suppurative cases.

steatonecrosis (stē-āt-ō-nē-krō'sis) [L. + *nekros*, corpse, + *-osis*, condition]. Necrosis of fatty tissue in small patches.

steatopathy (stē-āt-lōp'ā-thī) [L. + *pathos*, disease]. Disease of the sebaceous glands of the skin.

steatopygia (stē-āt-ō-pī'jī-ā, -pī'jī-ā) [L. + *pygē*, buttock]. Abnormal fatness of the buttocks.

steatorrhea (stē-āt-or-rē-ā) [L. + *rhoia*, flow]. 1. Increased secretion of sebaceous glands. SYN: *seborrhoea*. 2. Fatty stools, as seen in pancreatic diseases.

s. *idiopathic*. SYN: *secondary sprue*. Term applied to gastrointestinal disorders characterized by impaired absorption.

s. *simplex*. Excessive secretion of sebaceous glands of the face.

steatosis (stē-āt-ō'sis) [L. + *-osis*, condition]. 1. Fatty degeneration. 2. Disease of the sebaceous glands.

stegano- [G.] Combining form meaning covered.

stegnosis (stēg-nō'sis) [G. *stegnōsis*, a closing]. 1. Checking of a secretion or discharge. 2. Closing of a passage. SYN: *stenosis*. 3. Constipation. SYN: *costiveness*.

stegnotic (stēg-nōt'ik) [G. *stegnōsis*, a closing]. Bringing about stegnosis. SYN: *astrigent*, *constipating*.

Stegomyia (stēg'ā-mī'ā-ā). A subgenus of the genus *Aedes*, family Culicidae of mosquitos suspected of transmitting the causative organism of yellow fever.

stel'ia. [L.] star

s. *lentic* *hyaloidea*. Post. pole of crystalline lens of eye

s. *lentic* *iridica*. Ant. pole of crystalline lens of eye

stellate (stēl'āt) [L. *stella*, star] Star-shaped; arranged with parts radiating from a center.

s. *bandage*. One wound on the back, crossways.

s. *cell*. Any cell that appears star-shaped. EX: neurons of molecular layer of cerebellum, Kupffer's cells of the liver sinusoids, astrocytes.

s. *fracture*. One with numerous fissures radiating from central point of injury.

s. *ganglion*. SYN: *cervicothoracic ganglion*. A sympathetic ganglion formed by the fusion of inferior cervical and first thoracic ganglions.

s. *ligament*. SYN: *radiate ligament*. One of the ant. costovertebral ligaments.

s. *veins*. Venous plexuses beneath the kidney's capsule. SYN: *stars of Verheyen*.

Stellwag's sign (stēl'vāg). Widening of palpebral aperture with absence or lessened frequency of winking, seen in Graves' disease.

stem (stēm) [A.S. *stemma*, trunk]. 1. Any stalklike structure. 2. Offspring. 3. To derive from. 4. To check.

s. *brain*. The lower portion of the brain excluding the cerebrum and cerebellum. Includes the medulla oblongata, pons, mid-brain and diencephalon.

s. *cell*. A cell which gives rise to a specific type of cell as in hematopoiesis.

stenion (stén'í-ón) [G. *stenos*, narrow]. Cranio-metric point at extremities of the smallest transverse diameter in the temporal region.

steno- [G.]. Combining form meaning narrow, short, as *stenosis*, *steno-graphy*.

stenocardia (stén-ò-kar'dí-á) [G. *stenos*, narrow, + *kardia*, heart]. Angina pectoris.

stenocephaly (stén-ò-séf'ál-l) [' + *kephalé*, head]. Narrowness of the cranium in one or more diameters.

stenochoria (stén-ò-kó'rí-á) [' + *chóros*, space]. Partial constriction, esp. of the lacrimal duct. SYN: *stenosis*.

stenocompressor (stén-ò-kóm-prés'or) [' + *L* *compressor*, that which presses together]. An instrument for compressing Stensen's ducts to stop the flow of saliva.

stenocoriasis (stén-ò-kó-rí'ás-ls) [' + *koré*, pupil]. Narrowing of pupil of the eye.

stenopaic, stenopeic (stén-ò-pá'ík, -pá'ík) [G. *stenos*, narrow, + *opé*, opening]. Having a narrow opening.

stenosed (sté-nóst', stén'òzd). Characterized by stenosis, constricted.

stenosis (stén-ò'sís, sté-nó'sís) [G. *stenós*, a narrowing]. Constriction or narrowing of a passage or orifice. SYN: *stricture*.

Etiol. May result from embryonic maldevelopment, hypertrophy and thickening of a sphincter muscle, inflammatory disorders, or excessive development of fibrous tissue. It may involve almost any tube or duct.

s., **aortic**. Constriction of the aortic orifice at cardiac base or narrowing of the aorta.

s., **cardiac**. A narrowing or constriction of any of the orifices leading into or from the heart or between chambers of the heart.

s., **cicatricial**. S. resulting from any contracted cicatrix.

s., **mitral**. S. of mitral valve or orifice of heart, or of both. Usually the result of rheumatic heart disease.

s., **pyloric**. Obstruction caused by hypertrophy of walls of the pyloric orifice.

s., **subaortic**. Congenital constriction of aortic tract below aortic valves.

stenostomia (stén'ò-stó'mí-á) [G. *stenos*, narrow, + *stoma*, mouth]. Narrowing of the mouth.

stenothermal (stén'ò-ther'mál) [' + *thermé*, heat]. Resisting only a small change of temperature.

steno-thorax (stén'ò-thó'ráks) [' + *thóraz*, chest]. An unusually narrow thorax.

stenotic (stén-ò'tík) [G. *stenosis*, a narrowing]. Produced by or characterized by stenosis.

Stensen's duct (stén'sén). The excretory duct of parotid gland.

S's. **foramina**. Incisive foramina of sup. maxillary bone transmitting ant. branches of descending palatine vessels.

stentorophonous (stén-tó-róf'ò-nūs). Having a loud voice.

stephanion (sté-fá'ní-ón) [G. *stephanos*, crown]. Point at intersection of sup. temporal ridge and coronal suture.

step-page gait. The high-stepping gait seen in diabetic neuritis of the peroneal nerve and in tabes dorsalis.

Patient lifts the foot very high in walking to raise the drooping toes from the ground or floor.

stereo- [L.]. Combining form meaning dung, as *stercobilin*.

stercobilin (stér'kó-bí'lín) [L. *stercus*, dung, + *bilis*, bile]. A brown pigment

derived from the bile giving the characteristic color to feces. SEE: *urobilin*.

stercobilinogen (stér'kó-bí-lín'ò-jén). A colorless substance derived from stercobilin. It is present in the feces and turns brown on oxidation.

stercoraceous (stér-kó-rá'shūs) [L. *stercoraceus*, like dung]. Having the nature of, pert. to or containing feces.

stercoral (stér-kó-rál) [L. *stercus*, dung]. Pert. to feces. SYN: *stercoraceous*.

stercorolith (stér-kó-ró-lith) [' + *G* *lithos*, stone]. A fecal concretion. SYN: *coprolith*, *fecalith*.

stercoroma (stér-kó-ró-má) [' + *G* *ónma*, tumor]. A fecal tumorlike mass in the rectum. SYN: *coproma*, *fecaloma*, *scotoma*.

stercorous (stér-kór-üs) [L. *stercus*, *stercor*, dung]. Resembling excrement. SYN: *stercoral*, *stercoraceous*.

stercus (stér'küs) [L.]. Feces. SYN: *excreta*, *excrement*.

stere (stér, stár) [Fr *stère*, from G. *stereos*, solid]. A measure of capacity. SYN: *cubic meter*, *kiloiter*.

stereo- [G.]. Combining form meaning solid.

stereoaesthesia (stér'è-ò-án-és-thé'zí-á) [G. *stereos*, solid, + *an-*, negative, + *aisthesis*, sensation]. Inability to recognize objects by feeling their form.

sterearthrosis (stér'è-ò-ar-thró'i-sís) [' + *arthron*, joint, + *lysis*, a loosening]. Surgical formation of a movable new joint in bony ankylosis.

stereochemical (stér'è-ò-kém'í-kál) [' + *chèmeia*, chemistry]. Concerning stereochemistry.

stereochemistry (stér'è-ò-kém'ís-trí) [' + *chèmeia*, chemistry]. That branch of chemistry dealing with atoms in their space relation.

stereocilia (stér-è-ò-síl'í-á). Nonmotile protoplasmic projections from free surfaces of cells of ductus epididymis and ductus deferens.

stereognosis (stér'è-ò-gnó'sís) [' + *gnōsis*, knowledge]. Ability to recognize form of solid objects by touch.

stereoisomerism (stér'è-ò-i-sóm'ér-izm). Condition in which two or more substances may have the same empirical formula but a different structural formula; structural formulas being mirror images of each other.

Ex *dextrose* and *levulose*. Such differ in optical activity with regard to their effect on a plane of polarized light.

stereometry (stér-è-ò-m'èt-rí) [' + *metron*, a measure]. The measurement of a solid body or the cubic contents of a hollow body.

stereorhopter (stér'è-ò-ór-thóp'ter) [' + *orthos*, straight, + *opsis*, vision]. A mirror-reflecting device for treatment of strabismus.

stereophantoscope (stér'è-ò-fán'tó-skóp) [G. *stereos*, solid, + *phantos*, visible, + *skopein*, to examine]. A stereoscopic device with rotating disks for testing vision.

stereophometer (stér'è-ò-for-óm'è-ter) [' + *phoros*, a bearer, + *metron*, a measure]. A prism-refracting device for use in correcting defective vision.

stereophotography (stér'è-ò-fó-tóg'rā-fí) [' + *phōs*, *phot-*, light, + *graphein*, to write]. Photography which produces effect of solidity or depth of pictures.

stereophotomicrograph (stér'è-ò-fó-tó-mí-kró-grāf) [' + *micros*, tiny, + *graphein*, to write]. A photograph showing solidity or depth of a microscopical subject.

stereoscope (ster'ē-ō-skōp). [G *stereos*, solid, + *skopein*, to see] Instrument which creates an impression of solidity or depth of objects seen by combining images of 2 pictures

stereoscopic, stereoscopical (ster'ē-ō-skōp'ik, -i-kāl) ["" + *skopein*, to see]. Pert. to the stereoscope or its use.

s. vision. Vision in which things have the appearance of solidity and relief as though seen in 3 dimensions. Such is the result of binocular vision.

stereotropism (stēr'ē-ō-trō-plzm). **SYN:** *thigmotropism*. A response toward (positive s) or away from (negative s.) a solid object

stereotypy (stēr'ē-ō-tī'p'l) ["" + *typos*, type] Repetition of words, posture, or movement without meaning; seen in catatonic partial stupors.

sterile (stēr'īl) [L. *sterilis*, barren]. 1. Free from living microorganisms. **SYN:** *aseptic*. 2. Not fertile; unable to reproduce young. **SYN** *barren*.

sterility (stēr-īl'ī-tī) [L. *sterilitās*, barrenness]. **SYN** *barrenness, infertility* 1 Inability to conceive in the course of normal sexual relations 2 Inability to produce offspring

GENERAL CONSTITUTIONAL DISEASES: Diabetes mellitus, nephritis, syphilis, some of the blood dyscrasias. About 10% of all marriages are sterile.

Investigation into the cause of sterility includes primarily definite information as to the fertility of the husband. A routine examination for sterility includes a study of the vaginal secretions, a bimanual examination, visualization of the cervix, and in some cases a test for patency of the tubes

A history of pelvic disorder in the past is of great importance and any information as to the use of strong chemical douches for the purpose of contraception may be vital. In the event that the tubes are found closed, a study of the genital tract by the use of x-ray and lipiodol is indicated.

TREATMENT: The treatment of sterility depends upon the finding and correction of any or all causes of the condition

s. absolute. Complete inability to produce offspring as a result of anatomical or physiological factors which prevent production of functional germ cells, conception or normal development of a zygote.

s. acquired (secondary s). The failure of further conception after once having given birth to a child

s. facultative. Voluntary sterility; that resulting from contraceptive practices.

s. female. Inability to give birth to living young.

ETIOLOGICAL FACTORS: CONGENITAL ABNORMALITIES: Absence or maldevelopment of the uterus tubes, or ovaries; infantile uterus; congenital elongation of the cervix

ACQUIRED LOCAL CONDITIONS: (a) *Vagina:* Hyperacidity; marked hypertrophy of the vaginal mucous membrane with hiding of the cervix; lacerated vagina with effluvium seminis. (b) *Cervix:* Pinpoint os; sharp angulation; narrowing of the internal os; acute and chronic endocervicitis, polypoid occluding the cervical canal; severe lacerations, particularly where the internal os is torn, resulting in precipitate miscarriages before the viability of the child. (c) *Body of the uterus:* Malpositions, particularly retroversion, retroflexion, and hyperanteflexion; fibroids of the uterus which

block the canal; diseased endometrium, particularly endometritis (d) *Fallopian tube* Chronic salpingo-oophoritis with closure of the tubal ostium and where the ovary is embedded in adhesions. (e) Ovarian dysfunction which may result from congenital conditions or be secondary to endocrine disorders, infections, trauma, neoplasms, x-ray or surgical castration, or effects of toxic agents. (f) Psychological and emotional disturbances (g) Coital difficulties (h) Dietary deficiencies.

s., male. Inability of a male to bring about conception. May result from (a) congenital factors such as cryptorchidism, maldevelopment of testis ducts or testis, etc., (b) acquired factors (*See: sterility, female*), or (c) lack of libido or impotence

s. one-child. Sterility in a woman following the birth of one child

s., primary. S resulting from failure of testis or ovary to produce functional germ cells

s., relative. S due to causes other than defect of sex organs

sterilization (ster'īl-i-zā'shūn) [L. *sterilis*, barren]. 1 Process of destruction of all microorganisms on a substance by exposure to chemical or physical agents. 2 Process of rendering barren. Can be accomplished by (a) surgical removal of testis or ovary (castration) or inactivation by irradiation, (b) tying off or removal of a portion of reproductive ducts (ductus deferens or uterine tubes) **See: vasectomy, salpingectomy**

s., dryheat. S accomplished in ovens by subjection to high heat (165° to 170° C) for two to three hours

s., fractional. S, in which heating is done at separated intervals, so that spores can develop into bacteria and be destroyed. Usually accomplished by subjecting organisms to free-flowing steam for 15 min or three or four successive days. Also called *tyndalization* or *intermittent sterilization*

s. intermittent. **SYN:** *fractional sterilization, q v*

s., steam, by flowing. Exposure at 212° F. (100° C.) to steam in an unsealed receptacle

s., steam under pressure. Exposure to steam in an autoclave

sterilize (ster'īl-i-z) [L. *sterilis*, barren]. 1. To free from microorganisms. 2. To make barren.

sterilizer (ster'īl-i-zer) [L. *sterilis*, barren]. Oven or appliance for sterilizing.

s., Arnold steam. A sterilizer using live or streaming steam at atmospheric pressure.

s., steam. An autoclave or steam-pressure cooker which sterilizes by steam under pressure at temperatures above 100 degrees C

sternal (ster'nāl) [G. *sternon*, chest]. Relating to the sternum or breastbone.

sternalgia (stēr-nāl'jī-ā) ["" + *algos*, pain]. Pain in the sternum. **SYN:** *sternodynia*.

sterno- [G.]. Combining form meaning sternum.

sternoclavicular (ster'nō-klāv-vīk'ū-lar) [G. *sternon*, breast, + L. *clavicula*, a little key]. Concerning the sternum and clavicle.

sternocleidomastoid (ster'nō-klī-dō-mās'tōyd) ["" + *kleis*, clavicle, + *mastos*, breast, + *eidōs*, like]. One of 2 muscles arising from sternum and inner part of clavicle. **See: Table of Muscles in Appendix.**

sternocostal (ster'nō-kōs'tāl) ["" + L.

costa, rib]. Relating to sternum and ribs.

sternodynia (ster'nō-dīn'ī-ā) [' + *odynē*, pain]. Pain in the sternum. SYN: *sternalgia*.

sternohyoid (ster'nō-hī'oyd) [' + *hyoidēs*, U-shaped]. Muscle from medial end of clavicle and sternum to hyoid bone. SEE *Table of Muscles in Appendix*.

sternoid (ster'noyd) [' + *eidōs*, resemblance]. Resembling the breastbone.

sternomastoid (ster'nō'māst'oid). Pert to the sternum and mastoid process of temporal bone.

s. region. SYN *carotid region*. Wide area on lateral region of neck covered by sternocleidomastoid muscle.

sternopericardial (ster'nō-per'ī-kar'dī-al) [' + *peri*, around, + *kardia*, heart]. Concerning the sternum and pericardium.

sternoschisis (ster-nōs'ki-sis). A cleft or fissured sternum.

sternothyroid (ster'nō-thī'royd) [G *sternon*, breast, + *thyreos*, shield, + *eidōs*, like]. Muscle extending beneath the sternohyoid which depresses thyroid cartilage. SEE *Table of Muscles in Appendix*.

sternotomy (ster-nōt'ō-mī) [' + *tomē*, a cutting]. The operation of cutting the sternum.

sternotriphysis (ster'nō-trī-pē'sis) [' + *trypsis*, a boring]. Surgical perforation of the sternum.

sternum (ster'nūm) [G. *sternon*, breast]. The narrow, flat bone in the median line of the thorax in front. SYN *breastbone*.

It consists of 3 portions, distinguished as the *manubrium*, the *gladiolus*, and the *ensiform* or *xiphoid process*.

STERNUM, POSTERIOR VIEW
A. Clavicular notch. B. Manubrium.
C. Body of gladiolus. D. Xiphoid process.

RS: *chicken breast*, *chondrosternal*, *chondroxiphoid*, *cleft*, *gladiolus*, *ensiform*, *manubrium*, *xiphoid process*.

s., cleft. Congenital fissure of the sternum.

sternutament (ster-nū'tām-ēnt) [L. *sternutare*, to sneeze]. A substance causing sneezing.

sternutatio (stēr-nū-tā'shē-ō) [L. *sneezing*]. Sneezing.

s. convulsiva. Paroxysmal sneezing, as in hay fever.

sternutation (ster-nū-tā'shūn) [L. *sternutare*, to sneeze]. Act of sneezing.

s., convulsiva. Spasmodic or paroxysmal sneezing with profusion of watery secretion from the nose.

sternutator (ster'nū-tāt'or). An agent, such as a war gas, which induces sneezing.

sternutatory (ster-nū-tā-tō'rī) [L. *sternutare*, to sneeze]. Causing sneezing.

steroid (ster'oid) 1. An organic compound which yields methylcyclopentanophenanthrene on dehydrogenation with selenium. 2 Term applied to any one of a large group of substances chemically related to sterols. Includes sterols, D vitamins, bile acids, certain hormones, saponins, glucosides of digitals, and certain carcinogenic substances.

s. hormones. The sex hormones and hormones of the adrenal cortex.

sterol (stēr'ol) [G. *stereos*, solid, + L. *oleum*, oil]. One of a group of substances related to fats and belonging to the lipoids. They are alcohols with a cyclic nucleus (cyclopentanoperhydrophenanthrene) and are found free or ingested with fatty acids (cholesterols). They are found in animals (zoosterols) or in plants (phytosterols).

Generally colorless, crystalline compounds, nonsaponifiable and soluble in certain organic solvents. Ex: *cholesterol*.

stertor (stēr'tōr) [L. *stertor*, a snore]. Snoring or laborious breathing due to obstruction of air passages in the head, seen in certain diseases, as apoplexy.

stertorous (stēr'tō-rūs) [L. *stertor*, a snore]. Pert. to laborious breathing provoking a snoring sound.

stetho- [G.]. Combining form meaning the chest.

stethogoniometer (steth'ō-gō-nī-ōm'ēt-ēr) [G. *stēthos*, chest, + *gōnia*, angle, + *metron*, measure]. Device for measuring the curvature of the chest.

stethograph (stēth'ō-grāf) [' + *graphein*, to write]. Device to record chest movements in respiration.

stethokyrtograph (stēth'ō-kīrt'ō-grāf) [' + *kyrtos*, bent, + *graphein*, to write]. Device for measuring and recording the dimensions and amount of curves of the chest.

stethometer (stēth-ōm'ēt-ēr) [' + *metron*, measure]. Device for measuring the chest's expansion during respiration.

stethophonometer (stēth'ō-fō-nōm'ēt-ēr) [' + *phōnē*, voice, + *metron*, a measure]. Instrument for determining intensity of sound emitted in auscultation.

stethoscope (stēth'ō-skōp) [G. *stēthos*, chest, + *skopein*, to see]. Instrument used in auscultation to convey to the ear the sounds produced in the body.

Ordinarily, consists of rubber tubing in a Y shape.

s., binaural. S. designed for use with both ears.

s., compound. More than 1 set attached to the same fork and chest piece.

s., double. *S.* with 2 earpieces and tubes.

s., percussion. Solid cylinder of wood, 1 end wedge-shaped, other enlarged into an earpiece adapted for intercostal use.

s., single or monaural. For 1 ear only; rigid or flexible.

stethoscopy (stéth-ôs'kô-pl) [*G. stêthos*, chest, + *skopein*, to see]. Examination by means of the stethoscope.

stethospasm (stéth'ô-spáz-m) [' + *spasmos*, spasm] Spasm of the pectoral or chest muscles.

STH. Abbr. for somatotrophin, a growth hormone inducing the adrenal glands to produce desoxycorticosterone, (DOCA). **STH** mobilizes the body's defenses against infection.

sthenia (sthê'nî-â) [*G. sthenos*, strength]. Normal or unusual strength, the opp. of *asthenia*.

sthenic (sthên'ik) [*G. sthenos*, strength]. Active; strong.

sthenometer (sthên-ôm'ê-têr) [' + *metron*, a measure]. Device for measuring muscular strength.

sthenometry (sthên-ôm'ê-trî) [' + *metron*, a measure]. Determination of bodily strength.

stibialism (stîb'î-âl-izm) [*L. stibium*, antimony, + *G -ismos*, condition]. Antimonial poisoning.

stibium (stîb'î-ûm) [*L.*]. Antimony.

stichochrome (stîk'ô-krôm) [*G. stichos*, row, + *chrôma*, color]. A nerve cell in which the stainable bodies (tigroid mass) are arranged in parallel rows.

stictacne (stîk-tâk'nê) [*G. stiktos*, pointed, + *akmê*, point]. Acne with red base and black pointed comedo at apex. *SYN:* *acne punctata*.

stiff (stîf). Rigid, firm, inflexible.

s., joint. One with reduced mobility.
s., neck. Torticollis, wryneck. Rigidity of neck resulting from spasm of neck muscles. It is a symptom of many disorders.

s.-n. fever. 1. Dengue. 2. Cerebrospinal meningitis.

stigma (stîg'mâ) (pl. *stigmata*) [*G. stigma*, a mark]. 1. A mark or spot on the skin. 2. Spot on ovarian surface where rupture of a graafian follicle will occur. 3. Red spot due to extravasation of blood produced by nervous influence. 4. Mark characterizing a specific disease.

s. of degeneration. Any of the bodily variations from the normal found in numerous instances in degenerate individuals. Some of them are the following.

DEGENERATIVE CHANGES: *Face:* May be unusually hairy in the female and abnormally smooth in the male. *Fingers and toes.* May be an extra one, or adherent or webbed. *Forehead:* May be sloping and very low. *Eyes:* May be different in color or set at different levels. *Ears:* Unusual in many ways. *Jaws:* Either may project unusually. *Head:* May be unusually large or small. *Teeth:* May be irregular or project. *Roof of mouth:* May be high and pointed or unusually narrow. Only several of these irregularities may be considered as indicative of defective mentality.

s., hysterical. Any of the peculiar marks or symptoms of hysteria such as spots on the skin, areas of hyper- or anesthesia, impairment of sensory functions, etc.

s., psychic. Mental state characterized by susceptibility to suggestion.

stigmatic (stîg-mât'ik) [*G. stigma*, mark]. Pert. to or marked with a stigma.

stigmatism. 1. Condition characterized by possession of stigmata. 2. Condition in which the rays of light are accurately focused on retina. *SEE: astigmatism.*

stigmatization (stîg'mât-î-zâ'shûn) [*G. stigma*, mark]. The formation of stigmata, esp. hysterical s. on the skin.

stigmatometer (stîg-mâ-tôm'ê-têr) [*G. stigma*, mark + *metron*, a measure]. Device for testing eye refraction. *SYN:* *astigmatometer*.

stilbestrol. *SEE: diethyl s.*

stilet, stilette (stîl-ê't) [*Fr. stilette*]. 1. Small, sharp-pointed instrument for probing. 2. Wire used to pass through or stiffen a flexible catheter.

stillbirth (stîl'birth) [*A.S. stille*, quiet, + *M.E. burth*, birth]. Birth of a dead fetus.

stillborn (stîl'born) [' + *beran*, to bring forth]. Dead at birth.

stillicidium (stîl-î-sîd'î-ûm) [*L. stilla*, drop, + *cadere*, to fall]. A dribbling or flowing, drop by drop.

s. lacrimarum. Watering of the eye. *SYN:* *epiphora*.

s. narium. Watery mucus discharged at onset of coryza.

s. urinae. Urinary incontinence from a distended bladder. *SYN: strangury.*

stimulant (stîm'û-lânt) [*L. stimulus*, a goad]. Any agent temporarily increasing functional activity.

Strong coffee, tea, whiskey, brandy, wine, capsicum, ginger, ammonia applied to the nostrils, cold water dashed alternately over face and chest, atropine, strychnine, electric current, massage, are examples.

Stimulants may be classified according to the organ upon which they act as follows: Cardiac, bronchial, gastric, cerebral, intestinal, nervous, motor, vasomotor, respiratory, and secretory.

stimulate (stîm'û-lât) [*L. stimulare*, to goad on]. To increase functional activity of an organ or structure.

stimulating enema. One given to excite activity in shock or unconscious state. *SEE: enema.*

stimulation (stîm'û-lâ'shûn) [*L. stimulare*, to goad on]. 1. Process of being stimulated. 2. Irritating action of agents on muscles, nerves or sensory end-organs by which activity in a part is evoked.

stimulus (stîm'û-lûs) (pl. *stimuli*) [*L. stimulus*, a goad]. 1. Any agent or factor able to influence directly living protoplasm, as one capable of causing muscular contraction or secretion in a gland, or of initiating an impulse in a nerve. 2. A change of environment of sufficient intensity to evoke a response in an organism. 3. An excitant or irritant.

s., adequate. 1. Any stimulus capable of evoking a response, *i.e.*, an environmental change possessing a certain intensity, acting for a certain length of time and occurring at a certain rate. 2. A stimulus capable of initiating a nerve impulse in a specific type of receptor.

s., chemical. A chemical substance, liquid, gaseous, or solid, which is capable of evoking a response.

s., conditioned. A stimulus which gives rise to a conditioned response. *SEE: reflex, conditioned.*

s., electric. A stimulus resulting from the initiation of, or cessation of, a flow of electrons as from a battery, induction coil, or generator.

s., homologous. A stimulus which acts only on a sensory end-organ.

s., liminal. A threshold stimulus. *q.v.*

s., mechanical. *SYN: physical stimu-*

lus. A stimulus produced by a physical change such as contact with objects, changes in pressure, etc.

s., minimal. A threshold stimulus, *q.v.*
s., nociceptive. A painful and usually injurious stimulus

s., thermal. One produced by a change in temperature of the skin, a rise giving sensations of warmth; a fall giving rise to sensations of coldness.

s., threshold. *Syn:* **s., minimal;** **s., minimal.** The least or weakest stimulus that is capable of initiating a response or giving rise to a sensation

sting (sting) [A.S. *stingan*, to stick] 1. Sharp, smarting sensation, as of a wound or astringent. 2. A sharp offensive weapon of an insect such as a bee or wasp. 3. A wound made by a sting

S-T interval. The interval in an electrocardiogram which represents the initial and final ventricular complexes

stippling (stip'ling) [Dutch *stippelen*, to spot] A spotted condition, as in retina in certain ocular diseases or in basophilic red corpuscles

stirrup, stirrup bone (stir'up) [A.S. *stigrap*, a stirrup] Staples of the ears.

stitch (stich) [M.E. *stiche*, from A.S. *stice*, a pricking]. 1. A local, sharp, lancinating, or spasmodic pain 2. A single loop of suture material passed through skin or flesh by a needle, to facilitate healing of a wound. 3. To unite skin or flesh with a needle and suture material

Some are removed after a few days and other types are absorbed by the body. *Syn* **suture.**

s. abscess. One developing in a suture due to infection.

stock (stök) [A.S. *stocc*, a trunk]. The race or line of a family.

s. culture. Permanent culture of a microorganism reinforced from time to time by fresh media.

Stokes-Adams syndrome (stöks-äd'äms). A series of symptoms in those suffering from heart block. Onset is sudden, resembling epilepsy, for which it is sometimes mistaken.

Error. Due to stoppage or extreme slowness of ventricular contraction.

Stokes' law (stöks) A muscle is frequently a seat of paralysis if lying above an inflamed serous or mucous membrane.

S's. lens. Device used to diagnose astigmatism.

stoma (stö'mä) (pl. *stomata*) [G. *stoma*, a mouth]. 1. A mouth or small opening or a pore. 2. Artificially created opening bet. 2 passages or body cavities or bet. a cavity or passage and the body's surface 3. A minute opening between cells of certain epithelial membranes, esp. peritoneum and pleura.

stomach (stum'äk) [G. *stomachos*, stomach]. A dilated, saclike, distensible portion of the alimentary canal below the esophagus, 12x4 in., below the diaphragm to right of spleen, partly under the liver.

It is composed of a *fundus*, or round part; a *body*, or middle portion, and pyloric portion which is small end.

It has 2 openings; the upper *cardiac orifice* opens into the esophagus and the lower *pyloric orifice* opens into the duodenum. The stomach is composed of 4 layers. Outer *serous coat* covers almost all of the organ; the *muscular layer* just beneath is formed of 3 layers of smooth muscle fibers; an outer longitudinal layer; a medial circular layer,

STOMACH.
(Anterior View)

and an inner oblique layer. *Submucous layer* is a connecting medium between the muscular and the mucous layer, which is the inner lining of the stomach.

The cardiac, fundic (parietal or oxyntic) and pyloric glands of the stomach are composed of columnar and tubular cells which secrete gastric juice containing hydrochloric acid, pepsin, etc.

FUNCTIONS It secretes the gastric juice and converts proteins into peptones. In addition to serving strictly as an organ of digestion (*see: gastric digestion*), the stomach has the following functions. (1) Acting as a reservoir, it regulates the admission of food to the remainder of the gut, (2) its acid kills a large proportion of the microbes present in most food, (3) it has some power to absorb, *see absorption*, (4) secreting acid, it is important in the acid-base equilibrium of the body, (5) it can excrete some drugs, administered parenterally, into the gastric juice, (6) it acts as a kind of receptor in chemical and nervous mechanisms by which secretion and movement are stimulated in lower parts of the gastrointestinal tract (*see secretagogue and reflex, gastrocolic*), and (7) by the action of an *intrinsic factor* (present in gastric juice) on an *extrinsic factor* (vitamin B₁₂) present

THE STOMACH.
A. Esophagus. B. Cardia. C. C. Large cul-de-sac D. Peak of large cul-de-sac. E. Large curvature. F. Small curvature. G. Duodenum. H. Pylorus.

in foods, a *hematinic principle* (*anti-anemic factor*) is formed. This is effective in prevention of pernicious anemia.

S. **CANCER, VARIETIES:** *Colloid, epithelioma, hard cancer or scirrhus, soft cancer or encephaloid.*

Sym: General symptoms of dyspepsia with following characteristic symptoms. Continued pain, often tenderness, vomiting of partially digested food, absence of free hydrochloric acid in gastric juice, and presence of lactic acid after a flour soup test meal, hematemesis or blood in stools, slight in amount and blood altered so it presents a coffee grounds appearance; presence of tumor; loss of flesh and strength, extreme anemia; involvement of superficial lymph glands. When the pylorus is involved symptoms of gastric dilatation will be added.

Prog: Fatal. Duration, 6 months to 2 years.

Treatment: Early treatment, surgical. Liquid or semiliquid diet. Rest. Hydrochloric acid and pepsin often required to assist digestion. Constitutional treatment as indicated.

PYLORIC OBSTRUCTION AND DILATATION: Pyloric obstruction increases the resistance offered to the expulsion of food and in its efforts to overcome this the stomach first becomes hypertrophied, then dilated. *Causes of dilatation:* (1) Pyloric obstruction, (2) laxness of walls from simple atony or catarrh, (3) excessive ingestion of food or drink.

Sym: The general symptoms of dyspepsia, together with the following relating to the vomit. Vomiting occurs long after eating, sometimes several hours or days. Amount often excessive, sometimes several quarts, is sour and fermented, and on standing separates into a sediment of undigested food and a turbid, frothy liquid. Ejected fluid rich in torulae and sarcinae, forms of bacteria. Obstinate constipation.

Physical Signs: Bulging over epigastrium; in thin subjects the outline of stomach may be visible. Palpation gives a splashing fremitus.

PERCUSSION: Increased area of gastric tympany.

Auscultation: Splashing sounds often audible at some distance.

MENSURATION: Ordinarily an esophageal sound may be inserted a distance of 60 cm from the teeth. In dilatation may be inserted 65 to 70 cm.

Prog: Guarded. More favorable in dilatation without obstruction.

Treatment: Diet light, nutritive, not bulky, and should be given in small amounts at frequent intervals. Lavage 2 or 3 times weekly. An abdominal support often relieves some of distressing symptoms.

FOREIGN BODIES: These ordinarily should give no concern. Symptoms are usually absent. The patient may be alarmed. Give nothing by mouth. Salts, cathartics, and enemata should under no circumstances be used, inasmuch as they can only make the condition worse. Such foreign bodies usually pass through the alimentary tract without disturbance. These patients should always be under the care of a doctor.

DIET IN OTHER DISEASES OF STOMACH: *Atony and Hypomotility:* Food is retained longer than normal and if hydrochloric acid is deficient decomposition may occur. Liquids are retained longer than solids. Diet should consist of

quickly and easily digested foods, cream, butter, soft cooked vegetables, chicken, fish, scraped beef and moderate amount of milk. Avoid liquids, pastries and rich gravies.

Hypermotility. The stomach empties too rapidly, therefore, diet should be soft and liquid in small amounts and in frequent feedings. Fats delay the emptying of the stomach.

Hyperacidity: Protein to combine with acid, inhibiting its secretion by moderate amt. of fat, and to avoid stimulating secretion of acid. Five small meals, or 3 meals and 2 lunches.

s.-ache. Pain in the stomach. **Syn:** *gastralgia, gastrodynia, stomachalgia, stomachodynia.*

s., bilocular. See *hourglass stomach.*

s., cardiac. Fundus of the stomach.

s., cascade. A form of hour-glass stomach in which there is a constriction between cardiac and pyloric portions. Cardiac portion fills first and then contents cascade into pyloric portion. Also called *cup and spill stomach*. **s., cow horn.** A high transversely placed stomach. Also called *steer horn*.

s., dumping. A condition sometimes following gastroenterostomy in which food is rapidly discharged through new opening into intestine with resulting intestinal distention and accompanying discomfort.

s., hourglass. One resembling an hour-glass, caused by constriction from a band of fibrous exudate.

s., intubation. Passage of a tube into the stomach. 1. To obtain gastric contents for examination. 2. For prophylaxis and treatment of ileus. 3. To remove ingested poisons.

s., leather bottle. One caused by hypertrophy of the s. walls.

s., pump. Device for removing contents of the stomach by mouth.

s., thoracic. Condition in which stomach lies above diaphragm. May result from embryonic anomaly in which stomach fails to descend, or from hernia of diaphragm. Latter results in so-called *up-side-down stomach*.

s., tooth. A lower canine one during first dentition.

s., tube. One for washing out or feeding the stomach.

s., water-trap. One with the pylorus unusually high, causing slow emptying.

stomach, words pert. to: abdominal cavity; achoresis; achylia gastrica; acidity; anachlorhydria; anadenia; anticardium; atony; atretogastria; bathygastric; bead test; Bouchard's nodules; capotement; cardialgia; cardioidiosis; cardiopyloric; cardiospasm; catastalsis; chlorhydria; cholangiogastrotomy; clapotement; claptage; digestion; ectasia; endogastritis; feeding; artificial; fractional test meal; gastric juice; gastric lavage; gastric motor meals; "gastr-" words; gavage; hourglass stomach; hunger; lavage; linitis; myxorrhoea gastrica; oxyntic glands; pneumatosis; pneumogastria; pylorus; saburra; ulcer; ventriculus.

stomachal (stŭm'ăk-ăl) [*G. stomachos, stomach*]. 1. Relating to the stomach. 2. A gastric tonic.

stomachalgia (stŭm-ăk-ăl'jĭ-ă) [' + *algos, pain*]. Pain in the stomach.

stomachic (stŏ-măk'ĭk) [*G. stomachos, stomach*]. 1. Concerning the stomach. 2. Medicine exciting action of the stomach. **Syn:** *stomachal.*

stomachoscopy (stŭm-ăk-os'kŏ-pl) [' +

skochein, to inspect]. Examination of the stomach. SYN *gastroscopy*.
stomatalgia (stō-māt-āl-jī-ā) [G. *stoma*, *stomat-*, mouth, + *algos*, pain]. Pain in the mouth. SYN: *stomatodynia*.

stomatitis (stō-māt-ī-tis) [G. *stoma*, *stomat-*, mouth, + *-itis*, inflammation]. Inflammation of the mouth.

stomatitis (stō-māt-ī-tis) [G. *stoma*, *stomat-*, mouth, + *-itis*, inflammation]. Inflammation of the mouth.

Sym. Heat, pain, increased flow of saliva, fetor of breath, restlessness, languor, disinclination to nurse in infants, sometimes fever. RS: *gangrene*, *noma*, *thrush*.

Etiol. S may be caused by many factors or conditions. Among them are, 1. Pathogenic organisms, including bacteria and viruses. 2. Mechanical trauma. 3. Irritants, such as alcohol, tobacco, hot foods, spices. 4. Sensitization to chemical substances in tooth pastes, mouthwashes, etc. 5. Nutritional deficiencies, esp. avitaminoses. 6. Blood disorders. 7. Poisoning by drugs, esp. heavy metals. 8. Certain skin disorders. 9. Systemic infections such as measles, scarlet fever, syphilis. There are also several forms of unknown etiology.

s., aphthous. Formation of tiny ulcers (canker sores) on mucosa of the mouth.

Sym. General symptoms of stomatitis and on inspection numerous small, round vesicles on cheeks, lips and tongue, which soon break and leave little, shallow ulcers with red areola.

Prog. Good.

Treatment. For infants, sterilize milk. Nurse at regular intervals. Wash mouth with clean linen cloth. In adults, correct gastric disturbance.

s., catarrhal. Simple stomatitis.

Sym. General symptoms of s. with diffuse red swelling of mucous membrane.

Treatment. Good hygienic conditions, cleanse mouth with weak solution of boric acid or chlorate of potassium as a wash.

s., corrosive. S. resulting from use of corrosive substances.

s., diphtheritic. Diphtheria of mucous membranes of the gums or cheeks. SYN: *buccal diphtheria*.

s., follicular. SEE: *s. aphthous*.

s., gangrenous. This form seen in debilitated children from 2 to 6 years, usually follows one of the specific fevers, esp. measles and whooping cough.

Sym. General; an inspection shows cheek is affected. Externally, swollen, hard, red and glazed; internally, irregular, sloughing ulcer.

Complications. Perforation, septicemia, lobular pneumonia from aspirated sloughs, and diarrhea from swallowing fetid material.

Prog. Grave. Death common from exhaustion or complications. Recovery often attended with deformity.

Treatment. Excision with electrocautery knife early. Nutritious food, good hygiene. As a mouthwash boric acid or peroxide of hydrogen. SYN: *cancreum oris*, *noma*.

s., herpetic. S. characterized by cold sores (fever blisters).

s., membranous. S. accompanied by the formation of a false or adventitious membrane.

s., mercurial. This form is seen in artisans who work in mercury; after the administration of very large doses of mercurials, and after small doses where there has been unnatural susceptibility.

PREMONITORY SYMPTOMS: Tenderness of gums, redness near insertion of teeth, metallic taste, increase of saliva.

LATER SYM: Profuse salivation, fetor of breath, redness, swelling and tenderness of gums. Tongue may be similarly affected and protrude from mouth. In severe cases ulceration of mucous membrane, loss of teeth and necrosis of jaw result.

Treatment. Iodine of potassium in small doses to eliminate the mercury. Astringent and antiseptic mouthwashes. SEE: *pyralism*.

s., myotic. SYN *thrush*, *q v*.

s., parasitic. SYN *thrush* S caused by a yeastlike fungus, *Candida albicans*.

Sym. Of general s. with milk-white elevations on tongue and mouth which on removal leave a raw surface. Disease may extend to pharynx, esophagus and larynx. Microscopic examination reveals fungus.

Prog. Good.

Treatment. Correct hygiene. Treat any gastric disturbance, locally, mild antiseptic washes. Use of a saturated solution of sodium bicarbonate as a mouthwash is effective.

s., simple. Erythematous inflammation of the mouth occurring in patches on the mucous membranes.

s., traumatic. S. resulting from mechanical injury as from ill-fitting dentures, sharp jagged teeth, biting cheek, etc.

s., ulcerative. Thought by some to be an infectious disease, as it often occurs in epidemics and attacks both children and adults when congregated and subjected to bad hygienic conditions.

Sym. Of the general form; gums of lower jaw chiefly affected, are swollen, red and spongy. Linear ulcers soon form and may extend to cheek; gland under jaw swollen. In severe cases loosening of teeth and necrosis of jaw may follow.

Prog. Guardedly favorable.

Treatment. Correct hygiene; constitutional emetics, antiseptic mouthwashes. SYN: *trench mouth*.

s., vesicular. SEE *s. aphthous*.

s., Vincent's. Vincent's angina, *q v*
stomato- [G.] Combining form meaning mouth.

stomatodynia (stō'mā-tō-dīn'ī-ā) [G. *stoma*, *stomat-*, mouth, + *odynē*, pain]. Pain in the mouth. SYN: *stomatalgia*.

stomatodysodia (stō'mā-tō-dis-ō'dī-ā) ["" + *dysōdia*, stench]. Foul odor from the mouth.

stomatogastric (stō'mā-tō-gās'trīk) ["" + *gaster*, belly]. Concerning the stomach and mouth.

stomatography (stō'mā-tōg'rā-fī) ["" + *graphein*, to write]. A treatise on the mouth.

stomatologist (stō'mā-tōl'ō-jist) ["" + *logos*, a study]. Specialist in treatment of diseases of the mouth.

stomatology (stō'mā-tol'ō-jī) ["" + *logos*, a study]. Science of the mouth and teeth and their diseases.

stomatomalacia (stō'mā-tō-mā-lā'sī-ā) ["" + *malakia*, softening]. Pathological softening of any structures of the mouth.

stomatomy (stō-māt-ō-mī) ["" + *tomē*, a cutting]. Surgical nicking of the edges of the os uteri to facilitate delivery.

stomatomycosis (stō'mā-tō-mī-kō'sis) [G. *stoma*, *stomat-*, mouth, + *mykēs*, fungus, + *-ōsis*, condition]. Any mouth disease resulting from fungi.

stomatonecrosis, stomatonoma (stō'mā-tō-

nē-kro'sis, -nō'mā [*+* + *nekrosis*, death, — + *nomē*, a spreading]. Gangrenous, ulcerative inflammation of the mouth. **SYN:** *cancrum oris, noma*.

stomatopathy (stō-mā-tōp'ā-thī) [*+* + *pathos*, disease]. Any mouth disease.

stomatoplasty (stō-māt'ō-plās'tī) [*+* + *plassein*, to form]. Plastic operation upon the mouth

stomatorrhagia (stō-mā-tor-rā'jī-ā) [*+* + *-rrhagia*, from *rhegynai*, to burst forth]. Hemorrhage from the mouth or gums.

stomatoscope (stō-māt'ō-skōp) [*+* + *skopein*, to examine]. Instrument for examining the mouth

stomatosis. Any disease of the mouth

stomodaeum, stomodaeum (stō'mō-dē'ūm) [*G stoma*, stomat-, mouth, + *dæon*, to divide] An external depression lined with ectoderm and bounded by fronto-nasal, mandibular, and maxillary processes of the embryo. It forms an portion of oral cavity. Its floor, the *pharyngeal membrane*, separates stomodaeum from the foregut

stone (stōn) [A.S. *stān*]. Hardened mineral matter, as *gallstones*. **SYN:** *calculus, q v*

stool (stōol) [A.S. *stōl*, a seat]. 1. Evacuation of the bowels. 2. Waste matter discharged from the bowels. **SYN** *feces, q v*.

COLOR: Iron and bismuth turn the stool black and certain vegetables and berries darken it. Pathological stools are usually grayish or a whitish glistening color, and tarry in hemorrhage or show fresh blood.

CHARACTER OR NATURE OF STOOLS *Fatty stools* These are observed in obstructive jaundice, cancer of the pancreas, pancreatic calculi, and in indigestion or overfeeding in infants.

Frothy, poorly formed stools They may indicate a spastic colon, the presence of gas, or intestinal inflammation.

Lienteric stools: These contain much undigested food and are noted in inflammatory conditions of the stomach and upper bowel.

Tarry stools: They are indicative of gastric hemorrhage, or may result from swallowing blood from the nose or lungs. They also may denote duodenal ulcer, or ulcer of the intestines, hepatic cirrhosis, or cancer.

Membranous shreds They may exist in cancer of the colon, dysentery, relapsing fever, acute proctitis, and in sloughing of intestinal mucosa.

Mucous stools: Exist in catarrhal or inflamed conditions of the intestines or rectum, in dysentery, enterocolitis, proctitis, impaction, mucous colic, and mucous colitis.

SHAPE OF: *Cylindrical* If of small caliber, they may be indicative of pro-lapsus ani, annular rectal stricture, or intestinal spasms.

Ribbon-shaped: Indicative of stricture or cancer of the rectum; possibly enlargement of the prostate in males, hemorrhoids, spasm of the lower bowel and anus, prostatic abscess, and prolapse of the uterus.

Scybala: Rounded masses or balls of fecal matter or hardened feces, the result of habitual constipation, atony or sacculation (diverticulum) of the colon, gastric ulcer, or dilation, and rectal cancer or dysentery.

s., bilious. Yellowish or yellowish-brown discharges in diarrhea becoming darker on exposure.

s., fatty. Fat in the feces, as in pancreatic disease.

s., pea soup. Liquid stools of typhoid.

s., rice water. Watery serum stools with detached epithelium, as in cholera.

stop needle. One with eye at tip and a disk to prevent penetration deeper than desired.

stoppage (stōp'āj) [A.S. *stoppan*]. Obstruction of an organ. See *cholestasia*.

storm. A sudden outbreak or exacerbation of symptoms of a disease.

s., renal. A sudden attack of renal symptoms accompanying a neurosis sometimes occurring in patients suffering from aortic regurgitation.

stout (stowt) [ME stout, bold] Having a bulky body. **SYN** *corpulent*.

stovaine (stō-vā'in). Proprietary, local anesthetic less toxic than cocaine. **Dosage** 1/4-3/4 gr (0.02-0.05 Gm).

stovainization (stō-vā-in-i-zā'shūn). Induction of local anesthesia with stovaine.

stovarsol (stō-var-sol). A commercial brand of acetarsone* used in spirochetal infections.

STP. Abbr for standard temperature and pressure.

strabismic (strā-blz'mik) [*G strabismos*, a squint]. Pert. to or afflicted with strabismus.

strabismometer (strā-blz-mōm'ēt-ēr) [*+* + *metron*, a measure] Instrument for determining amount of strabismus.

strabismus (strā-blz'mūs) [*G strabismos*, a squinting]. Disorder of eye in which optic axes cannot be directed to same object, due to lack of muscular coordination. **SYN:** *squint*.

The squinting eye always deviates to the same extent when the eyes are carried in different directions. *Unilateral*, when same eye always deviates. *Alternating*, when either deviates, the other being fixed. *Constant*, when the squint remains permanent. *Periodic*, when eyes are occasionally free from it. Muscles may lead to squint, but prime factor is found in errors of refraction, in hypermetropia or in myopia with or without astigmatism. **SYN:** *squint, heterotropia, s., accommodative*. *S.* due to disorder of ocular accommodation.

s., alternating. *S.* affecting either eye alternately.

s., bilateral. Same as accommodative *s.*

s., concomitant. Form in which 2 eyes move freely, but retain false relation to each other.

s., convergent (internal squint). The deviating eye turns inward.

s., deorsum vergens. Vertical strabismus downwards. **SYN:** *hypotropia*.

s., divergent. Deviating eye turns outward.

s., intermittent. One recurring at intervals.

s., monolateral. When the squinting eye is always the same.

s., monocular. When the same eye habitually deviates.

s., paralytic. That which is due to paralysis of a muscle. The deviation is present only in the sphere of action of the paralyzed muscle. In paralytic squint the secondary deviation is greater than the primary.

This condition is due to paralysis of one or more ocular muscles and may point to grave cerebral disease or to presence of some constitutional dyscrasia.

This form is recognized by the fact that if a candle or the finger of the sur-

geon is carried from right to left before the face of the patient the deviating eye fails to follow to its proper limit, and leads us to look for lesions of the 8th nerve in failure of external rectus, of 3rd nerve in failure of internal rectus of either side, of 4th nerve in impairment of superior oblique muscles. In adults this is usually due to syphilitic disease involving the nerve centers or trunks, or to rheumatism.

PROG. In general, guarded.

TREATMENT: Directed to the cause. Use of glasses.

s., spastic. S. due to contraction of an ocular muscle.

s., sursum vergens. Vertical squint upwards. SYN: *hyperiopia*.

ETIOLOG.: Defects of fusion faculty, errors of refraction, poor vision in 1 eye, anisometropia.

TREATMENT: Refraction with prescribing of glasses, orthoptic training (training of fusion), operative.

s., vertical. Eye turns upward. The vision is double (diplopia), unless there is unconscious suppression of the image in squinting eye, and expression of face is bizarre and sometimes malign. It is usually the result in childhood of ametropia, or in adult life of central nervous disease.

strabometer (strā-bōm'ēt-ēr) [G *strabos*, squinting, + *metron*, a measure] Instrument to ascertain the degree of strabismus.

strabotomy (strā-bōt'ō-mī) [+ *tomē*, a cutting] Operation for strabismus.

strain (strān) [A.S. *strēon*, begetting] 1. A stock, said of bacteria or protozoa from a specific source and maintained in successive cultures or animal inoculation. 2. Hereditary streak or tendency. 3. [M.E. *strāner*, from L. *stringere*, to draw tight] To pass through, as a filter. 4. To injure by making too strong an effort or by excessive use. 5. Excessive use of a part of the body so that it is injured. 6. Injury to muscles from tension due to overuse or misuse. SYN: *sprain*.

F.A. TREATMENT: Apply cold applications and a firm dressing. Immobilize for some time. Adhesive strapping helpful. Operative repair sometimes necessary.

strainer (strān'er) [M.E. *strāner*, from L. *stringere*, to draw tight] Device used for retaining solid pieces while liquid passes through. SYN: *filter*.

strait (strāt) [M.E. straight, narrow, from L. *strictus*, tight] A constricted or narrow passage.

s., inferior. The lower outlet of the pelvic canal.

s.-jacket. Shirt with long sleeves laced on patient and fastened to restrain the arms. SYN: *camisole*.

s.s. of the pelvis. The inferior and superior openings of the true pelvis.

s., superior. The upper opening or inlet of the pelvic canal.

stramonium (strā-mō'n'ū-m) [L.] USP Jamestown weed, Jimson weed. The dried leaves of *Datura stramonium*.

USES: An ingredient in asthma powder for its antispasmodic effect. Local anodyne.

DOSEAGE: 1.25 gr. (0.075 Gm.).

POISONING: Related to atropine, q.v.

strangulation (strang'ū-lā'shūn) [G. *strangulatio*, to choke, + *alsthēsis*, sensation]. A girdlelike sensation of constriction. SYN: *zonesthesia*.

strangle (strang'gl) [G. *strangulē*, a halter]. To choke or suffocate or be choked from compression of the trachea.

strangulated (strang'ū-lā'tēd) [L. *strangulāre*, from G. *strangulē*, a halter]. Constricted so that air or blood supply is cut off, as a hernia.

strangulation (strang'ū-lā'shūn) [L. *strangulāre*, from G. *strangulē*, a halter]. Compression or constriction of a part, as the bowel or throat, such as causes suspension of breathing or of passage of contents; congestion accompanies condition.

s., internal. Slipping of a coil of the intestine through the diaphragm or an abnormal opening.

strangury (strang'ū-rī) [G. *stragros*, straggles, a drop, + *ouron*, urine] Painful and interrupted urination in drops, produced by spasmodic muscular contraction of urethra and bladder.

strap (strāp) [A.S. *stropp*, from G. *strophos*, a cord]. 1. A band, as one of adhesive plaster, used to hold dressings in place or to approximate surfaces of a wound. 2. To bind with strips of adhesive plaster.

strapping (strāp'ing) [A.S. *stropp*, from G. *strophos*, a band] 1. Adhesive plaster or other substance used to bind surfaces together or hold dressings in place. 2. Application of adhesive plaster strips on a part so as to give it support or compress it.

stratified (strāt'ī-fid) [L. *stratificāre*, to arrange in layers] In strata or in the form of layers.

s., epithelium. E in superimposed layers with differently shaped cells in the various layers.

stratiform (strāt'ī-form) [L. *stratum*, layer, + *forma*, shape] Arranged in layers, as manner of liquefaction of gelatin stab culture, in which there is liquefaction to the walls of the tube at the top and then downward horizontally.

stratum (strāt'ūm, strāt'ūm) (pl. *strata*) [L. *stratum*, layer] A layer.

s., basale. The innermost or deepest layer of the endometrium of uterus.

s., compactum. The superficial or outermost layer of the endometrium.

s., corneum. Outermost horny layer of the epidermis.

s., disjunction. The outermost layer of the stratum corneum which is being constantly shed.

s., germinativum. Innermost layer of epidermis, a row of columnar cells, which divide to replace rest of the epidermis as it wears away. SEE: *prickie cell*.

s., granulosum. A layer of cells containing deeply staining granules of *keratohyalin* found in epidermis of skin and lying between stratum germinativum and stratum lucidum.

s., lucidum. A translucent layer of the epidermis lying between stratum corneum and stratum granulosum. It is frequently absent.

s., Malpighii. Inner layer of the epidermis. SYN: *rete mucosum*, *s. germinativum*.

s., mucosum. Same as *s. malpighii*.

s., papillare. The papillary of the corium lying adjacent to the epidermis.

s., reticulare. The reticular layer of the corium lying just beneath the papillary layer.

s., spongiosum. Middle layer of decidua.

s., spinosum. Same as *s. malpighii*.

s., submucosum. Layer of smooth

muscle fibers of the myometrium lying contiguous with endometrium.

s. subserosum. Layer of smooth muscle fibers of myometrium which lies immediately under serous coat.

s. supravasculare. A layer of circular and longitudinal muscle fibers lying between s. subserosum and s. vasculare.

s. vasculare. A layer of smooth muscles in myometrium lying between s. submucosum and s. supravasculare.

strawberry (straw'bér'l) [A.S. *strēaw-berige*, hay berry]. COMP. Contain little cellulose. Sugar is low. They contain much lime and a salicylic element.

AV. SERVING 100 Gm. Pro 1.0, Fat 0.6, Carbo. 6.00.

VITAMINS: A+, B+, C++.

ASH CONST. Ca 0.041, Mg 0.019, K 0.147, Na 0.050, P 0.028, Cl 0.006, S 0.014, Fe 0.0006.

ACCTION: The salicylic element is irritating to many and may result in a skin rash.

strawberry mark. SYN: *canerous angioma*. A soft, nodular, vascular nevus usually present on face or neck, occurring at birth or shortly afterwards. They usually disappear without treatment.

strawberry tongue. The peculiar, red, papillated tongue of scarlatina, *q.v.* Sxz: tongue

straw itch (strau). A skin condition accompanied by itching due to working in straw or sleeping on a straw mattress.

streak (strék) [A.S. *strica*, a line]. A line or stripe. SYN: *stria*.

s., angioid. A dark streak seen in retina in individuals with pseudoxanthoma elasticum

s. culture. A bacterial culture in streaks

s., medullary. Deep longitudinal groove on dorsal surface of the embryo which becomes the medullary tube. SYN: *dorsal groove*.

s., meningitic. A red line across the skin formed by drawing a pointed article across it; seen in meningitis and nerve center affections. SYN: *tache cérébrale*.

s. reflex. A white, shining streak along center of retinal vessels.

strephosymbella (stréf'-ō-sim-bō'lli-ä) Difficulty in distinguishing between letters which are similar but in opposite directions, for ex p-q, b-d, or perception of objects reversed as in a mirror

strephtome (stréf'ō-tōm) [G. *strephein*, to twist, + *tomē*, a cutting]. Instrument for invagination of a hernial sac.

streptus (strép'tū-üs) [L. *streptus*, noise]. A sound or noise, as that heard on auscultation.

streptocemia (strép-tō-sē'mī-ä) [G. *streptos*, twisted, + *aima*, blood]. Streptococci present in the blood stream causing infection. SYN: *streptococcemia*.

strepto- [G.]. Combining form meaning twisted

streptoangina (strép'tō-än-jī'nä) [G. *streptos*, twisted, + L. *angina*, a choking]. Sore throat with membranous formation due to streptococci

streptobacillus (strép-tō-bä-sī'llūs) A bacillus in which individual bacilli form a chainlike colony.

streptococcal (strép'tō-kök'äl) ["" + *kokkos*, berry]. Caused by or pert. to streptococci.

streptococcemia (strép'tō-kök-sē'mī-ä) ["" + "" + *aima*, blood]. Presence of streptococci in the blood causing infection.

streptococci (strép'tō-kök'sk) ["" + *kokkos*, berry]. Resembling, produced by, or pert. to streptococci.

s. sore throat. Severe epidemic form with membranous formation caused by *Streptococcus haemolyticus*.

streptococciosis (strép'tō-kök-sī-kō'sis) [G. *streptos*, twisted, + *kokkos*, berry, + *-ōsis*, condition]. Any streptococcal infection.

streptococcolysin (strép'tō-kök-ōl'i'n-sin) ["" + "" + *lysis*, dissolution] A lysin produced by streptococci.

Streptococcus (strép'tō-kök'ūs) (pl *Streptococci*) [G. *streptos*, twisted, + *kokkos*, berry] A genus of bacteria belonging to the family Lactobacteriaceae, tribe Streptococcaceae. They are Gram-positive cocci occurring in chains.

Most species are harmless saprophytes but some are among the most common and dangerous pathogens of man. They are differentiated on the basis of their reactions on blood-agar plates into three types, *alpha* (α), *beta* (β), and *gamma* (γ). Those of the *alpha* type (*Streptococcus viridans*) form a greenish coloration about colonies and partially hemolyze blood; those of the *beta* or hemolytic type form clear zones about colonies and completely hemolyze blood (Ex: *Str. pyogenes*); those of the *gamma* type are non-hemolytic and produce a grayish coloration about colonies (Ex: *Str. anhemolyticus*).

Str. anhemolyticus. A species of low pathogenicity, often found as secondary invaders

STREPTOCOCCUS.

Cocci of varying size in chains.

Str. cardioarthritidis. Variety found in blood and throat secretion cultures in cases of rheumatic fever.

Str. epidemicus. Hemolytic variety seen in throat cultures in cases of epidemic sore throat.

Str. equinus. Variety found in intestines of horses, and in bovine and in human feces.

Str. haemolyticus, Str., hemolytic. Any of the streptococci causing complete hemolysis of erythrocytes; majority of pathogenic varieties are in this group.

Str. mitis. SYN: *Str. viridans, q.v.*

Str. parvulus. An organism which is found in the respiratory tract.

Str. pyogenes. Any of the hemolytic streptococci causing suppurative processes. The causative agent of scarlet fever, erysipelas, septic sore throat, puerperal sepsis, and various pyogenic infections.

Str. salivarius. Hemolytic variety which normally occurs in the nose, mouth and throat of human beings

Str. scarlatinae. Probable causative agent of scarlet fever.

Str. thermophilus. An organism found in dairy products.

Str. viridans. Nonhemolytic form producing green colonies on blood agar which frequently is the cause of focal infection, which in turn leads to symptoms of arthritis, neuritis, endocarditis, etc. A form normal in the mouth. Found in the blood of 40 per cent of people after tooth extraction, and in 11 per cent of those with dirty mouths. In 75 per cent of cases, penicillin will kill the germ.

streptococcolysin (strēp'tō-kōl'i-sin) [G. streptos, twisted, + lysis, dissolution]. A hemolysin produced by streptococci.

streptodermatitis (strēp'tō-der-mā-ti'tis) [+ derma, skin, + -itis, inflammation] Inflammation of the skin caused by streptococci

streptodornase (strēp'tō-dor'nās). One of the enzymes (streptokinase is another) elaborated by hemolytic streptococci, and capable of liquefying fibrinous and purulent exudates. Useful in pneumococci and tuberculous empyema

streptokinase (strēp'tō-kī'nās). See: streptodornase

streptoleukocidin (strēp'tō-lū-kō-sī'din) [+ leukos, white, + L cidus, from caedere, to kill] A toxin produced by streptococci destructive to leukocytes

streptolysin (strēp'tō-l'i-sin) [+ lysis, dissolution] A hemolysin excreted by a streptococcus. SYN streptococcolysin, streptococcolysin.

s. O. A streptolysin resistant to heat and acid but sensitive to oxygen

s. S. A streptolysin insensitive to oxygen but rapidly destroyed by heat and acid

streptomycin (strēp'tō-mī'sin) 1 An antibiotic derived from a soil microbe (*Streptomyces griseus*) 2 Term applied loosely to any of a group of several chemically related antibiotics synthesized by various species of actinomycetes, esp *Streptomyces* and related genera.

streptomycosis (strēp'tō-mī-kō'sis) [+ mykēs, fungus, + -osis, condition] Infection caused by streptococci.

streptosepticemia (strēp'tō-sēp-tī-sē'mī-ā) [+ séptikos, putrid, + aima, blood] Septicemia resulting from streptococcus infection. SYN streptococcemia, streptomycosis.

streptothricin (strēp'tō-thrī'sin). An antibiotic biosynthesized by *Streptomyces lavendulae*. It is effective against both Gram-negative and Gram-positive bacteria and some fungi. It is more toxic than streptomycin

streptothricosis (strēp'tō-thrī-kō'sis) [+ thriz, hair, + -osis, condition] Infection caused by a species of Streptothrix.

Sym: Chronic suppurative inflammation

Streptothrix (strēp'tō-thrīks) [+ thriz, hair]. A genus of Chlamydobacteriaceae, of which one form is the cause of actinomycosis and another is assumed to be cause of rabbit fever.

stress. 1. A condition harmful to an organism which results from the inability of the organism to maintain a constant internal environment. 2. In dentistry, the force exerted against the upper teeth by the lower ones during mastication. 3. Mental strain.

stress'or. An agent or condition capable of producing stress.

s., systemic. One which produces generalized systemic responses.

s., topical. One which causes mild inflammation or local damage.

stretch. To draw out or extend to full length.

s. receptor. A proprioceptor located in a muscle or tendon which is stimulated by a stretch or pull.

s. reflex. SYN: myotatic reflex. The contraction of a muscle as a result of a pull exerted upon the tendon of the responding muscle. Stretch reflexes are of primary importance in maintenance of posture

stretcher (strēcher) [A.S. streccan, to reach] A litter for carrying the sick, injured or dead

stretch'ing of contrac'tures. Process performed to loosen contracted ligaments, muscles and adhesions in stiff joints.

There should be a slow, steady and gradually increasing pull by the operator or with gradually increasing weights.

stria (strī'a) (pl. striae) [L. stria, a channel or groove] A line or band elevated above or depressed below surrounding tissue, or differing in color and texture

s. acusticae. SYN: striae medullares. One of the horizontal white stripes on floor of the 4th ventricle of the brain

s. atrophica. Fine pinkish-white or gray lines usually 14 cm. in length seen in parts of body where skin has been stretched. Commonly seen on thighs, abdomen, and breasts of women who are or have been pregnant or in persons whose skin has been stretched by obesity, tumor, or droopy.

s., cerebellares. Striae medullares, s. acusticae, q.v.

s. gravidarum. Same as s. atrophica.

s. longitudinalis lateralis. One of the longitudinal bands of gray matter, slightly elevated on upper part of the corpus callosum.

s. medullares. Same as s., acustic, s. acusticae

s. terminalis. A band of fibers in roof of inf. horn running to floor of body of the lateral ventricle

striate, striated (strī'āt, strī'āt-ēd) [L. stria, channel]. Striped, marked by streaks or striae

s. arteries. Branches of the middle cerebral artery which supply basal nuclei of brain.

s. body. Mass of gray and white bands in each cerebral hemisphere. SYN corpus striatum.

s. muscle. Skeletal muscle, consisting of fibers marked by cross striations. SEE: muscle

s. veins, inferior. Branches of basal vein which drain corpus striatum.

striation (strī-ā'shūn) [L. stria, channel]. 1. State of being striped or streaked. 2. One of a series of streaks. SYN stria.

striatum (strī-ā'tūm) [L. striatum, grooved] The caudate and lentiform nuclei of the brain considered as one. SYN corpus striatum.

stricture (strīk'chūr) [L. strictura, a tightening]. A narrowing or constriction of the lumen of a tube, duct, or hollow organ such as the esophagus, ureter, or urethra. Strictures may be congenital or acquired. Acquired strictures may result from infection, trauma, fibrosis resulting from mechanical or chemical irritation, muscular spasm, or pressure from outside from adjacent strictures or tumors. They may be temporary or permanent, depending on cause

s., annular. Ringlike obstruction involving entire circumference of structure

s., anorectal. Fibrotic narrowing of the anorectal canal.

s., bridle. One caused by a band across the tube, partially occluding it.

s., cicatricial. One resulting from a scar or wound.

s., functional. One due to muscular spasm.

s., impermeable. One closing the lumen of a tube or canal.

s., irritable. One causing pain when an instrument is passed.

s., spasmodic. Same as *functional s.*

s. of urethra. Most common in men. May be partial or complete.

SYM. Straining to pass urine, esp. at commencement of urination.

ETIOL. Spasm of urethral muscle, congestion of urethra and fibrous formation.

stricturetome (stri'chūr-ō-tōm) [L. *stric-tūra*, a contraction, + G. *tomē*, a cutting] Instrument for cutting strictures.

stricturetomy (stri'chūr-ō-tō-mī) [“ + G. *tomē*, a cutting]. Operation of cutting strictures.

stridor (strī'dōr) [L. a harsh sound] Harsh sound during respiration, high-pitched and like the blowing of the wind due to obstruction of air passages.

s., congenital or laryngeal. Inspiration at birth or during first 3 weeks giving forth a crowing sound.

s. dentium. Noise from grinding of the teeth.

s. serraticus. Sound of respiration like that of sawing, when heard through a tracheotomy tube.

stridulous (strī'dū-lūs) [L. *stridulus*, harsh, creaking]. Making a shrill grating sound.

string beans. AV. SERVING: 75 Gm. PRO. 18, FAT 0.2, CARBO 58.

VITAMINS A+++, B+++, C++, G+++,
ASH CONST Ca 0.046, Mg 0.025, K 0.247, Na 0.019, P 0.052, Cl 0.024, S 0.030, Fe 0.0011.

string-of-pearls deformity. Fusiform enlargement of proximal and middle phalanges seen in rickets.

string sign. A greatly narrowed terminal ileum seen in roentgenologic examination of abdomen in regional enteritis.

strip (stri:p) [A.S. *strīpan*, to strip off]. To remove all contents from, esp. by gentle pressure, as to strip the seminal vesicles.

strobila (strō-bī'lā) [G. *strobilē*, a twisted plug]. Consecutive segments of body of a tapeworm.

stroke (strōk) [A.S. *strāc*, a going] 1. A sudden, severe attack of affliction, as apoplexy; a sharp blow. 2. [A.S. *strācian*, a going]. To rub gently in one direction, as in massage. 3. Gentle movement of the hand across a surface.

s., apoplectic. Sudden loss of consciousness resulting from intracranial hemorrhage, thrombosis, or embolism. SEE: *apoplexy*.

s., back. Ventricular recoil of the heart during systole. SYN: *basculatōn*, 2.

s., heat. SEE: *heatstroke*.

s., paralytic. Sudden onset of paralysis resulting from injury to brain or spinal cord.

s. volume. SYN: *systolic discharge*. The amount of blood ejected by the left ventricle at each beat. Normally about 60 cc.

stroma (strō'mā) (pl. *stromata*) [G. *strōma*, a bed]. 1. Foundation supporting tissues of an organ. 2. Spongy, colorless framework of an erythrocyte.

stromal, stromatic (strō'mā'l, strō-māt'ik) [G. *strōma*, a bed]. Concerning or resembling the stroma of an organ.

Stromeyer's splint (strō'mī-ēr). A hinged splint for a joint, which can be fixed at any angle.

stromuhr (strō'moor) [Ger.]. Device for measuring velocity of blood flow. SYN: *rheometer*.

Strongylata. A suborder of nematode worms which includes the hookworms, strongyles, gapeworms and lungworms.

strongyle. A nematode belonging to the suborder Strongylata.

Strongyloides (strōn-jī-loi'dēz) [G. *strog-gylos*, round, + *eidos*, form] A genus of roundworms frequently found in the intestines.

S. intestinalis. An intestinal roundworm.

S. stercoralis. SYN: *S. intestinalis*. An intestinal parasite of man similar to the hookworm both in distribution and life cycle. The cause of Cochlin-China diarrhea.

strongyloidosis (strōn-jī-loi-dō'sis) [“ + “ + *-ōsis*, condition] Infestation with Strongyloides.

strongylosis (strōn-jī-lō'sis) [G. *strog-gylos*, round, + *-ōsis*, condition]. Infestation with Strongylus.

strontium (strōn'shl-ūm). SYMB: Sr. At wt 87.63, at. no. 38 sp gr 2.54. A metallic element sometimes used in medicine as a carrier of therapeutically active acids. Its salts are also used medicinally.

Strophanthus (strō-fān'thūs) [G. *strophos*, cord + *anthos*, flower] USP. Plant yielding a poisonous, white, crystalline glucoside, used chiefly in the form of alkaloid, strophanthin.

ACTION AND USES Similar to digitalis.

DOSEAGE: 1 gr (0.06 Gm.).

strophulus (strōf'ū-lūs) [L. *strophulus*, from G. *strophos*, a twisted cord] An infantile red eruption. SYN: *gum rash*, *red rash*, *tooth rash*.

s. albidus. Small, white nodule below the epidermis. SYN: *milium*.

s. infantum. Urticaria in infants.

s. pruriginosus. A form with itching papules.

structural (strūkt'ū-rāl) [L. *structūra*, a building] Pert to organic structure.

s. disease. A disease effecting changes in any structure.

struma (strū'mā) [L. a mass]. Enlargement of the thyroid gland. SYN: *goiter*.

s. aberrantia. S. of the accessory thyroid glands.

s. cast iron. Chronic thyroiditis accompanied by extreme development of fibrous tissue.

s. congenita. Goiter present at birth.

s. lingualls. Presence of thyroid tissue in tongue in region of foramen cecum.

s. lymphomatosa. SYN: *Hashimoto's struma*. Rare form involving a diffuse and extensive infiltration of the entire gland.

s. maligna. Carcinoma of the thyroid gland.

s., ovarii. A form of ovarian teratoma in which mass is composed of typical thyroid follicles filled with colloid.

s. Reidel's. A form of chronic thyroiditis in which gland becomes enlarged, hard, and adherent to adjacent tissues. Follicles become atrophic and fibrosis occurs.

strumiprivo (strū'mī-prī'vūs) [L. *struma*, a mass, + *privare*, to deprive]. Referring to or caused by removal of the thyroid gland. SEE: *cachexia*.

strumitis (strū-mīt'is) [“ + G. *-itis*, inflammation]. Inflammation of a thyroid gland with goiter. SYN: *thyroiditis*.

strumous (strū'mūs) [L. *struma*, a mass].

1. Affected with scrofula. **SYN:** *scrofulous* 2. Affected with goiter

Strümpell-Marie disease (strim'pēl). Ankylosing or rheumatoid spondylitis, *q.v.* **Strümpell's sign.** Dorsiflexion of foot when thigh is flexed on abdomen

strychnine (stri'k'nīn, -nēn, -nīn) [G. *strychnos*, nightshade]. A poisonous alkaloid obtained from plants, as *nux vomica*.

It is a marked stimulant, causing the heart to beat more strongly. When taken in small doses for some time the mental powers become sharpened and sensibility intensified. Bowel movements become less sluggish and gastric secretion augmented. The spinal cord is affected in a marked degree, reflex action being increased and the muscle tone improved.

USES: As a tonic in convalescence from weakening diseases, in some nervous conditions, and for the debility caused by excessive overstrain. Contraindicated in diseases connected with overactivity of spinal cord. When heart failure threatens the drug is often used hypodermically. Its stimulating action causes it to be a useful adjunct to purgative medicines.

When the nervous system is depressed owing to poisons or toxins, such as alcohol, lead, tobacco, and diphtheria, it is a much-ordered remedy.

POISONING. The fatal dose of strychnine by mouth is probably between 1 and 2 gr., although patients have recovered following much larger doses.

SYM: When swallowed, symptoms usually develop within 15 to 20 minutes. This time element depends largely upon the drug being in solution and the stomach being empty. Given by needle in toxic amount, the development of symptoms is remarkably prompt. The usual course is, first, a hyperesthesia followed by a modification of the reflexes, especially shown as a tendency 'or a single stimulus to produce exaggerated reactions and to involve apparently unrelated muscle groups.

If a sufficient amount has been taken, there rapidly develop nervous twitchings followed by convulsions. The seizures are tonic in character, further characterized by cyanosis and opisthotonos, followed by relaxation and exhaustion. The duration of a seizure may be from a few seconds to about a minute. Consciousness may not be lost, so that the tonic contractions may be very painful. They tend to recur in 5 to 15 minutes and may be precipitated by almost any stimulus such as physical contact or unusual noise. In favorable cases, convulsions gradually lessen in severity. Should death occur, it is usually by asphyxiation during one of the early attacks or later by exhaustion following repeated paroxysms.

TREATMENT: Consists in thoroughly emptying the stomach; best done with a small stomach tube. An ideal chemical antidote is *potassium permanganate*, used in a solution of about 1:2000; about a pint of this left in the stomach. Other measures are keeping patient quiet, free from any disturbing factors, such as noise and confusion. Medication depends upon the administration of antispasmodics. *Barbituric acid salts* are used intravenously, or *chloral hydrate* and *bromides* given by mouth or rectum. Inhalations of *chloroform* have been recommended for controlling a convul-

sion until the patient can be brought under the influence of other medication. Inhalations of *oxygen* have been used in this condition with apparent benefit. Artificial respiration, especially by the intratracheal method, is sometimes a life saver, but requires the proper apparatus that is not always available. Elimination favored particularly by diuretics.

s. nitrate. **USP.** The nitrate of the alkaloid strychnine

ACTION AND USES. Same as strychnine sulfate.

Dosage: Same

s. sulfate. **USP.** The sulfate of an alkaloid obtained from *nux vomica*.

ACTION AND USES. Stimulant to the spinal cord and respiration

Dosage 1/30 gr. (0.002 Gm.)

POISONING. An extremely bitter alkaloid used as an animal poisoning to destroy pests

SYM. Begin shortly after administration. Tightness of chest, a feeling of impending calamity, and shortly violent convulsions with weak, irregular pulse; dilated pupils.

F A TREATMENT. Wash out stomach; anesthesia is given cautiously to diminish convulsions. Tannic acid to precipitate the alkaloid. Sedatives, as barbitol, desirable, esp. those varieties that may be given intravenously, as sodium amytal and sodium pentobarbital. See *strychnine*.

INCOMPATIBILITIES. Potassium iodide.

strychninism (stri'k'nīn-izm) [G. *strychnos*, nightshade, *-ismos*, condition]. Chronic strychnine poisoning. **SYN:** *strychnism*.

strychnism (stri'k'nīzm). Poisoning from use of strychnine. **SYN:** *strychninism*.

stump (stūmp) [ME *stumpel*, Basal part of limb left after amputation]

s. hallucination. Consciousness of still being possessed of a limb or arm after its amputation

stun (stun) [ME *stunēin*, to stun] To render unconscious or stupefied by a blow

stupe (stūp) [L. *stupa*, tow, from G. *stypē*]. Cloth of flannel wrung out of hot water for a fomentation, often saturated with a counterirritant such as turpentine. **SEE:** *fomentation*

s., opium. 30-60 minims of opium sprinkled over stupe after it has been wrung out

s., turpentine. 1-2 drams of turpentine sprinkled evenly over dry flannel before water is poured on

stupefacient (stū-pē-fā'shēnt) [L. *stupefaciens*, stupefying]. Causing or that which causes stupor. **SYN:** *narcotic; soporific*.

stupemania (stū-pē-mā'nī-ā) [L. *stupor*, stupor, + G. *mania*, madness]. Insanity with symptoms of stupor.

stupor (stū'por) [L. *stupor*]. 1. Condition of unconsciousness, torpor, or lethargy with suppression of sense or feeling 2 **PSY:** A state of lessened responsiveness

Stupor occurs in visceral and infectious diseases, melancholia, catatonia, epilepsy, paresis, poisonings, and hysteria. A benign form is seen in manic-depressive psychosis.

s., energetic. Stupor accompanied with immobility seen in certain psychoses.

s., delusional. S associated with melancholia and accompanied by delusions.

s., epileptic. S. sometimes following an attack of epilepsy
s., lethargic. Trance, *q v*
s. melancholicus. S. associated with melancholia.

s. vigilans. Catalepsy, *q v*

RS' carotic, catatonica, collapse, coma, lethargy, narcoma, narcose, syncope, unconsciousness.

stuporous (stū'pōr-ūs). Affected with stupor

s. depression. An extremely depressed phase of manic-depressive psychosis characterized by extreme psychomotor retardation and unresponsiveness to surrounding conditions

stupration, stuprum (stū-prā'shūn, stū-prūm) [L. *stuprum*, defilement] Sexual intercourse with a woman without her consent and by overpowering force, or intimidation. SYN *rape*.

sturine (stū'rīn) [L. *sturio*, sturgeon] Protamine obtained from sperm of sturgeon which has bactericidal action.

stutter (stut'er) [ME *stutten*, to strike] To hesitate and repeat or stumble spasmodically in speaking, due to difficulty in pronouncing initial consonants caused by spasm of lingual and palatal muscles

stuttering (stut'er-ing) [ME *stutten*, to strike] Defect in speech in which there is stumbling and spasmodic repetition of same syllable RS *battarism*, *mogilalia*.

s., urinary. Irregular, spasmodic urination. SYN *stammering* of the bladder.

style (stīl) (pl. *styes* or *sties*) [AS *stigan*, a rising] A circumscribed inflammation of a sebaceous gland near edge of eyelid ending in suppurative SYN *hordeolum*
 SYN. General edema of lid, pain, localized conjunctivitis.

TREATMENT. Hot fomentations. When suppurative has taken place, free incision and pressure to evacuate sac. When a succession of styes occurs general system should be built up by constitutional remedies and the ametropia, which is almost always found in these aggravated cases, should be relieved by correcting lenses.

s., melibomian. Inflammation of a melibomian gland.

s., Zeissian. Inflammation of one of Zeiss' glands.

styles, stylē (stīles, stī'lēt) [L. *stylus*, a pointed instrument] 1 A slender, solid or hollow plug of metal for making permanent a canal after operation or for stiffening or clearing a cannula or catheter 2 A thin probe.

styliscus (stī-lis'kūs) [G. *styliskos*, pillar]. A slender, cylindrical plug for dilating a channel or for keeping a wound open. SEE: *tent*.

styloglossus (stī-lō-glō'sūs) [G. *stylos*, pillar, + *glōssa*, tongue]. A muscle connecting the tongue and styloid process which raises and retracts the tongue. SEE: *Table of Muscles in Appendix*

stylohyoid (stī-lō-hī'oid). Pert. to the styloid process of temporal and the hyoid bone

stylohyoideus (stī-lō-hī-oyd'ē-ūs). A muscle having its origin on styloid process and insertion on hyoid bone. It draws the hyoid bone upward and backward. SEE: *Table of Muscles in Appendix*.

styloid (stī'loid) [G. *stylos*, pillar, + *eidōs*, form]. Resembling a stylus or pointed instrument.

s. process. 1 A pointed process of the temporal bone, projecting down-

ward, and to which some of the muscles of the tongue are attached. 2 A pointed projection behind the head of the fibula. 3. A protuberance on distal end of radius' outer portion. 4. An ulnar projection on inner side of the distal end.

styloiditis (stī-loyd-'ītīs) [G. *stylos*, pillar, + *eidōs*, form, + *-itis*, inflammation] Inflammation of a styloid process.

styломандибулар (stī'lō-mān-dī'bū-lār). Concerning the styloid process of the temporal bone and the mandible

styломастоид (stī'lō-mās'toyd) [' + *mastōs*, breast, + *eidōs*, form] Concerning the styloid and mastoid processes of the temporal bone

styломасилларий (stī'lō-māks'lā-rī) [' + L. *maxilla*, jaw] Concerning the styloid process of the temporal bone and the mandible.

styлофарингеус (stī'lō-far-in'jē-ūs) [' + *pharynx*, pharynx] Muscle connecting the styloid process and pharynx which elevates and dilates the pharynx SEE *Table of Muscles in Appendix*.

stylus (stī'lūs) [L. *stylus*, a pen, from G. *stylos*, a pillar] 1 A probe or slender wire for stiffening or clearing a canal or catheter 2 Pointed medicinal preparation in stick form for external application

stype (stīp) [G. *stypē*, tow]. A pledget or tampon of cotton or other material

stypsis (stīp'sis) [G. *stypsis*, a steeping in an astringent] Astringency or the use of an astringent

styptic (stīp'tik) [G. *styptikos*, contracting]. 1 Contracting a blood vessel, stopping a hemorrhage by astringent action. 2 Anything that checks a hemorrhage SYN *astringent*, *hemostat*

Ex *ferrous sulfate*, *alum*, *tannic acid*

stypticin (stīp'tī-sin) [G. *styptikos*, contracting]. Proprietary preparation of cotarnine hydrochloride, a yellow, odorless, crystalline powder.

Uses As a hemostatic
 Dosage 1 gr. (0.06 Gm.).

stypven (stīp'ven) Commercial preparation of Russell's viper venom.

The results of recent investigation have proven this to be of value as a hemostatic, used topically to stop bleeding in dental surgery, etc

sub- [L.] Combining form meaning under, beneath, in small quantity

subabdominal (sūb-āb-dōm'ī-nāl) [L. *sub*, beneath, + *abdomen*, abdomen] Below the abdomen

subacetate (sūb-ās'ēt-āt) [' + *acetum*, vinegar]. A basic acetate.

subacromial (sūb-ā-krō'mī-āl) [' + G. *akron*, point, + *omos*, shoulder]. Under the acromion process.

subacute (sūb-ā-kūt') [' + *acutus*, sharp]. Bet. acute and chronic, but with some acute features, said of the course of a disease.

subalimentation (sūb-āl-l-mēn-tā'shūn) [' + *alimentum*, food]. A state of insufficient nourishment

subanconeus (sūb-ān-kō'nē-ūs) [' + G. *agkōn*, elbow]. 1. Below the elbow. 2. Muscle beneath the elbow which contracts its post. ligament. SEE: *Table of Muscles in Appendix*.

subaponeurotic (sūb'ap-ō-nū-rō'tik) [' + G. *apo*, from + *neuron*, tendon]. Below an aponeurosis.

subarachnoid (sūb-ā-rāk'noyd) [L. *sub*, under, + G. *arachnē*, spider, + *eidōs*, form]. Below the arachnoid membrane.

s. cisternae. Spaces at the base of the brain where the arachnoid becomes

widely separated from the pia giving rise to large cavities.

s. space. Space between the pia proper and arachnoid containing the cerebrospinal fluid.

subarcuate (süb-ar'kü-ät) [" + *arcuatus*, bow-shaped] Slightly arched

s. fossa. Depression beneath the arcuate eminence

subastragalar (süb-äs-träg'-ä-lar) [" + *G. astragalos*, one of a set of dice]. Beneath the astragalus.

substringent (süb-äs-trin'jént) [" + *astringere*, to contract]. Mildly astringent.

subaural (süb-aw'räl) [" + *auris*, ear] Below the ear

subcapsular (süb-käp'sü-lar) [" + *capsula*, a little box] Below any capsule, especially the capsule of the brain, or a capsular ligament

subcarbonate (süb-käp'bôn-ät) [" + *carbo*, carbon, coal] A basic carbonate, one having less carbonic acid radical than the normal carbonate.

subcartilaginous (süb-kar-til-ä'j'in-üs) [L. *sub*, beneath, + *cartilago*, cartilage] 1 Beneath a cartilage 2 Cartilaginous in part

subchronic (süb-kron'ik) [" + *G. chronos*, time] Noting a condition bet. subacute and chronic; almost chronic

subclavian (süb-klä'vi-än) [" + *clavus*, a key] Under the clavicle or collarbone. SYN *subclavicular*

s. artery. Large artery at base of neck which supplies blood to arm. The right subclavian a branches from the innominate artery; the l. subclavian a branches from aortic arch

s. triangle. One of the neck formed by the clavicle, and the omohyoid and sternomastoid muscles.

s. vein. Large vein draining arm. It unites with int. jugular to form the innominate vein

subclavicular (süb-kläv'-ik'-ü-lar) [" + *clavicula*, a little key] Beneath the clavicle. SYN *subclavian*

subclavius (süb-klä'vi-üs) [" + *clavis*, a key] A tiny muscle from the 1st rib to the undersurface of the clavicle. SEE *Table of Muscles in Appendix*.

subclinical (süb-klín'i-kal) [" + *G. klinikos*, pert. to a bed]. Pert. to a period before appearance of typical symptoms of a disease

subcollateral (süb-kö-lät'-er-äl) [L. *sub*, under, + *con*, with, + *latus*, later-, side]. Below the collateral fissure, indicating a cerebral convolution.

subconjunctival (süb-kön-jünk-ti'väl) [" + *conjunctiva*, a joining]. Beneath the conjunctiva.

subconscious (süb-kön'shüs) [" + *conscius*, aware] Not clearly conscious; pert. to activities of which the mind is not aware or to that which is not cognized through the physical senses, below the threshold of objective consciousness; that which is activated by involuntary processes; intuitional

subconsciousness (süb-kön'shüs-nēs) [" + *conscius*, aware]. 1. The state of being partially unconscious. 2. Noting of impressions and ideas without conscious knowledge of them. 3. The seat of a hypothetical subconscious mind in which are buried past impressions of objective knowledge. SEE *subconscious*.

subcontinuous (süb-kön-tin'ü-üs) [" + *continuus*, holding together]. Almost continuous; with periods of abatement, but no interruptions to continuity.

s. fever. Fever with periods of re-

mission and exacerbation. SYN: *remittent fever*.

subcoracoid (süb-kor'-ä-koyd) [" + *G. korakoedēs*, crowslike]. Beneath the coracoid process.

subcortex (süb-kor'tëks) [" + *cortex*, rind]. White substance of the brain underlying the cortex

subcortical (süb-kor'ti-kal) [L. *sub*, under, + *cortex*, cortic-, rind]. Pert. to the region beneath the cerebral cortex

subcostal (süb-kös'täl) [" + *costa*, rib] Beneath the ribs

subcostalgia (süb-kös-täl'ji-ä) [" + " + *G. algos*, pain]. Pain in region over the subcostal nerve

subcranial (süb-krä'n-i-äl) [" + *G. kranion*, skull] Beneath or below the cranium.

subcrepitant (süb-krep'i-tänt) [" + *crepitare*, to rattle]. Partially crepitant or crackling in character; noting a râle.

subcrureus (süb-krü-rë'üs) [" + *crus*, crur-, leg] Small muscle bet. ant. surface of femoral shaft and synovial membrane of knee joint. SEE *Table of Muscles in Appendix*.

subculture (süb-kül'chür) [" + *cultura*, cultivation] 1. To make a culture of bacteria with material derived from another culture 2. One made by transferring bacteria from a previous culture to a fresh medium

subcutaneous (süb-kü-tä'në-üs) [L. *sub*, under, + *cutis*, skin] Beneath or to be introduced beneath the skin. SYN: *hypodermic*.

s. surgery. Operation performed through a small opening in the skin

s. wound. A wound with only a small opening through the skin.

subcuticular (süb-kü-tik'-ü-lar) [" + *cuticula*, little skin] Beneath the cuticle or epidermis. SYN: *subepidermal*

subdelirium (süb-dë-lir'i-üm) [" + *dë*, away from, + *lira*, track]. A mild or not continuous delirium

subdiaphragmatic (süb-di-ä-fräg-mät'ik) [" + *G. dia*, across, + *phragma*, wall]. Beneath the diaphragm

subdural (süb-dü-räl) [" + *durus*, hard]. Beneath the dura mater.

s. space. Space bet. the arachnoid and dura mater.

subendocardial (süb'-ën-dö-kar'di-äl) [" + *G. endon*, within, + *kardia*, heart]. Below the endocardium

subendothelial (süb'-ën-dö-thë'ti-äl) [L. *sub*, under, + *G. endon*, within, + *thêlê*, nipple] Beneath endothelium.

subepidermal (süb'-ëp-i-der'mäl) [" + *G. epi*, upon, + *derma*, skin]. Beneath the epidermis. SYN: *subcuticular*.

subepithelial (süb'-ëp-i-thë'ti-äl) [" + " + *thêlê*, nipple] Beneath the epithelium.

subfascial (süb-fäsh'i-äl) [" + *fascia*, band] Beneath a fascia.

subfebrile (süb-fë'bril) [" + *febris*, fever]. Somewhat feverish.

subflavous (süb-flä'vüs) [" + *flavus*, yellow]. Yellowish.

s. ligament. Yellowish ligament connecting the laminae of the vertebrae. SYN: *ligamentum subflavum*.

subfrontal (süb-frün'täl) [L. *sub*, beneath, + *frons*, front-, forehead]. Below a frontal convolution or lobe of the brain.

subglenoid (süb-glë'noyd) [" + *G. glênê*, cavity, + *eidos*, form]. Below the glenoid fossa or glenoid cavity.

subglossal (süb-glos-äl) [" + *G. glössa*, tongue]. Under the tongue. SYN: *hypoglossal*, *sublingual*.

subglossitis (süb-glos-si'tis) [" + " + *-itis*,

inflammation]. Inflammation of the undersurface or tissues of the tongue.

subgrondation, subgrundation (süb-gron-dá'shün, -grün-dá'shün) [Fr]. Depression of one fragment of a broken bone beneath the other, as of the cranium.

subhyoid (süb-hi'oyd) [L. *sub*, beneath, + G. *hyoëdes*, U-shaped]. Beneath the hyoid bone.

subiculum (sü-bik'ü-lüm) [L. *subiculum*, a small support]. A division of hippocampal convolution, composed of a thick layer of myelinated fibers on its surface, and containing the olfactory association centers. **SYN** *convolution, uncinate; uncus gyri hippocampi*.

subiliac (süb-il'i-äk) [L. *sub*, under, + *iliacus*, pert to the hip] 1 Below the ilium 2 Pert to the subillum.

subillum (süb-il'i-üm) ["" + *ilium*, haunch bone] The lowest part of the ilium.

subinfection (süb-in-fék'shün) ["" + *infectio*, a putting into] 1 Mild infection because of the weakening of the resisting power of the cells against toxic conditions 2 Condition caused by toxins liberated from bacteria undergoing lysis.

subinflammation (süb-'in-fläm-ä'shün) ["" + *inflammatio*, a setting on fire] Very mild inflammation. **SYN** *irritation*.

subinflammatory (süb-'in-fläm-ä-tö-ri) ["" + *inflammatio*, a setting on fire]. Very mildly inflammatory.

subinfrant (süb-in-fränt) [L. *subinfrans*, stealing into]. Having cycles or paroxysms in such rapid succession that they intermingle.

s. fever. Intermittent fever in which the paroxysms occur so rapidly that one comes on before the previous one has disappeared.

subinvolution (süb-'in-vö-lü'shün) [L. *sub*, beneath, + *involutio*, a turning into] Imperfect involution, incomplete return of a part to normal dimensions after physiological hypertrophy as when the uterus following childbirth fails to reduce to normal size. **See** *uterus*.

subjacent. Lying underneath.

subject (süb-jékt) [L. *subiectus*, thrown or lying under] 1 A patient undergoing treatment, observation, or experiment 2 A body used for dissection.

subjective (süb-jék'tiv) [L. *subjectivus*]. Arising from or concerned with the individual, not perceptible to an observer. **OPP** *objective*.

s. sensation. A sensation occurring when stimuli due to internal causes excite the nervous system; one not of objective origin.

s. symptoms. Those which are of internal origin and evident only to the patient.

subjugal (süb-jü'gäl) [L. *sub*, beneath, + *yugum*, yoke] Below the malar bone or *os zygomaticum*.

sublatio (süb-lä'shi-ö) [L. *sublatio*, a taking away]. Removal or detachment of a part.

s. retinae. Detachment of the retina.

sublethal (süb-lé'thäl) [L. *sub*, under, + G. *lêthê* oblivion]. A little less than lethal, almost fatal.

s. dose. Dose containing not quite enough toxin to cause death.

sublimate (süb-'il-mät) [L. *sublimare*, to elevate]. 1. A substance obtained or prepared by sublimation. 2 To vaporize a solid substance by heat and condense it again without liquefying, for purification. 3 **PSY**. To overcome the libido by diverting it into nonsexual or higher activities.

sublimation (süb-'il-mä'shün) [L. *sublimatio*, an elevation] 1 **CHEM**. To convert a solid into a vapor and condense it again without liquefying to purify it. 2 **PSY**. Conversion of the libido into nonsexual channels.

Adequate expression for organic needs, removed from the primitive satisfaction in such a way that the "herd" regards the outlet as "superior," i. e., best suited to the social interests (demands).

A freudian term pert to unconscious mental processes whereby the sex instinct finds an outlet through creative mental work.

sublime (süb-'lím') [L. *sublimare*, to elevate]. **CHEM**. To evaporate a substance directly from the solid into the vapor state and condense it again.

Thus, metallic iodine on heating does not liquefy, but forms directly a violet gas.

subliminal (süb-'lím-'in-äl) [L. *sub*, under, + *limen*, threshold]. 1 Below the threshold of sensation, too weak to arouse sensation or muscular contraction. 2. Below the normal consciousness. **SYN** *subconscious*.

s. self. **PSY**. Part of a normal individual's personality in which his mental processes function without consciousness, under normal waking conditions.

sublingual (süb-'ling-gwäl) ["" + *lingua*, tongue] Beneath or concerning the area beneath the tongue.

s. gland. The smallest of the salivary glands, located bet side of tongue and the mandible, one on each side.

It has about 20 ducts opening for the most part directly above the gland.

sublinguitis (süb-'ling-gwä'tis) ["" + "" + G. *-itis*, inflammation] Inflammation of the sublingual gland.

sublobular (süb-'lób-'ü-lar) ["" + *lobulus*, a lobule] Beneath a lobule.

sublumar (süb-'lüm-'bar) ["" + *lumbus*, loin] Below the lumbar region.

subluxation (süb-'lüks-ä'shün) ["" + *luxatio*, dislocation] A partial or incomplete dislocation.

submammary (süb-'mam-ä-rä) [L. *sub*, under, + *mamma*, breast] Below the mammary gland.

submandibular (süb-'män-dib-'ül-är). Beneath the mandible or lower jaw.

s. gland. The submaxillary gland, *qv*.

submaxilla (süb-'mäks-'il-ä) ["" + *maxilla*, jaw]. The lower jaw or mandible. **SYN**: *maxilla, inferior*.

submaxillitis (süb-'mäks-'il-ar-'it'is) ["" + "" + G. *-itis*, inflammation] 1. Pert to the mandible. 2 Inflammation or mumps of the submaxillary glands.

submaxillary (süb-'mäks-'il-a-rä) ["" + *maxillaris*, pert to the jaw] Beneath the lower jaw or inferior maxilla.

s. gland. **SYN** *submandibular gland*. One of the salivary glands, a mixed tubuloalveolar gland about the size of a walnut which lies in digastric triangle beneath the mandible. Its main duct (*Wharton's duct*) opens at side of the frenulum linguae.

submaxillitis (süb-'mäks-'il-'it'is) ["" + "" + G. *-itis*, inflammation]. Inflammation of or mumps affecting the submaxillary gland.

submental (süb-'mën-'täl) ["" + *mentum*, chin] Under the chin.

submicron (süb-'mí-'krön) ["" + G. *mikros*, tiny]. A tiny particle invisible except with the ultramicroscope. **SYN**: *ultramicro-*.

submicroscopical (süb-'mí-'krö-sköp-'i-kal) [L. *sub*, under, + G. *mikros*, tiny, +

skopein, to examine]. Too minute to be visible under the microscope.

submorphous (sûb-mor'fûs) [' + G. *morphê*, form]. Neither completely amorphous nor crystalline, as some calculi.

submucosa (sûb-mû-kô'sâ) [' + *mucosus*, mucous]. The layer of areolar connective tissue under a mucous membrane.

submucous (sûb-mû'kûs) [' + *mucus*, mucus]. Beneath a mucous membrane.

subnarcotic (sûb-nar-kôt'ik) [' + G. *narkôtikos*, numb]. Mildly narcotic.

subnasal (sûb-nâ'zâl) [' + *nasus*, nose]. Under the nose

s. point. Craniometric point at base of nasal spine.

subneural (sûb-nû'râl) [' + G. *neuron*, nerve]. Beneath the neural axis or the central nervous system.

subnormal (sûb-nor'mâl) [L. *sub*, under, + *norma*, rule]. Below normal

subnucleus (sûb-nû'klê-us) [L. *sub*, under, + *nucleus*, a nut]. One of the secondary nuclei into which a nucleus of the central nervous system is sometimes divided

suboccipital (sûb-ôk-sip'i-tâl) [' + *occiput*, back of head]. Situated below the occiput or occipital bone

suboperculum (sûb-ô-per'kû-lûm) [' + *operculum*, covering]. Portion of occipital convolution overlapping the insula SEE *operculum*

suborbital (sûb-or'bi-tâl) [' + *orbita*, track]. Beneath the orbit.

subpapular (sûb-pâp'û-lar) [' + *papula*, pimple]. Very slightly papular, as papules elevated being scarcely more than macules

subpatellar (sûb-pâ-tê-lar) [' + *patella*, a pan]. Beneath the patella

subpeduncular (sûb'pê-dûn'kû-lar) [L. *sub*, under, + *pedunculus*, a stem]. Below a peduncle

s. lobe. Tiny lobe on undersurface of either cerebellar hemisphere SYN. *folliculus*

subpericardial (sûb'pêr-i-kar'di-âl) [' + G. *peri*, around, + *kardia*, heart]. Beneath the pericardium

subperiosteal (sûb'pêr-i-ôs'tê-âl) [' + + *osteon*, bone]. Beneath the periosteum

s. operation. Bone surgery without removal of the periosteum.

subperitoneal (sûb'pêr-i-tô-nê-âl) [' + G. *peritonaion*, peritoneum]. Beneath the peritoneum

subpharyngeal (sûb-fâr-in'jê-âl) [' + G. *pharynx*, pharynx]. Beneath the pharynx

subphrenic (sûb-frên'ik) [' + G. *phrên*, diaphragm]. Beneath the diaphragm. SYN: *subdiaphragmatic*

s. abscess. Collection of pus beneath the diaphragm

subplacenta (sûb-plâ-sên'tâ) [' + *placenta*, a flat cake]. Part of the decidua directly lining the uterus. SYN: *decidua vera*.

subpleural (sûb-plû'râl) [L. *sub*, under, + G. *pleura*, a side]. Beneath the pleura.

subpontine (sûb-pôn'tin, -tîn) [' + *pons*, pont-, bridge]. Below the pons Varolii.

subpreputial (sûb'prê-pû'shâl) [' + *præputium*, prepuce]. Under the prepuce.

subpublic (sûb-pû'blik) [' + *pubes*, pubis]. Beneath the pubic arch, as a ligament.

subpulmonary (sûb-pûl'mô-na-rî) [' + *pulmôn*, lung]. Below the lung.

subretinal (sûb-rêt'i-nâl) [' + *rêtê*, a net]. Beneath the retina.

subscapular (sûb-skâp'û-lar) [' + *scapula*, shoulder]. Below the scapula.

subscription (sûb-skrîp'shûn) [L. *subscriptio*, a writing under]. Part of a prescription containing direction to a pharmacist.

subserous (sûb-sê'rûs) [L. *sub*, under, + *serum*, whey]. Beneath a serous membrane

subsilant (sûb-sib'l-ânt). Having the sound of a muffled whistle

subsidence (sûb-sid'êns). The gradual disappearance of symptoms or manifestations of a disease

subspinous (sûb-spî'nûs) [' + *spina*, thorn]. 1. Beneath any spine 2. Anterior to or beneath the spinal column.

s. dislocation. Dislocation with head of the humerus resting below spine of the scapula.

substage (sûb'stâj) [' + O Fr *estage*, a landing]. Attachment to the microscope beneath the stage by which attachments are held in place

substance (sûb'stâns) [L. *substantia*, material]. That of which any material thing is composed, matter

s. accelerator. One of two substances called Factors V and VII which are essential for rapid conversion of prothrombin to thrombin

s. agglutinable. S. in red blood corpuscles and bacteria which unites with agglutinin producing specific agglutination

s. anterior perforated. Portion of rhinencephalon lying immediately anterior to optic chiasma. It is perforated by numerous small arteries

s. anterior pituitary-like. SYN. *APL substance* Gonadotrophin, chorionic q v

s. basophilic. SEE *s. chromophilic*

s. chromodial. SEE *s. chromophilic*

s. chromophilic. SYN. *basophilic chromophil*, or *chromidial substance*. Substance found in the cytoplasm of certain cells which stains similar to chromatin with basic dyes. Includes Nissl bodies of neurons and granules in seroxymogenic cells

s. colloid. Jellylike s. in colloid degeneration

s. depressor. Any substance whose action is that of reducing arterial blood pressure. SEE *vasopressin*.

s. gray. Gray matter of the brain and spinal cord

s. ground. The matrix or intercellular substance in which the cells of an organ or tissue are imbedded

s. intercellular. The substance occupying the spaces between cells

s. ketogenic. A substance which, in its metabolism, gives rise to ketone bodies

s. Nissl. Chromatophilic substance of nerve cells SEE *Nissl bodies*

s. posterior perforated. A triangular area forming floor of the interpeduncular fossa. It lies immediately behind the corpora mammillaria and contains numerous openings for blood vessels.

s. pressor. A substance which elevates arterial blood pressure

s. reticular. SEE. *formation, reticular*

s. specific soluble. ABBR: SSS. A polysaccharide hapten obtained from the capsules of pneumococci

s. threshold, high. A substance such as glucose or sodium chloride present in the blood which is excreted by the kidney only when its concentration exceeds a certain optimum value. SEE: *renal threshold*.

s. threshold, low. A substance such as urea or uric acid which is excreted

from the blood almost in its entirety. They occur in the urine in high concentrations

s., white. White matter of brain and spinal cord.

s., w., of Schwann. A nerve fiber's medullary sheath.

substantia (süb-stän'shí-ä) [L. *substantia*, material].

s. alba. White substance of the brain.

s. clarea. Gray substance of brain and spinal cord.

s. ferruginea. Elongated mass of pigmented cells in the locus caeruleus.

s. gelatinosa. Gray matter of the cord surrounding central canal and capping head of post horns of spinal cord.

s. grisea. BNA. Gray matter of the spinal cord.

s. nigra. BNA. Black substance in a section of the crus cerebri. SYN *locus niger*.

s. propria membranae tympani. Fibrous middle layer of drum membrane.

substernal (süb-ster'näl) [L. *sub*, beneath, + *G. sternon*, chest]. Situated beneath the sternum

substitution (süb-stí-tü'shün) [L. *substitutio*, a placing under] 1 CHEM Displacing an atom (or more than one) of an element in a compound by atoms of another element, equivalently 2 PSY. The turning from an obstructed desire to one whose gratification is socially acceptable. 3 The turning from an obstructed form of behavior to a more primitive one, as a substitution neurosis. 4 The replacement of a substance by another.

s. bone. Endochondral of cartilage bone

s. products. Compounds formed by an element or a radical replacing another element or radical in a compound

s. therapy. The use in treatment of a substance such as a product of glandular secretion (hormone or enzyme) to replace natural substance in body. This method is employed when glands fail to secrete properly or substance secreted is unavailable to tissues.

substitutive (süb'stí-tü-tív) [L. *substitutivus*, conditional] Causing a change or substitution of characteristics

s. therapy. Treatment to overcome an inflammation of a specific character by exciting an acute nonspecific inflammation.

substrate, substratum (süb'strät, süb-strä'tüm) [L. *substratum*, a srewing under]. 1. An underlying layer or foundation. 2. A base, as of pigment 3 The substance acted upon, as by an enzyme. SYN *zymolyte* SEE *enzyme*.

subsubtil (süb-süb'tús) [L. *subsubtilis*, from *sub*, under, + *salire*, to leap]. Any morbid tremor or twitching, as of the tendons, a grave symptom in certain fevers

s. clonus, s. tendinum. Involuntary twitchings of muscles, esp. of arms and feet, causing movement of tendons, observed in certain febrile conditions.

subsyilian (süb-sí-lí-ví-än) [L. *sub*, beneath]. Below the fissure of Sylvius.

subtarsal (süb-tar'säl) [" + *G. tarsos*, tarsus]. Below the tarsus

subthalamie (süb-thä-läm'ík) [" + *G. thalamus*, chamber]. Located below the thalamus.

s. nucleus. SYN: *Body of Luys*. An elliptical mass of gray matter lying in ventral thalamus above cerebral peduncle and rostral to substantia nigra. It receives fibers from the globus pallidus.

subthalamus (süb-thäl'ä-müs) [L. *sub*, beneath, + *G. thalamus*, chamber]. SYN *ventral thalamus*. Portion of the diencephalon lying ventral to thalamus. It is bounded laterally by pes pedunculi and internal capsule and medially by hypothalamus

subthyroidism (süb-thí'royd-izm) [" + *G. thyreos*, shield, + *eidosis*, like, + *-ismos*, condition]. Condition due to lack of activity of the thyroid gland. SYN. *hypothyroidism*.

subtile, subtle (süb'tíl, sü'tl) [M E. *sotill*, from L. *subtilis*, woven fine]. 1. Very fine or delicate 2 Very acute 3. Mentally acute or crafty or piercing, as sharp. 4. Operating without attracting attention, as subtle poisons.

subtilin (süb'tíl-in) An antibiotic biosynthesized by *Bacillus subtilis*. It is of low toxicity and effective against Gram-positive organisms

subtotal (süb-tó'täl) [L. *sub*, beneath, + *totus*, whole]. Just less than total, as subtotal removal of a gland

subtrochanteric (süb-tró-kän-ter'ík) [" + *G. trochanter*, a runner] Below a trochanter

subtuberal (süb-tü'bër-äl) [" + *tuber*, a knot] Located under a tuber.

subtympanic (süb-tím-pän'ík) [" + *G. tympanon*, drum]. Below the tympanum

sububeres (süb-'über-ëz) [" + *ubera*, breast] Suckling children

subumbilical (süb-üm-bíl'í-käl) [L. *sub*, beneath, + *umbilicus*, navel] Below the umbilicus

s. space. Space within the body cavity below the navel resembling a triangle in shape.

subungual, subunguial (süb-üng'gwäl, -gwi-äl) [" + *unguis*, nail] Situated beneath nail of a finger or toe. SEE *hyponychium*.

suburethral (süb-ü-rë'thräl) [" + *G. ourëthra*, urethra] Below the urethra

subvaginal (süb-väj'in-äl) [" + *vagina*, sheath] 1 Below the vagina 2 On inner side of any tubular sheathing membrane

subvertebral (süb-ver'të-bräl) [" + *vertebra*, vertebra] Beneath or on ventral side of the vertebral column or of a vertebra. SYN *subspinal*.

subvirile (süb-ví'íl, -ví'ríl) [" + *virilis*, male]. Of lowered or inferior virility

subvitreal (süb-ví'trín-äl) [" + *vitrea*, vitreous body]. Located beneath the vitreous body

subvolution (süb-vó-lü'shün) [" + *volutus*, from *volvere*, to turn] Method of surgically turning over a flap to prevent adhesions

succedaneous (sük-së-da'në-üs) [L. *succedaneus*, substituting]. Acting as a substitute or relating to one.

succharase. Sucrase, *q.v.*

succi. Plural of *succus*.

succinylsulfathiazole. 2-(N⁴-succinylsulfanilamido)-thiazole. Member of the sulfonamide family valuable as an antibacterial agent for use in the intestinal tract. White crystalline powder sparingly soluble in alcohol, acetone, and water; readily soluble in aqueous bases, as sodium bicarbonate solution.

succorrhæa (sük-kor-rë'ä) [L. *succus*, juice, + *G. rhoia*, a flow]. Unnatural increase in secretion of any juice, esp. of a digestive fluid.

succus (sük'küds) [L. *succus*, juice]. A juice or fluid secretion.

s. entericus. The intestinal juice of the body. It is alkaline. Sp. gr. 1.010.

The secretion of the minute glands lining the small intestine

It contains 5 enzymes: *Invertin*, *enterokinase*, *lactase*, *maltase*, and *erpsin*.

s. gastricus. The gastric juice.

s. pyloricus. An alkaline secretion by the pyloric end of the stomach

succussion (sūk-'s'shūn) [L. *succussio*, a shaking]. Shaking of a person to detect the presence of fluid in the bodily cavities by listening for a splashing sound, esp. in the thorax.

suck (sūk) [A.S. *sūcan*, to suck]. 1. To draw fluid into the mouth, as from the breast. 2. To exhaust air from a tube and thus siphon fluid from a container 3. That which is drawn into the mouth by sucking.

suckling pad. Mass of fat in cheeks, esp. well developed in an infant, aiding it to suck SEE: *myeosis*.

sucrase (sū'krās) [Fr *sucre*, sugar]. SYN: *invertase*, *succharase*. An enzyme in the intestinal juice which splits cane sugar into glucose and fructose, which are absorbed into the portal circulation

sucroclastic (sū-'krō-kłās'tik) [' + G. *klasios*, destroyed]. Splitting up or hydrolyzing sugar

sucrose (sū'krōs) [Fr *sucre*, sugar] SYN: *saccharum*, *sugar*. A saccharose $C_{12}H_{22}O_{11}$ obtained from sugar cane, sugar beet and other sources. It is hydrolyzed in the intestine to glucose and fructose by sucrase present in intestinal juice

ACTION: Only a little is retained by the stomach and it is all absorbed in the intestines. The lack of residue tends to cause constipation. The mucous membrane of the stomach is apt to be irritated by too much sugar. It and glucose may also set up fermentation. It is stored by the hepatic cells of the liver in the form of glycogen for future use. No chemical changes take place with the simple sugars, as they are directly absorbed. Any hydrolyzation in the stomach is supposed to be due to regurgitation of intestinal juice. Sugar is superior to starch, which requires more digestion. Sugar stimulates. As a rule, alcoholic drinkers do not care for much sugar, and one of the drink cures is the frequent use of candy. Excessive use causes fermentation.

Uses: Reduction of intracranial pressure, as in brain tumor, brain abscess, also being used as a diuretic.

CONTRA: Avoid much sugar in atony, gastric stasis, acne, furunculosis, obesity, liver complaints, and arthritis. In gout it should not be eaten with meat, as acid fermentation sets up and impedes uric acid elimination. A vegetable diet has the opposite effect. Prohibit in diabetes.

RS: *carbohydrates*, *disaccharose*, *fructose*, *galactose*, *glucose*, *lactose*, *levulose*, *maltose*.

suction (sūk'shūn) [L. *suctus*, from *sugere*, to suck]. The act of or capacity for sucking up by reduction of air pressure over part of the surface of a substance.

s. post-tussive. Suction sound over a lung cavity heard on auscultation after a cough.

sudamen (sū-dā'mēn) (pl. *sudamina*) [L. *sudamen*, sweat]. Noninflammatory eruption from sweat glands characterized by whitish vesicles caused by the retention of sweat in corneous layer of the skin, appearing after profuse sweating or in certain febrile diseases, disappearing by absorption.

sudamina (sū-dām'in-ā) [L. pl. of *sudamen*, sweat]. Plural of *sudamen*.

Sudan (sū-dān) One of a number of related biological stains which have a special affinity for fats. Includes Sudan II, Sudan III (G), Sudan IV, and Sudan R

sudanophil (sū-dān'ō-fil) [*sudan*, + G. *philein*, to love]. A leukocyte which stains readily with Sudan III, indicative of fatty degeneration.

sudanophilia (sū-dān'ō-fil'i-ā) [' + G. *philein*, to love]. A condition in which minute fat droplets contained in the leukocytes take a brilliant red stain, probably indicative of suppuration.

sudation (sū-dā'shūn) [L. *sudatio*, a sweating]. 1. The act of sweating. 2. Excessive perspiration.

sudatoria (sū-dā-tō'ri-ā) [L. *sudatorium*, sweating]. Excessive sweating. SYN: *ephidrosis*, *hyperidrosis*.

sudatorium (sū-dā-tō'ri-ūm) [L. *sudatorium*, a sweating room]. 1. A hot air bath or any bath to induce perspiration 2. A room used to induce sweat baths.

sudokeratosis (sū'dō-ker-ā-tō'sis) [L. *sudor*, sweat, + G. *keras*, *kerat*, horn, + *-osis*, condition]. Circumscribed, horny overgrowths obstructing the sweat ducts.

sudomotor (sū'dō-mō'tōr) [' + *motor*, a mover]. Pert. to stimulating the secretion of sweat, noting certain nerves.

sudor (sū'dor) [L. *sudor*, sweat]. Secretion from the sweat glands. SYN: *perspiration*, *sweat*.

RS *anhidrosis*, *bromidrosis*, *chromidrosis*, *hidrosis*, *hematidrosis*, *perspiration*, *pore*, *skin*, *sweat*, *sudorific*, *uridrosis*.

s. cruentus. Sweating of blood. SYN: *hematidrosis*.

sudoral (sū'dōr-āl) [L. *sudor* sweat]. Pert. to, caused by, or marked by perspiration.

sudoresis (sū-dō-rē'sis) [L. *sudoresis*, excessive sweating]. Profuse sweating. SYN: *diaphoresis*.

sudoriferous (sū-dor-if'ēr-ūs) [L. *sudor*, sweat, + *ferre*, to bear]. Conveying or producing sweat

s. glands. Sweat-secreting glands of the skin.

sudorific (sū-dōr-if'ik) [L. *sudorificus*, producing sweat]. 1. Secreting or promoting the secretion of sweat. 2. Agent which produces sweating. SYN: *diaphoretic*.

sudoriparous (sū-dor-ip'ā-rūs) [L. *sudor*, sweat, + *parere*, to produce]. Secreting sweat. SYN: *sudoriferous*.

suet (sū'ēt) [M.E. from L. *sebum*, suet]. Hard fat from the ox or sheep's kidneys and loins, used as the base of certain ointments and as an emollient

suffocate (sūf'ō-kāt) To asphyxiate.

suffocation (sūf'ō-kā'shūn) [L. *suffocare*, to choke]. 1. State of being choked by obstruction of air passages by drowning, smothering, throttling, or inhalation of noxious gases. SYN: *asphyxia*. Generally from gases. 2. Act of obstructing the air passages.

SYM: Insensibility, breathing slight, face purple and swollen, livid lips. Symptoms not always present.

TREATMENT: Dash cold water in face. Slap chest. Apply ammonia to nostrils. Artificial respiration. RS: *resuscitation*, *unconsciousness*.

suffusion (sūf'ū'shūn) [L. *suffusio*, a pouring over]. 1. Spreading of a bodily fluid into surrounding tissues. SYN: *extrav-*

asation. 2 Pouring of a fluid over the body as treatment.

sugar (shu'gar) [ME *suger*, from L *saccharum*, from G. *sakcharon*, sugar]. A sweet-tasting carbohydrate belonging to the monosaccharose and disaccharose groups. Crystalline carbohydrates of comparatively low molecular weight and generally having a sweet taste.

Classification. First, as to the number of atoms of simple sugars yielded on hydrolysis by a molecule of the given sugar and, secondly, as to the number of carbon atoms in the molecules of the simple sugars so obtained. Thus, *dextrose* (which see) is a monosaccharide because it cannot be hydrolyzed to a simpler sugar; it is a hexose because it contains 6 carbon atoms per molecule. *Sucrose* is a disaccharide because on hydrolysis it yields 2 molecules, 1 of dextrose and 1 of levulose.

s., beet. Sucrose obtained from sugar beets.

s., blood. The carbohydrate present in the blood; principally glucose.

s., brain. Cerebrose (galactose).

s., cane. Sucrose obtained from sugar cane.

s., diabetic. Glucose

s., fruit. Levulose, or fructose.

s., grape. Dextrose, glucose.

s., invert. One consisting of one molecule of glucose and one of fructose resulting from the hydrolysis of sucrose.

s., liver. Glycogen.

s., malt. Maltose.

s., milk. Lactose.

Dosage: Daily, 1-6 oz. (30-180 Gm.).

s., muscle. Inosite.

sugar, words pert. to: glycosuric, blose, blood, carbohydrate, dextrose, diabetin, disaccharide, disaccharose, Fehling's tests, fructose, fruit s., galactose, glucose, "gluco-" words, "glyco-" words, hypoglycemia, invert, invertase, lactose, levulose, mannite, melitemia, monosaccharide, monosaccharose, pentose, pentosuria, polysaccharide, polysaccharose, "sacchar-" words, sucrose, xylose.

suggestibility (sug-jēs'ti-blī'ti) [L *suggestus*, suggested]. A condition in which a person responds readily to suggestions or opinions of another.

suggestible (sug-jēs'ti-blī) [L *suggestus*, suggested]. Very susceptible to the opinions or suggestions of others.

suggestion (sug-jēs'chūn) [L *suggestio*, from *suggerere*, to supply]. 1 Imparting of an idea in any indirect way. 2 The idea so conveyed. 3 The acceptance or the effect of the statements or actions of one person upon another, depending on the emotional set-up of the recipient and his psychic relationship to the other person.

s., auto. Self-suggestion as distinguished from that coming from another person, esp in hypnotic state.

May produce or cure functional disturbances.

suggestive (sug-jēs'tiv) [L *suggestus*, suggested]. Stimulating or pert. to suggestion.

s. medicine. Therapy by suggestion either during consciousness or hypnosis.

s. therapeutics. The practice of treating disease by suggestion or hypnotism.

sugillation (sug-jil-ā'shūn) [L *sugillare*, to beat black and blue]. A bruise or black and blue mark. **SYN:** *ecchymosis*.

suicide (sū'tī-sid) [L *sui*, of oneself, + *cidus*, from *caedere*, to kill]. 1. Act or instance of taking one's own life volun-

tarily. 2 One who attempts or commits self-murder.

These individuals often have attacks of temporary insanity or mental depression which may be terminated by attempt at suicide. In addition to the usual F. A. Treatment for injuries, kindly interrogation and soothing, tranquil conversation are invaluable. In their after-care, such patients should be watched and kept free from needless questioning or emotional display. Sedatives are useful. **SEE:** *hysteria*.

MENTAL STATES CONDUCTIVE TO THOSE WITH SUDDEN IMPULSES. The depressed. Those with delusions (a) of persecution; (b) of being ruined; (c) voices suggesting, (d) incurable disease. In melancholia. Schizophrenia. Epilepsy. Confusional states. Alcoholics. Through accidents (a) Acute delirium; (b) mania; (c) general paralysis.

METHODS RESORTED TO 1 Hanging. 2 Drowning (in tub or otherwise) 3 Poisoning. 4 Cutting an artery. 5 Burning. 6 Jumping from window. 7 Instruments used (a) Matches; (b) knives and spoons; (c) glass; (d) cord, rope, suspenders, bedclothing, etc.; (e) harmless articles converted into dangerous tools, (f) nail files. All must be removed if patient is inclined to harm self or others.

sulcal (sū'l-kāl) [L *sulcus*, groove]. Pert to a sulcus.

s. artery. A tiny branch of ant. spinal artery.

sulcate, sulcated (sū'l-kāt, -ed) [L *sulcatus*, grooved]. Furrowed or grooved.

sulcus (sū'l-kūs) (pl. *sulci*) [L *sulcus*, groove]. A furrow or groove, or slight depression or fissure, esp of the brain.

s. centralls. BNA. Fissure dividing the frontal and parietal lobes of each cerebral hemisphere. **SYN:** *fissure of Rolando*.

s., intraparietal. One that separates the inf. from the sup. parietal bones and lobes.

s. praecentra'lis. BNA. An interrupted one generally parallel with the fissure of Rolando and ant. to it.

s. pulmona'lis. Depression on either side of the vertebral column.

s. spir'a'lis cochleae. Groove bet the labium tympanicum and labium vestibulare.

sulf-, sulfo- Prefix showing that a compound with this prefix contains sulfurous anhydride or the group SO₂.

sulfa drugs. Drugs of the sulfonamide group possessing bacteriostatic properties. **SEE:** *sulfonamides*.

sulfabenzamine (sū'l-fā-bēn-zā-mīn). A sulfonamide drug effective against anaerobic bacteria which cause gas gangrene. It has some antibacterial action against streptococci, staphylococci, and pneumococci.

sulfacetimide (sū'l-fā-sēt'ī-mīd). A sulfonamide used in treatment of *B. coli*, gonorrhea, and infections of the urinary tract, esp. when resistant to sulfanilamide and sulfathiazole.

sulfadiazine (sū'l'fā-dī'ā-zēn). One of a group of diazine derivatives of sulfanilamide, destructive to streptococci, staphylococci and pneumococci.

sulfamerazine. (sul'fa-mer'ā-zēn). A sulfur derivative which may be given orally for pneumococci, streptococci, meningococci, and gonococci.

sulfamethazine (sū'l-fā-mēth'ā-zēn). A near relative of sulfadiazine. Nausea and vomiting less than with sulfa-

pyridine; solubility good, and damage to kidneys slight.

sulfamethylthiazol (sül'fä-méth'ül-thí'ä-zöl). A sulfanilamide derivative which is less toxic than sulfapyridine, effective against staphylococcal organisms.

sulfanilamide (sül'fän-ül'ä-mld) (para-amino-benzene-sulfonamide) A white, slightly bitter, crystalline substance from coal tar, the parent of the azo dyes. It was formerly widely used in the treatment of a number of infections but, because of its toxic reactions and its tendency to produce acidosis, it has been superseded by more effective and less toxic sulfonamides.

sulfapyridine (sül'fä-pir'ä-dén). A sulfonamide, one of the first drugs to have a curative effect upon pneumonia; formerly used extensively in the treatment of streptococcal, gonococcal, and staphylococcal infections, but its use has been supplanted by other sulfa compounds which are less toxic and more effective.

sulfapyridine sodium monohydrate. A soluble salt of sulfapyridine for intravenous use only.

sulfarsphenamine (sül'ars-fën'ä-mën) An arsenic compound, 19% arsenic.

Uses Same as for neoarsphenamine, but said to have more reaction.

Dosage Intramuscularly, 0.4-0.5 Gm.

sulfate (sül'fät) [L. *sulphas*, sulfur salt]. A salt or ester of sulfuric acid.

s., iron. Green vitriol, copperas. Fatal in large dosage.

Poisoning Magnesia and diluents.

s., magnesium. * q v.

sulfathiazole (sül'fä-thí'ä-zöl) A sulfanilamide compound effective against pneumococci and staphylococci, largely replaced by sulfa compounds of less toxicity.

sulfhemoglobin (sül'hëm-ö-glö'bín) Substance formed by action of hydrogen sulfide on blood.

sulfhemoglobinemia (sül'hëm-ö-glö'bín-ë-mi-ä). Persistent cyanotic condition due to sulfhemoglobin in blood.

sulphydryl (sül'hí-dríl) The univalent radical, SH. Also called *SH group*.

sulfo-. A combining form usually indicating the presence of divalent sulfur or of the sulfo group, -SO₂OH.

sulfonal (sül'fö-näl). A proprietary hypnotic and sedative.

Dosage 12 gr (0.75 Gm.).

sulfonalism (sül'fö-näl-izm) 1. Sulfonal poisoning and its symptoms. 2. Addiction to sulfonal.

sulfonamides. A group of compounds consisting of amides of sulfanilic acid derived from their parent compound sulfanilamide. They are bacteriostatic, their action on bacteria resulting from interference with functioning of enzyme systems necessary for normal metabolism, growth, and multiplication.

sulfonethylmethane (sül'fön-éth'ül-méth'-än). USP. Trional. White powder or crystalline substance with a bitter taste.

Action and Uses As a hypnotic.

Dosage 12 gr (0.75 Gm.).

sulfonmethane (sül'fön-méth'-än). USP. Crystalline compound with hypnotic and sedative properties. Syn: *sulfonal*.

sulfourea (sül'fö-ü-rë'ä) [L. *sulfur*, sulfur, + *urea*]. Urea with oxygen replaced with sulfur. Syn: *thiourea*.

sulfur (sül'für) [L.] Syn: S. At. wt. 32.066, at. no. 16. Sp gr. 2.07. It is a pale, yellow, crystalline element which burns with a blue flame, producing sulfur dioxide.

The amount of sulfur excreted in the urine varies with amount of protein in diet but more or less parallels the amount of nitrogen excreted as both are derived from protein catabolism. The S/N ratio is approx. 1:14, i.e., for each gram of sulfur excreted, 14 grams of nitrogen are excreted. The amount of sulfur excreted daily in the form of sulfates averages about 2.5 grams. It aids in the ion balance of tissues when oxidized to sulfate and is required for the synthesis of body proteins as cystine or cysteine or their combination. Used as thiosulfate feeding and high protein diets to relieve dermatitis and eczema. A mixed diet contains about 1 Gm. of sulfur in each 100 Gm. of protein.

DEFICIENCY SYM. Dermatitis, imperfect development of hair and nails. Deficiency of cystine or cysteine proteins in diet restricts growth and may be fatal. Tissue oxidation of cystine forms inorganic sulfate if the protein intake is sufficient.

s. dioxide. An irritating gas used in industries to manufacture acids, also used in electrical refrigerators. A bactericide and important disinfectant.

POISONING: SYM. Suffocation from a highly irritating gas which forms sulfuric acid when in contact with moisture of the mouth, eyes, and respiratory passages, with resultant pain, swelling, burning, etc.

TREATMENT Remove patient from the vitiated atmosphere. Wash affected areas with large amounts of water and weak alkalis, as chalk, magnesia, lime water, soapsuds. Follow by hand diet.

sulfurated, sulfurated (sül'für-rä-ted, -rët-äd) [L. *sulfur*, sulfur]. Combined or impregnated with sulfur.

s. hydrogen. A colorless, inflammable gas of disagreeable odor resulting from decomposition of organic matter containing sulfur, used as a chemical reagent. Syn: *hydrogen sulfide* H₂S.

sulfuric acid (sül'für'ik) [L. *sulfur*, sulfur]. Syn: *oil of vitriol*. A colorless, odorless, liquid of heavy, oily consistency. It is extremely caustic and corrosive. It is widely used in manufacturing.

POISONING: Sometimes accidentally taken by mouth, as it resembles syrup or glycerin.

SYM: Local effects—burning, with destruction of skin. If it strikes eye it may result in blindness. If taken by mouth, intense pain extending from mouth to esophagus and down to stomach, causing marked, excruciating pain; swelling of affected tissues; salivation; painful swallowing; often gasping for breath, and hoarse voice. Mucous membrane has a grayish white coating. There is persistent, painful vomiting. Patient quickly develops shock.

TREATMENT: Dilute acid with large volumes of water. Neutralize acid with soapsuds, milk, magnesia, baking soda or other well-diluted alkalis. Follow by soothing substances, as raw eggs.

s. a., dilute. An aqueous 10% solution of H₂SO₄. Used as an astringent and for gastric hypacidity.

summation (süm-ä'shün) [L. *summatio*, an adding]. Cumulative action or effect, as of stimuli.

Thus, an organ reacts to 2 or more weak stimuli as if they were a single strong one.

summer (süm'ër) [A.S. *sumer*]. The hot season of the year.

sunburn (sûn'burn) [A.S. *sunne*, sun, + *bernan*, to burn]. Dermatitis due to exposure to the actinic rays of the sun. **See:** *burn*.

Sunday morning paralysis. **SYN:** *Saturday night paralysis*. Radial nerve palsy sometimes the indirect result of acute alcoholism resulting from stuporous patient lying immobile with arm pressed over a projecting surface.

sunstroke (sûn'strôk) [A.S. *sunne*, sun, + *M.E. strok*, a blow]. An affection from undue exposure to rays of the sun or excessive heat.

SYM: Extreme prostration, high fever, other symptoms of heatstroke, delirium, collapse, loss of mind, or death. **SYN:** *insolation, strissas, thermic fever*. **See:** *aprication, heatstroke, icтус*

super- [L]. Combining form meaning above, beyond, superior.

superalimentation (sûp'er-âl-i-mên-tâ'shûn) [L. *super*, above, + *alimentum*, food]. Therapeutic forcing of food in excess of body needs or appetite.

superalkalinity (sûp'er-âl-kâ-lîn'î-tî) [" + *alkalinus*, alkaline]. Excessive alkalinity.

superciliary (sûp'er-sîl'î-â-rî) [L. *supercilium*, eyebrow]. Pert to or in the region of an eyebrow.

supercilium (sû-pêr-sîl'î-ûm) [L. *supercilium*, eyebrow]. 1. Eyebrow. 2. A hair of the eyebrow.

super-ego (sûp'er-ê-gô) [L. *super*, above, + *ego*, I]. An inner, subconscious censor. **See:** *ego*.

superfecundation (sûp'êr-fê-kûn-dâ'shûn) [" + *fecundare*, to fertilize]. Successive fertilization by more than 1 coitus of 2 or more ova formed at the same menstrual period.

superfetation (sûp'êr-fê-fâ'shûn) [" + *foetus*, fetus]. Supposed fertilization of 2 ova in the same uterus at different menstrual periods within a short interval.

superficial (sû-pêr-fîsh'âl) [" + *facies*, shape]. 1. Confined to the surface. 2. Not thorough; cursory.

s. reflex. One induced by very light stimulus such as stroking skin lightly with soft cotton wad.

superficialis (sûp'êr-fîsh-i-â'llis) [L. *superficialis*, superficial]. Superficial; noting a superficial artery, vein, or nerve, or structure near the surface.

superimpregnation (sûp'êr-im'prêg-nâ'shûn) [L. *super*, over, + *impregnatio*, impregnation]. Conception during pregnancy; fertilization from 2 different ova. **SYN:** *superfecundation, superjetation*.

superinduce (sûp'êr-in-dûs') [" + *in*, into, + *ducere*, to lead]. To bring in over or above that already existing condition or situation.

superinfection (sûp'êr-in-fêk'shûn) [" + *infectio*, a putting into]. A new infection by the same organism, in addition to a similar one already existing.

superinvolution (sûp'êr-in-vô-lû'shûn) [" + *in*, into, + *volutus*, from *volvare*, to roll]. Excessive reduction of the uterus following childbirth to less than its normal size. **SYN:** *hyperinvolution*.

superior (sû-pêr'î-or) [L. comparative of *super*, beyond]. 1. Higher than, situated above something else. 2. Better than. 3. One in charge of others.

superiority complex. An exaggerated conviction of one's own superiority; a pretense of superiority in order to compensate for supposed inferiority.

superlactation (sûp'êr-lâk-tâ'shûn) [L. *super*, above, + *lactare*, to suckle].

Oversecretion of milk, or continuance of lactation beyond normal time.

superlethal (sûp'êr-lêthâl) [" + *G. lêthê*, forgetfulness]. Beyond a fatal limit, as a dose that will kill.

supermoron (sûp'êr-mô'rôn) [" + *G. môros*, stupid]. One slightly subnormal but above a moron mentally.

supermotility (sûp'êr-mô-tîl'î-tî) [" + *motilis*, able to move]. Excessive motility in any part. **SYN:** *hypercinesia*.

supernatant (sûp'êr-nâ'tânt) [" + *natâre*, to float]. Floating on surface, as oil on water.

supernate (sû-pêr-nât') [" + *natâre*, to float]. A supernatant fluid.

supernumerary (sûp'êr-nûm'êr-â-rî) [L. *supernumerarius*, above the number]. Exceeding the regular number.

supernutrition (sûp'êr-nû-trî'shûn) [L. *super*, above, + *nutritio*, nourishment]. More than normal nutrition.

supersaturated solution (sûp'êr-sât'û-rât'-êd) [" + *saturâre*, to saturate]. One containing more salt or other substance than it can dissolve at normal temperature.

superscription (sûp'êr-skrip'shûn) [" + *scriptio*, a writing]. The beginning of a prescription noted by the sign R, signifying L. *recipe*, take.

supersecretion (sûp'êr-sê-krê'shûn) [" + *secretio*, a separating]. An excess of any secretion.

supersensitiveness (sûp'êr-sên'sî-tîv'nês) [" + *sensitivus*, sensitive]. Excessive susceptibility to a foreign protein or pollen. **SYN:** *hypersensitiveness*.

supersoft (sûp'êr-sôft') [" + A.S. *sôfte*, soft]. Exceptionally soft, noting roentgen rays of extremely long wave length and low penetrating power.

supersonic. **SYN:** *ultrasonic*. Pert. to vibrations of sound space waves of frequencies above 20,000 cycles which are inaudible to the human ear.

superfension (sûp'êr-tên'shûn) [" + *tensio*, a stretching]. Extremely high tension. **SYN:** *hypertension*.

supervenosities (sûp'êr-vê-nôs'î-tî) [" + *venosus*, pert to a vein]. Incomplete oxidation of the blood; a condition of excessive venosity.

supervention (sûp'êr-vên'shûn) [L. *super-ventio*, a coming over]. Additional condition developing besides something already existing, as a complication to an existing disease.

supervirulent (sûp'êr-vîr'û-lênt) [L. *super*, above, + *virulentus*, poisonous]. More virulent than usual.

supinate (sûp'î-nât) [L. *supinare*, to lay on the back]. 1. To turn the forearm or hand so that the palm faces upward. 2. To rotate the foot and leg outward. 3. To cause to assume, or to assume, a position of supination.

supination (sûp'î-nâ'shûn) [L. *supinare*, to lay on the back]. 1. Turning of the palm or foot upward. 2. Act of lying flat upon the back. 3. Condition of being on the back or having the foot or palm facing upward.

supinator (sûp'î-nâ'tor) [L.]. A muscle producing the motion of supination of the forearm. **See:** *Table of Muscles in Appendix*.

s. longus reflex. Flexion of the forearm caused by tapping of the tendon of the supinator longus.

supine (sû-pîn') [L. *supinus*, bent back; lying on the back]. 1. Of position, lying on the back or with the face upward. 2. Of the hand or foot noting position with

the palm or foot facing upward. *Oppr. prone.* See: *position*

supplemental (süp-lf-mén'tál) [L. *supplementum*, an addition] Referring to something added to supply a need or to reinforce.

s. air. *Syn.* *Reserve air* The air which by the most forcible effort can be expelled after an ordinary expiration which has followed a normal inspiration. In adult males it averages about 1500 cc.

suppository (süp-pöz'ti-tō-rī) (pl. *suppositories*) [L. *suppositorium*, that which is placed underneath] A semi-solid, fusible substance for introduction into the rectum, vagina, or urethra, where it dissolves. It often serves as a vehicle for medicines to be absorbed.

Commonly shaped like cylinder or cone and made of soap, glycerinated gelatin or cocoa butter (oil of theobroma).

s., rectal, anodyne. For local or general effects to reduce pain.

s., r., astringent. To contract blood vessels and tissues.

s., r., evacuant. To cause evacuation.

suppression (sü-prësh'un) [L. *suppressio*, a pressing under]. 1. Repression of the ext. manifestation of a morbid condition. 2. Complete failure of a natural secretion or excretion. *Oppr. retention.* 3. *Psych.* Conscious inhibition of an idea or desire, as distinguished from repression which is considered an unconscious process.

s. of menses. 1. Amenorrhea in which menstruation ceases after once being established and from some cause other than pregnancy or the climacteric. 2. Any suppression of the menses.

s. of urine. Suppression of urine resulting from renal conditions.

suppurant (süp'ü-ránt) [L. *suppurans*, from *suppurare*, to cause to suppurate]. 1. Producing, tending to produce, or characterized by pus formation. 2. Agent causing pus formation. *Syn.* *suppurative.*

suppurate (süp'pü-rát) [L. *suppurare*, to cause to suppurate]. To form or generate pus.

suppuration (süp-ü-rá'shün) [L. *suppuratio*, from *sub*, under, + *pus*, *pur-*, matter, pus]. 1. The process of pus formation. 2. The discharge produced by suppuration. *Syn.* *pus.*

One of the terminations of inflammation due to the presence of certain microorganisms called pyogenic* (pus-forming) bacteria. Suppuration does not always obtain even though microorganisms are present in the affected part, as may be the case in erysipelas and acute joint affections where exudate is serous.

The liquefaction of tissues and formation of pus will continue so long as the microorganisms are alive. They cause the death of the leukocytes (white cells) and the cells of the part, liquefying the tissue so that the area becomes filled with a liquid (liquor puris) holding the dead and dying cells. Combination of liquor puris and the dead cells is called "pus."

An abscess may form by the accumulation of this liquid which is indicated by redness, swelling, heat and pain. It will show fluctuation which may be felt by touching it. When the abscess reaches the surface it will burst and discharge its contents.

RB: *abscess, gangrene, inflammation,*

infection, purulent, pus, pustulant, pustule.

suppurative (süp'ü-rá'tiv, -rá'tiv) [L. *suppuratus*, from *suppurare*, to cause to suppurate]. 1. Producing or associated with generation of pus. 2. Agent producing pus formation.

s. fever. Pus in the blood causing fever; a form of septicemia. *Syn.* *pyemia.*

supra- [L.]. Combining form meaning above.

supra-acromial (sü-prä-äk-rö'mi-äl) [L. *supra*, above, + *G. akron*, point, + *ōmos*, shoulder]. Located above the acromion.

supra-auricular (sü'prä-aw-rik'ü-lar) [L. + *auricula*, ear]. Located above an auricle.

supracerebellar (sü'prä-sēr-ē-bē'lār) [L. *supra*, above, + *cerebellum*, little brain]. On or above the upper surface of the cerebellum.

suprachoroid (sü'prä-kō-royd) [L. *supra*, above, + *G. chorioeidēs*, skinlike] *Syn. lamina suprachoroidea, epichoroid* 1. Situated upon or above the choroid layer of the eyeball. 2. The suprachoroid lamina, *q.v.*

s. lamina. *Syn. epichoroid, lamina suprachoroidea* The superficial layer of the choroid consisting of thin transparent layers, the outermost adhering to the sclera.

suprachoroidea (sü'prä-kō-ro'y-dē-ä) [L. + *G. chorioeidēs*, skinlike] Outermost layer of the choroid. *Syn. suprachoroid lamina.*

supraclavicular (sü'prä-klä-vik'ü-lar) [L. + *clavicula*, a little key] Located above the clavicle.

s. fossa. Depression on either side of neck reaching down behind the clavicle.

s. point. A stimulation point over the clavicle at which contraction of arm muscles may be produced.

supracondylar (sü'prä-kōn'dil-ar) [L. + *G. kondylos*, knuckle]. Above a condyle.

supracotyloid (sü'prä-kōt'ü-loyd) [L. *supra*, above, + *G. kotyloeidēs*, cup-shaped] Above the acetabulum.

supradiaphragmatic (sü'prä-dī'ä-frägm-at'ik) [L. + *G. dia*, across, + *phragma*, wall] Above the diaphragm.

supraglenoid (sü'prä-glē-noyd) [L. + *G. glenē*, cavity, + *eidos*, form] Above the glenoid cavity or fossa.

s. tuberosity. A rough surface of the scapula above glenoid cavity to which is attached the long head of biceps muscle.

suprathyroid (sü'prä-thi'oyd) [L. + *hyoeidēs*, U-shaped]. Located above the hyoid bone, denoting accessory thyroid glands within the geniohyoid muscle.

s. muscles. The digastric, geniohyoid, mylohyoid, and stylohyoid muscles.

suprainguinal (sü'prä-in'gwin-äl) [L. + *inguinalis*, pert. to the groin]. Above the groin.

supraliminal (sü'prä-llim'i-näl) [L. *supra*, above, + *limen*, *limin-*, threshold]. *Part:* 1. Above the threshold of consciousness. 2. Subliminal.

supralumbar (sü'prä-lüm'bar) [L. + *lumbus*, loin]. Above the lumbar region.

supramalleolar (sü'prä-mal-lē'ō-lar) [L. + *malleolus*, little hammer]. Located above either malleolus.

supramarginal (sü'prä-mar'jin-äl) [L. + *margo*, margin-, margin]. Above any border.

- s. convolution, s. gyrus.** A cerebral convolution on lateral surface of the parietal lobe above post. part of sylvian fissure.
- supramastoid** (sû"pră-măs'toyd) [" + *mastos*, breast, + *eidos*, like] Above the mastoid process of the temporal bone
- s. crest.** A ridge on the temporal bone Also called *temporal line*
- supramaxilla** (sû"pră-măks-ll'la) [" + *maxilla*, jaw] The upper jawbone. SYN: *maxilla*.
- supramaxillary** (sû"pră-măks-ll-lă-rî) [" + *maxillaris*, pert to the jaw] 1. Relating to the upper jaw. 2. Located above the upper jaw.
- suprameatal** (sû"pră-mē-ă-tāl) [L. *supra*, above, + *meatus*, passage]. Above a meatus, esp the ext. auditory meatus, noting the spine of Henle, a small, bony projection at post sup. margin of ext. auditory meatus
- s. spine.** SYN. *spine of Henle*. Small bony projection at post sup. margin of ext. auditory meatus marking the ant. superior apex of the suprameatal triangle. *q v*
- s. triangle.** Triangular space bordered by upper half of post. wall of ext. auditory meatus, and the supramastoid crest used to locate the mastoid antrum.
- supraoccipital** (sû"pră-ôk-slp'î-tāl) [L. *supra*, above, + *occiput*, back of head] Lying above or in upper portion of the occiput
- s. portion** (of occipital bone) Portion lying immediately above the foramen magnum and forming lower part of squamous portion of occipital bone
- supraorbital** (sû"pră-or-bî-tāl) [" + *orbita*, track, circuit]. Located above the orbit.
- s. neuralgia.** N of the supraorbital nerve. SYN. *hemicrania*
- s. notch.** A notch in sup. margin arch of orbit for transmitting supraorbital vessels and nerve
- s. reflex.** Contraction of orbicularis oculi muscle with closure of lids resulting from percussion above supraorbital nerve
- suprapelvic** (sû"pră-pēl'vîk) [L. *supra*, above, + *pelvis*, basis]. Located above the pelvis.
- suprapontine** (sû"pră-pôn'tîn) [" + *pons*, *pont-*, bridge]. Located above the pons Varoli
- suprapubic** (sû"pră-pūb'îk) [" + *pubis*, *pubis*] Above the pubic arch.
- s. cystotomy.** Surgical opening of the bladder from just above the symphysis pubis.
- s. reflex.** Deflection of linea alba toward stroked side when abdomen is stroked above Poupart's ligament.
- suprarenal** (sû"pră-rē-nāl) [" + *rēn*, kidney]. 1. Above the kidney. 2. Tiny gland above each kidney. SYN: *adrenal*, *suprarenal body*, *s. capsule*, *s. gland*. 3. Pert. to the suprarenal gland.
- s. gland.** SYN. *adrenal gland*; *glandula suprarenalis*. An endocrine gland lying cephalad and mediad to each kidney. SEE: *adrenal*, *ACTH*, *adrenalin*, *endocrine gland*, *epinephrine*, *cortico-sterone*, *cortisone*
- suprarenalopathy** (sû"pră-rē-nāl-ôp'ă-thî) [" + " + *G. pathos*, disease]. A disorder due to abnormal functioning of the suprarenal glands.
- suprarenopathy** (sû"pră-rē-nôp'ă-thî) [" + " + *G. pathos*, disease]. Any disorder of the suprarenal glands.
- suprascapular** (sû"pră-skăp'ū-lar) [L. *su-*

- pra*, above, + *scapula*, shoulder]. Located above the scapula.
- suprasegmental.** Above the segmented portion
- s. brain.** The cerebrum, midbrain, and cerebellum as distinguished from the *segmental portion* (pons and medulla oblongata)
- suprasellar** (sû"pră-sēl'ar) [" + *sella*, saddle] Above or over the sella turcica.
- suprasonic** (sû"pră-sôn'îk) [" + *sonus*, sound]. Noting sound with frequencies of vibration above 20,000 per second
- supraspinal** (sû"pră-spī'nāl) [" + *spina*, a thorn] Above a spine
- supraspinous** (sû"pră-spī'nūs) [" + *spina*, thorn] Above any spine
- s. fossa.** A groove above the spine of the scapula.
- suprasternal** (sû"pră-ster'nāl) [" + *G. sternon*, chest]. Above the sternum. SYN. *episternal*
- supra'ster'ol.** An end-product sometimes resulting from over-irradiation of ergosterol
- supratrochlear** (sû"pră-trok'lē-ar) [" + *trochlea*, pulley] Above a trochlea, esp. that of the humerus
- supravaginal** (sû"pră-văj'î-nāl) [" + *vagina*, sheath] Above the vagina or any sheathing membrane
- supraverge** (sû-pră-verg'ēns) Condition in which one eye moves upward in the vertical plane while the other does not.
- sura** (sû'rā) [L. *sura*, calf of the leg] The calf of the leg.
- sural** (sû'rāl) [L. *sura*, calf of the leg] Relating to the calf of the leg.
- suralimentation** (sûr-āl-im-ēn-tā'shūn) [Fr. *sura*, from L. *super*, above, + *alimentum*, nourishment] Treatment by overfeeding. SYN. *gavage*, *superalimentation*
- surdity** (sûr'dî-tî) [L. *surditas*, deafness] Inability to hear. SYN. *deafness*.
- surdomute** (sûr-dō-mût') [L. *surdus*, deaf, + *mutus*, dumb]. 1. A deaf-mute 2. Deaf and dumb.
- surface** (sur'fās) [Fr. *sur* from L. *super*, over, + *facies*, face] 1. The exterior of a body having length and breadth. 2. The external or internal exposed portions of a hollow structure as the outer or inner surfaces of the cranium or stomach. 3. The face or faces of a body such as a bone
- s. tension.** ABR. S.T. Condition at the surface of a liquid in contact with a gas or another liquid which causes its surface to act as a stretched rubber membrane. It is the result of mutual attraction of the molecules to each other thus producing a cohesive state which causes liquids to assume a shape presenting the smallest surface area to the surrounding medium. This accounts for the spherical shape assumed by fluids, such as drops of oil or water.
- surgeon** (sûr'jūn) [Fr. *chirurgien*, from L. *chirurgus*, from G. *cheir*, hand, + *ergon*, work]. A medical practitioner who specializes in surgery.
- s., dental.** A dentist authorized to operate on the mouth and teeth. SYN: *stomatologist*.
- s., house.** The chief surgical intern in a hospital.
- surgery** (sur'jur-î) [M.E. *surgerte*, from G. *cheiourgia*, handwork]. 1. Branch of medicine dealing with manual and operative procedures for correction of deformities and defects, repair of injuries, diagnosis and cure of diseases, relief of suffering and prolongation of life. SYN:

chirurgery, chirurgia. 2. Surgeon's operating room.

s., aseptic. Operative procedures carried on under aseptic conditions or in the absence of pathogenic organisms.

s., aural. That pertaining to the ear.

s., clinical. S employed in the teaching of operative procedures.

s., conservative. That in which as much as possible of a part or structure is retained.

s., major. Important and serious operations involving risk to life.

s., minor. Simple, less serious operations.

s., oral. That pertaining to the mouth and associated structures, esp the teeth and jaws.

s., orificial. Surgery of the orifices of the body such as the mouth, anus, vagina, etc.

s., orthopedic. S for correction of deformities.

s., plastic. S concerned with the repair or restoration of defective or missing structures, frequently involving the transference of tissue from a part or person to another.

surgical (sûr'jĭk-ăl) [*G cheirurgia, hand-work*]. Of the nature of or pert. to surgery.

s. diathermy. The use of high-frequency electrical oscillations in such a way that animal tissues are destroyed.

s. dressing. Sterile protective covering of gauze or other substance applied to an operative wound. **SEE** *chemise*.

s. fever. Fever following an operation or injury.

s. kidney. Suppuration or tuberculosis of the kidney.

s. neck. Constricted part of shaft of humerus below the tuberosities, commonly the seat of fracture.

surrogate (sûr'rô-gât) [*L. surrogare, to substitute*]. Something that replaces another, a substitute.

Psy. The representation of one whose identity is concealed from conscious recognition, as in a dream, a figure of importance may represent one's loved one.

sursumduction (sûr'sûm-dûk'shûn) [*L. sursum, upward, + ducere, to lead*]. Elevation, as the power or act of turning an eye upward independently of the other one.

sursumvergence (sûr'sûm-vêr'jêns) [*" + vergere, to turn*]. An upward turning, as of the eyeballs.

sursumversion (sûr'sûm-vêr'shûn) [*" + versio, from vertere, to turn*]. Process of turning upward, simultaneous movement of both eyes upward.

susceptible (sûs-sêp'tĭ-bl) [*L. susceptibilis, from suscipere, to take up*]. 1 Having little resistance to a disease or foreign protein. 2 An individual with little resistance to an infectious disease or who is not known to have become immune to one. 3 Easily impressed or influenced.

suscitate (sûs'sĭ-tât) [*L. suscitare, to rouse*]. To arouse to increased activity; to stimulate.

suscitation (sûs'sĭ-tât'shûn) [*L. suscitatio, from suscitare, to rouse*]. Act of stimulating to greater activity. **SYN**. *excitation*.

suspended (sûs-pênd'êd) [*L. suspendere, to hang*]. 1 Hanging. 2 Temporarily inactive.

s. animation. A cessation of the vital functions temporarily.

suspension (sûs-pên'shûn) [*L. suspensio, a hanging*]. 1. A condition of temporary cessation, as of any vital process. 2. Treatment by immobilization of a part or whole of a patient by hanging in desired position. 3. State of a solid when its particles are mixed with, but not dissolved in, a fluid or another solid; also a substance in this state.

s., cephalic. Suspension of a patient by the head to extend the vertebral column.

s., colloidal. A colloidal solution in which particles of the dispersed phase are relatively large.

s. stability. Degree of speed with which erythrocytes sink to bottom in a mass of citrated blood. **SYN** *sedimentation rate*.

s., tendon. Tenodesis, fixation of a tendon.

s. of the uterus. The operation of attaching the uterus to the abdominal wall.

suspenoid (sûs-pên'soyd) [*L. suspens, hanging, + G eidos, form*]. A colloid solution in which the dispersed particles are solid, as distinguished from emulsoid. **SYN** *suspension, colloidal*.

suspensory (sûs-pên'sôr-ĭ) [*L. suspensorius, hanging*]. 1 Supporting a part, as a muscle, ligament, or bone. 2 A structure of the body which supports a part. 3. Bandage or sac for supporting or compressing a part, esp the scrotum.

s. bandage. A sling for support of the testicles.

s. ligament. Any one of a number of ligaments which support a specific organ or structure. **SEE** *ligament, suspensory*.

suspiration (sûs'plĭr-â'shûn) A sigh or the act of sighing.

suspirious (sûs-pĭr'ĭ-ûs) [*L. suspirare, to sigh*]. Breathing with apparent effort; sighing.

sustentacular (sus-tên-tâk'û-lar) [*L. sustentaculum, support*]. Supporting; upholding.

s. cell. A supporting cell such as those found in the acoustic macula, organ of Corti, olfactory epithelium, taste buds, or testes. **SEE** *Sertoli cells*.

s. fibers (of Muller). Fibers forming the supporting framework of the retina.

sustentaculum (sus-tên-tâk'û-lûm) [*L. a support*]. A supporting structure.

s. hepatic. A fold of peritoneum upon which rests the right margin of the liver.

s. ilenl. Phrenocolic ligament which apparently supports the spleen.

s. talI. A process of the calcaneum which supports part of the astragalus.

susurrus (sûs-sûr'ûs) [*L. a whisper*]. A murmur.

sutura (sû-tû'râ) (pl. *suturæ*) [*L. sutura, a stitch*]. Suture.

s. dentâ'fa. One with interlocking of bones by toothlike processes.

s. harmo'nia. Simple apposition of 2 contiguous bones.

s. limbosa. Beveled suture in which opposing margins fit in parallel ridges as between parietal and frontal bones.

s. no'tha. A false suture with ill-defined projections.

s. serra'ta. One with deeper and more irregular indentations than a dental s.

s. squamosa. That formed by overlapping of contiguous bones by broad beveled edges as in suture between squamous portion of temporal and parietal bones.

s. vera. A true suture
sutural (sū'tū-rāl) [L. *sutura*, a stitch].
 Relating to a suture.

s. joint. Articulation bet 2 bones.

s. ligament. Fibers uniting opposed bones forming a cranial suture

suturation (sū'tū-rā'shun) [L. *sutura*, a stitch] Application of sutures; stitching

suture (sū'tūr) [L. *sutura*, a stitch]. 1 Line of union in an immovable articulation, as those bet. the skull bones, also such an articulation itself. **SYN.** *synarthrosis*. 2. Operation of uniting parts by stitching them together. 3. The thread or wire or other material used in the operation of stitching parts of the body together. 4. The seam or line of union formed by surgical stitches. 5. To unite by stitching, as *to suture a wound*. **SEE** *raphy*.

s. absorbable. S. undergoing liquefaction or replaced by living tissue

s. basilar. The one bet. the occipital bone and sphenoid bone.

s. bifrontal. **SEE** *coronal s.*

s. biparietal. **SEE** *sagittal s.*

s's., buried. Those completely covered by skin and not involving that structure at all

s. button. One in which the threads are passed through buttons on the surface and tied to prevent the thread from cutting.

s. coaptation. One uniting as distinguished from one intended to relieve tension

s. cobbler's. A s. in which the thread has a needle at each end

s. continuous. The closure of a wound by means of 1 continuous thread, usually by transfixing first 1 lip and then the other, alternately, from within outward.

s. coronal. The junction of the frontal and parietal bones

s's., cranial. Those s's. bet. the bones of the skull.

s. dentate. An articulation of long and toothlike processes

s. ethmoidofrontal. The one bet the ethmoid and frontal bones

s. ethmoidolacrimal. The one bet. the ethmoid and lacrimal bones

s. ethmosphenoid. The one bet. the ethmoid and sphenoid bones.

s. false. Any form of suture in which one surface is smooth

s. figure-of-eight. **SEE** *twisted s*

s. frontal. An occasional one in the frontal bone from the sagittal s. to root of nose.

s. frontolacrimal. The one bet the frontal and lacrimal bones

s. frontomalar. The one bet. the frontal and malar bones

s. frontomaxillary. The one bet. the frontal bone and sup. maxilla.

s. frontonasal. The one bet. the frontal bone and the alae of the sphenoid bone.

s. frontoparietal. The coronal suture

s. frontotemporal. The one bet. the frontal and temporal bones.

s. Glover's. A continuous s. in which the needle is, after each stitch, passed through the loop of the preceding stitch.

s. harelip. **SEE** *twisted s.*

s. harmonic. One in which there is simple apposition of bone.

s. horsehair. S. adapted for light, superficial sutures, alternated with heavier ones and for exposed places like the face, where scar tissue is to be avoided. **Dry**, 100 strands in a bunch. **Sterilized**, 50 in a bottle.

s., implanted. A s. formed by placing pins opposite each other on the 2 sides of a wound, and approximating the lips by winding thread or other similar material about the pins.

s., intermaxillary. The s. bet. the sup. maxillae.

s., internasal. The one bet. the nasal bones

s., interparietal. **SEE** *sagittal s.*

s., interrupted. A s. formed by single stitches inserted separately, the needle being usually passed through 1 lip from without inward, and through the other from within outward

s., jugal. **SEE** *sagittal s.*

s., lambdoid. The one bet the parietal bones and the 2 sup. borders of the occipital bone

s., Lemberi's. An intestinal s.

s., longitudinal. **SEE** *sagittal s.*

s., mattress. A continuous s. in which a stitch is taken with a needle, the thread tied, and then needle inserted upon the same side as that from which it emerged and passed in opposite direction through both lips of the wound, the direction of the needle being reversed at each stitch

s., maxillofacial. The one bet the maxilla and lacrimal bone.

s., mediofrontal. **SEE** *frontal s.*

s., metopic. **SEE** *frontal s.*

s., nasomaxillary. The one bet the nasal bone and sup. maxilla

s., nonabsorbable. Silk, silkworm gut, horsehair and wire.

s., occipital. **SEE** *lambdoid s*

s., occipitomastoid. The one bet the occipital bone and mastoid portion of temporal bone.

s., occipitoparietal. **SEE** *lambdoid s*

s., palatine. One bet the palate bones

s., palatine transverse. One bet the palate processes and sup. maxilla.

s., parietal. **SEE** *sagittal s.*

s., parietomastoid. The one bet. parietal bone and mastoid portion of the temporal bone.

s., petrooccipital. The one bet. the petrous portion of the temporal bone and occipital bone.

s., petrosphenoidal. The one bet petrous portion of the temporal bone and ala magna of sphenoid bone.

s., purse-string. One going in and out around a circular opening, closing when the 2 are drawn taut.

s., quilled, s., quill. An interrupted s. in which a double thread is passed deep into the tissues, even quite below the bottom of the wound, needle being so withdrawn as to leave a loop hanging from 1 lip and the 2 free ends of the thread from the other. A quill, or, more commonly, a piece of bough, is passed through the loops, which are tightened upon it, and the free ends of each separate thread are tied together over a second quill to bring the deep parts into firm coaptation and to relieve tension.

s., relaxation. A s. that may be loosened to relieve excessive tension.

s., relief. A row of supplementary s's. including the tissues to the extent of 1 or 1½ in. on each side of a fistula or a deep wound, for the purpose of lessening the strain on the coaptation s's.

s., right-angled. A s. used in sewing intestine. The needle is passed in the same direction as the long axis of the incision and the process repeated on the opposite side of the incision, the suture being continuous.

s., Sabatier's. Approximation of an intestinal wound by using cardboard soaked in turpentine oil.

s., sagittal. Suture between the two parietal bones.

s., serrated. An articulation by s. in which there is an interlocking of bones by small, fine and delicate projections and indentations.

s., shifted. A s. in which both ends of a wire or silkworm gut are passed through a perforated shot that is then compressed tightly over them.

s., silk. Does not produce suppuration if sterilized. Twisted, braided and floss.

s., silkworm gut. Causes little friction, pliable, does not curl or twist, less liable to produce irritation and sterilizable. Should always be soaked in a sterile solution 30 minutes.

s., sphenoparietal. The one bet. the parietal bone and ala magna of the sphenoid bone.

s., sphenosquamous. Articulation of the great wing of the sphenoid with squamous portion of the temporal bone.

s., sphenotemporal. The one bet. the sphenoid and temporal bones.

s., squamoparietal, s., squamosal. The one bet. the parietal and squamous portion of the temporal bone.

s., squamosphenoidal. One bet. the squamous portion of the temporal bone and great wing of sphenoid.

s., subcuticular. A buried continuous s. in which the needle is passed horizontally under the epidermis into the cutis vera, emerging at the angle of the wound, then in a similar manner passed through cutis vera of opposite side of the wound, and so on until the other angle of the wound is reached.

s., temporooccipital. See occipitotemporal s.

s., temporoparietal. One bet. the temporal and parietal bones.

s., twisted. A s. in which pins are passed through the opposite lips of a wound, at right angles to direction of wound, and material is wound about the pins, crossing them first at one end and then at the other in a figure-of-eight fashion, thus holding the lips of the wound firmly together.

s., uninterrupted. See continuous s.

s., wire. Usually silver. Adapted for cases where there is much tension, ends of bones, resection, etc.

swab (swǒb) [Dutch *zuabber*, to wipe]. 1. Cotton or gauze on end of slender stick used for cleansing cavities, applying remedies or for obtaining a piece of tissue or secretion for bacteriological examination. 2. To wipe with a swab, as to *swab a wound*.

s., test tube. For cleansing tubes, etc.

s., urethral. Slender rod for holding cotton, used in examinations with speculum, in treating ulcers, removing secretions, etc.

s., u., male. About 7 in. long.

s., uterine. For absorbing or wiping away discharges. Slender, flattened wire, plain rod or one with coarse thread on distal end.

swallow (swǒl'ō) [A.S. *swelgan*, to swallow]. To pass into the stomach through the mouth and throat.

swallowing (swǒl'ō-ing) [A.S. *swelgan*, to swallow]. **Syn:** *deglutition*. A complicated act usually initiated voluntarily but always completely reflexly whereby food is moved from the mouth through the pharynx and esophagus to the stomach. It occurs in three stages

as follows. In the *first stage*, food is placed on surface of tongue. Tip of tongue is placed against hard palate, then elevation of larynx and backward movement of tongue forces food through isthmus of fauces into pharynx. In the *second stage*, constrictor muscles of pharynx force it into the esophagus. Food is kept from entering nasal cavity by elevation of soft palate and from entering larynx by closure of the glottis and backward inclination of epiglottis. During this stage, respiratory movements are reflexly inhibited. In the *third stage*, food moves down the esophagus and into the stomach. This movement is accomplished by peristaltic contractions aided by gravity. Liquids pass rapidly and do not require assistance from the esophagus.

Difficulty in swallowing is called *dysphagia*, *q.v.* It may be caused by congenital defects such as cleft palate or esophageal obstruction, neuro- and psychogenic disturbances, muscular dysfunction or local conditions such as presence of tumors, abscesses, inflammation, etc.

RS: *acatoposis, aglutition, air s., aphagia, choking, deglutition, dysphagia, s., air.* **SYN:** *aerophagia.*

s., reflex. Swallowing induced by stimulation of soft palate.

s., tongue. Condition in which the tongue has a tendency to fall backward obstructing openings to larynx and esophagus. It is due to excessive flaccidity of tongue.

swallow's nest (swǒl'ōz). Cerebral depression bet. the uvula and the post. velum. **SYN:** *nidus hirsutinus*

sweat (swēt) [A.S. *swēt*, sweat]. 1. The secretion of the sudoriparous glands of the skin. **SYN:** *perspiration, sudor*. **SEX:** *glands, Moll's*. 2. Condition of perspiring or of being made to perspire freely, as to order a sweat for a patient. 3. To emit moisture through the skin's pores. **SYN:** *perspire*. 4. To cause to emit moisture through the pores.

The perspiration is a colorless, slightly turbid, salty, aqueous fluid, although that from the sweat glands in the axillae, and around the anus, and that of the ceruminous glands have an oily consistency. It contains urea, fatty substances and sodium chloride. This salty, watery fluid is difficult to collect without contamination with sebum.

FUNCTION: To cool the body by evaporation, and to rid it of what waste may be expressed through the pores of the skin. The amount per day is about a liter; this figure is subject to extreme variation according to muscular activity and atmospheric conditions.

PHYS: Perspiration is controlled by the sympathetic nervous system through true secretory fibers supplying the sweat glands.

s., bloody. S. tinged with blood. **SYN:** *hematidrosis*.

s., centers. Principal centers are located in the hypothalamus; secondary centers are present in the spinal cord.

s., colliquative. Profuse sweat of a clammy nature.

s., colored. S. tinged with a pigment. **SYN:** *chromidrosis*.

s., fetid. S. with foul odor. **SYN:** *bromidrosis*.

s., glands. Simple, coiled, tubular glands found on all body surfaces except margin of lips, glans penis and inner surface of prepuce. The coiled secreting portion lies in the corium or

subcutaneous portion of skin; the excretory duct follows a straight or oblique course through the dermis but becomes spiral in passing through epidermis to its opening, a *sweat pore*. Most sweat glands are merocrine; those of the axilla, areola or mammary gland, labia majora and circumanal region are apocrine.

They are most numerous on the palms of the hands and soles of the feet, averaging about 2800 to the sq. in. or over 2,000,000 to the body.

s., night. Sweating during the night, a symptom of pulmonary tuberculosis.

s., profuse. Excessive perspiration. **SYN** *hyperhidrosis*

s., scanty. Abnormally small amount or lack of sweat **SYN** *anhidrosis*

sweat, words pert. to: anaporesis, antisudoral, antisdudorin, bromidrosis, chromidrosis, chylidrosis, diaphoresis, diaphoretic, dyshidria, dysidrosis, epidrosis, hematiidrosis, hidradenitis, hidrorrhea, hidrosis, hydradenitis, hydradenoma, hyphidrosis, hyperidrosis, hypidrosis, ischidrosis, melanidrosis, perspiration, phosphoridrosis, sudor, sudorific, sudoriparous, uridrosis

sweating (swēt'ing) [A.S. *swāt*, sweat] 1. Act of exuding sweat 2. Emitting sweat 3. Causing profuse sweating.

To induce, paint 2 in square of skin under each axilla with mixture of equal parts of olive oil and guaiacol solution. Cover with several layers of gauze, then flannel, and hold with adhesive tape. Wrap patient in warm blankets.

s. deficiency of. **SYN** *anhidrosis*. Seen in profuse diarrhea, polyuria, vomiting, hemorrhage, diabetes insipidus, myxedema, general anasarca, ichthyosis and in high temperature

s. excessive. **SYN** *hyperhidrosis*. Seen in rheumatic, malarial and relapsing fever, septic fevers, pneumonia at crisis, pulmonary tuberculosis, Grave's disease, migraine, neuralgia and some drugs. Local of hands and feet in hysteria, neurasthenia, vagotonia, nervous irritability, exophthalmic, goiter, fright and other emotions

s. sickness. Miliary fever, *q. v.*

s., urinous. **SYN** *uridrosis*. Often found in uremia

RS: *anhidrosis, bromidrosis, chromidrosis, hidrosis, perspiration, pores, skin, sudor, sudorific, sweat, uridrosis.*

Swedish gymnastics, movements. System of active and passive exercise of the various muscles and joints of the body without using apparatus.

TYPES: *Active.* Taken by the patient with the assistance or resistance of the operator. *Duplicated active:* Performed by the patient with the operator's assistance. *General active.* Performed by the patient exclusively. *Passive.* All given to the patient by the operator. *General passive.* May be performed while the patient is dressed.

THE PRINCIPAL MOVEMENTS: 1. *Bending.* 2. *Depression and elevation.* 3. *Flexion and extension.* 4. *Pressing and shaking.* In pressing, the operator uses the tips of his fingers in vertical motion over the principal nerves. In shaking the arm, the operator grasps the hand and shoulder, keeping the arm in an extended position, and shakes as quickly as possible. In shaking the leg, he grasps the foot with one hand and the thigh as high as possible with the other and shakes quickly. These movements are always passive and are principally

used in nervous affections. 5. *Pulling.* 6. *Raising.* 7. *Rotation.* This is a rotary movement by which the different joints are brought into motion within their natural limits. Rotation is to lengthen and shorten the veins so as to produce a sucking of their contents, thus stimulating the circulation and assisting the heart in its action. 8. *Separating and closing.* 9. *Turning.*

POSITIONS: The movements may be performed in 5 different positions. Kneeling, lying, sitting, standing, or suspending. These are called ground positions and have many subdivisions. There are 47 derivative positions—about 800 movements in all.

S. massage. Massage combined with S. gymnastics

sweet (swēt) [A.S. *swēte*, sweet]. 1. Pleasing to the taste or smell. **SEE** *taste*. 2. Free from excess of acid, sulfur, or corrosive salts.

sweetbread (swēt'brēd) [origin uncertain] The thymus and pancreas glands, esp. of the calf, used as food

COMP: Nuclein abundant as well as collagenous substances. Purines are very high.

AV. SERVING: 115 Gm. **Pro.** 19.3, **Fat** 13.9

ACTION. Completely digested, but the presence of purines should be considered before recommending them.

swelling (swē'ling) [A.S. *swellan*, to grow larger] A morbid enlargement, esp. one appearing on the surface of the body

TREATMENT: *Local:* Ice water with salt in it applied to area reduces swelling rapidly.

RS *anthorism, detumescence, node, nodule, turgescence, turgid.*

s., albuminous. Same as cloudy *s*

s., Calabar. Swellings occurring in infestations by the nematode, *Loa loa*. They are temporary and painless and thought to be the result of temporary sensitization

s., cloudy. Degeneration of tissues marked by cloudy appearance, swelling, and appearance of tiny albuminoid granules in the cells.

s., fugitive. Temporary swellings such as those occurring in infestations of *Loa loa* which appear at one place, persist for two or three days, then disappear possibly to recur at another position.

s., glassy. **SYN:** *amyloid degeneration, pink disease, erythredema, polynuropathy.* That occurring in amyloid degeneration of tissues

s., white. Swelling seen in tuberculous arthritis, esp. of the knee

Swift's disease (swift). Condition occurring in very young children characterized by irritability and restlessness; redness and swelling of the hands and feet, esp. on the palms and soles, desquamation, a sensation of tingling or burning, loss of appetite, and the appearance of a rash, mainly on the trunk, and loss of muscle tone. **SYN:** *acrodynia.*

Swiss chard. **AV. SERVING:** 100 Gm. **Pro.** 1.4, **Fat** 0.2, **Carbo.** 4.4

switch, foot. In the application of surgical, high-frequency currents where both hands of the operator are needed, the current is started and cut off by a foot switch

s., pole-changing. P.T. A switch by which the polarity of a circuit may be reversed

swoon (swōōn) [M.E. *swounen*, from A.S. *geswōgen*, in a swoon]. 1. A syncope*

or fainting fit. 2. To sink into a fainting fit.

sycoma (sī-kō'mā) [G. *sykon*, fig, + -ōma, tumor]. A large, soft wart. SYN. *condyloma*.

sycomancy (sīk'ō-fān-sī) [G. *sykophantēs*, a false adviser]. PSY Characteristic of one maturely intelligent who has not developed a sense of responsibility and who is more or less dependent upon others.

sycomant (sīk'ō-fānt) [G. *sykophantēs*, a false adviser]. An adult who, though mature intellectually, lacks a sense of responsibility.

sycosiform (sī-kō'sī-form) [G. *sykōsis*, figlike disease, + L. *forma*, shape]. Resembling sycosis.

sycosis (sī-kō'sīs) [G. *sykōsis*, figlike disease]. Chronic inflammation of hair follicles.

ETIO. *Staphylococcus aureus* and *albus* entering through hair follicles, trauma, debility, etc., as predisposing factors.

SYM. As stated, on hairy regions, and, if severe, may result in alopecia and scarring, characterized by an aggregation of papules and pustules, each of which is pierced by a hair. Pustules show no disposition to rupture but dry to yellow brown crusts, more or less itching and burning. If disease persists may lead to extreme destruction of hair follicles and permanent alopecia.

PROG. Disease is curable under prolonged treatment; relapses prone to occur.

TREATMENT: Local treatment includes topical use of antibiotics. Organism should be cultured and tested to determine agent of choice. Generally systemic treatment is also called for with special attention given to diet, possible foci of infection, allergens, etc. X-ray treatment is sometimes effective.

s. barbae. Sycosis of the beard, marked by papules and pustules perforated by hairs, and surrounded by infiltrated skin. SYN. *folliculitis barbae*.

s., hypogonic. *Tinea barbae*, *q.v.*: barber's itch, usually due to species of *Trichophyton*.

s. tinea. A form due to infection with ringworm commonly affecting the beard.

s. vulgaris. SYN: *folliculitis barbae*, *barber's itch*. SEE: *sycosis*.

Sydenham's chorea (sīd'ēn-hām). Simple chorea with only mild convulsive movements.

S's. cough. C. produced in hysteria by spasm of the respiratory muscles.

syllabic utterance (sīl-ab'ik) [G. *syllabē*, a syllable]. A staccato accentuation of syllables, slowly but separately, observed in multiple sclerosis. SYN: *scanning speech*.

syllable stumbling (sīl'ā-bl) [G. *syllabē*, a syllable]. Hesitating utterance (dysphasia) with difficulty in pronouncing certain syllables.

syllabus (sīl'ā-būs) [G. *syllabos*, a collection]. Abstract of a lecture or outline of a course of study or of a book.

syllapsiology (sīl-lēp-sī-ō'ō-jī) [G. *syllēpsis*, conception, + *logos*, study]. The study of conception and pregnancy.

syllapsis (sīl-ēp'sīs) [G. *syllēpsis*, conception]. Conception; impregnation, or pregnancy.

syvatic plague. Bubonic plague which is enzootic among wild rodents, esp. in western U. S. The causative organism is transmitted by fleas.

Sylvester's method. Method of artificial respiration by drawing arms of a supine patient out above head, and then bringing them down folded onto the chest, with pressure on the abdomen and ribs to cause expiration.

This and other methods of artificial respiration should not be used for the resuscitation of babies born with asphyxia neonatorum. SEE: *artificial* respiration*.

sylvian aqueduct (sīl'vī-ān). A narrow canal from 3rd to 4th ventricle. SYN: *aqueduct of Sylvius*.

s. artery. Middle cerebral artery in the fissure of Sylvius.

s. fissure. The fissure separating the temporal lobe from the frontal and parietal lobes.

s. line. One on ext. of cranium marking direction of the sylvian fissure.

sym-, syn- [G] Combining form meaning *with, along, together with, beside*.

symbion, **symbiont** (sīm'bī-ōn, -ōnt) [G. *syn*, together, + *bios*, life]. SYN *commensal*. An organism which lives with another in a state of symbiosis.

symbiosis (sīm-bī-ō'sīs) [G. *symbiōsis*, a living together]. The living together in close association of two organisms of different species. If neither organism is harmed, such is referred to as *commensalism*; if the association is beneficial to both, it is *mutualism*, if one is harmed and the other benefited, it constitutes *parasitism*.

symblepharon (sīm-blēf'ā-rōn) [G. *syn*, together, + *blepharon*, eyelid]. Adhesion bet conjunctivae of lid and eyeball due to injuries, esp burns from lime, acids, etc.

Also seen in trachoma, pemphigus, and following operations.

SYM Interference with movement of eyeball, conjunctival irritation.

TREATMENT: Division of cicatricial bands and keeping raw surfaces separated. Mucous membrane grafts.

symbol (sīm'bōl) [G. *symbolon*, a sign]. 1. A representation of an idea or quality in the form of an object or that which stands for something beside itself.

2. PSY. An object used as an unconscious substitute and which is not connected consciously with the libido, but into which the libido is concentrated.

3. CHEM. A mark or letter representing an atom of an element.

SEE Table of Symbols in App. Also see symbols of weights and measures used in prescription writing.

SEE Table of Physical Constants of Elements in App. and for the symbols of chemical elements.

symbolia. Ability to identify or recognize an object by the sense of touch.

symbolism (sīm'bōl-izm) [" + -ismos, condition]. PSY. 1. Unconscious substitutive expression of subconscious thoughts of sexual significance in terms recognized by the objective consciousness.

2. An abnormal condition in which everything that occurs is interpreted as a symbol of the patient's own thoughts.

symboliza'tion. An unconscious process by which, on the basis of similarity or association, an object or idea comes to represent or stand for, i.e., symbolize, another object or idea.

symbolephobia (sīm-bō-lō-fō-bī-ā) [" + *phobos*, fear]. Fear of expressing one's self in words or action that may be interpreted as possessing a symbolic meaning.

Syme's operation (sīm). 1. Amputation of

the foot at the ankle joint with removal of the malleoli. 2. Excision of the tongue. 3. External urethrotomy.

symmē'la. Fusion of limbs.

symmetric, symmetrical (sím-ět'rik, -rī-kī) [G. *symmetrikos*, measuring with]. 1. Exhibiting correspondence in size and shape of parts. 2. CHEM. Denoting an atomic arrangement in a molecule at equal relative intervals.

s. gangrene. Gangrene affecting corresponding parts simultaneously and similarly. SYN. *Raynaud's disease, q.v.*

symmetromania (sím-ě-trō-mā'nī-ā) [G. *symmetria*, from *syn*, with, + *metron*, a measure]. An abnormal impulse to make symmetrical motions with the arms.

symmetry (sím-ět-rī) [G. *symmetria*, from *syn*, with, + *metron*, a measure]. Correspondence in shape, size, and relative position of parts on opposite sides of a body.

s. bilateral. That symmetry of an organism (a) whose right and left halves are mirror images of each other, or (b) in which a median longitudinal section divides the organism into equivalent right and left halves.

s. radial. That of an organism whose parts radiate out from a central axis.

sympathectomy (sím-pā-thēk'tō-mī) [G. *sympathētikos*, suffering with, + *ektomē*, excision]. Excision of a portion of the sympathetic division of the autonomic nervous system. It may include a nerve, plexus, ganglion, or a series of ganglia of the sympathetic trunk.

s. chemical. The use of chemicals to destroy part of the sympathetic nerve.

s. periarterial. Removal of sheath of an artery in which are the sympathetic nerve fibers, used in trophic disturbances.

sympathe neuritis (sím-pā-thē'ě-ō-nū-rī'tīs) [" + *neuron*, nerve, + *-itis*, inflammation]. Inflammation of the sympathetic nerve.

sympathetic (sím-pā-thē'tik) [G. *syn*, with, + *pathos*, suffering]. 1. Pert. to sympathetic nervous system, *q.v.* 2. Caused by or pert. to sympathy.

s. irritation. I. of a structure caused by irritation of another related structure.

s. nervous system. A division of the autonomic nervous system.

RS. *nervous system, parasympathetic nervous system, systema*

s. ophthalmia. Inflammation of the uveal tract in one eye due to similar inflammation in the other eye.

s. plexuses. Plexuses formed at intervals by the sympathetic nerves and ganglia.

sympatheticalgia (sím-pā-thē't-ī-kāl'jī-ā) [G. *sympathētikos*, suffering with, + *algos*, pain]. Pain in the cervical sympathetic ganglion.

sympatheticless (sím-pā-thē't-ī-k-lēs) [" + *A.B. lēas*, without]. Noting absence of the abdominal sympathetic chain.

sympatheticoparalytic (sím-pā-thē't-ī-k-ō-par-āl'ī-tik) [" + *paralysis*, a loosening at the sides]. Resulting from paralysis of the sympathetic nervous system.

sympatheticopathy (sím-pā-thē't-ī-kōp'ā-thī) [" + *pathos*, disease]. Any condition resulting from disorder of the sympathetic nervous system.

sympatheticotonia (sím-pā-thē't-ī-k-ō-tō-nī-ā) [" + *tonos*, tone]. Condition characterized by excessive tone of the sympathetic nervous system with unusually high blood pressure and tendency

to vascular spasm. SYN. *sympathicotonia*.

sympatheticotonic (sím-pā-thē't-ī-k-ō-ton'īk) [" + *tonos*, tension]. Marked by increased arterial tone or vasoconstriction due to overaction of the sympathetic nervous system.

sympatheticotripsy (sím-pā-thē't-ī-k-ō-trīp'sī) [" + *tripsis*, a crushing]. Surgical crushing of the sup. cervical ganglion in treatment of mental diseases.

sympathectomy (sím-pā-th-īs-ěk'tō-mī) [G. *sympathētikos*, suffering with, + *ektomē*, excision]. Excision of part of the sympathetic nerve. SYN. *sympathectomy*.

sympathicoblast (sím-pā-th'ī-k-ō-blāst) [" + *blastos*, a germ]. A primitive sympathetic nerve cell. SEE. *sympathoblast*.

sympathicoblastoma (sím-pā-th'ī-k-ō-blāst-ō-mā) [" + " + *-ōma*, tumor]. A tumor made up of sympathicoblasts.

sympathicomimetic (sím-pā-th'ī-k-ō-mīm-ět'īk) [G. *sympathētikos*, suffering with, + *mimētikos*, imitating]. Producing effects resembling those resulting from stimulation of the sympathetic nervous system, such as effects following the injection of the hormone epinephrine.

sympathiconneuritis (sím-pā-th'ī-k-ō-nū-rī'tīs) [" + *neuron*, nerve, + *-itis*, inflammation]. Inflammation of the sympathetic nerves.

sympathicotonia (sím-pā-th'ī-k-ō-tō-nī-ā) [" + *tonos*, tone]. Increased tonus of the sympathetic system with marked tendency to vascular spasm and heightened blood pressure. OR. *vagotonia*.

sympathicotripsy (sím-pā-th'ī-k-ō-trīp'sī) [" + *tripsis*, a crushing]. Crushing of the sup. cervical ganglion in treatment of mental diseases. SYN. *sympathicotripsy*.

sympathicotropic (sím-pā-th'ī-k-ō-trop'īk) [" + *tropos*, a turning]. Having a special affinity for the sympathetic nerve.

sympathicus (sím-pā-th'ī-kūs) [G. *sympathētikos*, suffering with]. The sympathetic nervous system. SYN. *systema nervorum sympathicum*.

sympathin (sím-pā-th-īn) [G. *syn*, with, + *pathos*, suffering]. A neurohumoral substance produced at the endings of postganglionic fibers of the sympathetic nervous system, and responsible for the resulting effects in effector organs. It is produced in all smooth muscle tissue and exists in two forms, *Sympathin E*, the excitator form which initiates contraction of smooth muscle, and *Sympathin I*, the inhibitor form which inhibits smooth muscle contraction. *Sympathin E* is thought to be norepinephrine.

sympathism (sím-pā-th-īzm) [" + " + *-ismos*, condition]. Condition of susceptibility to suggestion. SYN. *suggestibility*.

sympathoblast (sím-pā-th'ō-blāst) [" + " + *blastos*, germ]. A primitive cell from which arises a sympathetic ganglion cell.

sympathoblastoma (sím-pā-th'ō-blāst-ō-mā) [" + " + " + *-ōma*, tumor]. A malignant tumor made up of sympathetic nerve cells.

sympathoglioblastoma (sím-pā-th'ō-glī'ō-blāst-ō-mā) [" + " + *glia*, glue, + *blastos*, germ, + *-ōma*, tumor]. A tumor made up primarily of sympathoblasts, with scattered neuroblasts and spongioblasts.

sympathogonia (sím-pā-th'ō-gō-nī-ā) [" + " + *gonē*, seed]. Primitive cells from which sympathetic cells are derived.

sympathogonioma (sím-pā-th'ō-gō-nī-ā-ē-

mā) [" + " + " + -ōma, tumor]. A tumor containing sympathogonia.

sympathoma (sīm-pāth-ō-mā) [G. *syn*, with, + *pathos*, suffering, + -ōma, tumor] A tumor composed of tissue similar to that of the sympathetic nervous system.

sympathomimetic (sīm-pāth-ō-mīm-ēt'kī) [" + " + *mimētikos*, imitating] SYN *sympathicomimetic*, *q.v.*

sympathy (sīm-pā-thī) [G. *sympatheia*, from *syn*, with, + *pathos*, suffering]. 1. Relationship bet. 2 organs or parts through which 1 unaffected part is affected or becomes disordered from disease in the other part without actual transmission of morbid cause 2 In Psychol., an affective reaction to, and like that of, another person It may be *imitative sympathy* in which the reaction is like that of another person as perceived or thought (for example, weeping because another person is weeping), or *reflective sympathy* in which the reaction is like that of another person as his situation is understood 3 Feeling as another feels

sympexion (sīm-pēks'ī-on) [G. *sympēxis*, concretion]. A concretion in the seminal vessels.

sympexis (sīm-pēks'īs) [G. *sympēxis*, concretion]. Term for arrangement of red blood cells in harmony with the laws of surface tension.

sympalangism (sīm-fāl'ān-lāzm) [G. *syn*, together, + *phalagx*, *phalagx*-, *phalanx*]. 1. Ankylosis of joints of the fingers or toes 2. Web-fingered or web-toed condition.

symphyseal (sīm-fīz'ē-āl) [G. *symphysis*, a growth together]. Pert. to symphysis

symphyseotomy (sīm-fīz-ē-ōt'ō-mī) [" + *tomē*, incision]. Section of symphysis pubis to enlarge the pelvic diameters during delivery

symphysiectomy (sīm-fīz-ī-ēk'ō-mī) [" + *ektomē*, excision] Section of the symphysis pubis to facilitate delivery

symphysis (sīm-fīz'ī-ōn) [G. *symphysis*, a growth together]. Most ant point of the alveolar process of the lower jaw

symphysiotomy (sīm-fīz-ī-ōt'ō-mī) [" + *tomē*, a cutting]. Section of the symphysis pubis to facilitate delivery by enlarging the pelvic diameters

symphysis (sīm'fīs-īs) (pl *symphyses*) [G. *symphysis*, a growth together] 1 A line of fusion between two bones which are separate in early development, as *s. of mandible* 2 A form of synchondrosis in which the bones are separated by a disk of fibrocartilage, as in joints between bodies of vertebrae or between pubic bones. SEE: *intervertebral disk*

s. cartilaginosa. A synchondrosis

s. of jaw. An ant, median, vertical ridge upon outer surface of lower jaw representing line of union of its 2 halves.

s. ligamentosa. A syndesmosis

s. mandibulae. SEE: *s. menti*.

s. menti. SYN: *symphysis mandibulae*. The symphysis of the chin or the ridge marking line of union of the two halves of the mandible

s. pubis. The junction of the pubic bones on midline in front; bony eminence under the pubic hair. SEE: *disk*, *interpubic*.

sympodia (sīm-pō'dī-ā) [G. *syn*, together, + *pous*, *pod*-, foot] Condition in which lower extremities are united.

sympptom (sīmp'tūm) [G. *sympōtōma*, anything that has befallen one]. Any perceptible change in the body or its func-

tions which indicates disease or the kind or phases of disease.

They may be classified as *objective*, *subjective*, *cardinal*, and sometimes as *constitutional*. Another classification considers all symptoms as being subjective, the objective indications being called signs.

Some of the symptoms affecting different parts are the following:

Abdomen*. May be distended, rigid, flat, flabby, adipose, tympanitic, shiny, enlarged, or bulging in certain areas, and certain discolorations, stripings, or markings. Muscles may be tensed and little affected by pressure. May be cold areas, and various sounds may be heard, such as splashing, roarings, and rumblings (*borborygmus*, also known as *intestinal flatus*). Closely associated with abdominal symptoms is pain. Locate exact area affected, and note nature, time of duration, time when it arises, and any causes that might be responsible.

Emesis is another condition associated with symptoms pert. to the abdominal region. This may be watery, clear, or containing mucus or undigested food, may be stercoraceous, bilious, frothy, profuse, purulent, colored from food or medication, and showing blood (*hematemesis*). It may be sour, or have odor of feces, or garlic, or may be ammoniacal or have odor characteristic of some food or drug. The genital crease may show edema, lesions, discolorations, discharge, malformations, inflammations, infection, or growths.

The patient may complain of abdominal distention, gas, and pain caused by gas, crowding in the region of the heart, and interference with respiration. Heartburn may be present, or gastritis, and regurgitation. Pain may be felt when food enters the stomach, or relieved by eating or shortly after eating. Distention after eating should be noted, or desire to eructate or to expel flatus from the stomach. Colicky pains in the abdomen may be accompanied by pain in the shoulder. Pain at pit of stomach and in lower right quadrant may be indicative of appendicitis. When over lower right ribs or little below, the gallbladder may be suspected.

Back*. The dorsal side of the body may reveal edema, deformities, irregularities of the spine, discolorations, eruptions, impaired motion, decubitus or any condition affecting the skin.

Breath*. May have a fecal odor, a sweet odor, or one of wet hay, an odor of fish, or ammonia, urine, blood, or pus. Respiration may be abdominal or thoracic, and show *dyspnea*, *orthopnea*, *apnea*, or it may be normal (*eupnea*).

Chest*. The chest may show abnormalities and deformities. Coughing may be *whooping*, *hacking*, *crowing*, *hoarse*, *dry*, or *hysterical*. There may or may not be expectoration. A cough may be spasmodic or occur on awakening; during deep sleep it may awaken patient, or it may occur when swallowing food, when in a horizontal position, or when subjected to change of temperatures. If *singultus** is present note when it occurs. Sputum may be *mucoid*, *yellowish*, *thick*, *tenacious*, *ropy*, *gelatinous*, *dark green*, *offensive in odor*, *copious*, *streaked with bright or dark blood* (hemoptysis), or it may resemble *cheesy lumps*. It may be clear and watery, scanty, or profuse.

Frequency of coughing and clearing throat should be noted. Patient's respirations may be low pitched, *dyspnea* may be present, inability to expand the lungs or complaints of irritation, sticking pains, or catchy pains on inspiration. There may be an accumulation of phlegm in the air passages, or a tickling in throat. Patient may not be able to take deep inspirations, or may be constantly yawning. There may be migrating, knife-like pains in region of heart or throughout chest. "Heart-consciousness" may be present, or a fluttering feeling about the heart, or cardiac pain. Queer sensations, the loud beating of the heart, friction experienced by action of heart, and heaviness in cardiac region are other symptoms.

DEFECATION*. Symptoms to observe are the frequency of defecation; the presence of constipation; hemorrhoids; the nature of the feces, such as formation, as ribbon-shaped, soft, semiformed, hard or scybala, cylindrical, and whether watery, liquid, or semiliquid, the color, whether dark brown, light brown, clay-colored, green, yellowish, black, bloody; and whether lenteric, serous, mucous, purulent, tarry, or containing membranous shreds, calculi, or foreign substances. The amount should be noted, as *small*, *medium*, *large*, or *copious*. The odor may be characteristic of various conditions, *sour*, *putrid*, *offensive*, or *fetid*. The nature of the evacuation should be noted, as *natural*, *difficult*, *involuntary*, or *painful*.

DENTITION. Teeth may be irregular, missing, or showing a Hutchinsonian condition, or affected by caries. There may be a partial or complete denture. Dental hygiene may be good or poor. There may be a loosening of teeth, a film over them, or they may show the presence of sordes.*

EARS*. *Tinnitus aurium*, or ringing in the ears, occurs in certain diseases. Pain in ear, about ears, or swelling under either or both should be noted.

NOSE*. May appear *deformed*, *discolored*, *edematous*, or *enlarged*. Nostils may discharge or show obstruction, may be inability to breathe through one or both. Patient may complain of odors not usually manifested as objective symptoms, or for which there is no known cause.

EYES*. May be staring, or show an excited look, or they may be expressionless. Nystagmus, strabismus, and coma vigil may be indicated. Pupils may be contracted or dilated, or 1 pupil affected. Patient may keep eyes closed constantly, or keep 1 open and the other closed. Eyes may be sunken or protruding. Lacrimation may be present. Eyelids may be edematous, and eyeball soft to the touch. Accommodation may be faulty. Nictating or squinting, or tremor of the eyelids should always be recorded. Blurring of vision is usually associated with other symptoms. Patient may complain of specks dancing before the eyes. These may be red, yellow, green, blue, or black.

GAIT*. May be faltering, unsteady, staggering, weakened, swaying, or movements may be stiff, awkward, or unusual; may be total disability or immobility.

GENERAL APPEARANCE*. The face may show an expression of anxiety, a pinched look, or a "drawn" expression. Patient

may have air of apathy, a distorted or a blank look, an emotional expression, a *risus sardonicus*, or sudden lack of all expression.

GENERAL SYMPTOMS*. Burning sensations may be complained of in various parts of the body, as in the head, throat, arms, chest, or abdomen. They may or may not be accompanied by tenderness. The complaint may be of feeling too hot or too cold without apparent cause, or of having a general feeling of distress.

Anorexia, nausea upon taking food or at the thought of food, or with no reference to food are significant and should be noted, also when nausea obtains on awakening, when taking fluids, after eating, when changing a position, when taking medication, or in the presence of odors. There always should be an explanation for nausea.

LIMBS*. The symptoms pertain to the skin, of course, apply to skin of the limbs. Note if there are deformities, abnormalities, impaired motion, discolorations, sensitivity, varicosities.

LIPS*. May be *pale*, *dry*, *cyanotic*, *edematous*, *drawn*, *deformed*, *out of proportion*, *motionless* and *expressionless*, *flushed*, *fissured*, or show other lesions or growths.

MOUTH AND GUMS*. May be pale or ulcerated, highly inflamed and red, infected, discolored, edematous, or abnormal. Pyorrhea or edema may be present. Patient may complain of certain tastes, such as bitter, sweet, salty, sour, fishy, or flat tastes, or an absence of taste. Medication may have much to do with temporary disorders of taste.

PAIN*. The exact area affected must be ascertained, and the wording of the patient's complaint of pain must be charted or reported. Note if pain is in nature of a cramp or spasm, if *dull*, *superficial*, or *deep*, *remittent*, *shifting*, *shooting*, *lancinating*, *gnawing*, *fled*, *sharp*, *inflammatory*, or if there is an absence of pain, especially in conditions in which pain usually occurs. Note whether pain is relieved or increased by pressure, by heat, or by cold, or by other causes. When is pain experienced, how often does the same type of pain recur, and does it awaken the patient from sleep, especially at night? Observe the facial expression during an attack of pain and listen carefully to the patient's description.

Headache. The patient may locate the pain around the eyes and nose, in the center of the forehead above the nose, in 1 or both temples accompanied by throbbing, at the top of the head, or at the base of the brain. It may be felt as a tight, bandlike sensation around the head above the eyes, it may be in the center of the forehead above the eyebrow line or in the upper region of the center forehead, or all over the top of the head, or over 1 or both ears, or back of both ears. Pain may be sharp or dull, or shifting and accompanying head noises, or a roaring in the head may be experienced without pain. Vertigo may be present or a sensation of fainting. Pulsations may perhaps be felt in the occiput or in the temporal region. A patient may be very sensitive to light and sound, and headaches may be accompanied by nausea and vomiting, also by chills. Tenderness or soreness may be associated with rigidity.

POSITIONS AND POSTURES*. An inability to lie down, to arise, or to lie on one

side or on the back, or in any special position reveals much to the doctor. Whether lying on the affected or unaffected side is also important to observe. The left leg may be flexed or the right one, or both, or there may be an inclination to lie with the arms above the head.

SKIN*: May appear pale, flushed all over or in spots; may be *cyanotic*, *anuridic*, *shiny*, *erupted*, *bruised*, or exhibit dermatographia, lesions, growth, or deformities, or be *puffy* and *edematous*, *ashy*, *gray*, wet with perspiration, or discolored.

THROAT*: May show abnormalities, discoloration, inflammation, diseased tonsils, and presence of adenoids. Dysphagia and hoarseness, or aphonia and other conditions affecting the voice may be present. A lump in the throat (*globus hystericus*), or a dry, scratchy irritation or fullness or pulsations may be present.

TONGUE*: May be coated, clean, smooth, shiny, dry on top and moist on the sides, or dry all over, may look like raw beef or appear *furry*, *glossy*, *tremulous*, or sharp pointed. It may be *edematous* or abnormal in size, there may be fissures, the papillae may have disappeared, there may be a "strawberry-tongue," or it may have various colors.

URINE*: It may be blue, milkv, pale, lemon, smoky, brick-colored, clear, amber, straw-colored, orange, or some other color. *Hematuria* may be present. *Polyuria* or *oliguria* may be indicated, or there may be frequent urination of small amounts. The odors may be ammoniacal, aromatic, stercorous, or like that of new-mown hay, ripe apples, or violets. There may be retention or suppression, or dribbling, and urination may be painful.

See: Each part or organ in text

s., accessory. A minor symptom, or one not pathognomonic

s., accidental. One incidentally occurring during course of a disease but having no relationship to the disease

s., assident. An accessory symptom, *q v*

s., cardinal. Those pert. to pulse, respiration, and temperature.

s. complex. The entire group of symptoms presenting a clear picture of a disease. **Syn.** *syndrome*.

s. concomitant. One occurring along with the essential symptoms of a disease

s., constitutional, s., general. One caused by or indicating disease of the whole body.

s., delayed. S appearing sometime after precipitating cause

s., direct. S resulting from direct effects of disease

s., dissociation. Anesthesia to heat, cold, and pain without loss of tactile sensibility. Seen in syringomyelia

s., equivocal. One that may occur in several diseases, hence of doubtful significance

s., focal. One at a specific location

s., general. A constitutional symptom, *q v*

s., indirect. One occurring secondarily as a result of a disease.

s., labyrinthine. One such as tinnitus, vertigo, or nausea indicating a disease or lesion of the inner ear.

s., local. One indicating specifically

the seat of the disease or morbid process

s., negative pathognomonic. One which never occurs in a certain disease or condition, hence its occurrence rules out the existence of that disease.

s., objective. One apparent to the observer. Also called *sign*

s., passive. A static symptom, *q v*

s., pathognomonic. One which unmistakably points out presence of a particular disease

s's., prodromal. Those which indicate an approaching disease. **Syn:** *prodrome*

s., rational. A subjective symptom, *q v*

s., signal. A symptom which is premonitory of an impending condition such as the aura which precedes an attack of epilepsy or migraine

s., static. One pertaining to the condition of a single organ or structure without reference to remainder of body

s., subjective. One apparent only to the patient

s., sympathetic. A symptom for which there is no specific inciting cause and usually occurring at a point more or less remote from the point of disturbance

s's., withdrawal. Those following sudden withdrawal of a stimulant from an addict, generally excitement and collapse

symptomatic (simp-tō-māt'ik) [G *symp-tōmatikos*, pert to a symptom] Of the nature of or concerning a symptom

symptomatology (simp-tō-mā-tōl'ō-jī) [G. *symp-tōma*, symptom, + *logos*, a study]. 1. Science of symptoms and indications. **Syn** *semiology* 2. All of the symptoms of a given disease as a whole

symptomatolytic (simp-tō-māt'ō-līt'ik) [" + *lysis*, destruction]. Causing the removal of symptoms

symptom complex. All of the symptoms of a disease forming together a picture of it. **Syn** *syndrome*.

symptomolytic (simp-tō-mō-līt'ik) [G. *symp-tōma*, symptom, + *lysis*, destruction] Pert. to the removal of symptoms. **Syn** *symptomatolytic*

symptosis (simp-tō'sis). Emaciation; wasting away

syn- [G.]. Prefix meaning joined, together. **See:** *prefix con-*

syn'acto'sis. Malformation resulting from the abnormal fusion of parts

synalgia (sīn-āl'jī-ā) [G *syn*, with, + *algos*, pain] Referred or reflex pain felt in a part distant from the site of its origin

synalgic (sīn-āl'jīk) [" + *algos*, pain]. Pert to or characterized by referred pain

synanche (sī-nang'ke) **Syn** *diphtheria*. Severe throat infection

synanastomosis (sīn'an-as'tō-mō'sis) [" + *anastomosis*, a connecting mouth]. The connection of several vessels

synanthema (sīn-ān-thē'mā) [" + *antheim*, to bloom]. Exanthem made up of several different forms of eruption.

synapse (sīn'aps) [G. *synapsis*, from *syn*, with, + *aptēin*, to touch] The point of junction in a neural pathway between two neurons where the end arborizations of the axon of one neuron come into close proximity with the cell body or dendrites of another. At this point, where the relationship of the two neurons is one of contact only, the impulse travelling in the first neuron initiates an impulse in the second neuron. Synapses are *polarized*, i.e., the

Impulses pass in one direction only. They are susceptible to fatigue, offer a resistance to the passage of impulses and are markedly susceptible to the effects of oxygen deficiency, anesthetics and other drugs.

synapsis (sín-áp'sís) [G. *synapsis*, from *syn*, with, + *aptēin*, to touch]. The process in first maturation division in gametogenesis in which there is conjugation of pairs of homologous chromosomes forming double or bivalent chromosomes. In the resulting mitotic division, the chromosome number is reduced from the diploid to the haploid number. It is at this stage that crossing over occurs.

RS *crossing over*, *mitosis*, *oogenesis*, *spermatogenesis*

synap'tic. Pertaining to a synapse or synapses

s. field. A field in cerebral cortex, cerebellar cortex and retina where large numbers of contacts between neurons can take place

synaptolemma (sín-áp-tō-lēm'má) The membrane at a synapse separating two neurons.

synarthrodia (sín-ár-thrō'di-á) [G. *syn*, with, + *arthron*, joint, + *eidōs*, form]. Type of immovable cartilaginous joint without a joint cavity in which bones are separated by only a connective tissue membrane, a fixed articulation. SYN *synarthrosis*. SEE *joint*.

synarthrodial (sín-ar-thrō'di-ál) [" + " + *eidōs*, form] Pert to an immovable articulation bet bones

synarthrophysis (sín-ár-thrō-fí'sís) [" + *arthrosis*, joint, + *physis*, growth] Progressive ankylosis of joints

synarthrosis (sín-ár-thrō'sís) (pl *synarthroses*) [" + *arthrosis*, joint] A type of joint in which the skeletal elements are united by a continuous, intervening substance (cartilage, fibrous tissue, or bone). Movement is absent or limited and a joint cavity is lacking. It includes the *synchondrosis*, *suture*, and *syndesmosis* types of joints.

synanthus (sín-kán'thus) [G. *syn*, with, + *kantōs*, angle] Adhesion of eyeball to the structures of the orbit

synchilia (sín-kí'lí-á) [" + *cheilos*, lip]. Adhesion or imperforation (*atresia*) of the lips

synchiria (sín-kí'ri-á) [" + *cheir*, hand]. Disorder of sensibility in which stimulus is referred to the opposite side of the body from that to which it was applied. SYN *allochiria*. RS. *achiria*, *dyschiria*.

synchondrosectomy (sín-kōn-drō-sē-ōt'ō-mí) [" + *chondros*, cartilage, + *tomē*, a cutting] An operation of cutting through the sacroiliac ligaments and closing the arch of the pubes in congenital absence of the ant. wall of the bladder (*exstrophy*).

synchondrosis (sín-kōn-drō'sís) [" + *chondros*, cartilage, + *-ōsis*, condition] An immovable joint having the surfaces bet. the bones connected by cartilages.

synchondrotomy (sín-kōn-drōt'ō-mí) [" + " + *tomē*, a cutting]. 1. Division of articulating cartilage. 2. Section of the symphysis pubis to facilitate childbirth. SEE *symphyseotomy*

synchronism (sín'krō-nízm) [" + *chronos*, time, + *-ismos*, condition]. Occurrence of acts or events simultaneously.

synchronous (sín'krōn-ús) [G. *syn*, with, + *chronos*, time]. Occurring simultaneously.

synchysis (sín'kís-is) [G. *synchysis*, from *synchein*, to confound]. Fluid state of vitreous of the eye.

s. scintillans. Bright flashes of light resulting from presence of crystals of cholesterol in vitreous body.

synkinesis (sín-sín-ē'sís) [G. *syn*, with, + *kinesis*, motion]. An involuntary movement produced in association with a voluntary one. Synkinesis, *q.v.*

s., imitative. Occurs on sound side when movement is attempted on paralyzed side.

s., spasmodic. Occurs on hemiplegic side when muscles of opp. side are voluntarily moved.

synciput (sín'síp-út) [L.]. Ant upper half of the cranium. SYN *sinciput*.

synclitism (sín'klít-izm) [G. *syngklitēin*, to lean together] Parallelism bet. the planes of the fetal head and those of the maternal pelvis

synclonus (sín'klō-nūs) [G. *syn*, with, + *klonōs*, tumult] 1 Clonic contraction of several muscles together. 2 A disease marked by muscular spasms.

s. ballismus. Paralysis agitans.

s. tremens. Generalized tremor.

syncopal (sín'kō-pál) [G. *sygkōpe*, fainting] Relating to or marked by syncope

syncope (sín'kō-pē) [G. *sygkōpē*, fainting] SYN *fainting*, *swoon*. A transient form of unconsciousness, during which the person slumps to the ground resulting from cerebral anoxia

Etiol. Syncope or fainting may be due to deficient blood flow resulting from: (1) peripheral circulatory failure, (2) cardiac failure or disturbances, or (3) altered quality of the blood as in hyperventilation of hypoglycemia. Predisposing factors include fatigue, prolonged standing, nausea, pain, emotional disturbances, anemia, dehydration, poor ventilation, and many others.

TREATMENT Stimulate the heart action, fresh air, treat underlying cause. If seated, depress head bet knees, compressing abdominal viscera, and stimulating nervous system reflexly as well as the circulation. Remove tight clothing. Apply sudden dash of cold water or cold towel which should be removed immediately. Aromatic spirits of ammonia inhalations for a moment or two, only. Test to see if it is not too strong. External heat. When recovered, give hot drinks, strong coffee or tea. Keep lying down. Ten to 20 drops of ammonia by mouth in half a glass of water. Call a physician if recovery is not prompt. SEE *unconsciousness*.

s. angiosa. Cardiac spasm due to occlusion of coronary arteries.

s., cardiac. Syncope of cardiac origin as in Adams-Stokes syndrome, aortic stenosis, tachycardia, bradycardia, myocardial infarction, etc.

s., carotid sinus. S. resulting from pressure on, or hypersensitivity of, carotid sinus. May result from turning head to one side or from too tight a collar.

s., hysterical. That resulting from purely psychologic mechanisms

s., laryngeal. Brief unconsciousness following coughing and tickling in the throat. SYN *vertigo*, *laryngeal*.

s., local. Numbness of a part with sudden blanching, as of the fingers; a symptom of Raynaud's disease or of local asphyxia.

s., tussive. SYN *laryngeal epilepsy*. Syncope associated with paroxysms of coughing

s., vasovagal. SYN: *vasodepressor syncope*, *carotid sinus syncope*. S. resulting from fall in blood pressure due

to vasodilation of intramuscular vessels with concomitant, reduced, venous return, or due to slowing of the heart.
syncytial (sîn-sî'tî-âl). Of the nature of a syncytium

s. trophoblast. Syntrophoblast, *q. v.*
syncytiolysin (sîn-sî'tî-lî-sîn) [G. *syn.*, with, + *lytos*, cell, + *lysis*, destruction]. A cytolytic that is formed from injections of emulsions of placental tissue.

syntiotoma (sîn-sî'tî-ô-mâ) [" + *tô*, + *-ôma*, tumor]. A tumor of the chorion.
SYN *chorioma, deciduoma.*

s. benignum. A mole.

s. malignum. A tumor formed of cells from the syncytium and chorion, occurring frequently after abortion or in the puerperium at site of placenta.

syncytium (sîn-sî'tî-ûm) [G. *syn.*, with, + *kytos*, cell] **SYN** *coenocyte* 1 A multinucleated mass of protoplasm, for example, a striated muscle fiber 2 A group of cells in which the protoplasm of one cell is continuous with that of adjoining cells **EX** *mesenchyme cells of the embryo*

syndactylism (sîn-dâk'tîl-izm) [" + *daktylos*, digit, + *ismos*, condition] A fusion of 2 or more toes or fingers

syndectomy (sîn-dêk'tô-mî) [" + *dêin*, to bind, + *ektomê*, excision]. Excision of a circular strip of the conjunctiva around cornea to relieve *pannus*. **SYN:** *peritomy.*

syndesis (sîn-dê'sîs) [G. *syn.*, with, + *dêsis*, a binding together] 1 Condition of being bound together 2 Surgical fixation or ankylosis of a joint.

syndesmectomy (sîn-dês-mêk'tô-mî) [" + *desmos*, band, + *ektomê*, excision] Excision of a section of a ligament

syndesmectopia (sîn-dês-mêk'tô-pl-â) [G. *syndesmos*, ligament, + *ektôpos*, out of place]. Abnormal position of a ligament.

syndemitis (sîn-dês-mî'tîs) [" + *-itis*, inflammation] 1 Inflammation of a ligament or ligaments. 2 Inflammation of the conjunctiva.

syndesmochorial (sîn-dês'mô-kor't-âl) Pertaining to a type of placenta found in ungulates in which there is destruction of surface layer of uterine mucosa thus allowing chorionic villi to come into direct contact with maternal blood vessels

syndesmography (sîn-dês-môgr'â-fl) [G. *syn.*, with, + *graphem*, to write] Treatise on the ligaments

syndesmology (sîn-dês-môl'ô-jî) [" + *logos*, a study]. Study of the ligaments and their disorders

syndesmosa (sîn-dês-mô-mâ) [G. *syn.*, with, + *-ôma*, tumor]. A connective tissue tumor

syndesmopexy (sîn-dês-mô-pêks-î) [" + *pêxis*, fixation]. Joining of 2 ligaments or fixation of a ligament in a new place, used in correction of a dislocation

syndesmoplasty (sîn-dês-mô-plâs-tî) [" + *plassein*, to form]. Plastic surgery on a ligament.

syndesmorrhaphy (sîn-dês-mor'âf-î) [G. *syndesmos*, ligament, + *rhapê*, a seam]. Repair or suture of a ligament

syndesmosis (sîn-dês-mô'sîs) (pl *syndesmoses*) [" + *-ôsis*, condition]. Articulation in which the bones are united by ligaments. **EX:** the distal tibio-fibular articulation.

syndesmotomy (sîn-dês-môt'ô-mî) [" + *tomê*, a cutting]. Surgical section of ligaments.

syndrome (sîn'drôm, -drô-mê) [G. *syndromê*, a running together]. A complex of symptoms. For syndromes not

listed, look under noun

s., Adair-Dighton. A familial condition characterized by fragility of bones and blue scleras.

s., Adams-Stokes. Bradycardia and intermittent convulsive seizures with loss of consciousness due to organic obstruction of the bundle of His

s., Adie's. B. characterized by loss of one or more of deep reflexes and tonic state of pupil. Cause unknown.

s., adiposogenital. See *Frohlich's synd.*

s., adrenogenital. B. characterized by pubertas praecox in children, over-masculinization in adults, virilism, and hirsutism, due to oversecretion of adrenal cortical hormones **See:** *Cushing's syndrome*

s., Angelucci's. Palpitation, excitable temperament and vasomotor disturbance in spring conjunctivitis

s., dumping. Symptom complex which may follow partial gastrectomy. Appears to be related to rapid emptying of gastric pouch. Occurs immediately after eating. Consists of weakness, varying degrees of syncope, nausea, sweating, and palpitation, and, sometimes, diarrhea and sensation of warmth. Lying down usually affords some relief

s., Fröhlich's. Increase in fat, atrophy of the genitals, transition to feminine type due to lesions of the hypophysis.

s., Gradenigo's. External rectus paralysis, temporoparietal pain and suppurative otitis media on same side.

s. of Horner. Contracted pupil, ptosis, enophthalmos and dry, cool face on affected side produced by paralysis of sympathetics

Eriol. Tumors in neck, trauma, apical tuberculosis, tabes, syringomyelia, and neuritis of cervical plexus.

s., Korsakoff's. A psychosis, ordinarily due to chronic alcoholism, with polyneuritis, disorientation, insomnia, muttering delirium, hallucinations, and a bilateral wrist or foot drop.

s., Weber's. Paralysis of hypoglossal nerve on one side and of oculomotor nerve on other with paralysis of limbs due to lesion of a cerebral peduncle

syndromic (sîn-drom'îk) [G. *syn.*, with, + *dromos*, a running]. Pert. to or occurring as a syndrome

synechia (sîn-ê'ki-â) [G. *synecheia*, continuity] Adhesion of parts, esp. adhesion of iris to lens and cornea

s., annular. Adhesion of the iris to the lens throughout its entire pupillary margin

s., anterior. Adhesion of iris to cornea.

s., posterior. Adhesion of iris to capsule of lens.

s., total. Adhesion of entire surface of the iris to the lens

synechotomy (sîn-êk-ê't'ô-mî) [" + *tomê*, a cutting]. Division of a synechia or adhesion.

synecology (sîn-ê-kôl'ô-jî) [G. *syn.*, with, + *oikos*, house, + *logos*, a study]. The study of organisms in relation to their environment in group form.

syneresis (sîn-êr-ê's-îs) [" + *atresis*, a taking]. Contraction of a gel resulting in its separation from the liquid, as a shrinkage by fibrin and other colloidal gels.

synergetic (sîn-êr-jê't'îk) [G. *syn.*, with, + *ergon*, work]. Exhibiting cooperative action, said of certain muscles; working together. **SYN:** *synergic.*

synergia. The association and correlation

of the activity of synergetic muscle groups.

synergic (sín-ér'jík) ['' + *ergon*, work]. Relating to or exhibiting cooperation, as certain muscles.

synergism (sín-ér-jíz-ím). The harmonious action of two agents such as drugs or organs such as muscles producing an effect which neither alone could produce, or an effect may result which is greater than the total effects of each agent operating by itself.

synergist (sín-ér-jíst) ['' + *ergon*, work].

1. A remedy that stimulates the action of another. *SYN* *adjuvant* 2 A muscle or organ functioning in cooperation with another, as the flexor muscles.

synergy (sín-ér-jí) ['' + *ergon*, work]. Action of 2 or more agents or organs cooperating with each other, cooperation. Combined action, coordinated action.

synesthesia (sín-és-thé-zí-á) ['' + *aisthēsis*, sensation]. 1. A sensation in an area from a stimulus applied to another part. 2. A subjective sensation of another sense than the one being stimulated. *SEE* *chromatism*, *phonism*.

s. al'gica. Painful synesthesia.

synesthesialgia (sín-és-thé-zí-ál'jī-á) ['' + '' + *algos*, pain]. A painful sensation giving rise to a subjective one of different character. *SEE* *synesthesia*.

synexesis (sín-é-zé'sis) [G. *synizēsis*, a sitting together]. Closure of the pupil.

Syngamus (sín'gá-mūs). A genus of nematode worms parasitic in respiratory tract of birds and mammals.

S. laryngeus. Species normally parasitic in ruminants but sometimes accidentally infesting man.

syngamy (sín'gá-mí) [G. *syn*, with, + *gamos*, marriage]. Sexual reproduction, cell union, as of gametes in fertilization.

syngenesious (sín-jé-né'shus) Derived from an individual of the same species, said of tissue transplants.

synignocism (sín-jig'nó-ízm) ['' + *gignōskōn*, to know]. Hypnotism and its results.

synhidrosis (sín'hi-dró'sis). ['' + *hidros*, sweat]. Sweating, esp excessive sweating associated with another condition.

syniēsis (sín-iz-é'sis) ['' + *izēn*, to sit]. A closure of shutting.

s. pupillae. Closure of the pupil of the eye with loss of vision.

synkaryon (sín-kar'f-ōn) ['' + *karyon*, kernel]. A nucleus resulting from fusion of 2 pronuclei.

synkinesis (sín-ki-né'sis) [G. *syn*, with, + *kínēsis*, motion]. 1 An involuntary movement of a part occurring simultaneously with a movement, either reflex or voluntary, of another part. 2 An involuntary movement in a healthy or normal muscle accompanying an attempted movement of a paralyzed muscle on the opposite side. Called *imitative synkinesis*.

synonym (sín-ō-ním) [G. *syn*, with, + *ónoma*, name]. A word which has the same or very similar meaning as another word.

synophrys (sín-ō-fris). Condition in which the eyebrows are continuous.

synopsia (sín-ōp-sí-á). Condition in which there is congenital fusion of the eyes.

synopsis (sín-ōp'sis). A summary; a general review of the whole.

synoptophore (sín-ōp'tō-for) [G. *syn*, with, + *ops*, opt-, sight, + *phoros*, a bearer]. Apparatus for diagnosing and treating strabismus.

synoptoscope (sín-ōp'tō-skōp) ['' + '' + *skopein*, to examine]. An instrument

for diagnosis and treatment of strabismus. *SYN* *synoptophore*.

synorchidism, synorchism (sín-or'kíd-ízm, -klzm) ['' + *orchis*, orchid-, testicle, + -ismos, condition]. Union or partial fusion of the testicles.

synosteoecsis, synostosis (sín'ós-tē-ō'sis, -tō'sis) [G. *syn*, with, + *osteon*, bone, + -ōsis, condition]. 1 Articulation by osseous tissue of adjacent bones. 2. Union of separate bones by osseous tissue.

synostectomy (sín-ós-tē-ōt-ō-mí) [G. *syn*, with, + *osteon*, bone, + *tomē*, a cutting]. Dissection of joints.

synotia (sín-ō'shí-á). The union of or approximation of the ears occurring in embryonic development, usually associated with absence of, or incomplete development of, the lower jaw.

synovectomy (sín-ō-vēk'tō-mí) ['' + L. *ovum*, from G. *ōon*, egg, + G. *ektomē*, excision]. Excision of synovial membrane.

synovia (sín-ō-ví-á) ['' + L. *ovum*, from G. *ōon*, egg]. A colorless, viscid, lubricating fluid of joints, bursae, and tendon sheaths secreted within synovial membranes.

It contains mucin, albumin, fat, and mineral salts. *SEE* *asynovia*.

synovial (sín-ō-ví-ál) [G. *syn*, with, + L. *ovum*, from G. *ōon*, egg]. Pert to synovia, the joint lubricating fluid.

s. bursa. *SYN* *bursa mucosa*. A cleft in connective tissue between muscles, tendons, ligaments, and bones lined by a synovial membrane and containing synovia. *SEE* *bursa*.

s. crypt. Diverticulum of a synovial membrane of a joint.

s. cyst. Accumulation of synovia in a bursa, *s. crypt*, or sac of a synovial hernia, causing a tumor.

s. fluid. Lubricating, clear fluid secreted by the synovial membrane of a joint. *SYN* *synovia*.

s. folds. *SYN* *phcae synoviales*. Smooth folds of synovial membrane on inner surface of joint capsule.

s. hernia. Protrusion of a portion of synovial membrane through a tear in the stratum fibrosum of a joint capsule.

s. membrane. One lining the capsule of a joint.

s. sheaths. *SYN* *vaginae mucosae*. Sheaths which develop in osteofibrous canals through which tendons pass. Each is a double layered tube, the space between the two layers being occupied by synovial fluid.

s. villi. *SYN*: *haversian fringes*. Slender avascular processes on the free surface of a synovial membrane projecting into the joint cavity.

synovioma (sín'ō-ví-ō'mā) [G. *syn*, with, + L. *ovum*, + G. -ōma, tumor]. A tumor arising from a synovial membrane.

synovitis (sín-ō-ví'tis) [G. *syn*, with, + L. *ovum*, egg, + G. -itis, inflammation]. Inflammation of a synovial membrane.

Exor: As a result of an aseptic wound, of a subcutaneous injury (contusion or sprain), of the irritation produced by floating cartilage, or of exposure to cold and dampness, simple inflammation may attack the synovial membrane.

SYM: Joint painful, severely so on motion, esp. at night. Swollen, tense; may be fluctuating. At the knee, patella is floated up from condyles, can be readily depressed, to rise again when pressure is taken off. The part is never in full extension, as this produces great

suffering. Local heat raised, but skin, which is very sensitive to pressure only at certain points, is neither thickened nor reddened. After a few days, pain lessens, swelling diminishes as the effusion and extravasated blood are absorbed, the limb takes its natural position and recovery follows.

TREATMENT: Joint placed at rest. Cold may be applied locally by ice bag or coil of rubber tubing or by continuous irrigation, or hot applications may be made; or equal pressure as firm as can be comfortably borne. Affected region enveloped in cotton or wool and a bandage, preferably of rubber, put on. If there is great serous distention or large extravasation of blood into the cavity, aspiration may be required under strict asepsis.

s., chronic. The active congestion largely disappears, but there is an undue amount of fluid in the cavity and the membrane itself is edematous. Later, if disease does not subside, membrane and articular structures become irregularly thickened by plastic exudation and formation of fibrous tissue. Joint is weak, but not esp. painful except on pressure, may not be even then, movements, esp. in extension, are restricted, and generally attended by some grating or creaking. When there is great accumulation of liquid, symptoms are well marked. Fluid, which is straw-colored, somewhat viscid, sometimes flocculent and more or less blood stained, may be drawn off with the hypodermic needle.

TREATMENT Varies with amount of fluid present and according to type of arthritis present. When not of long standing and articular fullness not great, rest and pressure, preferably immobilized with plaster of Paris. When of long standing, with joint much distended, and impaired usefulness, the condition is called hydrarthrosis or hydrops articuli. If above treatment proves useless, aspirate and inject 3% to 5% solution of carbolic acid after inflammation has gone down entirely.

s., dendritic. S with villous growths developing in the sac.

s., dry. S without much effusion or no effusion.

s., fungous. Tuberculosis of a joint. SYN *arthritis fungosa*.

s., pannous. Is rarely met with, occurs in tubercular arthritis. The great serous accumulation in the synovial sac will almost certainly be regarded as non-tubercular until after aspiration and examination of the fluid.

s., purulent. S with purulent effusion within the sac.

s., serous. S. with nonpurulent, copious effusion.

s., sicca. Same as *dry** *synovitis*.

s., simple. S. with effusion only slightly turbid if not clear.

s., tendinous. Inflammation of a tendon sheath.

s., vaginal. Same as *tendinous** *synovitis*.

s., vibration. S resulting from a wound near a joint.

synpneumonic (sîn-nû-môn'ik) [G. *syn*, with, + *pneumonia*, pneumonia]. Concurrent with pneumonia; complicating pneumonia.

syntaxis (sîn-tâks'is) [' + *taxis*, arrangement]. A junction bet. 2 bones. SYN: *articulation*.

synthermal (sîn-thêr'mâl) [' + *thermê*, heat]. Having the same temperature.

synthesis (sîn'thês-is) [' + *tithenai*, to place]. GRÆM. The union of elements to produce compounds; the process of building up; the opposite of analysis or decomposition. In general, the process or processes involved in the formation of a complex substance from simpler elements or compounds as the *synthesis* of proteins from amino acids.

synthetic (sîn-thêt'ik) [G. *synthetikos*, placed together]. Relating to or made by synthesis, artificially prepared.

syntone (sîn'tôn) [G. *syn*, with, + *tonos*, tone]. An individual temperamentally responsive to his environment and its social demands. SEE *syntonic*.

syntonic (sîn-tôn'ik) [' + *tonos*, tone]. Pert. to a reaction type in which the subject responds strongly to emotional stimuli in harmony with the situation.

The type is exaggerated in maniclike states and in depressions.

syntonic (sîn'tô-nin) [' + *tonos*, tense]. An acid albumin, esp. one formed by the action of dilute hydrochloric acid on muscle during gastric digestion.

syntoxoid (sîn-tôks'oyd) [' + *toxikon*, poison, + *eidōs*, form]. A toxoid having the same degree of affinity for an antitoxin as the toxin has.

syntripsis (sîn-trîp'sis) [' + *tripsis*, a crushing]. A comminuted fracture or act causing it.

syntropan (sîn'trô-pân). Registered trademark for a brand of amprotoprine phosphate.

Uses: In spastic disorders of gastrointestinal and genitourinary tracts, also in parkinsonism.

syntrophoblast (sîn-trôf'ô-blâst) The syncytial layer of the trophoblast. SEE *trophoblast*, *syncytial*.

syntrope (sîn-tro'pê) [' + *outrê*, scar] 1. An agent stimulating cicatrization. 2. Promoting cicatrization.

syphilicosis (sîf-il-êl-kô'sis) [syphilis + G. *elkôsis*, ulceration]. Syphilitic ulceration.

syphiliculus (sîf-il-êl'kûs) [syphilis + G. *elkos*, ulcer]. A syphilitic ulcer.

syphilide (sîf'il-id) [Fr.]. Any cutaneous affection of syphilitic origin. SYN: *syphiloderm*.

syphilionthus (sîf-il-i-ôn'thûs) [' + G. *ionthos*, eruption]. A copper-colored, branny-scaled syphilide.

syphilophobia (sîf-il-i-fô'bî-â) [' + G. *phobos*, fear]. Morbid fear of syphilis. SYN: *syphilophobia*.

syphilis (sîf'î-lis) [origin uncertain; possibly from G. *syn*, with, + *philos*, love, or from *Syphilus*, a shepherd in a poem who had the disease]. SYN *lues venerea*, *morbus gallicus*, *poz*. An infectious, chronic, venereal disease characterized by lesions which may involve any organ or tissue. It usually exhibits cutaneous manifestations, relapses are frequent, and it may exist asymptomatic for years.

ETIOLOGY: *Treponema pallidum*, a spirochete, which is transmitted by direct contact between humans, contact with freshly contaminated material, by transfusion of infected blood or plasma, or in utero by passage of organism from mother to fetus. The organism may enter through any broken place in skin or mucous membrane.

PRIMARY STAGE SYM: Initial lesion appears 2 to 4 weeks after inoculation, changing from a small red papule to a small ulcer, to a hard chancre. Usually upon prepuce or vulva. Lymph nodes enlarge about 2 weeks after appearance of lesion.

Almost positive signs of syphilis are inflammation at mouth of Stensen's duct and enlargement of epitrochlear lymphatic glands.

SECONDARY STAGE SYM: Symptoms appear about 6 weeks after appearance of primary lesion, principally in the form of lesions of the skin and mucous membranes. The character of the skin lesions is protean, syphilis often being called the "Great Imitator." Systemic symptoms such as headache, fever, and malaise are common but may be absent. Enlargement and induration of regional lymph nodes occurs. Eruptions of skin, maculae (roseola), syphilide, reddish brown "coppery" spots, continuing for a week or two, recurring possibly later.

TERTIARY STAGE SYM: The heart and blood vessels (cardiovascular syphilis) and the central nervous system (neurosyphilis) are frequently involved. Tabes dorsalis, paresis (general paralysis of the insane), and various types of psychoses may result.

DIAG: Laboratory tests for syphilis are based on three procedures: 1. Dark-field demonstration of spirochetes, useful in early stages. 2. Biopsy. 3. Serologic tests of blood and spinal fluid, designated S.T.S. These include flocculation tests (Kahn, Eagle, Mazzini, Kline, Hinton), complement-fixation techniques (Wassermann test and its modifications). The VDRL (Venereal Disease Research Laboratory) test is a rapid slide flocculation technique.

TREATMENT: Penicillin is the treatment of choice for all types and stages. Should allergic reactions occur, other antibiotics (oxytetracycline, chlortetracycline, or erythromycin) may be substituted. The use of arsenicals, bismuth, and mercurials has been almost completely supplanted by antibiotics; however, they may be employed in late syphilis prior to administration of penicillin.

DOSAGE (American Academy of Dermatology and Syphilology): 1. *Primary, Secondary, Early Latent, or Late Latent Syphilis* 600,000 units procaine penicillin intramuscularly daily for 10 days. 2. *Late (Cardiovascular) Syphilis* 15 cc bismuth subsalicylate intramuscularly weekly for 6 to 12 injections, followed by 10,000,000 to 12,000,000 units penicillin over course of 20 days.

s., cardiovascular. Syphilis involving the heart and great blood vessels, especially the aorta. Saccular aneurysms of the aorta and aortic insufficiency frequently result.

s., congenital. S. present at birth.

s., extragenital. Syphilis in which the primary chancre is located elsewhere than on genital organs.

s., inocentium, s. insentium. S. not contracted through cottonium.

s., latent. Phase in which symptoms are absent and the disease can be diagnosed only by serological tests.

s., marital. Syphilis acquired in wedlock.

s., meningovascular. A form of neurosyphilis in which the meninges and vascular structures of the brain and spinal cord are involved. May be localized or general.

s., prenatal. Syphilis transmitted from mother to child; congenital syphilis.

s., venereal. Syphilis acquired through illicit sexual relations.

s., visceral. Syphilis in which visceral organs are involved.

syphilitic (sif-il-lit'ik) [*syphilis*]. Related to, caused by, or affected with syphilis.

s., fever. Rise in temperature in early stage of secondary syphilis.

s., macules. Small red eruptions manifested in secondary syphilis which often cover the entire body.

SYM: Associated with chancre or scar, alopecia, pain in bones, swollen glands, and sore throat.

syphilization (sif-il-i-zā'shūn) (*syphilis*). 1. Inoculation with *Treponema pallidum* to immunize against syphilis. 2. State resulting from such an inoculation.

syphiloderma, syphiloderma (sif-il-ō-derm, sif'il-ō-der'mā) [*syphilis* + *G. derma*, skin]. A syphilitic cutaneous disorder.

syphilogenesis, syphilogeny (sif'il-ō-jén-ē-sis, sif-il-ō-jén-l) [*syphilis* + *G. genesis*, to produce, + *genesis*, production]. The development or origin of syphilis.

syphilographer (sif-il-ōg'rā-fer) [*syphilis* + *G. graphen*, to write]. One who writes about syphilis.

syphilography (sif-il-ōg'rā-fl) [*syphilis* + *G. graphen*, to write]. A treatise on syphilis.

syphiloid (sif'il-ōyd) [*syphilis* + *G. eidos*, form]. 1. Resembling syphilis. 2. A disease akin to syphilis.

syphilologist (sif-il-ōl'ō-jist) [*syphilis* + *G. logos*, a study]. A specialist in treatment of syphilis.

syphilology (sif-il-ōl'ō-jī) [*syphilis* + *G. logos*, a study]. The study of syphilis and its treatment.

syphiloma (sif-il-ō'mā) [*syphilis* + *G. oma*, tumor]. A syphilitic tumor. A gumma.

syphilomania (sif-il-ō-mā-ni-ā) [*syphilis* + *G. mania*, madness]. Morbid fear of syphilis or inference that one is suffering with it. **SYN:** *syphilophobia*.

syphilopathy (sif-il-ōp'ā-thī) [*syphilis* + *G. pathos*, disease]. Any syphilitic disorder.

syphilophobia (sif-il-ō-fō-bl-ā) [*syphilis* + *G. phobos*, fear]. Morbid fear of syphilis or delusion of having the disease.

syphilophobic (sif'il-ō-fō-bl'ik) [*syphilis* + *G. phobos*, fear]. Pert. to or affected with syphilophobia.

syphilophyma (sif'il-ō-fl'mā) [*syphilis* + *G. phyma*, a growth]. 1. Any growth or excrescence due to syphilis. 2. Syphiloma of the epidermis.

syphilopsychosis (sif'il-ō-sī-kō'sis) [*syphilis* + *G. psychē*, soul, + *-osis*, condition]. Any mental disease caused by syphilis.

syphilosis (sif-il-lō'sis) [*syphilis* + *G. -osis*, disease]. Generalized syphilitic disease.

syphilotropic (sif-il-ō-trōp'ik) [*syphilis* + *G. tropos*, a turning]. Especially susceptible to syphilis.

syphilous (sif'il-ūs) [*syphilis*]. Of the nature of or pert. to syphilis. **SYN:** *syphilitic*.

syphionthus (sif-i-ōn'thūs) [*syphilis* + *G. ionthos*, eruption]. The copper-colored patches seen in syphilis.

syrigomphonia (sir'ig-mō-fō-ni-ā) [*G. syrigmos*, a whistle, + *phōnē*, voice]. 1. A sibilant rāle. 2. A whistling sound in pronunciation of s due to a denture peculiarity.

syrig'mus. A subjective sound such as a hissing or ringing heard in the ears.

syringadenoma (sir-ing-ād-en-ō'mā) [*G. syrigx*, pipe, + *adēn*, gland, + *-ōma*, tumor]. Tumor of a sweat gland.

syringe (sir-'inj', sir-'inj) [G. *syngx*, pipe].
1. Instrument for injecting fluids into cavities or vessel. 2 To wash out or introduce fluid with a syringe.

VARIETIES. Antitoxin, antrum, bladder, cocaine, drainage tube, ear, fountain, hemorrhoidal, hydrocele, hypodermic, lacrimal, Luer's, mucous, nasal, urethral, vesical-suction

syringectomy (sir-in-jék'tō-mī) [G. *syngx*, pipe, + *ektomē*, excision]. Removal of the walls of a fistula

syringitis (sir-in-jī'tis) [“ + *-itis*, inflammation]. Inflammation, eustachian tube.

syringobulbia (sir-in-gō-bul'bi-ā) [G. *syngx*, pipe, + *bulbos*, a bulb]. A chronic progressive disease characterized by development of cavities in the medulla oblongata. See *syringomyelia*.

syringocoele (sir-in-gō-sēl) [“ + *kōila*, a hollow]. The central canal of the myelon or spinal cord.

syringocystadenoma (sir-in-gō-sis-tad-ēn-ō'mā) [“ + *kystis*, a bladder, + *adēn*, gland, + *-ōma*, tumor]. Adenoma of sweat glands characterized by tiny, hard, papular formations

syringocystoma (sir-in-gō-sis-tō'mā) [“ + “ + *-ōma*, tumor]. Cystic tumor having its origin in ducts of the sweat gland

syringoid (sir-ing'ōyd) [“ + *eidos*, form]. Fistulous. Resembling a tube

syringoma (sir-in-gō'mā) [“ + *ōma*, tumor]. Tumor of the sweat glands

syringomeningocoele (sir-in-gō-men-in-gō-sēl) [“ + *meningz*, membrane, + *kēle*, hernial]. Meningocoele which is similar to a syringomyelocoele

syringomyelia (sir-in-gō-mī-ē'lī-ā) [G. *syngx*, tube, + *myelos*, marrow]. A chronic progressive disease of the spinal cord characterized by the development of cavities and gliosis of surrounding tissue. Usually begins before age of 30, and is more common among males. Its cause is unknown

SYM. Cavitation occurs in cervical and lumbar regions and soon involves pathways of the cord carrying impulses of pain and temperature sensations, resulting in dissociated sensory loss. Destruction of lateral and anterior gray matter causes muscular atrophy, weakness, and autonomic anomalies

TREATMENT: There is no satisfactory treatment. Sudden enlargement of cavity may warrant surgical intervention with decompression of cavity. Persistent pain may necessitate chordotomy or medullary tractotomy for relief.

syringomyelitis (sir-in-gō-mī-ē-lī'tis) [“ + “ + *-itis*, inflammation]. Inflammation coincident with abnormal dilation of the central canal of spinal cord.

syringomyelocoele (sir-in-gō-mī-ēl-ō-sēl) [“ + “ + *kēlē*, tumor]. A form of spina bifida in which the cavity of the projecting portion communicates with the central canal of the spinal cord.

syringomyelus (sir-in-gō-mī-ēl-ūs) [“ + *myelos*, marrow]. Abnormal dilatation of central canal of spinal cord.

syringopontia (sir-in-gō-pōn'shi-ā) [“ + *L. pons*, pont-, bridge]. Cavities in the pons Varolii similar to *syringomyelia*.

syringosystrophy (sir-in-gō-sis-tō-flī) [“ + *systrophē*, a twist]. Twisting of the oviduct.

syringotome (sir-ing'ō-tōm) [“ + *tomē*, a cutting]. Instrument for incision of a fistula.

syringotomy (sir-in-gōt'ō-mī) [G. *syngx*, tube, + *tomē*, a cutting]. Operation for cure of fistula by cutting.

syrinx (sir'inks) [G. *syngx*, pipe]. 1. The eustachian tube. 2 Pathological cavity in the spinal cord or brain. 3. A fistula.

syrup (sir'up) [*L. syrumpus*]. Concentrated solution of sugar in water or aqueous liquid.

They usually do not represent a very high percentage of the active drug. Some are used principally to give a pleasant odor and taste to solutions. There are 18 official syrups

syssarcosis (sis-ar-kō'sis) [G. *syn*, with, + *sarkōsis*, flesh condition]. The union of bones by means of muscles, muscular articulation, as of the *hyoid* and *patella*.

systaltic (sis-tāltik) [G. *systaltikos*, contracting]. Contracting and dilating; having a systole. **SYN pulsating.**

system (sis'tēm) [G. *systēma*, an arrangement]. 1. An organized grouping of related structures. 2. A group of structures or organs related to each other and functioning together in the performance of certain functions, as the digestive system. 3. A group of cells or aggregations of cells which perform a particular function, as the reticulo-endothelial system

s. autonomic nervous. That portion of the peripheral nervous system which innervates all smooth muscle, cardiac muscle, and glands, the activities of which are involuntary. It includes the *craniosacral* (*parasympathetic*) and *thoracolumbar* (*sympathetic*) divisions, each of which provides fibers for most of the visceral structures or organs

s.s., of body. Skeletal, muscular, digestive, circulatory, lymphatic, respiratory, urinary, integumentary, endocrine, nervous, reproductive

s. cardiovascular. The heart and blood vessels (aorta, arteries, arterioles, capillaries, venules, veins, vena cavae)

s. centimeter-gram-second. **ABBR:** cgs. A system of units of length, mass, and time

s. central nervous. The brain and spinal cord.

s. chromaffin. **SEE:** *chromaffin system*

s. circulatory. **SYN** *vascular system*. System concerned with circulation of body fluids. It includes the cardiovascular and lymphatic systems

s. cytochrome. Cytochrome oxidase and three hemochromogen-like pigments (cytochromes a, b, and c), which make molecular oxygen available for the oxidation of hydrogen liberated from cellular metabolites

s. digestive. The alimentary canal (mouth, pharynx, esophagus, stomach, small and large intestines) and accessory glands (salivary glands, liver, pancreas)

s. endocrine. The ductless glands or the glands of internal secretion.

s. enzyme. A group of enzymes essential for the completion of a series of reactions, as the pyruvate oxidation system. **SEE** *s. cytochrome*.

s. extrapyramidal motor. That which includes all descending fibers arising in cortical and subcortical motor centers which reach the medulla and spinal cord by pathways other than recognized pyramidal tracts. They are of importance in maintenance of equilibrium and muscle tone

s. genital. The reproductive system
s. genitourinary. That of the genitals and urinary organs.
s. haversian. The structural unit of bone. **SEE** *haversian system*.
s. hematopoietic. The blood-forming

tissues and organs of the body. Includes the bone marrow and lymphatic tissue and organs

s., impulse-conducting. A system of atypical muscle fibers (Purkinje fibers) within the heart which conducts impulses regulating contractions of the atria and ventricles. Includes S-A and A-V nodes and bundle of His.

s., integumentary. The skin and its derivatives (hair, nails, etc.)

s., lymphatic. That concerned with the circulation of lymph. Includes lymph vessels and ducts and lymphatic organs (lymph nodes, tonsils, thymus, spleen)

s., muscular. That which includes all the muscles (smooth, cardiac, striated or skeletal). As generally used, the term refers to the skeletal muscles

s., nervous. That which includes the brain, spinal cord, ganglia, and nerves

s., osseous. The bony structures of the body; the skeleton

s., portal. The hepatic portal vein and all of its branches

s., reproductive. SYN: *genital system*. The gonads and their associated structures and ducts

s., reproductive, female. The ovaries, uterine tubes (oviducts), uterus, vagina, and vulva

s., reproductive, male. The testes, efferent ducts, epididymus, ductus deferens, ejaculatory duct and urethra with the *accessory glands* (bulbo-urethral, prostate, seminal vesicles, and penis)

s., respiratory. The air passageways (nasal cavities, pharynx, larynx, trachea, bronchi, bronchioles, alveolar ducts, and alveoli) and the lungs which incorporate the last of the ducts named

s., reticuloendothelial. Collectively, all the phagocytic cells of the body excepting the leukocytes. Includes macrophages, histiocytes, Kupffer's cells of the liver, reticular cells of lymphatic organs, and many others

s., sympathetic nervous. The thoracolumbar or sympathetic division of the autonomic nervous system

s., urinary. The kidneys, ureters, bladder, and urethra.

s., urogenital. The urinary and reproductive systems combined

s., vascular. That of the heart, blood vessels, and lymphatics

s., vegetative nervous. The autonomic nervous system, *q.v.*

s., visceral efferent. That which includes all efferent nerve fibers conveying impulses to the visceral organs; the autonomic nervous system, *q.v.*

systema (sis-tém'á) [G. *systema*, an arrangement]. System.

s. nervorum sympathicum. BNA. The sympathetic nervous system.

systemic (sis-tém'ík) [G. *systema*, arrangement] Pert. to a whole body rather than to one of its parts. *somatic.*

s. circulation. The blood flow from the left ventricle through the aorta and all its branches (arteries) to the capillaries of the tissues and its return to

the heart through veins and the vena cavae which empty into the right atrium

s. death. Death of the body as a whole. SYN: *somatic death*.

s. remedies. Remedies which will act on the body as a whole, as a tonic.

systemoid (sis'tém-oyd) [G. *systema*, an arrangement, + *eidos*, form] 1 Resembling a system 2 Pert. to tumors made up of several types of tissues

systole (sis'tól-ē) [G. *systolē*, contraction] That part of the heart cycle in which the heart is in contraction, *i.e.*, the myocardial fibers are tightening and shortening.

RS: *murmur, presystole, diastole.*

s., aborted. A premature cardiac systole. Arterial pressure is increased little if at all because of inadequate filling of ventricles due to shortening of preceding diastole

s., anticipated. One that is aborted because it occurs before the ventricle is filled.

s., arterial. The rebound or recoil of the stretched elastic walls of the arteries following ventricular systole

s., auricular. The contraction of the atria

s., electrical. The total duration of the QRS-T complex in an electrocardiogram. Approximately the same as that of the mechanical systole

s., extra. A premature one occurring in addition to the fundamental rhythm.

s., premature. SYN *extra systole*. One slightly preceding a normal systole

s., ventricular. Ventricular contraction.

systolic (sis-tól'ík) [G. *systolē*, contraction]. Pert. to the systole.

s. discharge. The amount of blood ejected by the heart at each systole

s. murmur. A cardiac one during systole.

s. pressure. Blood pressure is expressed in terms of the systolic pressure; the greatest force exerted by the heart and the highest degree of resistance put forth by the arterial walls

RS: *blood pressure, diastolic p., pulse p., pulse, systole.*

systolometer (sis-tól-óm'ēt-ēr) [“ + *metron*, a measure]. Device for determining quality and character of cardiac murmurs.

systemma (sis-trém'á) [G. *systemma*, a twist]. Cramp in calf of the leg, the muscles assuming form of a hard ball.

syzygial (siz-ij'ī-āl) [G. *syzygia*, conjunction]. Pert. to a syzygium.

syzygiology (siz-ij-ī-ōl'ō-jī) [“ + *logos*, a study]. Interdependence or interrelationships of the whole as opposed to isolated functions or separate parts.

syzygium (si-zij-ī-ūm) [G. *syzygia*, conjunction]. Partial fusion of 2 structures.

syzygy (siz-ij-ī) [G. *syzygia*, yoke]. Fusion of organs, each remaining distinct.

Szabo's test (sah'bō). A test for hydrochloric acid.

t. Abbr. for *temporal*, and for Latin, *ter*, three times.

T. Abbr. for *temperature*, *time*, *tension* (intraocular). **T+** indicates increased tension; **T—**, diminished tension

T₁, T₂, etc. First thoracic vertebra, second thoracic vertebra, etc.

T-bandage. Bandage resembling the letter **T**. **Ser.** bandage.

T-wave. One of the waves or elevations in an electrocardiogram due to ventricular activity

TA. Abbr. for alkaline tuberculin.*

T. A. Abbr. for *toxin-antitoxin*

Ta. Chemical symbol for *tantalum*.

tabacism (tāb'ā-sizm) [*L. tabacum*, tobacco, + *G. -ismos*, condition] Chronic tobacco poisoning **SYN** *tabacosis*.

tabacosis (tāb-ā-kō'sis) [" + *G. -ōsis*, condition] Chronic tobacco poisoning, esp. from inhaling tobacco dust

tabacum (tāb-āk'ūm) [*L.*]. Tobacco.

tabagism (tāb'āj-izm) [*L. tabacum*, tobacco, + *G. -ismos*, condition]. Tobacco poisoning **SYN** *tabacosis*

Tabanidae (tā-bān'ī-dē). A family of insects belonging to the order *Diptera*. It includes the horse flies, gadflies, deer flies, and mango flies, which are blood-sucking insects attacking man and other warm-blooded animals. They are of medical importance in that they serve in the transmission of the filaria worm. *Loa loa* (tularemia, anthrax and other diseases; their bites are extremely painful and heal with difficulty

tabardillo (tab'ar-dēl'yo) Mexican typhus **SYN** under *typhus*

tabatière anatomique (tah-bah-tē-air'ahn-an-tō-mēk') [*Fr.* anatomical snuffbox]. Depression at back of hand at base of thumb

tabella (tā-bēl'ā) (pl. *tabellae*) [*L. tabella*, tablet] A medicated mass of material formed into a small disk.

RS *disk, lozenge, tablet, troche*

tabes (tā'bēz) [*L. tabes*, a wasting]. 1. A gradual, progressive wasting in any chronic disease 2 *Tabes dorsalis*, *q.v.*

SYN Postural instability, esp. when eyes are closed, and a staggering, wide-base gait are characteristic, hence the name *locomotor ataxia*. Pains and paresthesias are common, esp. "lightning" pains, described as sharp, stabbing, and paroxysmal. Ankle and knee reflexes are diminished or lost. Many symptoms characteristic of syphilis such as pupillary changes, optic atrophy, bladder disturbances, development of trophic ulcers esp. on feet, make diagnosis certain

TREATMENT: Antiluetic treatment for which **SEE** *syphilis*. Special measures should be taken to relieve pains which are most troublesome. Rehabilitation measures are often essential for those with disturbed gait

t., cerebral. Chronic degenerative brain disease with physical and mental deterioration. **SYN** *paresis, general*.

t., cervical. *T.* first affecting the upper extremities.

t., diabetic. Peripheral neuritis, affecting diabetics. May affect spinal cord and simulate *tabes dorsalis*.

t. dorsalis. **SYN:** *locomotor ataxia, tabetic neurosyphilis, syphilitic posterior spinal sclerosis*. A form of neurosyphilis characterized by chronic and usually progressive degeneration of ascending fibers of sensory neurons in posterior columns of spinal cord and usually also involving dorsal roots and ganglia of spinal nerves

t. ergotica. *T.* resulting from the use of ergot

t., marantic. *T.* with great emaciation.

t. mesenterica. Emaciation and general disorder of the functions of nutrition due to engorgement and tubercular degeneration of the mesenteric glands.

tabetic (tā-bēt'ik) [*L. tabes*, a wasting]. Pert to or afflicted with *tabes* or *tabes dorsalis*

t. ataxia. Occurs when there are lesions of first order of sensory neurons.

t. crises. Paroxysms of pain or other acute manifestations of episodic character in *tabes dorsalis*

t. foot. Twisted foot in *locomotor ataxia*

tabetiform (tāb-ēt'ī-form) [*L. tabes*, a wasting, + *forma*, shape]. Resembling or characteristic of *tabes*

table (tā'bl) [*L. tabula*, a board] 1. A flat-topped structure, as an operating table 2 A thin, flat plate, as of bone

t's. of skull. Inner and outer condensed layers of the cranial bone separated by diploe (cancellous bony tissue).

t., vitreous. The inner cranial table.

t's. of weights and measures. **SEE:** *weights and measures in Appendix*.

tablespoon (tā'bl-spoon). A large spoon containing about 15 cc or 4 fluidrams. **ASSN:** *tbsp*

tablet (tāb'lēt) [*O Fr. tablette*, from *L. tabula*, a table]. A small, disklike mass of medicinal powder

t., coated. Usually made by coating compressed tablets with sugar, chocolate, etc

t., compressed. Made by forcibly compressing the powdered substances into the desired shape; usually made to contain from 1 to 10 gr of the active drug

They are frequently very hard and sometimes not readily soluble.

t., dispensing. Those that contain a comparatively large amount of the active drug, as 1 gr of strychnine sulfate.

Used by pharmacists and dispensing physicians to avoid the necessity of weighing small amounts of a potent drug in filling prescriptions. There is one official tablet.

t., hypodermic. Usually made as are tablet triturates, frequently containing, in addition, some agents that produce chemical action when water is added, thus causing a rapid disintegration of the mass.

t. triturates. Made by moistening the powder with a volatile liquid, as alcohol, and then molding into shape and allowing the liquid to evaporate.

They seldom contain more than 1 gr. of the active agent. They will usually disintegrate readily and are a very de-

sirable form for administering certain drugs

taboparalysis (ta'bô-pâr-âl'îs-îs) [L. *tabes*, a wasting, + *paralysis*, a loosening at the sides]. *Tabes* associated concurrently with general paralysis

taboparesis (ta'bô-pâr-ê'sîs, -pâr'ê-sîs) [' + G. *paresis*, relaxation] SYN: **taboparalysis**. General paralysis in combination with *tabes*

tabophobia (tâ'bô-fô-bî-â) [' + G. *phobos*, fear] A morbid fear of being afflicted with *tabes*, a common symptom of neurasthenia

tabular (tâb'û-lar) [L. *tabula*, a table]. 1 Resembling a table. 2. Set up in columns, as a *tabulation*

t. *bone*. A flat one, or one with two compact bonelike parts with cancellous tissue bet. them

tache (tahsh) [Fr. *spot*]. A colored spot or macule on the skin, as a freckle

t. *blanche*. A white spot seen on liver in some infectious diseases

t. *bleuâtre* (blu-âht'r'). A blue spot on skin usually due to bite of cutaneous parasites. SYN: *macula caerulea*.

t. *cérébrale*. The red line which occurs in meningitis and other nervous disorders, when the fingernail is drawn across the skin, *q.v.*

t. *motrice*. The motor end-plate of a striated muscle fiber

t. *noire*. A small round or oval ulcer covered by a black scab; the primary lesion of *fievre boutonneuse* and *ricketsial* pox.

tachetic (tâk-êt'îk) [Fr. *tache*, spot]. Marked by purple or reddish blue patches (*taches*)

tachogram (tâk'ô-grâm) [G. *tachos*, swift-ness, + *gramma*, a mark] A graphic tracing of rate of flow of blood current

tachography (tâk-ô-grâ'fî) [' + *graphein*, to write]. The recording of the speed of the blood circulation.

tachy- [G.L. Combining form meaning *swift*.

tachyauexis (tâk'î-awks-ê'sîs) Condition in which a part of an organism grows more rapidly than the whole

tachycardia (tâk'î-kar'dî-â) [G. *tachys*, swift, + *kardia*, heart]. Abnormal rapidity of heart action

t. *atrial*. SEE *auricular fibrillation*

t. *atrioventricular*. T arising from stimuli in the A-V node characterized by sudden onset and cessation

t. *constant*. Occurs in some valvular affections, fatty degeneration, compensation failure, pregnancy, nervous disorders, exhaustive diseases, exophthalmic goiter

t. *ectopic*. T resulting from causes other than disorders in conducting tissue of heart

t. *essential*. Rapid, persistent heart action due to functional disturbance

t. *extrinsic*. T caused by factors outside of the heart, as increased metabolism or instability of the nervous system.

t. *intrinsic*. T caused by infection, as from rheumatism.

t. *nodal*. T resulting from an increase in rhythmicity of A-V node over the S-A node, often the result of digitalis therapy.

t. *paroxysmal*. Sudden and abrupt acceleration of cardiac rate, ceasing abruptly.

Due to stimulus of cardiac contraction having its origin at an abnormal point. May go as high as 250 beats per minute. SEE: *arrhythmia*, *bradycardia*.

t. *p. atrial*. Paroxysmal tachycardia originating in an ectopic or abnormal focus in the atria. Occurs commonly in early childhood or early adulthood and usually in the absence of heart disease. Its cause is unknown

t. *p. ventricular*. Paroxysmal tachycardia originating in an ectopic or abnormal focus in the ventricles. Occurs most commonly after age 50 Coronary disease or digitalis therapy is common cause

t. *reflex*. Tachycardia resulting from stimuli outside the heart reflexly accelerating heart rate or depressing vagal tone

t. *sinus*. Uncomplicated tachycardia when sinus rhythm is faster than 100 beats per minute, as that due to exercise Causes other than exercise include hyperthermia, thyrotoxicosis, hemorrhage, anoxia, infections, cardiac failure, and certain drugs such as atropine, epinephrine, and nicotine.

TREATMENT Tachycardia sometimes ceases following procedures which cause vagal stimulation Among these are pressure on one or both carotid sinuses, pressure on eyeballs, induction of gagging or vomiting, attempted expiration with glottis closed, lying down with feet in air and bending over If above procedures when employed singly are unsuccessful, two or more combined may produce desirable results

t. *strumosa exophthalmica*. Tachycardia occurring as a symptom of exophthalmic goiter

t. *ventricular*. Rapid contractions of the ventricle, the atrial rhythm remaining unchanged

tachycardiac (tâk-i-kar'dî-âk) [' + *kardia*, heart] Pert. to or afflicted with tachycardia

tachylalia (tâk'î-lâ'î-â) [' + *lalein*, to babble] Rapid speech

tachymeter (tâk-im'ê-ter) [' + *metron*, a measure] Instrument for estimating the rapidity of any body in motion

tachyphagia (tâk-i-fâ'jî-â) [' + *phagien*, to eat]. Rapid eating

tachyphasia (tâk'î-fâ'zî-â) [' + *phasis*, speech] Very rapid or voluble speech. SYN: *tachyphrasia*

tachyphrasia (tâk'î-frâ'zî-â) [' + *phrasia*, speech] Excessive volubility or rapidity of speech, as seen in mental disorders SYN: *tachyphasia*

tachyphrenia (tâk'î-frên'î-â) [G. *tachys*, swift, + *phrên*, mind]. Abnormally rapid mental activity

tachyphylaxis (tâk'î-fîl'âk'sîs) [' + *phylaxis*, protection] Lack of immune immunization to a toxic dose of a substance by previously injecting tiny doses of the same substance.

tachypnea (tâk-ip-nê-â) [' + *pnoia*, breath]. Abnormal rapidity of respiration.

t. *nervous*. Forty or more respirations per minute

It occurs in hysteria, neurasthenia, etc.

tachypsychia (tâk-i-sî'klî-â) [' + *psychê*, soul]. Rapid action of psychic processes.

tachyrrhythmia (tâk-i-rîth'mî-â) [' + *rhythmos*, rhythm]. 1. SYN: *tachycardia*. Rapid heart action. 2 Increase in frequency of brain wave: in electroencephalography up to 12 to 50 per sec.

tachysterol(e) (tâ-kîs'tê-rôl). One of the isomers of ergosterol* obtained by irradiation.

tachysystole (tāk't-sis'tō-lē) [G. *tachys*, swift, + *systole*, contraction]. Abnormally rapid systole. See *extrasystole*.

tachytrophism (tāk't-trē'fizm) [*+* *trophē*, nourishment, + *-tismos*, condition]. Accelerated metabolism.

tactile (tāk'til) [L. *tactilis*, tangible, from *tangere*, to touch]. Perceptible to the touch.

t. corpuscles. SYN. *Meissner's corpuscle*. Minute elongated bodies enclosing the endings of several afferent nerve fibers and serving as the receptor for slight pressure or touch. They are located in dermal papillae just beneath the epidermis and are most numerous on finger tips, toes, soles, palms, lips, nipples, and tip of tongue.

t. disk. SYN. *Merkel's disk*. Tiny expanded end of a sensory nerve fiber found in epidermis and in epithelial root-sheath of a hair.

t. system. That portion of the nervous system concerned with the sensation of touch. Includes sensory nerve endings (Meissner's corpuscles, Merkel's tactile disks, hair-root endings), afferent nerve fibers, conducting pathways in the cord and brain, and sensory (somesthetic) area of cerebral cortex.

tactometer (tāk-tōm'ēt-ēr) [L. *tactus*, touch, + G. *metron*, a measure]. Instrument for determining acuity of tactile sensiveness.

tactual (tāk-tū'al) [L. *tactus*, touch]. Relating to the sense of touch. SYN. *tactile*.

tactus (tāk'tus) [L. *tactus*]. Touch.

e. eruditus, f. expertus. Sensitiveness of touch acquired by long practice, as by a diagnostician or surgeon.

taenia (tē'nī-ā) [L. *taenia*, a flat band]. 1. Any bandlike structure. 2. A tapeworm.

t. coli. BNA. One of 3 bands of the large intestine into which muscular fibers are collected, i. e., *t. mesocolica* (mesenteric insertion), *t. libera* (opp. mesocolic band), and *t. omentalis* (at place of adhesion of omentum to transverse colon).

t. fimbriae. The folded fringed margin of the fimbria which lies at post end of the fornix. It is attached to the choroid plexus and lies in cavity of inferior cornua of the lateral ventricle.

t. fornix. T. fimbriae, *q. v.*

t. pontis. SYN. *fila lateralia*. One or two small transverse bands of fiber at rostral border of the pons.

t. semicircularis. SYN. *stria terminalis* (terminal stria) of the thalamus.

t. thalami. Structure separating superior surface from lateral surface of thalamus, its lateral portion containing the stria medullaris.

t. ventriculi quarti. SYN. *hugula*. The thickened line of attachment of the arachnoid to lateral surface of the medulla.

t. ventriculi tertii. SYN. *stria medullaris thalami*. The taenia of the third ventricle.

Taenia (tē'nī-ā). A genus of parasitic flatworms belonging to the class Cestoda, phylum Platyhelminthes. They are elongated, ribbonlike worms consisting of a scolex, usually armed, and a chain of segments (proglottids). Adults live as intestinal parasites of vertebrates; larvae parasitize both vertebrates and invertebrates which serve as intermediate hosts. SEE: *taeniasis*, *tapeworm*.

T. saginata. SYN. *beef tapeworm*. Tapeworm whose larval stages live in

cattle, the adult living in the intestine of man. Humans acquire it by eating insufficiently cooked beef infested with the encysted larval form (*cysticercus* or *bladderworm*). Adults may reach a length of 15 to 20 ft. or longer.

T. sollum. SYN. *pork tapeworm*. Tapeworm whose larval stages live in hogs, the adult living in the intestine of man. Humans acquire it by eating insufficiently cooked pork infested with larval form. Infected pork containing the bladder worm (*Cysticercus cellulosae*) is called *measly* pork. The cysticerci may also develop in humans, infection occurring from self-infection with eggs from contaminated hands or by hatching of eggs liberated in the intestine.

taeniicide (tē'nī-ā-sid). An agent which kills tapeworms.

taeniasis (tē'nī-ā-sis). Condition of being infested with tapeworms of the genus *Taenia*. *q. v.* SEE: *tapeworm*.

taeniform (tē'nī-form). Having the structure of, or resembling a tapeworm.

taenifuge (tē'nī-fūj). An agent which expels tapeworms.

taenophobia (tē'nī-ō-fō'bi-ā). Morbid fear of becoming infested with tapeworms.

tagliacotian operation (tāl-yā-kō'shān). Plastic operation on the nose in which skin is used from another part of the body. SYN. *rhinoplasty*.

tagma (tāgmā) (pl. *tagmas*, *tagmata*) [G. *tagma*, a thing arranged]. An aggregate of molecules, protoplasm.

tail (tāl) [AS. *taegel*]. Posterior, long, flexible terminus, as the extremity of the spinal column. SEE: *cauda*.

t. bone. Bone at caudal end of spine. SYN. *coccyx*.

tailor's cramp or spasm (tāl'lor). An occupational neurosis characterized by spasm of the muscles of the arms and hands.

Tail's law (tāl). Exploratory laparotomy should be made in every case of obscure abdominal or pelvic disease which is a threat to health or life.

Ts. operation. Repair of a torn perineum. SYN. *perineorrhaphy*.

talgia (tāl-āl'ji-ā) [L. *talus*, heel, + G. *algos*, pain]. SYN. *pternalgia*. Pain in the heel or ankle.

talc, talcum (tālk, tāk'ūm) [L. *talcum*, powder]. Powdered soapstone; a soft, soapy powder, native hydrous magnesium silicate used as a dusting powder and as a filter.

talipes (tāl'i-pēs) [L. *talus*, heel, + *pēs*, foot]. Any of a number of deformities of the foot, esp. those occurring congenitally; a nontraumatic deviation of the foot in the direction of one or the other of the four lines of movement, or of two of these combined.

t. arcuatus. Exaggerated normal arch of the foot. SYN. *i. cavus*.

t. calcaneus (flexion). Heel alone touching the ground, the patient walking on inner side of heel. Often follows infantile paralysis of muscle of tendo Achillis.

t. cavus. Same as *t. arcuatus*.

t. equinus (extension). Form with walking on the toes.

t. percuus. Excessive plantar curvature.

t. valgus (abduction). Form with everted foot.

t. varus (adduction). With inverted foot.

talipomanus (tāl-ip-ōm'ān-ūs) [L. *talus*, ankle, + *pēs*, foot, + *manus*, hand].

Deformity of the hand in which it is twisted out of shape. SYN: *clubhand*.

talcocalcaneal (tă'kô-kâl-kâ'nê-âl) [" + *calcaneum*, heel bone] Pertaining to the talus and calcaneus, bones of the tarsus

talocrural (tă-lô-krû'râl) [" + *crus*, *crur*-, leg.] Pertaining to the talus and leg bones

t. articulation. The ankle joint, a ginglymus or hinge joint

taloid (tal'ô-nd) [M.E. *talón*, from L. *talus*, heel]. The crushing region, the post. part. of a lower molar tooth.

talus (tă'lûs) [L. *talus*, ankle] BNA. The anklebone articulating with the tibia and fibula, and forming the ankle joint

tambour (tam'boor) [Fr. *tambour*, drum]. A shallow, drum-shaped appliance used in transmitting and registering arterial pulsations, blood pressure, respiratory movements, peristaltic contractions and other slight movements

tampon (tam'pon) [Fr. *tampon*, plug]. 1. A plug, usually of lint or cotton, for closing a wound or cavity, to absorb secretions, or to arrest hemorrhage. 2. To plug up a wound or cavity with a tampon, as to stop hemorrhage.

MATERIALS: Aseptic cotton, wool, oakum, gauze, etc

Mikulicz drain or tampon is a capillary drain on a large scale and consists of a square piece of iodoform gauze of requisite size, placed in a cavity and filled with narrow strips of plain gauze until the necessary degree of compression is secured. Used where there is parenchymatous oozing. Serves as a tampon to arrest bleeding and also acts as a capillary drain.

Rectal tampon made of piece of rubber tubing, size of thumb, 12 in. in length, covered with iodoform gauze. Into this tube is inserted a glass cylinder 3 in. in length, over which the rubber tubing should extend 2 in. An umbrella of iodoform gauze, 12x12 in., is fastened to the tube by tying a silk ligature over it at a point corresponding with the glass cylinder. Strips of sterilized gauze are used in packing the space bet the tube and umbrella or mantle of gauze after the tube has been inserted into rectum.

t. nasal. Soft rubber bulb, dilated with compressed air, for plugging nostrils to stop hemorrhage from the nose

tamponade, tamponage (tăm-pôn-ăd', tăm-pôn-ăj) [Fr. *tampon*, plug] To use or make use of a tampon

t. cardiac. Condition resulting from accumulation of excess fluid in the pericardium. May result from pericarditis or injuries to the heart or great blood vessels, with accumulation of blood

tannic acid (tăn'îk). Acid extracted from nutgalls. SYN: *tannin*, *q.v.*

tannin (tăn'in). 1. Acid substance found in bark of certain plants and trees or their products, usually from nutgall. Found in coffee and to a greater extent in tea. 2. Any of several substances containing tannin.

ACTION AND USES: Astringent, antidote for various poisons, for burns, and as a hemostatic. It is constipating. It is partly eliminated in the urine as gallic acid.

tap (tăp) 1. [A.S. *taeppa*, tap]. To puncture or to empty of fluid by paracentesis. 2. [O.Fr. *taper*, of imitative origin]. A slight blow.

tapetum (tă-pê'tûm) [L. *tapete*, a carpet].

A layer of fibers from the corpus callosum forming roof and lateral walls of inf and post horns of lateral ventricles of the brain. Fibers pass to temporal and occipital lobes

tapeworm (tăp'worm) [A.S. *taeppa*, a narrow band, + *wurm*, worm]. Any of the species of parasitic worms belonging to the class *Cestoda*, phylum *Platyhelminthes*. A typical tapeworm consists of a *scolex*, with hooks and suckers for attachment, and a series of segments or *proglottids*, which vary in number from a few to several thousand. New proglottids are budded off of the *scolex*, so that a worm is actually a linear colony consisting of *immature*, *mature*, and *ripe* or *gravid* proglottids.

Adults live as endoparasites in the intestine. The terminal ripe proglottids break off and pass out with the feces. Upon disintegration eggs develop into minute six-hooked *oncospheres* which when ingested by proper intermediate host, usually another vertebrate, develop in muscle tissues into an encysted larva known as a *cysticercus* or *bladderworm*. Infestation occurs when uncooked meat containing bladderworms is eaten

Species of medical importance are: *Diphyllobothrium latum*, *Echinococcus granulosus*, *Hymenolepis nana*, *H. diminuta*, *Taenia saginata*, and *T. solium*, *q.v.*

Also see *cysticercus*, *cysticercosis*, *hydatid*, *parganum*, *taeniasis*

SYM Often absent. If numerous, may cause intestinal obstruction. Occasionally mild systemic symptoms may occur from absorption of metabolic wastes. Sometimes there are dyspeptic symptoms

t. armed. *Taenia solium*, the pork tapeworm, whose scolex possesses a row of hooks about the rostellum.

t. beef. *Taenia saginata*, *q.v.*

t. dog. *Diphylidium caninum*, *q.v.*

t. dwarf. *Hymenolepis nana*, *q.v.*

t. fish. *Diphyllobothrium latum*, *q.v.*

t. mouse. *Hymenolepis diminuta*.

t. pork. *Taenia solium*, *q.v.*

t. rat. *Hymenolepis diminuta*.

taphophobia, taphophobia (tăf'ê-fô'bl-â, -ô-fô'bl-â) [G. *taphos*, grave, + *phobos*, fear]. Abnormal fear of being buried alive.

tapinocephalic (tăp'in-ô-sêf-âl'îk) [G. *tapeinos*, lying low, + *kephalê*, head]. Pert to flatness of top of cranium.

tapinocephaly (tăp'in-ô-sêf'â-îl) [" + *kephalê*, head]. Flatness of top of the skull.

tapioca (tăp'î-ô'kâ) [Portuguese]. COMP. The starchy substance of the cassava plant; a strictly carbohydrate food.

AV. SERVING 40 Gm. PRO. 0.2, Fat a trace. CARBO. 35.2

ASH. CONST. Ca 0.023, P 0.090, Cl 0.018, S 0.029, Fe 0.0018. FUEL VALUE: 300 Gm. = 100 Cal, 1 lb. = 1520 Cal, 100 Gm. = 333 Cal.

ACTION Fattening. Easy to digest but leaves little residue.

TIME FOR DIGESTION: One and two-thirds oz. in 2 3/4 hr.

RS. carbohydrate, starch, sugar.

tapiroid (tă'plr-oyd) [Spanish *tapir*, tapir, + G. *eidōs*, form]. Resembling a tapir's snout; said of an elongated cervix uteri.

tapotement (tă-pôl-mon') [Fr.]. Percussion in massage.

It is divided into: (a) *Beating* with the clenched hand; used for sciatica and muscular atrophy. (b) *Clapping*,

performed with the palm of the hand; used to reach superficial nerves. (c) *Hacking*, with the ulnar border of the hand; used principally around a nerve center and upon the muscles. (d) *Punctuation*, with the tips of the fingers; used principally around the heart and upon the head.

The strength of the manipulations is a principal point in the massage treatment, and care must be taken not to bruise the patient. As a rule, begin with moderate pressure, ascertaining from the patient his sensation. White petrolatum or some other oleaginous substance should be used to avoid abrading the skin. *See* *massage*.

tapping (tăp'ing) 1. [O Fr. *taper*, of imitative origin] Percussion in massage. *Syn.* *tapotement*. 2. [A.S. *taeppa*, *tapl*] Removal of fluid from a cavity. *Syn.* *paracentesis*. *See* *thoracentesis*.

tarantism (tăr'ăn-tizm) [Italian *Taranto*, *tarantula*, + G. *-ismos*, condition] A nervous affection marked by stupor, melancholy and uncontrollable dancing mania.

Popularly attributed to bite of *tarantula*.

tarantula (tă-răn'tū-lă) A large venomous spider much feared by many people; however, its bite is relatively harmless. *See* *spider bite*.

taraxis (tă-răks'is) Inflammation of the conjunctiva.

Tardieu's echymoses or spots (tar-dyū') Subpleural spots of echymosis following death by strangulation.

target (tar'gēt) [O Fr. *targette*]. 1 PT: The electrode on which cathode rays within an x-ray tube are focused and from which roentgen rays are emitted; usually of a heavy metal such as tungsten. 2 A tiny figure on an ophthalmometer's arm whose image is used to determine the amount of corneal astigmatism. *Syn.* *mire*, *q.v.*

t. cell. An abnormal erythrocyte with rounded central area which stains deeply, surrounded by a lightly staining area which in turn is surrounded by denser cytoplasm at the periphery of the cell, the whole somewhat resembling a target with a bull's eye, found in certain types of anemia and after splenectomy.

t. cell anemia. *Thalassemia*, *q.v.*

t. organ. The organ or structure toward which the effects of a drug, hormone, or therapeutic agent are primarily directed.

Tarnier's sign (tahr-ne-ă') A sign of coming abortion, the disappearance of angle bet upper and lower uterine segments in pregnancy.

tarsadenitis (tar-săd'ē-nī'tis) Inflammation of the tarsal or meibomian glands of eyelid.

tarsal (tar'sāl) [G. *tarsos*, flat of foot, edge of eyelid] 1 Pertaining to the tarsus or supporting plate of the eyelid. 2 Pertaining to the ankle or tarsus.

t. arches. Two branches, sup and inf of the median palpebral artery supplying the eyelid.

t. bones. The seven bones of the ankle.

t. cartilage. *Syn.* *palpebral cartilage*. The dense connective tissue of the tarsus of eyelid. It is not cartilage.

t. glands. *Syn.* *meibomian glands*. Branched alveolar, sebaceous glands embedded in tarsus and opening on margin of eyelid.

t. lacrimal glands. Accessory lacrimal glands located on inner surface of eyelids, esp upper lid.

tarsalgia (tar-sāl'ji-ă) [G. *tarsos*, flat of the foot, + *algos*, pain] Pain in tarsus or ankle. May be due to flatfoot, shortening of Achilles tendon, or other causes.

tarsalia (tar-să'li-ă) (sing. *tarsale*) [L.] The tarsal bones.

tarsalls (tar-să'lls) [L.] One of the tarsal muscles. *See* *Table of Muscles in Appendix*.

tarsectomy (tar-sēk'tō-mī) [G. *tarsos*, flat of the foot, edge of eyelid, + *ektomē*, excision] 1 Excision of tarsus or a tarsal bone. 2 Removal of tarsal plate of an eyelid.

tarsitis (tar-sī'tis) [' + *-itis*, inflammation]. 1 Inflammation of tarsus of the foot. 2 Inflammation of eyelid's border. *Syn.* *blepharitis*.

tars- [G] Combining form meaning the flat of the foot, edge of the eyelid.

tarsocheilloplasty (tar'sō-kī'lō-plās-tī) [G. *tarsos*, edge of eyelid, flat of the foot, + *cheilos*, lip, + *plassein*, to form]. Plastic surgery of borders of the eyelid.

tarsoclasia, tarsoclasia (tar'sō-kī-ă-sī-ă, tar-sōk'lās-is) [' + *klasis*, a breaking] Surgical fracture of the tarsus for correction of clubfoot.

tarsomalacia (tar'sō-mă-lă-sī-ă) [' + *malakia*, a softening]. Softening of the tarsal cartilages of the eyes.

tarsometatarsal (tar'sō-mēt-ă-tar'sāl) [' + *meta*, between, + *tarsos*, flat of the foot] Pert. to the tarsus and the metatarsus.

tarsophyma (tar'sō-fīm-ă) [' + *phyma*, a growth] Any tarsal tumor of the eyelid. *Syn.* *hordoleum*, *sty*.

tarsoplasia, tarsoplasty (tar'sō-plă-sī-ă, tar'sō-plăs'tī) [' + *plassein*, to form] Plastic surgery of margin of the eyelid. *Syn.* *blepharoplasty*.

tarsoptosis (tars-ōp-tō'sis) [' + *ptōsis*, a drooping] Falling of the tarsus. *Syn.* *flatfoot*.

tarsorrhaphy (tar-sor'ă-fī) [G. *tarsos*, edge of eyelid, flat of the foot, + *rhaphe*, a seam] The operation of uniting the edges of the lids at the outer commissure for the purpose of reducing the width of the palpebral fissure.

tarsotomy (tar-sōt'ō-mī) [' + *tomē*, a cutting]. 1 Incision of tarsal cartilage of an eyelid. 2 Any surgical incision of the tarsus of the foot.

tarsus (tar'sus) (pl. *tarsi*) [G. *tarsos*, a flat structure] 1 The ankle, with its seven bones located between bones of lower leg and metatarsus. It forms the proximal portion of the foot. It consists of the following bones: *calcaneus* (os calcis), *talus* (astragalus), *cuboid* (os cuboideum), *navicular* (scaphoid), and *first, second, and third cuneiform bones*. The talus articulates with the tibia and fibula; the cuboid and cuneiform bones with the metatarsals.

See *foot, skeleton, names of individual bones*. 2 *Syn.* *tarsal plates*. A curved plate of dense white fibrous tissue forming supporting structure of eyelid.

tartar (tar'ter) [G. *tartaron*, dregs]. Calcareous matter deposited upon the teeth.

t., cream of. Potassium bitartrate.

t. emetic. A poisonous, white, crystalline salt, the tartrate of potassium and antimony, used in medicine as a dia-phoretic, emetic, expectorant, and counter-irritant.

DOSAGE: As expectorant, $\frac{1}{10}$ gr. (0.003 Gm.); as emetic, $\frac{1}{2}$ gr. (0.03 Gm.).

POISONING: *SYM* Vomiting severe and sometimes bloody. Abdominal pain, diarrhea, and cramps in legs. Skin is cold and later face becomes cyanotic. Urine suppressed. Delirium and convulsions may occur.

TREATMENT: If stomach is not emptied by vomiting, use stomach tube. Give strong coffee or tea, or a half teaspoonful of tannic or gallic acid in a half glass of water. Follow with soothing drinks, such as white of an egg in water, barley water or milk. Stimulate if collapse is present. Keep patient warm.

tartaric acid (tar-tar'ik). An acid derived from lees of wine and certain plants, occurring in 4 forms. Sometimes used in artificial lemonades or in effervescent drinks and is rarely toxic unless taken in large doses.

tart cells. Certain cells containing altered nuclear material appearing along with L.E. cells in suspensions of leukocytes or bone marrow cells from patients with disseminated lupus erythematosus.

tartrate. A salt of tartaric acid.

taste (tást) [O Fr *taster*, to feel, to taste]. 1. To try or perceive by touch of the tongue. 2. A chemical sense dependent upon sense organs on the surface of the tongue when they are in contact with a substance to ascertain its attributes, the nervous impulses being carried to the brain by the lingual (from the anterior two-thirds of the surface) and the glossopharyngeal (from the posterior third) nerves.

Taste sensation is experienced through stimulation of gustatory nerve endings in the tongue. There are 4 fundamental taste sensations. *sweet, bitter, sour, and salt.*

Loss of taste may be due to bilateral disease of chorda tympani nerve and of gustatory fibers of the glossopharyngeal nerve.

RS: *ageusia, agnosia, alliaceous, alitriogeusia, amblygeusia, appetite, caccogeusia, calyculus gustatorius, degustation, dysgeusia, gustation, gustatory, hypergeusia, hypogeusia, oxygeusia, parageusia, pseudogeusia.*

t., after. The persistence of a taste sensation after removal of original stimulus.

t. area. Area in cerebral cortex at lower end of somesthetic area.

t. blindness. Inability to taste certain substances such as phenylthiocarbamide (PTC). May be due to a hereditary factor which is transmitted as a mendelian recessive trait.

t. buds. Sensory end-organs which mediate the sensation of taste. They are oval structures located on surface of tongue, esp sides of circumvallate papillae, on soft palate, epiglottis, and portions of pharynx. Each contains sensory, gustatory (taste) cells and supporting (sustentacular) cells. When stimulated by chemical stimuli, they give rise to sense of taste. *SEE: taste cells.*

t. cells. *SYN: gustatory cells.* Neuroepithelial cells within a taste bud which serve as receptors for the sense of taste. Each possesses a terminal *taste hair* which projects through the inner *taste pore*.

T. A. T. Abbr. for toxin-antitoxin.

taurocholemia (taw'rô-kô-lê'mî-â) [G. *tauros*, a bull, + *cholê*, bile, + *aima*, blood]. Taurocholic acid in the blood.

tauto- [G.] A form meaning *the same*.

tautomeral, tautomeric (taw-tôm'er-âl -to-mër'ik) [G. *tauto*, the same, + *meros*, a part]. Noting certain neurons which send processes to the white matter on the same side of the spinal cord.

tautomerism (taw-tôm'er-izm) [' + " + -ismos, condition]. Phenomenon in which 2 formulae are possible but only one stable substance is obtainable.

tautorotation (taw'tô-rô-tâ'shûn) [' + L. *rotâre*, to turn round]. A change in specific rotation which occurs when a solution of certain sugars stands a while.

taxis (tâk'sis) [G. *taxis*, arrangement]. 1. Manual replacement of displaced structures. 2. The response of an organism to its environment, a turning toward (positive taxis) or away from (negative taxis) a particular stimulus, e.g. *chemotaxis, q.v.*

t., bipolar. Replacing of a retroverted uterus by drawing down the cervix in the vagina and pressing upward through the rectum.

taxonomy (tâks-ôn'ô-mî) [' + *nomos*, law]. Laws and principles of classification of animals and plants.

Tay-Sachs disease. The infantile form of amaurotic family idiocy characterized by a cherry-red macula lutea. It is a disorder of lipid metabolism.

T. b. Abbr. for *tubercle bacillus* and for *tuberculosis*.

Tb. Abbr. for *terbium*.

tblsp. Abbr. for *tablespoon*.

Tc. *SYMS* for *technetium*.

t. d. s. Abbr. meaning *take 3 times a day*.

Te. 1. *SYMS* for *tellurium*. 2. Abbr. for *tetanus*.

tea (tê). 1. An infusion of a medicinal plant. 2. Leaves of plant *Thea chinensis* from which a beverage is made.

COMP. It contains dextrin, gum, nitrogenous extracts, oxalates, phosphate of potassium, and its active principle, *theine*, a trimethyl xanthine resembling caffeine. Tea also contains tannin, an astringent, the amount in tea being two to three times that in coffee; otherwise, the constituents of tea are practically the same as those of coffee.

t., black. Tea made from leaves which have been fermented before they are dried.

t., green. Tea prepared by heating leaves in open trays.

t., Paraguay. A tea made from the leaves and stems of the *Ilex paraguayensis*. It is a stimulating drink and contains volatile oil, tannin, and caffeine.

TEAB. Abbr. for *tetraethylammonium bromide*.

TEAC. Abbr. for *tetraethylammonium chloride, q.v.*

tear (târ). To separate or pull apart by force.

tears (têrz) [AS *têar*]. 1. The watery saline solution secreted by the lacrimal glands, *q.v.* 2. Hardened lumps or tear-like drops of any gummy or resinous material.

tease (têz) [A.S. *taesan*, to pluck]. To separate a tissue into minute parts with a needle to prepare it for the microscope.

teaspoon. Abbr. *tsp.* A spoon holding approximately 4 ml. (cc.) or 1 fluid dram.

teat (têt) [M.E. *tete*, from A.S. *tít, teat*]. 1. The nipple of the mammary gland. *SYN: papilla mammitia.* 2. Any protuberance resembling a nipple.

teatulation (têt'ô-lâ'shûn) [A.S. *tít, teat*]. The development of a nipplelike elevation.

technic (têk-nêk') [Fr. from G. *technê*, art]. Details of a procedure or of an operation.

technical (têk-ni'-kal) [G. *technikos*, skilled]. Requiring technic or special skill.

technician (têk-nish'-ân) [G. *technê*, art]. One skilled in a special art.

t., medical laboratory. A person who has received special training in medical laboratory procedures

techno- [G.]. Combining form meaning art, skill.

technologist (têk-nôl'-ô-jist). A technician, esp. who is highly trained

t., medical. A medical technician who is certified by the Registry of Medical Technologists of the American Society of Clinical Pathologists.

techno- [G.]. Combining form meaning child.

tectocephaly (têk-tô-sêf'-âl-i) [L. *tectum*, roof, + G. *kephalê*, head]. Possession of a boat-shaped cranium SYN *scaphocephalism*.

tectonic (têk-tôn'-ik) [G. *tektôn*, a builder]. Relating to plastic surgery

tectorial (têk-tô-ri'-âl) [L. *tectum*, roof]. Pert. to a roof or covering SYN: *tegmen-tal*.

tectorium (têk-tô-ri'-ûm) [L. *tectôrium*, a covering]. 1 Any rooflike structure 2. Corti's membrane. SYN *membrana tectoria*.

tectospinal (têk'tô-spî-nâl) [L. *tectum*, roof, + *spina*, thorn] From the tectum mesencephali to the spinal cord.

t. tract. A tract of white fibers of the spinal cord passing from the tectum of midbrain on 1 side, crossing, and going down through the medulla to the spinal cord.

tectum (têk'tûm) [L. *tectum*, roof]. 1. Any structure serving as, or resembling, a roof 2. The dorsal portion of the midbrain consisting of the sup. and inf. colliculi (corpora quadrigemina).

t. mesencephali. Roof of the midbrain including the corpora quadrigemina.

teeth (têth) (sing. *tooth*) [A.S. *tôth*, tooth] Hard, bony projections in jaws serving as organs of mastication, there being 32 permanent teeth, 16 in each jaw. They include the following types incisors, canines, (cuspsids), premolars (bicuspsids), and molars (For numbers of each, see table below)

t., anterior. Two canine and four incisors in each jaw.

t., auditory. SYN: *Husch'ke's a. teeth*. Minute toothlike projections along the free margin of the labium vestibulare of the cochlea.

t., back. All posterior teeth (to the canines) of the molar series.

t., deciduous. Temporary or milk teeth; those comprising the first set which are shed

t., Hutchinson's. Lateral incisors of upper jaw when pegged and central incisors of same jaw having convex sides

TEETH, DECIDUOUS.

1. Second molar. 2. First molar. 3. Canine. 4. Second incisor. 5. First incisor.

and crescentic notches on their cutting edges, noted only on permanent teeth, indicating hereditary syphilis.

t., malacot'ic. Those which are apt to decay, soft in structure and white in color.

t., milk. SYN: *deciduous teeth*. The first set of teeth

t. permanent. Those of the second dentition, replacing the deciduous teeth

t., secondary. The permanent teeth erupting about the 6th year and being complete about the 15th year.

t., sclerotic. Yellowish teeth that are naturally hard and not subject to ready decay.

t., temporary. Those of the first dentition, the milk or deciduous teeth

teething (têth'-ing) [A.S. *tôth*, tooth]. Eruption of the teeth. SYN: *dentition*.

tegmen (têg'mên) (pl. *tegmina*) [L. *tegmen*, covering]. A structure that covers a part

t. mastoideum. Bony roof of mastoid cells

t. tympani. BNA Roof of tympanum separating middle ear from cranial cavity.

t. ventriculi quarti. The roof of the fourth ventricle

tegmental (têg-mên'tâl) [L. *tegumentum*, covering] Relating to a tegument or tegumentum, covering.

t. field of Forel. Three masses of fibers (fields H, H₁, H₂) located in the ventral thalamus

t. nuclei. Several masses of gray matter lying in tegumentum of midbrain and upper portion of the pons. Include the dorsal, pedunculoopontile, reticular, and ventral nuclei.

tegumentum (têg-mên'tûm) [L. *tegumentum*, covering]. 1. A roof or covering. 2. The dorsal portion of cruri cerebri of the midbrain. It contains the red nucleus and nuclei and roots of the oculomotor nerve

tegument (têg'm-ment) [L. *tegumentum*, a covering]. 1. The skin; the covering

TEETH	DECIDUOUS		PERMANENT
	Erupt	Shed	Erupt
Central incisors	7½ mos.	7 yrs.	6-8 yrs.
Lateral incisors	7-9 mos.	8 yrs.	7-9 yrs.
Canines	16-18 mos.	10 yrs.	9-11 yrs.
First premolars			9-10 yrs.
Second premolars			10-12 yrs.
First molars	12-14 mos.	10 yrs.	6-7 yrs.
Second molars	20-24 mos.	12 yrs.	11-13 yrs.
Third molars			17-21 yrs.

of the body. **SYN:** *integument*. 2. A covering structure.

tegumental, tegumentary (tĕg'ū-mĕn'tāl, -tā-rĭ) [L. *tegumentum*, a covering]. Concerning a tegument, covering.

teichopsia (tĕ-kŏp'sī-ā) [G. *teichos*, wall + *opsis*, vision]. Zigzag lines bounding a luminous area appearing in the visual field causing a temporary blindness in that portion of the eye, sometimes accompanying severe sick headaches and mental or physical strain **SYN:** *scotoma*, *scintillating*.

tenodynia (tĭ'nŏ-dĭn'f-ā) [G. *tenŏn*, tendon, + *odynē*, pain]. Pain in the tendons **SYN** *tenodynia*.

tela (tĕ'lā) [L. *tĕla*, web] Any weblike structure.

t. choroidea. Part of the pia mater covering roof of the 3rd and 4th cerebral ventricles.

t. subcutanea. Subcutaneous connective tissue, superficial fascia.

t. submucosa. The submucosa of the intestine.

telalgia (tĕl-ā'lĭ-ā) [G. *tĕle*, far away, + *algos*, pain]. Pain felt at a distance from its stimulus **SYN** *pain*, *referred*.

telangiectasia, telangiectasis (tĕl-ān'jĭ-ĕk-tā'zhĭ-ā, -ĕk'tā-sĭs) [G. *tĕlos*, end, + *aggeion*, vessel, + *ektasis*, dilatation]. Dilatation of capillaries and sometimes of terminal arteries producing an angioma of maculalike appearance, or hyperemic spot.

It may be as a birthmark, or become apparent in young children. In adults probably due to several causes, such as indigestion, gastritis, gallbladder disease, cirrhosis of the liver, exposure to weather, goiter, tuberculosis, and infections. May occur on thighs, nose, or face.

t. faciei. Acne rosacea, *q v*.
t., hereditary hemorrhagic. **SYN:** *Ossler-Weber-Rendu disease*. A hereditary disease characterized by thinness of walls of blood vessels of nose, skin, and digestive tract and tendency to hemorrhage.

t. lymphatica. Tumor composed of dilated lymph vessels.

t., spider. A stellate angioma (nevus araneus).

telangiectoma (tĕl-ān-jĭ-ĕk-tŏ-mā) [" + " + " + -oma, tumor] Angioma from dilatation of capillaries or arterioles. **SYN:** *telangioma*.

telangitis (tĕl-ān-jĭ-tĭs) [" + " + -itis, inflammation]. Inflammation of the capillaries.

telangioma (tĕl'ān-jĭ-ŏ-mā) [" + " + -oma, tumor] A tumor made up of dilated capillaries or arterioles.

telangiosis (tĕl-ān-jĭ-ŏ'sĭs) [" + " + -osis, condition]. Disease of capillary vessels.

tele- [G.] Combining forms meaning at a distance, far off.

telecardiogram (tĕl'ĕ-kar'dĭ-ŏ-grām) [G. *tĕle*, distant, + *kardia*, heart, + *gramma*, a writing]. A cardiogram which records at a distance from the patient. **SYN:** *teleelectrocardiogram*.

telecardiography (tĕl'ĕ-kar'dĭ-ŏ-grā-fĭ) [" + " + *graphein*, to write]. Process of taking telecardiograms.

telecardiophone (tĕl'ĕ-kar'dĭ-ŏ-fŏn) [" + " + *phōnē*, voice]. A stethoscope will magnify heart sounds so that they may be heard at a distance from patient.

teleceptive (tĕl-ĕ-sĕp'tĭv) [" + L. -*ceptivus*, receiving, from *capere*, to take]. Relating to a teleceptor.

teleceptor (tĕl'ĕ-sĕp-tŏr) [G. *tĕle*, distant, + L. *ceptor*, a receiver] **SYN:** *teleceptor*.

tor. A distance receptor; a sense organ that responds to stimuli arising some distance from the body. **EX:** eye, ear, nose.

telecinesia (tĕl'ĕ-sĭn-ĕ'zĭ-ā) [" + *kinēsis*, movement]. Apparent automatic movement of an object produced without contact with any stimulus or power.

telecurietherapy (tĕl-ĕ-kū-rĭ-thĕr'ā-pĭ) [G. *tĕle*, distant, + *curie* + G. *therapeia*, treatment] Application of radium rays from a distance from a patient.

teledendrite, teledendron (tĕl-ĕ-dĕn'drĭt, -dĕn'drŏn) [G. *tĕle*, distant, + *dendron*, a tree] **SYN** *teledendron*. The terminal processes of an axon.

telediastolic (tĕ'lĕ-dĭ-as-tŏ'lĭk) [G. *tĕlos*, end, + *diastolē*, a dilatation]. Concerning the last phase of the diastole.

telegony (tĕl-ĕg'ŏ-nĭ) [G. *tĕle*, distant, + *gonē*, offspring] An alleged theory that the male sperm from a dam's first sexual contact modifies the blood of the female, thus influencing the offspring resulting from mating with another sire.

This is supposed to be due to the absorption of the male sperm by the mucous tissue of the female's genitals, then entering the lymphatics and blood stream.

teleelectrocardiogram (tĕl'ĕ-lĕk'trŏ-kar'dĭ-ŏ-grām) [" + *ēlektron*, amber (electricity), + *kardia*, heart, + *gramma*, a writing] One taken with a galvanometer attached to the patient by a wire some distance from the instrument. **SYN** *telecardiogram*.

telencephalic (tĕl-ĕn-sĕf-ā'lĭk) [" + *egkephalos*, brain]. Pert. to the endbrain (telencephalon).

telencephalon (tĕl-ĕ-sĕf-ā-lŏn) [G. *tĕlos*, end, + *egkephalos*, brain] The embryonic endbrain or ant. division of the prosencephalon from which the cerebral hemispheres, corpora striata, and rhinencephalon develop.

teleo- [G.]. Combining form meaning perfect, complete.

teleology (tĕl-ĕ-ŏl'ŏ-jĭ) [G. *tĕlos*, end, + *logos*, a study]. The belief that everything has a final purpose.

teleopsis (tĕl-ĕ-ŏp'sĭ-ā) A visual disorder in which objects perceived in space have excessive depth or close objects appear far away.

teleorganic (tĕl'ĕ-ŏr-gān'ĭk) [" + *organon*, organ] Necessary to organic life **SYN** *vital*.

teleotherapeutics (tĕl'ĕ-ŏ-ther-ā-pŭ'tĭks) [" + *therapeutikē*, treatment]. The use of hypnotic suggestion in the treatment of disease **SYN** *suggestive therapeutics*.

telepathist (tĕl-ĕp'ā-thĭst) [G. *tĕle*, distant, + *pathos*, feeling]. One who claims the ability to read the mind of others.

telepathy (tĕl-ĕp'ā-thĭ) [" + *pathos*, feeling]. Supposed communication of one mind with another at a distance without any means known to physical or psychological science **SYN:** *transference*, *thought*, *teleshema*.

telerradiography (tĕl'ĕ-rā-dĭ-ŏ-grā-fĭ) [G. *tĕle*, distant, + L. *radius*, ray, + G. *graphein*, to write] Radiography with the tube about 2 meters (6½ ft.) from the body. **SYN:** *teleroentgenography*.

telergy (tĕl'er-jĭ) [" + *ergon*, work]. 1. Action without conscious exercise of the will. **SYN:** *automatism*. 2. Hypothetical action of one individual's thoughts upon brain of another by transmission of some unknown form of energy.

teleroentgenography (tĕl'ĕ-rĕnt'gĕn-ŏg'rā-fĭ) [" + *roentgen* + G. *graphein*, to

write]. Radiography in which the tube is about 2 meters (6½ ft.) from the body. **SYN:** *teledradiography*.

telesthesia (tél-és-thé-zí-á) [*' + aisthēsis*, sensation] 1 An impression received at a distance without normal operation of organs of sense. 2 Distance perception. **SYN:** *telepathy*.

telosyphilis (tél-ô-sif'il-lis) [*' + syphilis*]. 1 Congenital syphilis without lesions. **SYN:** *metasyphilis*. 2 Any nonsyphilitic condition due to syphilis. **SEE:** *parasyphilitic*.

telesystolic (tél-ô-sis-tol'ik) [G. *telos*, end, + *systole*, contraction] Pert to the termination of the cardiac systole.

teletherapy (tél-ê-thér-á-pl) [G. *têle*, distant, + *therapeia*, treatment]. Absent treatment; treatment of disease by telepathy*, method of mental healers.

tellurium (tél-û-rí-ûm) [L. *tellus*, tellur-, earth] **SYMS:** *Te* At wt 127.61, At. no. 52 A nonmetallic element used as an electric rectifier and in coloring glass.

POISONING **SYM:** Garlic odor of all secretions and excretions. A disagreeable odor to the breath with suppression of perspiration and saliva, resulting in dry skin and mouth. Anorexia, nausea, drowsiness, and weakness often found.

F. A TREATMENT: Saline cathartics, increase fluid intake, induce perspiration, otherwise treatment is symptomatic.

teleceptor. Teleceptor, *q.v.*

telodendron (tél-ô-dên-drôn) [G. *telos*, end, + *dendron*, a tree] The more or less diffuse arborizations at the end of an axon or its collaterals.

teleolecithal (tél-ô-lêk-s-thäl) Term applied to an ovum in which the yolk is concentrated at one end.

telelemma (tél'ô-lêm-mä) The membrane covering motor end-plate in a striated muscle fiber.

telophase (tél'ô-fáz) [G. *telos*, end, + *phasis*, a phase]. The final phase or stage of mitosis (karyokinesis) during which reconstruction of the daughter nuclei takes place and the cytoplasm of the cell divides giving rise to two daughter cells.

telosynapsis (tél'ô-sin-áp'sis) End-to-end union of pairs of homologous chromosomes during gametogenesis.

telotism (tél'ô-tizm) [*' + -ismos*, process]. The entire performance of a function, as that of one of the senses.

TEM. Abbr for *triethylene melamine*. **SEE:** *nitrogen mustard*.

temperament (têm'per-â-mént) [L. *temperamentum*, mixture] Individual peculiarity of physical and mental organization.

temperate (têm'per-it). Moderate; not excessive.

temperature (têm'per-â-tür) [L. *temperatura*, proportion] 1 Degree of heat of a living body; loosely, body heat above normal. 2 Degree of hotness or coldness of a substance.

(a) Body temperature varies with different organs' areas, and with the time of day. The temperature in the *liver* may be 105° F., while that under the *tongue* is 98.6° F.; the temperature under the *arm* at 2 P. M. may be 99.0° F. and at 2 A. M. 96.7° F.; the *rectal* temperature is likely to be 0.5 to 0.75° above the oral.

One of the mechanisms for raising temperature is muscular work (as in shivering); one for lowering it is sweat-

ing. The interplay of such processes keeps the body temperature constant.

(b) Body temperature may be measured by a clinical thermometer placed in the mouth, rectum, or under the arm. Rectal temperature is usually about 6° F. higher than by mouth; axillary temperature about 5° F. lower.

Body temperature is the result of the balance between *heat production* and *heat loss*. 85% of body heat is lost through the skin, the remainder via lungs and through digestive and urinary excretions. Regulation of body temperature is accomplished principally through thermoregulatory centers located in the hypothalamus. Elevation of temperature above normal is designated fever (pyrexia), subnormal temperature is *hypothermia*.

Respiration, Pulse and Temperature Ratio		
Respirations	Pulsations	Temperature
18	80	99° F.
19 (plus)	88	100° F.
21	96	101° F.
23	104	102° F.
25 (minus)	112	103° F.
27	120	104° F.
28 (minus)	128	105° F.
30	136	106° F.

Temperature Indications

107° F. Generally fatal except in intermittent fever.

106° F. Intense fever.

105° F. High fever, dangerous.

104° F. Severe fever.

102° F. Moderate fever.

101° F. Slight fever.

98.6° F. Normal.

98° F. Subnormal.

96° F. Subnormal.

94° F. Algid collapse.

93° F. Fatal collapse except in cholera.

80-84° F. Fatal.

f., absolute. T measured from absolute zero, —273° C.

f., axillary. Thermometer is placed in apex of axilla with arm pressed closely to side of body. Temperature usually about 1° F. lower than oral temp.

f., body. The t. of the body.

f., critical. The t. below which a gas may be converted to liquid form by pressure.

f., curve. Line indicating the fluctuations of t. for a given period.

f., high. More alarming with wet skin than with dry skin.

f., inverse. Condition in which body temperature is higher in the morning than in the evening.

f., maximum. Bacr: T. above which growth will not take place.

f., mean. The average t. for a stated period in a given locality.

f., minimum. Bacr: T. below which growth will not take place.

f., normal. T. of the body in health, 98.6° F. (37° C.) in man.

f., optimum. T. at which an operation is best carried out, as the culture of a given organism.

f., oral. Thermometer is held for three minutes under patient's tongue with the lips closed. It should not be taken for at least 10 min. after ingestion of hot or cold liquids. It is *not* advisable for infants, mouth-breathers, comatose patients, or those extremely ill.

t., rectal. The thermometer should be inserted at least $1\frac{1}{2}$ in. and allowed to remain 3-5 minutes. Do not take following rectal operation or if rectum is diseased. Rectal temperature is more accurate than either oral or axillary temperatures. It averages about 1° F. higher than by mouth.

t., room. T. bet. $65-80^{\circ}$ F.

t. scale. Graduated device marked at regular intervals on a thermometer to register temperature

RS thermometer scale.

t. scale, absolute. One in which absolute zero (-273° C. or -459.4° F.) is taken as zero. This is the point at which gasses theoretically are without volume, molecular motion has ceased, and there is complete absence of heat.

t. senses. The sensations of warmth resulting from raising the temperature of the skin and that of cold aroused by lowering it. The sensation of warmth is mediated by *Ruffini's corpuscles*, that of cold by *end-bulbs of Krause*. These receptors are distributed so as to form cold and warm spots on the skin. There are an estimated 250,000 cold spots, 30,000 warm spots. Afferent impulses from receptors, on reaching the thalamus, may give rise to crude uncritical temperature sensations; on being relayed to the somesthetic area of the cortex they result in discrete and fairly well localized sensations of heat and cold. Adaptation is rapid.

t., subnormal. T. below the normal of 98.6° F.

t., zero. T. at which heat and cold are not felt by a sensory end organ.

Temperature Scale (Approximate)

	Degrees Fahrenheit
Alcohol boils	173.1
Acetic acid melts	62.6
Bacillus coli communis dies in 10 minutes	140.0
Bacillus typhosus dies in 10 minutes	136.4
Bacillus acidilactici dies in 10 minutes	133.0
Bacteria, most die but not all spores	144.0
Blood heat	98.0
Bread, white, bakes at	484.0
whole wheat, bakes at	430.0
graham, bakes at	400.0
diastase most active	140.0
favorable to fermentation	107.6
Butter melts	91.4
Caramel point	350.0
Casein, hardens slightly	214.0
Cream, rises slowly at	50.0
Egg, albumen coagulates, hardens coagulation complete	212.0
dissolved albumen rises	180.0
Fever, in febrile diseases may go as high as	110.0
almost certain death except in intermittent	108.6
generally fatal except in intermittent	107.0
intense	106.0
high (dangerous)	105.0
severe	104.9
moderate	102.0
slight	101.0
Fungus of yeast destroyed	125.0
Germes, Miquel's temperature for destruction of all germs in 1 hour's heating under pressure	221.0
Microorganisms checked	32.0
destroyed but no spores	154.4

Degrees Fahrenheit

Milk boils	213.5
scalded	196.0
pasteurized (for 30 minutes)	143.0
sterilizes	180.0
lactalbumin coagulates	122.0
freezes	31.1
Pneumococcus dies in 10 minutes at	126.5
Rennin enzyme destroyed	140.0
Stearin melts	131.0-140.7
Storage, beef, fresh, lowest	37.0
beef, fresh, highest	39.0
fish	30.0
fish, fresh, best for	25.0
fish, for cold	15.0
fruits, fresh, highest	39.0
fruits, dried, highest	35.0
fruits, bananas, berries, lemons	36.0
fruits, cranberries	34.0
fruits, cantaloupe, watermelon, apples	32.0
fruits, apples, lowest for	31.0
ham and lard	35.0
meats, brined	35.0
mutton and veal, highest	36.0
mutton and veal, lowest	32.0
oysters in tub	35.0
oysters in shell	40.0
pork, highest	33.0
pork, lowest	30.0
poultry, fresh, best	29.0
vegetables, highest	35.0
Water, boils	212.0
simmers	185.0
warm	92-100.0
lowest for hot water	100.0
highest for an emetic	95.0
lowest tepid	95.0
lowest for an emetic	92.0
freezing point	32.0
cold	32-63.0
Yeast, most favorable to growth	98.0
most favorable for development	86.0
life of, suspended	32.0
killed	212.0

See thermometer, thermometry.

temperature, words pert. to: algid, a. stage, algogenic, Baruch's sign, chafage, cold, enthermic, frigid, frigidity, frigorific, hardening, heat, infant, myothermic, pseudocrisis, respiration, temperature scale, "therm-" words

temple (tēm'pl) [O.Fr. from L. *tempora*, pl. of *tempus*, temple]. The region of head in front of ear and over the zygomatic arch.

tempolabile (tēm'pō-lā'bl) [L. *tempus*, time, + *labilis*, unstable]. Becoming altered spontaneously within a definite time.

temporal (tēm'por-āl) [L. *temporalis*, pert. to time, pert. to temples] 1. Pert. to or limited in time. 2. Relating to the temples

t. bone. A bone on both sides of the skull at its base SYN. *os temporale*. SEE: Arnold's canal, mastoid, petrosa, petrosal, squamous, styloid process.

Composed of squamous, mastoid, and petrous portions, the latter enclosing the organ of hearing.

t. line. One of two lines on lateral surface of frontal and parietal bones which mark upper limit of temporal fossa.

t. lobe. Lobe of cerebrum located laterally and below frontal and occipital lobes. Contains auditory receptive areas.

temporalis (tēm'pō-rā'līs) [L.]. Muscle in temporal fossa which elevates the mandible. SEE: *Muscles*, Table of, in Appendix.

temporo- [L.]. Combining form meaning *temples of the head*.

temporomaxillary (tēm'por-ō-māk'sīl-lā-rī) [L. *tempus*, *tempor-*, temple]. Pert. to the temporal and maxillary bones.

temporooccipital (tēm'por-ō-ōk-sīp'ī-tāl) [' + *occipitalis*, pert. to the occiput]. Pert. to the temporal and occipital bones or their regions.

temporosphenoid (tēm'por-ō-sfē'nōyd) [' + *G. sphēn*, wedge, + *eidos*, form]. Pert. to the temporal and sphenoid bones.

temulence (tēm'ū-lēns) [L. *temulentia*, intoxication]. Drunkenness; intoxication.

tenacious (tē-nā'shūs) [L. *tenax*, *tenac-*, holding]. Adhering to; adhesive; retentive.

tenaculum (tēn-āk'ū-lūm) [L. *tenaculum*, a holder]. Sharp, hooklike, pointed instrument with slender shank for grasping and holding a part, as an artery.

t., abdominal. Longer than others with smaller hook. *Sim's*, *Emmet's*, *Kelly's*, etc.

t., uterine. Heavier and shorter hook used for manipulating uterus.

tenalgia (tēn-āl'jī-ā) [G. *tendon*, tendon, + *algos*, pain]. Pain in a tendon. SYN: *tenodynia*.

t., crepitans. Inflammation of a tendon sheath which on movement results in a crackling sound SYN: *tendosynovitis crepitans*.

tenderness (tēn'dēr-nēs) [M.E. *tendre*, from L. *tener*, tender]. Sensitiveness to pain upon pressure, usually cutaneous.

tendinitis (tēn-dīn-ī'tīs) [L. *tendo*, tendon, + *G. -itis*, inflammation]. Inflammation of a tendon. SYN: *tenonitis*, *i. tenonitis*.

tendonoplasty (tēn'dī-nō-plās'tī) [' + *G. plassem*, to form]. Plastic surgery of tendons SYN: *tenontoplasty*, *tenoplasty*.

tendinosuture (tēn'dīn-ō-sū'tūr) [' + *sutura*, a seam]. The suturing of a divided tendon SYN: *tenorrhaphy*.

tendinous (tēn'dīn-ūs) [L. *tendinōsus*, like a tendon]. Pert. to, composed of, or resembling tendons

t., synovitis. Inflammation of a tendon's synovial sheath.

tendo (tēn'dō) (pl. *tēdīnes*) [L. *tendo*, tendon]. A tendon.

t., Achil'lis. The tendon of the soleus and gastrocnemius muscles inserted into tuberosity of the os calcis. SEE: *leg for illustration*.

t., calcaneus. BNA. Same as *t. Achillis*.

tendolysis (tēn-dōl'ī-sīs) [' + *G. lysis*, a loosening]. The process of freeing a tendon from adhesions.

tendon (tēn'dūn) [L. *tendo*, tendon] Fibrous connective tissue serving for the attachment of muscles to bones and other parts. SYN: *sineu*.

RS: *Achilles' jerk*, *achillobursitis*, *achillotomy*, *aponeurotomy*, *chorda*, *sineu*, "*teno-*" words.

t., Achilles. The large tendon at lower end of gastrocnemius muscle, inserted into the os calcis

It is the strongest and thickest one in the body.

t., calcaneus. Achilles* tendon.

t., cells. Fibroblasts of white fibrous connective tissue of tendons arranged in parallel rows

t., central. The central portion of the diaphragm consisting of a flat aponeurosis in which fibers of the diaphragm are inserted.

t., reflex. Reflex act in which a muscle contracts when its tendon is percussed.

t. r., patellar. SYN: *patellar reflex*, *knee jerk*. Slight extension of the leg when tendon of quadriceps muscle is tapped immediately below the patella. Patient should be sitting with foot resting on floor but bearing no weight and leg slightly extended at the knee (angle about 120°).

t., spindle. Fusiform nerve ending in a tendon.

t., superior (of Lockwood). Portion of fibrous ring from which sup. oblique muscle of eye originates.

t. of Zinn. Portion of the fibrous ring (*annulus tendineus communis*) from which inf. rectus muscle of eye originates

tendoplasty (tēn'dō-plās'tī) [L. *tendo*, tendon] Reparative surgery of an injured tendon. SYN: *tenoplasty*, *tenontoplasty*

tendosynovitis (tēn'dō-sīn'ō-vī'tīs) [' + *syn*, with, + *L. ovum*, egg, + *G. -itis*, inflammation]. Inflammation of a sheath of a tendon or the tendon. SYN: *tendovaginitis*, *tenontothectis*.

t., crepitans. T. accompanied on movement by a crackling sound

tendotome (tēn'dō-tōm) [' + *G. tomos*, a cutting]. Instrument for severing a tendon. SYN: *tenotome*.

tendotomy (tēn-dōt'ō-mī) [' + *G. tomē*, a cutting]. Division of a tendon. SYN: *tenotomy*.

tendovaginal (tēn'dō-vā'jī-nāl) [' + *vagina*, sheath]. Relating to a tendon and its sheath.

tendovaginitis (tēn'dō-vā'jī-n-ī'tīs) [' + *G. -itis*, inflammation] Inflamed condition of a tendon and its sheath. SYN: *tenontothectis*.

Tenebrio (tē-nē'brī-ō). A genus of beetles including the species of *T. molitor* which serves as intermediate host of the tapeworm *Hymenolepis diminuta*

tenec'tomy. Excision of a lesion of a tendon or tendon sheath; removal of a ganglion or xanthoma.

tenesmic (tēn-ēz'mīk) [G. *tenesmos*, a stretching]. Pert. to or like tenesmus.

tenesmus (tē-nēz'mūs) [G. *tenesmos*, a stretching] Spasmodic contraction of anal or vesical sphincter with pain and persistent desire to empty the bowel or bladder, with involuntary, ineffectual straining efforts.

teni. For words beginning with *teni* not listed here, see *taeni*.

teniasis (tē-nī'ās-is) [' + *G. -iasis*, a condition]. Presence of tapeworms in the body.

tenifuge (tēn'fī-ū) [' + *yugre*, to put to flight] Causing or that which causes expulsion of tapeworms. SYN: *teniafuge*.

ten'nis el'bow. An obscure, insidious, distressing complaint after playing tennis following a period of muscular inactivity of the arm or following a long duration of play.

SYN: *radiohumeral bursitis*, *epicondylitis*.

ETIOI: It may involve inflammation of the radiohumeral bursa or partial avulsion of the common extensor tendon with consequent periositis.

SYM: Pain over lat. epicondyle of humerus radiating to outer side of upper and forearm and aggravated by dorsiflexion and supination of wrist. Weakness of wrist and difficulty in grasping objects.

TREATMENT: In mild cases, immobilization by a splint or adhesive strapping, supplemented by heat or dia-

thermy. In long continued cases, surgical intervention is indicated

teno- [G.]. Combining form meaning *tendon*.

tenodesis (tên-ôd'e-sîs) [G. *tenôn*, tendon, + *desis*, a binding]. Suturing of the end of a tendon to a point of attachment.

tenodynia (tên-ô-dîn'î-â) ['' + *odynê*, pain]. Pain in a tendon. SYN: *tenalgia*.

tenomyoplasty (tên'ô-mî'ô-plâs'tî) ['' + *mys*, *my-*, muscle, + *plassein*, to form]. Reparatve operation upon a tendon and muscle. SYN: *tenotomyoplasty*.

tenomyotomy (tên'ô-mî-ô'tô-mî) ['' + " + *tomê*, a cutting]. Excision of lateral portion of a tendon or muscle

tenonec'tomy. Excision of a portion of a tendon

tenonitis (tên-ôn-î'tîs) 1. [G. *tenôn*, tendon, + *-itis*, inflammation]. Inflammation of a tendon. SYN *tenonitis*. 2. [Tenon + G. *-itis*, inflammation] Inflammation of Tenon's capsule

tenonometer (tên'ô-nôm-ê'ter) [G. *teineln*, to stretch, + *metron*, a measure]. Device for measuring amount of intra-ocular tension

Tenon's capsule (tê-non'). A thin connective tissue envelope of the eyeball behind the conjunctiva.

T's. space. One bet the post surface of the eyeball and Tenon's capsule

tenonitis (tên-ôn-î'tîs) [G. *teineln*, to stretch, + *-itis*, inflammation]. Inflammation of a tendon SYN. *tendinitis*, *tenositis*.

tenontodynia (tên-ôn-tô-dîn'î-â) ['' + *odynê*, pain]. Pain in a tendon. SYN: *tenalgia*, *tenodynia*

tenontography (tên-ôn-tog'râ-fl) ['' + *graphên*, to writel. A treatise on the tendons

tenontology (tên-ôn-tôl'ô-jî) ['' + *logos*, a study]. The study of the tendons

tenotomyoplasty (tên-ôn'tô-mî'ô-plâs'tî) ['' + *mys*, *my-*, muscle, + *plassein*, to form]. Plastic surgery, including muscle and tendon repair, in treatment of hernia. SYN: *tenomyoplasty*.

tenotomyotomy (tên-ôn'tô-mî-ô'tô-mî) ['' + " + *tomê*, a cutting]. Cutting of the principal tendon of a muscle, with excision of the muscle in part or in whole. SYN *myoteno'tomy*

tenotoplasty (tên-ôn'tô-plâs'tî) [G. *tenôn*, tendon, + *plassein*, to form]. Plastic surgery of defective or injured tendons. SYN: *tenoplasty*.

tenothecitis (tên-ôn-tô-thê-sî'tîs) ['' + *thêkê*, sheath, + *-itis*, inflammation]. Inflammation of a tendon and its sheath. SYN: *tendosynovitis*, *tendovaginitis*, *tenosynovitis*.

t. steno'sans. A chronic form of t. with narrowing of the sheath

tenophyte (tên'ô-ftî) ['' + *phyton*, a growth]. A cartilaginous or osseous growth on a tendon.

tenoplasty (tên'ô-plâs'tî) ['' + *plassein*, to form]. Reparatve surgery of tendons. SYN: *tenotomyoplasty*.

tenorrhaphy (tên-or'â-fl) ['' + *rhap'hê*, a seam]. Suturing of a tendon

tenositis (tên-ô-sî'tîs) ['' + *-itis*, inflammation]. Inflammation of a tendon. SYN *tenonitis*.

tenostosis (tên-ô-sô'sîs) ['' + *osteon*, bone, + *-osis*, condition]. Conversion of a tendon into bony tissue

tenosuspension (ten-ô-sus-pen'shun) [G. *tenôn*, tendon, + L. *suspensio*, a hanging under]. Suspension of the humerus by a layer of a tendon to the acromion process.

tenosuture (tên'ô-sû'tûr) ['' + L. *sutura*, a stitch]. Reunion of a divided tendon. SYN: *tenorrhaphy*.

tenosynovectomy (tên-ô-sîn-ô-vêk'tô-mî). Excision of a tendon sheath.

tenosynovitis (tên'ô-sîn-ô-vî'tîs) ['' + *syn*, with, + L. *ovum*, egg, + G. *-itis*, inflammation]. 1. Inflammation of a tendon and its sheath. 2. Inflammation of a tendon sheath

t. crepitan's. Inflammation of a tendon sheath in which a cracking sound is heard on motion.

ETIOI. May follow puncture wounds, contusions, and lacerations, or from lymphatic extension from an abrasion
SYM Pain, finger rigid, excessive tenderness

Most commonly affects flexor tendons.

TREATMENT Early drainage, rest

t. hyperplastica. Painless swelling of extensor tendons over the wrist joint

tenotome (tên'ô-tôm) ['' + *tomos*, a cutting]. Instrument for section of a tendon

tenotomist (tên-ô'tô-mîst) ['' + *tomos*, a cutting]. Specialist in tenotomy

tenotomy (tên-ô'tô-mî) ['' + *tomê*, a cutting] Section of a tendon

tenovaginitis (tên'ô-vâj-in-î'tîs) [G. *tenôn*, tendon, + L. *vagina*, sheath, + G. *-itis*, inflammation] SYN *tenothecitis*. Inflammation of a tendon sheath

tension (tên'shûn) [L. *tensio*, a stretching]. 1. Process or act of stretching; state of being strained or stretched. 2. Pressure, as arterial tension. 3. Expansive force of a gas or vapor. 4. PT A synonym for voltage, thus high tension would mean high voltage

Thus, to say that the tension of oxygen in arterial blood is 100 mm of mercury means that the blood contains as much oxygen as it would absorb if exposed to pure oxygen at a pressure of 100 mm of mercury long enough to reach equilibrium, or if exposed to a gaseous mixture in which the partial pressure of oxygen was 100 mm. of mercury. This method of expression is very convenient in explaining the direction in which the respiratory gases diffuse within the body.

t. arterial. SYN: *arterial blood pressure*. 1. Tension resulting from the force exerted by the blood on the walls of arteries.

t. of gases. Gas pressure measured in percentages of atmospheric pressure.

When in solution, gases are measured by gas pressure in surrounding medium sufficient to prevent gas from escaping from the solution

t. headache. Headache caused by sustained tension of muscles of the face, neck, and scalp

t. intraocular. Internal pressure of liquid within eyeball.

t. intravenous. Force exerted by the blood on the walls of a vein.

t. muscular. That condition of a muscle in which fibers tend to shorten and thus perform work, or liberate heat

t. premenstrual. Condition occurring periodically usually a week or ten days before menstruation characterized by extreme nervousness and irritability, emotional instability, headaches, and sometimes depression. Usually disappears a few hours after onset of menstrual flow

t. surface. Molecular property of film on surface of a liquid to resist rupture, the particles tending to pull inward.

t. suture. One used to reduce pull of the edges of a wound.

tensiophone (tên'si-ô-fôn) [L. *tensio*, tension, + G *phônê*, sound] Device for obtaining blood pressure readings by auscultation and palpation.

tensor (tên'sor) [L. *tensor*, a stretcher]. A muscle making a part tense. SEE. *Muscles*, Table of, in Appendix.

tent (tên't) [O Fr. *tente*, from L *tenta*, stretched out] 1. To keep open with a tent 2. A portable covering or shelter composed of fabric

t., oxygen. A tent which can be placed over a bed for the administration of oxygen usually to the very sick, restless, and uncooperative patients

tentative (tên'tâ-tiv) [L. *tentativus*, from *tentare*, to try] Noting a diagnosis subject to change because of insufficient data; experimental.

tenth cranial nerve. Nerve supplying most of the abdominal viscera, the heart, lungs, and esophagus SYN. *vagus nerve*, qv SEE: *cranial nerves* in Appendix

tentigo (tên-ti'gô) [L.] Abnormal sexual desire SYN: *lasciviousness*, *lust*, *nymphomania*, *satyriasis*

tentorial. Pertaining to a tentorium

t. notch. SYN *foramen ovale* of *Pacchioni* An arched cavity formed by the anterior and inner border of the tentorium cerebelli

t. pressure cone. Projection of a portion of temporal lobe of cerebrum through the incisure of the tentorium due to increased intracranial pressure

tentorium (tên-tô'ri-ûm) [L. *tentorium*, tent] A tentlike structure or part.

t. cerebelli. BNA. The process of the dura mater bet the cerebrum and cerebellum supporting the occipital lobes

tentum (tên'tûm) [L. *tentum*, from *tendere*, to stretch]. The penis

tenuate (tên'û-ât) To make thin

tenuity (tên'û-i-ti) The state or condition of being thin

tenuous (tên'û-ûs) Thin, slender, minute

tephromalacia (têf'rô-mâl-â'si-â) [G. *tephros*, gray, + *malakia*, softening]. Softening of the gray substance of brain or spinal cord

tephromyelitis (têf'rô-mi-êl-i'tis) [" + *myelos*, marrow, + *-itis*, inflammation]. Inflammation of the gray matter of the spinal cord SYN: *poliomyelitis*.

tephrosis (têf'rô'sis) [" + *-ôsis*, condition] Incineration; cremation

tephrylometer (têf-ri-lom-ê-ter) [" + *ylê*, matter, + *metron*, a measure] Device for measuring the thickness of the cerebral cortex, the gray matter of brain

tepid (têp'id) [L. *tepidus*, lukewarm]. Slightly warm; lukewarm.

t. bath. One about 86° F (30° C)

tepidarium (têp-id-â'ri-ûm) [L. pert to a warm bath]. A place for a warm bath.

TEPP. Abbr. for *tetraethylpyrophosphate*.

ter- [L.] Combining form meaning *thrice*.

teramorphous (têr-â-morf'ûs) [G. *teras*, monster, + *morphê*, form] Similar to, or of the nature of a monster

ter'as. A monster. Pl. *terata*

teratic (têr-ât'ik) [G. *teratikos*, monstrous]. Pert. to a monster.

teratism (têr-â-tizm) An anomaly or structural abnormality either inherited or acquired

t., acquired. One resulting from a prenatal environmental influence

t., atresic. One in which natural openings such as the mouth or anus fail to form

t., casemic. One in which a normal union of parts fails to occur.

t., ectogenic. One in which parts are absent or defective

t., ectopic. One in which a part becomes displaced

t., hypergenetic. One in which a part is exceptionally large.

t., symphysic. One in which parts which are normally separate are fused

terato- [G.] Combining form meaning a *marvel*, *prodigy*, *monster*

teratoblastoma (têr'â-tô-blâs-tô'mâ) [G. *teras*, *terat-*, monster, + *blastos*, germ, + *-ôma*, tumor]. A tumor containing embryonic material but which is not representative of all 3 germinal layers. SEE: *teratoma*

teratogenesis (têr-â-tô-gên-ês-is) The development of abnormal structures in an embryo, the development of a monster

teratoid (têr-â-toyd) [G. *teras*, *terat-*, monster, + *eidos*, form]. Resembling a monster.

t. tumor. Tumor of embryonic remains from all of the germinal layers. SYN *teratoma*.

teratology (têr-ât-ôl'ô-jî) [" + *logos*, a study]. Branch of science dealing with the study of monsters.

teratoma (têr-â-tô'mâ) [" + *-ôma*, tumor] Congenital tumor containing embryonic elements of all 3 primary germ layers, as hair, teeth, etc SYN *dermoid*

teratomatous (têr-â-tô'mâ-tus) [" + *-ôma*, tumor]. Pert to or resembling a teratoma

teratophobia (têr'â-tô-fô'bî-â) [" + *phobos*, fear] Abnormal fear of giving birth to a monster or of being in contact with one

teratosis (têr-â-tô'sis) [" + *-ôsis*, condition] A monstrosity

ter'bium. SYMS Tb At wt 158.93, At no. 65 A metal of the rare earths.

tere (tê're) [L. rub] Rub.

terebinthinate (têr'-ê-bin'thî-nât) [L. *terebinthus*, turpentine]. Containing or agent containing turpentine

terebrant, terebrating (têr'-ê-brant, -brât-ing) [L. *terebrâre*, to bore]. Boring or piercing, said of pain

terebration (têr'-ê-brâ'shun) [L. *terebrâre*, to bore]. 1 The act of boring SYN *trephining*. 2 A boring pain

teres (têr-êz) [L. *teres*, rounded, polished] 1. Round and smooth, cylindrical 2 A cylindrical muscle

t. major. A muscle that draws the arm down and back

t. minor. A muscle inserted in the great tuberosity of the humerus, which rotates the humerus outward and abducts it

tereti- [L.]. Combining form meaning *round*.

tergo- [L.] Combining form, *the back*.

tergotin. Vitamin T

tergum (têr'gûm) [L.] The back.

ter in die [L.] Three times a day. ABBR: tid

term (term) [L. *terminus*, a boundary]. 1. A limit or boundary. 2. A definite period 3 The normal period of pregnancy, namely nine months

t. birth. One occurring at expected time of delivery, one not premature

terminal (têr'mî-nâl) [L. *terminus*, a boundary]. Pert. to or placed at the end

t. arteriole. One with no branches, but which splits into capillaries

t. bars. Minute bars of dense intercellular cement which occupy and bind spaces between epithelial cells and bind them together

t. ganglia. Those of the parasympathetic division of the autonomic nervous system that are located in or close to walls or visceral structures such as heart, intestines, etc.; also called *peripheral ganglia*

t. infection. One appearing in the late stage of another disease; often fatal.

t. veins. One of two veins (ant and post) draining portions of the brain and emptying into int. cerebral veins

terminology (ter-mín-ô-lô-jí) [L. *terminus*, term. + G. *logos*, word]. The special terms used in any field, as an art or science. **SYN** *nomenclature*.

termitin. Vitamin T.

ternary (ter-na-ri) [L. *ternarius*, triple]. 1. Threefold; triple, third. 2. Composed of 3 elements.

t. acid. An inorganic acid containing hydrogen and 2 other elements

teropterín (ter-ôp-ter-in) Trade name for sodium pteroyl triglutamate solution Used for palliation of certain symptoms of malignancy in treatment adjunctive to x-ray, radium, and surgery

ter-pin hy'drate. USP. White crystalline substance with a turpentine taste made by the interaction of rectified spirits of turpentine, alcohol, and nitric acid

ACTION AND USES As an antiseptic and expectorant

DOSAGE (average) · 4 gr (0.25 Gm.).

terra (têr-â) [L.] Earth, soil.

t. al'ba. White clay.

t. fullon'ica. Fuller's earth.

terracing (ter-âs-ing) [O Fr *terrace*] Surturing in several rows through thick tissues in closing a wound

terramycin (ter-râ-mi-sin) A proprietary name for the oxy derivative of tetracycline An antibiotic biosynthesized by *Streptomyces rimosus* It is a broad spectrum antibiotic effective against both Gram negative and Gram positive bacteria, rickettsias, and some viruses

terror (ter-or) [L. *terror*, fear]. Very great fear

t., night. Nightmare or night terror, esp. of children

tertian (ter-shün) [L. *tertianus*, pert. to the third]. Occurring every 3rd day

t. fever. A malarial fever with paroxysms every other day

t. malaria. Caused by *Plasmodium vivax*, q.v. **SEE** *malaria*

tertiary (ter-shi-a-ri) [L. *tertius*, third]. Third in order or stage

t. alcohol. One containing the trivalent group COH

t. syphills. Third and most advanced stage of syphills

tertipara (têr-tip-â-râ) [L. *tertius*, third, + *parere*, to bring forth] A woman who has given birth to 3 children

tessellated (tê-sêl-â-têd) [L. *tessella*, a square]. Composed of little squares.

test (test) [L. *testum*, an earthen vessel]. 1. An examination 2 Method to determine the presence or nature of a substance, or the presence of a disease. 3 A chemical reaction. 4. A reagent or substance used in making a test.

t., acetone. Test for presence of acetone in the urine; made by adding a few drops of sodium nitroprusside to the urine along with strong ammonia water. Presence of acetone causes formation of a magenta ring at outline of contacts

t., Allen-Dolay. Test to determine amount of estrogen content in female blood serum by its reaction on secretions of mice.

t., Aschheim-Zondek. Test for pregnancy by injecting the patient's urine subcutaneously in immature female mice.

t., Binet-Simon. Method of ascertaining the mental capacity of children by asking a series of suitable questions. **SEE** *Binet age*

t., bluret. Test for the presence of proteins or urea

t., Brouha. Test for pregnancy by injecting the urine of the patient into male mice for 8 to 10 days. Positive reaction indicated by hypertrophy and hyperemia of the seminal vesicles

t., Chrobak. Cancer is present if probing an eroded cervix produces bleeding and crumbling of the tissue.

t., Friedman. Test for pregnancy by injecting urine of the patient into unmated mature female rabbits, a positive reaction being indicated by formation of corpora lutea and corpora haemorrhagica

t., Gelle's. Test for ear lesions by employing rubber tubing and a tuning fork

t., Huhner. Aspiration of vagina within an hour after coitus, to investigate sperm activity

t., Kahn's. Precipitation test for syphilis

t. paper. Paper used in making tests, as litmus paper

t., pregnancy. Test to determine pregnancy.

t., Rubin. Test for patency of the fallopian tubes by insufflation with carbon dioxide; used to determine cause of sterility

t., Schiller's. Test for cancer of the cervix by painting with iodine solution, since cancer cells do not stain with iodine, they turn white or yellow

t., Schneider's. A pregnancy test using female rabbits

t., Schwabach's. Test for hearing using tuning forks

t. solution. A standard solution used in making a test

t. tube. A plain tube of thin glass, closed at 1 end, used for simple tests.

t., urea balance. Test of the kidney function by measuring intake and output of urea

t., Wassermann. Diagnostic test for syphilis based on principle of fixation of complement.

testectomy (tê-s-têk-tô-mî) [L. *testis*, testicle, + G. *ektomê*, excision]. Removal of a testicle **SYN** *castration* 2. Removal of a corpus quadrigeminum

testes (tê-s'tê-s) (sing. *testis*) [L.]. The plural of *testis*, q.v.

testicle (tê-s'ti-kl) [L. *testiculus*, a little testis]. A *testis*, q.v.

testicular (tê-s-tik'ü-lar) [L. *testiculus*, a little testis]. Relating to a testicle.

testis (tes'tis) (pl. *testes*) [L. *testis*, testicle] **SYN** *testicle*. The male gonad. One of two reproductive glands located in the scrotum which produce the male reproductive cells or spermatozoa and the male hormone, *testosterone*

Each is an ovoid body about 4.0 cm long and 2 to 2.5 cm in width and thickness, enclosed within a dense inelastic fibrous *tunica albuginea*. The testis is divided into numerous *lobules* separated by *sepia*, each lobule containing one to three *seminiferous tubules* within which the spermatozoa arise. The lobules lead to *straight ducts* which join a plexus, the *rete testis*, from which 15-20 *efferent ducts* lead to the *epididymis*. The epididymis leads to the

ductus deferens through which sperm are conveyed to the urethra.

Between the seminiferous tubules are located the *interstitial cells* (cells of Leydig) which are considered to be the source of the male hormone(s).

The testes are suspended from the body by the *spermatic cord*, a structure extending from inguinal ring to testis. It contains the ductus deferens, testicular vessels (spermatic artery, vein, lymph vessels) and nerves.

Hyperfunction (hypergonadism) may cause early maturity, such as dentition, large sexual organs with early functional activity, and growth of hair.

Hypofunction (hypogonadism) is indicated by undeveloped testes, absence of body hair, high-pitched voice, sterility, smooth skin, loss of sex desire, low metabolism, and eunuchoid or eunuch type.

t., abdominal. An undescended testis which remains within body cavity.

t., compression reflex. Contraction of abdominal muscles following moderate compression of testis.

t., descent of. Change in position of the testis from abdominal cavity to scrotum during fetal life.

t., displaced. A testis within (abnormally) the inguinal canal, or pelvis.

t., femoral. An inguinal testis which is near or over the femoral ring.

t., inverted. One reversed in the scrotum so that the epididymis attaches to the ant. instead of post. part of gland.

t., perineal. One which is located in the perineal region outside the scrotum.

t., puboscrotal. One located over pubic tubercle.

TESTIS AND EPIDIDYMIS

1. Septa. 2. Tunica albuginea. 3. Tunica vaginalis. 4. Spermatic artery. 5. Ductus deferens. 6. Caudal aberrant ductule. 7. Tail of epididymis.

t., undescended. One or both remain in the inguinal canal or abdominal cavity at birth.

testitis (tēs-tī'tis) [L. *testis*, testicle, + G. -itis, inflammation]. Inflammation of a testis. SYN *orchitis*.

testotoxicosis (tēs'tī-tōks-i-tō'sis) [' + G. *toxikon*, poison, + -osis, condition]. A toxic state sometimes following ligation of the vas deferens.

test meal. A meal usually small and of definite quality and composition, given to aid in chemical analysis of the stomach contents or x-ray diagnosis of the stomach.

testosterone (tēs-lō'ster-ōn) [L. *testis*, testicle]. An androgen isolated from the testes of a number of animals including man and considered to be the principal testicular hormone produced in man. It is a steroid produced by the interstitial cells of Leydig. It has been prepared synthetically by conversion of other sterols, esp. cholesterol.

ACTION. It accelerates growth in tissues upon which it acts and stimulates blood flow. It stimulates and promotes the growth of secondary sexual characters and is essential for normal sexual behavior and the occurrence of erections. It is essential for normal growth and development of the male accessory sexual organs. It is responsible for deepening of the male voice at puberty, greater muscular development in men, development of beard and pubic hair, and distribution of fat in adult men. It also affects many metabolic activities.

tetanic (tē-tān'ik) [G. *tetanikos*, pert to a stretching]. 1. Pert to or producing tetanus. 2. Any agent producing tetanic spasms.

t., convulsion. A tonic one with constant muscular contraction.

tetaniform (tē-tan'ī-form) [G. *tetanos*, tetanus, + L. *forma*, shape]. Resembling tetanus.

tetaniogenic (tēt'ā-nīdī'ō-nūs). Causing tetanus or tetanic spasms.

tetanilla (tēt-ān-ī'lī-ā) [L.]. 1. Mild form of tetany* without rigidity. 2. Twitchings of a limited group of muscular fibers with clonic paroxysmal contractions.

tetanism (tēt'ān-ī-zm) [G. *tetanos*, tetanus, + -ismos, condition]. Persistent muscular hypertonicity resembling tetanus, esp. in infants.

tetanization (tēt-ān-ī-zā'shūn) [G. *tetanos*, tetanus]. 1. Production of tetanus or tetanic spasms by induction of the disease. 2. Induction of tetanic contractions in a muscle by electrical stimuli.

tetanize (tēt-ān-ī-zē) [G. *tetanos*, tetanus]. To induce tonic muscular spasms.

tetanode (tēt'ā-nōd) [' + *eidos*, form]. 1. Resembling tetanus. SYN *tetanoid*. 2. Noting interval bet. recurrent tonic spasms in tetany.

tetanoid (tēt-ā-nōyd) [' + *eidos*, form]. Resembling tetanus. SYN *tetaniform*.

t., paraplegia. Paralysis of lower extremities due to lateral sclerosis of spinal cord. SYN *spastic paraplegia*.

tetanolyisin (tēt'ā-nō-lī'sin). A hemolytic component of the toxin produced by *Clostridium tetani*, causative organism of tetanus.

tetanomotor (tēt'ān-o-mō'tor) [' + L. *motor*, a mover]. Appliance for the production of tetanic motor spasms mechanically by shocking a nerve.

tetanophil, *tetanophilic* (tēt'ān-ō-fīl, tēt'ān-ō-fīl'ik) [' + *philein*, to love]. Possessing an affinity for tetanus toxin.

tetanospasmin (tēt'ā-nō-spās'min). A

component of the toxin produced by tetanus bacillus which is responsible for tetanic convulsions

tetanus (têt'ă-nūs) [*G. tetanos, tetanus*].

1. An infectious, acute disease due to the toxin of *Clostridium tetani*, in which there is a state of more or less persistent, painful tonic spasm of some of the voluntary muscles. 2. A state of sustained contraction of a muscle, esp. that induced experimentally.

Usually begins gradually, but may begin suddenly, may be of brief duration or last some weeks. The first sign is stiffness of the jaw and esophageal muscles and some of the muscles of neck. Soon the jaws become rigidly fixed (trismus, or lockjaw), the voice is altered, muscles of the face contract, producing a wild, excited expression, a compound of bitter laughter and crying (risus sardonicus). The muscles of back, extremities, and penis become tetanic.

If the patient be bent back in a bow, the condition is termed *opisthotonos*, if he be bent to the side, *pleurothotonos*, if he be bent forward, *emprosthotonos*.

The paroxysms are reflex, and are excited by noises, currents of air, and even irritation of bedclothes. The temperature usually rises and may attain remarkable height (113° F.), and continues to rise for a time after death. The pain is great, patient also suffering from hunger, thirst, and want of sleep. The mind is clear. This disease is usually, but not always, fatal, the patient expiring from asphyxia or exhaustion.

RS. *emprosthotonos, lockjaw, opisthotonos, pleurothotonos, posture, risus sardonicus*.

t., anticus. Form in which the body is bowed forward.

t., antitoxin. An antibody which develops in the blood of man or other animals (horse) as a result of infection by the tetanus organism (*Clostridium tetani*) or inoculation with tetanus toxin or toxoid. 2. A sterile solution of antibody globulins derived from the blood of horses or cattle immunized against tetanus toxin. It is used to produce passive immunity to prevent the development of tetanus and in the treatment of active tetanus. Prophylactic dose is 1500 units injected subcutaneously, for active tetanus, 5000 to 20,000 units injected intravenously or subcutaneously.

t., artificial. Form produced by a drug like strychnine or by mechanical appliance.

t., ascending. Tetanus in which muscle spasms occur first in lower part of body, then spread upward finally involving muscles of head and neck.

t., cephalic. Form due to a wound of the head, esp. one near the eyebrow. It is marked by trismus, facial paralysis on one side, and pronounced dysphagia, resembles rabies, often fatal.

t., cerebral. A form produced by inoculating the brain of animals with tetanus antitoxin, marked by epileptiform convulsions and excitement.

t., chronic. SYN. *delayed tetanus*. 1. A latent infection in a healed wound which is reactivated upon opening the wound. 2. A form of tetanus in which onset and progress of the disease is slower and more prolonged and symptoms less severe.

t., descending. Tetanus in which muscle spasms occur first in head and neck and later are manifested in other muscles of body.

t., dorsalis. Tetanus in which the body is bent backward.

t., extensor. That which affects the extensors especially.

t., head. Kopf tetanus.

t., hydrophobic. Kopf tetanus.

t., idiothetic. That which occurs without any visible lesion.

t., imitative. Hysteria which simulates tetanus.

t., infantum. Tetanus of young infants, due to infection of umbilicus.

t., intermittent. SYN. *tetany*.

t., kopf. Form due to a wound of the head, esp. one near the eyebrow. It is marked by trismus, facial paralysis on one side, and pronounced dysphagia; resembles rabies, often fatal. Called also *cephalic tetanus, head tetanus, hydrophobic tetanus*.

t., lateralis. Form in which the body is bent sideways.

t., local. Tetanus characterized by spasticity of a group of muscles near the wound. Trismus (contraction of jaw muscles) is usually absent.

t., neonatorum. Tetanus of very young infants, usually due to infection of navel.

t., paradoxus. Cephalic tetanus in which condition is combined with paralysis of the facial or other cranial nerve.

t., posticus. Same as *t. dorsalis*.

t., postoperative. T. which follows an operation.

t., puerperal. T. which occurs in childbed.

t., rheumatic. Form due to exposure to cold and wet.

t., Ritter's. Tetanic contractions at opening of a constant current which has been passing along a nerve for some time; seen in tetany.

t., toxic. Produced by overdose of nuxvomica or strychnine.

t., toxoid. Tetanus antitoxin modified by treatment with formaldehyde so that its toxicity is greatly reduced but its capacity to promote active immunity has been retained.

t., traumatic. T. which follows wound poisoning.

tetany (têt'ă-nī) [*G. tetanos, tetanus*]. A nervous affection, characterized by intermittent tonic spasms, which are usually paroxysmal and involve the extremities; most frequent in the young; frequently associated with pregnancy or lactation.

ETIOI. Tetany is induced by changes in pH and extracellular calcium which increase nervous and muscular excitability. Causative factors are parathyroid deficiency or operative removal of parathyroids in thyroidectomy, alkalosis, vitamin-D deficiency, or alkalosis.

SYM. Characterized by nervousness, irritability and apprehension, numbness and tingling of the extremities, cramps of the various muscles, particularly those of the hands, producing a typical *accoucheur* type of hand and extreme extension of the feet. Cataract is prone to develop in persons afflicted with tetany. Bilateral tonic spasms in arms and legs, jaws rarely involved. Contractions usually paroxysmal and are attended with pain. Electrocontractility of muscles greatly exaggerated. May be slight edema. Sensation not disturbed; mind clear, fever slight or absent.

SIGNS: Characteristic diagnostic signs are (a) Trousseau's sign, (b) Chvostek's sign, and (c) the peroneal sign, *q.v.*

Prolongation of the isoelectric phase of the ST segment of the ECG is usually indicative of low calcium

Proc: Usually favorable Attacks following thyroidectomy and lavage sometimes fatal.

t., alkalotic. That resulting from respiratory alkalosis as in hyperventilation, or from metabolic alkalosis induced by excessive intake of sodium bicarbonate or excessive loss of chlorides by vomiting, gastric lavage, or suction.

t., duration. Continuous contraction, esp. in degenerated muscles, in response to a continuous electric current

t., epidemic. Syn: *rheumatic tetany* A form of tetany occurring in Europe, esp. in the winter season It is of short duration and seldom fatal.

t., gastric. Severe t from stomach disorders accompanied by tonic, painful spasms of extremities.

t., gutturofaryngeal. Stammering resulting from tetanoid laryngeal spasm

t., hyperventilation. T. caused by continued forced respiration

t., hypocalcemic. Tetany due to low serum calcium and high serum phosphate levels May be due to (a) lack of vitamin D, (b) factors which interfere with calcium absorption, such as steatorrhea or infantile diarrhea, or (c) defective renal excretion of phosphorus

t., latent. That which requires mechanical or electrical stimulation of nerves to show characteristic signs of excitability

t., manifest. When characteristic symptoms such as carpopedal spasm, laryngospasm, and convulsions are present

t., parathyroid. Syn: *hypoparathyroidism* T. resulting from excision of the parathyroid gland or from hyposecretion of the parathyroid gland as a result of disease or disorders of the gland

t., rachitic. That due to hypocalcemia accompanying vitamin D deficiency

t., thyroprival. That resulting from removal of thyroid gland accompanied by removal of parathyroid glands

tetacone (têt'ar-kôn) [G. *tetartos*, fourth, + *kônos*, cone]. Fourth or distolingual cusp of an upper molar tooth Syn: *tetartocone*.

tetartanopia, tetartanopsia (têt'ar-tân-ô'-pi-â, -ôp'si-â) ['' + *ôps*, eye, — + *opsis*, vision]. Symmetrical blindness in the same quadrant of each visual field. Syn: *hemianopsia, quadrant*

tetartocone (têt-art'ô-kôn) ['' + *kônos*, cone]. The distolingual cusp of an upper molar tooth. Syn: *tetacone*.

tethelin (têth'é-lin) [G. *têthêlos*, flourishing]. A substance derived from the ant. lobe of the pituitary having an accelerating effect on growth

tetmil (têt'mil). Ten millimeters, a unit of measurement.

tetra-, tetr- [G.] Combining forms meaning four.

tetrabasic (têt'ra-bâ'sik) [G. *tetra*, four, + *basis*, base]. Having 4 replaceable hydrogen atoms, said of an acid or acid salt.

tetrablastic (têt'ra-blâs'tik) ['' + *blastos*, germ]. Having 4 germinal layers, the *ectoderm*, *endoderm*, and 2 *mesodermic* layers.

tetrabromofluorescein (têt'ra-brôm'ô-flû-or-ês'in, -ê-in). A dye, $C_{20}H_2Br_4O_6$, obtained from action of bromine on fluorescein, used as a stain in microscopy. Syn: *eosin*.

tetracaine hydrochloride. A surface, infiltration, and intraspinal anesthetic. **tetrachlorethylene** (têt'râ-klor-êth'l-ên). A clear, colorless liquid with a characteristic odor.

Uses As anthelmintic, resembling in action carbon tetrachloride, but less toxic.

DOSAGE: 45 m (3 cc.), followed by saline cathartic.

tetracid (tê-trâs'id) [G. *tetra*, four, + L. *acidus*, sour] 1. Able to react with 4 molecules of a monoacid or 2 of a diacid to form a salt or ester, said of a base or alcohol; term disapproved by some authorities 2. Having 4 hydrogen atoms replaceable by basic atoms or radicals, said of acids 3. An acid containing 4 acid hydrogen atoms

Tetracoccus (têt'râ-kôk'ús) ['' + *kokkos*, berry] Genus of micrococcus arranged in groups of 4 by division into 2 planes

tetracrotic (têt'râ-krôt'ik) ['' + *krotos*, a beat]. Noting a pulse or pulse tracing with 4 upward strokes in the descending limb of the wave Syn *catacrotic*.

tetrad (têt'râd) [G. *tetras*, *tetrad-*, number four] 1. A group of 4 things with something in common 2. An element having a valence or combining power of 4 3. A group of 4 similar bodies 4. A group of 4 parts, said of cells produced by division in 2 planes, or of a chromosome in 4 parts in preparation for 2 mitotic divisions in maturation.

tetraethylammonium chloride (têt-râ-êth-il-âm-ô'nî-ûm klô'r'id) A quaternary ammonium compound used as a ganglionic blocking agent in diagnosis and treatment of circulatory diseases Absa TEAC

tetraethylpyrophosphate (têt-râ-êth'il-pî-rô-fos'fâ't) Absa TEPP A powerful cholinesterase inhibitor used as an insecticide, poisonous to man Has had some use in treatment of myasthenia gravis

tetragenous (têt-râj'ên-ûs) [G. *tetra*, four, + *gennao*, to produce] Pertaining to organisms, esp. bacteria, which divide into groups of four

tetralogy of Fallot. An anomaly of the heart consisting of pulmonary stenosis, ventricular septal defect, dextroposed aorta which receives blood from both ventricles, and hypertrophy of the right ventricle

tetramastia (têt'râ-mâs'ti-â) [G. *tetra*, four, + *masos*, breast]. Condition characterized by presence of 4 breasts. Syn: *tetramazia*

tetramazia (têt'râ-mâ'zi-â) ['' + *mazos*, breast] Condition of having 4 breasts Syn *tetramastia*

tetrameric, tetrameros (têt'râ-mêr'ik, têt-râm'êr-ûs) ['' + *meros*, a part]. Having 4 parts, or arranged in groups of 4 parts.

tetranopsia (têt-râ-nôp'si-â) ['' + *an-*, priv + *opsis*, vision]. Obliteration of visual field by one-quarter.

tetraplegia (têt-râ-plê'ji-â) ['' + *plêgê*, a stroke]. Paralysis of both arms and legs.

tetrasomic (têt-râ-sô'mik). Possessing four instead of the usual two of a pair of chromosomes, that is having a chromosome number of $2n + 2$

tetraster (têt-râs'ter) ['' + *astêr*, star]. A figure in which there are 4 asters, instead of more commonly 2; occurring abnormally in mitosis.

tetravalent (têt-râ-vâ'lênt). Syn: *quadrivalent*. Having a valence or combining power of four.

tetter (tět'ēr) [A.S. *teter*]. 1. Any of various vesicular cutaneous diseases, as herpes, ringworm, or eczema. 2. A pimple or blister.

textiform (tēks'ti-form) [L. *textum*, web, + *forma*, shape] Resembling a network, web or mesh

textoblastic (tēks'tō-blās'tik) [L. *textus*, tissue, + G. *blastos*, germ] Forming adult tissue, regenerative, noting cells

textural (tēks'tū-rāl) [L. *textura*, a weaving] Concerning the texture or constitution of a tissue

T fracture. One in which bone splits both longitudinally and transversely.

Th. Chemical symbol for thorium.

thalamie (thāl-ām'ik) [G. *thalamos*, chamber]. Pert to the thalamus

t. syndrome. Sensory disturbances and pain in conjunction with mild hemiplegia. SYN *Dejerine-Roussy syndrome*. Eriol. Optic thalamus lesion

thalamo- [G.]. 1. Combining form meaning chamber, part of brain at which a nerve originates 2. Pert to the thalamus

thalamocele, **thalamocele** (thāl-ām-ō-sēl) [G. *thalamos*, chamber, + *kōila*, a hollow] The 3rd ventricle of the brain.

thalamocortical (thāl-ām-ō-kor'ti-kāl) [+ L. *cortex*, *cortic-*, rind] Pert to the optic thalamus and the cerebral cortex.

thalamolenticular (thāl-ām-ō-lēn-tik'ū-lar) [+ L. *lenticula*, a small lentil]. Concerning the optic thalamus and the lenticular nucleus.

thalamotomy (thāl-ām-ō-mōt'ō-mī) [G. *thalamos*, chamber, + *tome*, incision]. A psychosurgical procedure for mental illness. A wire electrode is passed down into the thalamus, and a portion about the size of an almond is coagulated. Said to produce fewer unpleasant personality changes than *lobotomy*, *q.v.*

thalamus (thāl-ā-mūs) [G. *thalamos*, chamber] BNA. The largest subdivision of the diencephalon on either side, consisting chiefly of an ovoid, gray nuclear mass in the lateral wall of the 3rd ventricle.

Each consists of a number of *nuclei* (anterior, medial, lateral, and ventral), the *medial* and *lateral geniculate bodies* and the *pulvinar*.

FUNCTIONS All sensory impulses with the exception of olfactory impulses, are received by the thalamus. These are associated and synthesized and then relayed, through thalamocortical radiations, to specific cortical areas. Impulses are also received from the cortex hypothalamus, and corpus striatum and relayed to visceral and somatic effectors. The thalamus is also the center for appreciation of primitive, uncritical sensations of pain, crude touch, and temperature.

t. opticus. Same as *thalamus*.

thalassanemia (thāl-lās'sā-nēm'i-ā). SYN: Cooley's anemia. *Mediterranean anemia*, *familial microcytic anemia*, *thalassemia*. A hereditary disorder characterized by a severe microcytic, hypochromic anemia, and the presence of increased numbers of reticulocytes, target cells, and stippled cells. It occurs in two forms, major and minor.

thalasophobia (thāl-ās'sō-fō-bi-ā) [G. *thalassa*, sea, + *phobos*, fear]. Abnormal fear of the sea.

thalasotherapy (thāl-ās'sō-ther-ā-pl) [+ *therapeia*, treatment]. Treatment of disease by living at the seaside, by sea bathing, sea voyages, or sea air.

thallinization (thāl-lēn-i-zā'shūn) [G. *thal-*

los, a young shoot] Treatment with doses of thalline or its salts.

thallium (thāl'i-lum) [L. from G. *thallos*, a young shoot]. A rare, lustrous, white metal. Symb. Tl. At. wt. 204.39.

thamuria (thā-mū'ri-ā) [G. *thamus*, often, + *ouron*, urine]. Abnormally frequent urination. SYN: *pollakiuria*.

thanato- [G.]. Combining form meaning death

thanatobiological (thān'ā-tō-bi-ō-lōj'ik-āl) [G. *thanatos*, death, + *bios*, life, + *logos*, study]. Relating to the processes of life and death.

thanatognomic (thān'āt-ōg-nō-mōn'ik) [+ *gnōmonikos*, knowing] Indicative of the approach of death

thanatoid (thān'ā-toyd) [+ *eidōs*, form] Resembling death

thanatology (thān'ā-toi-ō-jī) [+ *logos*, science] The science of death

thanatomania (thān'ā-tō-mā-ni-ā) [+ *mania*, madness] Condition of homicidal or suicidal mania

thanatometer (thān-ā-tōm'ēt-ēr) [+ *metron*, a measure] Instrument for determining occurrence of death by internal temperature

thanatophobia (thān'ā-tō-fō-bi-ā) [+ *phobos*, fear] Morbid fear of death.

thanatopsis, **thanatopsy** (thān'ā-top'si-ā, thān'āt-ōp'si) [+ *opsis*, view]. Examination of a dead body to determine cause of death. SYN *autopsy*, *necropsy*

thanatos (thān'ā-tōs). The death instinct. In psychoanalysis. All the instinctive tendencies leading to senescence and death

thamato- [G.]. Combining form meaning wonder, marvel

theism (thē-ā-izm) [L. *thea*, tea, + G. *-ismos*, condition] Chronic poisoning from excess of tea drinking. SYN: *theism*, *theism*.

thebaism (thē'bā-izm) [G. *Thebai*, Thebes (opium of)] Condition produced by opium

Thebesius' foramina (thē-bē'zī-ūs). Orifices of the Thebesius' veins, opening into the right auricle of the heart.

T's. valve. An endocardial fold at entrance of the coronary sinus into right auricle

T's. veins. Venules conveying blood from the myocardium to the auricles or ventricles

theca (thē'kā) [G. *thēkē*, a box]. A sheath of investing membrane.

t. cell tumor. Thecoma, *q.v.*

t. cor'dis. Pericardium, which sheathes the heart.

t. follic'ull. Outer wall of a graafian follicle. It consists of an inner vascular layer, the *theca interna*, and outer fibrous layer, the *theca externa*

thecal (thē'kāl) [G. *thēkē*, a box] Pert to a sheath.

thecitis (thē-s'i'tis) [+ *-itis*, inflammation]. Inflammation of the sheath of a tendon.

theco- [G.]. Combining form meaning sheath, case, receptacle

thecodont (thē'kō-dont) [G. *thēkē*, box, + *odont-*, tooth]. Having teeth which are inserted in sockets

theco'ma. A tumor of the ovary usually occurring during or following the menopause. Only rarely is it malignant. Also called *theca-cell tumor* or *theca-lutein-cell tumor*

thecostegnosia, **thecostegnosis** (thē'kō-stēg-nō'si-ā, -nō'sis) [+ *stegnosis*, a narrowing]. Constriction of a tendon sheath.

theelin (thē'lin) [G. *thēlys*, female]. Proprietary name for estrone, an estrogenic substance obtained from pregnancy urine and also synthesized from cholesterol. **SX:** *estrone*.

SYN: *estrin, estrone, female sex hormone, folliculin, progyon*.

USES: Chiefly in menopausal disturbances, functional amenorrhea, and delayed puberty.

DOSAGE: 0.1-10 mg. (1000-10,000 international units).

theelol (thē'lōl) [G. *thēlys*, female]. **SYN:** *estriol*. An estrus-exciting hormone similar to but more active than theelin, found in urine of pregnant women.

theline (thē'en) Caffeine, *q.v.*

thelalgia (thē-lāl'jī-ā) [G. *thēlē*, nipple, + *algos*, pain]. Pain in the nipples.

thelasis (thē-lās'is). The act of sucking.

thelazia (thē-lā'zī-ā) A genus of nematodes which inhabits the conjunctival sac and lacrimal ducts of various species of vertebrates. They occasionally are found in man.

thelaxiasis (thē-lā'zī-ā-sis) Condition of being infested by worms of the genus *Thelazia*.

theloplasty (thēl'ē-plās'tī) [+ *plassein*, to form]. Plastic surgery of the nipple.

thelerethism (thēl-ēr'ē-thizm) [+ *erethisma*, stimulation]. Erection of the nipple.

thelitis (thē-lī'tis) [+ *-itis*, inflammation]. Inflammation of the nipples.

thelium (thē-lī-ūm) [L. from G. *thēlē*, nipple] 1 A papilla 2 A nipple. 3 A cellular layer.

thelon'cus. A tumor of a nipple.

thelophlebostemma (thē-lō-flēb'ō-stēm-mā) A dark or venous circle of veins about the nipple.

thelorrhagia (thē-lor-rā'gī-ā) Hemorrhage from a nipple.

thelothism (thē-lō-thizm). Erection of a nipple brought about by contraction of smooth muscle fibers. **SEE:** *thelere-thism*.

thenad (thē'nād) [G. *thenar*, palm, + *L. ad*, toward]. Toward the palm or thenar eminence.

thenal (thē'nāl) [G. *thenar*, palm]. Pert. to the palm or thenar prominence.

†. aspect. Outer side of the palm.

†. eminence. Ball of the thumb. **SYN:** *thenar*.

thenar (thē'nar) [G. *thenar*, palm] 1. Palm of hand or sole of foot 2 Fleshy eminence at base of thumb. 3. Concerning the palm

†. cleft. **SYN** *thenar space* A fascial cleft of the palm overlying volar surface of adductor pollicis muscle

†. eminence. One at the base of the thumb

†. fascia. A thin membrane covering the short muscles of the thumb

†. muscles. Abductor and flexor muscles of the thumb

theobromine (thē-ō-brō'mēn) [+ *brōma*, food]. A white powder obtained from *Theobroma cacao*.

ACTION AND USES: Similar to caffeine, less stimulating to cerebral centers.

DOSAGE: 5-8 gr. (0.3-0.5 Gm.)

†. with sodium salicylate, **USP**. Diuretin Combination of sodium salicylate and theobromine

ACTION AND USES: Same as theobromine but more soluble

DOSAGE: 5-10 gr. (0.3-0.6 Gm.).

thecalcin (thē-ō-kāl'sin) [+ *L. calx*, lime]. A double salt or mixture of calcium theobromine and calcium salicylate.

ACTION AND USES: Same as theobromine.

DOSAGE: 7-15 gr. (0.5-1 Gm.).

theomania (thē-ō-mā'nī-ā) [G. *theos*, god, + *mania*, madness] Religious insanity, esp. that in which patient thinks he is the Deity or is inspired.

theophobia (thē-ō-fō'bī-ā) [+ *phobos*, fear]. Abnormal fear of the wrath of God.

theophylline (thē-ō-fīl'en, -in) [L. *thea*, tea, + G. *phylon*, plant] **USP**. A white crystalline powder with action resembling caffeine and theobromine

theory. A supposition or an assumption based on certain evidence or observations but lacking scientific proof. When a theory becomes generally accepted and firmly established, it then becomes a *doctrine* or *principle*

theotherapy (thē-ō-thēr'a-pī) [G. *theos*, god, + *therapeia*, treatment]. Treatment of disease by spiritual and religious methods

therapeutic (thēr-ā-pū'tik) [G. *therapeutikos*, treating] 1 Pert to results obtained from treatment 2 Having medicinal or healing properties 3 A healing agent.

†. carbons. **PT**. Carbon electrodes cored or filled with various materials. When burning they emit radiation of various intensities and qualities of ultraviolet, visual, and infrared energy

†. exercise. Scientific supervision of bodily movements for curative purposes **SEE** *exercise*.

therapeutics (thēr-ā-pū'tiks) [G. *therapeutikē*, treatment]. That branch of medicine concerned with the application of remedies and the treatment of disease. **SYN** *therapy, q.v.*

†. suggestive. Treatment of a condition by using hypnotic suggestion

therapeutist (thēr-ā-pū'tist) [G. *therapeuten*, to treat medically] One who practices therapeutics

therapia sterilisans magna (thēr-ā-pī-ā stē-rī-lī-sāns mäg'nā) [L. *therapia*, method of administering chemical agent which will destroy in large dose all the parasites in the body of a patient without causing serious injury to the patient

therapy (thēr-ā-pī) [G. *therapeia*, treatment] Treatment of a disease or pathological condition

†. light. Treatment with radiation from the visible spectrum.

†. maggot. Use of maggots in suppurating wounds of bones and soft tissues to remove necrotic areas

†. mental. The use of suggestion in the treatment of disease.

†. nonspecific. Use of injections of foreign proteins, bacterial vaccines, etc., in treatment of infection to stimulate general cellular activity. **SEE:** *therapy, specific*

†. opsonic. Use of bacterial vaccines to elevate the opsonic index of the blood.

†. physical. Use of physical agents in the treatment of disease, as massage, heat, hydrotherapy, radiation, electricity, and exercise.

†. serum. Use of injections of blood serum from immunized animals or persons in the treatment of disease. **SYN:** *serotherapy*.

†. specific. Administration of a remedy acting directly against the cause of a disease, as arsphenamine or mercury for syphilis, or quinine for malaria.

- t., spiritual.** The application of spiritual knowledge in the treatment of disease. **See:** *spiritual therapy*
- t., substitution.** Use of glandular extracts to balance the deficiency of secretion of a gland.
- t., vaccine.** Injection of bacteria or their products to produce active immunization against a disease **SYN:** *therapy, opsonic*
- t., zone.** Mechanical manipulation or stimulation of an area in the same longitudinal zone as disorder causing distress.
- therm** (therm) [G. *thermē*, heat] A small calory, the amt. of heat required to raise 1 Gm of water 1° C
- thermogenesis** (thēr'mā-kō-jēn'ēs-īs) [' + *genesis*, production]. Production of an increase of body temperature by drug therapy
- thermaerotherapy** (thēr'mā'er-ō-ther'ā-pi) [' + *aēr*, air, + *therapeia*, treatment]. Therapeutic application of hot air.
- thermal** (ther'māl) [G. *thermē*, heat] Pert. to heat
- t., capacity.** Heat necessary to raise any body from 0° to 1° C
- t., death point.** Degree of heat that will kill a fluid culture in 10 minutes.
- t., radiation.** Heat radiation
- t., sense.** Capacity for recognition of heat **SYN:** *thermesesthesia*
- thermalgia** (thēr'māl-jī-ā) [' + *algos*, pain]. Neuralgia accompanied by intense burning sensation, pain, redness, and sweating of the area involved **SYN:** *causalgia*
- thermanalgia** (thēr'mān-āl-jē'zī-ā) [' + *an-*, priv. + *algēsis*, pain]. Inability to experience reaction to heat because of cerebral lesion
- thermanesthesia** (thēr'mān-ēs-thē'zī-ā) [' + *an-*, priv. + *aisthēsis*, sensation]. Inability to recognize sensations of heat and cold, insensibility to heat changes. It sometimes occurs in syringomyelia. **SYN:** *thermoanesthesia*
- thermatology** (thēr-mā-tō'lō-jī) [' + *logos*, science]. The study of heat in treatment of disease
- thermometer** (thēr-mēl-ōm'ēt-ēr) [' + *electric* + *G metron*, a measure]. An electric thermometer used to indicate temperature changes too slight to be measured on an ordinary thermometer
- thermesesthesia** (thēr-mēs-thē'zī-ā) [' + *aisthēsis*, sensation]. Sensitiveness to heat, temperature sense **SYN:** *thermoesthesia*
- thermesesthesiometer** (thēr'mēs-thē-zī-ōm'ēt-ēr) [G. *thermē*, heat, + *aisthēsis*, sensation, + *metron*, a measure]. Device for determining sensibility to heat.
- thermohypesthesia** (thēr-m-hī-pēs-thē'zī-ā) [' + *hypo*, under, + *aisthēsis*, sensation]. Lessened sensibility of the temperature sense **SYN:** *thermohyposthesia*
- thermic** (thēr'mik) [G. *thermē*, heat]. Pert to heat
- t., fever.** Sunstroke, collapse and high cutaneous temperature after long exposure to the sun. **SYN:** *insolation, sriasis*
- t., sense.** The temperature sense; ability to react to heat stimuli. **SYN:** *thermesesthesia, thermosthesia*
- thermo** [G.-I]. Combining form meaning hot, heat.
- thermoalgia** (thēr'mō-āl-jē'zī-ā) [G. *thermē*, heat, + *algēsis*, pain]. Condition in which pain is caused by application of moderate heat. **SYN:** *thermalgesia*
- thermoanalgia** (thēr'mō-ān-āl-jē'zī-ā) [' + *an-*, priv. + *algēsis*, pain]. Loss of heat sensation. **SYN:** *thermanalgia*
- thermoanesthesia** (thēr'mō-ān-ēs-thē'zī-ā) [' + *an-*, priv. + *aisthēsis*, sensation]. 1. Inability to distinguish bet. heat and cold. 2. Insensibility to heat or temperature changes.
- thermobiosis** (thēr'mō-bi-ō'sis) [' + *bi-ōsis*, a living! Ability to withstand high temperature
- thermobiotic** (thēr'mō-bi-ō'tik) [' + *bios*, life]. Able to exist at high temperature.
- thermocauterectomy** (thēr'mō-kaw-tēr-ēk'tō-mī) [' + *kautērion*, branding iron, + *ektomē*, excision]. Excision by thermocautery
- thermocautery** (thēr'mō-kaw'tēr-i) [' + *kautērion*, branding iron]. 1. Cautery by application of heat 2. Cauterizing iron. **See:** *actual cautery*
- thermoagulation** (thēr'mō-kō-āg-ū-lā'shun) [G. *thermē*, heat, + *L coagulāre*, to clot]. The use of high frequency currents to produce coagulation in checking growths.
- thermocouple** (thēr'mō-kūp-ēl) [' + *L copula*, a bond]. Device for measuring slight temperature changes. **SYN:** *thermopile*
- thermoduric** (thēr'mō-dūr'ik) [' + *L durus*, resistant, hard]. Able to live in high temperatures. **See:** *thermophilic*
- thermoesthesia** (thēr'mō-ēs-thē'zī-ā) [' + *aisthēsis*, sensation]. Ability to recognize temperature differences. **SYN:** *thermesesthesia*
- thermoexcitatory** (thēr'mō-ēk-sī'tō-rī) [G. *thermē*, heat, + *L excitāre*, to irritate]. Exciting the production of heat in the body
- thermogenesis** (thēr'mō-jēn'ēs-sīs) [' + *genesis*, production]. The production of heat, esp in the body
- thermograph** (thēr'mō-grāf) [' + *graphēin*, to write]. Device for registering variations of heat
- thermohyperalgia** (thēr'mō-hī'pēr-āl-gē'zī-ā) [' + *hyper*, above, + *algēsis*, pain]. Unbearable pain upon the application of heat.
- thermohyperesthesia** (thēr'mō-hī'pēr-ēs-thē'zī-ā) [G. *thermē*, heat, + *hyper*, above, + *aisthēsis*, sensation]. Exceptional sensitiveness to heat
- thermohyposthesia** (thēr'mō-hī'pēs-thē'zī-ā) [' + *hypo*, under, + *aisthēsis*, sensation]. Diminished perception of heat
- thermoimhibitory** (thēr'mō-in-hīb't-tō'rī) [' + *L inhibere*, to restrain]. Arresting or impeding the generation of bodily heat
- thermolabile** (thēr'mō-lā'bīl) [' + *labilis*, unstable]. Destroyed or changed easily by heat; unstable. **See:** *heat, heat, latent*
- thermolysis** (thēr'mō-līs-īs) [' + *lysis*, destruction]. 1 Loss of heat from the body, as by evaporation 2 Chemical decomposition by heat
- thermometer** (thēr'mōm'ēt-ēr) [G. *thermē*, heat, + *metron*, a measure]. An instrument for registering heat or cold.
- t., air or gas.** One filled with air or gas, the expansion of which registers high temperatures
- t., alcohol.** One containing alcohol.
- t., Celsius.** Centigrade
- t., centigrade.** Temperature of boiling water at sea level 100° and freezing point 0°, with 100° bet. Generally used in Latin America and in Europe, and in scientific work.

t., clinical. One for measuring temperature of body and in which the mercury remains stationary at registration point until shaken down.

t., differential. One recording slight variations

t., Fahrenheit. Boiling point 212°, freezing point 32°. Used in English-speaking countries and in Holland

t., mercury. One containing mercury.

t., Réaumur. Used in some parts of Germany and in Russia. Zero is same as 0° C or same as 32° F, having 80° instead of 100 like the Centigrade t. See: *comparative tables.*

t. scale. Graduated device on a thermometer to register the temperature.

Comparative Thermometric Scale

	Centigrade	Fahrenheit	Reaumur
Boiling point of water ..	100°	212°	80°
	90°	194°	72°
	80°	176°	64°
	70°	158°	56°
	60°	140°	48°
	50°	122°	40°
	40°	104°	32°
	30°	86°	24°
	20°	68°	16°
	10°	50°	8°
Freezing point of water	0°	32°	0°
	-10°	14°	-8°
	-20°	-4°	-16°

CONVERSION *F* to Centigrade: Subtract 32 and multiply by 5/9. *C* to Fahrenheit Multiply by 9/5 and add 32.

To convert *R* into *F*, multiply by 9, divide by 4, and add 32

There are 3 major scales, Centigrade, Fahrenheit, and Réaumur in use. The Celsius, no longer used, was the reverse of the Centigrade, zero being its boiling point. The absolute scale, used for only very low temperatures, based on absolute

zero, the point at which the form of motion constituting heat ceases, -459.4° F. See: *temperature scale, absolute.*

t., self-registering. One recording variations of temperature

t., spirit. One filled with alcohol instead of mercury for registering low temperatures.

t., surface. One for showing temperature of the body's surface.

t., wet and dry bulb. A device for determining relative humidity consisting of two thermometers, the bulb of one being kept saturated with water vapor. The difference in temperatures between the two is dependent upon relative humidity

thermometric (thēr'mō-mēt'rik) [*G. thermē, heat, + metron, a measure*]. Pert. to heat measurement or a thermometer.

thermometry (thēr-mōm'ēt-ri) [*G. thermē, heat, + metron, a measure*]. Measurement of temperature

t., clinical. Temperature of body in a state of health ranges between 96.6° and 100° F. During a 24 hr. period, a person's body temperature may vary 0.5° to 2.0° F. It is highest in late afternoon, lowest during sleep in early hours of the morning

Slightly increased by eating, exercising and external heat; reduced about 1½° during sleep. In disease the temperature of body deviates several degrees above and below the average of health. When it moves upwards it is far less dangerous than when it moves downward, particularly in children. Even in adults 1° below the standard of health represents more danger than 2½° above, and 2° below more than 4° above, and so on

In facial erysipelas, acute meningitis, pneumonia, scarlatina, typhus, smallpox, and intermittent fever it sometimes rises as high as 106° or 107° F. In other febrile diseases rarely reaches 104° F. Temperature may reach height

Thermometric Equivalents

C	F	C	F	C	F	C	F
0	32	27	80.6	54	129.2	81	177.8

26	78.8	53	127.4	80	176		

of 110° F., as seen in sunstroke, and patient recovers.

The lowest extreme of temperature is sometimes found in cold stage of cholera, when temperature may be very low (90°-85° F.) for several days. Subnormal temperatures below 98° F. are observed in the following conditions.

During convalescence from certain febrile conditions, after pneumonia and typhoid fever, temperature may remain subnormal for several days. In collapse: This may result from shock, from hemorrhage, from action of some tonic agent, from simple heart failure in course of disease or from rupture of a viscus, as the bowel in typhoid, the lung in phthisis or stomach in perforating ulcer. In certain chronic diseases, esp. diabetes, cancer, chronic cardiac, cerebral, and spinal diseases.

In general, for every degree of the thermometer, the pulse rises 10 beats per minute, but rise of temperature to 99° F. gives more evidence of disease than rising of pulse from 70 to 90 beats per minute. A decrease of heat in the morning is favorable, an increase from night to morning the reverse. If temperature remains above normal after general symptoms denote convalescence, patient is in danger of a relapse or the supervention of some other disease. The range of the increase of heat in different febrile diseases extends to 110° F. and as a rule the amount of increase is a criterion of the intensity of the disease.

Artificial fever induced through diathermy, continuous hot bath, or malarial injections now utilized in some diseases, as general paresis, chronic arthritis, and some forms of asthma.

thermoneurosis (thēr'mō-nū-rō'sis) [G. *thermē*, heat, + *neuron*, nerve, + *-ōsis*, condition]. Elevation of body temperature in hysteria and other nervous conditions.

thermopenetration (thēr'mō-pēn-ē-trā'shūn) [+ L. *penetrāre*, to penetrate]. Application of heat to the deeper tissues of the body by diathermy.

thermoperiodicity (thēr'mō-pēr-i-ō-dis'i-ti) Condition in which an organism grows better when exposed to alternating high and low temperatures.

thermophagy (thēr'mō-fā-gi) Swallowing extremely hot foods.

thermophilic (thēr'mō-fīl'ik) [+ *philein*, to love]. Preferring or thriving best under high temperature, said of bacteria.

thermophobia (thēr'mō-fō'bī-ā) [+ *phobos*, fear]. Abnormal dread of heat.

thermophore (thēr'mō-fōr) [+ *phoros*, a bearer]. Apparatus for applying heat to a part, consisting of water heater and tubes conveying water to a coil and returning to heater, or salts which produce heat when moistened.

thermophylic (thēr'mō-fīl'ik) [+ *phy-lakē*, guard]. Resistant to destruction by heat, noting certain bacteria.

thermopile (thēr'mō-pīl) [G. *thermē*, heat, + L. *pila*, pile]. PT. A thermoelectric battery used in measuring small variations in the degree of heat.

It consists of a number of dissimilar metallic plates connected together in which, under the influence of heat, an electric current is produced.

thermoplegia (thēr'mō-plē'jī-ā) [+ *plēgē*, a stroke]. Heatstroke, sunstroke. Syn: *insolation*, *siriasis*.

thermopolypnea (thēr'mō-pōl-īp-ne'ā) [+ *polys*, many, + *pnoia*, breath]. Quickened breathing caused by high fever or great heat.

thermoradioltherapy (thēr'mō-rā'di-ō-thēr'ā-pī) [+ L. *radius*, ray, + G. *therapeia*, treatment]. Application of heat to deep tissues by diathermy. Syn: *thermopenetration*.

thermoreceptor (thēr'mō-rē-sēpt'or). A sensory receptor which is stimulated by a rise of body temperature.

thermoregulatory (thēr'mō-rē-gū-lā-tōr-i). Pertaining to the regulation of temperature, especially body temperature.

centers. Centers in the hypothalamus which regulate heat production and heat loss, especially the latter, so that a normal body temperature is maintained. They are influenced by nervous impulses from cutaneous receptors and by the temperature of the blood flowing through them.

thermoresistant (thēr'mō-rē-zī'stānt) [+ L. *resistentia*, resistance]. Able to resist high temperature, but not develop in it, noting bacteria.

thermostabile (thēr'mō-stā'bīl) [+ L. *stabilis*, stationary]. Not changed or destroyed by heat.

thermostat (thēr'mō-stāt) [G. *thermē*, heat, + *statos*, standing]. An automatic device for regulating the temperature.

thermosteresis (thēr'mō-stē-rō'sis) [+ *sterēsis*, deprivation]. The deprivation or loss of heat.

thermosystaltic (thēr'mō-sis-tāl'tik) [+ *systellein*, to contract]. Pert. to contraction of the muscles under stimulus of heat.

thermotactic, thermotaxic (thēr'mō-tāk'tik, -tāks'ik) [+ *taktikos*, regulating, — + *taxis*, order]. Relating to regulation of the bodily temperature.

thermotaxis (thēr'mō-tāks'is) [+ *taxis*, arrangement]. 1 Regulation of bodily temperature. 2 Reaction of organisms or of protoplasm in the living body to heat. 3. Syn: *thermometropism*. The movement of certain organisms or cells toward (positive thermotaxis) or away from (negative thermotaxis) heat.

thermotherapeutics (thēr'mō-thēr-ā-pi-ā'tiks) [+ *therapeutikē*, treatment]. Use of heat in treatment of disease. Syn: *thermotherapy*.

thermotherapy (thēr'mō-thēr-ā-pī) [G. *thermē*, heat, + *therapeia*, treatment]. PT. The therapeutic application of heat. Heat may be applied locally by radiant heating devices which give off infrared rays and by conductive heating which utilizes hot water bottles, paraffin baths, hot packs, etc. or the temperature of the body may be increased (hyperthermia, *q v*) by artificial fever induced by raising environmental temperature or preventing heat loss from the body. See: *heat*.

thermotolerant (thēr'mō-tōl'ēr-ānt) [G. *thermē*, heat, + L. *tolerāre*, to tolerate]. Able to live normally in high temperature.

thermotoxin (thēr'mō-tōks'in) [+ *toxikon*, poison]. A poison formed in the tissues by excessive heat.

thermotropism (thēr'mō-trō'pīsm). Thermotaxis, *q v*.

thesis (thē'sis) [G. *thesis*, proposition]. An essay on a given subject offered by a candidate for a collegiate degree.

thiamin(e). Syn: *vitamin B*. A white, crystalline compound (C₁₂H₁₇N₄OS), occurring naturally and also produced synthetically. It is widely distributed in

various animal and plant foods, dry yeast and wheat germ being the richest natural resources. It occurs in the outer layers of seeds and in nuts, legumes, and most vegetables, and in some meats (pork, muscle, livers, hearts, and kidneys).

FUNCTION: It is essential for the normal metabolism of carbohydrates, and fats. It acts as a coenzyme of carboxylases in the carboxylation of pyruvic acid, hence is essential for the liberation of energy and disposal of pyruvic acid.

EFFECTS OF DEFICIENCY: Moderate deficiency results in impaired functioning of nervous, circulatory, digestive, and endocrine systems. Neurasthenia, neurologic disorders, cardiac, and gastrointestinal symptoms may result. Loss of appetite, fatigue, muscle tenderness, and increased irritability are symptoms. Severe and prolonged deficiency results in beriberi.

DAILY REQUIREMENTS: 1.5 to 3 mg depending on activity and carbohydrate intake.

Thiersch's graft or method (têrsh) A method of skin grafting using epidermis and a portion of the dermis.

thigh (thi) [A.S. *thioh*, thigh]. The proximal portion of the lower extremity, the portion lying between the hip joint and the knee. **See:** *hip*, *pectineus*, *sartorius*.

t. bone. The femur.

t. joint. The hip joint. **SYN** *articulatio coxae*.

thigmesthesia (thîg-mēs-thê'zî-ă) [G. *thigma*, touch, + *aisthēsis*, sensation]. The sense of touch.

thigmotaxis (thîg'mō-tāks'is) [“+ *taxis*, arrangement]. Arrangement in which some cells are attracted by contact with solids. **SYN** *thigmotropism*.

thigmotropism (thîg-mōt'rō-plîzm) [“+ *tropos*, a turning, + *-ismos*, condition]. The attraction exerted by contact with solids over certain cells. **SYN** *thigmotaxis*.

thio- [G.] Prefix denoting presence of sulfur replacing oxygen.

thiogenic (thî'ō-jên'îk) [G. *theion*, sulfur, + *gennao*, to produce]. Able to convert hydrogen sulfide into higher sulfur compounds, said of bacteria in the water of some mineral springs.

thionine (thî'ō-nēn) [G. *theion*, sulfur, + *neos*, new]. Crystalline sulfur-containing compound found in ergot and blood.

Structurally identified as thiolhistidine. It plays an important part in the blood in nutritional processes.

thiopectic, **thiopexic** (thî'ō-pêk'tîk, -pêks'îk) [“+ *pêxis*, fixation]. Pert. to the fixation of sulfur.

thiopexy (thî'ō-pêks-i) [“+ *pêxis*, fixation]. The fixation of sulfur.

thiophil, **thiophilic** (thî'ō-fîl, thî'ō-fîl'îk) [“+ *philein*, to love]. Thriving in the presence of sulfur or its compounds, as some bacteria.

thiouracil (thî'ō-û'rā-sîl). An antithyroid drug used in treatment of hyperthyroidism, thyrotoxicosis, and thyroiditis.

Dosage: 0.4 Gm. daily in divided doses. After symptoms are controlled and basal metabolic rate is within normal range, dosage should be reduced to 0.1 or 0.2 Gm. daily.

thiourea (thî'ō-û-rē-ă) [“+ *urea*]. Colorless crystalline compound of urea in which sulfur replaces the oxygen.

third cranial nerve. Oculomotor nerve. **See:** *Appendix*.

t. intention. Healing of a wound by filling with granulations. **See:** *resolution*.

t. ventricle. Third ventricle of the brain, a narrow cavity bet. the 2 optic thalami. **SYN** *ventriculus tertius*.

thirst. 1 Desire for fluid, esp for water.

This may obtain in fevers and certain other maladies, or it may be entirely lacking in some conditions. The nurse should note whether the intake of fluids allays the patient's thirst. 2 The sensation resulting from the lack of or the need of water. Thirst may result from drying of mucous membranes, especially those of the pharynx or from reduced salivary secretion. It also results from general dehydration as may occur following hemorrhage, profuse sweating, vomiting, or excessive renal functioning as in diabetes.

RS. *adipsia*, *adiposus*, *adipsy*, *anadipsia*, *aposis*, *taste*.

t., absence of. *Adipsia*, *aposis*.

t., excessive. *Polydipsia*.

t., morbid. *Dipsosis*.

Thiry's fistula (tê'rē). An artificial fistula in a dog's intestines for obtaining intestinal juice for experimental purposes.

Thomsen's disease (tôm'sên). **SYN** *myotonia congenita*, *q.v.* Also called *myotonia atrophica*, *myotonia dystrophica*.

thoracalgia (thō-rāk-ăl'jî-ă) [G. *thōraz*, *thōrak*-, chest, + *algos*, pain]. Pain in the chest wall. **SYN** *pleurodynia*.

thoracotomy (thō-rāk-sêkt'ō-mî) [“+ *ektomē*, excision]. Incision of the chest wall with resection of a portion of rib.

thoracentesis (thō-rās-ên-tē'sis) [“+ *kentēsis*, a puncture]. Tapping through the chest wall for removal of fluids. **SYN:** *pleurocentesis*, *q.v.*

NP Have patient well supported. Watch for signs of collapse during and following treatment.

thoracic (thōr-ăs'îk) [G. *thōraz*, *thōrak*-, chest]. Pert. to the chest or thorax.

t. cavity. The space lying above the diaphragm and enclosed within the walls of the thorax, the space occupied by the thoracic viscera. It includes the *pleural cavities* occupied by the lungs and the *mediastinum*, the space between the lungs occupied by the heart lying within the pericardium, the thoracic aorta, pulmonary artery and veins, vena cavae, thymus gland, lymph nodes, trachea, bronchi, and thoracic duct. It is separated from the abdominal cavity by the diaphragm.

t. duct. The main lymph duct of the body having its origin at the *cisterna chyli* on the abdomen. It passes upward through the diaphragm into the thorax, continuing upward alongside aorta and esophagus to the neck where it turns to the left and enters the left subclavian vein near its junction with the left internal jugular vein. It receives lymph from all parts of the body except right side of head, neck, and thorax and right upper extremity.

t. limbs. Upper extremities.

RS *lacteals*, *lymphatic*, *lymphatic system*, *chyle*, *cisterna chyli*.

thoraco- [G.] Combining form meaning chest, chest wall.

thoracobronchotomy (thō-rāk-ō-brôn-kōt'ō-mî) [G. *thōraz*, *thōrak*-, chest, + *brogchos*, windpipe, + *tomē*, a cutting]. Incision through the thoracic wall into the bronchus.

thoracocautery (thō-rāk-ō-kaw'têr-i) [“+ *kautēron*, branding iron]. The use of cautery in breaking up pulmonary adhesions to collapse the lung.

thoracoceloschisis (thō'rāk-ō-sē-lōs'kī-sīs) [*"* + *kōitā*, belly, + *schisis*, a fissure]. Congenital fissure of the thoracic and abdominal cavities.

thoracocentesis (thō'rāk-ō-sē-tē'sīs) [*"* + *kentēsis*, a puncture]. Tapping of the thorax *SYN* *thoracentesis*.

thoracocyllosis (thō'rāk-ō-sīl-ō'sīs) [*"* + *kyllosis*, crippling]. Deformity of the chest.

thoracocyrstosis (thō'rāk-ō-sīr-tō'sīs) [*"* + *kyrstōsis*, curvature]. Excessive curvature of the chest.

thoracodynia (thō'rāk-ō-dīn'ī-ā) [*"* + *odynē*, pain]. Pain in the thorax.

thoracogastroschisis (thō'rāk-ō-gās-trōs'kīs-is) [*G* *thōraz*, *thorak-*, chest, + *gaster*, belly, + *schisis*, a cleft]. Congenital fissure of abdomen and thorax.

thoracolumbar (thō'rāk-ō-lūm'bar) [*"* + *L. lumbus*, loin]. Pert. to the thoracic and lumbar parts of the spine, noting their ganglia and the fibers of the sympathetic nervous system.

thoracolysis (thō'rāk-ō-līs-is) [*G* *thōraz*, *thorak-*, chest, + *lysis*, loosening]. *SYN*: *pneumonolysis*. The freeing of a lung which is attached to the chest wall.

thoracometry (thō'rāk-ō-mē'trī) The measurement of the thorax.

thoracomyodynia (thō'rāk-ō-mī'ō-dīn'ī-ā) [*"* + *mys*, *my-*, muscle, + *odynē*, pain]. Pain in chest muscles.

thoracopathy (thō'rāk-ōp'āth-ī) [*"* + *pathos*, disease]. Any disease of the thorax, thoracic organs, or tissues.

thoracoplasty (thō'rāk-ō-plās'tī, thō'rāk-ō-plās'tī) [*G* *thōraz*, *thorak-*, chest, + *plassein*, to form]. A plastic operation upon the thorax; removal of portions of the ribs in stages to collapse diseased areas of the lung *SEE* *empyema*.

thoracopneumoplasty (thō'rāk-ō-nū'mō-plās'tī) [*"* + *pneumon*, lung, + *plassein*, to form]. Plastic surgery involving the chest and lung.

thoracoschisis (thō'rāk-ōs'kī-sīs) [*"* + *schisis*, a cleft]. Congenital fissure of the chest wall.

thoracoscope (thō'rāk-ō-skōp-, rāk'ō-skōp) [*"* + *skopein*, to examine]. 1 An instrument used in auscultation to convey the sounds of the chest to the ear *SYN* *stethoscope*. 2 Instrument for inspecting the thoracic cavity which has an electric light and is inserted through an intercostal space.

thoracoscopy (thō'rāk-ōs'kō-plī) [*"* + *skopein*, to examine]. Diagnostic examination of the pleural cavity with an endoscope.

thoracostenosis (thō'rāk-ō-stēn-ō'sīs) [*"* + *stenōsis*, a contraction]. Narrowness of the thorax. *SYN* *waspswaist*.

thoracostomy (thō'rāk-ōs'tō-mī) [*"* + *stoma*, mouth]. Resection of chest wall to allow room for enlarged heart or for drainage.

thoracotomy (thō'rāk-ōt'ō-mī) [*G* *thōraz*, *thorak-*, chest, + *tomē*, a cutting]. Surgical incision of the chest wall.

thorax (thō'rāks) (pl *thoraces* or *thoraxes*) [*G. thōraz*]. That part of the body bet the base of the neck superiorly and the diaphragm inferiorly. *SYN*: *chest*.

The surface of the thorax is divided into regions as follows:

ANTERIOR SURFACE *Supraclavicular*, above the clavicles; *suprasternal*, above the sternum; *clavicular*, over the clavicles; *sternal*, over the sternum; *mammary*, the space bet. the 3rd and 6th

THE SKELETAL THORAX

1. First thoracic vertebra. 2. Manubrium. 3. Gladiolus. 4. Xiphoid process. 5. Last thoracic vertebra. 6. First rib.

ribs on either side, *inframammary*, below the mamma and above the lower border of the 12th rib on either side.

POSTERIOR SURFACE *Scapular*, over the scapulae; *interscapular*, bet the scapulae; *infrascapular*, below the scapulae.

ON SIDES *Axillary*, above the 6th rib. *RS. acromiothoracis, cholethorothorax*, "thorac-" words.

f. Amason. A chest with only 1 breast *f. barrel-shaped*. A malformed chest rounded like a barrel seen in pulmonary emphysema.

f. fusiform. A chest deformed by long continued tight lacing.

f. paralyticus. The long, flat chest of patients with constitutional viscerop-tosis.

f. Peyrot's. A chest that has an obliquely oval, deformed shape, seen in large pleural effusions.

f. pigeon. One in which the sternum and ribs anteriorly form a prominent edge or ridge resembling the breastbone of a pigeon.

Thorazine (thōr-ā'zēn) A proprietary name for chlorpromazine hydrochloride. It is a central nervous system depressant and employed as a sedative and antiemetic. It potentiates the effects of sedatives and general anesthetics and is of value in quieting severely excited psychiatric patients.

thorium (thōr'ī-ūm). *SYMS*: Th. A metallic element occurring in combination. At wt. 232.05, at no. 90.

It is antiseptic and radioactive, and it produces mesothorium, radiothorium, and thorium emanation upon disintegration.

Thornwaldt's disease (torn'vahlt). Inflammation of crypt of the pharyngeal tonsil with formation of a pus-containing cyst and nasopharyngeal stenosis.

thoron (thō'rōn) A gaseous, radioactive element; an emanation or transformation product of thorium.

threadworm. 1 Common name applied to any member of the phylum Nematelminthes a roundworm. 2 A human parasitic roundworm, *Strongyloides stercoralis*, q v.

three-day fever. *SYN*: *pappataci fever*, *sandfly fever*. A viral disease transmitted by the sandfly, *Phlebotomus papatasi*. It resembles dengue but is less severe.

thremmatology (thrēm-ā-tōl'ō-jī) [*G.*

thremma, nursling, + *logos*, science]. Science of breeding according to the laws of heredity and variation

threonine (thrē'ō-nin). Alpha-amino-beta-hydroxybutyric acid. One of the essential amino acids.

threpsology (thrēp-sōl'ō-jī) [G. *threpsis*, nutrition, + *logos*, study]. Science of nutrition

threshold (thrēsh'ōld) [A.S. *therscwold*].

1 Point at which a psychological or physiological effect begins to be produced 2 A measure of the sensitivity of an organ or function which is obtained by finding the lowest value of the appropriate stimulus that will give the response.

t., absolute. The stimulus of least intensity that will give rise to a sensation or a response

t., auditory. Minimum audible sound. **t. of consciousness.** Psy Point at which a stimulus is hardly perceived

t., differential. The lowest limit at which two stimuli can be differentiated from each other

t., erythema. Stage in which e. of the skin due to radiation just begins.

t., ketosis. The lower limit at which ketone bodies (acetoacetic acid, hydroxybutyric acid, and acetone), upon their accumulation in the blood, are excreted by the kidney. Such indicates that ketone bodies are being produced faster by the liver than the body can oxidize them

t., renal. The concentration at which a substance in the blood normally not excreted by the kidney begins to appear in the urine. The renal threshold for glucose is 160-180 mg per 100 ml. **See: threshold**

t., sensory. The minimal stimulus for any sensory receptor which will give rise to a sensation

t., stimulus. *SYN:* *lminimal stimulus, rheobase* The least or minimal stimulus that will give rise to a sensation or bring about a response such as a muscle contraction

t. substance. A substance present in the blood which serves a useful function which on being filtered through glomeruli of the kidney is reabsorbed by the tubules up to a certain limit, that being the upper limit of the concentration of the substance in "normal" plasma. *High-threshold* substances are those which are entirely or almost entirely reabsorbed. *Ex: glucose, chlorides; low-threshold* substances are those which are reabsorbed in limited quantities; *Ex urea, phosphates, no-threshold* substances are those excreted in their entirety; *Ex creatinine sulfates*

thrill (thrīl) [M.E. *thriellen*, to pierce]. 1. Abnormal tremor accompanying a vascular or cardiac murmur felt on palpation. *SYN: fremitus.* 2. A tingling or shivering sensation of tremulous excitement, as from pain, pleasure, or horror.

t., aneurysmal. One felt on palpation of an aneurysm.

t., aortic. One heard over aortic aperture in lesions of valves

t., arterial. One heard over an artery.

t., diastolic. One felt over the heart during diastole of the ventricle.

t., hydatid. Peculiar tremor felt on palpation of a hydatid cyst.

t., presystolic. One sometimes felt over apex of the heart preceding ventricular contraction.

throat (thrōt) [A.S. *throta*]. 1. The pharynx and the fauces. 2. Cavity from arch of palate to glottis and sup. open-

ing of the esophagus. 3. The front of the neck 4. Any narrow orifice

t., sore. *SYN: odynophagia, pharyngitis, tonsillitis* Inflammation of tonsils, larynx, or pharynx

FOREIGN BODIES IN The symptoms depend somewhat on the location and size of the foreign body, and vary from simple discomfort to distressing coughing, difficulty in breathing, retching, and cyanosis, and, if not relieved, suffocation resulting in unconsciousness.

TREATMENT. If not causing serious distress, the patient should lie down with the head lower than the body. The common practice of a sudden slap on the back often helps to dislodge bodies in the trachea or throat, and in youngsters is esp efficacious when the child is inverted. If this does not succeed, it is possible to introduce a finger through the mouth into the throat, possibly to the larynx, and so dislodge the foreign body. It has been possible in this way to dislodge a bean from the larynx of an unconscious child.

Summon a physician immediately. Make sure to tell him the nature of the case so that he may bring the proper instruments, as it may be necessary for him to open the trachea. Cathartics and enemas are of no value whatever, and may be dangerous

throb (thrōb) [M.E. *throbben*, of imitative origin]. 1 A beat or pulsation, as of the heart 2 To pulsate

throbbing (thrōb'ing) [M.E. *throbben*, of imitative origin] Pulsation, a beating; rhythmic movement

Throckmorton's reflex (thrōk'mor'tūn) Extension of great toe and flexion of others when dorsum of foot is percussed in metatarsophalangeal region

throe (thrō) [A.S. *thrauz*, suffering]. A severe pain or pang, esp. one in childbirth.

thrombasthenia (thrōm-bās-thē'nī-ā) [" + *asthenia*, weakness] Deficiency of the blood platelets

thrombectomy (thrōm-bēk'tō-mī) [" + *ektomē*, excision]. Excision of a thrombus

thrombi. Plural of thrombus

thrombin (thrōm'bīn) [G. *thrombus*, a clot] 1 An enzyme formed in shed-blood from prothrombin which reacts with soluble *fibrinogen* converting it to *fibrin* which forms the basis of a blood clot. *See coagulation*

thrombinogen. *SYN: prothrombin, serozyme, thrombogen, proserozyme* A factor in the blood necessary for clotting; the precursor of thrombin, *q.v.*

thrombo- [G.]. Combining form meaning clot of blood, curd of milk, lump, piece, pert to a thrombus

thromboanglitis (thrōm-bō-ān-jī'tīs) [G. *thrombos*, clot, + *angeion*, vessel, + *-itis*, inflammation] Inflammation of inner coat of a blood vessel with clot formation. *See: thrombosis*

t. obliterans. Obliteration by thrombi of the larger veins and arteries of a limb, resulting in gangrene. *SYN: Buerger's disease.*

SYM. Occlusion; thrombosis; excruciating pain in leg or foot, worse at night; cyanotic, clammy cold extremity; diminished sense of heat and cold; gangrene of toes or foot may set in.

thromboarteritis (thrōm'bō-ar-tē-rī'tīs) [" + *arteria*, artery, + *-itis*, inflammation]. Inflammation of an artery in connection with thrombosis.

thromboplast (thrōm'bō-plāst) [" + *blas-*

tos, a germ]. A small basophilic cell, said to be the mother cell of the blood platelet.

thromboclasia (thrōm-bōk'lās-sīs) [' + *klasis*, a breaking] The breaking up of a thrombus. SYN: *thrombolysis*.

thromboclastic (thrōm-bō-klās'tīk) [' + *klasis*, a breaking] Pert to or producing the dissolution of a thrombus. SYN: *thrombolytic*.

thrombocyst, **thrombocystis** (thrōm'bō-sist, -sī'stīs) [' + *kystis*, a sac]. A membranous sac enveloping a thrombus.

thrombocyte (thrōm'bō-sīt) [G *thrombos*, a clot, + *kytos*, cell]. One of the pale disks found in normal blood, 200,000 to 400,000 per c.mm., which aid in coagulation. SYN: *platelet*.

They are much smaller than the corpuscles. SEE: *blood*, *erythrocyte*, *leukocyte*.

thrombocytoclit (thrōm'bō-sī-tō-krīt) [' + *kytos*, cell, + *krinein*, to separate]. Device for estimating the platelet content of the blood.

thrombocytolysis (thrōm'bō-sī-tō'lī-sīs) [' + *lysis*, dissolution]. Dissolution of thrombocytes.

thrombocytopenia (thrōm'bō-sī-tō-pē-nī-ā) [' + *penia*, lack]. Abnormal decrease in number of the blood platelets. SYN: *thrombopenia*.

thrombocytopoiesis (thrōm'bō-sī-tō-pōy-ē-sīs) [' + *poiesis*, production]. The development of blood platelets.

thrombocytosis (thrōm'bō-sī-tō'sīs) Increase in number of thrombocytes.

thromboembolism (thrōm'bō-ēm'bō-lizm) An embolism, the blocking of a blood vessel by a thrombus which has become detached from its site of formation.

thromboendocarditis. Formation of a clot on inflamed surface of a heart valve.

thrombogen (thrōm'bō-jēn) [' + *gennan*, to produce]. A substance believed to be present in blood plasma which is the precursor of thrombin. SYN: *prothrombin*.

thrombogenesis (thrōm'bō-jēn-ēs-īs) [G. *thrombos*, a clot, + *genesis*, production]. The formation of a blood clot.

thrombogenic (thrōm'bō-jēn'tīk) [' + *gennan*, to produce]. Producing or tending to produce a clot.

thromboid (thrōm'boyd) [' + *eidōs*, form]. Resembling a thrombus or clot.

thrombokinese (thrōm'bō-kin'ās) [G. *thrombos*, a clot, + *kinēsis*, motion]. SYN: *thromboplastin*, *q.v.*

thrombokinesis (thrōm'bō-kin-ēs-sīs) [' + *kinēsis*, motion]. The coagulation of the blood.

thrombolympfangitis (thrōm'bō-līm-fān-jītīs) [' + L. *lymphā*, lymph, + G. *agegon*, vessel, + *-itis*, inflammation]. Inflammation of a lymphatic vessel due to obstruction by thrombus formation.

thrombolysis (thrōm-bō'lī-sīs) [' + *lysis*, destruction]. The breaking up of a thrombus. SYN: *thromboclasia*.

thrombolytic (thrōm'bō-līt'īk) [G. *thrombos*, clot, + *lysis*, dissolution]. Pert to or causing the breaking up of a thrombus.

thrombopathy (thrōm-bōp'āth-ī) [' + *pathos*, disease]. A defect in the coagulation apparatus of the blood. SYN: *hemophilia*, *q.v.*

thrombopenia (thrōm'bō-pē-nī-ā) [' + *penia*, lack]. Lessening of the number of blood platelets.

thrombophilia (thrōm'bō-fīl'ī-ā) [' + *philein*, to love]. A tendency to the occurrence of clot formation.

thrombophlebitis (thrōm'bō-flē-bītīs) [G. *thrombos*, a clot, + *phleps*, *phleb*, vein, + *-itis*, inflammation]. SYN: *phlebitis*, *thrombophlebitis*, *milk leg*, *phlegmasia alba dolens*, *venous thrombosis*.

NP: Immobilize the affected limb, elevate it and support with a pillow. The weight of bedclothes should be removed by supporting them on a cradle. Fomentations may be ordered. All applications should be kept in place by a many-tailed bandage made so movement of the limb is prevented in changing dressings. Limb should be kept from pressure and well wrapped to keep it warm. It should be inspected daily to see that skin is in good condition. Light diet to keep blood pressure low. No alcohol or red meats. Constipation and straining at stool must be avoided. No excitement. Keep patient in bed for at least 6 days to 6 weeks. Limb may have to be bandaged from toes to thigh to keep down swelling.

TREATMENT: Absolute rest to avoid the greatest danger, which is an embolus. Leg elevated so hip and knee are in flexion and heat is applied. Patient must not get up until the temperature has been normal for at least a week, if there have been infarcts, for about 2 weeks.

thromboplastic (thrōm'bō-plās'tīk) [G. *thrombos*, clot, + *plassein*, to form]. Pert to or causing acceleration of clot formation in the blood.

thromboplastin (thrōm'bō-plās'tīn) [' + *plassein*, to form]. A substance found in the tissues which accelerates clotting of the blood.

thrombopoesis (thrōm'bō-pōy-ē-sīs) [' + *poiesis*, production]. The formation of blood platelets.

thrombosed (thrōm'bōzd) [G. *thrombos*, a clot]. 1. Coagulated; clotted. 2. Denoting a vessel containing a thrombus.

thrombosin (thrōm'bō'sīn) [G. *thrombos*, clot]. A substance derived from the cleavage of fibrinogen which can be converted into fibrin.

thrombosinuitis (thrōm'bō-sī-nūs-ītīs) [' + L. *sinus*, cavity, + G. *-itis*, inflammation]. Thrombus formation of a dural sinus.

thrombosis (thrōm'bō'sīs) [G. *thrombos*, clot, + *-osis*, condition]. The formation of a blood clot or thrombus.

RS: *embolus*, "*thromb-*" words, *angina pectoris*.

It is a solid aggregation formed in circulating blood and such changes constitute *thrombosis*. When a thrombus is detached from its original site and found in another part, it is called a *thrombotic embolus*. The simpler forms of *thrombi* do not contain clotted blood.

ERROL: Trauma, esp. following an operation and parturition; cardiac and vascular disorders, obesity, heredity, increasing age, an excess of erythrocytes and of platelets, an overproduction of fibrinogen, and sepsis are predisposing causes.

SYM: *Lungs*: Obstruction of smaller vessels in the lungs causes an infarct manifested by sudden pain in the side of the chest, similar to pleurisy; also the spitting of blood, a pleural friction rub, and signs of consolidation. *Kidneys*: Blood appears in the urine, and small hemorrhagic spots in the skin. *Spleen*: Pain is felt in the left upper abdomen. *Extremities*: If a large artery in one of the extremities, such as the

Symptoms	Coronary Thrombosis	Angina Pectoris
Onset Character of pain Duration of attack Patient Blood pressure Pulse Vomiting Treatment	At rest Continuous Hours or days Often restless Falls Sometimes irregular Common Morphia Amyl nitrite has no effect	With effort Paroxysmal Seconds or minutes Remains still Rises Regular Uncommon Amyl nitrite Morphia

brachial, is suddenly obstructed, the part becomes cold, pale, bluish, and the pulse disappears below the obstructed site. Gangrene of the digits or of the whole limb may ensue. Same symptoms may apply to embolisms, *q v*.

NP: In thrombosis of a limb rest in bed is essential. Blood pressure must be kept low to prevent movement of a portion of the clot, so patient must remain very quiet. He must not be permitted to move himself, not even the upper portion of his body. Elevate the affected limb on a pillow and steady it with sandbags. Cotton or wool may be wrapped about the limb and held in place by a many-tailed bandage, extending from groin to foot. Any application to the limb must be kept in place by a similar bandage.

If limb is badly swollen watch for pressure sores. Guard against burning with hot water bottle or electric pad. Remember excitement causes a rise in blood pressure and it may dislodge the clot irrespective of body movement. Straining at stool must be avoided, so the bowels should be kept open. No stimulants should be given, although very weak tea or coffee may be taken. All drinks should be cool. From 6 days to several weeks bedrest may be necessary depending on condition of patient.

Anticoagulant therapy necessary. When a thrombus or embolus is large, surgical removal may be necessary.

t., atrophic. T. resulting from malnutrition.

t., cardiac. Thrombosis of the heart.

t., coagulation. T. due to coagulation of fibrin in a blood vessel.

t., compression. T. due to compression bet a thrombus and the heart.

t., coronary. T. of the coronary arteries. A common cause of myocardial infarction.

Sym. Sudden onset of severe and prolonged substernal oppression and pain, the pain arising over the precordium and being referred to the upper and middle sternum and often radiating to the left and sometimes right arm and into the neck. Blood pressure usually falls, pulse becomes rapid, fever and leukocytosis usually observed within 24 hrs. Erythrocyte sedimentation rate becomes elevated and electrocardiographic changes occur.

Treatment: Complete physical and mental rest for first 2-3 weeks. Special nursing care is desirable. Prompt and complete relief from pain by use of morphine sulfate; oxygen administration sometimes necessary. Vasopressor drugs to elevate blood pressure; digitalis when there is evidence of congestive heart failure; treatment of cardiac arrhythmias, esp. tachycardia; anticoagulants.

DIET: Low protein and carbohydrate intake of approx 1000 cal. Fluids to produce urinary output of 1500 cc daily. Restrict salt intake to 2 gm.

POSSIBLE COMPLICATIONS: Shock; acute pulmonary edema, paroxysmal ventricular tachycardia, congestive heart failure.

t., dilatation. T. due to dilatation of a vein.

t., embolic. T. due to an embolus obstructing a vessel.

t., infective. T. due to bacterial infection.

t., marasmic. T. due to wasting diseases of infancy and old age.

t., placental. Thrombi in the placenta and veins of the uterus.

t., plate. Thrombus formed from an accumulation of blood platelets.

t., puerperal. Coagulation in veins following labor.

t., sinus. T. of a venous sinus.

LATERAL ETIOLOG. Associated with middle ear disease. **Sym.** Sudden rise of temperature with remission, chills, prostration, sweats, headache, mental symptoms, dullness or delirium, high leukocyte count.

CAVERNOUS: Sinus structures involved, edema and venous stasis in and about the eye.

t., traumatic. T. due to a wound or injury of a part.

t., venous. T. of a vein.

thrombostasis (thrōm-bōs'tā-sis) [*G. thrombos. clot, + stasis, a checking*]. Stasis of blood in a part causing or due to formation of thrombus.

thrombotic (thrōm-bōt'ik) [*G. thrombos. clot*]. Related to, caused by, or of the nature of, a thrombus.

thrombus (thrōm'būs) [*G. thrombos*]. A blood clot obstructing a blood vessel or a cavity of the heart.

Heparin,* an anticoagulant, injected intravenously, is being used in prevention and treatment of this condition.

t., annular. One whose circumference is attached to the walls of a vessel, an opening still remaining in the center.

t., antemortem. A clot formed before death in heart or large vessels.

t., ball. A round clot in the heart, esp. in the auricles.

t., hyaline. One having a glassy appearance usually occurring in smaller blood vessels.

t., Laennec's. A globular thrombus which forms in the heart, usually in cases of fatty degeneration.

t., lateral. A mural one, *q v*.

t., milk. A curdled milk tumor in the female breast due to obstruction in a lactiferous duct.

t., mural. **Syn:** lateral *t.*, parietal *t.* One attached to the wall of a vessel or the heart.

t., obstructing. One completely occluding the lumen of a vessel.

- f., progressive.** One which increases in size.
- f., stratified.** *SYN. fibrolaminar.* One composed of layers
- f., white.** *SYN: antemortem thrombus, q.v.*
- through drainage.** (thrū). Drainage by passing a perforated tube into cavity to be drained and flushing cavity by injection of fluids
- f. illumination.** Passage of light through the walls of an organ or cavity, for medical examination. *SYN. transillumination*
- thrush** (thrūsh) [Dutch *troske*, rotten wood]. Mycotic infection of mouth or throat, esp in infants and young children, characterized by formation of white patches, ulcer formation, and frequently fever and gastrointestinal inflammation. *SYN aphtha, sprue, stomatitis, q.v.*
- Etiol. *Candida* (*Monilia*) *albicans***
- thrypsis** (thrip'sis) [G. *thrypsis*, a breaking in pieces]. A comminuted fracture
- thulium** (thū'lī-um) A rare metallic element found in combination with minerals. *SYMS Tm At wt 168.94, at no 69*
- thumb** (thūm) [AS *thūma*, thumb] The short, thick, first finger on radial side of the hand, having but 2 phalanges and greater freedom of movement than other fingers. *SYN pollex*
- thylacitis** (thī'lā-sī'tis) [G *thylax*, pouch, + *-itis*, inflammation] Inflammation of the sebaceous glands of the skin
- thymectomy** (thī'mēk'tō-mī) [G *thymos*, thymus, + *-ektomē*, excision] Surgical removal of the thymus gland
- thymelocsis** (thī-mēl-kō'sis) ["" + *elkōsis*, ulceration]. Ulceration of the thymus gland
- thymergastic reaction** (thī-mēr-gās'tik) [G *thymos*, mind, + *ergasia*, work]. Name for psychic disorders most equivalent to manic-depressive or affect psychosis *
- thymic** (thī'mik) [G *thymos*, thymus] Relating to the thymus gland.
- f. acid.** 1. Acid obtained by heating nucleic acid of thymus gland with water. 2. Thymol, *q.v.*
- f. asthma.** Spasmodic closing of the glottis followed by a pronounced inspiration. *SYN: laryngismus stridulus.*
- f. death.** Sudden death in status lymphaticus and thymic asthma.
- f. stridor.** T. asthma
- thymion** (thīm'ī-on) [G *thymion*, wart]. A wart.
- thymitis** (thī-mī'tis) [G *thymos*, thymus, + *-itis*, inflammation]. Inflammation of the thymus gland.
- thymo-** [G.]. Combining form meaning thymus.
- thymocyte** (thī'mō-sīt) [G. *thymos*, thymus, + *kytos*, cell]. A lymphocyte having origin in the thymus gland.
- thymokesis** (thī'mō-kē'sis) [G *thymos*, thymus]. Abnormal enlargement and persistence of the thymus in the adult.
- thymol** (thī'mōl) [G *thymos*, thyme, + L. *oleum*, oil]. USP White crystals obtained from oil of thyme.
- ACTION AND USES:** Antiseptic and anthelmintic.
- Dosage** Antiseptic, 2 gr. (0.12 Gm.). Anthelmintic, 30 gr. (2 Gm.), div. into 3 doses.
- f. iodide.** USP. A reddish-brown powder.
- USES:** As a substitute for iodoform, as a dusting powder in various skin diseases.

thymolysis (thī-mōl'ī-sis) [G. *thymos*, thymus, + *lysis*, dissolution]. Dissolution of thymus tissue.

thymolytic (thī'mō-līt'ik) ["" + *lysis*, dissolution] Destructive to thymus tissue.

thymoma (thī-mō'mā) ["" + *-ōma*, tumor]. A tumor originating in epithelial tissues of the thymus gland

thymopexy (thī'mō-pēks'ī). Fixation of an enlarged thymus in a new position

thymotonic (thī'mō-tōks'ik) ["" + *tonikon*, poison] Poisonous to thymus tissue

thymus (thī'mūs) [G. *thymos*]. An unpaired organ located in the mediastinal cavity anterior to and above the heart. It consists of two flattened symmetrical lobes each enclosed in a capsule, from which trabeculae extend into the gland dividing each lobe into many lobules, each consisting of a *cortex* and *medulla*. The cortex is composed of dense lymphoid tissue containing many cells (thymocytes) closely packed together. The *medulla* also contains thymocytes but they are less numerous. It also contains characteristic *thymic* (Hassall's) *corpuscles*

At birth the thymus weighs 12 to 15 Gm. Growth is rapid during the first two years, then slow, attaining a weight of about 40 Gm at puberty, after which it begins to undergo involution during which it decreases in size and the thymic tissue is replaced with adipose and connective tissue

FUNCTIONS: Other than the possible production of lymphocytes, it has no known function. Its removal produces no significant effects.

PATH: Sometimes it is much larger than it should be and is then known as enlarged or persistent thymus. Children having these enlarged structures are particularly susceptible to infections and anesthetics, and are liable to sudden death under the latter. This condition is readily cured by the x-ray

SEX status *thymicolymphaticus*, *thymic asthma*

f., accessory. A lobule isolated from the mass of the thymus gland.

f. persists hyperplastica. A thymus persisting into adulthood, sometimes hypertrophying.

thymusectomy (thī'mūs-ēk'tō-mī) [G. *thymos*, thymus, + *-ektomē*, excision] Surgical excision of the thymus.

thyreoplasia congenita. Defective functioning of the thyroid gland due to abnormal development

thyro-, **thyreo-** [G.] Combining forms meaning oblong, shield, thyroid.

thyroadenitis (thī'rō-ād-en-ī'tis) [G *thyreos*, shield, + *adēn*, gland, + *-itis*, inflammation]. Inflammation of thyroid gland

thyroaplasia (thī'rō-ā-plā'zī-ā) ["" + *a-*, priv + *plasis*, a molding] Imperfect development of the thyroid gland.

thyroarytenoid (thī'rō-ā-rit'en-ōyd) ["" + *arytaina*, pitcher, + *eidos*, form]. Relating to the thyroid and arytenoid cartilages.

thyrocardiac (thī'rō-kar'dī-āk) ["" + *kardia*, heart]. 1. Pert. to the heart and thyroid gland 2. A person suffering from thyroid disease complicated by heart disorder.

thyrocele (thī'rō-sēl) ["" + *kēlē*, mass]. Enlarged condition of the thyroid gland. *SYN: goiter.*

thyrochondrotomy (thī'rō-kōn-drōt'ō-mī) ["" + *chondros*, cartilage, + *tōmē*, a cutting]. Surgical incision of thyroid cartilage. *SYN: laryngotomy.*

thyrocricotomy (thi-rō-kri-kot'ō-mī) [G. *thyreos*, shield, + *krikos*, ring, + *tomē*, a cutting]. Tracheotomy; division of the cricothyroid membrane.

thyroepiglottic (thi-rō-ēp-i-glōt'ik) [" + *epi*, upon, + *glōttis*, glottis]. Relating to the thyroid and epiglottis

t. muscle. Muscle arising on inner surface of thyroid cartilage. It extends upward and backward and is inserted on epiglottis. It depresses the epiglottis.

thyroepiglottideus (thi-rō-ēp'i-glōt'id'ē-us) [" + " + *glōttis*, glottis]. Muscle in the thyroid cartilage that depresses the epiglottis

thyroglobulin (thi-rō-glōb'ū-līn) [G. *thyreos*, shield, + *L. globulus*, a tiny sphere]. SYN: *iodothyroglobulin*. An iodine-containing protein secreted by the thyroid gland and stored within its colloid substance

thyroglossal. Pertaining to the thyroid gland and the tongue

t. duct. A duct which in the embryo connects the thyroid diverticulum with the tongue. It eventually disappears, its point of origin being indicated as a pit, the *foramen cecum*. It sometimes persists as an anomaly

thyrohyoid (thi-rō-hi'oyd) [" + *hyoideus*, U-shaped]. Rel. to thyroid cartilage and hyoid bone. SYN *hyothyroid*.

thyroid (thi'royd) [G. *thyreos*, shield, + *eidos*, form] 1. Thyroid extract, *q. v.* 2. A gland of internal secretion in the neck, ant. to and partially surrounding the thyroid cartilage and upper rings of the trachea. SEE *t. gland* 3. Muscle which depresses hyoid bone or elevates thyroid cartilage if hyoid bone is fixed. SEE *Table of Muscles in Appendix*

t. axis. SYN *thyrocervical trunk*. A short thick branch of the subclavian artery. Its branches are the *inf. thyroïd*, *suprascapular* and *transverse cervical* which supply the thyroid gland and neck region

t. cachexia. Exophthalmic goiter.

t. cartilage. The principal cartilage of the larynx consisting of two broad lamina united anteriorly to form a V-shaped structure. It forms a subcutaneous projection, the *laryngeal prominence* or *Adam's apple*.

t. crisis. SEE *thyroid storm*.

t. extract. USP. The dried thyroid glands of the ox or sheep.

ACTION AND USES: Used in cases of deficient action of the gland.

ADMINISTRATION: Tablet form by mouth. A large dose may be given for full effect, followed by maintenance dosage. It is more desirable, however, to begin with a small dose and gradually increase until desired effect is produced. It does not exercise its maximum effect for about 10 days. As it has this cumulative effect dosage should not be increased too rapidly. Thyroid may be necessary all through a patient's life.

t. gland. A gland of internal secretion located in the base of the neck on both sides of the lower part of the larynx and upper part of trachea.

It consists of two lateral lobes connected by an *isthmus*. Sometimes a third *medial* or *pyramidal lobe* extends upward from the isthmus. Histologically it consists of a large number of closed vesicles called *follicles* which contain a homogeneous substance called *colloid* which contains the active principles secreted by the gland.

RS: *endocrine gland, hormone hyperthyroidism, hypothyroidism, iodine,*

struma, thyrotoxic, thyrotrophic hormone.

t. storm. SYN: *thyroid crisis*. Fulminating increase in all the signs and symptoms of thyrotoxicosis.

t. therapy. Thyroid ext. treatment.

thyroidectomized (thi-roy-dēk'tō-mīzd) [G. *thyreos*, shield, + *eidos*, form, + *-ektomē*, excision]. With the thyroid gland removed.

thyroidectomy (thi-royd-ēk'tō-mī) [" + " + *-ektomē*, excision]. Excision of the thyroid gland

Posr. NP. Patient in sitting position as soon as recovered from anesthesia, head and arms well supported. Watch for edema. Steam inhalations sometimes ordered. Give absolute mental and physical rest as much as possible

thyroiditis (thi'roy-dī'tis) [G. *thyreos*, shield, + *eidos*, form, + *-itis*, inflammation]. Inflammation of the thyroid gland. SEE *Riedel's struma*

t., giant cell. Thyroiditis characterized by presence of giant cells, round-cell infiltration, fibrosis, and destruction of follicles

thyroidization (thi'roy-dī-zā'shūn) [G. *thyreos*, shield, + *eidos*, form] Thyroid extract therapy.

thyroidotomy (thi-royd-ōt'ō-mī) [" + " + *tomē*, a cutting]. Incision of thyroid gland.

thyroidotoxin. A substance which is toxic for cells of the thyroid gland

thyrolytic (thi-rō-lī'tik) [" + *lysis*, dissolution]. Causing destruction of thyroid tissue.

thyroparathyroidectomy (thi-rō-par-ā-thi-roy-dēk'tō-mī) [" + " + *para*, beside, + *thyreos*, shield, + *eidos*, form, + *ektomē*, excision]. Surgical removal of the thyroid and parathyroid glands.

thyropenia (thi-rō-pē-nī-ā) [" + " + *venia*, lack]. Defective thyroid secretion with no clinical symptoms.

thyroprival (thi-rō-prī'vāl) [" + *L. privus*, lacking]. Pert. to a condition resulting from loss of function or removal of the thyroid gland.

thyroptosis (thi-rōp-tō'sis) [" + *ptōsis*, a drooping]. Downward displacement of a goitrous thyroid into the thorax.

thyrosis (thi-rō'sis) [" + *-ōsis*, condition]. Any condition due to abnormal thyroid action

thyrotherapy (thi-rō-ther-ā-pī) [" + *therapeia*, treatment]. Treatment with thyroid gland extracts.

thyrotome (thi-rō-tōm) [" + *tomos*, a piece]. Knife for cutting the thyroid cartilage.

thyrotomy (thi-rōt'ō-mī) [" + *tomē*, a cutting]. 1. The splitting of the thyroid cartilage anteriorly in midline in order to expose laryngeal structures. SYN: *laryngofissure*. 2. Surgery on the thyroid gland

thyrotoxic (thi-rō-tōks'ik) [G. *thyreos*, shield, + *toxikon*, poison]. Pert. to, affected by, or marked by toxic activity of the thyroid gland

thyrotoxicosis (thi-rō-tōks-i-kō'sis) [" + " + *-ōsis*, condition]. The condition of intoxication due to excessive thyroid secretion. SYN: *exophthalmic goiter, q. v.*

SYM: Rapid heart action, tremors, elevated basal metabolism, enlarged gland, exophthalmos, nervous symptoms, and loss of weight.

thyrotropic (thi-rō-trōp'ik) [G. *thyreos*, shield, + *trōpē*, a turning]. That which has an affinity for or stimulates the thyroid gland.

t. hormone. ABBR: TTH. The thyroid-stimulating hormone secreted by the ant. lobe of hypophysis. Also called *thyroid-stimulating hormone*. ABBR: TSH

thyrotropin (thi-rot'ró-pin). The thyrotropic hormone. *Q v*

thyroxin (thi-ròks'in) [*G thyreos*, shield]. Proprietary name for the active principle of the thyroid gland, one of the constituent amino acids of thyroglobulin. Used in the treatment of thyroid deficiency

thyroxine (thi-ròks'en) [*G thyreos*, shield] 3 5 3 5-Tetraiodothyronine, an amino acid obtained from the thyroid gland considered to be the principal thyroid hormone. Used in the treatment of hypothyroidism

t.-binding protein. ABBR: TBP. The globin protein responsible for binding the greater part of thyroxine in the plasma

Ti. Chemical symbol for titanium

tibia (tib'ī-ā) [*L. tibia*, shinbone]. The inner and larger bone of the leg bet. the knee and ankle articulating with the femur above and with the talus below. Also called shin bone

t., Lannelongue's. A syphilitic tibia.

t., saber-shaped. A deformity of the tibia due to gummatous periostitis (syphilitic) in which it curves outward.

tibialis (tib-ī-ā'lis) [*L.*] One of 2 muscles of the calf of the leg

tibiadductor reflex (tib'ī-ā-dük'tor) [*L. tibia*, shinbone, + *adducere*, to lead to]. Lateral or crossed adduction of leg when tibia is percussed on its inner side.

tibiofemoral (tib'ī-ō-fem'ō-rāl) [' + *femur*, femur - thigh]. Relating to the tibia and femur

tibiobular (tib'ī-ō-bū-lar) [' + *fibula*, buckle] Relating to the tibia and fibula.

tibiotalar (tib'ī-ō-tar'sāl) [' + *G tarsos*, flat of the foot]. Relating to the tibia and tarsus

tic (tik) [*Fr.*]. A spasmodic muscular contraction, most commonly involving the face, head, neck, or shoulder muscles. *SYN. habit spasm.*

The spasms may be tonic* or clonic.* The movement appears purposeful, is often repeated, involuntary, can be inhibited for a short time, only to burst forth with increased severity.

Error. Certain of these cases are due to structure changes, many psychogenic, the expression of frustration, and its correlated muscular tension. The former group most commonly encountered in patients who have suffered from lethargic encephalitis. *SEE: tiqueur.*

t., convulsive. Facial muscle spasm.

t., douloureux (doo-loo-ru'). Degeneration of or pressure on the trigeminal nerve, resulting in neuralgia of that nerve. *RS. neuralgia.* The pain is excruciating. Usually occurs after forty.

Pain is paroxysmal, radiating from angle of the jaw along one of the involved branches. If the first branch, a shocklike pain is felt along the eye and back over the forehead. If it is the middle fiber, the upper lip, nose, and cheek under the eye are affected. If it is the third branch, pain is in the lower lip and outer border of tongue on affected side. Pain is momentary but returns again and again.

t., facialis. Same as *convulsive tic*.

t., habit. Habitual repetition of a grimace or muscular action.

t., rotatores. Spasmodic torticollis in which head and neck are forcibly ro-

tated or turned from one side to the other.

t., spasmodic. Tonic contractions and paralysis of muscles of one or both sides of the face.

tick (tik) [*M.E. tike*]. Any of the numerous bloodsucking arachnids of the order Acarida. Ixodidae is the hard tick family and Argas the soft. They transmit specific diseases to man and lower animals.

t. fever. 1. Any infectious disease transmitted by the bite of a tick. 2. African relapsing fever. 3. Specifically, an acute infectious disease transmitted by the bite of a wood tick in the Rocky Mountain region. *SYN: Rocky Mountain spotted fever, spotted fever.*

Error. A bacillary microorganism (*Dermacentorzenus ricкетtsi*) transmitted by a tick.

SYN. Incubation period. From the bite to the first symptom, 5-7 days. Onset may be gradual or sudden, but generally for a period of 1 or more days; if so, it is preceded by weakness, chilly sensations and then a definite chill.

Other symptoms are headache in front and back of head, or both, more or less bloodshot eyes with sensitivity to light, eyeballs sore to touch, white coated tongue with red edges, deep, dusky flush on face, pain in muscles, bones, and joints; backache, esp in lower portion; bronchial cough; nosebleed; constipation, and marked weakness. The skin becomes spotted bet the 3rd and 5th day after onset. The spots resemble those of measles but differ in distribution. In Rocky Mountain spotted fever spots are apt to be concentrated on the wrist, ankles, and feet, instep, soles, and outer margin of the foot from the small toe, posteriorly. The trunk is usually free from spots. The spots appear to disappear on pressure but later become hemorrhagic, changing to a rust color due to disintegration.

tickle (tik'l) [*origin uncertain*]. 1. Peculiar sensation caused by titillation or touching, esp in certain regions, resulting in reflex muscular movements, laughter, or hysteria. 2. To arouse such a sensation by touching a surface lightly.

tickling (tik'ling) [*origin uncertain*]. Gentle stimulation of a sensitive surface and its reflex effect, such as involuntary laughter, etc. *SYN: titillation.*

t. i. d. (*L. ter in die*). Three times a day.

tidal (tī'dāl). Periodically rising and falling, increasing and decreasing

t. air. That which is inhaled and exhaled during normal quiet breathing. *SEE: respiration.*

t. drainage. The drainage of a paralyzed bladder by use of an automatic irrigation apparatus.

tide (*A.S. tid*, time). Alternate rise and fall; a space of time

t., acid. A temporary increase in acidity of urine due to increased secretion of alkaline substances into the duodenum

t., alkaline. Temporary decrease in acidity of urine following awakening and after meals. The former results from hyperpnea in which excess CO₂ is eliminated; the latter results from increase of base in the blood following the secretion of HCl into gastric juice.

tigretter (tē-grēt-ā-ā') [*Fr.*]. A dancing mania or form of tarantism due to bite of a poisonous spider occurring in Tigré, Abyssinia.

tigroid (tī'groyd) [*G. tigreoidēs*, spotted]. Striped, spotted, or marked like a tiger.

t. bodies. SYN: *Nissl bodies*. Masses of chromophil substance present in the cell bodies of neurons

Higrolysis (hig'ro-l'v'is). SYN: *chromatolysis*. Dissolution and disappearance of chromophil substance of a nerve cell. May occur following injury to an axon (retrograde degeneration) or subsequent to direct injury to a nerve cell.

tilmus (til'mūs) [G. *tilmos*, a plucking]. Delirious picking at the bedclothes by the patient. SYN: *carphology*

timbre (tim'ber, tahn'br) [Fr a bell to be struck with a hammer]. Resonance quality of a sound by which it is distinguished, other than pitch or intensity, depending upon the number and character of vibrating body's overtones

time (tim) [A.S. *tima*, time]. Interval between beginning and ending, measured duration. AGE.

t., bleeding. Time required for bleeding from a small wound to cease. Usually tested by uncuring lobe of ear. Normal time, 1-3 min

t., clot retraction. Time required following withdrawal of blood for a clot to completely contract and express the serum entrapped within the fibrin net. Normal time, about 1 hour. Clot retraction is dependent upon number of platelets

t., coagulation. Time required for clotting to occur after removal of blood from the body. Average time, 5-8 min

t., prothrombin. That needed for oxalated plasma to clot, measured in seconds, after adding thromboplastin and recalcifying.

t., reaction. Period bet application of a stimulus and the response

t., thermal death. Time required to kill all microorganisms at a certain temperature.

tin (tin) [A.S.] SYMS: Sn. At wt 118.70, at no. 50 A metallic element, used in medicine

Poisoning. Tin in tinned or soldered containers in the past has occasionally been responsible for poisoning. This is exceedingly rare and for practical purposes need not be considered

SYM. Metallic taste, gastrointestinal irritation, nausea, vomiting, cramping, and diarrhea

F. A TREATMENT. Wash out stomach and administer bland or soothing drinks

tinctorial (tink-tō'ri-al) [L. *tinctorius*, dyeing]. Relating to staining or color

tincture (tingk'tūr) [L. *tinctura*, a dyeing]. Diluted alcoholic solutions of non-volatile substances (tincture of iodine being an exception), 10% being standard strength for powerful drugs and 20% for weaker ones.

The name of any fluid contained in the tincture other than alcohol is added to the name of the tincture.

They are the most commonly used class of preparations. They usually contain tannic acid, so, in most instances, cannot be employed with agents that are incompatible with that drug. Those tinctures that contain much resinous matter or oils will precipitate with water. Some examples are tinctures of ginger, benzoin, *gualac*, etc. Tinctures of the most potent drugs usually represent 10% of the crude drug, as tinctures of opium, digitalis, aconite, etc. Where more than a fluidram of a 10% tincture would have to be taken to get a dose of the drug, the tincture is usually made to represent 20%, or more, of the agent. The majority of tinctures can be put

roughly into 2 groups; those the dose of which is about 10 minims and those of fluid dram doses. Forty are official

t. iodine. POISONING. This commonly used antiseptic is sometimes taken by mouth

DOSE: 1½ m (0.1 cc)

SYM. Very strong irritation of mouth, esophagus, and stomach. Stains membranes dark brown or black. Pain intense, and leads to early vomiting and purging; extreme thirst, often collapse.

TREATMENT: Give large amounts of water, milk and starchy paste; gruels, as boiled rice or arrowroot.

tinea (tin'ē-ā) [L. *tinea*, worm]. Any fungus skin disease, esp ringworm, occurring in various parts of the body, name indicating the part affected, as *t. barbae*, *t. corporis*, etc. A dermatomycosis, *q v*

SYM. Superficial or deep types. Superficial is marked by scaling, slight itching, reddish or grayish patches, dry, brittle hair which is easily extracted with hair shaft. Deep type is characterized by flat, reddish, kerionlike tumors, the surface studded with dead or broken hairs or by gaping follicular orifices. Nodules may be broken down in center, discharging pus, etc., through dilated follicular openings.

TREATMENT: Griseofulvin, *q v* for all types of tinea. Vaccines. Parasitocides for general body surface. That attacking palms and soles is resistant. Fuchsin paint, salicylic and sulfur mixture, avoid soap and water. In tinea cruris, iodine in carbon tetrachloride, salicylic and benzoic acids, iodine. In ringworm of crotch, soothing remedies, antipruritic powders, followed by antiseptics (sod hyposulfite, carbolyzed resorein, iodine, mercuric chloride, formalin), then soothing lotions. In long-standing cases, chrysarobin. Ringworm of scalp is most resistant to treatment. X-rays, total depilation, prevention of new foci, and eradication of those existing, maintaining an aseptic condition of scalp.

t. barbae. A fungus skin disease of the bearded portions of neck and face. SYN: *barber's itch*.

t. capitis. A fungus skin disease of the scalp; ringworm of the scalp

t. circinata. On the body—red, slight, elevated, scaly patches, which on examination reveal minute vesicles or papules. New patches spring from the periphery while central portion clears up. Often considerable itching.

t. corporis. A fungus skin disease of the body

t. cruris. A fungus skin disease of surfaces of contact in the scrotal, crural, anal, and genital areas

t. favosa. An infectious disease of skin, typically on scalp, due to a specific fungus; characterized by peculiar saucer-shaped, sulfur yellow crusts

t. nodosa. Sheathlike, nodular masses in hair of beard and mustache from growth of an unknown fungus. They surround the hairs, which become brittle, and hair may be penetrated by fungus and thus split.

t. pedis. A fungus skin disease of the foot; ringworm of the foot. SYN: *dermatophytosis*; *athlete's foot*.

t. trichophytina. Local infectious disease of skin, produced by the trichophyton fungus. The organism grows in the horny epithelium. The lesions vary according to part of body attacked, and

whether the hairs are involved. **SYN:** ringworm.

t. versicolor. A chronic disease excited by a vegetable parasite, the *Microporon furfur*.

tinnitus (tin-'tŭs) [L. *tinnitus*, a jingling]. A ringing or tinkling sound that is purely subjective.

t. aurium. Ringing, tinkling, buzzing, or other sounds in the ear. Found in conditions of ext., middle, or inner ear.

ETIOI. Impacted cerumen, myringitis, otitis media, labyrinthitis, Meniere's symptom complex, otosclerosis, hysteria, etc. Also follows overdosage of drugs such as quinine.

t. cerebri. Noises in the head.

t., telephone. Tinnitus resulting from excessive use of the telephone.

tintometer (tin-tôm-'ê-ter) [L. *tinctus*, a dyeing, + G. *metron*, a measure]. A scale of different shades of color to determine by comparison the intensity of color of the blood or other fluid.

tintometric (tin-tô-mê-'trik) [+ G. *metron*, a measure]. Relating to tintometry.

tintometry (tin-tôm-'ê-tri) [+ G. *metron*, a measure]. Estimation of a color by comparison with a scale of colors.

-tion. O.E. and L. suffix forming abstract names.

-tious. O.E. suffix forming adjective.

tiqueur (tê-kur') [Fr.]. One afflicted with a tic.

tire (tir) [AS *tyrian*, to tire]. 1 Exhaustion, fatigue. 2 To exhaust or fatigue. 3 To become fatigued.

tirefond (têr-fon') [Fr.]. Appliance like a corkscrew for raising depressed portions of bone or for removing foreign bodies.

tires (tirz) Condition marked by constipation, vomiting, muscular tremors, and pain. **SYN** *milk sickness, trembles*.

tissue (tish'ŭ) [O Fr. *tissu* from L. *texere*, to weave]. A group or collection of similar cells and their intercellular substance which act together in the performance of a particular function. The primary tissues are (a) epithelial, (b) connective, (c) muscular, and (d) nervous.

t., adipose. **SYN:** *fat*. Areolar tissue containing aggregations of densely packed fat cells.

t., areolar. A form of loose connective tissue consisting of interlacing collagenous and elastic fibers embedded in a semifluid matrix together with fibroblasts, histiocytes, mast cells, plasma cells and other cellular elements. It is widely distributed forming the interstitial tissue of most organs, the membranes surrounding blood vessels and nerves, and constituting the principal portion of fascia.

t., cartilage. **See:** *cartilage*.

t., chondroid. Embryonic cartilage.

t., chromaffin. Tissues containing cells which give the chromaffin reaction. Found in the adrenal medulla. **See:** *chromaffin system*.

t., chromophil. Those tissues which give a chromophil reaction; found in the medulla and sympathetic ganglia.

t., connective. T which supports and connects other tissues and parts.

The cells of connective tissue are comparatively few in number, the bulk of the tissue consisting of intercellular substance or *matrix*, the nature of which gives each type of connective tissue its particular properties. Connective tissues are highly vascular with the exception of cartilage. *Connective tissue*

proper includes the following types: (a) mucous, (b) fibrous (areolar, white fibrous, yellow fibrous or elastic), (c) reticular, and (d) adipose. *Dense connective tissue* includes cartilage and bone (osseous tissue).

t., elastic. A form of connective tissue in which yellow elastic fibers predominate. Found in certain ligaments, and the walls of blood vessels, esp the larger arteries.

t., embryonic. **See:** *tissue, mucous*.

t., epithelial. **SYN** *epithelium*. A form of tissue composed of cells arranged in a continuous sheet consisting of one or several layers. It forms epidermis of skin, covers surfaces of organs, lines cavities and canals, forms tubes and ducts and secreting portions of glands.

t., erectile. Spongy tissue, the spaces of which fill with blood, causing it to harden and expand. Found in the penis, clitoris, and nipples.

t., fibrous. Connective tissue consisting principally of fibers. Includes three types (1) areolar or loose connective, (2) white fibrous, and (3) yellow fibrous or elastic. **See** *specific types listed*.

t., interstitial. Connective t. forming a network with the cellular elements of an organ.

t., mucous. Jelly-like tissue from which connective tissue is derived.

t., muscular (voluntary). Striped or striated tissue principally connected with the bony framework. In animals it is known as "lean meat" or "flesh." It is a cross-striated, muscular tissue, the fibers like a long cylinder with flattened sides and conical ends, enveloped in a delicate sheath, the *sarcolemma* (*involuntary*). Smooth or unstriated, or nonstriated, not under control of the will. Principally found in walls of hollow organs, tubes, arteries, and veins.

t., osseous or bone. Connective tissue with intercellular substance impregnated with phosphate and carbonate of calcium, the mineral substances being 2/3 of the bone's weight.

t., reticular or retiform. A type of connective tissue consisting of delicate fibers forming interlacing networks. Fibers stain selectively with silver stains and are called argyrophil fibers.

It supports lymph nodes and is found in muscular tissue and in bone marrow, the spleen, liver, lungs, kidneys, and mucous membranes of the gastrointestinal tract.

t., subcutaneous. Areolar tissue beneath the corium and becoming part of it.

t., s. adipose. Adipose tissue within subcutaneous tissue.

t., white fibrous. Connective t. with white, inelastic fibers, forming tendons, ligaments, and resistant membranes.

t., w. nervous. Nervous tissue of medullated nerve fibers.

t., yellow elastic. Same as *elastic tissue*.

titanium (ti-tâ-'ni-ŭm) [L.]. A metallic element found in combination in minerals. **SYMS:** *Ti*.

titer (tî-ter) [Fr. *titre*]. Standard of strength per volume of volumetric test solution.

t. of a serum. Amount of specific antibody in an antiserum, or strength of a serum.

titillation (tî-tî-'l-ŭ-shŭn) [L. *titillatio*, a tickling]. 1 Act of tickling, as in the throat. 2 State of being tickled. 3 Sensation produced by tickling.

titration (tĭ-trā'shŭn) [Fr. *titre*, a standard] 1. Determining strength of a solution by use of solutions of known strength 2. Determination of quantity of antibody in an antiserum

titre. SEE: *titer*

titrimetric (tĭ'trĭ-mĕt'rik) [" + G *metron*, a measure] Employing the process of titration

titubation (tĭt-ŭ-bā'shŭn) [L. *titubatio*, a staggering]. A staggering gait, seen in diseases of the cerebellum

t., **lingual**. Stuttering, stammering.

Tl. Symb of thallium

Tl. 1. Chem. symbol for thulium 2. Symbol for maximal tubular excretory capacity.

Tn. 1. Symb. of normal intraocular tension 2. Chem symbol for thoron

T.O. Abbr for original or old tuberculin. Also abbr O.T.

toadskin. Condition characterized by excessive dryness, wrinkling, and scaling of skin sometimes seen in vitamin deficiencies

toadstool (tōd'stool) Any of various fungi with an umbrella-shaped cap, popularly a poisonous mushroom

POISONING: **SYM** Usually come on from 1 to 14 hours after ingestion, characterized by marked abdominal pain, vomiting and intense diarrhea associated with blood and mucus. Profound weakness comes early and remains. Sometimes perspiration and lacrimation present and occasionally nervous symptoms

F. A. TREATMENT: Empty stomach and bowels promptly and completely with gastric lavage and quick acting cathartic and enemata. Atropine is esp helpful and may be given by any route. Fluid and sodium chloride intake should be increased to point of tolerance. Coffee, tea, and milk are helpful. Charcoal may be given early if available. Treat for shock

tobacco (tō-bāk'ō) [Spanish *tabaco*]. Dried leaves of *Nicotiana tabacum* and other species.

It is a narcotic containing *nicotine*, *pyridine*, *picoline*, and *collidin*. SEE: *nicotine*

Widely used in forms of cigars, cigarettes, pipe tobacco, snuff, and chewing. During its combustion, various products are given off, the most important being *nicotine*, *q. v.*

t., **heart**. Disturbance of function of heart from use of tobacco.

t., **Indian**. *Lobelia*.

tocodynamometer (tō'kō-dī-nām-ōm'ē-ter) [G. *tokos*, birth, + *dynamis*, power, + *metron*, a measure]. Device for estimating expulsive force of uterine contractions in childbirth.

tocogeny (tō-kōg'ē-nĭ) [" + *gonē*, seed]. Parental generation as opposed to abiogenesis.

tocograph (tōk'ō-graf) [" + *graphein*, to write]. A device for estimating and recording the force of uterine contractions.

tocology (tō-kōl'ō-jĭ) [" + *logos*, science]. Science of parturition and obstetrics.

tocomania (tō'kō-mā'nĭ-ā) [" + *mania*, madness]. Puerperal insanity.

tocometer (tō-kōm'ēt-ēr) [" + *metron*, a measure]. Device for estimating expulsive force of the uterus in labor. SYN: *tocodynamometer*.

tocopherol (tō-kōph'ēr-ōl). One of three substances collectively referred to as vitamin E, *q. v.*

tocophobia (tō'kō-fō'bĭ-ā) [" + *phobos*, fear]. Abnormal fear of childbirth.

focus (tō'kūs) [L. from G. *tokos*, birth]. Parturition; childbirth

toe (tō) [A.S. *tā*] A digit of the foot. RS' *acroataxia*, *acrodynia*, *bunion*, *camptodactylia*, *clavus*, *dactyl*, *dactylus*, *digit*, *gout*, *hallex*, *hallus*, *metatarsus*. **t.**, **claw**. Hammer toe, *q. v.*

t., **clonus**. Contraction of the big toe in sudden extension of the first phalanx.

t., **dislocations of**. These are treated essentially same as dislocations of the fingers, *q. v.*

t., **drop**. Inability to lift the toes. DISEASES: *Thromboangitis obliterans*, *gangrene*, *deformities*, *rashes*, *bromidrosis*

t., **fanning of**. Spreading of toes, esp when sole is stroked

t., **hammer**. SEE: *hammer toe*.

t., **Morton's**. *Metatarsalgia*, *q. v.*

t., **pigeon**. Walking with the toes turned inward

t., **reflex**. When great toe is strongly flexed all muscles below knee become tense.

toilet (toy'lĕt) [Fr. *toilette*, a little cloth]. Cleansing of a wound after operation or of an obstetrical patient.

toko- [G.] Combining form meaning birth.

tolerance (tol'ēr-āns) [L. *tolerantia*, tolerance] Capacity for enduring a poison, or a food or drug which may be harmful if taken in excess, power of resistance to such, or point at which such resistance ends, amount of a drug or food which may be so tolerated

t., **glucose**. The ability of the body to absorb and utilize glucose. SEE: *glucose tolerance test*.

t., **test**. Master's exercise tolerance test for circulatory efficiency consists in ascending and descending 2 steps a variable number of times and in a given period. Blood pressure and pulse readings are estimated for age and weight

tol'erant. Capable of enduring or withstanding drugs without experiencing ill-effects

-tome [G.] Combining form meaning a cutting, a cutting instrument.

tomomania (tō'mō-mā'nĭ-ā) [G. *tomē*, a cutting, + *mania*, madness]. 1. Tendency of a surgeon to resort to unnecessary surgical operations. 2. Abnormal desire to be operated upon

tomotocia (tō'mō-tō'sĭ-ā) [" + *tokos*, birth]. Cesarean section delivery by incising the uterus.

tonaphasia (tō-nā-fā'zhĭ-ā) [L. *tonus*, from G. *tonos*, a stretching, + *a-*, priv. + *phasis*, speech]. Inability to remember a tune due to cerebral lesion. SYN: *amusia*, *vocal*.

tone (tōn) [L. *tonus*, from G. *tonos*, a stretching] 1. PHYS: That state of a body or any of its organs or parts in which the functions are healthy and performed with due vigor 2. Normal tension or responsiveness to stimuli, as of arteries or muscles, seen particularly in involuntary muscle (such as the sphincter of the urinary bladder). 3. A musical or vocal sound.

t., **deafness**. Inability to detect differences in musical sounds. SYN: *amusia*.

t., **muscular**. Condition in which a muscle is in a steady state of contraction; the ability of a muscle to resist a force for a considerable period of time without change in length

tongue (tūng) [A.S. *tunge*]. A freely-movable muscular organ lying in the

floor of the mouth. Its surface is covered with mucous membrane.

ANAT: It consists of a *body* and *root* and is attached by muscles to the hyoid bone below, the mandible in front, the styloid process behind, and the palate above, and by mucous membrane, to the floor of the mouth, the lateral walls of the pharynx, and the epiglottis. A median fold, the *frenulum linguae*, connects the tongue to the floor of the mouth. Its surface of the tongue bears numerous papillae of three types, *filiform*, *fungiform*, and *vallate*. *Taste buds* are present on the surfaces of many of the papillae, esp the vallate papillae. *Mucous* and *serous glands* (lingual glands) are present, their ducts opening on the surface. Lymphoid tissue comprising the *lingual tonsils* is present in the post third of the tongue. A median fibrous *septum* extends the entire length of the tongue.

RS. Words beginning with *glosso-*; *macroglossia*, *microglossia*, *lingual*.

FUNCTIONS: Manipulation of food in mastication and deglutition, speech production, taste.

ARTERIES: Lingual, ext maxillary, and ascending pharyngeal.

MUSCLES: *Extrinsic muscles* include *genioglossus*, *hypoglossus*, and *styloglossus*. *Intrinsic muscles* consist of four groups: superior, inferior, transverse, and vertical *lingualis muscles*.

NERVES: Lingual nerve (containing fibers from trigeminal and facial nerves), glossopharyngeal, vagus, and hypoglossal.

PAEN: Occurs in local lesions, fissures, glossitis, malignancies, and pernicious anemia.

PROTRUSION: This occurs with very sick patients, as in advanced typhoid fever and toxemia. The tongue is tremulous in early typhoid and in meningitis. In chorea it is thrust out suddenly and at once withdrawn. If it is protruded very slowly or if left exposed after being shown, it is a sign of great exhaustion, congestion, or other pressure on the brain.

SCARS: These may be the result of injury or bulbar palsy causing ulceration and resulting in scars.

SHARP-POINTED T: Observed in irritation and inflammation of the brain, smoker's tongue, leukoplakia.

SPASM: Occurs in multiple sclerosis, general paresis, melancholia, and in stuttering.

TREMBLING. With tongue immobile, indicates torpor of brain.

TREMORS: Noted in asthenia, alcoholism, bulbar palsy, Graves' disorder, and in hemiplegia it is turned toward the paralyzed side if face is affected. If turned toward the unaffected side, it denotes lesion of the medulla.

TREMULOUS: In all acute diseases of evil import, but no particular significance in chronic nervous disorders.

COLOR OF TONGUE: *Black coating:* Glossophytia; may be due to stain or presence of microphytes. In dysentery, indicates exhaustion, mortification, death. In jaundice, denotes organic disease of liver. In smallpox, is unfavorable sign.

Bluish: Denotes impeded circulation. Interference with respiration. Heart disease, asthma, cyanosis.

Dark-brown: Malignant fever, Addison's disease.

Gray-coated and flabby t: With an oval bare spot in center, which is red

and glossy, sometimes seen in children; indicative of gastrointestinal catarrh.

Lead colored: Found in cholera and mortification of lungs and stomach, with thrush, it denotes death.

Pale: Indicates severe anemia; the tongue appears smaller than normal.

Red: Redness along center indicates intestinal irritation. An early sign in typhoid fever. If glassy, very unfavorable.

Red, cracked t: Points to kidney trouble.

Bright red t: Indicates inflammation of gastric or intestinal mucous membrane, glossitis, stomatitis.

Clean, red t: With papillae prominent, or a white-coated tongue with papillae projecting through the fur, indicates scarlatina.

Red tip and edges, or having red, dry streak in center typical of typhoid and gastric fever.

Scarlet t: Acute in inflammation usually of the stomach, if red along edges and tip.

Strawberry t: White fur through which project bright red and prominent papillae. Seen in early stage of scarlet fever.

White coating: This denotes gastric derangement.

Yellow, with thick fur covering the tongue indicates biliary derangement.

SIZE: *Macroglossia*, or large tongue, is generally congenital, or may result from inflammation of lymphatics, Ludwig's angina, glossitis, actinomycosis, acromegaly, myxedema. If localized, may be due to gumma, carcinoma, foot and mouth disease, and local trauma.

Microglossia, small tongue, atrophy due to hemorrhage, in anemia, emaciation, convalescence from typhoid. These conditions are temporary.

POSITION AND CONDITIONS: If thick and flabby, showing imprints of the teeth, indicates gastric and nervous irritation. *Thrust to one side* indicates hemiplegia if continually held in this position.

t., beefy. Occurs in chronic inflammation of the bowels, liver, or mucous surfaces.

t., bifid. One with a cleft at its anterior end; a forked tongue.

t., black, hairy. SYN. *hyperkeratosis linguae*, *lingua nigra*, *lingua villosa nigra*. Condition in which tongue possesses a brown, furlike area on its dorsum. The area is composed of hypertrophied filiform papillae pigment, and possibly microorganisms. Sometimes results from excessive use of oxygen-liberating mouthwashes or antibiotic therapy.

t., burning. *Glossopyrosis*.

t., clearing of. If it clears slowly, commencing at tip and edges, leaving natural appearance, permanent recovery may be expected. If fur comes off in patches, leaving smooth, red surface, recovery will be slow. If fur disappears rapidly, leaving glassy, cracked surface, it is unfavorable.

t., cleft. A bifid or trifid tongue, q.v.

t., coated. One covered with layer of whitish or yellowish material consisting of desquamated epithelium, bacteria, food debris, etc. Usually indicative of a digestive disturbance. If *darkly* coated, it may indicate a fungus infection.

t., deviation of. Marked turning of tongue from the midline when protruded.

Indicative of lesions of the hypoglossal nerve.

t., dry. One that is dry and shriveled, usually indicative of a dehydration. May also be the result of mouth breathing.

t., fern-leaf. One possessing a prominent central furrow and lateral branches

t., flimy. One possessing symmetrical whitish patches

t., fissured. *Syn:* *furrowed tongue*, *lingua plicata* One bearing deep furrows in its epithelium May be normal Causes obscure. If deep and inflamed, may be due to syphilitic infection, or dissecting glossitis, a broken tooth, chronic dysentery, hepatic disease, or diabetes mellitus.

t., forked. *See* *t., bifid.*

t., furred. Coated tongue on which surface epithelium appears as a coat of white fur Seen in nearly all fevers

Brown fur: Nervous prostration, putrefaction; a bad indication; deeper the color the worse the omen. If dry with fissures, condition is grave Circumscribed furring often indicates local disturbance, as from a jagged tooth, or from tonsillitis.

Heavy fur: Great disturbance; serious trouble.

Light fur: If moist, simple irritation of stomach.

Unilateral furring: May result from disturbed innervation, as in condition affecting the 2nd and 3rd branches of the 5th nerve. Has been noted in neuralgia of those branches and in fractures of the skull involving the foramen rotundum

Yellow fur: Liver derangement

t., geographic. One possessing white, raised areas resembling mountain ranges on a relief map. Areas consist of heaped-up epithelium surrounding areas of atrophy

t., hairy. One possessing fine elongated papillae

t., magenta. One magenta-colored seen in cases of riboflavin deficiency.

t., parrot. A dry shriveled tongue, seen in typhus

t., smoker's. *Syn* *leukoplakia* Condition characterized by white, opaque patches of thickened epithelium later thickening and becoming fissured

t., smooth. One resulting from atrophy of papillae Characteristic of many conditions such as anemia, gastrointestinal disorders, etc

t., strawberry. Tongue which first has a white coat except at tip and along edges, with enlarged papillae standing out distinctly against white surface Later white coat disappears leaving a bright red surface. Characteristic of scarlet fever

t., trifid. One in which anterior end is divided into three parts

tongue tie (*tūng'tī*). This is a congenital shortening of the frenum.

Sym: Interference in sucking and in articulation.

Treatment: Surgical.

tongue, words pert. to: circumvallate papillae, cleft, frenulum, "gloss-" words, hypoglossal, lingua, macroglossia, microglossia, ranula, strawberry, sublingual, s. gland.

tonic (*tōn'ik*) [*G. tonikos*, pert. to tone]. 1. Pert. to or characterized by tension or contraction, esp muscular tension. 2. Restoring tone. 3. A medicine that increases strength and tone.

They are subdivided according to ac-

tion, as cardiac, general, etc. **Ex:** iron, arsenic, digitalis.

t. spasm. A persistent, involuntary, firm or violent muscular contraction. **Syn:** *clonic*.

tonicity (*tō-nis'tī-tī*) [*G. tonos*, tone]. 1. Property of possessing tone, esp. muscular tone. 2. State of normal tension or partial contraction of muscle fibers while at rest. **Syn** *tone*

tonisator (*tō'nī-sa'tor*). Instrument giving both the interrupted galvanic and faradic current with a sinusoidal wave superimposed.

tonoclonic (*tōn'o-klōn'ik*) [*G. tonos*, tone, + *klonos*, tumult] Both tonic and clonic, said of muscular spasms.

tonograph (*tōn'ō-grāf*) [' + *graphein*, to write] Device for recording blood pressure

tonometer (*tōn-ōm'ē-ter*) [' + *metron*, a measure]. Instrument for measuring the intraocular tension or blood pressure The tonometer reading for normal limits of intraocular pressure is 13 to 22

tonometry (*tōn-ōm'ē-trī*) [' + *metron*, a measure] The measurement of tension of a part, as intraocular tension.

tonophant (*tōn'ō-fānt*) [' + *phainem*, to show]. Device for visualizing sound waves

tonoplast (*tōn'ō-plāst*) [' + *plastos*, a thing formed] An intracellular body. **Syn.** *vacuole*

tonoscope (*tōn'ō-skōp*) [' + *skopein*, to examine] A device for examining interior of the skull or brain by means of sound

tonsil (*tōn'sil*) [*L. tonsilla*, almond] 1 A mass of lymphatic tissue located in depressions of the mucous membrane of fauces and pharynx. **See** *lingual, palatine, and pharyngeal tonsil* 2 A rounded mass on inferior surface of cerebellum lying lateral to the uvula

Function: Acts as filter to protect body from invasion of bacteria, and aids in the formation of white cells. Their only known function is the formation of lymphocytes

t., cerebellar. One of a pair of cerebellar lobules on either side of the uvula* projecting from inf. surface of cerebellum.

t., faucial. Same as *tonsil*, (def 1).

t., lingual. A mass of lymphoid tissue located in root of tongue

t., Luschka's. Same as *pharyngeal t.*

t., pharyngeal. Lymphoid tissue on post. sup. wall of pharynx **See** *adenoid*.

t., nasal. Lymphoid tissue on the nasal septum.

t., palatine. A mass of lymphoid tissue which lies in *tonsillar fossa* on each side of oral pharynx between glossopalatine and pharyngopalatine arches The free surface of each tonsil is covered with stratified squamous epithelium which forms deep indentations or *crypts* extending into substance of tonsil The lateral surface of each tonsil is invested by a firm fibrous capsule. Efferent lymph vessels convey lymph from the tonsil. No afferent vessels are present.

t., tubal. Lymphatic tissue present in mucous membrane of auditory tube near its opening into pharynx.

tonsillar (*tōn'sī-lar*) [*L. tonsilla*, almond]. Pert. to a tonsil, esp. the faucial or palatine t.

t. crypt. A deep indentation into pharyngeal surface of a tonsil. It is lined with stratified epithelium.

f. fossa. A depression between the glossopalatine and pharyngopalatine arches in which the palatine tonsil is situated.

f. ring. SYN *Waldeyer's ring*. The almost complete ring of tonsillar tissue encircling the pharynx. Includes the palatine, lingual and pharyngeal tonsils.

f., sinus. Space lying between plica triangularis and anterior surface of palatine tonsil.

tonsillectomy (tôn-sil-êk'tô-mî) [“ + G. *ektomê*, excision] Surgical removal of the tonsils.

OPER. NP Patient is placed in dorsal position with head extended and covered with a sterile sheet up to neck in usual manner, over sterile sheet, at neck, place a sterile towel.

Immediately following operation patient is turned on side or face down, so that vomitus or blood is not inhaled, and ice compress is placed around throat. It is important for nurse to test suction apparatus before operation. Cold water should be flushed through the suction tip into bottle after operation to prevent stoppage through clotting of blood.

tonsillitis (tôn-sil-'tîs) [L. *tonsilla*, almond, + G. *-itis*, inflammation] Inflammation of a tonsil, esp the faucial tonsil.

f., acute. SYN *scarlet fever, scarlatina, epidemic sore throat, septic sore throat*. Inflammation of the lymphatic tissue of the pharynx, esp the palatine or faucial tonsils. May occur sporadically or in epidemic form.

Error. Usually caused by group A hemolytic streptococci.

Sym. Onset is sudden usually accompanied by chills. Temperature may reach 105° F. Malaise, headache, pains and aches in back and extremities. Pain in tonsils, esp when swallowing. Tonsils appear enlarged, red, and yellowish exudate projects from crypts.

Progn. Usually self-limited but serious complications may occur such as sinusitis, otitis media, mastoiditis, or peritonsillar abscess.

TREATMENT: (General) Bedrest, liquid diet, antipyretics, hot saline or 30% glucose gargles or throat irrigations. (Specific) Procaine penicillin or tetracycline drugs.

tonsillolith (tôn-sil-ô-lîth) [L. *tonsilla*, almond, + G. *lithos*, stone]. A concretion within a tonsil. SYN *amygdalolith*.

tonsilloscopy (tôn-'sil-los'kô-pî) [“ + G. *skopein*, to examine]. Inspection of the tonsils.

tonsillectomy (tôn-sil-êk'tô-mî) [“ + G. *tomê*, a cutting] Excision of the tonsils. SEE: *amygdalotomy*.

tonus (tô'nûs) [L. from G. *tonos*, tone]. That partial, steady contraction of muscle which determines tonicity or firmness. SYN: *tone, tonicity*.

tooth (tooth) (pl. *teeth*) [A.S. *tôth*]. One of the conical hard structures in the upper and lower jaws used for mastication.

A tooth consists of a *crown* or portion above gum, a *root*, portion embedded in socket (alveolus) of jaw bones, and *neck* or *cervix*, constricted region between crown and root which is covered by the *gum* or *gingiva*. The major portion of a tooth consists of *dentin*, an ivorylike substance harder than bone, which surrounds the *pulp cavity*. A layer of *enamel* covers the crown and *cementum* covers the dentin of the root.

A *periodontal membrane* surrounds the root and holds the tooth firmly in its socket. The pulp cavity contains *dental pulp* which consists of connective tissue, capillaries, lymph vessels and nerve endings. SEE *dentition, teeth*, words beginning with *odonto-*.

toothache. SYN: *odontalgia, odontodynia*. Pain in a tooth or the region about a tooth.

topagnosis. Loss of ability to localize tactile sensations.

topectomy (tô-pêkt'ô-mî) A modified form of frontal lobotomy in which small incisions are made through the thalamofrontal tracts. A psychosurgical procedure used in the treatment of certain mental diseases.

topesthesia (to-pes-the'zî-â) [G. *topos*, place, + *aisthêsis*, sensation] Ability through tactile sense to determine any part that is touched.

tophaceous (tô-fâ'shûs) [L. *tophaceus*, sandy]. 1. Relating to a tophus. 2. Sandy, gritty.

tophus (tô'fûs) (pl. *tophi*) [L. *tophus*, porous stone]. 1. Deposit of sodium bicarbonate in tissues near a joint in gout. 2. A salivary calculus. 3. Tartar on the teeth.

tophyperidrosis (tôi'T-pêr'T-drô'sîs) [G. *topos*, place, + *hyper*, above, + *idrosis*, perspiration]. Excessive sweating in local areas.

topical [G. *topos*, place]. Pert to a definite area, local.

topoalgia (tô-pô-âl'jî-â) [“ + *algos*, pain]. Localized pain, common in neurasthenia following emotional upsets.

topoanesthesia (tô'pô-ân-ês-thê'zî-â) [“ + *an-*, priv + *aisthêsis*, sensation]. Loss of ability to recognize the location of a tactile sensation.

topognosis, topognosis (tô-pôg-nô'sî-â -sîs) [“ + *gnosis*, knowledge] Recognition of the location of a tactile sensation. SYN *topesthesia*.

topographic (tô-pô-gráf'îk) [“ + *graphein*, to write]. Pert to description of special regions.

f. anatomy. SYN: *regional anatomy*. A study of all the structures and their relationships in a given region, for example, the axilla.

topography (tô-pôgr'fî) [“ + *graphein*, to write]. Description of a part of the body.

toponarcosis (tô'pô-nar-kô'sîs) [“ + *narkôsis*, stupor] Local anesthesia.

toponeurosis (tô'pô-nû-rô'sîs) [G. *topos*, place, + *neuron*, nerve, + *-osis*, condition]. Neurosis of a limited area.

topophobia (tô-pô-fô'bî-â) [“ + *phobos*, fear]. A fear of psychoneurotic origin in relation to a particular locality.

topothermesthesiometer (top'ô-ther-mêsthê-zhî-ôm'ê-ter) [“ + *thermê*, heat, + *aisthêsis*, sensation]. Device for measuring local temperature sense.

torantil (tô-rân'tîl). A biologically standardized histamine destroying enzyme, obtained from the mucosa of the small intestines and kidneys of hogs.

Uses: In hay fever, some forms of dermatitis, serum sickness, and allergic conditions.

Dosage: Varies according to the condition, from 10 to 20 units 3 times a day.

tormen (tor'mên) (pl. *tormina*) [L. *tormen*, a twisting]. Gripping pain in the bowels.

tormina (tor'mîn-â) (sing. *tormen*) [L. twistings]. Intestinal colic with gripping pains.

torose, torous (tôr'ôs, -rûs) [L. *torosus*, full of muscle]. Knobby or bulging, tubercular.

torpént (tor'pént) [L. *torpens*, numbing]. 1. Medicine which modifies irritation. 2. Not capable of active functioning; dormant.

torpid (tor'pid) [L. *torpidus*, numb]. Not acting vigorously; sluggish.

torpidity (tor'pid'i-ti) [L. *torpidus*, numb]. Sluggishness; inactivity.

torpor (tor'por) [L. *torpor*, numbness]. Abnormal inactivity; dormancy, numbness; apathy.

t. infestivum. Constipation.

t. peristalticus. Atonic constipation.

t. retinae. Reduced sensitivity of retina to light stimuli.

torsion (tor'shun) [L. *torsio*, a twisting].

1. Act of twisting or condition of being twisted. 2. Rotation of the vertical meridians of the eye.

torsive (tor'siv) [L. *torsio*, a twisting].

Twisted, as in a spiral.

torso (tor'sô) [Italian]. The trunk of the body.

torocclusion (tor-sôk-lû'zhun) [" + L.

occlusio, a shutting out]. 1. Acupressure in combination with torsion to stop a bleeding vessel. 2. Malocclusion characterized by rotation of a tooth on its long axis.

toricollis (tor-tik-ôl'is) [L. *tortus*, twisted, + *collum*, neck]. Stiff neck caused by spasmodic contraction of neck muscles drawing the head to one side with chin pointing to the other side. Congenital or acquired. SYN *wryneck*.

ETIOLOGY. Result of scars, disease of cervical vertebrae, adenitis, tonsillitis, rheumatism, enlarged cervical glands, retropharyngeal abscess, cerebellar tumors. It may be spasmodic (clonic) or permanent (tonic). The latter type may be due to Pott's disease.

The muscles affected are principally those supplied by the spinal accessory nerve.

t. fixed. Abnormal position of head due to organic shortening of the muscles.

t., intermittent. Same as *spasmodic t.*

t., ocular. T. from inequality in sight of the two eyes.

t., rheumatic. Same as *symptomatic t.*

t., spasmodic. T. with recurrent but transient contractions of muscles of neck and esp. of the sternocleidomastoid.

t., spurious. T. from caries of the cervical vertebrae.

t., symptomatic. Rheumatic stiff neck.

toripelvis (tor'ti-pêl'vis) [L. *tortus*, twisted, + *pelvis*, basin]. Muscular contractions distorting the spine and hip. SYN *dystonia musculorum deformans*.

toruloid (tor'û-loyd) [L. *torulus*, a little bulge, + G. *eidos*, form]. EACR: Beaded, noting an aggregate of colonies like those seen in the budding of yeast.

torulosis (tor'û-lô'sis) [Torula + G. -ôsis, condition]. Infestation with *Torula* or yeast cells.

torulus (tor'û-lûs) [L. *torulus*, a little elevation]. A very small elevation. SYN: *papilla*.

t. fac'ialis. A tactile cutaneous elevation on palms and soles.

torutilla. Vitamin T.

touch (tûtsh) [O.Fr. *touchier*]. 1. To perceive by the tactile sense; to feel with the hands, to palpate. 2. The sense by which pressure on the skin or mucosa is perceived; the tactile sense. 3. Examination with the hand. SYN: *palpation*.

Various disorders may disturb or impair the tactile sense or the ability to

feel normally. There are a number of words pert. to sensation and its modifications, a few of the more important ones being listed as follows. *algæsia*, -*algia*, *anæsthesia*, *dysæsthesia*, -*dymia*, *æsthesia*, *æsthesioneurosis*, *hyperæsthesia*, *paræsthesia*.

t., abdominal. Palpation of the abdomen.

t., after. Persistence of the sensation of touch after contact with stimulus has ceased.

t., double. Vaginal and rectal examination made at same time.

t., rectal. Digital exploration of the rectum.

t., vaginal. Digital exploration of the vagina.

t., vesical. Digital exploration of the bladder.

touch, words pert. to: amblyaphia, an-aphia, anaptic, astereognosis, atopognosis, delire du toucher, dysaphia, hallucinations, haphophobia, haptic, poly-æsthesia, stereognosis, tactile.

tour de maître (toor'deh mât'r [Fr. the master's turn]. A method of introducing a catheter or sound into the male bladder or into the uterus.

Tourette's disease (too-rêt'). Convulsive tic, with echolalia and coprolalia, associated with motor incoordination. Also called *Gilles de la Tourette's disease*.

Tournay's sign (toor-nâ'). Dilatation of the pupil of the eye on unusually strong lateral fixation.

tourniquet (tür'nî-kêt) [Fr. a turning]. Any constrictor used on an extremity to make pressure over an artery and to control bleeding, also used to distend veins for aspiration or intravenous injections.

Tourniquets are made more effective by placing a firm object such as a padded stone or a padded piece of wood over an artery to concentrate pressure at that point. A figure-of-eight knot pulled tight is also an excellent method for making firm such an object.

Tourniquet should never be left in place too long. Ordinarily, it should be released from 12 to 18 minutes to determine whether bleeding has ceased. If it has, leave tourniquet loosely in place so that it may be retightened if necessary. If not retighten at once.

Arterial hemorrhage. Apply bet the wound and the heart, close to the wound, placing a hard pad over point of pressure. Should be discontinued not later than 1 hour and a tight bandage substituted under the loosened tourniquet.

Venous hemorrhage: Place below bleeding point, but close to the wound. The tourniquet should remain in place with periodic momentary loosening until released by a physician.

The tourniquet should remain in place until released by a physician.

t. test. Test for determining the ability of capillaries to withstand increased pressure.

Touton cells (toot'ôn). Giant multinucleated cells found in lesions of xanthomatosis.

tow (tô) [A.S. *toſa*, a weaving]. Coarse fibers of flax, used for surgical dressings.

towelette (tow-êl-êt') [M.E. *towele*, towel]. A small towel for surgical or obstetrical use.

toweling, towelling (tow'êl-ing) [M.E. *towele*, a towel]. Friction with a coarse towel.

toxalbumin (tôks'âl-bû'mîn) [G. *toxikon*, poison, + L. *albumen*, white of egg]. A poisonous albumin or protein.

toxicalbumose (tòks-ál'bû-môs) [+ L. *albumen*, white of egg]. A poisonous albumose

toxinamin (tòks-ám-in) [+ *amine*]. One of a class of injurious substances said to be present in grain food, which are harmful unless counteracted by vitamins.

toxanemia (tòks-á-né'mí-á) [G. *toxikon*, poison, + *an-*, priv + *aima*, blood]. Toxemia, *q.v.*

toxemia (tòks-é'mí-á) [G. *toxikon*, poison, + *aima*, blood]. Distribution throughout body of poisonous products of bacteria growing in a focal or local site, thus producing generalized symptoms

SYM Constitutional disturbances, rigors, increased temperature, diarrhea, vomiting, pulse and respiration quickened or depressed, prostration

In *tetanus*, the nervous system is esp. affected, in *diphtheria*, nerves and muscles

f. **eclamptogenic**. Toxemia of pregnancy, *q.v.* Also see *eclampsia*

f. **of pregnancy**. Series of conditions affecting women in pregnancy

ERROR Disordered metabolism causing circulating toxins which are unknown

FORMS Simple vomiting, pernicious vomiting (hyperemesis gravidarum), acute yellow atrophy of the liver, nephritic toxemia, low reserve kidney, preeclampsia, and eclampsia

toxenzyme (tòks-én'zim) [G. *toxikon*, poison, + *en*, in, + *zyme*, leaven]. A poisonous enzyme

toxic (tòks'ík) [G. *toxikon*, poison]. Pert. to, resembling or caused by poison *SYN*. *poisonous*

f. **erythema**. Redness of skin or a rash resulting from toxic agents such as drugs

f. **unif.** Smallest dose of a toxin fatal to a guinea pig of standard weight in 3-4 days. Also, smallest amount of scarlet fever toxin necessary to produce a positive skin test reaction in a susceptible person

toxicant (tòks'í-kánt) [G. *toxikon*, poison]. 1. Poisonous; toxic 2. Any poison

toxicide (tòks'í-síd) [+ L. *cidus*, from *caedere*, to kill] 1. Destructive to toxins 2. A chemical antidote for poisons.

toxicity (tòks-ís'í-tí) [G. *toxikon*, poison]. 1. Poisonous 2. The extent, quality, or degree of being poisonous

toxico- [G]. Combining form meaning *poison*

toxicoderma (tòks'í-kò-der'má) [G. *toxikon*, poison, + *derma*, skin] Any skin disease resulting from a poison

toxicodermatitis (tòks'í-kò-derm-á-tí'tis) Inflammation of the skin due to a poison.

toxicodermatosis (tòks'í-kò-derm-á-tò'sis) Toxicoderma, *q.v.*

toxicogenic (tòks-ík-ò-jén'ík) [+ *gennan*, to produce]. Caused by, or producing, a poison

toxoid (tòks'í-koyd) [+ *eidos*, resemblance] Of the nature of a poison.

toxicologist (tòks-í-kòl'ò-jíst). A specialist in the field of poisons or toxins.

toxicology (tòks-í-kòl'ò-jí) [+ *logos*, science]. The science of poisons, their nature, effects, and antidotes

toxicomania (tòks'í-kò-má-ní-á) [+ *mania*, madness]. Abnormal craving for narcotics, intoxicants, or poisons.

toxicopathic (tòks'í-kò-pát'ík) [+ *pathos*, disease]. Pert. to any condition caused by a poison.

toxicopathy (tòks'í-kop'á-thí) [G. *toxikon*, poison, + *pathos*, disease]. Any disease caused by a poison

toxicophobia (tòks'ík-ò-fò'bí-á) [+ *phobos*, fear]. Abnormal fear of being poisoned by any medium, food, gas, water, drugs, etc.

toxicosis (tòks'í-kò'sís) [+ *-osis*, condition] A diseased condition resulting from poisoning *SYN*. *toxicopathy*

f. **endogen'ic**. Disease due to poisons generated within the body. *SYN* *auto-intoxication*

f. **exogen'ic**. Any disease resulting from a poison not generated in the body.

f. **retention**. T from retained products which normally are excreted as formed

toxidermitis (tòks'í-der-mí'tis) [G. *toxikon*, poison, + *derma*, skin, + *-itis*, inflammation] Any inflammatory skin disease due to poisoning *SYN* *toxicodermatitis*

toxiciferous (tòks-í-fér'ús) [+ L. *ferre*, to carry] Containing a poison *SYN*: *poisonous*

toxigenic (tòks'í-jén'ík) [+ *gennan*, to produce]. Producing toxins or poisons

toxigen'city (tòks'í-jén-ís'í-tí). The virulence of a toxin-producing pathogenic organism

toxigenomic (tòks-íg-nóm'ík) [+ *gnomikos*, knowing] Having the toxic action peculiar to a poison

toxin (tòks'in) [G. *toxikon*, poison]. A poisonous substance of animal or plant origin which is capable of inducing antibody (antitoxin) formation when injected into animals or humans.

RS. *antibody*, *antitoxin*, *bacteria*, *phytoxin*, *toxoid*

f. **bacterial**. T. produced by bacteria. Includes exotoxins which diffuse from bacterial cells into surrounding medium, and *endotoxins* which are liberated only when bacterial cell is destroyed. *SEE* *bacteria*, *toxin production* (page B-3)

f. **extracellular**. Same as *exotoxin*

f. **intracellular**. Same as *endotoxin*

toxin-antitoxin (tòks'in-án'tí-tòks'in) [G. *toxikon*, poison, + *anti*, against, + *toxikon*] Diphtheria toxin with its antitoxin in a nearly neutral mixture, the diphtheria toxin being about 85% neutralized.

Used for immunization against diphtheria. Also known as *T. A. T. mixture*.

toxemia (tòks'in-é'mí-á) [+ *aima*, blood] Blood poisoning. *SYN*: *toxemia*.

toxoinfection (tòks'in-fék'shún) [+ L. *infectio*, a putting into]. Infection caused by toxins or other poisons.

toxicicide (tòks'in'ís-íd) [+ L. *cidus*, from *caedere*, to kill]. That which is destructive to toxins.

toxinoses (tòks'in-ò'sís) [+ *-osis*, condition]. Disease due to a toxin.

toxipathy (tòks-íp'á-thí) [+ *pathos*, disease]. Any disease due to poison.

toxiphobia (tòks'í-fò'bí-á) [+ *phobos*, fear]. Abnormal fear of being poisoned.

toxiatabellae (tòks-í-táb-él'è) [G. *toxikon*, poison, + L. *tabella*, tablet] Poisonous tablets. Usually designated by having an angular shape or by having the word "poison" or the "skull and crossbones design" stamped upon them.

toxitherapy (tòks'í-ther'á-pí) [+ *therapeia*, treatment]. Use of toxins in treatment of disease.

toxitubercullid (tòks'í-tù-bér'kù-líd). A skin lesion resulting from action of toxin of tuberculosis organisms.

toxocalexin (tòks'ò-ál-éks'in) [+ *alexin*,

to ward off]. An alexin which counteracts bacterial toxins.

toxogenin (tòks'òj'én-ín) [+ *gennan*, to produce, hypothetical substance in the blood caused by injection of antigens, innocuous in itself, but causing anaphylaxis upon addition of fresh antigen]

toxoid (tòks'oyd) [+ *eidós*, form]. A toxin treated so as to destroy its toxicity, but still capable of inducing formation of antibodies on injection. SEE: *Ehrlich's side-chain theory*

t., alum-precipitated. T of diphtheria or tetanus precipitated with potassium alum

t., diphtheria. Diphtheria toxin detoxified by formaldehyde treatment.

toxicocithin (tòks-ò-lés'í-thín) A compound of lecithin with a toxin such as snake venom

toxolysin (tòks-òl'í-sín) [+ *lysis*, dissolution] Substance destroying toxins. SYN: *antitoxin, toxicide*

toxomucin (tòks-ò-mú'sín) [+ L *mucus*, mucus] Specific toxic albuminoid from cultures of tubercle bacilli

toxon, toxone (tòks'ón, -ón) [G *toxikon*, poison] A bacterial toxin with lessened activity, producing paralysis and delayed death

toxonoid (tòks'ò-noyd) [+ *eidós*, form]. A nontoxic substance with a weak affinity for antitoxin

toxosis (tòks-ò-nò'sís) [+ -*osis*, condition] A disease caused by poisoning. SYN: *toxicosis, toximosis*

toxopeptone (tòks-ò-pép'tón) [+ *pepton*, digesting] A protein derivative produced by action of a toxin on peptones

toxopexic (tòks'ò-péks'ík) [+ *péxis*, fixation] Pert to the neutralization of a toxin

toxophil(e) (tòks'ò-fíl, -fíl) [+ *philein*, to love] Having a special affinity for toxins, said of certain haptophore groups.

toxophore (tòks'ò-fór) [G *toxikon*, poison, + *phoros*, a bearer] That portion of a toxin which gives to a toxin its poisonous qualities. SEE: *Ehrlich's side-chain theory*

toxophore group (tòks'ò-fór) [+ *phoros*, a bearer]. Poison-bearing group of a toxin. SEE: *Ehrlich's side-chain theory*

toxophilaxin (tòks-ò-fí-láks'ín) [+ *philaxis*, protection] A defensive protein that neutralizes bacterial poisons. SYN: *toxicophilaxin*.

Toxoplasma (tòks-ò-plás'má). A genus of protozoa of undetermined relationship.

T. gondii. The causative agent of toxoplasmosis, *q v*

toxoplasmosis (tòks-ò-plás-mò'sís) A disease due to infection with *toxoplasma gondii*

toxozoin (tòks'ò-sò'zín) [+ *sözoin*, to save] A normal defensive protein that neutralizes bacterial poisons. SEE: *sozin*

TPI test. Abbr for *Treponema pallidum* immobilizing test (for syphilis).

TPN. Abbr for triphosphopyridine nucleotide

t.p.r. Abbr for temperature, pulse, and respiration.

tr. Abbr for L *tinctura*, tincture

trabecula (trá-bék'ü-lá) (pl *trabeculae*) [L. *trabecula*, a little beam]. Fibrous cord of connective tissue, serving as supporting fiber by forming septum extending into an organ from its wall or capsule.

s. carnea. BNA. Thick muscular tissue bands attached to inner walls of the ventricles of the heart

trabs, trabs cerebri (trábs ser'è-brí) [L. *trabs*, a beam]. Arched band of white

fibers connecting the cerebral hemispheres. SYN: *corpus callosum*.

trace (trás) [Fr *tracer*, from L *tractus*, a drawing]. 1. A very small quantity. 2. A mark

t. elements. Organic elements normally found in minute traces in foods and tissues, such as fluorine, copper, manganese, zinc, cobalt, nickel, aluminum, silicon, bromine, and other physiologically rare minerals

t., primitive. Pale white streak in germinal area indicating beginning of development of the blastoderm. SYN: *primitive streak*

tracer. A radioactive isotope, capable of being incorporated into compounds which when introduced into the body "tags" a specific portion of the molecule so that its course may be traced. Used in absorption and excretion studies, for determination of intermediary products of metabolism, and determination of distribution of various substances in the body. Radioactive carbon (C^{14}), calcium (Ca^{45}) and iodine (I^{131}) are some of tracers used

trachea (trá'ké-á) (pl. *tracheae*) [G *tracheia*, rough] A cylindrical cartilaginous tube, $\frac{4}{8}$ inches long, from the larynx to the bronchial tubes. SYN: *windpipe*

It extends from the sixth cervical to the fifth dorsal vertebra. Here it divides into 2 bronchi, 1 for each lung. It is lined with mucous membrane. Its inner surface is lined with ciliated epithelium

tracheaectasy (trá'ké-á-ék'tá-sí) [G *tracheia*, rough + *ektasis*, dilatation] Dilatation of the trachea

tracheal (trá'ké-ál) [G *tracheia*, rough]. Pertaining to the trachea

t. tugging. Pulsation of the larynx or downward pull of the trachea, symptomatic of thoracic aneurysm

trachealgia (trá'ké-ál'jí-lá) [+ *algos*, pain]. Pain in the trachea

trachealis (trá-ké-á'lis) [L]. A muscle composed of smooth muscle fibers which extends between the ends of the tracheal rings. Its contraction reduces the size of the lumen.

tracheitis (trá-ké-í'tís) [G. *tracheia*, rough + -*itis*, inflammation]. An inflammation of the trachea

It may be acute or chronic and may be associated with bronchitis and laryngitis.

NP: It is necessary to keep patient in bed, as the condition may spread and give rise to bronchial complications. As the middle aged are more apt to be afflicted, cardiac strain from constant coughing and loss of sleep must be avoided. Inflammation of the chest must be guarded against. Pulse and temperature must be carefully checked and recorded. Camphorated oil may be rubbed on the chest, which is then covered with warm wool. Lemonade should be within reach of the patient as constant small sips will help relieve irritation from coughing. Diet should be light

trachelagra (trá-kél-ágrá) [G. *trachēlos*, neck + *agra*, seizure] Rheumatic condition of neck muscles resulting in torticollis.

trachelectompezy (trá'kél-ék-tóm'ò-peks'í) [+ *ektome*, a cutting out + *péxis*, fixation] Fixation of uterine neck with partial excision.

trachelectomy (trá-kél-ék'tò-mí) [+ *ektomē*, excision]. Amputation of the cervix uteri.

tracheleumatoma (trā'kē-lō-mā-tō'mā) [" + *kaima*, blood + -ōma, tumor]. A hematoma situated on the neck.

trachelism, trachelismus (trā'ke-liz-m, trā-ke-liz-mūs) [" + -ismos, condition]. Backward spasm of the neck, sometimes preceding an epileptic attack.

trachelitis (trā'kē-lī'tis) [" + -itis, inflammation]. Inflammation of mucous membrane of the cervix uteri. *SYN.* *cervicitis*.

tracheo- [G.]. Combining form, meaning neck.

trachelobregmatic (trā'kē-lō-brēg-māt'ik) [G. *trachelos*, neck, + *bregma*, front of the head]. Pert. to the neck and the bregma.

trachelocystitis (trā'kē-lō-sis-tī'tis) [" + *kystis*, bladder, + -itis, inflammation]. Inflammation of neck of bladder.

trachelodynia (trā'kē-lō-dī'nī-ā) [" + *odynē*, pain]. Pain in the neck.

trachelokyphosis (trā'kē-lō-ki-fō'sis). Excessive anterior curvature of cervical portion of spine. Pott's disease.

trachelology (trā'ke-lō-lō-jī) [" + *logos*, study]. Scientific study of the neck, its diseases and injuries.

trachelomastoid (trā'ke-lō-mās'toyd) [G. *trachelos*, neck, + *mastos*, breast, + *eidos*, form]. *SYN.* *longissimus capitis*. A muscle of the neck. *SEE* *Muscles*, Table of, in Appendix.

trachelomyitis (trā'ke-lō-mī-tī'tis) [" + *mys*, *my-*, muscle, + -itis, inflammation]. Inflammation of muscles of neck.

tracheolepsy (trā'ke-lō-pēs'ī) [" + *pexis*, fixation]. Surgical fixation of the cervix uteri to an adjacent part.

tracheoplasty (trā'ke-lō-plas'tī) [G. *trachelos*, neck, + *plassein*, to form]. Plastic surgery of the cervix uteri.

trachelorrhaphy (trā'ke-lō-rā'fī) [" + *raphē*, seam]. Suturing of a torn cervix uteri.

trachelos (trā'ke-lōs) [G. *trachelos*, neck]. Neck.

trachelotomy (trā'ke-lō-tō'mī) [" + *tomē*, a cutting]. Incision of the cervix of the uterus.

tracheo- [G.]. Combining form meaning trachea, windpipe.

tracheo-aerocele (trā'kē-ō-er-ō-sēl) [G. *tracheia*, rough, + *aēr*, air, + *kēlē*, hernia]. Hernia or cyst of trachea containing air.

tracheobronchoscopy (trā'kē-ō-brōng-kōs-kō-pī) [" + *brochos*, tube, + *skopein*, to examine]. Inspection of the trachea and bronchi through a bronchoscope.

tracheocele (trā'ke-ō-sēl) [" + *kēlē*, hernia]. 1. Protrusion of mucous membrane through the wall of the trachea. 2. Enlargement of the thyroid gland. *SYN.* *goiter*.

tracheoesophageal (trā'kē-ō-fō-so-faj'ē-āl, -ō-sōf'ā-jē-āl) [" + *oisophagos*, esophagus]. Pert. to the trachea and esophagus.

tracheolaryngotomy (trā'kē-ō-lār-in-gōt'ō-mī) [" + *larynx*, larynx, + *tomē*, a cutting]. Incision into larynx and trachea.

tracheopathia, tracheopathy (trā'kē-ō-pāth'i-a, -op'ā-thī) [" + *pathos*, disease]. Diseased condition of the trachea.

tracheopharyngeal (trā'kē-ō-far-in'jē-āl) [" + *pharynx*, pharynx]. Pert. to both the trachea and pharynx.

tracheophonosis (trā'kē-ō-fōn-ē-zhī-ā) [G. *tracheia*, rough, + *phōnēsis*, a sounding]. Cardiac auscultation at the sternal notch.

tracheophony (trā'kē-ō-fō-nī) [" + *phōnē*,

a sound]. Sound heard over the trachea in auscultation.

tracheoplasty (trā'kē-ō-plās-tī) [" + *plassein*, to form]. Plastic operation on the trachea.

tracheopyosis (trā'kē-ō-pī-ō'sis) [" + *pyon*, pus, + -ōsis, condition]. Trachelitis with suppuration.

tracheorrhagia (trā'kē-ō-rā-jī-ā) [" + *rhēgnūnai*, to burst forth]. Tracheal hemorrhage.

tracheoschisis (trā'kē-ōs'kī-sis) [" + *schisis*, a cleft]. Fissure of the trachea.

tracheoscopy (trā'kē-ōs'kō-pī) [" + *skopein*, to examine]. Inspection of interior of trachea, by means of reflected light.

tracheostenosis (trā'kē-ō-sten-ō'sis) [" + *stenōsis*, a narrowing]. Contraction or narrowing of lumen of the trachea.

tracheotome (trā'kē-ō-tōm) [G. *tracheia*, rough, + *tomē*, a cutting]. Instrument used in opening of trachea.

tracheotomy (trā'kē-ō-tō'mī) [" + *tomē*, a cutting]. Operation of cutting into the trachea usually for insertion of tube to overcome tracheal obstruction.

NP. Temperature of tracheotomy room must be not less than 80° F and atmosphere should be saturated with steam. The outer tube should not be removed by nurse, but inner one should be removed every hour or oftener if so directed by physician. The movable or inner tube should be washed in a solution of salt water (1 dram of salt to quart of water) or boric acid and swabbed out with a sterilized cotton mop. Before replacing inner tube, the tube remaining in trachea should also be cleaned to remove mucus that collects in and around tube. Never leave patient alone. *SEE* *diphtheria*.

f. tube. T. to insert into opening made in tracheotomy.

trachitis (trā'kī'tis) [G. *tracheia*, rough, + -itis, inflammation]. Inflammation of the trachea. *SYN.* *tracheitis*.

trachoma (trā'kō'mā) [G. *trachōma*, roughness]. A chronic contagious form of conjunctivitis, noted by hypertrophy of conjunctiva, formation of follicles with subsequent cicatricial changes. *SYN.* *conjunctivitis*, *granular*, *ophthalmia*, *Egyptian*.

ETIO. A virus which is readily transmitted especially in early stages of disease. Transmission is by direct contact with trachomatous material or indirectly through contaminated articles such as towels, handkerchiefs, etc.

COMPLICATIONS: Pannus, ptosis, corneal ulcers.

Sequelae: Trichiasis, entropion, ectropion, symblepharon, corneal opacities, staphylocoma, blindness.

TREATMENT: Oral and topical sulfonamide treatment or systemic administration of antibiotics. Surgery may be necessary when lid deformities occur.

f., brawny. T. with general lymphoid infiltration without granulation of the conjunctiva.

f., deformans. Vulvitis with cicatricial contractions.

f., diffuse. T. with large granulations.

trachychromatic (trā'kī-kro-mat'ik) [G. *trachys*, rough, + *chrōma*, color]. Pert. to a nucleus with very deeply staining chromatin.

trachyphonia (trā'kī-fō-nī-ā) [" + *phōnē*, voice]. Roughness of the voice.

tract (trākt) [L. *tractus*, a track]. 1. A course or pathway. 2. A group or bundle of nerve fibers within the spinal cord or brain which constitutes an anatom-

- ical and functional unit. SEE: *fasciculus* 3. A group of organs or parts forming a continuous pathway
- f., afferent.** An ascending tract, *q.v.*
- f., alimentary.** The canal or passage from the mouth to the anus
- f., ascending.** Afferent white fibers in spinal cord.
- f., descending.** Efferent fibers in the spinal cord.
- f., digestive.** SEE: *alimentary tract*.
- f., genitourinary.** The genital and urinary pathways
- f., motor.** Descending pathway conveying motor impulses from brain to lower portions of spinal cord
- f., olfactory.** A narrow white band extending from olfactory bulb to anterior perforated substance of brain
- f., optic.** A band of fibers extending from optic chiasma to lateral geniculate body of thalamus. Some fibers of the tract continue on to midbrain and hypothalamus
- f., pyramidal.** Any of columns of motor fibers in the spinal cord which are continuations of pyramids in the medulla
- f., respiratory.** The respiratory organs in continuity.
- f., rubrospinal.** A descending tract of fibers arising from cell bodies located in red nucleus of midbrain. Fibers terminate in gray matter of spinal cord
- f., sensory.** Any tract of fibers conducting sensation to the brain
- f., supraopticohypophyseal.** A tract consisting of fibers arising from cell bodies located in supraoptic and paraventricular nuclei of hypothalamus and terminating in post lobe of hypophysis. They convey the hormones vasopressin and oxytocin from cells of origin in hypothalamic nuclei to the hypophysis where they are stored
- f., urinary.** The urinary passageway from kidney to the outside. Includes the pelvis of kidney, ureter, bladder, and urethra.
- traction** (trák'shūn) [*L. tractio*, a drawing] Process of drawing or pulling
- f., axis.** Traction in line with the long axis of a course through which a body (fetus) is to be drawn
- f., elastic.** Traction exerted by elastic devices such as rubber bands
- f., head.** Traction applied to the head as in the treatment of injuries to cervical vertebrae
- f., weight.** Traction exerted by means of weights
- tractotomy** (trák-tōt'ō-mī) Surgical section of a fiber tract of the central nervous system. Sometimes resorted to for relief of intractable pain
- tractus** (trák'tūs) (pl. *tractūs*) [*L.*, a tract | *A tract* or path
- tragacanth** (trag'ā-kānth) [*G. tragacantha*, a goat thorn] USP The dried gummy exudation from a plant grown in Asia, used in the form of mucilage as a greasless lubricant, and as an application for chapped skin
- tragal** (trā'gāl) [*G. tragos*, goat]. Relating to the tragus.
- tragi.** Plural of *tragus*, *q.v.*
- f., lamina.** The cartilage of the tragus.
- tragicus** (trāj'ik-ūs) [*L.*]. Muscle on the outer surface of the tragus. SEE: *Muscles*, Table of, in Appendix
- tragomachalia** (trag'ō-mās-kāl'i-ā) [*G. tragos*, goat, + *machale*, axilla]. Odorous perspiration (bromidrosis) of the axilla.
- tragophonia, tragophony** (trāg'ō-fō'nī-ā, -ōf'ō-nī) [*'' + phōnē*, voice]. A bleating sound heard in auscultation at level of fluid in hydrothorax. SYN: *egophony*.
- tragopodia** (trāg-ō-pō-dī-ā) [*'' + pous*, pod-, foot]. Knock-knee
- tragus** (trā'gūs) [*G. tragos*, goat]. 1 Carthaginuous tonguelike projection in front of the ext. meatus of the ear. 2 One of the hairs at the entrance of the ext. auditory meatus.
- trait.** A distinguishing feature; a characteristic or property of an individual
- f., acquired.** One that is not inherited, one resulting from effects of environment.
- f., inherited.** One due to hereditary determiners or genes transmitted through germ cells
- trajector** (tra-jēk'tor) [*L. trajectus*, thrown across] Device for determining approximate location of a bullet in a wound
- trance** (trāns) [*L. transitus*, a passing over] A sleeplike state, as in deep hypnosis, appearing also in hysteria and in some spiritualistic mediums, with limited sensory and motor contact with the ordinary surroundings, and with subsequent amnesia of what has occurred during the state
- f., coma.** Hypnotic lethargy.
- f., death.** Trance simulating death.
- f., induced.** Hypnotic or somnambulist
- f., somnambulist.** T. with anesthesia, or catalepsy, or paralysis induced by hypnotism
- tranquillizer.** A drug that acts on the emotional state of overactive and severely disturbed patients so that the patients become amenable to further treatment and rehabilitation. Among the drugs in use are chlorpromazine (Thorazine), reserpine (Serpasil), meprobamate (Miltown, Equanil), promazine (Sparine), hydroxyzine (Atarax), azacyclonal (Frenquel)
- Side effects, particularly from chlorpromazine and reserpine, have included jaundice, Parkinson's disease, nausea, rashes, and in some surprising instances severe mental depression. The U S Public Health Service has warned of "a significant incidence of severe depression, with suicidal tendencies in some instances," in persons under heavy reserpine dosage
- trans-** [*L.*]. Prefix meaning *across*, *over*, *beyond*, *through*
- transamidation.** The transfer of an amidine group from one amino acid to another
- transaminase.** An enzyme that catalyzes transamination
- transamination** (trāns'am-i-nā'shūn). The transfer of an amino group from one compound to another or the transposition of an amino group within a single compound
- transanimation** (trāns'ān-i-mā'shūn) [*L. trans*, across, + *anima*, breath]. Resuscitation of a stillborn infant.
- transaudient** (trāns'aw'di-ent) [*'' + audire*, to hear]. Permeable to sound waves.
- transcalent** (trāns-kāl'ent) [*'' + calere*, to be hot]. Permeable to heat rays. SYN: *diathermanous*.
- transcapillary** (trāns'kăp'il-lă-ri). Across the endothelial wall of a capillary.
- f. exchange.** The passage of substances between blood and tissue (interstitial) fluid
- transduction** (trāns-dūk'shūn). A phenomenon causing genetic change in bac-

teria in which DNA is carried from one bacterium to another by bacteriophage.
See transformation

transection (trān-sék'shūn) [“ + *sectio*, a cutting]. A cutting made across a long axis, a cross section.

transfer, transference (trāns'fer, trāns'fer'ens) [L. *trans*, across, + *ferre*, to bear] 1. *Psy.* Transmission of any affect from one idea to another, or from one object or person to another, unconscious identifications being the activating motive. 2. State in which the symptoms of one area are transmitted to a similar area on the other side, as in hysteria.

t. neuroses. Compulsion neuroses and hysteria

t. situation. The emotional state of a patient existing bet him and his physician during psychoanalysis.

Either affection or distrust is transferred by the patient to the physician, although such feelings are not related to reality.

t., thought. Transference of one's thoughts to another. *SYN:* telepathy.

transfix (trāns-fiks') [L. *trans*, across, + *figere*, to fix]. To pierce through or impale with a sharp instrument

transfixion (trāns-fik'shūn) [L. *trans*, across, + *figere*, to fix] Maneuver in performing an amputation in which a knife is passed into the soft parts and cutting is from within outward

transforation (trāns'for-ā'shūn) [“ + *forare*, to pierce]. The perforation of the fetal skull at the base in craniotomy.

transforator (trāns'for-rā-tor) [“ + *forare*, to pierce]. Instrument for perforating fetal skull.

transformation (trāns'for-mā'shūn) [“ + *formatio*, a forming]. 1 Change of shape or form. *SYN* metamorphosis 2. Change of one tissue into another 3. Degeneration. 4. A type of mutation occurring in bacteria which can be induced at will. It results from DNA penetrating the host cell and becoming incorporated into the genotype of host

transformer (trāns-form'er) [L. *trans*, across, + *formāre*, to form]. PT: A stationary induction apparatus to change electrical energy at one voltage and current to electrical energy at another voltage and current through the medium of magnetic energy, without mechanical motion

transfusion (trāns-fū-zhūn) [L. *trans*, across, + *fuso*, a pouring] 1 Injection of the blood of one person into the blood vessels of another. *SEE* blood transfusion

2 Injection of saline or other solutions into a vein for a therapeutic purpose
SEE: donor.

t., direct. Transfer of blood directly from one person to another.

t., indirect. T. of blood from a vessel to the patient.

t., intermediate. Direct transfusion, *q v*

t., replacement. Procedure in treatment of erythroblastosis fetalis of the newborn in which major portion of total blood volume is withdrawn in small amounts at a time and replaced with Rh-negative blood.

t., subcutaneous. Infusion of saline solution or other fluid beneath the skin.

t., venous. T. direct from a vein of a donor into a vein of patient.

transiliac (trāns-il'ī-āk) [L. *trans*, across, + *iliacus*, pert. to a haunch bone]. Extending bet. the 2 ilia.

transillumination (trāns'il-lū'mī-nā'shūn) [L. *trans*, across, + *illumināre*, to enlighten] Inspection of a cavity or organ by passing a light through its walls

When pus or lesion or degeneration is present, the reflection of light is diminished or absent

transition (trānz-i'shūn) [L. *transitio*, a going across] Passage from one state or position to another, or from one part to another part *SEE* transitional

transitional (trānz-ish'un-āl) [L. *transitio*, a going across]. Marked by or relating to a transition

t. douche. One using alternately hot and cold water

t. tumor. A benign one which, if it recurs after removal, may become malignant

transitionals (trānz-ish'un-āls) [L. *transitio*, a going across] Mononuclear leukocytes, characterized by their large size, often 3 times as large as a red cell

Commonly slightly irregular and found in from 2 to 4% of a normal differential The nucleus is oval, lobulated or a horseshoe, and stains an even dirty blue color Protoplasm likewise stained a dirty blue tint It has neutrophilic granules which take a lilac shade.

translucent (trāns-lū'sent) [L. *trans*, across, + *lucens*, shining] Not transparent but permitting passage of light.

transmethylation. Process in the metabolism of amino acids in which a methyl group is transferred from one compound to another, for example, the conversion in the body of homocysteine to methionine In this case the methyl group is furnished by choline or betaine

transmigration (trāns'mī-grā'shūn) [L. *trans*, across, + *migratio*, migration] Wandering across or through, especially the passage of white blood cells through capillary membranes into the tissues

t., external. Transfer of an ovum from an ovary to an opp tube through the pelvic cavity

t., internal. Transfer of an ovum through the uterus to the opposite oviduct

transmissible (trāns-mis'i-bl) [L. *transmissio*, a sending across]. Capable of being carried from one person to another, as an infectious disease

transmission (trāns-mish'ūn) [L. *transmissio*, a sending across]. Transfer of anything, as a disease or hereditary characteristics

t., biological. Condition in which organism transmitting causative agent of disease plays an essential role in the life history of a parasite or germ.

t., duplex. Passage of impulses through a nerve trunk in both directions

t., mechanical. The passive transfer of causative agents of disease, esp by arthropods. May be *indirect*, as when flies pick up organisms from excreta of a man or animals and deposit them on food, or *direct*, as when they pick up organisms from body of a diseased individual and directly inoculate them into body of another individual by bites or through open sores

t., neuromyal. The transmission of excitation from a motor neuron to a muscle fiber at a neuromyal (myoneural) junction

t., placental. The transmission of substances in the mother's blood to the blood of the fetus by way of the placenta

t. synaptic. The mechanism by which an impulse in one neuron gives rise to an impulse in another neuron.

t., transovarial. The transmission of causative agents of disease to offspring following invasion of ovary and infection of eggs. Occurs in ticks and mites.

transmutation (tráns-mú-tá'shùn) [L. *transmutatio*, a changing across]. A transformation or change, as of one species into another.

transonance (tráns-ó'náns). Transmission of sounds through an organ, as heart sounds through the lungs and chest wall.

transparent (tráns-pár'ént) [L. *trans*, across, + *parere*, to appear]. 1. Transmitting light rays so that objects are visible through the substance. 2. Pervious to radiant energy. **See.** *clearing agent*.

transpirable (tráns-pí'rā-bl) [' + *spirāre*, to exhale]. Permitting excretion through the skin or membranes, as perspiration.

transpiration (tráns-pí-rā'shùn) [' + *spiratio*, exhalation]. 1. Act of exhaling water, gas, or vapor through the skin or a membrane. **See.** *perspiration*. 2. Substance exhaled.

t., cutaneous. Giving off sweat from pores of the skin. **Syn.** *perspiration*.

t., pulmonary. Escape of watery vapor from the blood to the air in the lungs.

transplantation (tráns-plān-tā'shùn) [' + *plantāre*, to plant]. The taking of a portion of living tissue from its normal position in the body or from the body of another person and uniting it with like tissue in another place, to lessen defect or remedy deformity or injury. **See:** *autotransplantation, graft*.

t., autoplasic. Transplantation of tissue from one part to another part of the same body.

t., hetero. The transplantation of an organ or tissue from one individual to another of a different species.

t., heteroplasic. The transplantation of a part from one individual to another individual of the same or a closely related species.

t., heterotopic. One in which transplant is placed in a different location in host than it had in donor.

t., homo. Transplantation of tissue from one individual of the same species to another.

t., homoplasic. An autoplasic transplant. *q v*

t., homotopic. One in which transplant occupies same location in host that it had in donor.

t., of cornea. Keratoplasty. *q v*.

t., fenoplastic. Transplantation of tissue between individuals belonging to different genera.

transportation of the injured. ONE-MAN CARRIES. *Carrying in arms.* Patient is picked up in both arms as a child.

One-arm assist. Patient's arm is placed about neck of bearer and bearer's arms are placed about waist, thus assisting patient to walk.

Chair carry. **See.** *chair stretcher*.

Chair stretcher. Any ordinary firm chair should be tested. Patient is placed seated upon it tilted back. One bearer grasps back of the chair and the other the legs of the chair (either the front or rear, depending on the construction of the chair). Both bearers face in the same direction. Patient's head rests either on chest or back of the head bearer. Turn 2 chairs to the ground; overlap the backs and tie or wire them together, using the legs as handles.

Double loop. A sheet is rolled on its long axis, tied and placed over the shoulder of both bearers. Patient sits on the long loop and rests his back against a

short upper loop with the bearers supporting him. The weight is thus distributed on shoulders of both bearers.

Fireman's drag. Patient's wrists are crossed and tied with tie, belt, etc. Bearer kneels astride patient, places his head under patient's wrists and walks on all fours dragging patient beneath him.

Fireman's lift. Bearer grasps patient's left wrist with right arm, places patient's head under left armpit drawing patient's body over his left shoulder. Left arm should encircle both thighs, then lift patient. Patient's wrist is transferred to bearer's left hand, thus leaving 1 hand free to remove obstacles or to open doors, etc.

Four-handed basket seat. Each bearer grasps his own wrist and then grasps partner's free wrist. Patient sits upon this support.

Pack-strap carry. Patient lies on bearer's back. Patient's right arm is brought over bearer's right shoulder and held by his left hand. Left arm is brought over left shoulder and held by his right hand. Patient is thus carried on the back with arms resembling pack straps.

Pickaback carry. This is the pack strap carry only bearer supports patient's knees in flexed position. This leaves patient practically in a sitting position astride bearer's back.

Ring carry. A cravat or folded towel is rolled and tied to form a small ring. Bearer grasps this ring and allows patient to sit upon it. One free arm is used to support patient.

Saddle-back carry. Bearer places arm under patient's armpit around his back and grasps it around armpit. Patient's body is across bearer's back. Rescuer's free arm grasps both thighs, allowing patient to rest across patient's back as a saddle.

Shirt-tail carry. Bearer grasps patient's coat, blouse, or shirt tail, twists it to make a handle and brings it over his shoulder thus carrying patient back to back.

Six- or eight-man carry. This is done as the 3-man carry except 3 or 4 bearers are on each side of patient, thus dividing weight more uniformly.

Three-handed basket seat. Bearer grasps his own wrist, partner grasps the other wrist and leaves 1 arm free for supporting patient.

Three- or four-man carry. The little carry used by emergency squads. Three men kneel on one side of patient, place their hands under him and lift him up. The head bearer supports head and shoulders, center bearer lifts waist and hips, and third bearer lifts both lower extremities. If a fourth man is available, he should help steady patient while he is being lifted.

Triangular or greater arm sling, or branchiocervical sling: Place triangle on chest with 1 end over the sound shoulder, the point at elbow of affected side. Fold the base. Flex injured arm outside of triangle above the horizontal. Carry other end upward outside of arm back over shoulder of affected side. Tie to side of neck with square knot. Bring point anteriorly around back of elbow and fasten to ascending base or tie forming a cup at elbow. (In this bandage the weight is taken from entire length of forearm.)

Two-handed seat: Bearers kneel on either side of patient. Each passes 1

arm around back (under armpits) and other arm under knees and lifts him carefully. Patient is in a sitting position.

Wheel chair, improvised *Fastening casters to ordinary chair* Tie on a broom handle or similar stick for footrest by placing chair legs on parallel boards and fastening roller skates, wheels, etc.

Fastening as rocker to roller skates Remove legs from an old chair and fasten to frame of a baby carriage, or play wagon

f. by vehicle. Ambulances are desirable if available and usually contain appropriate stretchers. When not obtainable, stretchers may be made with poles, chairs or ladders. *SEE stretchers.* When entering or leaving an airplane one must remember that patient must be tied to the stretcher

f. by automobile. This is difficult. One bearer should be in the car and 1 or 2 outside to assist patient. A small chair-stretcher can sometimes be used with advantage. A door or ladder slung across the open windows or from front to rear seats may be used. The large rear seat can be used, a stretcher being placed diagonally and supported at 1 end by the seat and the other end on a box or folded blankets.

transposition (trāns-pō-zī'shūn) [L. *trans*, across, + *positio*, a placing]. 1. A transfer of position from one spot to another. *SEE metathesis.* 2. Displacement of an organ, esp. a viscus, to the opposite side. 3. Transplantation of a flap of tissue without severing it entirely from its original position until it has united in the new position

transsegmental (trāns'seg-mēn-tāl) [" + *segmentum*, a cutting]. Extending across or beyond a segment as of a limb.

transseptal (trāns-sēptāl) [" + *saeptum*, septum]. Across a septum

transtemporal (trāns-tēm-pōrāl) [" + *temporalis*, pert. to a temple]. Crossing the temporal or the cerebrum

transthalamic (trāns-thāl-am'ik) [" + *thalamus*, chamber]. Passing across the optic thalamus

transthermia (trāns-thēr-mī-ā) [" + *thermē*, heat]. Production of heat in the deep tissues by electric currents. *SYN: diathermy, medical, thermopenetration.*

transthoracic (trāns-thō-rās'ik) [" + *thorax*, chest]. Across the thorax

transthoracotomy (trāns-thō-rāk-ōt-ō-mī) [L. *trans*, across, + *thorax*, chest, + *tōmē*, a cutting]. The operation of incising across the thorax

transubstantiation (trāns-sūb-stān'shī-ā'shūn). The process of replacing one tissue by another

transudate (trāns-ū-dāt) [L. *trans*, across, + *sudare*, to sweat]. The fluid which passes through the pores of a membrane, especially that which passes through capillary walls. *SEE: exudate.*

transudation (trāns-ū-dā'shūn) [" + *sudatio*, a sweating]. Cozing of a fluid through pores or interstices, as of a membrane

transurethral (trāns-ū-rē'thrāl) [" + *ourethra*, urethra]. Pert. to an operation performed through the urethra.

transvaginal (trāns-vā'jīn-āl) [" + *vagina*, sheath]. Through the vagina.

transversalis. Transverse to or at right angles to the long axis of the body.

f. fascia. A thin membrane forming the peritoneal surface of the transversus muscle and its aponeurosis.

transverse (trāns-vēr's) [L. *transversus*, turned across]. Lying across, crosswise.

f. foramen. Canal in each transverse process of a cervical vertebra for the arteries and veins

transversectomy (trāns-vēr-sēk-tō-mī) [" + *G ektomē*, excision]. Excision of a transverse vertebral process

transversospinalis (trāns-vēr'sō-spi-nāl'is) [L. *transversus*, turned across, + *spina*, thorn]. Semispinalis capitis, s. cervicis. *SEE: Muscles, Table of, in Appendix.*

transversus (trāns-vēr'sūs) [L. turned across]. 1. Any of several small muscles. *SEE: Muscles, Table of, in Appendix.* 2. Lying across the long axis of a part or organ

transvestism, transvestitism (trāns-vēst'izm, -i-tizm) [L. *trans*, across, + *vestitus*, clothed, + *G. -ismos*, condition]. A sexual perversion in which men prefer to dress as women, or women dress as men. *SYN: eunism, qv*

trapezium (trā-pē-zī-ūm) [G. *trapezion*, a little table]. *SYN: greater multangular bone, os trapezium.* The first bone in the distal row of carpal bones. It lies between navicular and 1st metacarpal bones.

trapezius (trā-pē-zī-ūs) [G. *trapezion*, a little table]. A flat, triangular muscle covering posterior surface of neck and shoulder. *SEE: Muscles, Table of, in Appendix.*

trapezoid (trāp-ē-zoyd) [G. *trapezoidēs*, table-shaped]. A plane four-sided figure having two sides parallel

f. body. *SYN: corpus trapezoideum.* A bundle of transverse fibers in the ventral portion of tegmentum of pons

f. bone. *SYN: lesser multangular bone.* The second bone in the distal row of carpal bones. It lies between the greater multangular and capitate

f. ligament. The lateral portion of the coraco-clavicular ligament

Trapp-Hässer formula (trāp-hās'ér). To estimate the grains of solids in urine, multiply last 2 figures of the sp gr by 233, which gives the solids in 1000 cc.

traspentin. Spasmolytic agent similar to atropine, but lacking its undesirable properties.

trauma (traw'mā) (pl *traumata* or *traumas*) [G. *trauma*, wound]. An injury or a wound

f., psychic. A painful, emotional experience, which may cause a neurosis.

traumatic (traw-māt'ik) [G. *trauma*, wound]. 1. Caused by or relating to an injury. 2. Causing the healing of wounds. 3. A drug promoting healing

f. fever. One following an injury. **f. psychosis.** One resulting from physical injuries or emotional shock.

traumatia (traw-māt-in) [G. *trauma*, wound]. Plant substance which helps the healing of injured tissues.

traumatism (traw'mā-tizm) [" + *-ismos*, condition]. 1. Morbid condition of system due to an injury or wound. 2. Incorrectly, a trauma.

traumatology (traw-mā-tōl-ō-jī) [" + *logos*, science]. The science of wounds and their care.

traumatopnea (traw'mā-tōp-nēā) [" + *noē*, breath]. Passage of air in and out of a wound in the chest wall

treatment (trā'tment) [M.S. *trēten*, to handle]. 1. Medical, surgical or psychiatric management of a patient. 2. Any specific procedure used for the cure or the amelioration of a disease or pathological condition. *SEE: therapy.*

f., active. Treatment directed specifically toward cure of a disease.

t., after. That employed during convalescence following an operation or an illness.

t., causal. Treatment directed toward removal of the cause of the disease.

t., conservative. 1 The withholding of administration of medicine or utilization of operative procedures until such procedures are clearly indicated 2 In surgical cases, the preservation of the organ or part if at all possible with the least possible mutilation

t., dietetic. Treatment based on regulation of diet

t., electric shock. Electroshock therapy, shock therapy, *q.v.*

t., empiric. One based on observation and experience rather than having a scientific basis.

t., expectant. Relief of symptoms as they arise

t., hypoglycemic shock. Insulin shock therapy, shock therapy, *q.v.*

t., palliative. One designed for the relief of symptoms of the disease rather than curing the disease

t., paralysis. A serious and sometimes fatal complication following the administration of antirabic vaccine

t., preventive, prophylactic. T. directed to prevention of disease

t., rational. One based on scientific principles.

t., shock. Shock therapy, *q.v.*

t., specific. T. directed to the cause of a disease

t., starvation. Treatment employed in which food is withheld as in cases of bacillary dysentery, following hemorrhage, etc 2 The treatment of diabetes in which there are days of fasting followed by a restricted and carefully controlled diet

t., supportive. Special measures employed to supplement specific therapy.

t., surgical. T. by means of operation.

t., symptomatic. Treatment directed toward constitutional symptoms such as pyrexia, shock, and pain

tree. In anatomy, a treelike structure

t., bronchial. The right or left bronchus with its branches and their terminal arborizations

Tre'ma'to'da. A class of flatworms commonly called *flukes* belonging to the phylum Platyhelminthes It includes two orders, (1) the *Monogenea*, which are external or semi-external parasites having direct development with no asexual multiplication, and (2) the *Digenea*, internal parasites with asexual generation in its life cycle The *Digenea* usually require two or more hosts, the hosts alternating **SEE fluke**

trematode (trēm'ā-tōd) [G. *trematōdēs*, full of holes]. A fluke, a parasitic flatworm belonging to the class *Trematoda*. **SEE fluke, cercaria.**

trematodiasis (trēm'ā-tō-dī'ā-sis). Infestation with a trematode.

tremble. 1. An involuntary quivering or shaking 2 To shiver, quiver, or shake.

trembles. **SYN:** milk sickness A condition resulting from ingestion of plants such as snakeroot containing *tremato* Common in domestic animals and may occur in humans as a result of ingesting the plants or more commonly from drinking milk or eating the meat of poisoned animals Symptoms are weakness, anorexia, nausea and vomiting, prostration, and possibly death

tremetol (trēm'ē-tōl). A poisonous substance occurring in snakeroot, rayless goldenrod, and other plants which causes trembles in animals or man. **SEE:** trembles.

tremogram (trēm'ō-grām) [L. *tremere*, to shake, + G. *gramma*, a mark]. Graphic representation made by a tremograph.

tremograph (trēm'ō-grāf) 1" + *graphein*, to write]. Device for recording tremors.

tremolabile (trēm'ō-lā-bil) 1" + *labilis*, unsteady]. Easily destroyed or inactivated by shaking, said of a ferment.

tremophobia (trēm'ō-fō-bi-ā) 1" + G. *phobos*, fear]. Abnormal fear of trembling.

tremor (trēm'or) [L. *tremor*, a shaking]. 1 A quivering, esp continuous quivering of a convulsive nature 2 An involuntary movement of a part or parts of the body resulting from alternate contractions of opposing muscles

Tremors may be classified as *involuntary, static, dynamic, kinetic, hereditary, and hysterical* Pathologic tremors are independent of the will The trembling may be fine or coarse, rapid or slow, may appear on movement (intention tremor) or improve when the part is employed Often due to organic disease, trembling may express an emotion (e.g., fear).

TREATMENT: Varies with underlying cause **SEE subsultus**

t., alcoholic. The visible t exhibited by alcoholics

t., coarse. One in which oscillations are relatively slow (6 or 7 per second).

t., continuous. One that resembles tremors of paralysis agitans

t., fibrillary. One caused by consecutive contractions of separate muscular fibrillae, rather than of a muscle or muscles

t., fine. A rapid tremor, one that oscillates 8 to 10 times per second

t., forced. T continuing after voluntary motion has ceased

t., hysterical. A fine rapid tremor occurring in hysteria May be limited to one extremity or generalized

t., intention. T when voluntary motion is attempted

t., intermittent. One common to paralyzed muscles in hemiplegia when attempting voluntary movement

t., muscular. Slight oscillating muscular contractions in rhythmic order

t., physiologic. A transient tremor occurring in normal individuals, resulting from excessive physical exertion, excitement, hunger, fatigue, or other causes

t., rest. One present when the involved part is at rest but absent or diminished when active movements are attempted

t., senile. A tremor occurring in old age

t., static. **SYN** rest tremor One present when muscles involved are at rest

t., volitional. Trembling of limbs or of body when making a voluntary effort Seen in multiple sclerosis and other nervous diseases **SEE intention tremor**

t., wing-beating. Tremor in which there are rapid, violent movements of upper extremity resembling the flapping of the wings of a bird

tremulous (trēm'ū-lūs) [L. *tremuläre*, to tremble]. Trembling or shaking

trench fever. **SYN:** *Wolhynian fever.* A rickettsial disease occurring in central Europe caused by *Rickettsia wolhynica* transmitted by the body louse.

trench foot. A condition resembling frostbite affecting feet of soldiers who are obliged to stand in cold water for long periods of time.

trench mouth. Infection of tonsils and

floor of the mouth with Vincent's bacillus, characterized by inflammation, ulceration, and painful swelling. **SYN:** ulceromembranous angina, Vincent's angina, *q v*

trend, psychiatric. Benign or malignant emotional interests and urges, revealed by postures, gestures, actions, speech

Trendelenburg position (trén-dél'én-burg). The bed or table is raised from the foot, greatly elevating the knees, the legs projecting on an extended leg rest

In this position the abdominal organs are pushed up toward the chest by gravity. The legs are elevated at an angle of 45°. The head is lower than the hips and legs. The foot of the bed may be elevated by resting upon blocks or pins

This position is assumed in some abdominal surgery, in case of shock, or low blood pressure. In surgical cases, the legs and feet hang over the end of the table.

trepan (tré-păn') [G. *trypanon*, a borer].

1. To perforate the skull with a trepan to relieve brain from pressure 2. An instrument resembling a carpenter's bit for incision of the skull **SYN:** *trephine*.

trephination (tréf-in-ă'shûn) [Fr. *tréphine*, a bore] Process of cutting out a piece of bone with the trephine.

trephine (tré-fln') [Fr. *tréphine*, a bore]. 1. To perforate with a trephine 2 A cylindrical saw for cutting circular piece of bone out of skull **SYN:** *trepan*

trephining. *trē*. process of cutting bone with a trephine 2 The removal of a piece of cornea for the relief of glaucoma

trephone (tréf'ôn) [G. *trephine*, to nourish] Hypothetical growth-promoting substance in the blood serum, used by cells as food material

trepidant (trép'i-dănt) [L. *trepidans*, trembling]. Marked by tremor

trepidation (trép-i-dă'shûn) [L. *trepidatio*, a trembling]. 1. Fear, anxiety. 2 Trembling movement, esp when involuntary.

Treponema (trép-ô-né'mă) [G. *trepein*, to turn, + *nēma*, thread] A genus of spirochetes, parasitic in man, with undulating or rigid bodies. The belong to the family Treponemataceae.

T. carateum. The causative agent of pinta, an infectious disease of the skin
T. pallidum. Causative organism of syphilis **SYN:** *Spirochaeta pallida*.

T. pertenue. Causative organisms of yaws (frambesia).

Treponemataceae. A family of spiral organisms belonging to the order Spiro-

chaetales Includes the genera *Borrelia*, *Leptospira*, and *Treponema*.

treponemiasis (trép'ô-né-mi'ă-sis) [G. *trepein*, to turn, + *nēma*, thread, + *iasis*, infection]. Infestation with *Treponema*.

treponemicidal (trép'ô-né-mi-si'dăl) ["" + " + *L. cidus*, from *caedere*, to kill]. Destructive to *Treponema*

trepopnea (trép-ôp'né-ă). Difficult breathing when one is in a certain recumbent position

tréppe (trép'eh) [Ger. *treppe*, staircase]. Increase in height of contractions when the heart or a muscle is stimulated rapidly at regular intervals. **SYN:** staircase phenomenon, *q v*

trésis (tré'sis) [G. *trésis*, perforation]. Perforation.

tri- [G.] Combining form meaning *three*.

triad (tri'ăd) [G. *trias*, three]. 1. Any three things having something in common 2 A trivalent element 3 Trivalent *t.*, *Hutchinson's*. Notched teeth, interstitial keratitis, and eighth-nerve deafness due to meningial involvement; a syndrome characteristic of prenatal syphilis

triakaldekaphobia (tri'ăk-i-dēk-ă-fô-bi'ă) ["" + *kai*, and, + *deka*, ten, + *phobos*, fear] Superstition regarding the number 13.

triangle (tri'ăng-l) [L. *trēs*, three, + *angulus*, angle, *triangulum*] A figure or area formed by 3 angles and 3 sides

t., *anal*. **SYN:** *rectal triangle*. Triangle with base between the two ischial tuberosities and apex at coccyx.

t., *anterior, of the neck*. The space bounded by the middle line of the neck, the ant. border of the sternocleidomastoid, and a line running along the lower border of the mandible and continued to the mastoid process of the occipital bone

t., *carotid, inferior*. The space bounded by the middle line of the neck, the sternomastoid and the ant. belly of the omohyoid muscle

t., *carotid, superior*. The space bounded by the ant. belly of the omohyoid muscle, the post. belly of the digastric and the sternomastoid.

t., *cephalic*. A *t* on the anteroposterior plane of the skull formed by lines joining the occiput and forehead and chin, and 1 uniting the 2 latter.

t., *facial*. A *t* bounded by lines uniting the basion and the alveolar and nasal points, and 1 uniting the 2 latter.

t., *femoral*. *T* on the inner part of the thigh, bounded by the sartorius and

TRENDELENBURG POSITION.
Shoulder braces on table prevent patient from slipping.

adductor longus muscle, and above by inguinal ligament.

t., frontal. A t. bounded by the maximum frontal diameter and lines joining its extremities and the glabella.

t., Hesselbach's. The interval in the groin bounded by Poupart's ligament, edge of rectus muscle, and deep epigastric artery

t., inferior occipital. Of Welcker, a t. having the bimaistoid diameter for its base and theinion for its apex.

t., inguinal. See *femoral t.*
t., Lesser's. Space bounded below by ant and posterior bellies of the digastric muscle and above by the hypogastric nerve

t., lumbocostoadominal. The space bounded in front by the obliquus abdominis externus, above by the lower border of the serratus posticus inferior and the point of the 12th rib, behind by the outer edge of the erector spinae, and below by the obliquus abdominis internus

t., muscular. See *inferior carotid t.*
t., mylohyoid. The triangular space formed by the mylohyoid muscle and the 2 bellies of the digastric muscle.

t., occipital, of the neck. The space bounded by the sternocleidomastoid, the trapezius, and the omohyoid.

t., omoclavicular. See *subclavian t.*

t., omohyoid. See *superior carotid t.*

t., of Petit. The space above the hipbone, bet. the ext. oblique muscle, the latissimus dorsi, and int. oblique muscle.

t., posterior cervical; t., posterior, of the neck. The space bounded by the upper border of the clavicle, the posterior border of the sternocleidomastoid muscle, and the anterior border of the trapezius muscle

t., pubourethral. A triangular space in the perineum, bounded externally by the ischiocavernosus muscle, internally by the bulbocavernosus muscle, and posteriorly by the transversus perinei muscle.

t., Scarpa's. Femoral triangle, *q v.*

t., subclavian. A space bounded by the post belly of the omohyoid, the upper border of the clavicle, and the post. margin of the sternocleidomastoid.

t., submaxillary. The space between the lower border of the inf maxilla, the parotid gland, and the mastoid proc-

TRIANGULAR BANDAGES.

ess of the temporal bone above, the post. belly of the digastric and the stylohyoid below, and the middle line of the neck in front.

f., supraclavicular. SEE *subclavian f.*

f., supraraeal. Triangle slightly above and behind ext. auditory meatus. It is bounded above by root of zygoma and anteriorly by post. wall of ext. auditory meatus.

f., urogenital. Triangle with base formed by line between the two ischial tuberosities and its apex just below symphysis pubis.

f., vesical. The trigone, *qv*

triangular. Having three sides, shaped like a triangle.

f. ligament. One of two ligaments, right and left, connecting posterior portions of right and left lobes of liver with corresponding portions of diaphragm.

f. nucleus (of Schwalbe). SYN *medial nucleus*. The chief or dorsal nucleus of the vestibular division of the eighth cranial nerve. Located in pons occupying most of area acoustica of rhomboid fossa.

triangular bandage. One folded diagonally. When folded the several thicknesses afford some support.

triangularis (tri-äng-ü-lä-ris) [L.] A muscle of the chin. SEE *Muscles, Table of, in Appendix*.

Triatoma (tri-ät-ö-mä). A genus of blood-sucking bugs belonging to the order Hemiptera, family Reduviidae. Commonly called cone-nosed bugs or assassin bugs. It includes the species *T. brasiliensis*, *T. dimidiata*, *T. infestans*, *T. protracta*, *T. recurva*, *T. rubida* and others. They are house-infesting pests and some species especially *T. infestans* serve to transmit *Trypanosoma cruzi*, causative agent of Chagas' disease.

tribade (trib'äd). A woman, usually one with an enlarged clitoris, who plays the part of a male in homosexual practices.

tribadism (trib'äd-izm) [G. *tribein*, to rub, + *-ismos*, condition]. A form of perversion in which women seek sexual gratification from one of their own sex.

tribasilar (tri-bäs'il-ar). Having three bases.

f. synostosis. Condition resulting from premature fusion of three skull bones, the occipital, sphenoid, and temporal. Results in arrested cerebral development and mental deficiency.

tribromoethanol (tri-brö-mö-eth'an-öl). USP for *avertin*.

triceps (tri'sëps) [L. *trēs*, three, + *caput*, head]. A muscle arising by 3 heads with a single insertion. SEE *Muscles, Table of, in Appendix*.

f. reflex. Sharp extension of forearm resulting from tapping of triceps tendon while arm is held loosely in bent position.

Tricercomonas (tri'sër-cöm'ö-näs). SEE: *Enteromonas*.

trichangiectasia, trichangiectasis (trik"än-ji-ëk-tä'zä-ä, -ëk-tä-sis) [G. *thrix*, trich-, hair, + *angion*, vessel, + *ektasis*, dilatation]. Dilatation of capillaries. SYN: *telangiectasia*.

trichatrophla (trik-ä-trö'fi-ä). Brittleness of hair resulting from atrophy of root of hair.

trichauxe, trichauxis (trik-aw'k'së, -sis) [" + *auxē*, increase]. Excessive growth of hair. SYN *hypertrichosis*.

trichi-, tricho- [G.]. Combining forms meaning *hair*.

trichiasis (trik-iäs-is) [G. *trichiasis*, hair condition]. Inversion of eyelashes so that they rub against the cornea, causing a continual irritation of the eyeball. SYN. Photophobia, laceration, and feeling of foreign body in eye.

TREATMENT. Epilation, electrolysis and operation, such as correcting the underlying entropion with which this condition is usually associated.

Trichina (trik-i'nä) [G. *trichinos*, of hair]. A nematoid, parasitic worm usually found in the intestinal tract of certain lower animals and man.

Trichinella (trik-i-nē'lä) [G. *trichinos*, of hair]. A genus of nematode worms belonging to the suborder Trichurata. They are parasitic in humans, hogs, rats, and many other mammals.

T. spiralis. The species of *Trichinella* which commonly infests man causing trichinosis. Infection occurs when raw or improperly cooked meat containing cysts is eaten. Larvae encyst in the

UPPER EXTREMITY (POSTERIOR VIEW)
SHOWING TRICEPS BRACHII MUSCLE

duodenum and invade mucosa of small intestine becoming adults in 5 to 7 days. After fertilization, each female deposits 1000 to 2000 living larvae which enter blood or lymph vessels and are circulated to various parts of the body where they encyst in striated muscle. SEE: *trichinosis*

trichinellosis (trik-kī-nēl-lō'sis) [+ -ōsis, condition]. Disease caused by *Trichinella spiralis*. SYN *trichinosis*, *q.v.*

trichinization (trik'in-i-zā'shūn) [G *trichinos*, of hair] Infestation with trichinae.

trichinophobia (trik in-ō-fō'bi-ā) [+ -phobos, fear] Abnormal fear of developing trichiniasis.

trichinosis (trik-in-ō'sis) [G *trichinos*, of hair, + -ōsis, condition] Disease caused by the ingestion of *Trichina spiralis* into the system through eating raw or insufficiently cooked pork.

SYM Sometimes lacking. When large numbers have been ingested, gastrointestinal symptoms develop in a few days. These are pain, nausea, vomiting and serous diarrhea.

IN From 1 to 2 weeks muscular symptoms develop, muscles become swollen, firm, extremely painful, movement is inhibited, and dyspnea results from involvement of respiratory muscles. Edema, esp. of face, is a prominent symptom. Profuse sweating sometimes observed and high fever commonly present. Blood shows an eosinophilia.

PROG. Depends on number of worms ingested. Majority recover.

TREATMENT There is no specific therapy. If it is known that infected meat is eaten, purgatives may be effective in early stages of the disease, but this is seldom the case. In later stages after worms have involved muscles, muscle pains should be relieved by analgesics. Treatment is in general symptomatic and supportive to enable patient to survive the acute toxemia following invasion of muscles. After encystment the only symptom is vague muscular pains which may persist for weeks.

trichinous (trik'in-ūs) [G *trichinos*, of hair] Infested with trichinae.

trichitis (trik-i'tis) [G *thrīx*, *trich-*, hair, + -itis, inflammation] Inflammation of hair bulbs.

trichlorethylene (trī'klor-ēth'il-ēn) A colorless liquid (CHCl CCl₂). Trade name Trilene. An analgesic and anesthetic.

CAUTION Must be kept away from open flame. May cause watery eyes and other unpleasant symptoms.

trichobacteria (trik'ō-bāk-tē'ri-ā) [G *thrīx*, *trich-*, hair, + *baktērion* rod] 1. Filamentous bacteria. 2. Bacteria possessing flagella.

trichobezoar (trik'ō-bē-zō-ar) [+ Persian *bezoar*] A hair ball or concretion in the intestine or stomach.

trichocardia (trik'ō-kar'di-ā) [+ *kardia*, heart] Erythematous inflammation with elevations resembling hair. SYN: *cor hirsutum*, hairy heart, shaggy pericardium.

trichocephalasis (trik'ō-sēf-āl-i'ā-sis) [+ *kephalē*, head] Infestation with *Trichocephalus*.

Trichocephalus (trik'ō-sēf-āl-ūs) [+ *kephalē*, head] A genus of parasitic worms infesting the colon.

trichoclasis, **trichoclasia** (trik'ō-klā-zī-ā, -oklās-is) [+ *klasis*, a breaking] Brittleness of the hair. SYN: *trichorrhexis*.

trichocryptosis (trik'ō-krip-tō'sis) [+ *kryptos*, concealed]. Any disease of the hair follicles.

trichoepithelioma (trik'ō-ēp'i-thē-il-ō'mā) [G *thrīx*, *trich-*, hair, + *epi*, upon, + *thēlē*, nipple, + -oma, tumor]. A benign skin tumor originating in the hair follicles.

trichoesthesia (trik'ō-ēs-thē-zī-ā) [+ *aisthēsis*, sensation] 1. Sensation felt when a hair is touched. 2. A paresthesia causing a sensation of the presence of a hair on a mucous membrane or on the skin.

trichoesthesiometer (trik'ō-ēs-thē-zī-ōm-ē-ter) [+ + + *metron*, a measure]. Device for testing sensibility of the scalp by means of the hair.

trichogen (trik'ō-jēn) [+ *gennan*, to produce] An agent stimulating growth of hair.

trichogenous (trik'ō-jēn-ūs) [+ *gennan*, to produce] Promoting hair growth.

trichoglossia (trik'ō-glōs-si-ā) [+ *glōssa*, tongue] Hairy condition of the tongue.

trichoid (trik'ōyd) [+ *eidos*, resemblance] Hairlike.

trichokryptomania (trik'ō-krip'tō-mā'nī-ā) [G *thrīx*, *trich-*, hair, + *kryptos*, crooked, + *mania*, madness]. Abnormal desire to break off the hair or beard with the fingernail. SYN *trichorrhexomania*.

trichology (trik'ōl-ō-jī) [+ *logos*, a study] Study of the hair and its care and treatment.

trichoma (trik'ō-mā) [G *trichōma*, hairiness] 1. Inversion of 1 or more eyelashes. SYN *entropion*. 2. Matted, verminous, encrusted state of the hair. SYN: *plecia polonica*.

trichomatosis (trik'ō-mā-tō'sis) [+ -ōsis, condition] Entangled, matted hair due to fungous disease of scalp and want of cleanliness. SYN: *plecia polonica*.

trichomatous (trik'ō-mā-tūs) [G *trichōma*, hairiness] Of the nature of, or affected with trichoma.

Trichomonas (trik'ōm'ō-nās) [G *thrīx*, *trich-*, hair, + *monas*, unit] Genus of flagellate parasitic protozoa.

T. hominis. Species in human intestines sometimes causing diarrhea and bacillary dysentery.

T. vaginalis. Vaginitis caused by a species of T. in secretions of the vagina, sometimes found in the male urethra. SEE *colpitis*.

trichomoniasis (trik'ō-mō-nī-ās-is) [+ + -iasis, infection]. Infestation with a parasite of genus *Trichomonas*.

trichomycosis (trik'ō-mī-kō'sis) [+ *mykēs*, fungus, + -ōsis, condition]. Any disease of the hair due to a fungus.

t. axillaris. SYN. *trichomycosis nodosa*, *q.v.* An affection of the axillary region and sometimes pubic hairs caused by *Nocardia tenuis*.

t. nodosa. Disease marked by nodule formations on the hair shafts. SYN: *pedra*.

trichonosis, **trichonosis** (trik'ō-nō'sis, -ōn'ō-sus) [+ *nosos*, disease]. Any diseased condition of the hair.

trichopathophobia (trik'ō-pāth-ō-fō'bi-ā) [+ *pathos*, disease, + *phobos*, fear]. Morbid fear of hair on the face experienced by women, or any abnormal anxiety regarding hair.

trichopathy (trik'ō-pāth-i) [+ *pathos*, disease]. Any disease of the hair.

trichophagia, **trichophagy** (trik'ō-fā'i-ā, -of-ā-jī) [+ *phagēin*, to eat] The habit of swallowing hair.

trichophobia (trik'ō-fō'bi-ā) [G *thrīx*, *trich-*, hair, + *phobos*, fear]. Abnormal dread of hair or of touching it.

trichophytic (trik'ô-fî'tik) [+ phyton, growth]. 1. Relating to Trichophyton. 2. Promoting hair growth.

trichophytid (trik'ô-fî'tîd) A skin disorder considered to be an allergic reaction to fungi of the genus *Trichophyton*.

trichophytin (trik'ô-fî'tîn) An extract prepared from fungi of the genus *Trichophyton*. Used as an antigen for skin tests and for the treatment of certain trichophytid infections.

trichophytobezoar (trik'ô-fî'tô-bê-zôr) A hair ball found in stomach or intestine composed of hair, vegetable fibers, and miscellaneous debris.

Trichophyton (trik'ô-fî't-ôn). [G *thrîz*, *trich-* hair, + *phyton*, growth] A genus of parasitic fungi which lives in or on the skin or its appendages (hair and nails) and is the cause of various dermatomycoses and ringworm infections. Species which produce spores arranged in rows on the outside of the hair are designated *ectothrix*, if spores are within the hair, *endothrix*.

T. gypsum. Causative agent of tinea favosa, *q.v.*

T. schoenleinii. Causative agent of favus of the scalp.

T. tonsurans. Causative agent of favus or ringworm of the scalp. SEE *tinea capitis*.

T. violaceum. Causative agent of barber's itch (*tinea barbae*, *q.v.*)

trichophytosis (trik'ô-fî-tô'sîs) [+ " + -ôsis, condition] Infestation with trichophyton fungi; mostly in children.

f. barbae. Tinea barbae, *q.v.*

f. capitis. Tinea capitis, *q.v.*

f. corporis. Tinea corporis, *q.v.*

f. cruris. Tinea cruris, *q.v.*

f. pedis. Tinea pedis, *q.v.*

trichophytosis (trik'ôp-tî-tô'sîs) [+ *ptilon*, feather, + -ôsis, condition]. 1. The splitting of hairs at the ends, giving them a featherlike appearance. 2. Disease of hair marked by development of nodules along the hair shaft at which point it splits off. SYN *trichorrhexis nodosa*.

trichorrhea (trik-or-ê-â) [+ *rhoia*, a flow] Rapid falling of the hair.

trichorrhexis (trik'ô-rêks'îs) [+ *rhêxis*, a breaking] Condition in which the hair splits. SYN *fragilitas crinium*, *trichschisis*.

f. nodo'sa. Longitudinal splitting of hair at nodules formed on the shaft. SYN. *clastothrix*, *trichoclasia*.

trichorhexomania (trik'ô-rêks'ô-mâ-nî-â) [+ " + *mania*, madness] The abnormal habit of breaking off the hair with the fingernails.

trichschisis (tri-kos'kis-îs) [G. *thrîz*, *trich-* hair, + *schisis*, a fissure]. Splitting of the hairs.

trichoscopy (trik-ôs'kô-pî) [+ *skopein*, to examine]. Inspection of the hair.

trichosis (tri-kô'sîs) [+ -ôsis, condition]. Any disease of the hair or its abnormal growth or development in an abnormal place.

f. decolor. Any abnormal coloring or lack of coloring of the hair. SYN: *canities*.

f. seto'sa. Coarse hair.

Trichosporon (tri-kôs'pô-rên) [G *thrîz*, *trich-* hair, + *spora*, a seed] A genus of fungi which grows on hair causing piedra.

T. beigellii. The causative agent of white piedra, *q.v.*

trichosporosis (trik'ô-spô-rô'sîs) [+ " + -ôsis, condition]. Infestation of the hair with *Trichosporon*.

trichosyphilis, trichosyphilosis (trik'ô-sîf'-î-lîs, -sîf'îl-ô'sîs) [+ *syphilis* + -ôsis, condition] Any hair disease arising from a syphilitic condition.

Trichothecium (trik'ô-thê'sî-ûm) [+ *thêkê*, a box]. A genus of mold fungi causing disease of the hair.

T. ro'seum. A species of mold fungus found in certain cases of inflammation of the eardrum (mycomyringitis).

trichotillomania (tri-kô-tîl-ô-mâ-nî-â) [G. *thrîz*, *trich-* hair, + *tîllein*, to pull, + *mania*, madness] The unnatural impulse to pull out one's own hair.

trichotomy (tri-kôt'ô-mî) [G *tricha*, threefold, + *tomê*, a cutting]. Division into three parts.

trichotoxin (trik'ô-tôks'în) [G *thrîz*, *trich-* hair, + *toxikon*, poison] An antibody or cytotoxin which destroys ciliated epithelial cells.

trichotrophy (tri-kôt'rô-fî) [+ *trophê*, nourishment] Nutrition of the hair.

trichroic (tri-krô'îk) [G *treis*, three, + *chrôa*, color] Presenting 3 different colors from 3 different aspects.

trichroism (tri'krô-îzm) [+ " + -ismos, condition] Quality of showing a different color from each of 3 positions.

trichromatic (tri'krô-mât'îk) [+ *chrôma*, color] Relating to or able to see the 3 primary colors, noting normal color vision.

trichromic (tri-krô'mîk) [+ *chrôma*, color]. Pert to normal color vision or ability to see the 3 primary colors. SYN: *trichromatic*.

trichuriasis (trik'û-rî-â-sîs) [G *thrîz*, *trich-* hair, + *oura*, tail] Presence of worms of genus *Trichuris* in the colon, or in the ileum. SYN *trichocephalosis*.

Trichuris (tri-kû-rîs) [+ *oura*, tail]. A genus of Trematoda.

T. trichurfa. The whipworm. SYN: *Trichocephalus dispar*.

tricipital (tri-sîp'î-tâl) [L *três*, *tria*, three, + *caput*, head]. Three-headed, as the triceps muscle.

tricornic, tricornute (tri-kor'nîk, -nût) [+ *cornu*, horn]. Having 3 horns or cornua.

tricrotic (tri-krôt'îk) [G *treis*, three, + *krotos*, a beat] Condition in which three accentuated waves or notches occur on a sphygmograph tracing from one beat of the pulse.

tricrotism (tri'krôt-îzm) [+ " + -ismos, condition] Condition of being tricrotic.

tricuspid (tri-kûs'pîd) [L *tres*, *tria*, three, + *cusps*, a point]. 1. Pert to the tricuspid valve. 2. Having 3 points or cusps. 3. A tooth having 3 cusps.

f. area. Lower portion of body of sternum where sounds of right atrioventricular orifice are best heard.

f. murmur. One caused by stenosis of the tricuspid valve or by its incompetency.

f. orifice. Right atrioventricular cardiac aperture.

f. tooth. One with a crown having three cusps.

f. valve. Right atrioventricular valve. SYN: *valvula tricuspidalis*.

trident, tridentate (tri'dênt, tri-dên'tât) [L *três*, *tria*, three, + *dens*, *dent-*, tooth]. Having three prongs.

tridermic (tri-dêr'mîk) [G *treis*, three, + *derma*, skin]. Developed from the ectoderm, endoderm, and mesoderm.

tridermoma (tri'dêr-mô'mâ) [+ " + -ôma, tumor]. A teratoid growth containing all three germ layers.

trielcon (tri-êl'kôn) [+ *elkein*, to draw].

Instrument with 3 branches for removing foreign substances from wounds.

triethylene melamine. Commonly abbr. *TEM*. One of the nitrogen mustard compounds. SEE *nitrogen mustard*.

trifacial (tri-fā'shāl) [L. *trēs*, *tria*, three, + *facialis*, facial]. Pert. to the 5th pair of cranial nerves. SYN *trigeminal*.

† **neuralgia**. N. of 1 of the branches of the 5th cranial nerve, often severe. SYN. *tic douloureux*.

trifid (tri'fid) [L. *trifidus*, split thrice]. Split into 3; having 3 clefts.

trigastic (tri-gāst'rik). Having three bellies, as certain muscles

trigeminal (tri-jēm'in-āl) [L. *trēs*, *tria*, three, + *geminus*, twin]. Pert. to the trigeminal or 5th cranial nerve

† **cough**. A reflex cough from irritation of the trigeminal nerve terminations in respiratory upper passages

† **nerve**. SYN: *nervus trigeminus*. The fifth cranial nerve, a large mixed nerve arising superficially from the side of the pons near its superior border. It is attached to the brain stem by two roots: a large sensory root and a small motor root. The sensory root bears an enlargement, the *semilunar Gasserian ganglion*, from which three large branches arise. These are (1) *ophthalmic*, purely sensory, from skin of upper part of head, mucous membranes of nasal cavity and sinuses, cornea and conjunctiva; (2) *maxillary*, purely sensory, from dura mater, gums and teeth of upper jaw, upper lip, and orbit; (3) *mandibular*, the largest division containing sensory fibers from tongue, gums and teeth of lower jaw, skin of cheek, lower jaw, and lip, and motor fibers supplying principally muscles of mastication.

† **neuralgia**. Facial neuralgia. SYN: *tic douloureux*.

† **pulse**. One with longer or shorter interval after each 3 beats because the 3rd beat is an extra systole. SYN *pulsus trigeminus*.

trigeminus (tri-jēm'in-nūs) [L. *trēs*, *tria*, three, + *geminus*, twin]. SYN: *trigeminal nerve*, *q.v.* The fifth cranial nerve. SEE: *Table of Cranial Nerves in Appendix*.

trigeminy (tri-jēm'in-nī). Occurring in threes, especially three pulse beats in rapid succession.

trigenic (tri-jēm'ik). In genetics, condition in which three instead of two alleles are present such as occurs in trisomic or triploid individuals.

trigger. To initiate or start with suddenness

† **action**. A physiologic process or a pathologic change initiated by a sudden stimulus.

† **finger**. State in which flexion or extension is arrested temporarily, but finally completed with a jerk.

† **material**. SEE: *trigger substance*.

† **substance**. A chemical substance which initiates a functional activity.

† **zone**. 1. An area which when stimulated will initiate an attack of neuralgia. 2. An area of cerebral cortex which when stimulated produces abnormal reactions similar to those in acquired epilepsy. Also called *epileptogenic zone*.

trigonal (tri-gō-nāl) [G. *trigōnon*, a three-cornered figure]. Triangular; pert. to a trigone.

trigone (tri-gōn) [G. *trigōnon*, a three-cornered figure]. A triangular space, esp. one at the base of the bladder. SYN: *trigonom*.

trigonid (tri-gō'nid). The first three cusps of a lower molar tooth.

trigonitis (tri-gō-nī'tis) ["" + *-itis*, inflammation]. Inflammation of trigone of bladder confined to its mucous membrane.

trigonocephalic (tri'gō-nō-ser-āl'ik) ["" + *kephalē*, head]. Having a head shaped like a triangle.

trigonom (tri-gō'nūm) [L. from G. *trigōnon*, a three-cornered figure]. Any triangular area. SYN *trigone*.

trihybrid (tri-hī'brid). In genetics, the offspring of a cross between two individuals differing in three unit characters

trilabe (tri'lāb) [G. *treis*, three, + *labē*, a handle]. Three-pronged forceps for removing foreign substances from the bladder. SEE *lithotrite*.

trill (trīl) [Italian *trillare*, probably imitative]. A tremulous sound, esp. in vocal music, made by vibration of 1 speech organ against another.

trimanual (tri-mān'ū-āl) [L. *trēs*, *tria*, three, + *manualis*, by hand]. Performed with three hands, as an obstetrical maneuver.

trimensual (tri-mēn'shū-āl) ["" + *mensualis*, monthly]. Occurring quarterly or every 3 months.

trimorphous (tri-mor'fūs) [G. *treis*, three, + *morphē*, form]. 1. Having three different forms as the larva, pupa, and adult of certain insects. 2. Having three different forms of crystals.

trinitrophenol (tri-nī-trō-fē'nōl). USP. Picric acid, a yellow crystalline powder, explosive when heated.

ACTION AND USES. An astringent and antiseptic. Used chiefly in the treatment of burns as a saturated solution.

triorchid, **triorchis** (tri-or'kid, -kīs) [G. *treis*, three, + *orchis*, testicle]. One having 3 testicles.

triorchidism (tri-or'kid-izm) ["" + *-ismos*, condition]. The condition of having 3 testicles.

tri'ose. A monosaccharide having three carbon atoms in its molecule.

tripara (trip-ā-rā) [L. *trēs*, *tria*, three, + *parēre*, to bear]. A woman who has had 3 children in separate pregnancies. SYN: *tertipara*. Designated *Para III*.

tripeptid(e) (tri-pēp'tid) [G. *treis*, three, + *peptōn*, digested]. Product of combination of 3 amino acids formed during proteolytic digestion.

triphalangia (tri-fā-lan'jī-ā) ["" + *phalangx*, *phalanx*]. Deformity marked by presence of 3 phalanges in a thumb or great toe.

triphasic (tri-fā'sik) ["" + *phasis*, phase]. Consisting of 3 phases or stages, said of electric currents.

Tripier's amputation (trip-ē-ā'). Amputation of a foot with part of the calcaneus removed.

triple. Consisting of three; threefold; treble

† **response**. The three reactions of the skin to injury consisting of: (1) A red reaction along line of injury; (2) A red area (flare or erythema) about injury; (3) An elevated area (welt or wheal) resulting from localized edema.

triplegia (tri-plē'jī-ā) [G. *treis*, three, + *plēgē*, stroke]. Hemiplegia with paralysis of 1 limb on the other side of the body.

triplet (trip'lēt) [L. *triplius*, threefold]. 1. One of 3 persons born of the same mother from 1 pregnancy. SEE: *Hellin's law*. 2. A combination of 3 of a kind.

triplex (trī'plēks, trīp'lēks) [L. *trēs*, *tria*, three, + *plexus*, folded]. Triple; three-fold

triploblastic (trīp-lō-blāst'ik) Consisting of three germ layers. ectoderm, entoderm, and mesoderm

triplokorla (trīp-lō-kor'l-ā). Possessing three pupillary openings in one eye

triplopia (trīp-lō'pī-ā) [G. *triploos*, triple, + *opsis*, vision]. Condition in which 3 images are visioned of the same object.

triquetral (trī-kwē'trāl). Triangular, the triquetral bone. *q v*

f. bone. SYN. *os triquetrum*, *cuneiform bone* 1 The third carpal bone in the proximal row, enumerated from radial side 2 Any wormian bone

triquetrous (trī-kwē'trūs) [L. *triquetrus*, triangular] Triangular

f. bone. 1 A wormian bone. 2 The Cuneiform bone of the carpus

trisaccharide (trī-sāk'hā-rīd) A carbohydrate which upon hydrolysis yields three molecules of simple sugars (monosaccharides)

trismoid (trīz'moyd) [G. *trismos*, trismus, + *eidos*, form]. 1 Of the nature of trismus. 2 A form of trismus nascentium, once thought to be due to pressure on occiput during delivery.

trismus (trīz'mūs) [G. *trismos*, grating]. 1 Tonic contraction of the muscles of mastication May occur in mouth infections, encephalitis, inflammation of salivary glands, and tetanus 2 Old term for tetanus (lockjaw)

trisomic (trī-sōm'ik). In genetics, an individual possessing 2n plus 1 chromosomes, that is, one with three chromosomes of a given kind with two only of each of the remaining chromosomes of the haploid

trispianchnic (trī-splānk'nīk) [G. *treis*, three, + *splanchna*, viscera]. Pert to the 3 visceral cavities, the skull, thorax, and abdomen.

f. nervous system. Sympathetic nervous system

tristichia (trī-stīk'hī-ā) [" + *stichos*, row]. The presence of 3 rows of eyelashes

tristimania (trīs-tīm-ā'nī-ā) [L. *tristis*, sad, + *mania*, madness]. Melancholia

trisolcate (trī-sūl'kāt) [L. *tres*, *tria*, three, + *sulcus*, groove] Having 3 grooves or furrows.

tritanopia (trī-tān-ō'pī-ā) [G. *tritos*, third, + *an-*, priv + *opsis*, vision]. Color blindness in which blue and yellow appear gray

trificeous (trīf'ish'ūs) [L. *triticeus*, of wheat] Shaped like a grain of wheat.

f. cartilage, f. nodule. A cartilaginous nodule in the thyrohyoid ligament

trifium (trīsh'f-ūm) [L]. The mass 3 isotope of hydrogen; triple-weight hydrogen.

trifotoxin (trīf'tō-tōks'īn) [G. *tritos*, third, + *toxikon*, poison]. A toxin, according to Ehrlich, which is the 3rd or lowest in order of toxicity.

triturable (trīf'ū-rā-bī) [L. *triturare*, to pulverize] Susceptible of being powdered.

triturate (trīf'ū-rāt) [L. *triturare*, to pulverize] 1. To reduce to a fine powder by rubbing. 2. A finely divided substance made by rubbing

trituration (trīf'ū-rā'shūn) [L. *trituratō*, a rubbing to powder]. Powdered preparation containing 10% of the active drug and 90% of sugar of milk. None is official. The act of reducing to a powder.

trivalent (trī-vā'lēnt, trīv'ā-l-ēnt) [L. *trēs*, *tria*, three, + *valens*, powerful]. Com-

bining with or replacing 3 hydrogen atoms.

trocar (trō'kar) [Fr. *troisquarts*, three-quarters]. Instrument with a triangular tip used for aspiration or removal of fluids from cavities.

troch. Abbr for *trochiscus*

trochanter (trō-kān'ter) [G. *trochantēr*, a runner]. Either of the 2 bony processes below the neck of the femur.

f., greater. SYN *trochanter major*, *q v*

f., lesser. SYN *trochanter minor*, *q v*

f. major. BNA A thick process at upper end of the femur projecting upward externally to union of neck and shaft

f. minor. BNA A conical tuberosity upon inner and post surface of upper end of femur, at junction of shaft and neck

f. tertius. The gluteal ridge of the femur when it is unusually prominent

f., third. SYN *trochanter tertius*, *q v*

trochanterian, trochanteric (trō-kān-tō'rī-ān, trō-kān-ter'ik) [G. *trochantēr*, a runner] Relating to a trochanter.

troche (trō'ke) [G. *trōché*, a round object] Solid, discoid, or cylindrical mass consisting chiefly of medicinal powder, sugar, and mucilage. Abbrn *troch.*

They are intended to be used by placing them in the mouth and allowing them to remain until, through slow solution or disintegration, their purpose of mild medication is effected SYN: *lozenge*

trochlea (trōk'lē-ā) (pl. *trochleae*) [L. *trochlea*, pulley] 1 A structure having the function of a pulley; a ring or hook through which a tendon or muscle projects 2 The articular smooth surface of a bone upon which glides another bone.

trochlear. Pertaining to, or of the nature of a pulley

f. fovea. A depression on orbital plate of frontal bone for attachment of cartilaginous pulley of sup. oblique muscle

f. nerve. SYN *nerve trochlearis*, 4th cranial nerve A small mixed nerve making its exit from dorsal surface of midbrain It contains efferent motor fibers to sup oblique muscle of eye and afferent sensory fibers conveying proprioceptive impulses from the same muscle SEE *Table of Cranial Nerves in Appendix*

trochlearis (trō-klē-ā'rīs) [L.] Sup oblique muscle of the eye. SEE *Muscles*, *Table of*, in *Appendix*

trochocardia (trō'kō-kard'ī-ā) [G. *trochos*, a wheel, + *kardia*, heart] Rotary displacement of the heart on its axis

trochocephalia, trochocephaly (trō'kō-se-fā'lī-ā, -sēf'ā-lī) [" + *kephalē*, head]. Roundheadedness, a deformity due to premature union of frontal and parietal bones.

trochoid (trō'koyd) [G. *trochos*, a wheel, + *eidos*, resemblance] Rotating or revolving, noting an articulation resembling a pivot or pulley.

f. joint. A pivot joint, *q v*

trochoides (trō-koy'dēs) [G. *trochoeidēs*, wheellike]. A pivot or rotary joint.

Troglorematidae (trōg'lō-trē-māt'ī-dē). A family of flukes which includes *Paragonimus* (human lung fluke) and *Trogloremata* (Syn: *Nanophyetus*), the fluke associated with salmon poisoning in dogs

Trombicula (trōm-bīk'ū-lā). A genus of mites belonging to the Trombiculidae.

he larvae called redbugs or chiggers re annoying pests causing an irritating dermatitis. They may serve as vectors of various diseases.

T. akamushi. Species of mite transmitting causative agent of scrub typhus. **mbidiasis, trombidiosis** (trōm-bī-dī-ā-s, -bīd-i-ō'sis). Infestation with the *rombidium irritans*.

mmer's test (trōm'er). Test for sugar in the urine

nomania (trōm'ō-mā-nī-ā) [G *tromos*, trembling, + *mania*, madness]. Derium tremens

sh, tropho- [G] Combining forms meaning nourishment.

shedema, trophoedema (trō-fē-dē'mā) 3 *trophē*, nourishment, + *oidēma*, a swelling. Localized edema due to congenital hypoplasia of lymphatic vessels resulting secondarily from obstruction to lymph flow by external pressure or to repeated low grade infection. Also called *Milroy's disease* or *hereditary ophedema*.

shic (trōf'ik) [G *trophē*, nourishment]. concerned with nourishment

Applied particularly to a type of efferent nerves believed to control the growth and nourishment of the parts they innervate. *Syn: autotrophic.*

shoblast (trōf'ō-blāst) [G *trophē*, nourishment, + *blastos*, germ] *Syn: ophcetoderm*. The outermost layer of the developing blastocyst (blastodermic sac) of a mammal. It differentiates into two layers, the *cytotrophoblast* and *introphloplast*, the latter coming into ultimate relationship with the uterine endometrium with which it establishes nutrient relationships.

shoblastoma (trōf'ō-blās-tō'mā) [" + " -ōma, tumor] A neoplasm due to excessive proliferation of chorionic epithelium. *Syn: chorioepithelioma.*

shoderm (trōf'ō-derm) [G *trophē*, nourishment, + *derma*, skin] Term applied to the trophoblast and its underlying layer of mesoderm. It is homologous to the serosa of birds, reptiles, and lower mammals.

shology (trō-fōl'ō-jī) [" + *logos*, a science] The science of nutrition.

shoneurosis (trōf'ō-nū-rō'sis) [" + *neuron*, nerve, + *-osis*, condition]. Any ophic disorder due to defective function of the nerves concerned with nutrition of the part.

t., disseminated. Thickening and ardening of the skin. *Syn: sclerema, leroderma.*

t., facial. Progressive facial atrophy.

t., muscular. Muscular changes in connection with nervous disorders.

shoneurotic (trōf'ō-nū-rō'tik) [" + *neuron*, nerve]. Relating to a tropho-urosis

shonosis (trōf'ō-nō'sis) [" + *nosos*, disease]. Any disease of metabolism or nutrition, or condition resulting from them.

phonucleus (trōf'ō-nū'klē-ūs) [G. *ophē*, nourishment, + *L. nucleus*, kernel] Protozoan nucleus concerned with vegetative functions in metabolism and reproduction. *Syn: macronucleus.*

shopathia, trophopathy (trōf'ō-path-ā, trōf-op-ā-thī) [" + *pathos*, disease]. Any disorder of the nutrition. 2. A ophic disease.

shotaxis (trōf'ō-tāks'is) [" + *taxis*, arrangement]. The adaptation or selectivity and repulsion to nutrients by organic cells. *Syn: trophotropism.*

shoterapy (trōf'ō-ther-ā-plī) [" +

therapeia, treatment]. The therapeutic use of foods. *Syn: dietotherapy.*

trophotonos (trōf'ō-tōn-ōs) [" + *tonos*, tension]. A rigid state of contractile tissue resulting from trophic disorder.

trophotropism (trōf'ō-t'rō-pīz-m) [G. *trophē*, nourishment, + *tropē*, a turning, + *-ismos*, condition] Attraction and repulsion of cells to nutritive substances. *Syn: trophotaxis.*

trophozoite (trōf'ō-zō'it) [" + *zōon*, animal] A sporozoan nourished by its host during its growth stage

tropical (trōp'ī-kāl) [G *tropikos*, turning] Pert to the tropics

t. anemia. A, or merely pallor without blood changes, in northerners traveling in the tropics

t. lichen. Prickly heat, acute inflammation of the sweat glands

tropin. A substance present in blood serum which stimulates the engulfment of foreign organisms by phagocytic cells. *Syn: bacteriotropin.*

tropism (trō'pīz-m) [G *tropē*, a turn, + *-ismos*, condition] *Syn: taxis* 1 Reaction of living organisms involuntarily toward or away from light, darkness, heat, cold, or other stimuli 2 The involuntary response of an organism as a bending, turning, or movement toward (positive tropism) or away from (negative tropism) an external stimulus. *Syn: chemotropism, phototropism, galvanotropism.*

-tropism. Combining form meaning a response to or a turning towards an external stimulus.

tropometer (trōp-om'ē-ter) [G. *tropē*, a turn, + *metron*, a measure]. 1. Device for measuring the rotation of the eyeballs 2. Instrument for measuring torsion in long bones

Trousseau's disease (trū-sō'). 1. Generalized hypertrophy of lymphatic glands 2. Gastric vertigo

T's. sign. Muscular spasm resulting from pressure applied to nerves and vessels of the upper arm. It is indicative of latent tetany. Also occurs in osteomalacia

T's. spots. Streaking of the skin with the fingernail, seen in meningitis and other cerebral diseases. *Syn: meningitic streak.*

T's. symptom. Spasmodic muscular contractions indicative of tetany, on pressing the principle vessel and nerve of the limb.

troy weight (trōī) A system of weighing gold, silver, precious metals, and jewels, and in making philosophical experiments. 5,760 gr equal 1 lb.

24 grains (gr) equal1 pennyweight
20 pennyweights equal1 ounce (oz)
12 oz equal1 pound (lb)

See Appendix for apothecaries, avoirdupois and household measures, and metric system.

TRU. Abbr. for turbidity reducing unit

true (trū) [AS *trēowe*, faithful]. Not false, real, genuine

t. pelvis. Portion below the iliopectineal line.

t. ribs. The 7 upper ones on each side with cartilages articulating directly with the sternum. *Syn: costa vera. Ss: ribs.*

truncal (trūng'kāl) [L. *truncus*, trunk]. Relating to the trunk.

truncate (trūng'kāt) [L. *truncare*, to cut off]. 1. Having a square end as if it were cut off, lacking an apex. 2. To cut off; to amputate.

trunk (trûnk) [L. *truncus*, trunk]. 1. The body exclusive of the head and limbs. SYN: *torso*. 2. Main stem of a lymphatic, nerve, or blood vessel.

truss (trîs) [O Fr. *trousser*, to bundle]. Device for holding a hernia in its place.

truth serum. A preparation of hyoscine or other drugs which inhibit the nervous system causing the patient to divulge incriminating facts.

trypanocide, trypanocidal (trîp-ân-ô-sîd, trîp-ân-ô-sî-dâil) [G. *trypanon*, a borer, + *L. cidus*, from *caedere*, to kill]. 1. Destructive to trypanosomes. 2. An agent which kills trypanosomes. SYN: *trypanosomicide*.

trypanolysis (trîp-ân-ôl'i-sîs) [+ *lysis*, dissolution]. The dissolution of trypanosomes.

Trypanoplasma (trî'pân-ô-plâz'mâ) [+ *plasma*, a thing formed]. A genus of protozoan parasites resembling trypanosomes.

Trypanosoma (trî'pân-ô-sô-mâ) [G. *trypanon*, a borer, + *sôma*, a body]. A genus of parasitic, flagellate protozoa found in the blood of many vertebrates including man. They are transmitted by insect vectors.

T. brucei. The causative agent of trypanosomiasis in horses and other domestic animals. Nonpathogenic in man.

T. cruzi. The causative agent of American trypanosomiasis in many animals and specifically Chagas' disease in humans. It is transmitted by blood-sucking insects (triatomids) belonging to the family Reduviidae.

T. gambiense. The causative agent of African sleeping sickness. It is transmitted by the tsetse fly.

T. rhodensiense. An organism parasitic in wild game and domestic animals of portions of Africa. May cause East-African sleeping sickness in humans.

trypanosomal (trî-pân-ô-sô-mâl) [+ *sôma*, body]. Pert. to trypanosomata.

trypanosome (trî'pân-ô-sôm) Any protozoan belonging to the genus *Trypanosoma*.

trypan fever. Sleeping sickness.

trypanosomiasis (trî-pân-ô-sô-mî'â-sîs) [G. *trypanon*, a borer, + *sôma*, body, + *-iasis*, infection]. Any of the several diseases occurring in man and domestic animals caused by a species of *Trypanosoma*. SEE *sleeping sickness*.

f., African. African sleeping sickness, caused by *Trypanosoma gambiense*, q.v.

f., American. Trypanosomiasis in the western hemisphere. In man, Chagas' disease is caused by *Trypanosoma cruzi* transmitted by blood-sucking triatomids.

trypanosomid(e) (trî-pan-ô-sô-mîd) [+ *sôma*, body]. A skin eruption in any disease caused by a trypanosome.

trypanamide (trîp-ars'â-mîd, -mîd). An arsenic compound containing about 25% arsenic.

Uses: Chiefly in neurosyphilis and sleeping sickness.

DOSAGE: 15-45 gr. (1-3 Gm.) intravenously preferably.

trypsis (trîp-ê'sîs) [G. *trypsis*, a boring]. An incision of the skull to reduce pressure by removing a disk of bone. SYN: *trephining*.

trypsin (trîp'sîn) [G. *tripsis*, a rubbing]. A proteolytic enzyme formed in the intestine from the action of enterokinase of the intestinal juice (succus entericus) on *trypsinogen* secreted by the pancreas and present in pancreatic juice. It catalyzes the hydrolysis of peptide

bonds in partly digested proteins and some native proteins, the final products being amino acids and various polypeptides. SEE: *chymotrypsin*, *digestion*, *enzyme*, *pancreas*.

trypsinized (trîp'sî-nîz'd) [G. *tripsis*, a rubbing]. Subjected to action of trypsin, thus having antitryptic power abolished.

trypsinogen (trîp-sîn-ô-jên) [+ *gennan*, to produce]. The proenzyme, or inactive form of trypsin found in pancreatic juice, believed to be activated when mixed in the intestine with the enterokinase of the *succus entericus*.

tryptic (trîp'tîk) [G. *tripsis*, a rubbing]. Relating to trypsin.

tryptolysis (trîp-tôl'i-sîs) [G. *tripsis*, a rubbing]. The hydrolysis of proteins or their derivatives by trypsin.

tryptolemia (trîp'tô-né-mî-â) [+ *aima*, blood]. Tryptones in the blood.

tryptophan(e) (trîp'tô-fân). An amino acid in proteins needed for tissue repair and growth; a product of tryptic digestion.

tryptophanuria (trîp-tô-fâ-nûr'i-â) [*tryptophan* + G. *ouron*, urine]. Tryptophan in the urine.

T.S. Abbr. for *test solution*; *triple strength*.

tsetse fly (tsêt'sê) [South African]. One of several species of blood-sucking flies belonging to the genus *Glossina*, order Diptera, confined to Africa south of the Sahara Desert. They are important transmitters of trypanosomes, the causative agents of African sleeping sickness in man, and nagana and other diseases of cattle and game animals. SEE: *Trypanosoma*, *trypanosomiasis*.

TSH. Abbr. for *thyroid-stimulating hormone*. SEE: *TTH*.

tsp. Abbr. for *teaspoon*.

tsutsugamushi disease (soot'soo-gâ-moosh'i) Scrub typhus, q.v.

TTH. Abbr. for *thyrotrophic hormone*, q.v.

T. U. Abbr. for *toxic unit*.

tub (tûb) [Middle Dutch *tubbe*]. 1. A receptacle for bathing. 2. The use of the cold bath. 3. To treat by using a cold bath.

tubal (tû'bâl) [L. *tuba*, tube]. Pert. to a tube, esp. the fallopian tube.

f. nephritis. Inflammation of kidney tubules.

f. pregnancy. Pregnancy in one of the oviducts.

tubatorion (tû'bâ-tor'shûn) [+ *torso*, a twisting]. The twisting of an oviduct.

tube (tûb) [L. *tuba*, a tube]. A long, hollow, cylindrical structure.

f., cathode-ray. A vacuum tube with a thin window at the end opposite the cathode to allow the cathode rays to pass outside. More generally, any discharge tube in which the vacuum is fairly high.

f. Coolidge. A kind of hot cathode tube, which is so highly exhausted that the residual gas plays no part in the production of the cathode stream, and which is regulated by variable heating of the cathode filament.

f., Crookes'. One with an exhausted vacuum, used in obtaining roentgen rays.

f., drainage. A glass or rubber tube which, when inserted into a cavity, drains away its fluid contents.

f., electric. Hollow glass or metal receptacles wired for electricity.

f., esophageal. Same as *stomach t.*

f., eustachian. The tube passing from the throat to the middle ear.

f., fallopian. One of 2 oviducts.

t., hot-cathode. A vacuum tube in which the cathode is electrically heated to incandescence and in which the supply of electrons depends on the temperature of the cathode.

t., h.-c. roentgen-ray. A vacuum roentgen-ray tube in which the electron stream is supplied by a heated cathode. The cathode stream may be regulated by varying the current through the cathode filament.

t., intubation. A tube for passing into the larynx to facilitate breathing

t., Leonard. SEE cathode-ray tube

t., oscillator vacuum. Method of producing alternating current. Current produced by this is a continuous sine wave current in contradistinction to the damped harmonic wave of spark gap diathermy machine

t., stomach. A rubber tube, 16 in in length, for introducing food or other fluid into the stomach

t., tracheotomy. A tube for inserting into the trachea

tuber (tû'ber) (pl. *tubers, tubera*) [L. *tuber*, a swelling] A swelling or enlargement.

tubercle (tû'ber-kl) [L. *tuberculum*, a little swelling] 1 A small rounded elevation or eminence on a bone 2 A small nodule, esp. a circumscribed solid elevation of the skin or mucous membrane 3 The characteristic lesion resulting from infection by tubercle bacilli It consists typically of three parts: a central giant cell, a midzone of epithelioid cells, and a peripheral zone of nonspecific structure SEE *tuberculosis*

t., adductor. That part of femur to which is attached the tendon of the adductor magnus

t., bacillus. Organism causing tuberculosis

t., deltoid. One in clavicle for attachment of deltoid muscle

t., genial. One on either side of lower jawbone

t., genital. The fetal structure that becomes the clitoris, or the penis

t., lacrimal. One on upper jawbone.

t., laminated. The cerebellar nodule.

t., Lisfranc's. T for scalenus anticus muscle on the 1st rib

t., miliary. A small tubercle resembling a millet seed, the lesion of tuberculosis

t., zygomatic. One on the zygoma at junction of ant root

tubercular (tû-ber'kû-lar) [L. *tuberculum*, a little swelling] 1 Relating to or marked by nodules. 2 Incorrectly pert. to tuberculosis 3 Person with tuberculosis SEE *torose*.

tuberculate, tuberculated (tû-ber'kû-lât, -lât'ed) [L. *tuberculum*, a small swelling]. Covered with nodules SYN: *tubercular*

tuberculation (tû-ber'kû-lâ'shûn) [L. *tuberculum*, a little swelling]. The formation of tubercles

tuberculid(e) (tû-ber'kû-lîd, -lîd) [L. *tuberculum*, a small nodule] A tuberculous cutaneous eruption due to toxins of tuberculosis

t., follicular. That characterized by presence of groups of follicular lesions, esp on trunk

t., papulonecrotic. Form characterized by symmetrically distributed bluish papules, esp on extremities. These undergo central necrosis and, on healing, leave deep scars.

tuberculinogenous (tû-ber'kû-lîj'ên-ûs) [' +

G. gennan, to produce]. Causing or predisposing to tuberculosis

tuberculin (tû-bêr'kû-lîn) [L. *tuberculum*, a little swelling]. A soluble cell substance prepared from the tubercle bacillus, usually the human type, which is used to determine the presence of a tuberculosis infection. SEE: *tuberculin test* It has also been used as a therapeutic agent but results are questionable Among the types of tuberculin used are (1) Koch's original or old tuberculin (ABBR OT or TO; (2) new tuberculin (ABBR TR—tuberculin residuum); (3) synthetic medium old tuberculin trichloroacetic acid precipitated (ABBR SOTT), now known as PPD (purified protein derivative); (4) bacillary emulsion tuberculin (ABBR BE)

t. test. A test to determine the presence of a tuberculous infection based on positive reaction of subject to tuberculin Tests commonly used are: *Mantoux test*, injection intradermally of tuberculin, *von Pirquet test*, rubbing tuberculin on scarified skin; and *Vollmer "patch" test*, the application to skin of a piece of gauze impregnated with dried tuberculin In all three tests a local inflammatory reaction is observed in infected persons after 48-96 hours Tests do not reveal whether infection is active or inactive

tuberculederma (tû-ber'kû-lô-der'mâ) [' + *G. derma*, skin] A tuberculous lesion of the skin SYN: *tubercide*

tuberculoïfbroid (tû-ber'kû-lô-fî'broyd) [' + *fibra*, fiber + *G. eidos*, form]. Denoting fibroid degeneration of tubercles.

tuberculoïfbrosis (tû-ber'kû-lô-fî-brô'sis) [' + " + *G. -ôsis*, condition] 1 Chronic pulmonary inflammation with formation of fibrous tissue 2 Interstitial pneumonia

tuberculoïd (tû-ber'kû-loïd) [' + *G. eidos*, resemblance]. Resembling tuberculosis or a tubercle

tuberculoïdin (tû-ber'kû-loï'dîn) [' + *G. eidos*, form] A form of tuberculin treated with alcohol

tuberculoïl (tû-ber'kû-lôl) [L. *tuberculum*, a little swelling] Tuberculin which is free from secondary products.

tuberculoma (tû-ber'kû-lô'mâ) [' + *G. -ôma*, tumor] 1 A tuberculous abscess. 2 Any tuberculous neoplasm

tuberculomucin (tû-ber'kû-lô-mû'sîn) [' + *mucus*, mucus] A mucinlike substance prepared from old cultures of tubercle bacilli

tuberculophobia (tû-ber'kû-lô-fô'bî-â) [' + *G. phobos*, fear] An abnormal fear of becoming affected with tuberculosis.

tuberculoïpro'tein. A protein derived from tubercle bacilli

tuberculosis (tû-bêr'kû-lô'sis) [L. *tuberculum*, a little swelling, + *G. -ôsis*, disease] An infectious disease caused by the tubercle bacillus, *Mycobacterium tuberculosis*, and characterized pathologically by inflammatory infiltrations, formation of tubercles, caseation, necrosis, abscesses, fibrosis, and calcification

It most commonly affects the respiratory system but other parts of the body such as gastrointestinal and genitourinary tracts, bones, joints, nervous system, lymph nodes, and skin may become infected Fish, amphibians, birds, and mammals (cattle) are subject to the disease, three types of the tubercle bacillus existing, namely *human*, *bovine* and *avian* Man may become infected by any of the three types but in the U. S. the human type predominates. Infec-

tion is usually acquired from contact with an infected person or an infected cow or through drinking contaminated milk.

Tuberculosis may occur in an acute generalized form or in a chronic localized form. In man, the primary infection usually consists of a localized lesion and regional adenitis, these constituting the *primary complex*. From this state, lesions may heal by fibrosis and calcification and the disease exist in an arrested or inactive stage. Reactivation or exacerbation of the disease or reinfection gives rise to the chronic progressive form.

TREATMENT Sanatorium care is recommended for active cases, however, recent developments in chemotherapy have greatly altered time-honored views. In advanced cases, bed rest, adequate well-balanced diet, relief from emotional tension, collapse therapy (pneumoperitoneum, pneumothorax, phrenectomy) and, in some cases, surgery (thoracoplasty) may be required. Among chemotherapeutic drugs, three are widely used: streptomycin, para-aminosalicylic acid (PAS), and isoniazid. Symptomatic treatment is necessary for cough, hemoptysis, chest pain, and other symptoms. *RS tuberculin, tuberculin test, tubercle* (def 3), *tubercle bacillus, Mycobacterium*.

tuberculous (tū-ber'kū-lūs) [*L. tuberculum*, a little swelling] Relating to affected with tuberculosis, or conditions marked by infiltration of a specific tubercle, as opposed to the term tubercular, referring to nonspecific tubercle.

tuberculus (tū-ber'kū-lūm) (pl *tubercula*) [*L.* a little swelling]. A small knot or nodule, a tubercle.

t. acus'Heum. Dorsal nucleus of the cochlear nerve.

t. majus humeri. BNA Larger tuberosity of the humerus at upper end of its lateral surface giving attachment to infraspinatus, supraspinatus, and teres minor muscles.

t. minus humeri. BNA The projection at proximal end of humerus' ant surface giving attachment to subscapularis muscle.

tuberin (tū-ber'in) [*L. tuber*, a swelling]. A simple protein; a globulin in potatoes.

tuberositas (tū-ber-ōs'it-ās) (pl *tuberositates*) [*L.* a nodule]. A projection, nodule, or prominence.

tuberosity (tū-ber-ōs'tī-tī) [*L. tuberositas*, tuberosity] 1. An elevated round process of a bone. 2. A tubercle or nodule.

tubo- [*L.*]. Combining form meaning *tube*.

tuboabdominal (tū'bō-āb-dōm'nāl) [*L. tuba*, tube, + *abdominalis*, pert to the abdomen] Pert to the fallopian tubes and the abdomen.

t. pregnancy. Ectopic gestation with embryo partly in tube and partly in the abdominal cavity.

tuboligamentus (tū'bō-līg-ā-mēn'tūs) [" + *ligamentum*, a band] Pert. to the fallopian tube and broad ligament of the uterus.

tuboovarian (tū'bō-ō-vā'rī-ān) [" + *ovarium*, egg holder]. Pert. to the fallopian tube and the ovary.

tuboovariotomy (tū'bō-ō-vā-rī-ō-tō-mī) [" + *t.* + *G. tomē*, a cutting] Excision of ovaries and oviducts. **Syn:** *salpingo-oöthecotomy*.

tuboperitoneal (tū'bō-pēr-i-tō-nē-āl) [" + *G. peritoneon*, peritoneum]. Relating to the oviduct and peritoneum.

tuberrhea (tū-bor-rē-ā) [" + *G. rhoia*, a

flow]. Discharge from the eustachian tube.

tubotympanal (tū'bō-tīm'pā-nāl) [" + *G. tympanon*, a drum]. Relating to the tympanum of the ear and the eustachian tube.

tubouterine (tū'bō-u'tēr-in) [" + *uterinus*, pert to the uterus]. Relating to the oviduct and the uterus.

tubular (tū'bū-lar) [*L. tubularis*, like a tube]. Relating to or having the form of a tube or tubule.

t. excretory capacity, maximum.

Abbr. Tm. The difference between the amount of a substance that is filtered and that appearing in urine per minute. Tm gives valuable information concerning glomerular and tubular activity.

tubule (tū'būl) [*L. tubulus*, a tubule]. A small tube or canal.

t., collecting. T. in renal medulla which is part of the discharging tubule.

t., excretory. The uriniferous tubules in medullary portion of kidneys.

t., junctional. Short part of a uriniferous t. connecting with a collecting t.

t's., seminal. Epithelial lined tubes (1/150-1/200 in diam) forming the major portion of the testis.

t., uriniferous. Minute canals forming the glandular substance of the kidney, originating in Bowman's capsules and emptying into pelvis of kidney.

tubuloalveolar. Consisting of tubes and alveoli.

t. gland. **Syn:** *tubuloacinar gland*. Branched, compound glands in which some of the terminal secreting portions are tubular, others alveolar (acinar), for example, salivary glands.

tubulodermoid (tū'bū-lō-der'moyd) [*L. tubulus*, tubule, + *G. derma*, skin, + *eidos*, form]. A dermoid tumor due to the persistent embryonic tubular structure.

tubulus (tū'bū-lūs) (pl *tubuli*) [*L.* a tubule]. A tubule, a small tube.

tuff. A small clump, cluster, or coiled mass.

t., enamel. Abnormal structure formed in development of enamel consisting of poorly calcified twisted rods.

tug'ging. A dragging or pulling.

t., tracheal. An indication of thoracic aneurysm.

Sym. A sense of downward pulling of larynx with cardiac systole when thyroid cartilage is gently raised bet. the finger and thumb.

tularemia (too-lār-ē-mī-ā) [*Tulare*, part of California where disease was first discovered, + *G. aima*, blood]. Deer fly fever transmitted to man from rodents and rabbits bitten by a blood-sucking insect infected with *Pasteurella tularensis* or by direct contact.

Sym. Three days after infection headache, chilliness, vomiting, aching pains, and fever. Site of infection develops into an ulcer. Glands at elbow or in armpit become enlarged, tender, and painful; later may develop into an abscess. Sweating, loss of weight, and debility.

tumbu fly. Species of African fly belonging to the genus *Cordylobia*. Their larvae develop in the skin of wild and domesticated animals, and man is frequently attacked.

tumefacient (tū-mē-fā-shēnt) [*L. tumefacere*, producing swelling]. Producing or tending to produce swelling; swollen.

tumefaction (tū'mē-fāk'shūn) [*L. tumefactio*, a swelling]. 1. A swelling. 2. Act of swelling or the state of being swollen.

entia (tū-mēn'shl-ā). Swelling.
f., vasomotor. Irregular swellings in
 lower extremities associated with vaso-
 motor disturbances

essence (tū-mēs'ēns). 1. Condition of
 being swollen or tumid. 2. A swelling.
vid. Swollen.

or (tū'mor) [L. *tumor*, a swelling].
syn *neoplasm* 1. A swelling or enlarge-
 ment. 2. An autonomous, new growth
 tissue forming an abnormal mass
 which performs no physiologic func-
 tion. It is with few exceptions of un-
 known cause, noninflammatory, and de-
 velops independent of, and unrestrained
 by normal laws of growth and morpho-
 genesis. SEE *cancer*

TYPES OF TUMORS *Myeloid Sarcoma*,
lent Celled S Consist of elements
 formed chiefly of protoplasm containing
 or more nuclei, up to 20 or even 50;
 with a varying number of round, spindle,
 or mixed cells. Vary in consistency from
 that of jelly to that of muscle. More
 frequently occurs on lower jaw, femur,
 and tibia

Round Celled Sarcoma Usually soft,
 fleshy, rapidly growing, become large,
 and early give rise to metastatic de-
 posits in distant parts and in viscera.
 Occur in periosteum, bone, lymphatic
 glands, subcutaneous tissue, testicle, eye,
 ovary, uterus, lung, kidneys, though
 may occur wherever fibrous tissue exists.
Ghoma Grows from the connective
 tissue of nerve centers and its basic sub-
 stance resembles that structure. Occurs
 in retina and brain

Melanotic Sarcoma In which cells
 may be either of round or spindle vary-
 ing. Is the most malignant form

Spindle-cell Sarcoma Cells vary much
 in size, from small oat-shaped cells to
 greatly elongated bodies with long, fine,
 tapering extremities. Chiefly in bones.
Endothelioma Attack, in different
 forms, the testicle, placenta, pleura,
 and peritoneum.

**Acinous or Spheroidal-celled Carci-
 noma** (1) Hard, spheroidal-celled (scir-
 rhus or chronic c) SEE *scirrhous* (2)
 Soft, spheroidal celled (encephaloid, or
 cystic c), resembles brain tissue in ap-
 pearance and consistency. Occurs in
 testicle, liver, bladder, kidney, ovary,
 and uterus, more rarely in the breast.
Colloid Carcinoma Really one of pre-
 vailing varieties which has undergone
 colloid degeneration, and so distended
 cells which may be seen by naked
 eye. Occurs in stomach, intestine, omen-
 tum, ovary

Epithelial Carcinoma (1) The squa-
 mous-celled epithelioma which always
 rings from skin or mucous membranes,
 through glands, esp. at junctions of
 mucous and cutaneous surfaces. Are
 often encapsulated. Commence as wart-
 like growth, flattened tubercle, or fis-
 sure, ulceration in all these forms set-
 ting in early (2) Cylindrical or col-
 umnar-celled. Less common form of
 carcinoma. Originates from either the
 cylindrical surface epithelium of a mu-
 cous membrane, or of its glands, closely
 imitating these structures in micro-
 scopic appearance. These growths form
 furcated, infiltrating masses in the
 walls of organs attacked, producing con-
 siderable stenosis of lumen, of hollow
 organs; as rectum and small intestinal
 tract. Occur in uterus and intes-
 tinal tract. (3) Tumors composed of
 blastical, hypoblastic, and mesoblastic
 elements.

Warty or Villous Growth (*Papil-
 lomata*). Resemble in their structure
 hypertrophied papillae of skin—or mu-
 cous membrane. These include con-
 dylomata and mucous tubercles. Occur
 about anus and genitals, or in mouth
 and throat. Warts and warty growths
 on skin of hands and genitalia, and
 mucous surface of larynx. Villous
 growths, bladder, rectum, and larynx.

Teratoma Tumors containing bone,
 hair, teeth, etc., situated in ovaries or
 testicles

tumora (tū'mor-āf-in) [L. *tumor*, a
 swelling, + *affinis*, related]. Having an
 affinity for tumor cells. **syn:** *oncotropic*.

tumultus (tū-mūl'tus) [L.] Over or dis-
 turbed action

f. cordis. Irregular heart action with
 palpitation

f. sermonis. Extreme stuttering due
 to pathologic cause

tuna fish (tū'nā). Pro 26 Fat 11.4 FUEL
 VALUE: 100 Gm. equal 208 Cal

Tunga. A genus of fleas commonly called
 chiggers. It belongs to the family Tun-
 gidae, order Siphonaptera

T. penetrans. **syn:** *chigger*, *chigoe*,
tigger, *sand flea* A small flea common
 in tropical regions which infests man,
 cats, dogs, rats, pigs, and other animals.
 They produce a severe local inflamma-
 tion frequently liable to secondary in-
 fection

tunic (tū'nīk) [L. *tunica*, a sheath]. An
 investing membrane

tunica (tū'nī-kā) (pl. *tunicae*) [L. *tunica*,
 a sheath]. An enveloping or covering
 membrane.

f. adventitia. BNA Outer coat of
 an artery or any tubular structure.

f. albuginea. The white fibrous coat
 of the eye, testicle, ovary, or spleen

f. externa. Outer coat of an artery

f. interna. SEE *t. intima*

f. intima. Lining coat of an artery

f. media. Middle muscular coat of
 an artery.

f. propria. BNA Deep portion of the
 corium containing blood vessels, nerves,
 glands, and hair follicles

f. vaginalis. Serous lining of the
 testicles

tunnel. A narrow channel or passageway.

f. anemica. A disease due to ankylos-
 tosis, and resembling idiopathic anemia

f. disease. 1. Caisson disease, *q. v.* 2.
Ancylotomiasis, q. v.

f. inner. **syn** *tunnel of Corti* Tri-
 angular canal lying between the inner
 and outer pillars of Corti in the organ
 of Corti of inner ear

turbid. Cloudy, not clear. SEE: *turbidity*

turbidimeter (tūr-bī-dīm'ē-ter) [L. *tur-
 bidus*, disturbed, + *G. metron*, a meas-
 ure] Device for estimating degree of
 turbidity of a fluid.

turbidimetry (tūr-bī-dīm'ē-trī) [“ + *G.
 metron*, a measure]. Estimation of the
 turbidity of a liquid.

turbidity (tūr-bī-dī'tī) [L. *turbiditas*, tur-
 bidity] 1. Bact. Quality of not having
 translucent appearance of liquid due to
 growth of microorganisms. 2. Having
 flaky or granular particles suspended in
 a clear liquid giving it a cloudy ap-
 pearance. SEE *clarificant*

turbinatoid (tūr-bī-nā'tōid) [L. *turbo*, tur-
 bin-, a whirl]. Top- or cone-shaped

f. bones. **syn:** *conchae*. SEE: *con-
 chae, nasal*

turbineotomy (tūr-bīn-ēk'tō-mī) [“ + *G.
 ektomē*, excision]. Excision of a tur-
 binated bone

turbintome (tūr-bīn'ō-tōm) [“ + *G.*

tomē, a cutting]. Instrument for excision of a turbinated bone

turbinotomy (tūr-bin-ōt'ō-mī) [*t* + *G tomē*, incision] Surgical incision of a turbinated bone.

Turck's bundle. A pathway of descending projection fibers from cerebral cortex

turgescence (tur-jēs'ēns) [*L turgescens*, swelling]. Swelling or enlargement of a part

turgescit (tur-jēs'ēt) [*L turgescens*, swelling]. Swelling, inflated

turgid (tur'jīd) [*L turgidus*, swollen]. Swollen, bloated

turgor (tur'gor) [*L turgor*, a swelling] 1 Normal tension in a cell. 2. Distention, swelling

t. vifa'lis. Normal fullness of the capillaries and blood vessels.

tur'key. AV SERVING 230 Gm. Pro 48.5, Fat 52.7, Carbo 0.0.

VITAMINS A— to +, B+.

FUEL VALUE 100 Gm equal 294 Cal

turning (turn'ing) [*AS turnian*, to turn]. Process of manually changing position of fetus in utero to permit normal delivery. *SYN.* *version*.

turnip (yellow and tops or greens) *COMP.* Their carbohydrates are in the form of sugar but no starch

(Second set of figures for *greens*)

A base-forming food, alkaline potentiality, 2.7 cc per 100 Gm, 6.8 cc per 100 Cal

ACTION. Slightly stimulating and flatulent

TIME FOR DIGESTION: Boiled, 4 hr

turpentine (turp'en-tin) [*G terebinthos*, turpentine tree] Oleoresin obtained from the pine tree

A mixture of terpenes and other hydrocarbons obtained from pine trees used externally in liniments and counter irritants, by mouth as an anel-mintic. The source of oil of turpentine or "spirits of turpentine"

ACTION AND USES. Antiseptic, antelmintic, and diuretic

DOSAGE. Internally, of the rectified oil, 5 minims (0.3 cc).

POISONING. May occur from inhalation.

SYM. Warm or burning sensation in the gullet and stomach, followed by cramping, vomiting, and diarrhea. Pulse and respiration become weak, slow, and irregular, irritation of urinary tract and central nervous system resembling alcoholic intoxication.

F. A **TREATMENT.** Gastric lavage, soothing drinks, and stimulants. Increase fluid intake

turunda (tu-run'dā) [*L.*] 1. A surgical tent, drain, or tampon. 2. A suppository.

tussal (tūs'āl) [*L tussis*, cough]. Relating to a cough. *SYN.* *tussive*.

tussis (tūs'is) [*L tussis*, a cough] A cough, as bronchial tussis, senile tussis, etc

t. convuls'va. Pertussis* or whooping cough.

t. stomacha'lis. Reflex cough from irritation of the mucosa of the stomach.

tussive (tūs'iv) [*L tussis*, cough]. Relating to a cough. *SYN:* *tussal*.

twelfth cranial nerve. One of a pair of cranial nerves distributing to the base of the tongue. *SEE* *hypoglossal nerve*, and *Table of Nerves in Appendix*

twilight sleep (twi'lit slēp). A state of partial anesthesia and hypococonsciousness in which pain sense has been greatly reduced by the injection of morphine and scopolamine

Patient responds to pain, but afterward memory of pain is dulled or effaced, as following childbirth. *SEE:* *labor*.

t. state. *PSY:* One in which consciousness is disordered, making possible actions subsequently forgotten

Evidenced in hysteria, epilepsy, and dementia precox

twin (twīn) [*AS. twinn*]. One of 2 children developed within the uterus at the same time from the same impregnation. *SEE* *Hellin's law*

RS *enzygotic, fetus papyraceous*

t's., biovular. Dizygotic twins, *q.v.*

t's., conjoined. Twins which are united. *SEE* *Siamese twins*

t's., dizygotic. Those from 2 separate ova fertilized at the same time

t's., fraternal. Dizygotic twins, *q.v.*

t's., identical. Twins which develop from a single fertilized ovum. Twins of this type have the same genetic makeup, consequently are of the same sex and resemble each other strikingly in physical, physiological, and mental traits. They develop within a common chorionic sac and have a common placenta. Each usually develops its own amnion and umbilical cord. They may result from (a) development of two inner cell masses within a blastocyst, (b) development of two embryonic axes on a single blastoderm, or (c) the division of a single embryonic axis into two centers.

t's., interlocked. Twins in which the neck of one becomes interlocked with the head of the other making delivery impossible

t's., monozygotic. Those developing from a single fertilized ovum. These give rise to identical twins, *q.v.* Also called *monochorionic, uniovular*, or *similar twins*

t., parasitic. The smaller of a pair of conjoined twins when there is a marked disparity in size

t's., Siamese. Symmetrical conjoined twins. *SEE* *Siamese twins*.

t's., true. Monozygotic twins.

t's., uniovular. Those developing from a single ovum

twinge (twīn) [*AS twengan*, to pinch]. A sudden, keen pain

twitch (twich) [*ME twicchen*]. 1. A simple, quick, spasmodic contraction of a muscle. 2. To jerk convulsively. *SEE* *myokymia, myopalmus*.

two-four-six enema. An enema with a double portion of the ingredients of the one-two-three enema, often given for flatulence as well as evacuation

tylion (tīl'yōn) [*G tyleron*, knot]. Point at middle of ant edge of the optic groove

tyloma (tī-lō'mā) [*G tylos*, knot, + *-ōma*, tumor] A callosity

tylosis (tī-lō'sis) [*t* + *-ōsis*, condition]. 1. A callosity. *SYN:* *tyloma*. 2. Formation of a callus

tympanal (tīm'pān-āl) [*G typanon*, drum]. Relating to the tympanum. *SYN:* *tympanic*.

tympanectomy (tīm-pān-ēk'tō-mī) [*t* + *ektomē*, excision]. Excision of the tympanic membrane.

tympanic (tīm-pān'ik) [G. *tympānon*, drum]. 1. Pert. to the tympanum. 2. Resonant.

t. membrane. SYN: *drum membrane*. Membrane serving as the lateral wall of the tympanic cavity and separating it from the ext. acoustic meatus SEE: *tympanum*.

tympanism (tīm'pān-lzm) [G. *tympānon*, drum, + *-ismos*, condition] Abdominal inflation from gas SYN *tympanites*

tympanites (tīm-pān-l'tēz) [G. *tympānitēs*, distention]. Gaseous distention of the abdomen

tympanitic (tīm-pān-l'tik) [G. *tympānitēs*, distention]. 1. Pert. to or characterized by tympanites 2. Resonant SYN *tympanic*.

t. resonance. A sound produced by percussion over an air- or gas-filled cavity.

tympanitis (tīm-pān-l'tis) [G. *tympānon*, drum, + *-itis*, inflammation] Inflammation of the middle ear SYN *otitis media*.

tympano- [G.] Combining form meaning *cardium, tympanum* of the ear

tympanomastoiditis (tīm'pān-ō-mās-toy-dit's) [" + *mastos*, breast, + *eidos*, form, + *-itis*, inflammation] Inflammation of the tympanum and mastoid cells

tympanosis (tīm-pā-nō'sis). Tympanites, *q v*

tympanotomy (tīm'pān-ō'tō-mī) [" + *tomē*, a cutting] Incision of the membrana tympani SYN *myringotomy*

tympanous (tīm'pān-ūs) [G. *tympānon*, a drum] Marked by abdominal distention with gas

tympanum (tīm'pān-ūm) [G. *tympānon*]. SYN *cavum tympani*, *ear drum*. The middle ear or tympanic cavity SEE *ear*, *middle*.

t. antrum. The space by which the epytympanic recess of the tympanic cavity proper communicates with the mastoid cells.

t. cavity. The cavity of the middle ear SEE: *tympanum*

tympany (tīm'pā-nī) [G. *tympānon*, drum]. 1. Abdominal distention with gas. 2. Tympanic resonance on percussion

It is a clear hollow note like that of a drum having no vesicular quality It indicates a pathologic condition of the lung or of a cavity.

type (tip) [G. *typos*, type] The general character of a person, a disease, or substance.

RS: *Aztec*, *koinotropic*, *sexual psychopathy*, *syntonic*.

t., asthenic. One who is slender with a long chest that is flat and who has poor muscular development

t., pyknic. One with a rounded body, thick shoulders, large chest, short neck, and broad head.

t., vagofonic. One with deficient adrenal stimulus, slow pulse, low blood pressure, and high sugar tolerance.

t., vesanic. Functional insanity due to no evident external cause

typhlatonia, **typhlatony** (tif-lā-tō'nī-ā, -lā'tō-nī) [G. *typhon*, cecum, + *tonos*, tone] Deficient motor activity of the cecum.

typhlectasis (tif-lēk'tā-sis) [" + *ektasis*, dilatation]. Cecal distention.

typhlectomy (tif-lēk'tō-mī) [" + *ektomē*, excision]. Excision of the cecum. SYN: *cecectomy*.

typhlenteritis (tif-lēn-ter-l'tis) [" + *enteron*, intestine, + *-itis*, inflammation].

Inflammation of the cecum. SYN: *typhlitis*

typhlitis (tif-l'i'tis) [" + *-itis*, inflammation] Inflammation of the cecum.

Clinically cannot be distinguished from appendicitis. Treatment similar

typhlodiliditis (tif'lō-dik-lī-dī'tis) [" + *diklis*, door, + *-itis*, inflammation]. Inflammation of the ileocecal valve

typhloempyema (tif'lō-ēm-pl-ē'mā) [" + *en*, in, + *pyon*, pus, + *ama*, blood]. An abdominal abscess following typhlitis.

typhloenteritis (tif'lō-ēn-ter-l'tis) [G. *typhon*, cecum, + *enteron*, intestine, + *-itis*, inflammation] Inflammation of the cecum. SYN *typhlenteritis*, *typhlitis*.

typhlolexia (tif'lō-lēks-lā) [G. *typhlos*, blind, + *lexis*, speech] Inability to recognize written words SYN *word blindness*

typholithiasis (tif'lō-lī-thī'ā-sis) Formation of a concretion in the cecum

typhology (tif-lō-lō-jī) [" + *logos*, study]. Study of blindness, its causes and effects.

typhlopezy (tif'lō-pēks'ī) [G. *typhon*, cecum, + *pēris*, fixation] Suturing of a movable cecum to the abdominal wall.

typhlosis (tif-lō'sis) [G. *typhlos*, blind, + *-osis*, condition] Blindness

typhlospasm (tif'lō-spāsm) Spasm of the cecum

typhlostensis (tif-lō-stēn-ō'sis) [G. *typhon*, cecum, + *stenōsis*, a narrowing]. Stenosis or stricture of the cecum.

typhlostomy (tif-lōs'tō-mī) [" + *stoma*, opening] Establishment of a permanent cecal fistula

typhlotomy (tif-lōt'ō-mī) [" + *tomē*, a cutting] Incision of the cecum

typhloretrostomy (tif'lō-ū-rē'ter-ōs'tō-mī) [" + *ourēter*, ureter, + *stoma*, opening] Implantation of a ureter in the cecum.

typho- [G.] Combining form *pert* to fever, *typhoid*.

typhobacillosis (tif'lō-bās-lī-ō'sis) [G. *typhos*, stupor, + *L. bacillus*, little stick, + *G. -osis*, condition]. Poisoning due to toxins produced by the *Bacillus typhosus*.

typhohemia (tif'lō-hē'mī-ā) [" + *haima*, blood] Degeneration of the blood due to presence of bacilli.

typhoid (ti'foid) [G. *typhos*, stupor, + *eidos*, form] Resembling typhus.

t. fever. An acute, infectious disease characterized by definite lesions in Peyer's patches, mesenteric glands, and spleen accompanied by fever, headache, and abdominal symptoms

ETIOLOGIC Causative organism *Salmonella typhi* (*Eberthella typhosa*), a gram-negative, motile, bacillus Common in early adult life and esp prevalent during fall and early winter It may be transmitted by infected water or milk supplies Well water in country districts sometimes contaminated through the soil from outhouses Human carriers, particularly when food handlers, may be responsible for spread of infection Body discharges from active or convalescent cases may be the means of infecting others.

INCUBATION Two to 3 weeks.
SYM Early: Headache, general weakness, indefinite pains, nosebleed; constipation may occur

Within a few days to a week the temperature may reach a maximum of 104° to 105° F and during this time, or up to the 10th day, rose spots can usually be seen, particularly on the abdomen, though they may be observed on the chest and back. They disappear on

pressure and usually come out in crops during a period of several days. Abdominal tenderness develops and with it, generally, distention.

During following weeks fever is characterized by marked daily remissions, evening temperature being from 1° to 3° F higher than the morning. In the young, the temperature often rises very abruptly. When the diurnal remissions are slight, a protracted case is forecast. As defervescence advances, the temperature becomes more irregular. Remissions are more decided and not infrequently a higher temperature is recorded in the morning. Hurried respiration, slight cough, and bronchial râles are common. Pulse is usually slow in comparison with the temperature, and is dicrotic. Heart sounds often feeble, expression dull and heavy, cheeks somewhat flushed, conjunctivae clear, pupils dilated. Tongue tremulous, at first red at tip and edges, and covered posteriorly with a whitish fur.

In severe cases, tongue becomes dry, brown and fissured, and sordes collect on teeth. Gastric symptoms not common, but obstinate. Vomiting sometimes develops and becomes a serious complication. Abdomen tympanitic, tenderness on palpation, esp. in iliac fossa. Diarrhea generally present, though not a constant symptom. Discharges vary from 3 to 6 or more a day, thin, offensive, yellowish. Stupor, muttering, delirium, twitching of the tendons, carphologia, and coma vigil may be present. Urine usually shows albumin. Retention common.

White blood count demonstrates a leukopenia. Convalescence marked by anemia, falling of hair, often desquamation. The patient evidences evidence of having suffered from a protracted illness that has produced general enfeeblement of mind and body.

VARIETIES *Abortive*. Abrupt onset with severe symptoms, but convalescence follows within a few days.

Mild form: Moderate fever with marked remissions, diarrhea slight, nervous symptoms often absent, rash usually present and often abundant.

Ambulatory type. Symptoms mild and often disregarded by patient, who refuses to go to bed. However, grave symptoms may suddenly develop and even death from intestinal perforation may follow.

Typhoid of children. Rash often absent, fever rises abruptly, cerebral symptoms may be sufficiently marked to suggest meningitis.

RELAPSES. These are common in typhoid. There may be a complete repetition of all symptoms experienced during primary attack, but they are usually of shorter duration.

RECONVESCENCE. This is a sudden, temporary elevation of temperature occurring during convalescence, and is not associated with a return of other symptoms. It may be due to constipation, excitement, or irritating food.

COMPLICATIONS. Pneumonia, peritonitis, parotitis, deafness, myocarditis, nephritis. Bedsores may also come under this classification. An abrupt fall of several degrees in temperature is suggestive of intestinal hemorrhage or perforation. Hemorrhage takes place in from 3 to 5% of all cases and usually occurs during 3rd or 4th week. Hemorrhage is a fatal complication in from 30 to 40%. Intes-

tinal perforation most common during the 2nd or 3rd week, and is said to occur in from 5 to 6% of cases. More frequent in males than in females.

DIFFERENTIAL DIAGNOSIS. Paratyphoid, pneumonia, dysentery, meningitis, smallpox, appendicitis. Diagnostic points of value will be the presence of a leukopenia, the Widal test, blood culture and examination of feces for presence of causative organism.

PROGNOSIS. Should always be guarded, no matter how mild the case appears to be. Fatality rate varies in different epidemics. In private practice, it may be less than 5%, in hospital practice it sometimes exceeds 10%. Hemorrhages in any form, together with excessive diarrhea, are unfavorable omens.

PROPHYLAXIS. Safeguards adopted for the supply of drinking water in large cities and the more or less general pasteurization of milk are probably chief factors in the great reduction of typhoid fever in well-governed communities. Active immunization is a factor in reduction of mortality. Individual immunity can ordinarily be established by means of 3 injections of antityphoid vaccine given at weekly intervals.

TREATMENT OF THE ACTIVE CASE. General care, isolation of patient, and disinfection of all discharges are of primary importance. Those caring for the typhoid patient should be immunized against the disease. All precautions applicable to such infections must be adopted. Articles in contact with the patient must be sterilized or disinfected before being handled by other persons than the immediate attendant. It is necessary to guard against development of bedsores. Since delirium is not infrequent, patient may require constant watching to prevent his leaving the bed, which might result in fatal consequences. The mouth should be kept as clean as possible to prevent development of sordes.

Specific Treatment. Chloramphenicol (Chloromycetin) is the drug of choice. It greatly shortens the febrile period and toxicity is markedly reduced, especially if adrenalcortical therapy is used in conjunction with it. Tetracycline drugs are also effective.

Diet. In the early stages, diet may be largely liquid, including plenty of water and milk given in from 2 to 4 pints in the 24-hour period. This is usually best administered in small quantities at intervals of 2 to 3 hours, and the addition of lime water in preparations of $\frac{1}{2}$ oz. of lime water to each 2 oz. of milk is

TYPHOID ULCERS.

A. In Peyer's patch. 1. Slough in ulcer. 2. Lymphoid tissue. B. Erosion of blood vessel, with separation of slough, causing hemorrhage. 1. Slough separated. 2. Eroded artery. C. Perforation of ulcer through peritoneum. 1. Slough separated. 2. Peritoneal perforation. 3. Mucous membrane. 4. Muscle layer. 5. Peritoneum.

advisable. Koumiss or buttermilk may be acceptable to the patient.

The starvation diet, which was once so common in the treatment of typhoid fever, is seldom followed in the present day. Nevertheless, it is often well to be cautious during onset of the disease, gradually adding to the patient's nourishment until it is found that he may be placed on a soft diet without danger. When this can be done, a great loss of weight, which used to be so common in typhoid fever patients, may be, to a large extent, avoided.

Ice bags and cold sponging are little used at the present time. On the other hand, sponging with tepid water, or with alcohol, is sometimes used when the temperature has reached unusual heights. In case of severe hemorrhage or intestinal perforation, nothing short of surgical interference offers any possibility of saving the patient's life.

NP The objectives are: (a) To support the patient's strength, (b) to lessen toxemia, and (c) to prevent complications.

Quiet is essential, visitors, excitement, and noise are not conducive to quiet or peace of mind. Bright lights, heavy bed-clothing, and everything that might irritate the patient should be avoided. An airy, well-ventilated room is essential. The bed must be comfortable and protection provided in case of incontinence. If the patient becomes emaciated an air bed may be necessary.

Position of patient. Usually he lies on one side with knees drawn up, so if sores are apt to develop the knees should be wrapped in wool to prevent chafing when together. Extra pillows are permissible if desired by the patient. The patient should make no muscular effort while the bed is being made.

Care of the mouth. Frequent soft swabs and bland lotions should be used, as sordes gather on the teeth and the mouth is dry, brown, and fissured. Keeping the mouth moist cannot be over-emphasized.

Care of the skin. A morning and night cleansing bath should be given. In the meantime, tepid sponging will remove perspiration, and help maintain the function of the skin and also assist in elimination. As the secretion of the skin carries infection, water used for bathing should be disposed of and the basin disinfected. The patient's hands should be kept scrupulously clean to prevent them from being contaminated with excreta. Ointment should be used to protect the skin in cases of incontinence. At regular intervals washing with hot water is necessary if ointment has been used, to prevent the pores from becoming filled up.

Headache and backache. A severe frontal headache may last from 10 to 14 days from inception of the fever. The light should be shaded and cold compresses applied. The legs and back should be supported with pillows.

Restlessness. This may induce sleeplessness. A change of position, a sponge bath; taking off a cover if the patient is hot, or adding one if cold, washing the face, and brushing the hair will do much to rest the patient.

Urine. This should be measured and tested daily for albumin. Watch for sign of retention due to atony of the

bladder's muscular wall in the latter weeks of illness.

Stools: Inspection for presence of undigested food, for blood, and flatus is very important. Frequency should be noted. Four or five movements per day is normal in diarrhea, but 8 to 12 indicate complications. Constipation is not unusual with these patients and a simple enema may be ordered, but it should be small, with temperature not more than 98° F, and given with a catheter, allowing the fluid to run very gently. When complicated by hemorrhages, and frequent stools, the patient may be too exhausted to use a bedpan, in which case the excreta should be received on pads.

Abdominal distention. This may become a dangerous complication, in any event it is distressing. Water may be given but not sweetened lemonade, and the diet may have to be reduced to prevent excessive fermentation. Change of the patient's position may relieve the flatus.

Bathing. Baths, their nature, and frequency should be left to the discretion of the physician, otherwise routine care, such as cleansing and sponge baths, may be used unless contraindicated.

Delirium. This is usually of the low muttering type, and the patient stares with a fixed gaze upon the ceiling and plucks on the bedclothing. Utensils and other articles should not be left within his reach and he must not be left alone.

Charting. A 4-hour chart should be kept of temperature, pulse, and respiration, although the pulse should be taken much more frequently than this. In the 3rd week, the temperature should be taken every 2 hours. A sudden drop in temperature indicates hemorrhage.

Disinfection. The usual methods of disinfection should be observed in handling all excreta and secretions, linens, and utensils. Disinfection for the nurse is also very important.

f. state. Condition in many diseases marked by profound prostration and other symptoms like those of typhus or typhoid fever.

f. vaccine. A vaccine containing not less than one billion killed typhoid bacilli. It is usually combined with killed paratyphoid A and paratyphoid B bacilli to form a triple vaccine usually designated TAB.

f., walking. T fever with mild general constitutional symptoms the patient being able to be up and to walk. Syn. ambulatory typhoid.

typhoidal (tī-fōi'dāl) [G. *typhos*, stupor, + *eidos*, resemblance]. Resembling typhoid.

typholysin (tī-fōi'lī-sīn) [+ *lysis*, dissolution] A lysin destructive to typhoid bacilli.

typhomalarial (tī-fō-mā-lā'rī-āl) [+ Italian *malaria*, bad air] Having symptoms of both typhoid and malarial fever.

typhomania (tī-fō-mā-nī-ā) [+ *mania*, madness] Muttering delirium characteristic of typhoid fever and typhus.

typhopneumonia (tī-fō-nū-mō-nī-ā) [+ *pneumonia*, inflammation of lungs]. 1. Pneumonia occurring in typhoid fever. 2. Pneumonia with typhoid symptoms.

typhous (tī-fūs) [G. *typhos*, stupor]. Pert to typhus fever.

typhus, typhus fever (tī-fūs) [G. *typhos*, stupor] One of a group of acute, infectious diseases characterized by great prostration, severe headache, general-

ized maculopapular rash, sustained high fever, and usually progressive neurologic involvement, ending in a crisis in 10 to 14 days

Three diseases are included in the group *epidemic (louse-borne) typhus*, *Brill-Zinsser disease (recrudescence typhus)*, and *murine (flea-borne) typhus*. Although clinically and pathologically similar, they differ in intensity of symptoms, severity, and mortality rate.

Epidemic typhus is particularly prevalent amid unsanitary conditions. It often develops on shipboard, in army camps, and where living conditions are unfavorable and congestion is marked. The disease is rare in the United States, infection being found principally at the seaboard as a result of imported cases.

INCUBATION: Ten to 14 days

SYM. Onset sudden. Severe headache, pain in back and limbs, extreme prostration. Fever rises rapidly, often reaching 104° to 105° F. in from 2 to 3 days. Remains high for about 10 days, when it falls by crisis. Pulse rapid, weak, often dirotic. Tongue tremulous, may be covered with whitish fur, in severe cases becomes black and rolled up like a ball in back of mouth. Face dusky, conjunctivae injected, pupil contracted, headache, stupor, delirium, subsultus tendinum, carphologia

From 4th to 5th day, bluish spots appear over body, esp on abdomen. These are petechial in character and do not disappear on pressure. The extent of eruption is indicative of severity of attack. Sometimes there is a diffuse, dark red, subcuticular mottling. Bowels are constipated, urine is scanty, high-colored, and often albuminous

COMPLICATIONS. Bronchopneumonia more frequent than lobar, hypostatic congestion of lungs, nephritis, and parotid abscess

DIFFERENTIAL DIAG. Typhoid fever, hemorrhagic smallpox, Henoch's purpura, epidemic meningitis of fulminating type, and ulcerative endocarditis may have to be considered

PROC. Mortality often high. Disease esp severe in advanced years and in alcoholics. Fatality rate 12% to 20%

TREATMENT. *Preventive.* Absolute cleanliness, sterilization of clothing, and the use of apparel to prevent infestation of the body louse. The delousing camps, so common during the late war, were examples of the precautions necessary to prevent its spread. Patient must be isolated. Absolute rest necessary, and a liquid diet. *Specific.* Broad-spectrum antibiotics, such as the tetracyclines and chloramphenicol, give excellent results. PABA (para-aminobenzoic acid) is also useful. Sulfonamides are contraindicated, and penicillin has no antirickettsial effect.

t., endemic. Murine typhus, *q.v.*

t., epidemic (louse-borne). *SYN:* *fall fever, war fever, camp fever, Fleck typhus, European typhus, classic typhus, historic typhus.* An infectious disease caused by *Rickettsia prowazeki* and transmitted by the human body louse (*Pediculus humanus corporis*)

t., flea-borne. Murine typhus, *q.v.*

t., Mexican. *SYN:* *tabardillo.* A louse-borne epidemic typhus present in certain portions of Mexico.

t., mite-borne. Tsutsugamushi disease or scrub typhus

t., murine. *SYN:* *endemic, rat, flea-borne, urban, or shop typhus.* A disease caused by *Rickettsia mooseri* and occurring in nature as a mild infection of rats and transmitted from rat to rat by the rat-louse or flea. Humans may acquire it by being bitten by infected rat-fleas or ingesting food contaminated by rat-urine or flea-feces

t., rat. Murine typhus

t., recrudescence. *SYN:* *Brill's disease, Brill-Zinsser disease.* A recurrence or recrudescence of a preceding attack of epidemic typhus after initial attack

t., rural. Scrub typhus, *q.v.*

t., scrub. *SYN:* *mite-borne or rural typhus, Japanese river fever, Tsutsugamushi disease.* A self-limited febrile disease of two weeks' duration caused by *Rickettsia tsutsugamushi* and transmitted by two species of mites (chiggers) of the genus *Thrombicula*. Occurs principally in Pacific-Asiatic area.

t., shop. Murine typhus

t., urban. Epidemic typhus, *q.v.*

typical (tīp'i-kāl) [G *typikos*, pert. to type] Having the characteristics of, pert. to, or conforming to, a type or condition or group

typing. The determination of the specific blood group to which an individual belongs or the specific type or subdivision of a species to which certain bacteria (e.g., *Salmonella* or *Diplococcus pneumoniae*) belong. *SYN:* blood transfusion

typo- [G]. Combining form meaning a type

tyroscope (tīpō-skōp) ["" + *skopein*, to examine] Device to aid patients with amblyopia and cataract in reading

tyramine (tī-rām'in) Intermediate product in the conversion of tyrosine to epinephrine

tyrannism (tīr'ān-izm) [G *tyrannos*, tyrant, + *-ismos*, condition] Abnormal tendency to exercise cruelty. *SYN:* sadism, *q.v.*

ty reflex (tī) Sudden reflex grasping of mother's body by infant when startled

tyremesis (tī-rēm'ē-sis) [G *tyros*, cheese, + *emesis*, vomiting] Infant vomiting of curdy or cheesy substances.

tyrogenous (tī-rōi'n-ās) ["" + *gennan*, to produce] Having origin in cheese or produced by it.

Tyroglyphus (tī-rōg'lī-fūs). A genus of sarcoptoid mites commonly known as *cheese mites*. They infest cheese and dried vegetable food products and occasionally infest man causing a pruritus. Contains species causing *grocer's itch, vanilla m.* and *copra itch*

tyroid (tī'roīd) ["" + *eidos*, form]. Caseous; cheesy.

tyromatosis (tī-rō-mā-tō'sis) ["" + *-osis*, condition] Cheesy degeneration. *SYN:* caseation

tyrosinase (tī-rō'sin-ās) [G *tyros*, cheese]. A ferment that acts on tyrosine.

tyrosine (tī'rō-sin) An amino acid present in many proteins, esp. casein. It serves as a precursor of epinephrine, thyroxine, and melanin. Two vitamins, ascorbic acid and folic acid, are essential for its metabolism

tyrosinosis (tī-rō-sin-ō'sis). Condition resulting from faulty metabolism of tyrosine, whereby its oxidation products appear in the urine.

tyrosinuria (tī-rō-sin-ū'ri-ă) [“ + *ouron*, urine] Tyrosine in the urine.

tyrosis (tī-rō'sis) [“ + *-osis*, condition].

1 Curdling of milk 2 Vomiting of cheesy substance by infants. SYN *tyremesis* * 3 Cheesy degeneration. SYN: *tyromatosis*.

tyrothricin (tī-rō-thrī'sin) An antibiotic isolated from a soil bacteria, *Bacillus brevis*. It contains *gramicidin* and *tyrocidin*, both of which are effective against Gram-positive bacteria. Applied topically as an ointment or cream.

tyrotoxism (tī-rō-tōks'izm) [“ + “ + *-ismos*, condition] Poisoning produced by a milk product or by cheese.

Tyrrel's fascia (tīr'él) An ill-defined fibromuscular layer from the middle aponeurosis of the perineum, behind the prostate gland. SYN *rectovesical fascia*.

Tyson's glands (tī'sūn) SYN *preputial glands*. Modified sebaceous glands located on neck of penis and inner surface of prepuce. They secrete *smegma*. *q v*.

U. 1. Chem. symbol of uranium. 2. Abbr. for unit.

uarthritis (û'ar-thrî'tis) [G *arthron*, joint, + *-itis*, inflammation]. Gout supposed to result from excess of uric acid. **Syn** *arthritis urica*

uaterium (wâ-tê'ri-um). A medical preparation to be used in the ear

uberous (û'bêr-ûs) [L *uber*, udder] Profitic, fruitful, fertile

uberty (û'bêr-tî) [L *uber*, udder] Fruitfulness, fertility.

UBI. Abbr for ultraviolet blood irradiation

Uffelmann's test (oof'el-mahn) Test for determination of lactic acid in gastric juice.

Uhlenhuth's test (oo'len-hoot) **Syn** *biologic test*, *Bordet's test*, *serum test*, *precipitin reaction*, *precipitin test* A test for blood, meat, etc Substance tested for is used as an antigen and injected into a rabbit Serum of rabbit is then added to saline solution of suspected material Solution becomes cloudy if suspected substance is of the same nature as antigen

Uthoff's sign (oot'hof) The nystagmus which occurs in multiple disseminated sclerosis

ulagmagetis (û-lâg'â-nâk'tê-sis) [G *oulon*, gum, + *agâgkêsis*, irritation]. Disagreeable sensations or irritation in or about the gums

ulalgia (û-lâj'jî-â) [G *oulon*, gum, + *algos*, pain] Pain in the gums

ulatrophia (û'lât-rô'fî-â). Shrinking of gums, recession of the gums

ulcer (ul'ser) [L *ulcus*, *ulcer*, ulcer] An open lesion upon the skin or mucous membrane of the body, with loss of substance, accompanied by formation of pus.

Simple ulcers may result from trauma, caustics, or intense heat or cold. They may accompany varicose veins in the aged

In syphilis, they are deep seated, having an offensive secretion, in epithelioma, they appear late in life with a single center and a thickened, infiltrated edge with a scanty, bloody secretion, in lupus vulgaris, they appear early in life, but they are superficial

RS *abscission*, *anabrosis*, *anthracosis*, *aphtha*, *argema*, *cancerocosis*, *carnamelocosis*, *chatarosis*, *dieresis*, *duodenal u.*, *helicond*, *peptic*, *phagedena*, *rodent u.*, *slough*, *stomach*, *vomicoe*

u., *amputating*. One which destroys tissue to the bone by encircling the part.

u., *atonic*. A chronic ulcer

u., *callous*. A chronic u. with indurated, elevated edges and no granulations, which does not heal

u., *duodenal*. An ulcer on the mucosa of the duodenum, due to the action of the gastric juice.

u., *erethistic*. One with an inflamed, red, painful surface

u., *follicular*. A tiny ulcer having its origin in a lymph follicle and affecting a mucous membrane

u., *fungous*. One in which the granulations protrude above edges of wound and bleed easily

u., *gastric*. **See:** *peptic u.*

u., *healthy*. An u. which tends toward healing, its surface being soft and smooth with tiny red granulations

u., *indolent*. Nearly painless u. usually found on leg, characterized by indurated and elevated edge, and nongranulating base

u., *peptic*. An ulcer of the mucosa of the duodenum or stomach

TREATMENT Protein diet; colloidal aluminum hydroxide relieves pain promptly and ulcer heals rapidly **See:** *peptic ulcer*

u., *perforating*. An ulcer which permeates the entire thickness of the part, as the foot.

u., *phagedenic*. An ulcer which sloughs particles, spreading rapidly and disintegrating the tissues

u., *rodent*. A deeply infiltrating ulcer which slowly eats away the bones and soft tissues, commonly affects the upper part of the face

u., *round*. **See:** *peptic ulcer*

u., *serpiginous*. A creeping ulcer which heals in 1 part and extends to another.

u., *simple*. A local ulcer with no severe inflammation or pain.

u., *specific*. An ulcer caused by a specific disease, as syphilis or lupus

u., *stercoral*. 1 Ulcer caused by pressure from impacted feces 2 Ulcer through which feces escapes.

ulcerate (ûl'sêr-ât) [L *ulcerâre*, to ulcerate] To produce or become affected with an ulcer

ulcerated (ûl'sêr-â'têd) [L *ulcerâre*, to ulcerate] Of the nature of an ulcer or affected with one

u., *sore throat*. Putrid sore throat, a gangrenous inflammation

u., *tooth*. Suppuration of the alveolar periosteum with ulceration of gum surrounding the decaying root of a tooth

ulceration (ûl'sêr-â'shûn) [L *ulcerâre*, to ulcerate] Suppuration taking place on a free surface, as on the skin or on a mucous membrane

A termination of inflammation.

ulcerative (ûl'sêr-â'tiv) [L *ulcerâre*, to form ulcers] Pert. to or causing ulceration

u., *scrofuloderma*. Tubercular scrofuloderma

ulceromembranous (ûl'sêr-ô-mêm-brân-ûs) [*u.* + *membrana*, membrane] Pert to ulceration and formation of a fibrous pseudomembrane.

u., *tonsillitis*. Tonsillitis that ulcerates and develops a membranous film.

ulcerous (ûl'sêr-ûs) [L *ulcerâre*, to ulcerate]. Pert. to or affected with an ulcer.

ulcus (ûl'kûs) (pl. *ulcera*) [L] Ulcer.

u., *cancro'sum*. 1. Cancerous ulcer which eats away the tissues **Syn:** *rodent ulcer*. 2. Same as *u. durum*.

u., *cruris*. Indolent ulcer of the leg

u., *durum*. Lesion of syphilis. **Syn:** *chancre*

u., *induratum*. A chancre, *q.v.*

u., *molle*. Chancroid or soft chancre, *q.v.*

u., *tuberculo'sum*. Tuberculosis of the skin. **Syn:** *lupus*.

ulectomy (û-lêk'tô-mî) 1. [G. *oulê*, scar, + *ektomê*, excision] Excision of scar tissue, esp. in secondary iridectomy 2. [G. *oulon*, gum] Removal of gum tissue, as in pyorrhea alveolaris. SYN: *gingivectomy*.

ulegyria (û-lê-gî-ri-â) Condition in which gyri of the cerebral cortex are abnormal due to scar tissue from injuries usually occurring in early development

ulemorrhagia (û-lê-mor-â'ji-â) [G. *oulon*; gum, + *haimorrhagia*, bleeding] Bleeding from the gums.

ulerythema (û-lêr-i-thê-mâ) [G. *oulê*, scar, + *erythêma*, redness] An erythematous disorder with atrophic scar formation. SEE: *lupus erythematosus*

u. centrifugum. *Lupus erythematosus*.

u. ophryog'enes. Folliculitis of eyebrows

Sym Falling out of hair and scarring.

u. sycoisiforme. Keloid sycois.

uletic (û-lê'tîk) [G. *oulon*, gum]. Pert. to the gums

uletomy (û-lê'tô-mî) [G. *oulê*, scar, + *tomê*, a cutting] Incision of a scar to relieve tension SYN *cicatricotomy*

uliginous (û-lî'î'n-ûs) [L. *uliginosus*, wet]. Muddy, slimy

ulitis (û-lî'tis) [G. *oulon*, gum, + *-itis*, inflammation]. Inflammation of the gums

u. interstitial. Inflammation of connective tissue of gums about the necks of the teeth

ulna (ûl'nâ) [L. *ulna*, elbow] The inner and larger bone of the forearm, bet the wrist and the elbow, on the side opposite that of the thumb
It articulates with the head of the radius and humerus above and with the radius below

RS coronoid process, cubital, cubitus, olecranon process

ulnad (ûl'nad) [' + *ad*, toward]. In the direction of the ulna

ulnar (ûl'nar) [L. *ulna*, elbow] 1 Relating to the ulna, or to nerve or artery named from it 2 Cuneiform carpal bone SYN: *ulnare*

ulnocarpal (ûl'nô-kar'pâl) [L. *ulna*, elbow, + G. *karpós*, wrist] Relating to the carpus and ulna, or to the ulnar side of the wrist

ulnoradial (ûl'nô-râ'dî-âl) [' + *radius*, spoke of a wheel] Relating to the ulna and radius, as their ligaments and articulations

ulocace (û-lôk'â-sê) [G. *oulon*, gum, + *kakê*, badness]. Ulcerative inflammation of the gums

ulocarcinoma (û-lô-kar-sîn-ô'mâ) [' + *karkinos*, cancer, + *-ôma*, tumor] Carcinoma of the gums

uloglossitis (û-lô-glos-'tis) [' + *glossa*, tongue, + *-itis*, inflammation] Inflammation of the gums and tongue

uloid (ûl'oyd) [G. *oulê*, scar, + *eidós*, resemblance] 1. Scarlike. 2. A scarlike lesion caused by subcutaneous degeneration.

u. cicatrix. Same as *uloid*, 2.

uloncus (û-lôn'kûs) [G. *oulon*, gum, + *ogkos*, mass] Swelling or tumor of the gums SEE *epulis*

ulorrhagia (û-lor-â'ji-â) [' + *-rrhagia*, bleeding]. Bleeding from the gums.

ulorrhea (û-lor-rê-â) [' + *rhoia*, a flow]. Slow bleeding from the gums.

ulosis (û-lô'sis) [G. *oulê*, scar, + *-ôsis*, condition]. Formation of scar tissue. SYN: *cicatrization*

ulotic (û-lô'tîk) [G. *oulê*, scar]. Causing cicatrization. SYN: *cicatricial*.

ulotomy (û-lô'tô-mî) 1 [' + *tomê*, a cutting] The cutting of scar tissue to relieve deformity or tension 2 [G. *oulon*, gum]. Incision of the gums

ulotrichous (û-lô'trik-ûs) [G. *oulos*, woolly, + *thrix*, *trich-*, hair]. Having short, woolly hair, as a negro

ulotropsis (û'lô-trop'sis) [G. *oulon*, gum, + *tropsis*, nutrition] Revitalization of the gums by massage

ulter (ûl'têks). A bifocal glass in which the near section is ground with the spherical curve

ultimate (ûl'tîm-ât) [L. *ultimus*, last]. Final or last.

ul timobran chial bodies (ûl-tî-mô-brân'gkê-âl) Two embryonic pharyngeal pouches usually considered as rudimentary fifth pouches. They become separated from the pharynx and incorporated into substance of the thyroid gland where they lose their identity Also called *post-bran chial bodies*, *lateral thyroids*.

ultra- [L.]. Prefix meaning *beyond*, *excess*.
ultrabrachycephalic (ûl'trà-brâk't-sê-fâl-'îk) [L. *ultra*, beyond + G. *brachys*, short, + *kephalê*, head] Having a cephalic index of 90 or over

ultracentrifuge (ûl'trà-sên'tri-fûzh). A high speed centrifuge with rotational speeds up to or exceeding 70,000 rpm and producing a G-field of up to 500,000 times gravity Used in the study of proteins, viruses, etc

ultrafilter (ûl'trà-flî'têr). A filter by which colloidal particles may be separated from their dispersion medium or from crystalloids

ultrafiltration (ûl'trà-flî-trâ'shûn) [' + *filtrum*, a filter]. Filtration of a colloidal substance in which the dispersed particles, but not the liquid, are held back.

ultraligation (ûl'trà-lî-gâ'shûn) [' + *ligâre*, to bind] Ligation of a blood vessel beyond the origin of a branch.

ultramicrobe (ûl'trà-mî'krôb) [' + G. *mikros*, tiny, + *bios*, life] A microorganism too small to be visible by the ordinary microscope.

ultramicroscope (ul'trà-mî'krô-skôp) [' + *skopein*, to examine]. Microscope by which objects invisible through an ordinary microscope may be seen by means of powerful side illumination. A dark-field microscope, *q. v.*

ultramicroscopy (ûl'trà-mî-krô'skô-pî) [' + *skopein*, to examine] The use of the ultramicroscope for scientific purposes.

ultrasonic (ûl'trà-sôn'îk) SYN. *supersonic*. Pertaining to sounds of frequencies above 20,000 cycles per second which are inaudible to the human ear.

ultrasonics (ûl'trà-sôn'îks) SYN *supersonics*. Sounds with frequencies between 20,000 and 500,000,000 cycles per sec Biological effects may result depending on intensity of beams *Heating effects* are produced by beams of low intensity. *Paralytic effects* by those of moderate intensity, and *lethal effects* by those of high intensity. The lethal action of ultrasonics is primarily the result, either directly or indirectly, of cavitation Ultrasonics are utilized clinically for therapeutic and diagnostic purposes. They are of value in the treatment of pain syndromes

ultraviolet (ûl'trà-vî'ô-lêt) [' + *violet*]. Beyond the visible spectrum at its violet end, said of rays SEE: *infrared rays*

u. rays. Invisible rays emitted by very hot bodies and ionized gases with wave lengths between 3900 Å° and 1800 Å°. From a therapeutic standpoint,

physiological effects include (a) erythema production, (b) pigmentation of skin, (c) antitachitic effect through production of vitamin D (d) bactericidal effects, and (e) various effects on metabolism. In clinical practice, dosage is measured in terms of *minimum erythematous dose* (Abb. MED).

u. therapy. Treatment with ultraviolet radiation. See *heliotherapy, light therapy*.

ultravirus (ül'tră-vî'rûs) [*ul* + *virus*, poison] A virus which is filtrable but which can be demonstrated by inoculation test. See: *virus filtrable*.

umbilical (üm-bil'i-käl) [*L. umbilicus, navel*] Pert to the umbilicus.

u. cord. The attachment connecting the fetus with the placenta, artificially severed at birth of the child.

It leaves a depression on the abdomen of the child called the navel or *umbilicus*,* where the cord was attached to the fetus. It contains 2 arteries and 1 vein protected by Wharton's jelly, through which the embryo receives from the mother its blood supply and nourishment.

Cord should not be cut or tied until umbilical vessels have ceased pulsating. This gives the infant a better red blood cell count. See *Wharton's jelly*.

u. fissure. Portion of hepatic longitudinal fissure in which the umbilical vein is lodged.

u. hernia. A hernia in the region of the umbilicus.

u. souffle. A hissing sound said to arise from the u. cord.

u. vesicle. That part of the embryonic yolk sac leading from the umbilicus.

umbilicate (üm-bil'i-kät) [*L. umbilicatus, dimpled*]. Pert to or shaped like the navel, noting a bacterial colony with a central depression resembling an umbilicus.

umbilication (üm-bil'i-kä'shün) [*L. umbilicatus, dimpled*] 1 A depression resembling a navel. 2 Formation at apex of a pustule or vesicle of a pit or depression.

umbilicus (üm-bl'i-kûs, -bil'i-kûs) (pl. *umbilici*) [*L. a pit*] A depressed point in the middle of the abdomen, the scar which marks the former attachment of the umbilical cord to the fetus.

RS: *angiolysis; funic, f. souffle; funiculus; funis; hydromphalus, mesogastrium; navel, "omphal-" words, umbilical cord; varicocomphalus, Wharton's jelly*.

umbo (üm'bô) [*L. boss*]. Projecting center of a round surface.

u. of tympanic membrane. The central depressed portion of concavity on lateral surface of tympanic membrane. It marks the point where the handle (manubrium of malleolus) is attached to inner surface.

umbrascopy (üm-bräs'kô-pî) [*L. umbra, shadow, + G. skopem, to view*] Use of shadows in refraction of the eye or use of roentgen rays. SYN: *skiascopy*.

un- [A.S.]. Prefix meaning back, reversal, annulment of, not.

uncia (ün'si-ä) [*L. uncia, the twelfth part of a whole*]. An ounce, or an inch.

unciform (ün'si-form) [*L. uncus, hook, + forma, shape*] Hook-shaped.

u. bone. Hook-shaped bone on ulnar side of distal row of the carpus. SYN: *os hamatum*.

u. fasciculus. Bundle of fibers connecting frontal cerebral lobes with the temporosphenoid ones.

u. process. 1 Long, thin lamina of bone from orbital plate of the ethmoid articulating with the inf turbinate. 2 Hook at ant end of hippocampal gyrus. 3 Hooked end of unciform bone.

Uncinaria (ün-sin-ä'ri-ä) [*L. uncus, a hook*] Former term applied to a genus of hookworms which included species now in the genera *Necator* and *Ancylostoma*.

uncinariasis (ün-si-na-ri-ä-sis) [*L. uncus, hook*] Hookworm disease. SYN: *ankylostomiasis, q.v.*

u. of skin. Vesicular dermatitis generally of the feet from invasion by the *Uncinaria duodenale*.

uncinate (ün'sin-ät) [*L. uncinatus, hooked*] Hook-shaped; hooked.

u. bundle of Russell. SYN: *fastiglobulbar tract*. Fiber arising in fastigial sup cerebellar peduncle and passing inferiorly to vestibular nuclei and reticular formation by which impulses are carried to muscles, esp those of neck and body.

u. convolution. SEE: *u. gyrus*.

u. epilepsy. Form of c. occurring in disease of uncinate area of the temporal lobe.

u. fasciculus. Bundle of fibers connecting orbital gyri of frontal lobe with rostral portion of temporal lobe. They curve sharply as they pass over lateral fissure of cerebrum.

u. fits. Episodic attacks characterized by olfactory and gustatory hallucinations, usually disagreeable, a sense of unreality, and sometimes convulsions and temporary loss of senses of taste and smell. Associated with lesions of uncinate gyrus.

u. gyrus. SYN: *uncinate convolution, uncus*. A gyrus of the temporal lobe consisting of recurved rostral portion of hippocampal gyrus.

unconditioned reflex. An inborn or natural reflex, one not dependent upon previous experience or training.

unconscious (ün-kön'shüs) [A.S. *un*, not, + *L. concius, conscious*], 1. Insensible; lacking in awareness of the environment. 2. State in which a person experiences no sensory impressions and has no subjective experiences. SEE: *unconsciousness*. 3. Psy. That part of our personality consisting of a complex of feelings and drives of which we are unaware and which are not available to our consciousness.

unconsciousness (ün-kön'shüs-nës) [A.S. *un*, not, + *L. concius, aware*]. State of being insensible or without conscious experiences.

Unconsciousness physiologically occurs in sleep, pathologically it may occur temporarily as in *syncope* (fainting) or be prolonged and vary in depth from *stupor* (semiconsciousness) to *coma* (profound unconsciousness).

CAUSES. Alcohol, barbiturate and bromide intoxication; brain tumor, cerebral accident (hemorrhage, thrombosis, embolism), concussion, cardiac decompensation, carbon monoxide poisoning, diabetes, epilepsy, eclampsia, fracture of skull, heat stroke, hemorrhage (esp subarachnoid), hypertensive encephalopathy, meningitis, neurosyphilis, opium poisoning, pneumonia, subdural hematoma, severe infections, uremia.

SYM. Patient unable to swallow, eyes do not react, insensible to surroundings. The cause varies considerably.

If face is flushed or if hemorrhage is present or suspected, do not lower head and do not give stimulants. In all

other instances, it is desirable to lower head and shoulders, loosen clothing and keep patient warm. Turn head to one side to prevent vomit, if any, from being drawn into lungs. Loosen clothing. Fresh air and, if necessary, artificial respiration. Look for fractures, paralysis. Test pulse, respiration, odor of breath, condition of skin and pupils of eyes. Make a diagnosis prior to further treatment.

TO MOVE AN UNCONSCIOUS PATIENT FROM STRETCHER TO BED. *Method 1* 1 Fold draw sheet in half lengthwise and place it across center of stretcher, pleating the excess and tucking the ends under for about 6 in. before patient is put on stretcher. 2 When patient is on stretcher this sheet should be under the buttocks. 3 Place stretcher parallel with bed and as close as you can get it. Get 3 other people to help you. 4 Have one person at patient's head, one at feet, one at side, and one at far side of bed. The ones at the sides take firm hold of the ends of the draw sheet and all 4 lift together, the person at the far side pulling the draw sheet toward her.

Method 2 1 This takes 3 people. 2 Place stretcher at right angles to the foot of the bed. Patient's head at end nearest bed. 3 Standing side by side the 3 people put their arms under patient, lift him, and swing him around onto the bed.

unconsciousness, words pert. to: aochlesia, aphrenia, aphronia, apoplexy, apopsychia, asphyctic, asphyxial, asphyxiation, catalepsy, collapse, coma, fainting, gas, shock, sleep, stupor, syncope, trance, twilight sleep.

uncoupling hypophysis. Hypophysis to explain action of thyroid hormone by assuming that it acts to uncouple electron transfer from oxidative phosphorylation.

unction (ûnk'shûn) [L *unctio*, ointment] 1 The application of an ointment. 2 Substance used for anointing. *SYN:* *unguent*.

unctuous (ûnk'chû-ûs) [L *unctus*, an ointment] Only, greasy.

uncus (ûn'kûs) [L *uncus*, hook] 1 Any structure that is hook-shaped. 2 Hooked ant. end of hippocampal gyrus.

undernutrition. 1 A deficiency in one or more of the essential dietary constituents. 2 As generally used, a state of nutritional deficiency principally in calories and protein.

SYM. Loss of body weight, representing at first mostly loss of body fat, then loss of protein manifested by atrophy of muscles, weakness, hypothermia, bradycardia, lowered BMR, edema, psychoneuroses.

under toe (ûn'dê-tô) [A.S. *under*, beneath, + *tê*, toe]. Condition of displacement of the great toe underneath the others.

underweight. Condition in which body weight is at least 10% less than average weight for persons of the same age, sex, height, and body build.

undifferentiation (ûn-dîf-êr-ên-shî-â'shûn) [A.S. *un*, not, + L *differens*, bearing apart]. Alteration in cell character to a more embryonic type or toward a malignant state. *SYN.* *anaplasia*.

undine (ûn'dîn). A small glass flask used for irrigating the conjunctiva and in removal of a cataract.

undinism (ûn'dîn-izm). Awakening of the libido by running water, as by urination or at sight of urine.

undulant (ûn'dû-lânt) [L *undulatus*, wavy] Rising and falling like waves, or moving like them.

u. fever. *SYN.* *brucellosis*, *Malta fever*. An infectious disease characterized by fever which rises to 104° or 105° F. in the evening and drops gradually to normal in the morning. Other symptoms are weakness, sweats, chills, anorexia, general malaise, and nervous symptoms. Caused by one of three species of *Brucella* affecting animals. *Br. abortus*, cattle, hogs; *Br. suis*, (hogs), and *Br. melitensis* (goats).

undulate (ûn'dû-lât) [L *undulatus*, wavy]. Wavy; having a wavy border with shallow sinuses, said of bacterial colonies.

undulation (ûn'dû-lâ'shûn) [L *undulatus*, wavy] A continuous wavelike motion or pulsation.

u., jugular. A venous pulse *u., respiratory.* Fluctuations in blood pressure due to respiratory movements.

ung. [L] Abbr. of *unguentum*, ointment.

ungual (ûng'gwâl) [L *unguis*, nail] Pert. to or resembling the nails. *SYN.* *unguinal*.

u. phalanx. Terminal phalanx of each finger and toe.

u. tuberosity. Spatula-shaped extremity of the terminal phalanx which supports the nails of fingers and toes.

unguent (ûng'gwënt) [L *unguentum*, ointment] A lubricant or salve for sores, burns, etc. *SYN.* *ointment*.

unguentum (ûn-gwënt'ôm) [L *unguentum*, ointment] 1 Fatty, soft, solid preparation intended to be applied to the skin by inunction. Sixteen ointments are official.

2 Simple ointment. *SYN.* *ointment*, *q v*.

ungues (ûng'gwêz) (sing *unguis*) [L]. The nails. *SEE* *unguis*.

unguis (ûng'gwîs) (pl *ungues*) [L *unguis*, nail] 1 A finger- or toenail. *SYN.* *onyx*. 2 The lacrimal bone. 3 Pus mass in cornea. 4 A white prominence on floor of the lateral ventricle's post horn. *SYN.* *hippocampus minor*.

u. incarnatus. An ingrowing nail, esp a toenail.

ungula (ûng'gw-lâ) [L *ungula*, claw] Instrument for removal of dead fetus.

uni- [L] Combining form meaning *one*.

unicellular (û'nî-sêl'yû-lar) [L *unus*, one, + *cellula*, a little box]. Having only 1 cell.

unicorn (û'nî-korn) [" + *cornû*, horn]. Having a single cornu or horn.

u. uterus. A uterus with but 1 horn perfectly formed.

unicornuous (û'nî-kor'nûs) [" + *cornû*, horn]. Having but 1 horn or cornu.

unigravida (û'nî-grâv'î-dâ) [" + *gravidâ*, pregnant] Woman who is pregnant for the first time.

unilateral (û'nî-lâ'têr-al) [L *unus*, one, + *latus*, later-, side]. Affecting or occurring on only one side.

unilocular (û'nî-lôk'yû-lar) [" + *loculus*, a little place]. Having but one cavity.

uninuclear, uninucleate (û'nî-nû'klê-âr, -ât, -â-têd) [" + *nucleus*, a kernel]. Having only one nucleus.

unilocular (û'nî-ôk'yû-lar) [" + *oculus*, eye]. Pert. to or having only one eye.

union (ûn'yûn) [L *unio*, oneness, union].

1 Act of joining. 2 or more things into 1 part, or state of being so united. 2. Growing together of severed or broken parts, as of bones or lips of a wound. *SEE:* *healing*.

u. of granulations. A healing by third°

intention with wound filling up with granulations.

u. non-. Failure to unite, as a fractured bone.

u. secondary. A healing by second* intention with adhesion of granulating surfaces

u. vicious. Union of ends of a broken bone in such a way as to cause deformity.

unioval (û'nî-ô'vål) [L. *unus*, one, + *ovum*, egg] Developed from 1 ovum, as identical twins

unipara (û-nîp'â-râ) [' + *parere*, to bring forth]. A woman who has had only 1 child.

uniparous (û-nîp'â-rûs) [' + *parere*, to bring forth] 1 Having produced but 1 child. 2. Giving birth to 1 offspring at a time

unipolar (û'nî-pô'lar) [L. *unus*, one, + *polus*, pole] 1 Having or pertaining to one pole. 2. Having a single process as a *unipolar neuron*

unit (û'nî) [L. *unus*, one]. 1. One of anything. 2. A determined amount adopted as a standard of measurement

u. Allen Doisy. See. *unit, mouse; unit, rat*.

u. amboceptor. The smallest amount of amboceptor required in the presence of which a given quantity of red blood corpuscles will be dissolved by an excess of complement

u. Angstrom. An internationally adopted unit of measurement of wave length, 1/10,000,000 of a millimeter, or 1/254,000,000 of an inch

u. antigen. Smallest quantity of antigen required to fix 1 unit of complement, preventing hemolysis

u. antitoxic. The amt of antitoxin needed to neutralize 100 times the least fatal dose of standard toxin that will kill a guinea pig weighing 250 Gm

u. British thermal. The amt of heat necessary to raise 1 pound of water at 39° F. one degree.

u. candlepower. See. *light unit*.

u. of capacity. Capacity of a condenser which gives a difference of potential of 1 volt when charged with 1 coulomb. Syn. *curie, farad*

u. cat. The amount of a drug per kg of weight of animal just sufficient to kill a cat when injected intravenously slowly and continuously

u. complement. Smallest quantity of complement required for hemolysis of a given amount of red blood corpuscles with 1 amboceptor unit present

u. electrical. See. *ampere, ohm, volt, watt, etc.*

u. Hampson. An x-ray unit of measurement. 1/4 the erythema dose

u. hemolytic. The amount of inactivated immune serum which causes complete hemolysis of 1 cc of a 5% emulsion of washed red blood corpuscles, in the presence of complement

u. Holzknacht. An x-ray unit of measurement, 1/5 the erythema dose. Abbr: *H.*

u. immunizing. See. *antitoxic unit*.

u. international, of vitamin A. The vitamin activity of 0.0008 mg of the international standard carotene

u. I. of vitamin B. The vitamin activity of 10 mg of the international standard absorption product

u. I. of vitamin C. The vitamin activity of 0.05 mg of the international standard levo-ascorbic acid

u. I. of vitamin D. The vitamin activity of 1 mg. of the international

standard solution of irradiated ergosterol (0.025 mg. crystalline vitamin D)

u. Kienbock. Measurement of x-ray dosage, 1/10 the erythema dose

u. light. A foot-candle, or the amount of light 1 ft. from a standard candle

u. Mache. Unit of measurement of radium emanation. Abbr: *M u*

u. mouse. Least amount of estrus-producing hormone which induces, in a spayed mouse, a characteristic desquamation of the vaginal epithelium

u. physical. See. *coulomb, erg, dyne, household measures, metric system, apothecaries' s, avoirdupois s, troy weight*.

u. radiation. See: *unit, Angstrom, unit, Mache*.

u. rat. Greatest dilution of an estrus-producing hormone which will cause desquamation and cornification of vaginal epithelium during 1st day, if given to a mature spayed rat in 3 injections, 1 every 4 hours

u. toxic. 1. Lowest dose of diphtheria toxin which in 3-4 days will kill a guinea pig weighing 250 Gm. 2. The amount of scarlet fever toxin that gives a positive reaction in susceptible persons when injected intradermally or no reaction in immune individuals

u. X-radiation. The international unit is the quantity of X-radiation which, when the secondary electrons are fully utilized, and the wall effect of the chamber is avoided, produces in 1 cc. of atmospheric air at 0° C and 76 cm mercury pressure, such degree of conductivity that 1 electrostatic unit of charge is measured at saturation current. Designated by the small letter "r."

u. x-ray. See. *Kienbock u*

unitarian (û-nî-târ-i-an) [L. *unitarius*]

Composed of a single unit

u. theory. That of Bordet that assumes only 1 alexin or complement in the serum of an animal, despite the fact that the alexins in different species differ

unitary (û'nî-târ-i) [L. *unitarius*]. Relating to a unit. Syn. *unitarian*

uniterminal (û'nî-ter'mîn-ål) [L. *unus*, one, + *terminus*, end] Having only 1 terminal. See. *monoterminial*.

univalent (û'nî-vål'ent, u-nîv'ål-ënt) [' + *valens*, to be powerful]. 1. Possessing the power of combining or replacing 1 atom of hydrogen. 2. Single, noting a chromosome which lacks or falls to unite with a synaptic mate

universal (û'nî-ver'sål) [L. *universalis*, combined into one whole]. General.

u. antidote. 2 parts powdered charcoal; 1 part tannic acid; 1 part magnesium oxide. Give 1 heaping teaspoonful in warm water and repeat as necessary. Use in cases of poisoning where specific antidote is unknown or unavailable

u. donor. A person belonging to blood group O whose blood as a rule may be transfused without danger of untoward reactions into persons belonging to any of the other blood groups

u. recipient. A person belonging to blood group AB, whose serum will not agglutinate the cells of any blood group

unofficial (ûn-of-îsh'ål) [A.S. *un*, not, + L. *officialis*, doing work]. Not listed by the pharmacopoeia or National Formulary, with reference to drugs.

unorganized (ûn-or'gân-îzd) [' + L. *organizare*, to form a structure]. 1. Not organized into an organic structure. 2. Without the characteristics of a living organism; inorganic.

unsaturated (ûn-săt'û-răt'éd) [" + L. *saturare*, to satel. 1. Capable of dissolving or absorbing to a greater degree. 2. Not combined to the greatest possible extent

u. compound. An organic compound having double or triple bonds between the carbon atoms

unsex (ûn-sěks') [AS *un*, not, + L. *sextus*, sex] To castrate, to spay or excise the ovaries.

unstriated (ûn-strî'ât-éd) [" + *striatus*, striped]. Unstriped, as smooth muscle fiber.

unwell (ûn-wěl') [" + *well*] 1. Sick, ill; indisposed 2. Menstruating

upsiloid (ûp'sî-loyd) [G *upsilon*, letter U, + *eidos*, form] Shaped like the letter U or V.

urachal (û'ră-kăl') [G *ourachos*, fetal urinary canal] Relating to the urachus
urachus (û'ră-kus) [G *ourachos*, fetal urinary canal] An epitheloid cord surrounded by fibrous tissue extending from apex of bladder to umbilicus. In the embryo it is continuous with the allantoic stalk, postnatally it forms the middle umbilical ligament (of the bladder).

u., patent. Condition in which urachus remains as a hollow tube connecting vertex of bladder with umbilicus resulting in an umbilical urinary fistula

uracrasia (û-ră-kră'sî-ă) [G *ouron*, urine, + *akrasia*, incontinence] 1. A disordered condition of urine 2. Inability to retain the urine SYN *enuresis*

uracratia (û-ră-kră'sî-ă) [G *ouron*, urine, + *akratia*, incontinence] Incontinence of the urine SYN *enuresis*

uragogue (û'ră-gog) [" + *agogos*, leading] Increasing the secretion of urine SYN *diuretic*.

uranalysis (û'răn-ăl'is-ls) [G *ouron*, urine, + *ana*, apart, + *lysis*, a loosening] Urinalysis, *q v*

uranisconitis (û-răn-ls'kon-i'tis) [G *ouraniskos*, palate, + *-itis*, inflammation] Inflammation of the palate

uraniscoplasty (û-răn-ls'kô-plăs'tî) [" + *plassein*, to form] Operation for repair of cleft palate. SYN *uranoplasty*, *uranorrhaphy*

uraniscorrhaphy (û-răn-ls'kor'ră-fi) [" + *raphē*, a seam] Operation for suturing of a cleft palate SYN *uraniscoplasty*

uraniscus (û-răn-ls'kûs) [G *ouraniskos*, palate] Palate, or roof of mouth.

uranism (û-răn-lzm) [G. *ouranos*, heaven, + *-ismos*, condition] Unnatural sex relations bet. males SYN *urningism*, *q v*.

uranist (û-răn-lst) [G. *ouranos*, heaven]. A male homosexual. SYN. *urning*.

uranium (û-ră-nî-um) [G. *ouranos*, sky]. SYMB U Primary radioactive element, the parent of radium and other radioelements. At wt 238.07, at no 92.

uranoplasty (û-răn-ô-plăs'tî) [G. *ouranos*, palate, + *plassein*, to form] Operation for cleft palate SYN *uraniscoplasty*

uranoplegia (û-răn-nô-plē'gî-ă) [G. *ouranos*, vault, + *plēgē*, stroke] Paralysis of muscles of the soft palate.

uranorrhaphy (û-răn-or'ră-fi) [" + *raphē*, a seam]. Operation for suture of a cleft palate SYN *uraniscorrhaphy*.

uranoschisis (û-răn-ôs'kîs-ls) [" + *schisis*, a fissure]. Cleft palate

uranostaphyloplasty (û'răn-ô-stăf'il-ô-plăs'tî) [" + *staphylē*, uvula, + *plassein*, to form]. Operation for correction of a defect of the soft and hard palates.

uranostaphylorrhaphy (û'răn-ô-stăf-il-or'-ă-fi) [" + " + *raphē*, a seam]. Operation for repair of cleft of hard and soft palates

uraroma (û-ră-rô'mă) [G *ouron*, urine, + *aroma*, spice]. Aromatic, spicy odor of the urine.

urase. Urease, *q v*

urate (û'răt) [G *ouron*, urine]. Combination of uric acid with a base, a salt of uric acid

Urates in urine insignificant unless excessive. Urates can be dispersed by boiling the urine. SEE *anturatic*

uratemia (û'ră-tē'mî-ă) [" + *aima*, blood].

Urates, esp sodium urate, in the blood.

uraturia (û'ră-tû-rî-ă) [G *ouron*, urine]. Excess of urates in the urine. SYN: *lithuria*

urceiform (ûr-se'î-form) [L *urceus*, pitcher, + *forma*, shape] Pitcher shaped
urea (û-rē-ă) [G *ouron*, urine] The diamide of carbonic acid, a crystalline solid having the formula CO(NH₂)₂, found in blood, lymph, and urine.

It is formed principally in the liver from ammonia derived from amino acids by deamination. It may also be formed directly from arginine

It is the chief nitrogenous constituent of urine and final product of protein metabolism in the body, and carrying off 85% of the nitrogen excreted

It is without odor and is colorless, appearing as white prismatic crystals, and forming salts with acids. Its excess is one of the causes of *uremia*, *q v*. The amount excreted per day varies from 20-70 Gm., or about an ounce (32 Gm.) on the average. The amount of excreted urea is less on a low protein diet. From 8 to 10 Gm per day may be excreted on a low protein diet of 50 Gm. per day.

USES As a diuretic

DOSEAGE 8-60 gr (0.5-4.0 Gm.).

INCOMPATIBILITIES Chloral hydrate, lead acetate

INCREASED UREA Observed in (a) fevers and loss of weight, (b) in increased protein intake, (c) following a large intake of water or beer, (d) during and after parturition

DECREASED UREA Observed in (a) reduced elimination, (b) low protein intake, (c) pregnancy, (d) gain in weight

U CONCENTRATION TEST Performed for estimating renal efficiency

It depends upon fact that when healthy kidneys are presented with an extra amount of urea in blood, they will excrete an equal amount of urea into urine

Method The patient urinates, and is then given a solution of 15 Gm of urea in 2 or 3 oz of water to drink. After 1 hr patient urinates again, and also after the 2nd hr. The 2 specimens are then tested for the amount of urea, which should rise above 2%.

u. clearance. The number of cc of plasma which contain urea eliminated in one min. of renal activity. Normally about 75.

u. frest. White flaky deposits of urea seen on skin in cases of advanced *uremia*

u. nitrogen. Abbr. *BUN* The nitrogen of urea as distinguished from nitrogen in blood proteins

ureagenetic (û-rē-ă-jēn-ēt'îk) [urea + G. *genesis*, production] Pert. to or producing urea.

ureal (û-rē-ăl') [urea from G. *ouron*, urine] Relating to or containing urea.

ureameter (û-rē-ăm'ter-er) [urea + G. *metron*, a measure]. Device for deter-

mining amount of urea in urine. **SYN:** *ureometer*

ureametry (û-rê-âm'êt-rî) [urea + *G. metron*, a measure]. Determination of amt of urea in urine.

ureapoeisis (û-rê-â-poy-ê'sis) [urea + *G. poeisis*, formation] Formation of urea. **SYN** *ureopoeisis*

urease (û-rê-âs) [urea, from *G. ouron*, urine] An enzyme which accelerates hydrolysis of urea into ammonium carbonate and hippuric acid into glycocholic and benzoic acid

It is found in alkaline fermentation of urine, produced by many microorganisms, and is also found in seeds, as the soybean

It is used in determining the amount of urea in blood or in urine

ureccchysis (û-rêk'is-is) [*G. ouron*, urine, + *ekchysis*, a pouring out] Effusion of urine into areolar tissue

uredema (û-re-dê'mâ) [' + *oidema*, a swelling] Urine in the subcutaneous tissues distending them

uredo (û-rê-dô) [*L. uredo*, a blight] 1. Burning sensation in the skin 2. Skin disorder marked by smooth, white elevations which itch severely **SYN** *hives*, *urticaria*, *q.v.*

ureide (û-rê-îd) [urea from *G. ouron*, urine] Any compound of urea in which acid radicals have taken the place of 1 or more of its hydrogen atoms

urelcosis (û-rêl-kô'sis) [' + *eklôsis*, ulceration]. Ulceration of the urinary tract

uremia (û-rê-mî-â) [*G. ouron*, urine, + *aima*, blood] Toxic condition associated with renal insufficiency and the retention in the blood of nitrogenous substances normally excreted by the kidney. **SEE** *azotemia*

UROL Result of disturbed kidney metabolism seen in nephritis and due to suppression or deficient secretion of urine from any cause

SYM: Nausea, vomiting, headache, dizziness, dimness of vision, coma or convulsions, urinous odor of breath, and perspiration Stupor, stertorous respiration No change in pupillary reaction; dry skin, hard, rapid pulse, elevated blood pressure, scanty urine containing casts and albumin There is a reduction of urea, and presence of tube casts in uremic coma **SEE** *coma*, *uremic*

u., extrarenal. Uremia, prerenal, *q.v.*

u., prerenal. Uremia occurring not as a result of primary renal disease but due to other conditions such as disturbances in circulation, fluid balance, or metabolism arising in other parts of the body Also called *prerenal azotemia*

uremic (û-rê-mîk) [*G. ouron*, urine, + *aima*, blood] Pert to or caused by uremia.

uremide (û-rê-mîd) [' + *aima*, blood]. The skin lesions of uric acid poisoning

uremigenic (û-rê-mî-jên'îk) [' + *gennan*, to produce] Caused by uremia or producing it

ureometer (û-rê-ôm'êt-êr) [*G. ouron*, urine, + *metron*, a measure] Appliance used to determine the amt. of urea in urine. **SYN.** *ureameter*.

ureometry (û-rê-ôm'êt-rî) [' + *metron*, a measure]. Estimation of amt. of urea in urine.

ureopoeisis (û-rê-ô-poy-ê'sis) [' + *poeisis*, formation]. Formation of urea. **SYN:** *ureapoeisis*.

ureythrins (û-rêr'î-thrîn) [' + *erythros*, red]. A red pigment in the urine in

rheumatic and certain other fevers. **SYN** *uroerythrin*

uresiæsthesia, uresiæsthesis (û-rê'sî-ês-thê-zî-â, -sis) [*G. ourêsis*, urination, + *aisthêsis*, sensation] The normal inclination to void urine

uresis (û-rê'sis) [*G. ourêsis*, urination]. The excretion of urine **SYN:** *urination*.

ureter (û-rê-ter, û-rê'têr) [*G. ourêtêr*, ureter] One of 2 tubes carrying urine from the kidneys to the bladder, beginning with the pelvis of the kidney, and emptying into the base of the bladder

Each ureter averages about 11 inches in length and about 1/4 in in diameter Its wall consists of three layers the mucous, muscular, and fibrous coats

RS *autonephrectomy*, *kidney, urelcosis*, "uret-" words.

ureteralgia (û-rê-ter-âl'jî-â) [*G. ourêtêr*, ureter, + *algos*, pain] Pain in the ureter

uretercystoscopy (û-rê'têr-sîs'tô-skôp) [' + *kystis*, bladder, + *skopein*, to examine] A cystoscope combined with a ureteral catheter

ureterectasis (û-rê'têr-êk'tâ'sis) [' + *ektasis*, dilatation] Dilatation of the ureter

ureterectomy (û-rê'têr-êk'tô-mî) [' + *ektomê*, excision] Excision of a ureter

ureteritis (û-rê'têr-î'tis) [' + *-itis*, inflammation] Inflammation of the ureters

ureterocele (û-rê'têr-ô-sêl) [*G. ourêtêr*, ureter, + *kêlê*, hernia] Cystlike dilatation of ureter near its opening into the bladder usually due to congenital stenosis of ureteral orifice

ureterocolostomy (û-rê'têr-ô-kô-lôs'tô-mî) [' + *kôlon*, colon, + *stoma*, passage] The implantation of the ureter into the colon

ureterocystoneostomy (û-rê'têr-ô-sîs'tô-ô-s'tô-mî) [*G. ourêtêr*, ureter, + *kystis*, bladder, + *neos*, new, + *stoma*, passage] Ureteroneocystostomy.

ureterocystostomy (û-rê'têr-ô-sîs'tô-s'tô-mî) [' + *kystis*, bladder, + *stoma*, passage] Ureteroneocystostomy

ureterodialysis (û-rê'têr-ô-dî-âl'î-sis) [' + *dialysis*, a separation]. Rupture of a ureter **SYN:** *ureterolysis*

ureteroenterostomy (û-rê'têr-ô-ên-ter-ô-s'tô-mî) [' + *enteron*, intestine, + *stoma*, passage]. Formation of a passage bet. a ureter and the intestine.

ureterography (û-rê'têr-ôg'râ-fî) [' + *graphein*, to write]. X-ray photography of the ureter after injection of some opaque substance into the ureter

ureterohydronephrosis (û-rê'têr-ô-hî'drô-nê-frô'sis) [' + *ydor*, water, + *nehros*, kidney, + *osis*] Dilatation of ureter and pelvis of kidney resulting from an obstruction, either mechanical or of an inflammatory nature, in the urinary tract.

ureterolith (û-rê'têr-ô-lîth) [' + *lithos*, stone]. A stone or calculus in the ureter.

ureterolithiasis (û-rê'têr-ô-lîth-î-âs-is) [' + *-iasis*, condition] Development of a calculus in the ureter.

ureterolithotomy (û-rê'têr-ô-lîth-ô-tô-mî) [' + *-tô-mê*, a cutting]. Surgical incision for removal of a calculus from ureter.

ureterolysis (û-rê'têr-ô-lî-sis) [*G. ourêtêr*, ureter, + *lysis*, loosening]. 1. Rupture of the ureter **SYN:** *ureterodialysis*. 2. Paralysis of the ureter. 3. The process of loosening adhesions around the ureter.

ureteroneocystostomy (û-rê'ter-ô-nê-ô-sis-tôstô-mî) [" + *neos*, new, + *kystis*, bladder, + *stoma*, passage] Surgical formation of a new passage bet a ureter and the bladder. **Syn:** *ureterocystoneostomy*, *ureterocystostomy*.

ureteroneopyelostomy (û-rê'ter-ô-nê-ô-pî-ê-lôs-tô-mî) [" + " + *pyelos*, pelvis + *stoma*, passage] Excision of a portion of the ureter with attachment of the severed end of the lower portion to a new aperture in the renal pelvis. **Syn:** *ureteropyeloneostomy*.

ureteronephrectomy (û-rê'ter-ô-nef-rêk-tô-mî) [" + *nephros*, kidney, + *ektomê*, excision]. Removal of a kidney and its ureter.

ureteropathy (û-rê'ter-ôp-â-thî) [" + *pathos*, disease]. Any diseased condition of the ureter.

ureterophlegma (û-rê'ter-ô-flêg-mâ) [" + *phlegma*, phlegm] Mucous accumulation in the ureter.

ureteroplasty (û-rê'ter-ô-plâs-tî) [" + *plassein*, to form] Plastic surgery of the ureter.

ureteroproctostomy (û-rê'ter-ô-prôk-tôs-tô-mî) [G *ourêter*, ureter, + *prôktos*, anus, + *stoma*, passage] Formation of a passage from the ureter to the anus.

ureteropyelitis (û-rê'ter-ô-pî-êl-î-tîs) [" + *pyelos*, pelvis, + *-itis*, inflammation] Inflammation of the pelvis of the kidney and a ureter.

ureteropyeloneostomy (û-rê'ter-ô-pî-êl-ô-nê-ôs-tô-mî) [" + " + *neos*, new, + *stoma*, passage] Ureteroneopyelostomy.

ureteropyelonephritis (û-rê'ter-ô-pî-êl-ô-nef-rî-tîs) [" + " + *nephros*, kidney, + *-itis*, inflammation] Inflammation of the renal pelvis and the ureter.

ureteropyeloplasty (û-rê'ter-ô-pî-êl-ô-plâs-tî) [" + " + *plassein*, to mold]. Plastic surgery of the ureter and renal pelvis.

ureteropyosis (û-rê'ter-ô-pî-ô-sîs) [" + *pyon*, pus, + *-ôsis*, condition] Suppurative inflammation within a ureter.

ureterorrhagia (û-rê'ter-ô-râ-jî-â) [" + *-rrhagia*, from *rhégnai*, to burst forth] Hemorrhage from the ureter.

ureterorrhaphy (û-rê'ter-ô-râ-fî) [G *ourêter*, ureter, + *rhaphê*, a seam] Suture of the ureter, as for fistula.

ureterosigmoidostomy (û-rê'ter-ô-sîg-moyd-ôs-tô-mî) [" + *sigma*, letter S, + *eidos*, shape, + *stoma*, passage] Surgical implantation of the ureter into the sigmoid flexure.

ureterostenosis (û-rê'ter-ô-stên-ô-sîs) [" + *stenôsis*, a narrowing] Stricture of a ureter.

ureterostomy (û-rê'ter-ôstô-mî) [" + *stoma*, passage] Formation of a permanent fistula for drainage of a ureter.

ureterotomy (û-rê'ter-ô-tô-mî) [" + *tomê*, a cutting]. Incision or surgery of the ureter.

ureteroureterostomy (û-rê'ter-ô-û-rê'ter-ôstô-mî) [G *ourêter*, ureter, + *ourêter*, ureter, + *stoma*, passage]. 1. Formation of a connection from 1 ureter to the other. 2. Reestablishment of a passage bet. the ends of a divided ureter.

ureterovaginal (û-rê'ter-ô-vâjî-nâl) [" + *L. vagina*, sheath]. Relating to a ureter and the vagina, noting a fistula connecting them.

ureterovesical (û-rê'ter-ô-vêsi-kâl) [" + *L. vesica*, bladder]. Pert. to a connection bet. the ureter and the bladder.

ureterovesicostomy (û-rê'ter-ô-vêsi-kôs-tô-mî) [" + " + *G stoma*, passage]. Reimplantation of a ureter into the bladder.

urethra (û-rê'thrâ) [G. *ourêthra*, urethra]. A canal for the discharge of urine extending from the bladder to the outside. In the female its orifice lies in the vestibule between vagina and clitoris; in the male, the urethra trans-

URETHRA, INTERIOR OF MALE, SHOWING THE FLOOR

- 1 Bell's muscle
- 2 Interuretic ridge
- 3 Internal trigone
- 4 Left ureteric opening
- 5 Crest
- 6 Opening of utricle
- 7 Prostate gland in section (surrounding prostatic portion of urethra)
- 8 Membranous portion of urethra

verses the penis opening at the tip of the glans penis. In the male it carries semen as well as urine.

Its inner lining, the *mucosa*, is thrown into folds and contains openings of *lacunae* into which *glands* of *Littre* open. Surrounding the *mucosa* is a *lamina propria* containing many elastic fibers and blood vessels, outside of which is an indefinite muscular layer *u. muliebris*. BNA The female urethra.

u. virilis. BNA The male urethra. **urethra, words pert. to:** *aerourethroscopy*, *anaspadias*, *ankylourethria*, *atreturethria*; *blennurethria*, *bulb*, *bulbourethral glands*, *Carcassonne's ligament*; *corpus spongiosum*, *gleet*, *habenula urethralis*, *hypospadias*, *meatus urinarius*, *Skene's glands*, *urelcosis*, "ureth-" words

urethral (û-rê-thrål) [G *ourêthra*, *urethra*] Relating to the urethra

urethralgia (û-rê-thrål'jî-â) [G *ourêthra*, *urethra*, + *algos*, pain]. Urethral pain; pain in the urethra

urethralgia (û-rê-thrål-trê-zî-â) [" + *atrêsis*, imperforation] Occlusion, or imperforation of the urethra

urethrectomy (û-rê-thrêk'tô-mî) [" + *ektomê*, excision] Surgical excision of the urethra or part of it

urethrophraxis (û-rê-thrêm-frâk'sîs) [" + *emphraxis*, obstruction] Urethral obstruction. SYN *urethrophraxis*.

urethreurynter (û-rê-thrê-rînt'er) [" + *eurynein*, to dilate]. Appliance for dilating the urethra

urethrisms, **urethrisms** (û-rê-thrîzm, û-rê-thrîzm's) [" + *-ismos*, condition] Irritability or spasm of the urethra

urethritis (û-rê-thrî'tîs) [G *ourêthra*, *urethra*, + *-itis*, inflammation] Inflammation of the urethra

u., anterior. Inflammation of that portion of the urethra ant to the ant. layer of the triangular ligament

u., gonococcal. U caused by gonococcus.

u., posterior. Inflammation of membranous and prostatic portions of the urethra

u., simple. Catarrhal inflammation of the urethra. SYN *blennorrhœa*

u., specific. Urethritis occurring in gonorrhœa

urethro- [G.]. Combining form meaning *urethra*.

urethrocele (û-rê-thrô-sêl) [G *ourêthra*, *urethra*, + *kêlê*, hernia] 1 Pouchlike protrusion of the urethral wall in the female. 2 Thickening of connective tissue around the urethra in the female

urethrocystitis (û-rê-thrô-sîs-tî'tîs) [" + *kystis*, bladder, + *-itis*, inflammation]. Inflammation of urethra and bladder

urethrography (û-rê-thrôgrâ'fî) [" + *graphein*, to write]. X-ray photography of the urethra, after the injection of an opaque medium

urethrometer (û-rê-thrôm'et-er) [" + *metron*, a measure]. Instrument for measuring diameter of urethra or lumen of a stricture.

urethropenile (û-rê-thrô-pê-nîl) [" + *L. penis*, penis] Relating to the urethra and penis

urethropenineal (û-rê-thrô-pêr-l-nê-âl) [" + *perinaion*, perineum]. Relating to the urethra and perineum

urethropenineoscrotal (û-rê-thrô-pêr-l-nê-ô-skrô'tâl) [" + " + *L. scrotum*, pouch]. Relating to the urethra, perineum, and scrotum.

urethrophraxis (û-rê-thrô-frâk'sîs) [G. *ourêthra*, *urethra*, + *phrassein*, to obstruct]. Urethral obstruction. SYN: *urethremphraxis*.

urethrophyma (û-rê-thrô-fl'mâ) [" + *phyma*, growth]. A neoplasm in the urethra.

urethroplasty (û-rê-thrô-plâs'tîl) [" + *plassein*, to mold]. Reparative surgery of the urethra.

urethrorrectal (û-rê-thrô-rêk'tâl) [" + *L. rectus*, straight] Relating to the urethra and the rectum

urethrorrhagia (û-rê-thrô-râ'jî-â) [" + *-rrhagia*, from *rhegnnai*, to burst forth]. Hemorrhage from urethra

urethrorrhaphy (û-rê-thrô-râ'fî) [" + *rhaphê*, a seam] Suture of the urethra, as a urethral fistula

urethrorrhea (û-rê-thrô-rê-â) [" + *rhoia*, a flow]. Morbid discharge from the urethra

u. ex libidine. The discharge of normal glandular secretions resulting from sexual stimulation, esp that preceding sexual intercourse

urethroscope (û-rê-thrô-skôp) [G *ourêthra*, *urethra*, + *skopein*, to examine]. Device for examining interior of urethra

urethroscopic (û-rê-thrô-skôp'îk) [" + *skopein*, to examine] Relating to the urethroscope or urethroscopy

urethroscopy (û-rê-thrô-skô'pî) [" + *skopein*, to examine] An examination of the mucous membrane of the urethra with a urethroscope

urethrosppasm (û-rê-thrô-spâzm) [" + *spasmos*, a spasm]. Spasmodic stricture of the urethra

urethrostaxis (û-rê-thrô-staks'îs) [" + *staxis*, a dropping] Oozing of blood from the urethral mucous membrane

urethrostenosis (û-rê-thrô-stên-ô'sîs) [" + *stenosis*, a narrowing]. Stricture of the urethra

urethrostomy (û-rê-thrô-s'tô-mî) [" + *stoma*, opening] Formation of a permanent fistula opening into the urethra by perineal section and fixation of membranous urethra in perineum.

urethrotome (û-rê-thrô-tôm) [G *ourêthra*, *urethra*, + *tome*, a cutting]. An instrument for incision of urethral stricture.

urethrotomy (û-rê-thrô-tô'mî) [" + *tomê*, a cutting] Incision of a urethral stricture

urethrovaginal (û-rê-thrô-vâ'jî-nâl) [" + *L. vagina*, sheath]. Pert. to the urethra and vagina

uriginin (ûr'jîn-in). A proprietary mixture of 2 glucosides derived from squill

Uses. As a cardiac stimulant similar to digitalis.

DOSEAGE: From 1-3 mg. per day, depending on the severity

uridyrosis (ûr-l-drô'sîs) Condition in which urinary urea, uric acid occurs in excess in sweat

uric (û'rik) [G. *ouron*, urine]. Of or pert. to urine.

u. acid. $\text{C}_5\text{H}_4\text{N}_2\text{O}_6$, a crystalline acid, occurring as an end-product of purine metabolism. It is formed from purine bases derived from nucleoproteins.

It is a common constituent of urinary and renal calculi, and gouty concretions

Output: Bet. 0.5 and 1 Gm. per day on ordinary mixed diet. Uric acid must be excreted, as it cannot be destroyed within the body.

INCREASED ELIMINATION: Observed in: (1) ingestion of proteins; (2) gout; (3) leukemia; (4) acute articular rheumatism; (5) after exercise, and (6) the ingestion of nitrogenous foods.

DECREASED ELIMINATION: Observed in (a) Nephritis; (b) chlorosis; (c) lead poisoning, (d) protein-free diet.

u. a., endogenous. Uric acid derived from purines undergoing metabolism from the nucleoprotein of body tissues.

u. a., exogenous. Uric acid derived from those purines from food made up of free purines and nucleoproteins.

SEE: *urate, uraturia.*

uricacidemia (û"rik-âs-id-ê-mî-â) [G. *ouron*, urine, + *L. acidus*, sour, + *G. aima*, blood]. Excess uric acid in the blood

uricaciduria (û"rik-âs-id-û"rî-â) [" + " + *G. ouron*, urine] Excessive amount of uric acid in the urine

uricase (û"rî-kâz) [G. *ouron*, urine, + *ase*, enzyme] A hydrolytic enzyme capable of changing uric acid into allantoin.

uricemia (û"rî-sê-mî-â) [G. *ouron*, urine, + *aima*, blood] SYN *uricacidemia*

Excess uric acid in the blood

uricocholia (û"rik-ô-kô"li-â) [" + *cholê*, bile] Uric acid in the bile.

uricolysis (u-rik-ôl'is-is) [" + *lysis*, dissolution] The decomposition of uric acid

uricolytic (û"rik-ô-lit'ik) [" + *lysis*, dissolution] Decomposing uric acid

u. index. The amt of uric acid converted into allantoin

uricometer (û-rik-ôm-ê-têr) [" + *metron*, a measure] Apparatus for quantitative estimation of uric acid in the urine

uricopoiesis (û"rik-ô-poy-ê'sis) [" + *poiê-sis*, formation] The development of uric acid

uricosuria (û-rik-ô-sû"rî-â). The excretion of uric acid or urates in the urine

uricoydase (û"rik-oks'i-dâs) [G. *ouron*, urine, + *oxys*, sharp, + *ase*, enzyme]. An enzyme capable of oxidizing uric acid

uridrosis (û-rîd-rô'sis) [G. *ouron*, urine, + *idrôsis*, a sweating]. The presence of urea in the sweat.

Left Kidney

(cut open)

Right Kidney

Evaporation may show white scales, the crystals of urinary solids.

u. crystallina. White powder of uric acid deposited on the skin.

uristhesis (û-re-ês-thê'sis) [" + *aisthê-sis*, sensation]. Normal desire to void urine.

urina (û-rî-nâ) [L] Urine.

u. cibi. Urine voided after a full meal.

u. cruenta. Bloody urine

u. galactodes. Urine of a milky color.

u. hysterica. Watery, pale urine following hysteria.

u. lumentosa. Cloudy urine

u. potus. U. voided after drinking.

u. sanguinis. U. on arising in morning uninfluenced by food or drink.

urinal (û"rî-nâl) [L. *urina*, urine] 1. A vessel for the urine 2. A toilet for the male consisting of a vessel attached to a wall

urinalysis (û-rîn-âl'is-is) [L. *urina*, urine, + *G. ana*, apart, + *lysis*, a loosening]. Analysis of the urine

urinary (û"rîn-a"rî) [L. *urina*, urine].

Pert. to secreting, or containing urine

u. bladder. Receptacle for urine before it is voided. SEE *bladder*

u. calculi. Concretions formed in the urinary passages. They contain urates, calcium, oxalate, calcium carbonate, phosphates, and cystine

u. casts. Casts of kidney tubules passed in the urine.

u. organs. The structures concerned with the secretion and excretion of urinary products, consisting of the 2 kidneys, 2 ureters, the bladder, and the urethra

u. pigments. Urochrome, urobilin, uroerythrin, and hematoporphyrin

u. reflex. Desire to void resulting from accumulation of urine in bladder.

u. sediments. Substances found in standing urine, i. e., water, phosphates, uric acid, calcium oxalate, calcium carbonate, calcium phosphate, magnesium and ammonium phosphate, more rarely, cystine, tyrosine, xanthine, hippuric acid, hematin.

u. stammering. Temporary interruptions in voiding urine.

u. stuttering. Same as *u. stammering*.

u. system. Kidneys, ureters, bladder, and urethra

urinate (û"rîn-ât) [L. *urinâre*, to discharge urine] To discharge the urine

urination (û-rîn-â'shün) [L. *urinatio*, a discharging of urine]. The act of voiding urine. SYN: *uresis*.

Although this act is somewhat under voluntary control, it is accomplished chiefly by the action of involuntary muscles. The musculus sphincter vesicae relaxes, while the general musculature of the wall of the urinary bladder contracts to force out its contents.

INCREASED FREQUENCY: Seen in polyuria, nervous excitement, irritation of bladder, urethra, or urinary meatus, disease of spinal cord; enlarged prostate in male; pregnancy in female, beer drinking; interstitial nephritis; diabetes; phimosis, adenoids, and intestinal worms in children.

DECREASED FREQUENCY: After sweating, diarrhea, or bleeding, in anuria, oliguria, uremia, brain disease, drug poisoning, coma, and parenchymatous nephritis. SEE: *urine*.

urination, words pert. to: aconuresis, acraturessis, anisuria, bacilluria, bladder, bradyuria, catheterization, chaudi-pisse, diuresis, diuretic, dysuria, enure-

sis, kidney, melanuria, micturate, micturition, nocturia, nycturia, oliguria, polyuria, strangury, uracratia, urea, "uret-" words, uric acid, "urin-" words, void

urine (ŭ'rin) [L. *urina*, from G. *ouron*, urine] The fluid secreted from the blood by the kidneys, stored in the bladder, and discharged, usually voluntarily, by the urethra

It is conveyed to the bladder by 2 ureters from the kidneys. In health, urine is of amber color, slightly acid reaction (about 30%), and it has a peculiar odor, with a bitter, saline taste, frequently depositing a precipitate of phosphates when fresh, but esp on standing, and having a specific gravity that varies bet 1.001 and 1.026

The greater the amt excreted, the lower is the specific gravity. The normal amt of nonprotein nitrogen is from 25-35 mg per 100 cc of blood.

The daily output is equally variable, being adapted to the amt. of water taken in, and to the amt lost by evaporation from the respiratory and cutaneous surfaces

Constituents of Urine

Urine consists of water (95%) and solids (5%). Solids amount to 40-50 gm per liter and include the following (figures are grams per liter):

Organic substances: urea (23), hippuric acid (0.6), uric acid (0.6), creatine (1.5), other solids (2.0) **Inorganic substances:** sodium chloride (9), potassium chloride (2.5), sulfuric acid (1.8), phosphoric acid (1.8), ammonia (0.6) calcium (0.2), magnesium (0.2). In addition to the above, many other substances may be present depending on diet and state of health of the individual. Among substances indicating pathologic states are albumin, glucose, ketone bodies, blood, pus, casts, and bacteria

Normal Amount Voided and Specific Gravity

Time	cc.	Specific Gravity
8-10 A. M.	153	1.016
10-12 A. M.	156	1.019
12-2 P. M.	194	1.012
2-4 P. M.	260	1.014
4-6 P. M.	114	1.020
6-8 P. M.	238	1.010
8-9 A. M.	375	1.020
	1490	

Diagnosis

COLOR OF URINE: Normal urine is amber color. Its color is imparted by urobilin.* A pigment mainly derived from bilirubin* in the bile. This pigment is found in more than normal quantities in fever, and it may be indicative of blood destruction. The effect of food and medication must be considered before concluding that the color of the urine reflects a pathological condition.

Black: Melanuria. Malignant pigmented tumor, melanotic cancer or carbolic acid poisoning.

Bile-colored: Seen in jaundice.

Blue: This may result from methylene blue or the presence of indigo.

Colorless urine: This is known as achromaturia.

Milky urine: May be due to chyluria, lipuria, or pus.

Orange-red urine: It may indicate the presence of pyridine dyes

Pale urine: This indicates an excess of water. It is found in conditions causing polyuria

Red or reddish color: This may be due to the presence of blood in the urine, hematuria, to senna or rhubarb, which may color the urine either brown or orange.

CONDITION OF URINE: **Acid urine:** It shows white or pinkish sediment, and may be found in tuberculosis of the kidneys, acidosis, and pyelonephritis.

Alkaline urine: This shows a white sediment.

Bacteria in urine: It appears cloudy. **Bloody urine:** It shows a smoky sediment, and is reddish-brown.

Pus in urine: This is mucoid and shows a white sediment. It is found in cystitis, severe vomiting, and obstructive gastric ulcers

ODOR OF URINE: **Ammoniacal:** This may result from decomposition products.

Aromatic urine: This is the odor of a normal urine

Fecal odor: This is due to fistulous communication bet the intestinal and urinary tracts

Fishy odor: Cystitis

New-mown hay odor: Indicative of diabetes

Overripe apple odor: Indicative of acetoneuria, or the presence of acetone bodies in the urine.

Violet odor: This may be caused by turpentine.

URINARY PRODUCTS IN DISEASE: **Albumin:** Due to nephritis and inflammation of mucous membrane of any portion of the urinary apparatus

Acetone: Its presence represents the by-products of excessive fat metabolism excreted by the kidneys and known as ketonuria.

Animal parasites: Rare, found as result of contamination

Bacteria: They have no significance in the absence of pus cells

Bile: Bile in the urine indicates retention due to obstruction of flow above the duodenum.

Blood: Indicates hemorrhagic nephritis, calculi, congestion of a kidney, renal carcinoma, tuberculous of kidney, chronic infections, and certain drugs

Casts: These indicate renal disease. A few hyaline casts in the aged denote slight damage to the kidneys. Casts are found in large numbers in nephritis. The less acute the disease, the finer are the granular casts.

Crystals: Acid urine produces crystals, calcium oxalate, and urates, alkaline urine, ammonium biurate and phosphates. Crystals have little significance, excepting leucine and tyrosine crystals which indicate yellow atrophy of the liver, or phosphorus poisoning, or other serious liver damage.

Cylindroids: They have no special significance

Diacetic acid: Indicates deficient carbohydrate metabolism of an advanced stage. It is preceded by the presence of acetone

Epithelial cells (squamous): If in large numbers from urinary bladder and ureters they indicate inflammation of these parts, **renal epithelial cells of kidney:** Serious damage to the same

Fat droplets: Indicate fatty degeneration of kidneys and lipemia.

Froth around standing urine indicates presence of bile

Indican: It has small significance but is seen in intestinal putrefaction and constipation

Lipoids, double refractile: Epstein's lipoidal nephrosis

Mucus: If visible and in quantity, urethritis is indicated. No special significance in women if the quantity is small.

Mucous threads Mucoid, ribbonlike structures of no great significance

Pus cells. Their presence may be normal if not many. If accompanied by red cells, they indicate inflammation.

Red blood cells: Stones or inflammation of kidney or urinary tract. No significance during menstruation of women.

Sediment: Pinkish due to excess of urates, white, caused by phosphates.

Sugar (glucose) Denotes faulty carbohydrate metabolism as seen in diabetes mellitus

Urea * This is the principal end product of protein metabolism.

Yeasts and molds Result of contamination. SEE: urinary conditions.

Excretion: Increased in Fevers, esp. if weight is lost, after pregnancy, during parturition, after the intake of large

URINARY CONSTITUENTS

1. Various forms of uric acid crystals. 2. Crystals of hippuric acid. 3. Mucus deposited from urine. 4. Urinary sediment of triple phosphates (large, prismatic crystals) and urate of ammonium, from urine which had undergone alkaline fermentation. 5. Crystals of cystine. 6. Crystals of calcium oxalate.

quantities of liquid and after protein intake.

Diminished in: Pregnancy, convalescence with gain in weight, in disease of the liver, and in low protein intake.

URINARY CONDITIONS. *Difficult urine.* Found in urethral stricture, enlarged prostate, atony and impairment of the bladder's muscular power, and in gonorrhea and other inflammatory conditions involving the urethra, bladder, or lower ureter.

Diminished u. (oliguria) Valvular disease of heart, degeneration of cardiac muscles. Scanty in all fevers, accompanies acute and chronic and parenchymatous nephritis, obstruction of return venous circulation of kidney thrombosis of renal vein or inf. vena cava, loss of fluids through hemorrhages, vomiting or diarrhea, obstruction or pressure upon ureter, lead poisoning, hysteria, or melancholia.

Frequent u. Excess of urea (azoturia) or of uric acid and urates (lithuria).

Reflex of renal calculus in ureter; pyelitis. May precede attack of ague, accompany angina pectoris or prove a symptom of sunstroke.

Incontinence. SYN *Enuresis.* *q.v.* Inability to retain urine (a) Paralysis or relaxation of sphincters or (b) contraction of longitudinal muscular layer of bladder. Paralysis of both a and b, retention, incontinence and dribbling are results. All forms of coma, shock, sunstroke and some forms of insanity, typhoid, typhus. Injuries to spinal cord and tumors of same and lesions, transverse myelitis, spinal meningitis, locomotor ataxia, paralysis. Reflex excitability of nervous system. Local irritation. Cystitis, phimosis, vesical calculus, meatus contracted, ascarides, diabetic or too concentrated urine. Relaxation of vesical sphincters. Hydrocyanic acid poisoning.

Increased u. (polyuria) May be indicative of chronic interstitial nephritis, diabetes (mellitus or insipidus), amyloid

Significance of Changes in Urine

Normal	Abnormal	Significance
1000-1500 cc. (96% H ₂ O)		Depends upon water and fluid foods consumed, exercise, temperature, kidney function, etc
	High (polyuria)	Diabetes mellitus, diabetes insipidus, nervous diseases, certain types of chronic nephritis (kidney disorder), diuretics (drugs as caffeine, calomel, digitalis, causing increased urinary excretion)
	Low (oliguria)	Acute nephritis, heart disease, fevers, eclampsia, diarrhea, vomiting
	None (anuria)	Uremia (urinary substances in blood), acute nephritis, metal poisoning, <i>e.g.</i> , due to bichloride of mercury.

Color

Normal	Abnormal	Significance
Yellow to amber		Depends upon concentration of pigment (urochrome).
	Pale	Diabetes insipidus, granular kidney, due to a very dilute urine.
	Milky	Fat globules, pus corpuscles in genitourinary infections
	Reddish	Blood pigments, drugs, or food pigments.
	Greenish	Bile pigment, associated with jaundice.
	Brown-black	Poisoning (mercury, lead, phenol), hemorrhages.

Transparency

Normal	Abnormal	Significance
Clear		No significance.
Cloudy on standing		Precipitation of mucin from urinary tract. Not pathological.
Turbid		Precipitation of calcium phosphate. Not pathological.
	Milky	Presence of fat globules. Pathological.
	Turbid	Presence of pus as result of inflammation of urinary tract. Pathological.

Odor

Normal	Abnormal	Significance
Faintly aromatic		No significance.
	Pleasant (sweet)	Acetone, associated with diabetes mellitus.
	Unpleasant	Decomposition or ingestion of certain drugs or foods.

Specific Gravity

Normal	Abnormal	Significance
1.015 to 1.025 sp. gr.		Ordinarily, sp. gr. inversely proportional to volume
	Low	Dilution, if volume is large, otherwise nephritis
	High	Concentrated if volume is small, otherwise if volume is large and light colored, diabetes mellitus Acute nephritis.

Acidity

Normal	Abnormal	Significance
Acid (slight)		Diet of acid-forming foods (meats, eggs, prunes, wheat, etc.) overbalancing the base-forming foods (vegetables and fruits)
	High acidity	Acidosis, diabetes mellitus, many pathological disorders (fevers, starvation).
	Alkaline	Putrefying bacteria change urea into ammonium carbonate. Infection or ingestion of alkaline compounds.

Urine: Examination of¹
 Table Giving the More Important Characters of the Urine
 in Some of the Commoner Diseases

	Names of Diseases	Condition of Urine
I.	Gastric Catarrh	Quantity normal, high colored, sp. gr. often raised; acid. Urates, oxalates, or phosphates may be deposited
II.	Jaundice	Urine greenish-brown in color, frothy, acid reaction, contains bile. Quantity and sp. gr. usually normal
III.	Heart and Lung Disease	Urine often diminished, dark in color, acid, high sp. gr. Urates deposited, albumin often present.
IV.	Fevers, General and Special	Quantity nearly always diminished, high colored, usually acid, high sp. gr., turbid; urates. May be albumin, blood and tube casts. Urea usually increased in amount.
V.	Diabetes Mellitus	Quantity increased, pale, usually acid, sweet odor; high sp. gr. Sugar in greater or less quantity. Sometimes diacetic acid and (or) acetone amount of urea usually increased
VI.	Acute Nephritis	Quantity diminished. Urine may be suppressed. Sp. gr. at first raised and lowered. Albumin; sometimes blood, tube casts, sometimes urates, urea diminished
VII.	Chronic Nephritis	Urine increased in quantity, pale; sp. gr. low. Albumin in small amount, or absent, no blood, a few tube casts.
VIII.	Chronic Cystitis	Quantity not usually altered, turbid, often alkaline and offensive. Mucus and pus (muco-pus) often present
IX.	Acute Gout	Quantity usually diminished, high colored; sp. gr. raised. Abundant deposit of urates.

¹ From *Faber's Nurses Encyclopedia*.

disease of kidney; reabsorption of effusions, functional disease of nervous system, as hysteria, neurasthenia, migraine, etc. Persistent in bulbar, cerebellar and spinal tumors, locomotor ataxia and meningitis.

Obstructive u. Result of occlusion of one or both ureters.

Painful urination. Dysuria * Vesical tenesmus. There is a persistent desire to urinate.

Residual u. That remaining in bladder after urination. Usually indicative of a pathologic condition such as prostatic disease, cystocele, etc.

Retention of u. SYN *ischuria* Inability to urinate. Almost same diseases and injuries of cord producing incontinence. All forms of coma, typhoid, in peritonitis and hysteria, atony, prostatic enlargement; urethral stricture, urethritis, cystitis or tumors of bladder or calculus in urethra.

Strangury. Painful and spasmodic. May be indicative of cystitis, neuralgia, tuberculosis, cancer or ulceration of bladder, urethritis, urethral stricture, hypertrophied, cancerous or inflamed prostate, prolapsus uteri, pelvic peritonitis and abscess, metritis, cancer of cervix, dysmenorrhea, vesical tenesmus. Pain and burning often caused by the concentrated or acid urine. May be a symptom of acute nephritis.

Suppression of u. Failure of kidneys to secrete urine. May be complete (*anuria*) or partial (*oliguria*). Failure of kidneys to secrete the urine or failure to reach the bladder if secreted may be found in acute nephritis or congestion, renal abscess, last stages of chronic nephritis. Inhalation of ether, lead, phosphorus, cantharides or turpentine poisoning, may occur in connection with Asiatic cholera, cholera infantum or cholera morbus, gastrointestinal perforations, shock or collapse. Typhoid or yellow fever, pernicious malaria, acute yellow atrophy of liver, hysteria.

SEDIMENT, HOW TO OBTAIN. The examination should be made quickly after urine is voided by centrifuging for 3 minutes, or by placing some urine in a glass with a conical base, allowing organic matter to settle by gravity. If sediment from a 24-hour specimen is to be examined, entire urine should be shaken vigorously before portions are placed in either the centrifuge tube or the sediment glass.

urine, words pert. to: acathetic, acetone; a bodies, a, tests for, acetoneuria; achromaturia, acidaminuria, acromaturia; adrenaturia, albiduria; albinuria, albuminaturia, albuminorrhea; albuminuria, albumosuria; alkalinuria, alkaluretic; alkaptone, alkaptoneuria; allantoinuria, allantoinuria, alloxuria, Almen's test; aminosuria; ammoniuria; amylosturia; amyliuria, anisuria; antidiuresis; antidiuretic, anuresis, anuria; arabinosuria; ardor urinae, azoturia, baruria; Bence-Jones albumose; Benedict's test, bilirubinuria, bladder, urinary, b, test, urine; b percussion, blemnia, blood, test for; brick dust, calculuria; carbonyluria; carbouluria; carbonuria; cast; ceramuria; cerebrospuria; chlorides, test for, chloriduria; chloruremia, chloruria; cholerythrin; choleluria; choluria; chondroituria; chromaturia; chyluria; clap threads; diacetic acid test; epithelium; erythruria; Esbach's method; galactosuria; galacturia; glucose; glycosuria; Haines formula; Heller's test; hemoglobinuria;

hippuria; hyaline casts, hydruria; incontinence, ischuria; lumentous; ketonuria; ketosis; kidney, lactosuria; lipuria; lithuria; litmus, melanuria, mucus; myosinuria; oliguresis, oxaluria, pentosuria; polydruia; pus; pyuria, residual, residuum, retention, Rothera's test; secretion; tyrosinuria; uraturia; urea; urechysis; uredema, uremia; ureter; uric acid; urinalysis, "uro-" words

urinemia (û-rîn-ê-mî-â) [L. *urina*, urine, + G. *aima*, blood] Contamination of the blood with urinary constituents SYN *uremia*, *q v*

uriniferous (û-rîn-if-êr-ûs) [+ *ferre*, to bear] Carrying urine

u. tubules. Small tubes of the kidneys for passage of kidney products.

uriniparous (û-rîn-ipâr-ûs) [+ *parere* to bear] Producing or secreting urine

urinogenital (û-rîn-ô-jên-it-âl) [+ *genitalia*, genitals] Pert to the genital and urinary organs SYN *urogenital*.

urinogenous (û-rîn-ô-jên-ûs) [+ G. *gennan*, to produce]. 1 Producing urine

2 Originating in urine SYN *urogenous*.

urinoglucometer (û-rîn-ô-glû-kôs-ôm-ê-têr) [+ G. *glukus*, sweet, + *metron*, a measure] Apparatus for estimating amt. of glucose in the urine.

urinology (û-rîn-ô-lô-jî) [+ G. *logos*, study] Scientific study of the urine. SYN *urology*

urinoma (û-rîn-ô-mâ) [L. *urina*, urine, + G. *omo*, mass.] A cyst containing urine.

urinometer (û-rîn-ôm-ê-têr) [+ G. *metron*, a measure] Device for determining urine's specific gravity.

urinometry (û-rîn-ôm-ê-têr) [+ G. *metron*, a measure] Determination of specific gravity of the urine.

urinophil (û-rîn-ô-fîl) [+ G. *philein*, to love] Capable of existing in the urine.

urinology (û-rîn-ô-s-kô-pî) [+ G. *skopein*, to examine] Examination of the urine.

urinoe, urinoe (û-rîn-ôs, û-rîn-ûs) [L. *urina*, urine]. Having the characteristics of, or containing urine.

urisolvent (û-rî-sôl-vênt) [+ *solvens*, dissolving] Dissolving uric acid or causing it to be dissolved

urning (oorn'ing) [Ger.] One exhibiting and conscious of sexual inversion. SYN: *homosexual*, *uranist* SEE *urningism*

urningism, urnism (oorn'ing-izm, oorn'izm) [Ger.] Perversion in which sexual desire is only for one of the same sex. SYN. *lesbianism*, *sapphism*, *tribadism*, *amor lesbicus*, *homosexuality*, *q v*

Lesbianism is a term applied only to the female sex. The opposite sex has no interest for urnings, but seems to inhibit the normal sexual act. Sexual hyperesthesia and paraesthesia are often present. Passionate love and dedication of the object of affection are common. Such perversion may be congenital, but in many instances it is the result of acquired habits. SEE *urningism*.

uro- [G.] Combining form meaning pert. to urine.

uroacidimeter (û-rô-âs-i-dîm-ê-têr) [G. *ouron*, urine, + L. *acidus*, sour, + G. *metron*, a measure] An apparatus for measuring the degree of acidity of the urine

urobilin (û-rô-bîl'in) [G. *ouron*, urine, + L. *bilis*, bile] A brown pigment formed by the oxidation of urobilinogen, a decomposition product of bilirubin. Urobilin may be formed in stools or in urine after exposure to air.

u. jaundice. J. said to be result of urobilin in the blood.

urobilinemia (û'rô-bî'lîn-ê'mî-â) [" + " + *G. ama*, blood]. Urobilin in blood.

urobilinicterus (û'rô-bî-lîn-ik'tér-ús) [" + " + *G. ikteros*, jaundice]. Jaundice resulting from urobilinemia. *SYN.* *urobilin jaundice*

urobilinogen (û'rô-bî-lîn-ô-jên) [" + " + *G. gennan*, to produce]. A chromogen in urine which gives rise to urobilin on oxidation

urobilinogenemia (û'rô-bî'lîn-ô-jên-ê'mî-â) [" + " + " + *G. ama*, blood]. Urobilinogen in the blood

urobilinuria (û'rô-bî'lîn-ô-rî-â) [" + " + *G. ouron*, urine]. Excess of urobilin in the urine

urocele (û'rô-sêl) [*G. ouron*, urine, + *kelê*, hernia]. Effusion of urine into the scrotum.

urocheras (û-rôk-êr-âs) [" + *cheras*, gravel]. Sand in the urine *SYN.* *urop-sammus*

urochesia (û-rô-kê'zî-â) [" + *chезin*, to defecate] A discharge of urine through the anus

urochrome (û'rô-ki-ôm) [" + *chrôma*, color] A yellow coloring matter in urine, assumed to be closely related to urobilin, which probably gives urine its color

uroclepsia (û-rô-klêp'sî-â) [" + *kleptên*, to steal] Involuntary and unconscious discharge of urine

uroclepsia (û-rô-klêp'sî-â) [" + *kleptên*, judge] A diagnosis by inspection of the urine

urocrisis (û'rô-krîs-is) [" + *krîsis*, crisis]. 1. Change (generally favorable) which supervenes in the crisis of a disease accompanied by copious urination 2. A crisis marked by excessive urination 3. Pain in bladder in locomotor ataxia

urocyanogen (û'rô-sî-ân-ô-jên) [" + *kyan*os, blue, + *gennan*, to produce]. A blue pigment in urine, esp. in cholera patients.

urocyanosis (û'rô-sî-ân-ô'sîs) [*G. ouron*, urine, + *kyan*os, blue, + *-ôsis*, condition] *SYN.* *indicanuria* Blue discoloration of the urine May be due to presence of indigo blue from oxidation of indican, or from ingestion of drugs such as methylene blue

uroedema (û'rô-ê-dê'mâ) [" + *oidêma*, a swelling] Extravasation of urine distending the tissues. *SYN.* *uredema*

uroerythrin (û'rô-er'îth-rîn) [*G. ouron*, + *erythros*, red]. A reddish pigment sometimes present in urine *SYN.* *ur-erythrin*.

uroflavin (û'rô-flâv'in) *SYN.* *aquaflavin* A fluorescent substance present in most urine samples It is a degradation product of riboflavin

urofusin (û'rô-fûs'in) A reddish-brown pigment sometimes found in samples of urine, esp. in cases of porphyrinuria

urofuscohematin (û'rô-fûs'kô-hêm-ât-in) [" + *L. fuscus*, brown, + *G. haima*, blood] A red-brown pigment in urine in some diseases

urogastrone (û'rô-gâs'trôn). A hormone-like substance present in urine which has an inhibitory effect on gastric secretion

urogenital (û'rô-jên'tî-tål) [*G. ouron*, + *L. genitalia*, genitals]. *SYN.* *urinogenital*. Pertaining to the urinary and reproductive organs.

urogenous (û-rô-jên-ús) [" + *gennan*, to produce]. *SYN.* *urinogenous* 1. Producing urine 2. Originating in urine.

uroglauin (û'rô-glâw'in) [" + *glaukos*, green]. Indigo blue, a pigment sometimes occurring in the urine, assumed to be

result of chromogen oxidation, as in *scarlatina*.

urogram (û'rô-grâm) [" + *gramma*, a mark] An x-ray photograph of any part of the urinary tract.

urography (û-rô-grâ-fî) [*G. ouron*, urine, + *graphein*, to write]. Roentgenography of any part of the urinary tract, after introduction of an opaque medium

urogravimeter (û'rô-grâv-im-êt-êr) [" + *L. gravis*, heavy, + *G. metron*, a measure]. Apparatus for estimating sp. gr. of urine. *SYN.* *urinometer*

urohematin (û'rô-hêm-ât-in) [" + *haima*, hemat-, blood]. Pigment in urine, considered as identical with hematin,* which alters color of urine in proportion to degree of oxidation.

urohematonephrosis (û-rô-hêm-â-tô-nê-frô'sîs) Pathological condition of kidney in which pelvis is distended with blood and urine

urohematoporphyrin (û'rô-hêm-ât-ô-por-fîr-in) [" + " + *porphyr*a, purple]. Iron-free hematin in urine when hemolysis occurs

urokinetic (û'rô-ki-nê'tîk). Resulting reflexly from stimulation of the urinary organs

urolagnia (û-rô-lâg-nî-â). Sexual excitation resulting from seeing urine or watching a person urinating.

urolith (û-rô-lîth) [" + *lithos*, stone]. A concretion in the urine

urolithiasis (û'rô-lîth-i-âs-is) [" + " + *iasis*, condition]. Formation of urinary calculi *SEE* *calculus, renal*.

urolithology (û'rô-lîth-ôl'ô-jî) [" + " + *logos*, a study]. Science dealing with urinary calculi

urologic (û-rô-lôj'îk) [*G. ouron*, urine, + *logos*, study] Pert to urology.

urologist (û-rô-lô-jîst) [" + *logos*, a study] One who specializes in the practice of urology

urology (û-rô-lô-jî) [" + *logos*, a study] The science dealing with the urine and diseases of the urogenital organs

urolutein (û'rô-lû'te-in) [" + *L. luteus*, yellow]. A yellow pigment seen in the urine

uromelanin (û-rô-mêl-ân-in) A black pigment occurring in urine resulting from the decomposition of urochrome

urometer (û-rôm-êt-êr) [" + *metron*, a measure] Instrument for determining specific gravity of urine. *SYN.* *urinometer*

urancus (û-rôn'kûs) [" + *ogkos*, a mass]. A swelling or cyst containing urine

uronephrosis (û'rô-nêf-rô'sîs) [*G. ouron*, urine, + *nephros*, kidney, + *-ôsis*, condition]. Dilatation of renal structures from obstruction of urinary flow Distention of renal pelvis and tubules with urine *SYN.* *hydronephrosis*

uronology (û-rôn-ôl'ô-jî) [" + *logos*, a study] The science of urine and genitourinary diseases *SYN.* *urology*

uronometry (û'rôn-ôn-kôm-ê-trî) [" + *ogkos*, mass, + *metron*, a measure]. Measurement of amt of urine voided in 24 hours

uronophile (û-rôn-ô-fîl) [" + *phîlan*, to love] Developing best in a culture containing urine, noting a microorganism.

uropathy (û-rôp-â-thî) [" + *pathos*, disease]. Any disease affecting the urinary tract.

u., obstructive. Any disease resulting from obstruction of the urinary tract.

uropenia (û-rô-pê-nî-â) [" + *penia*, a lack]. Lack of urinary secretion.

urophan (û-rô-fân). A substance which when taken into the body appears unchanged in the urine

urophanic (û-rô-fân'ik) [+ *phainein*, to appear]. Appearing in the urine

urophain, **urophaein** (û-rô-fê'in) [G *ouron*, urine, + *phaios*, gray] Gray pigment in urine said to cause its characteristic odor.

urophosphometer (û-rô-fôs-fôm'ê-têr) [+ *L phosphas*, phosphorus] Device for estimating amt. of phosphorus in the urine.

uropiania (û-rô-plâ'nî-â) [+ *planê*, a wandering]. Condition in which urine is present or discharged from parts other than the urinary organs

uropoiesis (û-rô-poy-ê'sis) [+ *poiêsis*, production]. Secretion of urine by the kidneys

uropoietic (û-rô-poy-ê't-ik) [+ *poiein*, to form]. Concerned in the formation of urine, or uropoiesis

uroporphyrin (û-rô-por'fr-in). A reddish pigment present in the urine and feces in cases of porphyria. May also be present in other conditions such as carcinomatosis, Hodgkin's disease, systemic infections, liver disease, or other disorders

uropsammas (û-rô-sâm'ûs) [+ *psammos*, sand] Gravel in urine.

uropytis (û-rôp'tis-is) [+ *pytis*, a splitting] Urination through the mouth

uropyonephrosis (û-rô-pi-ô-nêf-rô'sis) [G. *ouron*, urine, + *pyon*, pus, + *nephros*, kidney, + -osis, condition] Urine and pus in the renal pelvis

uropyoureter (û-rô-pl'ô-û-rê'têr) [+ *ourêter*, ureter] Mass of urine and pus in the ureter

urorosein (û-rô-rô-zê'in) [+ *L roseus*, rosy]. A rose-colored pigment in urine, which is increased in certain diseases. SYN *urorrhodin*

urorrhagia (û-ror-â'ji-â) [+ *-rrhagia*, a flowing]. Excessive secretion of urine. SYN *polyuria*

urorrhea (û-ror-rê'â) [+ *rhoia*, a flow]. Involuntary flow of urine. SYN *enuresis*

urorrhodin (û-rô-rô'dîn) [+ *rhodon*, rose]. A rose-colored pigment in the urine. SYN *urorosein*, *q.v.*

urorrhodinogen (û-rô-rô-dîn'ô-jên) [+ *gennan*, to produce]. A chromogen of the urine which, when decomposed, forms urorrhodin

urorubin (û-rô-rû'bîn) [G *ouron*, urine, + *L. ruber*, red]. A red pigment obtained from urine, by treatment with hydrochloric acid

urosubrohematin (û-rô-rû'brô-hêm'â-tîn) [+ *haima*, *haemat-*, blood] A reddish pigment occasionally found in the urine in some chronic diseases.

urosac (û-rô'sa-sîn) [G. *ouron*, urine]. A red pigment in the urine. SYN: *urorrhodin*

uroschecele (û-rôs'kê-ô-sêl) [G *ouron*, urine, + *oscheon*, scrotum, + *kêlê*, mass] Swelling of scrotum from extravasation of urine into scrotal sac SYN: *urocele*

uroschesis (û-rôs'kê-sis) [+ *schesis*, a holding]. 1. Suppression of urine. 2. Retention of the urine.

uroscopy (û-rôs'kô-pl) [+ *skopein*, to examine] 1. Examination of the urine. 2. Diagnosis by examination of the urine.

uroselectan (û-rô-sê-lêk'tân) [G *ouron*, urine]. A pyridine derivative for intravenous pyelography.

urosemiology (û-rô-sê-mî-ô'lô-jî) [+ *semeion*, sign, + *logos*, study]. Exam-

ination of the urine as an aid to diagnosis

urosepsin (û-rô-sêp'sîn) [+ *sêpsis*, putrefaction]. A septic poison formed from decomposition of urine in the tissues.

urosepsis (û-rô-sêp'sis) [+ *sêpsis*, putrefaction] Septic poisoning due to retention and absorption of urinary products in the tissues.

urospectrin (û-rô-spêk'trîn) [+ *L spectrum*, image]. A pigment derived from normal urine seen when shaken with acetic ether

urostealith (û-rô-stê'â-lith) [+ *stear*, fat, + *lithos*, stone] A fatty substance in some urinary calculi

urtica (ur'tik-â) A wheal

urotoxicity (û-rô-tôks-îs-tî) [G *ouron*, urine, + *toxikon*, poison] The toxic character of the urine

uroreter (û-rô-urê-têr, -û-rê'têr) [+ *ourêter*, ureter] Distention of the ureter with urine, due to stricture or obstruction

urous (û-rûs) [G *ouron*, urine] Having the nature of urine

uroxanthin (û-rô-zân'thîn) [+ *xanthos*, yellow] Yellow coloring matter of the urine, an indigo-forming substance

uroxin (û-rôk'sîn) [+ *oxy*, sharp]. A derivative of alloxan *

urticaria (ur-tî-kâr'i-â) [L *urtica*, nettle]. An inflammatory affection, characterized by the eruption of pale, evanescent wheals, which are associated with severe itching. SYN *hives*, *nettle rash*. SEE: *allergy*, *angioneurotic edema* (*giant hives*).

Etiol. Contact with an ext irritant, as the nettle rash, physical agents, foods, insect bites, serum sickness, pollen, drugs, neurogenic factors.

Sym. Sudden general eruption of papules or wheals associated with intense itching. Each lesion lasts a few hours, and is succeeded by new ones in other places.

Treatment: *General measures.* Because the skin manifestation is an allergic reaction, identify and remove the antigenic offender if possible. Check diet for common offenders such as wheat, milk, eggs, chocolate and other food allergens. Avoid unnecessary medication as drugs are often causative factors

Specific measures Antihistaminic drugs often give quick relief. Injection of epinephrine (subcutaneous) (0.5 cc. of 1/1000 sol.). Ephedrine may be used. In severe cases ACTH or cortisone used with caution has proved effective. *Locally*, antipruritic lotions and baths are frequently beneficial

u. bullo'sa. Eruption of temporary vesicles with infusion of fluid under the epidermis

u. facti'tia. Wheals following slight irritation of the skin. SYN *autographism*.

u. haemorrhagica. U. with lesions infiltrated with blood.

u. maculo'sa. A chronic form of u with red-colored lesions.

u. mariti'ma. U. due to salt water bathing

u. medicament'o'sa. U. due to certain drugs.

u. papulosa. In this form the wheal is followed by a lingering papule which is attended by considerable itching. Most commonly observed in debilitated children. SYN. *lichen urticatus*, *prurigo simplex*.

u. solaris. Urticaria occurring in certain individuals following exposure to sunlight

u. vesiculo'sa. Same as *u. bullosa*

urticarial, urticar'ious (ûr-tîk-â-ri-âl, ûr-tîk-â-ri-ûs) [L. *urtica*, a nettle] Pert. to urticaria

urtication (ûr-tîk-â'shûn) [L. *urtica*, a nettle] 1 Flogging of a part with nettles to induce counterirritation 2 Burning or itching sensation 3 Eruption of itching wheals **SYN** *urticaria*.

U. S. P., U. S. Phar. Abbr. for *United States Pharmacopeia*.

U. S. P. H. S. Abbr. for *United States Public Health Service*

ustilaginism (ûs-tîl-âj'in-izm) [L. *ustulatus*, scorched] Poisoning resulting from eating corn infected with smut **SEE** *Ustilago*

Ustilago (us-tîl-â'gô). A moldlike fungus called smuts

ustion (ûs'chûn) [L. *ustio*, a burning]. 1 Cauterization with actual cautery. 2 Incineration

ustulation (us-tû-jâ'shûn) [L. *ustulâre*, to scorch] Roasting, parching, or drying of a moist substance.

ustus (ûs'tus) [L.] Burned **SEE** *calcination*.

uta (oo'tâ) American leishmaniasis, *q. v.*

ut. dict. Abbr. for *L ut dictum*, as directed

utend. Abbr. for *L utendus*, to be used

uter-, utero. Combining forms, denoting pertaining to the uterus.

uteralgia (û-têr-âl'y-jî-â) [L. *uterus*, womb, + *G algos*, pain] Uterine pain.

uterectomy (û-tê-êk'tô-mî) ["" + *G. êktomê*, excision] Removal of uterus through the abdomen or vagina **SYN:** *hysterectomy, q. v.*

uterine (û-tê-in, -in) [L. *uterinus*, pert. to the womb]. Pert. to the uterus

u. bleeding. Bleeding from the uterus. Physiologic bleeding via the vagina occurs in normal menstruation. Abnormal forms include excessive menstrual flow (*hypermenorrhea*, *menorrhagia*) or too frequent menstruation (*polymenorrhea*). Nonmenstrual bleeding is called *metrorrhagia*. *Pseudomenstrual* or *withdrawal bleeding* may occur following estrogenic therapy.

u. cake. The placenta

u. glands. The tubular glands in the endometrium

u. milk. A milky, white substance bet. the gravid uterus and the placental villi.

u. souffle (soof'fl). Vascular sound in the pregnant uterus heard with stethoscope

u. tubes. Small tubes attached to either side of the uterus, and leading from the region of the ovary. **SYN:** *fallopian tubes*

uterismus (û'têr-is-mûs). Painful contractions of the uterus.

uteritis (û-têr-î'tis) [L. *uterus*, womb, + *G. -itis*, inflammation]. Inflammation of the uterus. **SYN** *metritis*

uteroabdominal (û'têr-ô-âb-dôm'in-âl) ["" + *abdominalis*, pert. to abdomen]. Pert. to both the uterus and abdomen

uterocèle (û-têr-ô-sêl) ["" + *G. kêlê*, hernia] Hernia containing the uterus.

uterocervical (û'têr-ô-sêr'vî-kâl) ["" + *cervix*, neck]. Relating to the uterus and the cervix.

uterocystostomy (û'têr-ô-sis-tôs'tô-mî) ["" + *G. kystis*, bladder, + *stoma*, mouth]. Formation of a passage bet the uterine cervix and the bladder

uterofixation (û'têr-ô-flîks-â'shûn) ["" +

fixatio, a fixing] Fixation of a displaced uterus. **SYN:** *hysteropexy*.

uterogestation (û-têr-ô-jês-tâ'shûn) [L. *uterus*, womb, + *gestatio*, a carrying]. Pregnancy in the uterus, normal pregnancy.

uterography (û'têr-ôg'râ-fî) ["" + *G. graphêin*, to write] Roentgenography of the uterus

uterolith (û'têr-ô-lîth) ["" + *G. lithos*, stone] A uterine concretion

uterologist (û'têr-ô-lô-jîst) ["" + *G. logos*, a study] One who specializes in the practice of gynecology and obstetrics

uterology (û-têr-ô-lô-jî) ["" + *G. logos*, a study] Gynecology combined with obstetrics.

uterometer (û'têr-ô-m'êt-êr) ["" + *G. metron*, a measure] Device for measuring the uterus and for determining its position

uteroovarian (û'têr-ô-ô-vâ'rî-ân) [L. *uterus*, womb, + *ovarium*, ovary] Relating to the uterus and ovary

uteropexia, uteropexy (û'têr-ô-pêks'î-â, û'têr-ô-pêks-î) ["" + *G. pexis*, fixation] Fixation of the uterus to the abdominal wall. **SYN** *hysteropexy*

uteroplacental (û'têr-ô-plâ-sen'tâl) ["" + *placenta*, a flat cake]. Relating to the placenta and uterus

uteroplasty (û'têr-ô-plâs'tî) ["" + *G. plassem*, to form] Reparative operation upon the uterus

uterosacral (û'têr-ô-sâkrâl) ["" + *sacralis*, pert. to the sacrum] Relating to the uterus and sacrum.

uterosalpingography (û'têr-ô-sâl-pîng-ôg'râ-fî) ["" + *G. salpiqz*, tube, + *graphêin*, to write]. Visualization of the interior of the uterus and fallopian tubes by x-ray.

uterosclerosis (û'têr-ô-skî-â-rô'sîs) ["" + *G. sklêrôsis*, a hardening] Uterine sclerosis

uteroscope (û'têr-ô-skôp) [L. *uterus*, womb, + *G. skopein*, to examine] Device for viewing the uterine cavity

uterotome (û'têr-ô-tô-mî) ["" + *G. tomê*, a cutting] An instrument used for uterotomy **SYN** *hysterotome*.

uterotomy (û'têr-ô-tô-mî) ["" + *G. tomê*, a cutting] Incisions of the uterus

uterotonic (û'têr-ô-tôn'îk) ["" + *G. tonos*, tone] Giving muscular tone to the uterus

uterotractor (û'têr-ô-trâk'tor) ["" + *tractor*, a drawer] An instrument for making traction on the cervix uteri

uterotubal (û'têr-ô-tû-bâl) ["" + *tuba*, tube] Relating to the uterus and the oviducts

uterovaginal (û'têr-ô-vâj'î-nâl) ["" + *vagina*, sheath]. Relating to the uterus and vagina

uterovesical (û'têr-ô-vês'î-kâl) ["" + *vesica*, bladder]. Relating to the uterus and bladder.

uterus (û'têr-ûs) [L. *uterus*, womb]. The organ of gestation **SYN** *womb*

ANAT. A muscular, hollow, pear-shaped structure of the female. It is partly covered by peritoneum, the cavity lined by mucous membrane which is the *endometrium*

The uterus consists of three areas: the *body* or expanded upper portion, the *isthmus* or constricted central area, and the *cervix*, the lowermost cylindrical portion. The rounded portion of the body lying above the openings of the two uterine tubes is the *fundus*.

It is supported in this position by the *pelvic diaphragm*, supplemented by two broad ligaments, two round ligaments,

and two *utero-sacral ligaments*, as well as other lesser ligaments.

The upper part of the body is called the *fundus* and the ends of the fundus to which the tubes are attached are called the *cornual ends*. The cavity of the uterus is triangular in shape, with the base of the triangle in the fundal portion. The canal of the cervix is long and narrow, and is constricted at the upper end by the internal os and at the lower end by the external os.

The largest portion of the uterus is made up of musculature which is longitudinal and circular. The outer covering of the uterus is peritoneum with the exception of that part upon which the bladder rests and the vaginal portion of the cervix. The inner lining of the body of the uterus varies in form and histological structure with the period of life in which it is studied, the prepuberty stage, the actively menstruating stage and the menopausal stage each having its own characteristics.

The uterus is situated in the mid-pelvis approximately halfway bet. the

sacrum and the *symphysis pubis*. It is supported in this position by the 2 broad ligaments, the round ligaments, the uterosacral ligaments, and the ligament attached to bladder. The uterus is normally anteфлекed. The blood supply of the uterus is derived from the uterine and ovarian arteries.

POSITIONS *Anteflexion*: Bending forward. *Anteversio*: Forward displacement of fundus towards pubis, while cervix is tilted up towards sacrum. *Retroflexion*: Bending backward, a junction of body and cervix. *Retroversio*: Inclination backward with retention of normal curve, opposed to anteversion.

AUSCULTATION After the 4th month of gestation if uterus contains a living fetus 3 distinct sounds may be heard. *Fetal heart sounds*. Consist of a succession of short, rapid, double pulsation varying in frequency from 120 to 140 per minute. First sound is short, feeble and obscure, while the 2nd, the one usually heard, is loud and distinct, sound like ticking of a watch wrapped in

THE UTERUS AND OTHER FEMALE PELVIC ORGANS.

napkin. Sound is usually transmitted over space of 3 or 4 inches square. Location is determined by position of fetus. Generally, when maximum intensity is on level of, or above umbilicus, a breech presentation; when low down in front on left side, 1st position, low in front on right side, in 2nd position. During labor examinations, if made, should be bet. uterine contractions. In protracted labors is of value in indicating the time for manual or instrumental interference to save life of child.

Sounds Irregularity and feebleness of sound are the most threatening to the life of the child.

Funic souffle A sound usually heard at a point quite remote from the uterine bruit. It is short, blowing in character, and corresponds in pregnancy with the fetal pulsation. Supposed to depend upon obstruction to the transmission of blood through the umbilical arteries, as from twisting or knotting of the funis, or from ext. pressure. Is not a constant or even frequent sound, the conditions of production being rarely met with.

Uterine bruit This sound is single, intermittent, and in character a combination of blowing and hissing sounds. Increases in intensity up to the period of labor. Believed to depend upon rapid passage of blood from the arteries into the distended venous sinuses of the uterus. Synchronous with maternal pulse, subject to same variations, and is always heard before the pulsations of the fetal heart, area over which is audible varies, greatest point of intensity in median line a little above pubes.

After 5th month, at latest and inferior borders of uterus, next at fundus. Not a positive proof of pregnancy, as is sometimes heard in uterine and ovarian tumors. Does not prove fetus alive, as it is sometimes heard after its death.

PALPATION During pregnancy in 3rd month, if walls of abdomen are not too thick, by placing patient upon her back, with head raised and thighs flexed, and pressing points of fingers gently downward and backward above the pubes, a hard, round mass will be found on the median line, rising out of the pelvis. In 2 or 4 weeks later the increase is much more strongly marked. As pregnancy advances, the mass loses more and more of its hardness, and becomes more and more elastic, like a cyst filled with water. In doubtful cases where decided enlargement of abdomen is present, exploration *per vaginam* becomes of great importance.

"Touch," or really internal palpation, signifies the means by which knowledge is obtained of internal conditions by vaginal or anal examination with the finger. By vaginal touch may be able to diagnose the stage of gestation, stage of parturition, or whether the woman is in that state, the progress of labor, the presentation and position of the child, the position of uterus—tenderness or prolapse of the ovaries, etc. May be practiced with the woman standing, lying on either side, or back. The sensation of the tip of cervix of unimpregnated uterus to the touch is like that imparted to the finger by touching the tip of the nose, firm and cartilaginous, of the impregnated, like that of touching the lips. Feels soft like velvet, but deeper, beyond the softness, is a hardness, as of board.

PERCUSSION Unimpregnated uterus is inaccessible to touch externally, or to percussion. In pregnancy at end of 2nd month a dull sound on percussion just above pubes indicates the enlarging uterus, later, as uterus increases in volume and rises into abdomen, able, by oval tumor felt in hypogastrium and by circumscribed area of dullness corresponding to situation of the tumor, to establish strong presumptive evidence of pregnancy. This presumption becomes strengthened if the area of dullness increases with the regularity proper to gestation. Palpation and percussion, however, are not sufficient to determine whether the enlargement is due to pregnancy or to some morbid deposit in its wall or cavity, as fibrous tumors, etc. After the 5th month both these methods are inf. to auscultation.

U. TUMORS or (a) May cause sterility, abortion, or obstruct labor (b) May become infected or twisted on their attachments (c) Myomata possible, but not common in young women (d) Fibroids common beyond 30 and in negro race (e) Subserous tumors do not affect pregnancy. May bar labor. (f) May disappear following labor (g) Interstitial and submucous type may interfere with pregnancy and produce abortion.

EFFECTS UPON LABOR (a) Usually have no effects (b) If low, may cause malpresentation or impossible labor (c) Labor pains weak and inefficient (d) Often severe pains and rupture of uterus (e) Submucous tumors may protrude before or after birth (f) Placenta may be retained (g) Tumor may be infected postpartum (h) Knee-chest position helps patient, if tumor is in pelvis (i) If in fundus, delivery is through vagina, if not, cesarean section may be needed. (j) Control hemorrhage by packing.

UTERUS, CANCER of (a) Extremely rare in pregnancy, growth increases with pregnancy (b) May produce sterility or abortion, hemorrhage, sepsis (c) Detected by size, intermittent bleeding, purulent discharge, vaginal or Papannicolaou smear, or cervical or endometrial biopsy.

UTERUS, RUPTURE OF, IN PREGNANCY (a) Rare but serious (b) Etiology weakness of uterine wall, or obstruction (c) Scars may be cause of weakness of wall (d) May be spontaneous or traumatic (e) Child and amniotic sac may be expelled into peritoneal cavity (f) Spontaneous rupture may occur without warning (g) Abdominal pains, shock, hemorrhage may occur (h) Child easily palpated (i) Active movements of child which cease with death ensuing (j) Obstruction usually precedes symptoms (k) Combat shock and hemorrhage; salt solutions, etc.

SUBINVOLUTION The lack of involution of the uterus following childbirth. It is manifested by a large uterus and a continuation of lochia rubra beyond the usual time. The factors in its causation are usually puerperal infection, multiparity, overdistention of the uterus by multiple pregnancy or polyhydramnios, lack of lactation, malposition of the uterus, and retained secundines. Involution is aided by being certain that the placenta is intact at the time of delivery, and the use of ecbolics to cause contraction of the uterus. Reposition of the uterus should be practiced when malposition is discovered.

- u. acollis.** Uterus without a cervix.
- u. arcuatus.** Uterus with a depressed arched fundus.
- u. bicornis.** Uterus in which the fundus is divided into 2 parts
- u. biformis.** Uterus in which the ext os is divided into 2 parts by a septum.
- u. bilocularis.** Uterus in which the cavity is divided into 2 parts by a partition.
- u., bipartite.** Uterus in which body is partially divided by a median septum
- u. cordiformis.** A heart-shaped uterus.
- u. didelphys.** Double uterus
- u. duplex.** A double uterus resulting from failure of union of mullerian ducts
- u., fetal.** One which is retarded in development and possessing an extremely long cervical canal
- u. gravid.** Pregnant uterus
- u. masculinus.** The prostatic utricle, *q v*
- u. parvicollis.** Normal uterus with disproportionately small vaginal portion
- u., prolapse of.** Downward displacement of uterus, the cervix sometimes protruding from the vaginal orifice
- u., pubescent.** An adult uterus which resembles a uterus of a prepuberal female
- u. septus.** SEE *u. bilocularis*
- u. unicornis.** Uterus which possesses only one lateral half and usually having only one uterine tube
- utricle** (û'trik'l) [L *utriculus*, a little bag]. One of 2 sacs of the membranous labyrinth in the bony vestibule of the inner ear
- The utricle communicates with the semicircular ducts by 5 openings on posterior wall and with the sacculus and endolymphatic duct by an opening on ant wall. On its inner surface is an area of sensory epithelium, the *macula utriculi* containing cells which respond to movement of *otoliths* due to changes in position
- u., prostatic.** SYN *uterus masculinus* A small blind pouch of the urethra extending into substance of prostate gland. It is a remnant of the embryonic mullerian duct
- u. of the urethra.** The prostatic vesicle of the male
- u. of vestibule.** Vestibular cavity connecting with the semicircular canals
- utricular** (û'trik'û-lar) [L *utriculus*, a little bag] 1 Pert to the utricle 2. Like a bladder
- utriculitis** (û'trik'û-lî'tis) [L *utriculus*, a little bag, + G *-itis*, inflammation] Inflammation of the utricle, either that of the vestibule or the prostatic utricle
- utriculoplasty** (û'trik'û-lô-plâs'tî) [+ G *plassein*, to form] Reduction of the uterus by excision of a longitudinal, wedge-shaped section
- utriculosaccular** (û'trik'û-lô-sâk'û-lar) [+ *sacculus*, a small cavity]. Pert to the utricle and sacculus of the labyrinth
- u. duct.** A duct uniting the utricle and sacculus.
- utriculus** (û'trik'û-lûs) (L. *utriculus*, a little bag). A utricle, *q v*
- u. masculinus.** SEE *utricle, prostatic*
- u. prostaticus.** SEE: *utricle, prostatic*
- utriform** (û'trî-form) [L. *uter, utri-*, a skin bag, + *forma*, shape]. Having a shape like a bottle
- uvea** (û've-â) [L. *uva*, grape]. The 2nd or vascular coat of the eye lying immediately beneath the sclera.
- It consists of iris, ciliary body and choroid, forming pigmented layer
- uveal** (û've-âl) [L. *uva*, grape] Pert to the middle coat of the eye, or uvea
- uveitis** (û-vê-lî'tk) [L. *uva*, grape, + G. *-itis*, inflammation] Marked by or pert. to uveitis
- uveitis** (û-vê-lî'tis) [+ G. *-itis*, inflammation] Inflammation of the iris, ciliary body, and choroid, or the entire uvea
- uveoparotitis** (û've-ô-pâr-ô-tî'tis) [+ G. *para*, near, + *ous*, of-, ear, + *-itis*, inflammation]. Parotitis with uveitis
- uveoplasty** (û've-ô-plâs'tî) [+ G. *plassein*, to form] Reparative operation or the uvea
- uviofast** (û'vî-ô-fâst) Unaffected by ultra-violet radiation
- uvial** (û'vî-ôl) Glass which is unusually transparent to ultraviolet rays
- u. lamp.** Electric l with uvial glass globe
- uvioleze** (û've-ô-lîz) To use ultraviolet rays therapeutically
- uvioresistant** (û'vî-ô-rê-zîs'tânt). Resistant to effects of ultraviolet rays
- uviofast** (û'vî-ô-sên'sî-tîv). Sensitive to effects of ultraviolet rays
- uvula** (û'vû-lâ) [L. *uvula*, a little grape] Small, soft structure hanging from free edge of soft palate in midline above the root of the tongue. It is composed of muscle, connective tissue and mucous membrane
- RS *cion, cionitis, cionotomy, staphyle*
- u. of cerebellum.** A small lobule of the cerebellum lying on inferior surface of inf. vermis, anterior to the pyramis
- u. fissa.** A cleft uvula
- u. palatine.** SEE *uvula*
- u. vesicae.** BNA A median projection of mucous membrane of urinary bladder located immediately anterior to orifice of urethra
- uvulaptoxis** (û'vû-lâp-tô'sîs) [+ G. *ptôsis*, a drooping] A relaxed condition of the uvula
- uvular** (û'vû-lar) [L. *uvula*, little grape] Pert. to the uvula
- uvularis** (û'vû-lâ'rîs) [L] The azygos uvulae muscle SEE *Muscles, Table of, in Appendix*.
- uvulatome** (û'vû-lâ-tôm) [L *uvula*, little grape, + G *tomê*, a cutting]. Instrument for removal of uvula
- uvulotomy** (û'vû-lât'ô-mî) [+ G *tomê*, a cutting] Excision of the uvula.
- uvulitis** (û'vû-lî'tis) [+ G. *-itis*, inflammation] Inflammation of the uvula.
- uvuloptosis** (û'vû-lôp-tô'sîs) [+ G. *ptôsis*, a drooping]. Relaxed condition of the palate
- uvulotome** (û'vû-lô-tôm) [+ G *tome*, a cutting]. Instrument for performing uvulotomy
- uvulotomy** (û'vû-lô't'ô-mî) [+ G *tomê*, a cutting] Amputation of the uvula

V

V. Abbr. for vision, visual acuity, *Vibrio*, and for volt SYMS for vanadium.

vaccigenous (vák-síj'én-ús) [L *vaccinus*, pert to a cow + *G genna*, to produce] Producing vaccine. SYN *vaccinogenous*

vaccin (vák'sín) [L *vaccinus*, pert to a cow]. Any substance for inoculation against disease SYN *vaccine*

vaccina (vák-sín'á) [L *vaccinus*, pert to a cow]. A disease resulting from inoculation with cowpox virus SYN *vaccinia*

Papules form about 3rd day after vaccination which change to umbilicated vesicles and then to pustules. They dry and form scabs which fall about the 21st day SEE *Paschen bodies*

vaccinal (vák'sín-ál) [L *vaccinus*, pert to a cow]. Relating to vaccine or to vaccination

v. fever. A mild fever that may follow vaccination

vaccinate (vák'sín-át) [L *vaccinus*, pert to a cow] 1 To inoculate with cowpox vaccine to prevent or mitigate an attack of smallpox 2 To inoculate with any vaccine to produce immunity against disease

vaccination (vák-sín-á'shùn) [L *vaccinus*, pert. to a cow] 1 Inoculation against smallpox 2 Inoculation with any vaccine as a preventive measure

Vaccination against smallpox was introduced by Edward Jenner in 1798

TIME OF PERFORMANCE. In normal infant of good health, about 4th month, unless definite exposure to smallpox is known, when vaccination should be performed regardless of age It is advisable to undertake vaccination about every 5 years

METHOD Site of selection. Usually, the left arm, just above point of insertion of deltoid. Not advisable to vaccinate on leg, as secondary infections are much more likely to develop. If vaccination is performed on the leg, the outer muscles at the midthird are the proper point for inoculation The skin should be cleansed with soap and water, then rendered aseptic by sponging with 95% alcohol and allowed to dry The vaccine lymph is expelled from the capillary tube by means of a small rubber bulb, and a sterile needle is selected for the purpose of abrading the epidermis through the drop of vaccine This may be readily accomplished by the multiple pressure method which consists of simply tapping the skin repeatedly with end of needle until the epidermis is denuded over an area no longer than the diameter of the shaft of an ordinary match. Cross scratching or vertical scratching with needle is totally unnecessary and often produces a needlessly large scar. Following inoculation, the area involved should be allowed to dry or protected from contact with clothing Celluloid shields, or any appliance which encircles the arm and causes constriction not only inadvisable, but many times proves to be dangerous, inasmuch as possibilities of secondary infection are promoted by such appliances.

SYM. From the 3rd to the 5th day following inoculation, a papule should develop. This is surrounded by a red areola By 6th to 7th day, the papule is converted into a pearly vesicle, the center of which becomes depressed. The surrounding tissue may be red and tender with considerable infiltration From 10th to 12th day the vesicle becomes a pustule, when there may be some swelling and tenderness of the axillary glands, as well as elevation of temperature. From 12th to 25th day, the pustule passes through the stage of desiccation and scab drops off, leaving a pitted scar at its former site A potent vaccine should always produce a reaction in a susceptible individual The fact that the vaccination does not take in one who has never been successfully vaccinated, or who has never had smallpox, does not indicate that such an individual is immune.

RS' arm-to-arm v, autovaccination, autoraccine, vaccina, vaccine, variola v., accelerated. SYN *vaccinoid, secondary vaccinia* That in which the whole course of the reaction is accelerated and shortened Indicates partial immunity and is designated a "mild take"

v. primary. Vaccinia or "take" with results indicating absence of immunity.

v. rash. One sometimes following vaccination

vaccine (vák'sén) [L *vaccinus*, from *vacca*, a cow] Killed or modified live virus, bacteria, or rickettsiae prepared in suspension for inoculation Used to prevent or treat certain infectious diseases

Vaccines are of four general classes (1) those containing living attenuated infectious organisms, (2) those containing infectious agents killed by physical or chemical means; (3) those containing soluble toxins of microorganisms, sometimes used as such, but generally forming toxoids, and (4) substances extracted from infectious agents

Examples of the first class are the BGG vaccine for tuberculosis and vaccines for smallpox and yellow fever

Examples of the 2nd class are vaccines used to protect human beings against typhoid fever, rabies, and whooping cough. Vaccines of this class have been prepared for use in preventing several other diseases including pneumonia, cholera, dysentery, undulant fever, and plague, but they are less reliable as preventives against these

In the 3rd class comes toxoid used in the prevention of diphtheria and tetanus.

Examples of the 4th class are capsular polysaccharides extracted from pneumococci

FUNCTION To stimulate the development in the body of specific defensive mechanism which results in more or less permanent protection against a disease. An attack of smallpox or diphtheria, for example, usually leaves the recovered patient permanently immune to those diseases As a result of infection, the body succeeds in building up its own

defenses, so that a new infection causes no illness. A successful vaccine does same thing without risk of illness.

v., aqueous. V. employing physiological salt solution as the vehicle

v., autogenous. Bacterial v. taken from the individual to be inoculated

v., bacterial. Any substance for preventive inoculation, esp. a suspension of bacteria, killed or attenuated, in saline solution used for injection into body to induce development of active immunity to the same organism.

v., BCG. (Calmette - Guérin bacillus). Substance used in prophylactic vaccination of infants against tuberculosis with virulence reduced by repeated cultures on glycerinated ox bile

v., Castaneda. V. against typhus fever

v., heterologous. One prepared from organisms obtained from a source other than the person to be inoculated

v., homologous. An autogenous vaccine, *q.v.*

v., humanized. Vaccine obtained from vaccinia vesicles in human beings

v., killed. One consisting of killed infectious agents

v., mixed. One prepared from more than one infectious agent

v., multivalent. A polyvalent vaccine, *q.v.*

v., point. A needle or quill coated with vaccine lymph at its tip

v., polyvalent. V. made from several strains of the same species of bacterium

v., rabies. Vaccine prepared from fixed virus of rabies, used prophylactically following bite by a rabid animal. *See rabies*

v., rash. One due to vaccination

v., Salk. One against poliomyelitis.

v., Sabin. Oral poliomyelitis vaccine.

v., sensitized. V. made more active by treatment of the bacteria with their specific immune serum. *See serobacterin.*

v., smallpox. V. made from lymph of cowpox vesicles obtained from healthy vaccinated bovine animals

v., stock. Bacterial v. made from same species as that causing the infection, but not autogenous

v., TAB. A mixture of typhoid, paratyphoid A, and paratyphoid B vaccines.

v., therapy. Treatment of a disease by inoculation with a vaccine specific for that disease.

v., triple. (for typhoid). TAB vaccine.

v., virus. An emulsion containing substance from pustules of vaccinia used for inoculation

vaccinia (vák-sín-í-á) [L. *vaccinus*, pert. to a cow]. A contagious disease resulting from inoculation with cowpox virus.

Papules form about 3rd day after vaccination which change to umbilicated vesicles about the 5th day and then, at end of 1st week, to umbilicated pustules surrounded by a red areola. They dry and form scabs, which fall about the 2nd week, leaving a white, pitted depression.

Inoculation with this virus confers upon man more or less immunity against smallpox.

RS' vaccination, variola, varicella.
vacciniform (vák-sín-í-form) [L. *vaccinus*, pert. to a cow, + *forma*, shape]. Of the nature of vaccinia or cowpox.

vaccinola (vák-sín-í-ó-lá) [L. diminutive of *vaccinia*, from *vaccinus*, pert. to a cow]. Secondary general eruption after local eruption from vaccine.

vaccinization (vák-sín-í-zá-shùn) [L. *vac-*

cinus, pert. to a cow]. Vaccination by repeated inoculations until the virus has no effect.

vaccinogenus (vák-sín-ó-jén-ús) [“ + *G. gennan*, to produce] Producing vaccine or pert. to its production.

vaccinoid (vák-sín-óyd) A mild “take” *See vaccination, accelerated.*

vaccinotherapeutics, vaccinothrapy (vák-sín-ó-thér-á-pú-tíks, -thér-á-pl) [“ + *G. therapeutiké*, treatment, + *G. therapia*, treatment]. Treatment by injection of bacterial vaccines

vacuolar (vák-ú-ó-lár) Pertaining to or possessing vacuoles.

v., degeneration. Swelling of cells with increase in number and size of vacuoles. Also called *parenchymous, albuminous, or hydropic degeneration, or cloudy swelling*

vacuolated. Possessing or containing vacuoles

vacuolation (vák-ú-ó-lá-shùn) [L. *vacuolum*, a tiny empty space]. Formation of vacuoles. *See vacuolization*

vacuole (vák-ú-ó-l) [L. *vacuolum*, a tiny empty space] A clear space in cell protoplasm filled with fluid or air

v., plasmocrin. A vacuole present in cytoplasm of secretory cell which is filled with crystalloid material

v., rhagiocrin. A vacuole present in cytoplasm of secretory cell which is filled with colloid material

vacuolization (vák-ú-ó-liz-á-shùn) [L. *vacuolum*, a tiny space] *See vacuolation.*

vacuome (vák-ú-óm) The internal reticular apparatus, *q.v.*

vacuum (vák-ú-úm) [L. *vacuum*, empty]. A space exhausted of its air content

v., treatment. Insertion of a limb in a partial vacuum

v., tube. A vessel of insulating material (usually glass) provided with metal electrodes, which has been so highly evacuated that the residual gas does not affect the current passing bet. metal electrodes projecting from the outside

vagabond's disease. Discoloration of skin caused by exposure and scratching due to presence of lice. *See pediculosis corporis melanoderma*

vagal (vâ-gâ) [L. *vagus*, wandering]. Pert. to the vagus nerve

v., attack. A condition of dyspnea, cardiac distress, a fear of impending death, and a sinking sensation assumed to be the result of vasomotor spasm.

v., escape. Condition in which one or more beats of the heart occur even though the vagus nerve is being continuously stimulated. Stimulation of the vagus normally inhibits heart beat.

v., substance. Substance liberated at termination of vagus nerve fibers in the heart. *See: acetylcholine*

v., tone. Condition in which impulses over the vagus nerves exert a continuous inhibitory effect upon the heart.

vagina (vâ-jí-nâ) (pl. *vaginae, vaginas*) [L. *vagina*, sheath]. 1. A sheathlike part. 2. A musculomembranous tube which forms the passageway bet. the uterus and the external orifice.

Anat. It is divided into 4 walls. 2 lateral, 1 ant., and 1 post. In the uppermost part, the cervix divides the vagina into 4 *foresices*, the 2 lateral, the anterior and the posterior.

The bladder is situated on the ant. wall of the vagina and the rectum is behind the post. wall. In a nulliparous woman all walls approximate each other, making an H shape. The vagina is lined by mucous membrane made up of aqua-

mous epithelium. It is surrounded by fascias which allow for easy distensibility. The blood supply of the vagina is furnished from the inferior vesical, inferior hemorrhoidal, and uterine arteries.

FUNCTION: A passage for the intromission of the penis, the reception of the semen, and for the discharge of the menstrual flow, also, for the delivery of the fruits of pregnancy.

v., bulb of. Small erectile body on each side of the vaginal vestibule. **SYN:** *bulbi vestibuli, Bartholin's glands.*

v. fibrosa tendinis. A fibrous sheath surrounding a tendon which is confined to an osseous groove.

v. masculinus. The prostatic utricle, *q v*

v. mucosa tendinis. A synovial sheath which develops about a tendon.

v., septate. Congenital condition in which the vagina is divided longitudinally into two parts. Division may be partial or complete.

vagina, words pert. to: acrocely, bulbi vestibuli, "colp-" words, Duverney's gland, "elvir-" words, endocervicitis, enterocele, esthiomene, fistula, fornix, fourchette, gynatresia, hematomatometra, hydrocolpos, hymen, kysthoptosis, leukorrhea, lochiocolpos, pachycolpismus, pachyvagininitis, paravaginal, pronaus, supravaginal, transvaginal, "vagin-" words

vaginal (vāj'in-āl) [L. *vagina*, sheath]. Pert to the vagina or to any enveloping sheath.

v. hysterectomy. Excision of uterus through vagina.

vaginalectomy (vāj'in-āl-ēk'tō-mī) [+ G *ektomē*, excision] Excision of the tunica vaginalis. **SYN:** *vaginectomy*

vaginalitis (vāj'in-āl-ī'tis) [L. *vagina*, sheath, + G *-itis*, inflammation] Inflammation of tunica vaginalis testis

vaginate (vāj'in-āt) [L. *vagina*, sheath]. Sheathed

vaginectomy (vāj'in-ēk'tō-mī) [L. *vagina*, sheath, + G *ektomē*, excision] 1 Resection of tunica vaginalis 2 Excision of the vagina or a part of it

vaginicoline (vāj'in-īk'ō-līn) [+ *colere*, to dwell] Living in the vagina, as microorganisms.

vaginismus (vāj'in-īz'mūs) [L.] Painful spasm of vagina from contraction of the vaginal walls preventing coitus.

It may indicate neurotic aversion to the act. Extraordinary hyperesthesia of nerve supply to mucous membrane of vagina at or near site of the hymen, resulting in spasmodic constriction of sphincter vaginae muscle, preventing coitus. May also be due to local trauma, ulceration, lack of physiological lubrication, vaginitis, menopausal involution, or congenital malformation.

SYM: Extreme sensitiveness. Spasmodic closure of vaginal orifice on slightest touch. In severe cases, sterility.

TREATMENT: Psychotherapy; correction of primary causative factors; education correcting misinformation and fear.

v., mental. V. resulting from repugnance to cohabitation.

v., posterior. V. due to contraction of the levator ani muscle.

vaginitis (vāj'in-ī'tis) [L. *vagina*, sheath, + G *-itis*, inflammation] 1. Inflammation of a sheath. 2. Inflammation of vagina.

At first acute; unless promptly treated assumes chronic form. Erysipelatous

and erythematous inflammation may cause intensely red, painful, elevated, more or less extensive patches.

v. adhaesiva. Inflammation with mucous membrane exfoliation causing adhesions and partial obliteration of the vaginal lumen.

v., atrophic. **SYN:** *postmenopausal or senile vaginitis*. That following the menopause, whether natural or artificial.

v., diphtheric. V. with membranous exudate.

v., emphysematous. V. with gas in connective tissues.

v., glandular. V. when the follicles alone seem affected, when mucous membrane shows no traces of change and when secretion appears more copious and of a yellowish-white or grayish color.

v., granular. V. with infiltrated cells and enlarged papillae. The most common form of v.

v., papulous. Vagina and neck of womb covered with papulae or follicles more or less developed or resembling fleshy granulations.

v., postmenopausal. Atrophic vaginitis, *q v*. Usually due to insufficient estrogens.

v., pustulous. May result from appearance of pustules in persons affected with pustulous affections of the skin.

v., senile. Atrophic vaginitis, *q v*.

v., testis. Inflammation of the tunica vaginalis of the testis.

v., Trichomonas vaginalis. That associated with, or caused by infection by *Trichomonas vaginalis*, a flagellate protozoan.

v., vesicular. V. from extension of eczema from vulva to the vagina.

SYM: Feeling of heat and burning in vagina and vulva; feeling of aching and sense of weight in perineum; frequent desire to urinate; pain and throbbing in pelvic region of abdomen, profuse leukorrhea, which may be purulent, offensive and acrid, excretion of vulva and external adjacent parts. In chronic cases same set of symptoms exist but lesser degree.

vaginoabdominal (vāj'in-ō-āb-dōm'in-āl) [L. *vagina*, sheath, + *abdominalis*, abdominal] Relating to the vagina and abdomen.

vaginocele (vāj'in-ō-sēl) [+ G *kēlē*, hernia]. Vaginal hernia. **SYN:** *colpocele*.

vaginodynia (vāj'in-ō-dīn'ī-ā) [+ G. *odynē*, pain] Pain in the vagina.

vaginofixation (vāj'in-ō-fīks-ā'shūn) [+ *fixatio*, a fixing] 1. Process of rendering the vagina immovable 2. Attachment of uterus to vaginal peritoneum.

vaginogenic (vāj'in-ō-jēn'īk) [+ G. *genan*, to produce]. Developed in the vagina.

vaginography (vāj'in-ōg'rā-fī) [+ G. *graphein*, to write] The taking of x-ray pictures of the vagina.

vaginolabial (vāj'in-ō-lā'bī-āl) [+ *labium*, lip]. Relating to the vagina and the labia. **SYN:** *vaginoovular, vulvovaginal*.

vaginometer (vāj'in-ōm'ē-tēr) [L. *vagina*, sheath, + G. *metron*, a measure]. Device for measuring the length and expansion of the vagina.

vaginomycosis (vāj'in-ō-mī-kō'sis) [+ G. *mykēs*, fungus, + *-osis*, disease]. A fungus infection (mycosis) of the vagina.

vaginoperineal (vāj'in-ō-pēr-ī-nē-āl) [+

G *perinaion*, perineum]. Relating to the vagina and perineum.

vaginoperineorrhaphy (vāj'īn-ō-pēr-l-nō-or-āf-ī) [" + *rhaphe*, a sewing]. Repair of a perineal laceration in the vagina. SYN *colpoperineorrhaphy*.

vaginoperineotomy (vāj'īn-ō-pēr-l-n-ō-t-ō-mī) [" + *tomē*, a cutting]. Separation of the vagina and perineum.

vaginoperitoneal (vāj'īn-ō-pēr-l-tō-nē-āl) [" + G *peritonaion*, peritoneum]. Relating to the vagina and peritoneum.

vaginopexy (vāj-jī'nō-pēk'wī) [" + G *pēxis*, fixation]. Fixation of the vagina. SYN *colpopexy*.

vaginoplasty (vāj-jī'nō-plās'tī) [L *vagina*, sheath, + G *plassein*, to form]. Reparative surgery on the vagina.

vaginoscope (vāj'īn-ō-skōp) [" + G *skopein*, to examine]. Instrument for inspection of the vagina.

vaginoscopy (vāj-l'n-ōs'kō-pl) [" + G *skopein*, to examine]. Visual examination of the vagina.

vaginotome (vāj-jī'nō-tōm) [" + G *tomē*, a cutting]. An instrument for making an incision in the vaginal walls.

vaginotomy (vāj-l'n-ō-tō-mī) [" + G *tomē*, a cutting]. Incision of vagina.

vaginovesical (vāj'īn-ō-vēs'tīk-āl) [" + *vesica*, bladder]. Relating to the vagina and the bladder. SYN *vesicovaginal*.

vaginovulvar (vāj'īn-ō-vul'var) [" + *vulva*, a covering]. Pert. to the vulva and vagina.

vagitus (vāj-jī'tūs) [L *vagire*, to squall]. First cry of newly born infant.

v. uterinus. Crying of the fetus before birth when membrane has been ruptured permitting passage of air into the uterus.

v. vaginalis. Cry of a child or infant with head still in the vagina.

vagomimetic (vāj'gō-mīm-ē'tīk) [L *vagus*, wandering + G *mimetikos*, imitating]. Resembling action of stimulated vagus nerve.

vagosympathetic (vāj'gō-sīm-nā-thēt'īk) [" + G *sympathētikos*, suffering with]. The cervical sympathetic and the vagus nerves considered together.

vagotomy (vāj-gō'tō-mī) [" + G *tomē*, a cutting]. Section of the vagus nerve.

vagotonia (vāj-gō'tō-nī-ā) [L *vagus*, wandering, + G *tonos*, tone]. Hyperirritability of vagus nerve resulting in a condition marked by spastic tendency in smooth muscles, fatigue, nervousness, and vasomotor instability.

vagotonic (vāj'gō-lōn'īk) [" + G *tonos*, tone]. Pertaining to vagotonia.

vagotropic (vāj'gō-trop'īk) [" + G *tropos*, a turning]. Acting upon the vagus nerve.

vagotropism (vāj-gō'trō-plīzm) [" + " + *-ismos*, condition]. Affinity for the vagus nerve, as a drug.

vagrant (vāj'grānt) [L *vagrans*, from *vagāre*, to wander]. 1. Wandering from place to place, as the leukocytes. 2. A vagabond.

v's. disease. Cutaneous discoloration and irritation caused by filth and body lice. SYN *vagabond's disease*.

vagus (vāj'gūs) (pl. *vagi*) [L *vagus*, wandering]. The pneumogastric or 10th cranial nerve.

It is a mixed nerve having motor and sensory functions and a wider distribution than any of the cranial nerves.

v. pneumonia. P caused by trauma of the vagus nerve.

v. pulse. A slow pulse caused by the slowing action of the heart due to in-

hibition of the vagus nerve. SEE: *vagotomy*, *vagotonia*.

valence, valency (vāl'ēns, -lēn-sī) [L *valens*, powerful]. 1 Property of an element or radical combining with or replacing other elements or radicals in definite proportion. 2 Degree of the combining power or replacing power of an element or radical, the hydrogen atom being unit of comparison.

The number indicates how many atoms of hydrogen can unite with 1 atom of another element.

SEE: *artiad*, *atomicity*.

Valentin's ganglion (vāl'ēn-tēn) A small ganglion at junction of mid and post branches of the sup dental plexus.

valeudinarian (vāl-e-tū-dīn-ār-ān) [L *valeudinarius*, pert to ill health]. 1. Sickly, ailing. 2 One subject to frequent illness, or feebleness. SYN *invalid*.

valgus (vāj'gūs) [L *valgus*, bowlegged]. 1 A term denoting position meaning bent outward or twisted, applied especially to deformities in which a part is bent outward, as *talipes valgus*, *q v*, *hallux valgus*, *q v*.

valine (vāl'ēn, vāl'ēn). An amino acid derived from protein decomposition $C_6H_{11}NO_2$.

vallate (vāl'āt) [L *vallātus*, walled]. Having a rim around a depression.

v. papilla. A circumvallate papilla; one of a group of papillae forming a V-shaped row on post dorsal surface of tongue.

vallecula (vāl-lēk'ū-lā) [L *vallecula*, a depression]. A depression or crevice.

v. cerebelli. BNA A deep fissure on inf surface of the cerebellum.

v. epiglottica. Depression lying lateral to the median epiglottic fold and separating it from the pharyngo-epiglottic fold.

v. ova'ta. A depression in the liver in which rests the gallbladder.

v. syl'vii. A depression marking beginning of the fissure of Sylvius.

v. un'guis. Fold of skin in which the proximal and lateral edges of the nails are imbedded.

Vallet's mass (vāl-ā'). Mass of ferrous carbonate, containing 36% ferrous carbonate.

Uses In simple anemia.

Dosage 3-5 gr (0.2-0.3 Gm).

valley of the cerebellum (vāl'ē). Hollow on inf surface of cerebellum. SYN *vallecula cerebelli*.

vallum unguis (vāl'um ung'gwīs) BNA Fold of skin overlapping the nail.

Valsalva's experiment (vāl-sāl'vā) Attempted forced expiration with glottis closed. Results in reduced venous return and a drop in arterial pressure.

V's. maneuver. V's experiment, *q v*.

V's. sinuses. Three dilations in wall of the aorta behind the flaps of the three aortic semilunar valves.

valvate (vāl'vāt) [L *valva*, valve]. Pert. to or provided with valves. SYN: *valvular*.

valve (vāl'v) [L *valva*, a fold]. Any one of various structures for temporarily closing an orifice or passage, or for allowing movement of fluid in 1 direction only.

v., aortic. The semilunar valve preventing regurgitation at the entrance of the aorta to the heart, composed of 3 segments.

v. bicuspid. Valve closing orifice bet. left cardiac atrium and left ventricle.

v., ileocecal. Valve bet ileum and large intestine to prevent regurgitation

of intestinal contents; composed of 2 membranous folds.

v., mitral. Bicuspid valve, *q.v.*

v., pulmonary. Valve composed of 3 cusps separating pulmonary artery and right ventricle

v., pyloric. Prominent circular membranous fold at pyloric orifice of the stomach.

v., semilunar. Valve bet heart and the aorta and valve bet. the heart and the pulmonary artery.

v., tricuspid. Valve bet the right cardiac atrium and right ventricle

v. tube. An electric valve consisting of a vacuum tube having for 1 electrode a hot filament

v. of Varolius. Ileocecal valve, *q.v.*

valvotomy [L *valva*, a fold, + *G tome*, a cutting] **SYN** *dichotomy* Incision into a valve, esp Houston's valves of the rectum

valvula (vāl'vū-lā) [L *valvula*, a tiny fold] A valve, specifically a small valve

v. bicuspidalis. BNA Valve bet left cardiac atrium and left ventricle.

v. coll. BNA. Valve bet ileum and large intestine.

v. pylori. BNA Prominent mucosal fold at pyloric entrance of the stomach

v. semilunaris. BNA Valve separating heart and aorta and heart and pulmonary artery

v. tricuspidalis. Valve bet the right atrium and right ventricle of the heart

valvulae conniventes (vāl'vū-lē kon-nī-vēn'tēs) [L.] Circular membranous folds projecting into lumen of small intestine, they do not disappear on distention of bowel, and act by retarding passage of the food along the bowel, they also provide a greater absorbing area. **SYN** *phica circularis*

valvular (vāl'vū-lar) [L *valvula*, a small fold]. Relating to or having a valve. **SYN** *valvate*

valvulitis (vāl'vū-lī'tis) ["" + *G. -itis*, inflammation] Inflammation of a valve, especially a cardiac valve. **SYN** *dichiditis*.

valvulotome (vāl'vū-lō-tōmē) ["" + *G. tomē*, a cutting]. An instrument for incising a valve

valvulotomy (vāl'vū-lōt'ō-mī) ["" + *G tomē*, a cutting] Process of cutting through a valve, as a too rigid rectal fold **SYN** *valvotomy*.

vanadium (vān-ā'dī-ūm). A light gray metallic element **SYMB:** V At. wt 50.95, at no 23

van Buren's disease (vān bū'rēn). Induration of the corpora cavernosa.

van den Bergh's test. A direct or indirect test to detect the presence of bilirubin in blood serum in assumed cases of obstructive jaundice or impaired liver functioning.

vanillism (vān-il'iz-m). Irritation of the skin, mucous membranes and conjunctiva sometimes experienced by workers handling vanilla

van Swieten's solution (vān swē'tēn). Mercuric chloride 1, alcohol 100, distilled water 900.

vapor (vā'por) [L. vapor, smoke]. 1 Gaseous state of any substance. 2 Medicinal substance for administration in form of inhaled vapor.

v. bath. Exposure of body to hot vapor.

v. cabinet. Cabinet in which to give vapor baths.

v. douche. Treatment with a jet of hot vapor

See: halitus, nebulization.

vaporium (vā-pō'rī-ūm) [L. *vaporium*]. Apparatus for applying hot or cold or medicated vapors

vaporization (vā'por-i-zā'shūn) [L. *vapor*, smoke]. 1. The conversion of a liquid or solid into vapor 2 Therapeutic use of a vapor. **SYN** *nebulization*

vaporizer (vā'por-iz-ēr) [L *vapor*, smoke]. Device for converting liquids into a vapor spray.

vaporoie (vā'pō-rōi). 1. An ampule or capsule of glass containing a single dose of a volatile drug for inhalation. 2. Trade name of a glass ampule.

vaporous (vā'por-ūs) [L. *vapor*, smoke]. Consisting of, pert. to, or producing vapors

Vaquez's disease (vā-kā'). Continuous excessive erythrocyte formation by the diseased bone marrow with enlargement of the spleen

V's. nodes. Small painful nodules occurring on tips of fingers in cases of bacterial endocarditis

varicella (var-i-sel'ā) [L *varicella*, a tiny spot] An acute, highly contagious disease characterized by an eruption that makes its appearance in crops and passes through successive stages of macules, papules, vesicles, and crusts **SYN** *chickenpox*

ETIOI. A virus which resembles the virus of herpes zoster in morphology and antigenic properties. May occur at any age, though far less common in adults than in children. Epidemics most frequent in winter and spring. One attack nearly always confers immunity.

INCUBATION 14 to 21 days

SYM. Onset There may be but slight elevation of temperature, followed within 24 hours by appearance of the eruption after which time temperature usually rises still further. Eruption first appears on back and chest, crops continuing to make their appearance for a period of from 2 to 3 days on an average

Each crop requires about 36 hours to pass through the several stages. Because of this, in the same general locality, macules, papules, vesicles and crusts may be found side by side. Lesions are superficial and rupture very easily

They have a tendency to be avoid and on the chest their distribution is often particularly marked along the course of the intercostal nerves. Some, though possibly few, scars nearly always remain as evidence of a chickenpox attack. The extremities are relatively free as compared with the trunk

COMPLICATIONS Secondary infections, due to scratching, which may result in abscess formation, or at times development of erysipelas or even septicemia. Occasionally lesions in the vicinity of the larynx may cause edema of the glottis and threaten the life of the patient. Encephalitis is a rare complication.

DIFFERENTIAL DIAG. Confusion bet. this disease and smallpox is responsible for the chief importance given chickenpox

Impetigo, dermatitis herpetiformis, herpes zoster, and furunculosis may require consideration.

PROG: Always favorable except in a very severe type which is described as varicella gangraenosa. In this variety, gangrene may develop about the site of the lesions.

TREATMENT: Isolation. Restrain the hands in the case of infants or young children in order that the lesions may not be scratched. Use of calamine lotion locally may alleviate irritation. Ordi-

narily, no internal remedies are necessary. The usual duration of the disease is from 2 to 3 weeks. Cases usually classed as contagious until the skin is free of all crusts. Except in those cases suffering from one of the few complications that may occur, a soft diet for the first few days and a general diet later will be found suitable.

v. gangrenosa. V in which necrosis occurs around the vesicles resulting in gangrenous ulceration

v. inoculate. That resulting from vaccination with fluid from vesicles of varicella lesions

varices (var'is-ez) (Sing varix) [L varix, dilated veins]. Enlarged twisted veins.

variciform (vâr-is'f-orm) [L varix, varic-, a twisted vein, + *forma*, shape]. Resembling a varix. SYN varicose.

varicoblepharon (vâr-i-kô-blêf'â-ron) (" + G. blepharon, eyelid). Varicose tumor of the eyelid.

varicocele (vâr-i-kô-sêl) [L varix, varic-, a twisted vein, + G. kêlê, hernial]. Enlargement of the veins of the spermatic cord (spermatic plexus), occurring in adolescents and young men, most commonly on the left side. SYN scrocele.

SYM. Vessels on affected side of scrotum are full, feeling like a bundle of worms, sometimes purplish in color. Dull ache along the cord. Testis oversensitive, slight dragging sensation in groin, hypochondriacal outlook, defective morale.

TREATMENT: Sexual hygiene. Suspensory. Surgery if insisted upon and to patient's benefit.

v., ovarian. Varicosity of veins of the ovarian or pampiniform plexus of the broad ligament.

v., utero-ovarian. Varicosity of the veins of the ovarian (pampiniform) plexus and uterine plexus of the broad ligament.

varicocelelectomy (vâr-i-kô-sêl'êk'tô-mî) [L varix, varic-, twisted vein, + G. kêlê, hernia, + *ektomê*, excision]. Excision of portion of scrotal sac with ligation of the dilated veins to relieve varicocele.

varicography (vâr-i-kôg'râ-fi) (" + G. graphêin, to write). X-ray photography of varicose veins.

varicomphalus (vâr-ik-ôm'fâl-ûs) (" + G. omphalos, navel). Varicose tumor of the navel.

varicophlebitis (vâr'i-kô-flê-bî-tîs) (" + G. phleps, phleb-, vein, + -itis, inflammation). Phlebitis combined with varicose veins.

varicose (vâr'i-kôs). Pert to varices, distended, swollen, noting veins.

v. veins. Enlarged twisted veins most commonly found on leg and thigh.

ERROR. Congenitally defective venous valves, pregnancy, occupations requiring standing positions, and obesity.

SYM. Pain in feet and ankles, swelling, ulcers on skin. Severe bleeding, if a vein is injured.

F. A. TREATMENT: Elevation of extremity and gentle pressure over wound will always stop bleeding. The use of a tourniquet is undesirable. Sterile dressing should be held in place with a firm bandage. Patient should not be permitted to walk for some time.

GENERAL: Rest, elevation of extremity, and use of an external support such as an elastic bandage or stocking. Unna's paste boots recommended for elderly or debilitated persons. Injection of sclerosing solutions may be utilized for small varicosities. High ligation and

removal of vein by stripping may be necessary for major varicosities.

RS. *cirsenchysis*, *cirsoides*, *cirsoemphalos*, *cirсотomy*.

varicosity (vâr-i-kôs'î-tî) [L varix, varic-, vein]. 1. Condition of being varicose.

2. A swollen, twisted vein. SYN varix.

varicotomy (vâr-i-kôt'ô-mî) (" + G. tomê, a cutting). Excision of a varicose vein.

varicula (vâr-ik'û-lâ) [L varicula, a tiny dilated vein]. A small varix, esp a varicose dilation of the veins of mucous membrane covering ant surface of the eye.

variety. A subdivision of a species.

variola (vâ-rî'ô-lâ) [*variola*, a small spot]. An acute contagious disease characterized by a prodromal stage during which the constitutional symptoms are usually severe, and followed by an eruption which passes through the successive stages of macules, papules, vesicles, pustules, and crusts. SYN *smallpox*.

ERROR. Causative agent is a virus, which closely resembles the vaccinia virus. More common during colder seasons. No age exempt. May occur in utero. No preference as to sex. Acquired chiefly by direct contact with patient. May also be spread through the handling of articles contaminated by the patient. Susceptibility practically universal in those unprotected by proper vaccination, or before a first attack of smallpox, although second attacks have been reported.

INCUBATION. Seven to 14 days. Occasionally longer; average time, 10 to 12 days.

SYM. Onset abrupt with chill or chilliness. Headache usually frontal, intense lumbar pains, elevation of temperature, which may rise to 104° or higher, nausea, or more frequently, vomiting. Fever remains high until evening of 3rd or morning of 4th day, when it falls sharply, often to normal.

With drop in temperature, the eruption makes its appearance, coming out first as a rule, about the face, and soon afterward on extremities and to lesser extent on trunk. Eruption is of same character in any one general location, in this respect differing markedly from eruption of chickenpox.

About 2nd day of eruption, the macules become papular, and from 3rd to 5th day these papules become vesicles. The vesicles increase in size and from 7th to 8th day, well developed pustules are present, having appearance of being deep-seated and areola may, or may not, be markedly evident.

The fever of suppuration, so commonly referred to, which is generally anticipated at the time pustules develop, is not always present in the discrete type of smallpox. From 8th to 11th day, desiccation occurs and by end of 21st day in the average discrete case the skin is likely to be free of crusts. The customary observation that smallpox papules when found on the palmar or plantar surfaces feel like shot underneath the skin is a fact to which too much importance is commonly attached.

Preceding eruption of smallpox, a leukocytosis is not present. However, albuminuria may be noted. It may always be expected that the lesions will predominate on the head and extremities, the trunk being relatively free in the discrete type.

The lesions of smallpox, being deep-seated, do not rupture easily, for two

reasons. First, the smallpox lesion is not single celled, but multicellular. Second, because of a deeper invasion, there is a thicker protective covering. It is because of the first of these reasons that the smallpox lesion does not collapse when pricked by a needle. If properly treated, the majority of discrete cases will show little evidence of the disease some months after recovery.

Pitting is not an inevitable misfortune in all cases, but depends principally on extent to which the true skin is involved. However, though pitting does not occur, marked pigmentation may exist at the sites of the lesions and continue to attract attention for many weeks following recovery from an acute attack.

Prodromal rashes sometimes make their appearance before the true eruption of smallpox, and when present, may be mistaken for either measles or scarlet fever. These rashes, which may develop soon after the onset, bear no significance to the severity of the attack which is to follow. Several other types are described and often classified under one heading—the malignant. Of these, the principal ones are the confluent and the hemorrhagic.

COMPLICATIONS. Abscesses, iritis, conjunctivitis, cervical adenitis, nephritis, and pneumonia are among the more common ones.

PROG. In modified and discrete smallpox, the outcome may be considered favorable in practically all instances. In confluent smallpox, recovery is always doubtful and in the hemorrhagic types, death is almost inevitable.

TREATMENT. *Prophylactic.* Successful vaccination against smallpox is an absolute preventive. However, this should always be repeated in the presence of an epidemic or when knowledge of recent exposure is possessed.

General. Absolute isolation of patient in a cool, well-ventilated room. If there are many lesions on mucous membranes a liquid diet may be essential. In the discrete type, patient need not be limited as to diet, unless there is some contraindication. Plenty of water, fruit juices and vegetables should be given. Milk is often soothing as well as nourishing in those cases in which the throat symptoms are severe. Cathartics or laxatives as indicated.

Closest attention should be given to the eyes. For washing the eyes a saturated boric acid solution and sometimes the addition of some silver salt as well. It is not advisable to use ointments on the skin before desiccation is complete, as such treatment only blocks the surface and increases likelihood of abscess formation.

The itching commonly associated with smallpox is seldom complained of, when present, calamine lotion may be applied. In the confluent type, weak iodine baths, or weak permanganate tubbings are often necessary not merely for cleansing skin but for purpose of acting as a deodorant.

v., black. Same as *hemorrhagic v.*

v., coherent. V. in which pustules are not confluent,* but coalesce at edges.

v., confluent. V. in which pustules run together. In confluent smallpox, the onset may be no different than in the discrete variety.

However, as eruption develops, lesions are so numerous that their presentation

may be mistaken for measles. As this eruption progresses, the lesions enlarge until destroyed by breaking down of their walls and so pustular material flows together into small pools.

The temperature does not show the same remission as in the discrete type, the toxemia is much more profound, the throat symptoms are likely to be unusually severe, and swallowing may be practically impossible.

Lesions frequently develop on the conjunctiva, or even on the cornea itself, resulting in the destruction of sight. Death may be due directly to profound toxemia, or to a complicating anemia. Delirium of a violent character is common in these cases, which frequently die between the 7th and 12th day of eruption. Death, however, is not inevitable, and if patient recovers, severe pitting is likely to remain.

v., discrete. V. when pustules are distinct.

v., hemorrhagic. V. with hemorrhage into the vesicles.

In the hemorrhagic type, following customary onset, an extensive eruption of skin may develop, suggestive of scarlet fever. Profuse subconjunctival hemorrhages, profuse hemorrhages from nose and mouth may develop and patient die within 24 to 48 hours with no prior loss of consciousness. In some cases of hemorrhagic smallpox, there may be seen only a few, or sometimes many spots, followed by death within 24 hours of their appearance. In still a 3rd type of the hemorrhagic variety lesions progress in the customary manner until pustular stage is reached, when hemorrhages take place in the lesions. Cases of this kind are not necessarily fatal in comparison with the 2 preceding hemorrhagic varieties mentioned.

v., malignant. A fatal form of hemorrhagic v. q v.

v., modified. Type of the disease commonly called varioloid. Case of modified smallpox seen in patients who have been vaccinated some years previously, but have not retained a complete immunity to the disease.

As a result, the infection is usually mild as to number and character of lesions, though at times the onset is somewhat severe.

variolar (vār-l'ōl-ar). Pertaining to smallpox.

variolate (vār't-ō-lāt) [L. *variola*, a tiny mark]. 1. To vaccinate with smallpox virus. 2. Having lesions like those of smallpox.

variolation, variolization (vār-l-ō-lā'shūn, vār-l-ō-l-zā'shūn) [L. *variola*, a tiny spot]. Inoculation with smallpox.

varioloïd (vār't-ō-loïd) [" + G. *eidos*, form]. 1. Resembling smallpox. 2. Pert. to varioloïd. 3. A mild but contagious type of smallpox in those who have had smallpox or have been vaccinated.

varioloüs (vār't-ō-lūs) [L. *variola*, a tiny mark]. Relating to smallpox.

varix (vār'iks) [L. *varix*, a dilated twisted vein]. 1. A tortuous dilatation of a vein. **See: varicose veins**. 2. Less commonly, dilatation of an artery or lymph vessel.

v., aneurysmal. A direct communication bet. an artery and a varicose vein without an intervening sac.

v., chyle. A varix of a lymphatic vessel which conveys chyle.

v., lymphaticus. Dilatation of lymphatic vessel.

v., turbinal. Permanent dilatation of veins of turbinate bodies.

varolian (vā-rō'li-ān). Relating to the pons Varolii.

v. bend. Ant. extension of hindgut on its ventral surface in the fetus.

varus (vā'rūs) [L. *varus*, bent inward].

1. Turned inward; bowlegged. 2. A condition in which a clubfooted person walks on outer border of the foot. SYN: *talipes varus*.

vas (vās) (pl. *vasa*) [L. *vas*, vessel].

A vessel or duct.

v. aberrans. 1. A narrow tube varying in length from 1½ to 14 inches, occasionally found connected with the lower part of the canal of the epididymis or with the commencement of the vas deferens. 2. Vestige of the biliary ducts sometimes found in the liver.

v. afferens. An afferent vessel of a lymph node.

v. afferens glomeruli. The afferent arteriole which conveys blood to the glomerulus of a renal corpuscle.

v. capillare. BNA. A capillary blood vessel.

v. deferens. The excretory duct of the testis, the continuation of the epididymis, terminating at *ductus ejaculatorius* at prostatic urethra. SYN: *ductus deferens*.

RS. *Ampullitis, cord, spermatic, deferentitis*.

v. lymphaticum. BNA. One of the vessels carrying the lymph.

v. prominens. BNA. Blood vessel on the cochlea's accessory spiral ligament.

v. spirale. A large blood vessel beneath the tunnel of corti in the basilar membrane.

vasa (vā'sā) (sing. *vas*) [L. *vas*, vessel].

v. afferentia. The lymphatic vessels entering a lymph node.

v. bre'via. Branches of the splenic artery going to greater curvature of the stomach.

v. efferentia. 1. Lymphatics which leave a lymph node. 2. Excretory ducts of the testis to the head of the epididymis.

v. prae'via. The blood vessels of the cord presenting before the fetus.

v. rec'ta. 1. Tubules which become straight prior to entering the mediastinum testis. 2. Straight collecting tubules of the kidney.

v. vaso'rum. BNA. Tiny blood vessels which are distributed to walls of larger veins and arteries.

v. vortico'sa. Stellate veins of the choroid, carrying blood to the sup. ophthalmic vein.

vasal (vā'sāl) [L. *vas*, vessel]. Relating to a vas or vessel.

vascular (vās'kü-lār) [L. *vasculum*, a small vessel]. Pert. to or composed of blood vessels.

v. reflex. Constriction or dilation of vascular trunk or area resulting from mental or physical irritation.

v. system. The heart, blood vessels, lymphatics and their parts considered collectively.

It includes the pulmonary and portal systems.

v. tuft. One of the vascular processes on the chorion in the fetus at an early stage of development. SYN: *villi, chorionic*.

v. tumor. One containing dilated blood vessels. SYN: *angioma, telangioma*.

vascularization (vās'kü-lā-rī-zā'shūn) [L. *vasculum*, a tiny vessel]. Development of new blood vessels in a structure.

vascularize (vās'kü-lā-rīz) [L. *vasculum*, a tiny vessel]. To become vascular by development of new blood vessels.

vasculitis (vās'kü-lī'tis) [' + -itis, inflammation]. Inflammation of a vessel. SYN: *angitis*.

vasculum (vās'kü-lūm) [L. a small vessel]. A tiny vessel.

vasectomy (vās-ék'tō-mī) [L. *vas*, vessel, + G. *ektomē*, excision]. Removal of all or a segment of the vas deferens.

vasifactive (vās-l-fāk'tiv) [' + *facere*, to make]. Forming new vessels. SYN: *vaso-factive, vasoformative*.

vasiform (vās'l-form) [' + *forma*, shape]. Resembling a tubular structure or vas.

vas'o- [L.] Combining form meaning a vessel, as a blood vessel.

vasoconstrictive (vās'ō-kōn-strīk'tiv) [L. *vas*, vessel, + *constrictus*, bound]. Causing constriction of the blood vessels.

vasoconstrictor (vās'ō-kōn-strīk'tor) [' + *constrictor*, a binder]. 1. Causing constriction of blood vessels. 2. That which constricts or narrows the caliber of blood vessels, as a drug or a nerve.

vasodentin(e) (vās'ō-dēn-tēn) [' + *dentinus*, pert. to a tooth]. Modified dentine provided with blood capillaries.

vasodepression (vās'ō-dē-prēsh'ūn) [' + *depressio*, a pushing down]. Vasomotor depression or collapse.

vasodepressor (vās'ō-dē-prēs'sor) [L. *vas*, vessel, + *depressor*, that which pushes down]. 1. Having a depressing influence on the circulation, lowering blood pressure by dilatation of blood vessels. 2. An agent which depresses circulation.

vasodilatation (vās'ō-dī-lā-tā'shūn) [' + *dilatāre*, to widen]. Dilatation of blood vessels, esp. small arteries and arterioles.

v., antidromic. Vasodilatation resulting from stimulation of dorsal root of a spinal nerve.

v., reflex. Formation of a red mark on the skin, which turns white quickly when rubbed firmly by a penholder.

vasodilatin (vās'ō-dī-lā'tin) [L. *vas*, vessel, + *dilatāre*, to widen]. A vasodilator substance said to be present in organic extracts, which depresses nerves and blood vessels. It is similar to or possibly identical with histamine.

vasodilator (vās'ō-dī-lā'tor) [' + *dilatāre*, to widen]. 1. Causing relaxation of the blood vessels. 2. A nerve or drug which dilates the blood vessels.

vaso-epididymostomy (vās'ō-ēp'ī-dīdīmōs'tō-mī) [' + G. *epi*, upon, + *didymos*, testicle, + *stoma*, passage]. Formation of a passage bet. the vas deferens and the epididymis.

vasoexcitor (vās'ō-ēks-sīt'or). Stimulating vasoconstriction.

v. material. Abbr. VEM. A pressor principle formed in the kidney which appears in circulation of animals in shock or after prolonged anoxia.

vasofactive (vās'ō-fāk'tiv) [' + *facere*, to make]. Forming new blood vessels. SYN: *vasifactive, vasoformative*.

vasoformative (vās'ō-for'mā-tiv) [' + *formāre*, to form]. Forming new blood vessels. SYN: *vasofactive, vasifactive*.

vasography (vās'ōgr'fā-fi) [L. *vas*, vessel, + G. *graphein*, to write]. X-ray photography of the blood vessels.

vasohypertonic (vās'ō-hī-pēr-tōn'ik) [' + G. *hyper*, over, + *tonikos*, pert. to tension]. Causing or that which causes constriction of blood vessels. SYN: *vasoconstrictor*.

vasohypotonic (vās'ō-hī-pō-tōn'ik) [' + G. *hypo*, under, + *tonikos*, pert. to ten-

sion]. Relaxing or that which relaxes blood vessels. SYN: *vasodilator*.

vasoinhibitor (väs'ô-in-hîb'î-tor) [' + *inhibere*, to restrain]. An agent that depresses vasomotor nerve.

vasoinhibitory (väs'ô-in-hîb'î-tor-î) [' + *inhibere*, to restrain]. Restricting vasomotor activity.

vasoligation (väs'ô-il-gâ'shûn) [' + *ligare*, to bind]. Ligation of a vessel, specifically the vas deferens.

vasomotion (väs'ô-mô'shûn) [' + *motio*, a moving]. Change in caliber of a blood vessel.

vasomotor (väs'ô-mô'tor) [L. *vas*, vessel, + *motor*, a mover]. Pert. to the nerves having muscular control of the blood vessel walls.

The circularly arranged fibers of the muscles of arteries and veins can contract or relax, the affected region is accordingly either blanched or flushed. The former effect can commonly be produced by stimulating sympathetic fibers, and is consequently called vasoconstrictor; certain other nerves on stimulation cause vasodilation, examples being the nervus chorda tympani and the nervi erigentes.

A vasomotor reflex is one in which the stimulus, *e g*, a horrifying sight, results in a change in vasomotor stage, *e g*, pallor. SEE *vasoconstrictor*, *vasodilator*.

v. epilepsy. E with vasomotor changes in the skin.

v. nerves. Those which cause either contraction or dilation of blood vessels.

v. spasm. Spasm of smaller arteries.

vasomotor (väs'ô-mô'tor-î) [L. *vas*, vessel, + *motor*, a mover]. Controlling changes in the size of the blood vessels. SYN: *vasomotor*.

vasoneurosis (väs'ô-nû-rô'sis) [' + G. *neuron*, nerve, + *-osis*, condition]. A neurosis affecting blood vessels, a disorder of the vasomotor system. SEE: *angioneurosis*.

vasoörchidostomy (väs'ô-or-kîd-ô'stô-mî) [' + G. *orchis*, orchid-, testicle, + *stoma*, mouth]. Surgical connection of the epididymis to the severed end of the vas deferens.

vasoparesis (väs'ô-pär-ê'sis) [' + G. *paresis*, relaxation]. Partial paralysis or weakness of the vasomotor nerves.

vasopressin (väs'ô-prê's'in). SYN. *antidiuretic hormone* (Abbr. *ADH*), *pitressin*. A hormone formed in supraoptic and paraventricular nuclei of hypothalamus and transported to post. lobe of hypophysis through the hypothalamo-hypophyseal tract. It has an antidiuretic and a pressor effect elevating blood pressure. It also stimulates intestinal peristalsis and causes hyperglycemia. SEE: *oxytocin*.

vasopuncture (väs'ô-pûnk-chûr) [L. *vas*, vessel, + *punctura*, a piercing]. Puncture of the vas deferens.

vasorelaxation (väs'ô-rê-lâks-â'shûn) [' + *relaxare*, to loosen]. Lessening of vascular pressure.

vasorrhaphy (väs-or-â-flî) [' + G. *rhaphe*, a seam]. Surgical suture of the vas deferens.

vasosection (väs'ô-sêk'shûn) [' + *sectio*, a cutting]. Surgical division of the vasa deferentia.

vasosensory (väs'ô-sên'sô-rî) [L. *vas*, vessel, + *sensorius*, pert. to sensation]. A pressoreceptor nerve: the cardio-aortic and sinus nerves.

vasospasm (väs'ô-spâzm) [' + G. *spasmos*, a spasm]. Spasm of any vessel, esp. of a blood vessel. SYN: *angiospasm*, *vasoconstriction*.

vasostimulant (väs'ô-stîm'û-lânt) [' + *stimulare*, to goad]. Exciting vasomotor action.

vasostomy (va-zos'to-mî) [L. *vas*, vessel, + G. *stoma*, mouth]. Surgical procedure of making an opening into the vas deferens.

vasotomy (väs-ôt'ô-mî) [' + G. *tomê*, a cutting]. Incision of the vas deferens.

vasotonic (väs'ô-tôn'îk) [' + G. *tonikos*, pert. to tone]. Pert. to the tone of a vessel.

vasotribe (väs'ô-trib) [' + G. *tribein*, to crush]. Pressure forceps used for controlling hemorrhages. SYN: *angiotribe*.

vasotripsy (väs'ô-trîp-sî) [' + G. *tripsis*, a crushing]. Arrest of hemorrhages with a strong forceps by crushing an artery. SYN: *angiotripsy*.

vasotrophic (väs'ô-trôf'îk) [L. *vas*, vessel, + G. *trophê*, nourishment]. Concerned with the nutrition of blood vessels.

vasovesiculectomy (väs'ô-vês-îk-û-lêk'tô-mî) [' + *vesicula*, tiny sac, + G. *ektomê*, excision]. Excision of the vas deferens and seminal vesicles.

vasovesiculitis (väs'ô-vês-îk-û-lî-tîs) [' + *vesicula*, tiny sac, + G. *-itis*, inflammation]. Inflammation of the vas deferens and seminal vesicles.

vas'us. 1 Great, large, extensive. 2 One of three muscles of the thigh. SEE: *Table of Muscles in App.*

Vater's ampullae (fâ'h'ter). Dilatation at junction of common bile duct and pancreatic duct, just before they empty into the duodenum.

V.'s corpuscles. Ovoid end organs of nerves supplying the skin. SYN. *pacinian corpuscles*.

V.D. Abbr. for *venereal disease*.

V.D.G. Abbr. for *venereal disease—gonorrhea*.

V.D.H. Abbr. for *valvular disease of the heart*.

VDM. Abbr. for *vasodepressor material*.

VDRL. Abbr. for *Venereal Disease Research Laboratories*.

V.D.S. Abbr. for *venereal disease—syphilis*.

veal (vêl) [ME *veel*]. COMP. Poor in fat and myosin and inferior to beef. Overburdened with xanthines and nuclein. More or less toxic.

v. cutlet (cooked). AV SERVING. 230 Gm. Pro 22.7, fat 2.7.

ASH. Ca. 0.058, Mg. 0.118, K. 1.694, Na. 0.421, P. 1.078, Cl. 0.378, S. 1.146, Fe. 0.015.

VITAMINS: A— to +, B+.

Fifteen milligrams of iron per 100 Gm. of protein ascribed to meats is too high for veal.

ACCTION: It resists the action of the gastric juice and is less digestible than beef.

Veal (Nutrients)				
	Pro.	Fat	Fuel Value	Calories
Breast	20.3	11.0	100 Gm.	178
Forequarters ..	20.0	8.0	100 Gm.	151
Hindquarters ...	20.7	8.3	100 Gm.	156
Side	20.2	8.1	100 Gm.	153

vection (vēk'shūn) [L. *vectio*, a carrying]. Carrying of disease germ from the sick to well persons.

v., circumferential. Transference through an intermediate host.

v., radial. Direct transference of disease germs from one individual to another.

vectis (vēk'tis) [L. *rectis*, pole]. A curved lever for making traction on the presenting part of the fetus.

vector (vēk'tor) [L. *vector*, a carrier]. An animal, usually an arthropod (insect or tick) which transmits the causative organisms of disease from infected to non-infected individuals, esp. one in which the organism goes through one or more stages in its life cycle.

v., circumferential. One carrying infection from the sick to the well.

vectorial (vēk-tō'rī-āl) [L. *vector*, a carrier]. Relating to a vector.

vegetable (vēj'ēt-ā-bl) [O Fr from L. *vegetus*, active] 1 Pert to, of the nature of, or derived from plants. 2 A herbaceous plant, esp. one cultivated for food. 3 The edible part or parts of plants which are used as food. Such includes the leaves, stems, seeds and seed pods, flowers, roots, tubers, and fruits.

Vegetables play an important dietary role as they (a) are important sources of minerals and vitamins, (b) provide bulk which stimulates intestinal motility, (c) and are sources of energy. Caloric value is generally proportional to water content.

v., green. ACTION: They promote intestinal hygiene.

CONTENTS. Vegetables in general are valuable for their mineral content and for their cellulose. Copper is estimated at 1.2 milligrams per kilo for leafy vegetables, and 0.7 milligram per kilo for nonleafy ones. They are deficient in fat, which should be made up by adding milk, cream, butter in their preparation. **See** names of minerals.

NUTRIENTS. Pro 0.83, Fat 0.90, Carbo. ACTION: Vegetables for the most part are base-forming foods. They increase the dissolving of uric acid, and cause diminishing of ammonia content. They stimulate the entire system, esp. the stomach, intestines, kidneys, skin, and generative organs. They are antiscorbutic, prevent scurvy and constipation, aid in the prevention of rheumatism, diabetes, purpura, and anemia, and render the blood and urine alkaline.

The green parts of all vegetables are esp. good for anemia and chlorosis. Fibrous vegetables should be avoided in hyperacidity. Vegetable foods cause fermentation, increasing peristalsis, and they are hurried through the system without proper time for absorption.

CHEMICAL CHANGES. 1. Dry heat changes starch to dextrin. 2. Heat and acid or a ferment change dextrin to dextrose. 3. In germinating grain, starch is changed to dextrin and dextrose. 4. Dextrose in fermentation turns to alcohol and carbon dioxide. 5. Raw starch is not digestible. All starches must be changed to sugars before they can be absorbed in the system. **See:** sugar, classification of.

vegetal (vēj'ēt-āl) [L. *vegetalis*, trophic or nutritional, esp. with reference to that part of an ovum which contains the yolk. **See:** pole, vegetal.

vegetarian (vēj-ē-tā'rī-ān) [L. *vegetabilis*, quickening]. One who eats no animal products, but who lives on vegetables.

vegetarianism (vēj-ē-tā'rī-ān-izm) [' + G. -ismos, condition]. The belief and practice of eating vegetables and fruits, only.

vegetate (vēj'ē-tāt). 1. To grow luxuriantly with the production of fleshy or warty outgrowths such as a polyp. 2. To lead a passive existence either mentally or physically: to do little more than eat and maintain basic bodily processes.

vegetation (vēj-ē-tā'shūn) [L. *vegetatio*, animation]. A morbid luxuriant outgrowth on any part, esp. wartlike projections made up of collections of fibrin in which are enmeshed white and red blood cells; sometimes seen on denuded areas of the endocardium covering the valves of the heart.

v., adenoid. Fungus-like masses of lymphoid tissue in nasopharynx.

vegetative (vēj'ē-tā'tiv) [L. *vegetare*, to animate]. 1 Having the power to grow, as plants. 2 Functioning involuntarily. 3 Quiescent, passive, noting a stage of development.

v. nervous system. The sympathetic* nervous system.

v. pole. Area at end of ovum containing nutritive matter.

vehicle (vē'l-kī) [L. *vehiculum*, that which carries]. A substance, usually inactive therapeutically, used in a medicinal preparation as the agent for carrying the active ingredient, for ex., a syrup in liquid preparations.

veil (vāl) [L. *velum*, a covering]. 1. Any veil-like structure. 2. A piece of the amniotic sac occasionally covering the face of a newborn infant. **SYN** caul. 3. Slight obscuration of the voice.

v., acquired. Slight imperfection of the voice due to strain or exposure.

v., uterine. Device for covering the cervix uteri to prevent impregnation.

vein (vān) [L. *vena*]. Vessel carrying dark red (unarterated) blood to the heart, except for pulmonary vein.

Veins have 3 coats. They differ from arteries in their larger capacity and greater number, also in their thinner walls, larger and more frequent anastomoses and presence of valves which prevent backward circulation. They consist of 2 sets, *superficial* or *subcutaneous* and the *deep* veins with frequent communications. The former do not usually accompany an artery, as do the latter. The systemic veins consist of 3 groups: Those entering the heart through the (a) *superior vena cava*, (b) those through the *inferior vena cava*, and (c) those through the *coronary sinus*. Blood from the capillary plexuses enter the right auricle of the heart. **See:** circulation, Table of Veins in Appendix.

vein, words pert. to: basilic, cava, innominate, intravenous, janitrix, jugular, phlebotomy, phlebitis, phlebogram, phlebotomy, phlegmasia alba dolens, portal, thrombophlebitis, thrombus, "varic" words, varix, vascular, vasoconstrictor, vasodilator, vasomotor, vasoparesis, vena, vena cava, venesection, venosity, veinlet, venostomy, venule, venous.

veinlet. A small vein or venule.

velamen (vēl-ā'mēn) [pl. *velamina*] [L. *vetamen*, veil]. Any covering membrane.

v. nativum. The skin covering the body.

v. vul'vae. Abnormal elongation of the nymphae. **SYN:** *Hottentot apron*.

velamentous (vēl-ā-mēn'tūs) [L. *velamen*, veil]. Expanding like a veil, or sheet.

velamentum (vél-â-mên'tùm) (pl. *velamenta*) [L. *velamentum*, a cover]. A membranous covering.

velar (vél'ar) [L. *velum*, a veil]. Pert. to a veil or veil-like structure.

vellication (vél-ik-â'shùn) [L. *vellicare*, to twitch]. Spasmodic twitching of muscular fibers.

velosynthesis (vél-o-sín'thês-îs) [L. *velum*, veil, + G. *synthesis*, a placing together]. Suture of a cleft palate, particularly the soft palate. SYN: *staphylorrhaphy*.

Velpeau's bandage (vél-pô') A bandage for the shoulder. SEE *bandage*.

V's deformity. D. seen in Colles' fracture in which lower fragment is displaced backward.

velum (vè'lùm) [L. *velum*, veil]. Any veil-like structure.

v. palat'num. BNA. The soft palate.

VEM. Abbr. for *vasoexcitator material*. q.v.

vena (vè'nâ) (pl. *venae*) [L. *vena*, vein].

A vein. SEE *Table of Veins in Appendix*.

v. cava, inferior. The principal vein draining lower portion of the body. It is formed by junction of the two common iliac veins and terminates in rt. atrium of the heart. SEE *heart*.

v. cava, superior. The principal vein draining the upper portion of the body. It is formed by the junction of the rt and left innominate veins and empties into rt atrium of the heart. SEE *heart*.

venation. The distribution of veins to an organ or structure.

venenation (vèn-è-nâ'shùn) [L. *venenum*, poison]. 1 Condition of being poisoned. 2 Act of poisoning.

venene (vè-nèn') [L. *venenum*, poison]. Toxic substance in snake venom.

veneniferous (vèn-è-nîf'êr-ûs) [' + *ferre*, to carry]. Transmitting or carrying poison.

venenific (vèn-è-nîf'ik) [' + *facere*, to make]. Producing poison.

venenous (vèn'en-ûs) [L. *venenum*, poison]. Poisonous.

venepuncture (vèn'è-pûnk'chûr) [L. *vena*, vein, + *punctura*, a piercing]. Puncture of a vein to withdraw blood or inject a remedy.

venereal (vè-nè'rê-âl) [L. *venereus*, from *Venus*, goddess of love]. Pert. to or resulting from sexual intercourse.

v. bubo. Enlarged lymph node in the groin, the result of a venereal disease.

v. collar. Mottled condition of the neck seen occasionally in syphilis.

v. disease. One acquired ordinarily as a result of sexual intercourse with an individual who is afflicted.

The diseases are gonorrhea, syphilis and chancroid. Vincent's infection of the genitals known as the fourth venereal disease, and the fifth venereal disease, venereal lymphogranuloma.

v. sore, v. ulcer. Chancroid.

v. urethritis. Urethritis occurring in gonorrhea.

v. wart. Moist reddish elevations on genitals and anus. SYN *verruca acuminata*, *condyloma*.

venereologist (vè-nèr'è-ôl'ô-jîst) [L. *venereus*, venereal, + G. *logos*, a study]. A doctor who specializes in the treatment of venereal diseases.

venereology (vè-nèr'è-ôl'ô-jî) [' + G. *logos*, a study]. The scientific study and treatment of venereal diseases.

venereophobia (vè-nèr'è-ô-tô-bî-â) [' + G. *phobos*, fear]. Abnormal fear of venereal disease. SYN: *cypridophobia*.

venery (vèn'êr-î) [L. *Venus*, *Vener-*, *Venus*, goddess of love]. Sexual intercourse. SYN: *coitus*.

venesection (vèn'è-sêk'shùn) [L. *vena*, vein, + *sectio*, a cutting]. Opening of a vein for withdrawal of blood.

venin(e) (vèn'in) [L. *venenum*, poison]. Toxic substance in snake venom.

venin-antivenin (vèn'in-ân'tî-vèn'in). Vaccine to counteract snake poison.

veniplex (vèn'î-plêks) [L. *vena*, vein, + *plexus*, a braid]. A plexus of veins.

venipuncture (vèn'î-pûnk'chûr) [' + *punctura*, a piercing]. Puncture of a vein for any purpose.

venisection (vèn'î-sêk'shùn) [' + *sectio*, a cutting]. Opening of a vein for blood abstraction. SYN *phlebotomy*.

venisuture (vèn'î-sû-chûr) [' + *sutura*, a stitch]. Suture of a vein. SYN: *phleborrhaphy*.

venoatrial (venoaortic) (vè'nô-â'trî-âl, -aw-rik'û-lâr) [L. *vena*, vein, + *atrium*, corridor]. Relating to the vena cava and the atrium.

venoclysis (vè-nôk'li-sîs) [' + G. *klysis*, injection]. The continuous injection of medicinal or nutrient fluid intravenously. SYN *phleboclysis*.

venogram (vè'nô-grâm) [' + G. *gramma*, a writing]. 1 A roentgenogram of the veins. SYN *phlebogram*. 2 A tracing of the venous pulse.

venography (vè-nôg'râ-fî) [' + G. *graphem*, to write]. 1 Roentgenography of veins. 2 The making of a tracing of the venous pulse.

venom (vèn'ôm) [L. *venenum*, poison]. A poison excreted by some animals, such as insects or snakes, and transmitted by bites or stings.

v. snake. The poisonous secretion of the labial glands of certain snakes. Venoms contain proteins, chiefly toxins and enzymes, which are responsible for their toxicity. They are classified as *thermococytolysins*, *hemocytolysins*, *hemococytolysins*, *proteolysins*, and *cytolysins* on the basis of the effects produced.

ven'omot'or. Pert. to constriction or dilatation of veins.

venomous. Poisonous.

v. snake. In the USA, the coral snakes and pit vipers (copperhead, cottonmouth moccasins, and rattlesnakes). SEE *snakes*, *poisonous*.

venoperitoneostomy (vè'nô-pèr'î-tô-nè-ôs'tô-mî) [L. *vena*, vein, + G. *peritonion*, peritoneum, + *stoma*, passage]. Attachment of the cut end of the saphenous vein into the cavity of the peritoneum.

venopressor (vè'nô-près'or) [' + *pressor*, that which squeezes]. Pert. to venous blood pressure.

venosclerosis (vè'nô-skîlê-rô'sîs) [' + G. *skîrôsis*, a hardening]. Sclerosis of veins. SYN *phleboscclerosis*.

venosity (vè-nô's'î-tî) [L. *vena*, vein]. 1. Condition in which there is an excess of venous blood in a part causing venous congestion. 2 Deficient aeration of venous blood.

venostasis (vè-nôs-tâ'sîs) [L. *vena*, vein, + G. *stasis*, a standing]. The trapping of blood in an extremity by compression of veins, a method sometimes employed for reducing the amount of blood in circulation.

venostat (vè'nô-stât) [' + G. *statikos*, standing]. Appliance for performing venous compression.

venothrombotic (vè-nô-thrôm-bôt'ik). Having the property of inducing the formation of thrombi in veins.

venotomy (vē-nōt'ō-mī) [L. *vena*, vein, + G. *tomē*, a cutting]. Incision of a vein.

venous (vē'nūs) [L. *vena*, vein] Pert to the veins or blood passing through them.

v. blood. The dark blood in the veins.

v. hum. Murmur heard upon auscultation over larger veins of the neck.

v. hyperemia. Excess of venous blood in a part. *SYN* *venosity*

v. return. The amount of blood returning to the atria of the heart

v. sinus. A channel which carries venous blood. Important venous sinuses are those of the dura mater draining the brain and those of the spleen

v. sinus of sclera. The canal of Schlemm, *q v*

venovenostomy (vē-nō-ve-nōst'ō-mī) [L. *vena*, vein, + *vena*, vein, + G. *stoma*, mouth] Formation of an anastomosis of a vein into a vein.

vent (vēnt) [O. Fr *fente*, slit]. An opening in any cavity, esp one for excretion.

v., alveolar. An opening between adjacent alveoli of the lung

venter (vēn'ter) [L *venter*, belly] *SYN*. *belly* 1 The abdomen or belly 2 The cavity of the abdomen 3. The belly of a muscle

ventilation (vēn-tīl-ā'shūn) [L *ventilāre*, to air] 1 Circulation of air or amt of fresh air in a room and withdrawal of foul air 2 Oxygenation of blood 3. *PHYS.* The amt of air inhaled per day.

This can be estimated by spirometry, multiplying the tidal air by the number of respirations per day. An average figure is 10,000 liters. This must not be confused with the total amt. of oxygen consumed, which is on the average only 490 liters. 2000 cu. ft. of air per hr. are necessary to maintain health

Inspired air contains carbon dioxide, 4.38% oxygen, 16.02%, and nitrogen, 79%. *SEE* *air, humidity, respiration*

v. coefficient. The amount of air that must be respired for each liter of oxygen absorbed.

v. pulmonary. The inspiration and expiration of air from the lungs

v. rate. *ABBR* *VR* The amount of air breathed in one minute. Also called *respiratory minute volume (RMV)*

ventrad [L. *venter*, belly, + *ad*, toward]. Toward the ventral aspect, opp. to *dorsad*

ventral (vēn'trāl) [L *ventralis*, pert to the belly] Pertaining to the belly, hence, in quadrupeds, pertaining to the lower or underneath side of the body; in man, pertaining to the anterior portion or the front side of the body.

v. hernia. One through the abdominal wall, esp at points other than the umbilicus and groin

ventricle (vēn'trīk'l) [L *ventriculus*, a little belly]. 1 A small cavity. 2 One of 2 lower chambers of the heart, which propel blood into the arteries. The right v. forces it into the pulmonary artery and the lungs; the left, through the aorta. At each beat, each ventricle pumps more than 6 oz. of blood. In a resting adult at each beat, each ventricle discharges approximately 60 ml. of blood (*stroke volume* or *systolic output*). 3. One of the cavities of the brain.

RS: Arantius', aula, aulata, carnosus columns, heart.

v., aortic. Left v. of the heart.

v. of the larynx. The space bet. the true and false vocal cords.

ventricornu (vēn'trī-kor'nū) [L. *venter*, belly, + *cornu*, horn] The ant ventral horn of gray matter of the spinal cord.

ventricose (vēn'trī-kōs) [L. *ventricōsus*, big-bellied]. 1. Inflated on 1 side. 2. Corpulent.

ventricular (vēn'trīk'ū-lar) [L *ventriculus*, a little belly] Pert. to a ventricle.

v. folds. The false vocal cords or folds of mucous membrane parallel or above the true vocal cords.

v. ligament. A narrow band of fibrous tissue lying within each ventricular fold.

v. tertius. Third ventricle of the brain

ventriculin (vēn'trīk'ū-līn). Desiccated, gastric tissue. A proprietary product, given orally for treatment of pernicious (addisonian) anemia

ventriculography (vēn'trīk'ū-lōgrā'fī) [L. *ventriculus*, a little belly, + G. *graphein*, to write] An x-ray process used for localization of cerebral tumors, following the injection of air into the cerebral ventricles

ventriculometry (vēn'trīk'ū-lōm'ē-trī) [" + G. *metron*, a measure] The measurement of the intraventricular cerebral pressure

ventriculolector (vēn'trīk'ū-lō-nēk'tor) [" + *lector*, a joiner] Muscular band connecting atria and ventricles of the heart. *SYN* *atrioventricular bundle*.

ventriculoscopy (vēn'trīk'ū-lōs'kō-pl) [" + G. *skopein*, to examine] Examination of the ventricles of the brain with an endoscope

ventriculus (vēn'trīk'ū-lūs) [L. a little belly] *BNA* 1 The stomach 2 A ventricle of the brain or heart.

ventricumbent (vēn'trī-kum'bent) [L *venter*, belly, + *cumbere*, to lie]. Lying on the belly. *SYN*. *prone*

ventruct (vēn'trī-dūkt) [" + *ductus*, leading] To draw toward the abdomen.

ventrimeson (vēn'trī-mēs'ōn) [" + G. *mesos*, middle] The median line on the ventral surface of the body

ventripyramid (vēn'trī-pīrā-mīd) [" + G. *pyramis*, pyramid]. An ant pyramid of the medulla oblongata

ventro-. Combining form denoting the abdomen or ventral (anterior) surface of the body.

ventrocystorraphy (vēn'trō-sīs-tor'ā-fī) [" + G. *kystis*, sac, + *rhaphe*, a seam]. Suture of a cyst to the abdominal wall to permit drainage

ventrofixation (vēn'trō-fīks-ā'shūn) [" + *fixāre*, to fix]. The suture of a displaced viscus to the abdominal wall

ventrohysteropexy (vēn'trō-hīs'tēr-ō-pēks'ī) [" + G. *hystera*, uterus, + *pēxis*, fixation]. Attachment of the uterus to the abdominal wall

ventroscopy (vēn'trōs'kō-pl) [L. *venter*, belly, + G. *skopein*, to examine]. Examination of the abdominal cavity by illumination. *SYN* *celioscopy*.

ventrose (vēn'trōs) [L. *venter*, belly] Having a belly or swelling like one.

ventrosity (vēn'trōs'ī-tī) [L. *venter*, belly]. Having an enlarged belly; corpulence.

ventrosuspension (vēn'trō-sūs-pēn'shūn) [" + *suspensio*, a hanging]. Fixation of displaced uterus to abdominal wall

ventrotomy (vēn'trōt'ō-mī) [" + G. *tomē*, a cutting]. Incision into abdominal cavity. *SYN*: *celiotomy, laparotomy, q v*.

ventrovesicoanastomosis (vēn'trō-vēs-ī-kō-fīks-ā'shūn) [" + *vesica*, bladder, + *fixāre*, to fix]. Suture of uterus to abdominal wall and bladder. *SYN*: *hysterocystopexy*.

venula (vēn'ū-lā) [L. little vein]. Venule.

- ***venule** (vén'ül) [L. *venula*, little vein]. A veinlet, a tiny vein continuous with a capillary.
- venus** (vén'üs) [L. *Venus*, goddess of love]. Sexual intercourse. **SYN:** *copulation*.
- v.'s collar.** Pigmentation around the neck in eruption due to syphilis.
- v., crown of.** An eruption around the hairline caused by syphilis.
- v., mount of.** The mons pubis (mons veneris), *q. v.*
- verbigeration** (vër-blj-ër-ä'shün) [L. *verbigere*, to chatter] Uncontrollable repetition of phrases, absence of coherent thought combined with voluble speech, seen in insanity.
- verbomania** (vër'bô-mä'nî-ä) [L. *verba*, word, + G. *mania*, madness] The flow of talk in some forms of psychosis.
- verdigris** (vër'dig-ris) [O Fr.] 1 Mixture of basic copper acetates. 2. Deposit of copper carbonate upon copper and bronze vessels.
- POISONING: TREATMENT** Same as for copper sulfate.
- verdohemoglobin** (vër'dô-hëm'ô-glôb-in). A greenish pigment occurring as an intermediate product in the formation of bilirubin from hemoglobin.
- Verga's ventricle** (vër'gä) Cleftlike space bet the callosum and fornix of the brain.
- vergence** (vërg'ëns) [L. *vergere*, to bend] A turning of one eye with reference to the other. May be horizontal (convergence or divergence) or vertical (infravergence or supravergence).
- vergens.** Inclining.
- v. deorsum.** Inclining downward.
- v. sursum.** Inclining upward.
- Verheyen's stars** (fër-hë'n) Starlike venous plexuses on surface of the kidney below its capsule.
- vermicidal** (vër'mî-sî däl) [L. *vermis*, worm, + *cidus*, from *caedere*, to kill] Destroying worms parasitic in the intestines.
- vermicide** (vër'mî-sîd) [+ *cidus*, from *caedere*, to kill]. 1 Destroying worms. 2. An agent that will kill intestinal worms. **EX:** *santonin, chenopodium oil*.
- vermicular** (vër-mîk'û-lär) [L. *vermicularis*, like a worm]. Resembling a worm.
- v. movements.** The wormlike movements of peristalsis.
- v. pulse.** Small, rapid one resulting in wormlike feeling in the fingers.
- vermiculation** (vër-mîk'û-lä'shün) [L. *vermiculare*, to wriggle] A wormlike motion, as in the intestines. **SEE** *peristalsis*.
- vermiculose, vermiculose** (vër-mîk'û-lôs, vër-mîk'û-lôs) [L. *vermicularis*, wormlike] 1 Infested with worms or larvae. 2. Wormlike.
- vermiform** (vër'mî-form) [L. *vermis*, worm, + *forma*, shape] Contoured like a worm.
- v. appendix.** A small tube about the size of a goose quill opening into the cecum and closed at its other end.
- Its inflammation is called appendicitis.**
- vermifugal** (vër-mîf'û-gäl) [+ *fugäre*, to put to flight]. Expelling worms from the intestines.
- vermifuge** (vër'mî-fûj) [+ *fugäre*, to put to flight] Agent for expelling intestinal worms. **SEE:** *anthelmintic, vermicide*.
- vermin** (vër'mîn) [L. *vermis*, worm]. Parasitic insects and animals, such as mice, lice, bedbugs.
- vermination** (vër-mîn-ä'shün) [L. *vermis*, worm]. Vermin or worm infestation.
- verminosis** (vër-mîn-ô'sis) [+ G. -ô'sis, condition]. Infestation with vermin.

- verminous** (vër'mîn-üs) [L. *vermis*, worm]. Pert to or infested with worms.
- vermiphobia** (vër-mî-tô'bî-ä) [+ G. *phobos*, fear] An abnormal fear of being infested with worms.
- vermis** (vër'mis) [L. *vermis*, worm]. 1. A worm. 2. Median connecting lobe of the cerebellum.
- v. cerebelli.** BNA Same as vermis, 2.
- v., inferior.** The anterior inferior portion of the vermis of the cerebellum. Includes the *nodulus, uvula, pyramis*, and *tuber*.
- v., superior.** The posterior, dorsal portion of the vermis. Includes the *folium, declivus, culmen*, and *central lobule*.
- vernal** (vër'näl) [L. *vernalis*, pert. to spring]. Occurring in or pert. to the spring.
- vernix** (vër'nîks) [L.]. Varnish.
- v. caseosa.** A sebaceous deposit covering the fetus due to secretion of skin glands. Most abundant in creases and flexor surfaces. Consists of exfoliations of outer skin layer, lanugo, and secretions of sebaceous glands.
- After birth, rub the skin with olive oil and it will disappear. **SEE:** *sebum*.
- veronal** (vër'ô-näl) USP A proprietary brand of barbital, a white crystalline substance.
- USES** As a hypnotic.
- DOSAGE** 5 gr (0.3 Gm).
- v. sodium.** A brand of soluble barbital.
- veronalism** (vër'ô-näl-izm). Addiction to the use of veronal and the resultant symptoms.
- verruca** (vër-rü'kä) (pl. *verrucae*) [L. *verruca*, wart] Elevation of the skin, small, circumscribed, formed by hypertrophy of the papillae and of various forms according to location. **SYN** *wart*.
- Etiol.** Caused by a filtrable virus, but predisposing factors are not known.
- Procc.** Essentially benign and may disappear spontaneously, particularly in children and young adults. In elderly with longstanding dry seborrhea, lesions may have potential malignancy.
- TREATMENT.** Removal with sharp spoon curet under local anesthesia, touching base with iodine. If elevated, clip off with sharp scissors and touch with iodine. Negative galvanism, cauterization with zinc chloride, formalin, trichloroacetic acid, liquor potassii, acid nitrate of mercury, freezing with carbon dioxide snow, fulguration and, if multiple, x-ray therapy.
- v. acuminata.** A pointed reddish moist wart about the genitals and the anus, seen in gonorrhea. **SYN:** *venereal wart*.
- Develops near mucocutaneous junctures, forming pointed, tufted, or pedunculated, pinkish or purplish projections of varying lengths and consistence.
- Venereal warts should be treated with applications of podophyllum resin followed by removal of the resin by washing with soap and water about 6 hours after application.
- v. digitata.** Form seen on face and scalp, possibly serving as starting point of cutaneous horns, forming several filiform projections with horny caps closely grouped on a comparatively narrow base which in turn may be separated from skin surface by slightly contracted neck.
- v. filiformis.** Small threadlike growths on neck and eyelids covered with smooth and apparently normal epidermis.
- v. necrogenica.** *Tuberculosis verrucosa cutis, q. v.*

v. plana. Flat oily wart, pigmented, on backs of old people.

v. plantaris. Warts on the soles of the feet

v. senilis. V. plana, q v.

v. simplex. V vulgaris, q v.

v. vulgaris. Common warts, usually on backs of hands and fingers.

verruciform (vēr'-ū'sī-form) [L *verruca*, wart, + *forma*, shape] Wartlike.

verrucose, verrucous (vēr'-rū-kōs, vēr'-rū-kūs) [L *verrucōsus*, wartlike]. Wartlike, with raised portions

verruca peruana (vēr-roo'gā pēr-wān'ā). Bartonellosis, also called Carrion's disease or Oroya fever, q v

versicolor (vēr'sī-kul'er) [L *versicolor*, of changing colors] 1 Having many shades or colors 2 Changeable in color

version (vēr'zhūn) [L *versio*, a turning]. 1 Condition of uterus in which its axis is deflected from the normal position without being bent on itself. See *antiversion*, *lateroversion*, *retroverson*. 2. Process of turning the fetus in the uterus to facilitate delivery

v., cephalic. Turning of fetus so that the head presents

v., pelvic. Manipulation of a cross presentation until it is changed to a pelvic presentation

v., podalic. Manipulation of fetus by the feet so that the breech presents.

v., spontaneous. V of fetus by uterine muscular contraction without artificial assistance

vertebra (vēr'tē-brā) (pl *vertebrae*) [L *vertebra*] Any one of the 33 bony segments of the spinal column

The vertebrae are comprised of 7 cervical, 12 thoracic (dorsal), 5 lumbar, 5 sacral, and 4 coccygeal in adults, the five sacral vertebrae fuse to form a single bone, the *sacrum*, and the four rudimentary coccygeal vertebrae fuse to form the *coccyx*

A typical vertebra consists of a ventral *body* and a dorsal or *neural arch*. In the thoracic region the body bears on each side two *costal pits* for reception of the head of a rib. The arch which encloses the *vertebral foramen* is formed of two *roots* or *pedicles* and two *lamina*

The arch bears seven processes: a dorsal *spinous process*, two lateral *transverse processes*, and four *articular processes* (two superior and two inferior). A deep concavity, the *vertebral notch*, on the inferior border of the arch transmits a spinal nerve. The successive vertebral foramina lodge the spinal cord

The bodies of successive vertebrae articulate with one another and are separated by *intervertebral disks*, disks of fibrous cartilage enclosing a central mass, the *nucleus pulposus*. The inferior articular processes articulate with the superior articular processes of the next succeeding vertebra in the caudal direction. Several ligaments (superior, spinous, interspinous, ant and post, longitudinal, and the ligaments flava) hold the vertebrae in position yet permit a limited degree of movement.

RS: *acantha*, *anapophysis*, *anticlinal*, *atlas*, *axis*, *cervical v.*, *lamina*, *spondyle*, *spondylitis*, *spondylotherapy*.

v., basilar. The lowest of the lumbar vertebrae.

v., cervical. The 7 vertebrae of the neck.

v., coccygeal. The rudimentary vertebrae of the coccyx.

CERVICAL VERTEBRA

1. Body. 2 Vertebral foramen. 3 Spinous process. 4. Transverse process.

ATLAS

1 Anterior tubercle 2 Lateral mass. 3. Foramen transversarium. 4 Groove for vertebral artery. 5 Posterior tubercle 6 Posterior arch 7 Transverse process. 8. Superior articular surface.

v., codfish. Abnormal vertebrae seen in cases of osteoporosis in which there are concave deformities of endplates of bodies of vertebrae resulting from pressure from the nucleus pulposus.

v. dentata. The 2nd cervical vertebra. SYN *axis*.

v., false. One of the segments of the sacrum and the coccyx

v., fixed. False vertebrae, q v.

v., flexion. All except the atlas and axis

v., lumbar. The 5 vertebrae bet. the dorsal vertebrae and the sacrum.

v. magnum. The sacrum.

v., odontoid. Same as *v dentata*.

v. prominens. The 7th cervical vertebra.

v., rotation. The first two cervical vertebrae, the atlas and axis

v., sacral. The 5 fused segments forming the sacrum

v., sternal. The segments of the sternum.

v., thoracic. The 12 vertebrae which connect the ribs and form part of the post. wall of the thorax. SYN *dorsal v.*

v., true. The vertebrae which remain unfused through life

vertebral (vēr'tē-brāl) [L *vertebra*, vertebra]. Pertaining to a vertebra or the vertebral column

v. arch. The thoracic portion of a vertebra which encloses a vertebral foramen

v. canal. Cavity of the spinal (vertebral) column which contains the spinal cord.

v. column. Spinal column.

LUMBAR VERTEBRA

1. Body. 2. Inferior articular process. 3. Spinal process. 4. Transverse process. 5. Inferior articular process. 6. Pedicle.

SACRUM

1. Superior articular process. 2. Body of first sacral vertebra. 3. Ala. 4. First anterior sacral foramen. 5. Lateral articular process. 6. Body and foramen of second sacral vertebra. 7. Body and foramen of third sacral vertebra. 8. Body and foramen of fourth sacral vertebra. 9. Body of fifth vertebra. 10. Inferior articular process. 11. Attachment of the piriformis muscle.

v. foramen. 1 The hollow space enclosed by a vertebral arch. 2. A vertebral foramen

v. groove. Groove lying on either side of the spinous processes of the vertebrae

v. notch. Notch on inferior surface of vertebral arch for transmission of a spinal nerve

v. ribs. The lower 2, or floating ribs.

Vertebrata (ver'tē-brā'tā). A subphylum of the phylum Chordata characterized by possession of segmented backbone or spinal column. They possess an axial notochord at some period of their existence. Includes the following classes: *Agnatha* (cyclostomes), *Chondrichthyes* (cartilaginous fishes), *Osteichthyes* (bony fishes), *Amphibia*, *Reptilia*, *Aves*, and *Mammalia*

vertebrate, vertebrated (ver'tē-brāt, ver'tē-brā-tēd) [L. *vertebra*]. Having or resembling a vertebral column.

vertebrectomy (ver-tē-brēk'tō-mī) [' + G. *ektomē*, excision]. Excision of a vertebra or part of one

vertebrochondral (ver'tē-brō-kōn'drāl) [' + G. *chondros*, cartilage]. Denoting the false ribs (8th, 9th, 10th) connected with a vertebra at 1 end and the costal cartilages at the other.

vertebrocostal (ver'tē-brō-kōs'tāl) [' + *costa*, rib]. Pert. to a vertebra and a rib. SYN. *costovertebral*

vertebromammary (ver'tē-brō-mām'mā-rī) [' + *mammarius*, pert. to a breast]. Pert. to the vertebral and mammary area.

v. diameter. The anteroposterior diameter of the thorax.

vertebrosternal (ver'tē-brō-ster'nāl) [' + G. *sternon*, chest]. Pert. to a vertebra and the sternum.

vertex (ver'tēks) [L. *vertex*, summit]. The top of the head. SYN. *crown*.

v. cordis. Apex of the heart

v. presentation. Presentation in labor of vertex of the fetal skull.

vertical (ver'tīk-āl) [L. *vertex*, *vertic*-, summit]. 1. Pert. to or situated at the vertex. 2. Perpendicular to the plane of the horizon of the earth, upright

verticillate (ver-tis'il-āt, -tis-il'āt) [L. *verticillus*, a little whirl]. Arranged like the spokes of a wheel or a whirl.

vertiginous (ver-tij'in-us) [L. *vertigo*, *vertigin*-, a turning round]. Pert. to or afflicted with vertigo

vertigo (ver'tīg-ō, ver-tij'gō) [L. *vertigo*, a turning round]. Sensation of dizziness, a whirling motion of oneself or of ext. objects

ETIOI. Cerebral anemia or congestion; reflex irritation, as in gastric disturbances, eyestrain, uterine disease, constipation, etc

v., auditory, v., aural. V due to disease of the ear.

v., cerebral. V. due to brain disease.

v., epileptic. V attending an epileptic attack or following it.

v., essential. V. from an unknown cause.

v., gastric. V. from gastric disturbance.

v., hysterical. V. accompanying hysteria.

v., labyrinthine. V due to disease of labyrinth of the ear. SYN. *Ménière's disease*.

v., laryngeal. V accompanying laryngeal spasm.

v., lithemic. V. experienced in gout or lithemia.

v., objective. V. when objects seem appear to be moving when stationary.

v., ocular. V. caused by disease of the eye.

v., organic. V. from a brain lesion.

v., peripheral. V from disturbance distant from the brain

v., subjective. V in which patient seems to be turning or rotating

v., toxic. V. from presence of a toxin in the body.

verumontanitis (ver'ū-mōn-tān-i'tis) [L. *verumontānum*, mountainous ridge, + G. *-itis*, inflammation]. Inflammation of the verumontanum. SYN. *colliculitis*

verumontanum (ver'ū-mōn-tā'nūm) [L. *verumontānum*, mountainous ridge]. An elevation on the floor of the prostatic portion of the urethra where the seminal ducts enter

vesalianum (vēs-a-lī-ā'nūm). One of the sesamoid bones in the tendon of origin of the gastrocnemius muscle, and another on outer border of foot in the angle bet. the cuboid and fifth metatarsal.

Vesalius, foramen of (vēs-ā-lī-ūs). One in base of the skull transmitting an emissary vein.

v. vein of. Small emissary vein from cavernous sinus passing through foramen of Vesalius and conveying blood to the pterygoid plexus.

vesania (vē-sā-nī-ā) [L.]. Mental derangement without coma or fever. SYN: *insanity*.

Any well-defined psychosis without structural pathology of the functional group.

vesanic (vēs-ān'īk) [L. *vesania*, insanity]. Pertaining to insanity.

vesica (vēs-ī-kā) [L. *vesica*, a bladder]. A bladder.

v. fellea. BNA. The gallbladder.

v. prostatica. A minute pouch in the prostatic urethra, remnant of müllerian duct. SYN *utricle*, *prostaticus*.

v. urinaria. BNA. The urinary bladder.

vesical (vēs'īk-āl) [L. *vesica*, a bladder]. Pert to or shaped like a bladder.

v. reflex. Inclination to urinate, caused by moderate bladder distention.

vesicant (vēs'īk-ānt) [L. *vesicare*, to blister]. 1. Blistering, causing or forming blisters. 2. Agent used to produce blisters. It is much less severe in its effects than escharotics. 3. A blistering gas used in chemical warfare. Among the blistering gases are mustards and Lewisite.

Vesicants draw the deeper fluids to the surface in the form of blisters.

vesication (vēs-ī-kā'shun) [L. *vesicare*, to blister]. 1. Process of blistering. 2. A blister.

vesicatory (vēs'īk-ā-tōr'ī) [L. *vesicare*, to blister]. 1. Causing or pert to blisters. 2. Agent causing blisters. SYN *vesicant*.

vesicle (vēs'ī-kl) [L. *vesicula*, a little bladder]. 1. A small sac or bladder containing fluid. 2. A blisterlike small elevation on the skin from the size of a pinhead to that of a split pea, containing serous fluid.

Vesicles may be round, transparent, opaque, or dark elevations of the skin, sometimes containing seropurulent or bloody fluid.

They are seen in *sudamina* as the result of sweat which cannot escape from the layers of the skin, in *herpes*, mounted on an inflammatory base, having no tendency to rupture but associated with burning pain. In *herpes zoster* they follow the line of the nerve trunks. They are also seen in *dermatitis venenata*, as the result of poison ivy or oak, and accompanied by great itching, in *dermatitis herpetiformis* or *multiformis*, in *impetigo contagiosa*, occurring especially in children in discrete form, flat and umbilicated, filled with straw-color fluid with no tendency to break. They dry up, forming yellow crusts with little itching, also seen in *vesicular eczema*, *milaria* (prickly heat or heat rash), in *chicken-pox*, *smallpox*, and in *scabies*.

RS: *chitropompholyx*, *herpes*, *milaria*.

v., auditory. That portion of the cerebral v. from which the ext. ear is formed.

v. blastodermic. Sac developed from the blastoderm.

v., cerebral. Expansion of neural embryonic canal from which the brain develops.

v., seminal. One of the 2 membranous, sacculated tubes situated at the base of the bladder, bet it and the rectum, serving as a reservoir for the semen and having a secretion of its own.

v., umbilical. Portion of embryonic yolk sac outside the body cavity.

vesico- [L.]. Combining form meaning *bladder*.

vesicocoele (vēs'īk-ō-sēl) [L. *vesica*, bladder, + *G kēlē*, hernia]. Hernia of bladder. SYN *cystocoele*.

vesicocervical (vēs'īk-ō-ser'vī-kāl) [v. + *cervix*, neck]. Relating to the urinary bladder and cervix uteri.

vesicoclysis (vēs-īk-ōk'īl-sīz) [v. + *G klysis*, a washing out]. Injection of fluid into the bladder.

vesicofixation (vēs'īk-ō-fīks-ā'shun) [v. + *fixatio*, a fixing]. Attachment of the uterus to the bladder or the bladder to the abdominal wall.

vesicoprostatic (vēs'īk-ō-prōs-tāt'īk) [v. + *G prostatēs*, prostate]. Relating to the bladder and prostate.

vesicopubic (vēs'īk-ō-pū'bīk) [v. + *pubis*, pubis]. Pert to the bladder and the os pubis.

vesicospinal (vēs'īk-ō-spī'nāl) [v. + *spina*, a thorn]. Relating to the urinary bladder and spinal cord.

vesicotomy (vēs-ī-kōt'ō-mī) [L. *vesica*, a bladder, + *G tomē*, a cutting]. Incision of the bladder.

vesicouterine (vēs'īk-ō-ū'ter-īn) [v. + *uterinus*, pert to the womb]. Pert to the urinary bladder and the uterus.

v. pouch. SYN *uteronasal pouch*. Downward extension of the peritoneal cavity located between bladder and uterus.

vesicovaginal (vēs'īk-ō-vāj'ī-nāl) [v. + *vagina*, a sheath]. Pert to the urinary bladder and vagina.

vesicula (vēs-īk'ū-lā) (pl *vesiculac*) [L. *vesicula*, a tiny bladder]. A small bladder, or vesicle.

v. seminales. BNA. Tiny reservoir of semen at base of the bladder. SYN: *vesicle*, *seminal*, *v*.

vesicular (vēs-īk'ū-lar) [L. *vesicula*, a tiny bladder]. Pert to vesicles or small blisters.

v. breathing. Murmur heard in normal breathing.

v. eczema. E accompanied by formation of vesicles.

v. fellea. The gall bladder.

v. murmur. The normal sound of respiration heard on auscultation. Same as *v. breathing*.

v. prostatica. The prostatic utricle.

v. râle. The crepitant râle, a crackling sound heard at end of inspiration.

v. resonance. Percussion sound heard over the normal lung.

v. seminales. The seminal vesicle. SEE: *vesicle*, *seminal*.

vesiculase (vēs-īk'ū-lās) [L. *vesicula*, tiny bladder]. An enzyme in prostatic fluid said to coagulate semen.

vesiculation (vēs-īk'ū-lā'shun) [L. *vesicula*, a tiny bladder]. Formation of vesicles or state of having or forming them.

vesiculectomy (vēs-īk'ū-lēk'tō-mī) [v. + *G ektomē*, excision]. Partial or complete excision of a vesicle, particularly a seminal vesicle.

vesiculiform (vēs-īk'ū-lī-form) [v. + *forma*, shape]. Having the shape of a vesicle.

vesiculitis (vēs-īk'ū-līt'is) [v. + *G -itis*, inflammation]. Inflammation of a vesicle, particularly the seminal vesicle.

vesiculocavernous (vēs-īk'ū-lō-kāv'ēr-nūs) [v. + *cavernōsis*, hollow]. Vesicular and cavernous.

vesiculogram (vēs-īk'ū-lō-grām) [v. + *G gramma*, a mark]. An x-ray picture of the seminal vesicles.

vesiculography (vēs-īk'ū-lōgr'āf-ī) [v. + *G graphēin*, to write]. X-ray photography of the seminal vesicles.

vesiculopapular (vēs-īk'ū-lō-pāp'ū-lār) [L. *vesicula*, a tiny bladder, + *papula*, a

pimple]. Composed of vesicles and papules.

vesiculopustular (vēs-īk'ū-lōs-pŭt'ŭ-lār) [+ *pustula*, pustule]. Having both vesicles and pustules

vesiculotomy (vēs-īk'ū-lōt'ō-mī) [+ *G. tomē*, a cutting]. Division of a vesicle, as a seminal vesicle

vesiculotympanic (vēs-īk'ū-lō-tīm-pān'īk) [+ *G. tympanon*, drum]. Vesicular and tympanic

vespaius (vēs-pā'jūs). Follicular, suppurative inflammation of the hairy part of the scalp

vessel (vēs'ēl) [O. Fr from L *vascellum*, a little vessel]. A tube, duct, or canal to convey the fluids of the body. SYN: *vas*

RS' *anastomose*, *anastomosis*, *angutis*, *angiodystrophia*, *arrosion*, *atresic*, *atretic*, *capreolary*, *capreolate*, *endothelial*, *intima*, *rhegma*, *vas*, *vascular*

v.'s, absorbent. The lacteals, lymphatics and capillaries of the intestines.

v.'s, blood. Arteries, veins, and capillaries

v.'s, chyliiferous. V's arising in the villi of the intestinal walls carrying chyle and terminating in the thoracic duct

v.'s, lymphatic. Vessels conveying lymph

v.'s, nutrient. Those supplying interior of the bones.

v., radicular. Branch of a vertebral artery supplying cerebral nerve root

vestibular (vēs-tīb'ŭ-lār) [L *vestibulum*, vestibule] Pert to a vestibule

v. bulbs. Two sacculated collections of veins, lying on either side of the vagina beneath the bulbocavernosus muscle, connected anteriorly by the *pars intermedia*, and through this strip of cavernous tissue communicating with the erectile tissue of the clitoris

Injury during labor may give rise to troublesome bleeding The vestibular bulbs are the homologues of the male corpus spongiosum. SEE: *vestibule*, *Bartholin's glands*, *vagina*

vestibule (vēs'tīb-ŭl) [L *vestibulum*, vestibule] A small space or cavity at the beginning of a canal, such as the aortic v.

v. of ear. The middle part of the inner ear, behind the cochlea, and in front of the semicircular canals, it contains the utricle and sacculus

v. of larynx. The portion of the larynx above the vocal cords

v. of nose. The anterior part of the nostrils containing the vibrissae

v. of vulva. An almond-shaped space bet the lines of attachment of the labia minora At the ant angle the *clitoris* is situated, the post boundary is the *fourchette* The vestibule appears approximately 4 or 5 cm long and 2 cm in greatest width when the labia minora are separated Four major structures open into vestibule The *urethra anteriorly*, the *vagina posteriorly*, and the two *excretory ducts of the glands of Bartholin*, laterally The covering membranes are pink in color and constructed of delicate stratified squamous epithelium. Collections of cavernous tissue are disposed beneath the integument. SEE: *vestibular bulbs*, *Bartholin's glands*, *vagina*

vestibulitis (vēs-tīb-ŭ-lī'tīs). A dermatitis of the nasal vestibule; common in diabetics.

vestibulotomy (vēs-tīb'ū-lōt'ō-mī) [L *vestibulum*, vestibule, + *G. tomē*, a cut-

ting]. Surgical incision into the vestibule of the inner ear

vestibulourethral (vēs-tīb'ū-lō-ŭ-rē'thrāl) [+ *G. urethra*, urethra] Relating to the vestibule of vulva and urethra

vestibulum (vēs-tīb'ŭ-lum) (pl *vestibula*) [L *vestibulum*, vestibule] Vestibule

vestige (vēs'tij) [L *vestigium*, footprint]. A small degenerate or incompletely developed structure which has been more fully developed in the embryo or in a past generation

vestigial (vēs-tij'ī-āl) [L *vestigium*, a footprint] Of the nature of a vestige

SYN *rudimentary*

vestigium (vēs-tij'ī-ŭm) [L. a footprint]. Vestige

veta (vā'ta) Mountain sickness

veterinarian (vēt-ēr-i-nā'ri-ān). One who practices veterinary medicine

veterinary (vēt-ēr-i-nā'ry). Pertaining to the diseases of animals and their treatment 2 A veterinarian

v. medicine. That which deals with diseases of animals and their treatment

V.H. Abbr for *viral hepatitis*

viability (vi-ā-bil'ī-ti) [L *vita*, life, + *habilis*, fit] Ability to live, grow and develop

viable (vi-ā-bl) [L *vita*, life, + *habilis*, fit]. Capable of living, as a 7 months' fetus

vial (vi-āl) [G *phialē*, a drinking cup]. A small glass bottle for medicines or chemicals

vibratile (vi-brā-tīl) [L *vibrāre*, to shake]. Adapted to or used in vibratory motion, moving to and fro SEE *vibratory*

vibration (vi-brā'shŭn) [L *vibrāre*, to shake] 1 A to and fro movement SYN *oscillation* 2 Therapeutic shaking of the body, a form of massage

Consists of a quick motion of the fingers or the hand vertical to the body or use of a mechanical vibrator.

vibrator (vi-brā-tor) [L *vibrator*, a shaker] Device for causing artificial vibration of body or its parts

v., mechanical. Machine driven by hand or motor to give general shake-up of part desired

v., ossicle. Instrument for breaking up aural adhesions

vibratory (vi-brā-tō'ri) [L *vibrator*, a shaker]. Having a vibrating or oscillatory movement

Vibrio (vi-brī-ō) [L. from *vibrāre*, to shake] A genus of short, rigid, motile bacteria, shaped like an "S" or a comma, belonging to the *Spirillaceae*. They are small, actively motile, curved rods possessing a single flagellum. They are Gram-negative and non-spore forming

V. cholerae asiaticae. The spirillum of Asiatic cholera

V. comma. The causative organism of Asiatic cholera

vibron septique (vē-brē-on'sēp-tēk) [Fr. *septic vibrio*]. Bacillus causing malignant edema *Clostridium septicum*, *q.v.*

vibrissae (vi-bris'sē) (sing. *vibrissa*) [L. *vibrissa*, that which shakes]. Stiff hairs within the nostrils at the ant. nares.

vibrometer (vi-brōm'ēt-ēr) [L. *vibrāre*, to shake, + *G. metron*, a measure]. Device for the treatment of deafness which produces rapid vibrations of the membrana tympani.

vibrotherapeutics (vi-brō-thēr-ā-pū'tīks) [+ *G. therapeutikē*, treatment]. The therapeutic application of vibration.

vicarious (vi-kā'ri-ŭs) [L. *vicarius*, substitute]. Taking the place of another; pert.

to assumption of the function of 1 organ by another.

v. menstruation. Menstruation through some other channel than the vagina, as hemorrhage from the nose, from the breast, or eyes, or in form of a leukorrhea at menstrual period

v. respiration. Increased *r* in lung when the other is lessened or abolished.

Vicq d'Azyr's tract (vik da-zēr') *SYN* *mammillothalamic tract* A large myelinated bundle arising in mammillary nuclei and terminating in ant thalamic nuclei

vidian artery (vid'ī-ān). Branch of int. maxillary artery passing through the vidian canal

v. canal. *SYN* *pterygoid canal* A canal in medial pterygoid plate of the sphenoid bone for transmission of pterygoid (vidian) vessels and nerve

v. nerve. A branch from the sphenopalatine ganglion *See* *Nerves, Table of, in Appendix*

vigil (vij'li) [L *vigil*, awake]. Insomnia; wakefulness

v., coma. Condition of muttering delirium in which patient is partially conscious and not completely comatose *See: vigiliambulism*

vigiliambulism (vij-li-ām'bū-lizm) [L *vigil*, awake, + *ambulare*, to walk, + *G -ismos*, condition]. The secondary state of dual or multiple personality, occurring in a state resembling somnambulism, but not during sleep

According to Charcot, an attack of transformed hysteria producing a primary state in which the subject is normal, and a secondary state, in which vigiliambulism takes place, during which all the automatic acts of life continue to take place, but during which the victim assumes a personality entirely unlike the normal personality, each living 2 distinct existences, 1 of them always ignorant of the other, or both ignorant of each other. The secondary state appears to be analogous to hysterical somnambulism.

vigintinormal (vi-jin'ti-nor'māl) [L *viginti*, twenty, + *norma*, rule]. Consisting of one-twentieth of what is normal, as a solution

villi (vil'i) [L *villus*, tuft of hair]. Plural of *villus*.

v., chorionic. Tiny branching processes of surface of chorion which become vascular and help to form the placenta

villiferous (vil-lī'ēr-ūs) [' + *ferre*, to bear]. Having villi, or tufts of hair.

villose, villous (vil'ōs, vil'ūs) [L *villus*, tuft of hair] Pert to or furnished with villi or with fine hairlike extensions.

villositis (vil-ōs-ī'tis) [L *villus*, tuft of hair, + *G -itis*, inflammation]. A bacterial disease causing inflammation of the placental villi.

villus (vil'ūs) (pl. villi) [L *villus*, tuft of hair]. The short filamentous processes found on certain membranous surfaces.

v., chorionic. Tiny vascular projections on the chorionic surface which help to form the placenta *See: chorion*

Vincent's angina (vin'sents ān-jī'nā). Painful ulceromembranous disease of the tonsils and pharynx. *SYN: trench mouth. See: Borrelia vincenti.*

Errort. Fusiform bacillus.

SYN: Painful swelling of lymphatic nodes, inf. of tonsils extending to floor of mouth. Membranous exudate, later ulceration; fever.

vinculum (vin'kū-lūm) [L *vinculum*, a band]. A uniting band or bundle. *SYN: frenulum, frenum, ligament*

v. fen'dinum. 1 BNA. Tendinous, slender filaments connecting the phalanges with the flexor tendons 2 The ringlike ligament of the ankle or wrist.

vinegar (vin'e-gär) [ME *vinegre*, from Fr. *vin*, wine, + *aigre*, sour] The product of the fermentation of cider, wine, or beer used as a condiment.

AV SERVING 5 Gm

ASH CONST Ca 0.016, Mg 0.008, K 0.185, P 0.013, Na 0.017, Fe 0.0003 No sodium or chlorine *SYN: acetum* *See: condiment*

vinethene (vin'ēth-ēn). Proprietary general anesthetic, acting rapidly, but of short duration

USES Chiefly in dentistry and minor surgery

vinous (vi'nūs) [L *vinum*, wine]. Containing or of the nature of wine

vinum (vi'nūm) [L *vinum*, wine] Wine

The medicated wines are solutions of medicinal substances in wine They are not often prescribed None are official

vioform (vi'ō-form) A proprietary product (iodochlorhydroxyquin, USP) containing 41% iodine and having antibacterial and antifungal action This is an almost odorless substitute for iodoform *USES* In powder form for treatment of eczema (moist), burns, and certain ulcers and as a surgical dusting powder Used in other forms for treatment of eczema and Trichomonas vaginalis vaginitis

violence (vi'ō-lēns) [L *violentia*] The use of force or physical compulsion.

It may be expected in *Acute delirious mania* *Epileptics* Especially when planned by 2 or more patients. *Epileptic furor* These cases have no memory of their violent attacks *General paralytices* If their delusions are properly handled, violence may be averted. *Systematized delusional psychosis* Generally they hold in check attacks of violence within the institution, but more apt to yield to such violence outside of the hospital *Schizophrenia* Some cases may become violent

Many attacks of violence may be averted by recognizing warning signs and by knowing the patient.

violet (vi'ō-lēt) [ME *violet*, from L *viola*, violet] One of the colors of the spectrum resembling purple.

v. blindness. Inability to see violet tints *SYN: amianthinopsy*

viomycin (vi-ō-mī'sin). An antibiotic that exerts a suppressive effect against tubercle bacilli Effective against streptomycin-resistant organisms Not suitable for routine use, since renal irritation, vestibular impairment, and deafness may result.

viosterol (vi-ōs'tēr-ōl). A solution of irradiated ergosterol in vegetable oil.

USES: Same as cod-liver oil

AVERAGE INFANT DOSE 5 drops.

viraginity (vir-āj-in-ti-ti) [L *virāgo*, a manlike woman] Presence in a woman of masculine qualities and sexual tendencies.

viral. Pertaining to or caused by a virus *v. disease.* One which is caused by a virus *See: virus diseases*

virgin (vir'jin) [L *virgo*, a maiden]. 1. A woman (or man) who has had no sexual intercourse. 2. Uncontaminated; fresh; new.

virginal (vir'jin-āl) [L *virgo*, a maid]. Relating to a virgin or to virginity

v. membrane. The membrane occluding the ext. orifice of the vagina. **SYN:** *hymen*.

virginity (vîr-jîn-tî-tî) [L. *virginitas*, maidenhood]. The state of being a virgin; not having sustained sexual relations with the opposite sex.

viricidal (vî-rî-sî-dâil) [L. *virus*, poison, + *cidus*, from *caedere*, to kill]. Destructive to or inhibiting a virus. **SYN:** *virucidal*.

virile (vîr'il) [L. *virilis*, masculine]. Having characteristics of a mature male. **SYN:** *masculine*.

v. reflex. 1. Sudden downward movement of penis when the prepuce or gland of a completely relaxed penis is pulled upward. 2. Contraction of bulbocavernosus muscle on percussing dorsum of penis. 3. Contraction of bulbocavernosus muscle resulting from compression of glans penis.

virulence (vîr-il-ê-s'êns) [L. *virilis*, masculine]. The acquisition of masculine characteristics by an aged female.

virilia (vîr-il'i-â) [L. *virilia*, male genitalia]. The male generative organs.

virilism (vîr-il'izm) [L. *virilis*, masculine, + G. -ismos, condition]. Presence or development of male secondary characteristics in a woman.

v. prosopopillary. V with growth of hair on face of a woman.

virility (vîr-il'i-tî) [L. *virilitas*, masculinity]. 1. The state of possessing masculine qualities. 2. Normal power of procreation in the male sex.

viripotent (vîr-ip'ô-tênt) [L. *vir*, man, + *potens*, able]. 1. Sexually mature, noting male sex. 2. Marriageable, applied only to a female. **SYN:** *nubile*.

virology (vîr-ôl'ô-jî) [L. *virus*, poison, + G. *logos*, study]. The phase of biology dealing with viruses and virus diseases.

viros, virus (vî-rôs, vî-rûs) [L. *virus*, poison]. Having poisonous qualities or effects. **SYN:** *poisonous*.

virtual (vîr-tû-âl) [L. *virtus*, excellence]. Being in effect, but not in fact; potential.

virucidal (vî-rû-sî-dâil) [L. *virus*, poison, + *cidus*, from *caedere*, to kill]. Destructive of a virus.

virulence (vîr-il-lêns) [L. *virulentia*, a stench]. 1. Relative power possessed by organisms to produce disease. 2. Property of being virulent; venomousness, as of a disease. **SEE:** *attenuation, avirulent*.

virulent (vîr-û-lênt) [L. *virulentus*, full of poison]. 1. Very poisonous. 2. Infectious, able to overcome the host's defensive mechanism; distinguished from toxic and pathogenic.

viruliferous (vîr-û-lîf'êr-ûs) [L. *virus*, poison, + *ferre*, to bear]. Conveying or producing a virus.

virus (vî-rûs) [L. *virus*, poison]. 1. The specific living morbid principle by which an infectious disease is transmitted. 2. The fluid exudate from vesicles of vaccinia used for vaccination.

v. attenuated. A virus so treated that it is less pathogenic.

v. dehumanized. Vaccine obtained by the inoculation of a heifer with virus from a human being.

v. diseases. Smallpox, chickenpox, measles, mumps, the common cold, poliomyelitis, rabies, epidemic encephalitis, and v. pneumonia.

v. filtrable. A virus causing infectious disease, the essential elements of which are so tiny that they retain infectivity after passing through a filter of the Berkefeld* type.

v. neurotropic. Those that seek out the nerves.

vis (vis) (pl. *vises*) [L. *vis*, force]. Force, strength, energy, power.

v. attract'va. Force that attracts.

v. format'va. Energy resulting in development of new tissue.

v. medica'trix natu'rae. The healing power of nature.

viscera (vis'êr-â) (sing. *viscus*) [L. *viscus*, *viscer-*, *viscus*]. Internal organs, esp. the abdominal.

RS: *celosomia, evisceration, splanchnic*.

viscerad (vis'êr-âd) [" + *ad*, toward]. Toward the viscera.

visceral (vis'sêr-âl) [L. *viscus*, *viscer-*, *viscus*]. 1. Pert to viscera. 2. Pertaining to or derived from the gill arches of vertebrates.

v. arches. Branchial arches, *q.v.*

v. cavity. Body cavity containing the viscera.

v. clefts. The fissures separating the visceral arches.

v. skeleton. The pelvis, ribs and sternum enclosing the viscera.

visceralgia (vis'êr-âl'jî-â) [L. *viscus*, *viscer-*, *viscera*, + G. *algos*, pain]. Neuralgia of any of the viscera.

vis'cero-. Combining form meaning pertaining to the viscera.

viscerogenic (vis'êr-ô-jên'tk) [" + G. *genan*, to produce]. Originality in the viscera, noting reflexes.

visceroinhibitory (vis'êr-ô-in-hîb'î-tô-ri) [" + *inhibere*, to restrain]. Checking the action of the viscera.

visceromotor (vis'êr-ô-mô'tor) [" + *motor*, a mover]. Conveying motor impulses to the viscera. **SYN:** *visceri-motor*.

v. reflex. Increase in tonus of abdominal muscles resulting from painful stimuli originating in a viscus.

visceroparietal (vis'êr-ô-pâ-ri-ê-tâl) [" + *paries*, *pariet-*, wall]. Relating to the viscera and the abdominal wall.

visceroperitoneal (vis'êr-ô-pêr'î-tô-nê-âl) [L. *viscus*, *viscer-*, *viscus*, + G. *peritonaton*, peritoneum]. Relating to the abdominal viscera and peritoneum.

visceropleural (vis'êr-ô-plû-râl) [" + G. *pleura*, a side]. Relating to the thoracic viscera and the pleura. **SYN:** *pleuro-visceral*.

visceroptosis (vis'êr-ôp-tô'sîs) [" + G. *ptosis*, a dropping]. Downward displacement of a viscus. **SEE:** *Glénard's disease*.

visceroreceptors. A group of receptors which includes those located in visceral organs. Their stimulation gives rise to poorly localized and ill-defined sensations. In hollow visceral organs they are stimulated principally by excessive contraction or by distention.

viscerosensory (vis'êr-ô-sên'sô-ri) [L. *viscus*, *viscer-*, *viscus*, + *sensorius*, sensory]. Pertaining to sensations aroused by stimulation of visceroreceptors.

v. reflex. Pain or tenderness elicited in somatic structures (skin and muscle) due to visceral disorder. **SEE:** *referred pain*.

visceroskeletal (vis'êr-ô-skêl'êt-âl) [" + G. *skeleton*, skeleton]. Relating to the visceral skeleton.

viscerosomatic (vis'êr-ô-sô-mât'k) [" + G. *sôma*, body]. Relating to the viscera and the body.

v. reaction. A reaction occurring in muscles of the body-wall as a result of stimulation of visceroreceptors.

viscerotrophic (vis'ēr-ō-trōf'ik) Pertaining to trophic conditions related to or associated with visceral conditions.

viscero-visceral reaction (vis-ēr-ō-vis-ēr-āl) A reaction taking place in the viscera as a result of stimulation of visceral receptors. Such reactions are usually below the level of consciousness.

viscid (vis'id) [L. *viscidus*, sticky]. Adhering, glutinous, sticky.

BACT Said of a growth that follows the needle when it is touched to the culture and withdrawn. The sediment rises in a coherent whirl when the liquid culture is shaken.

viscosity (vis-id'i-ti) [L. *viscidus*, sticky]. The property of being viscid or sticky. **SYN** *viscosity*.

viscosimeter (vis-kōs-im'ēt-ēr) [L. *viscōsus*, sticky, + G *metron*, a measure]. Device for estimating the viscosity of a fluid, esp of blood.

viscosity (vis-kōs'i-ti) [L. *viscōsus*, sticky]. 1 State of being sticky or gummy. 2 Resistance offered by a fluid to change of form or relative position of its particles due to attraction of molecules to each other.

v., **specific**. The internal friction of a fluid, measured by comparing the rate of flow of the liquid through a tube with that of some standard liquid, or by measuring the resistance to rotating paddles.

viscous (vis'kūs) [L. *viscōsus*, sticky]. Sticky, gummy, gelatinous.

viscus (vis'kūs) (pl *viscera*) [L. *viscus*, viscus]. Any internal organ enclosed within a cavity, such as the thorax or abdomen. **SYN** *viscera*.

visile (viz'il) [L. *visum*, seeing]. 1 Pert. to vision. 2 Readily recalling what is seen, more than that which is audible or motile.

vision (vizh'ūn) [L. *visio*, a seeing]. 1 Act of viewing external objects. **SYN** *sight*. 2 Sense by which light and color are apprehended. 3 An imaginary sight.

v., **achromatic**. Complete color blindness.

v., **binocular**. Visual sensation which is produced when the images fall on symmetrical points of each retina.

v., **central**, **v.**, **direct**. Vision with the fovea centralis.

v., **day**. Condition in which patient sees better during the day than at night, found in peripheral lesions of the retina, such as retinitis pigmentosa.

v., **double**. Seeing of one object as two. **SYN** *diplopia*.

v., **field of**. The space within which an object can be seen while the eye remains fixed on some one point.

v., **half**. Blindness in one or both eyes for half of the visual field. **SYN** *hemianopia*.

v., **indirect**, **v.**, **peripheral**. Vision with the retina outside of the macular field.

v., **multiple**. Seeing of one object as two or more. **SYN** *polyopia*.

v., **night**. Condition in which patient sees better after dusk, found in lesions of the macula.

vision, words pert. to: aberration, chromatic, accommodation, aftercataract, afterimage, ambliopia, ambyopia, ametropia, anopia, astigmatic, astigmatism, autophony, amphodiplopia, amplitude of accommodation, anianthropsy, anopia, anotropia, asthenopia, asthenopia, bifocal, caligatio, caligo, chloropia, chloropsia, chromatopsia, convergence, cyanopia, chromopsia, diplopia, erythropsia, farpoint, farsightedness, field, fogging, gerontopia, glare, halation, hypermetro-

pia, hypometropia, lanthropsia, image, macropsia, metamorphosis, micropsia, mire, monoblepsia, mucae volitantes, myometrium, myope, myopia, nyctalopia, nyctamblyopia, nyctotrophosia, ocular, oculist, orthophrenia, oxyblepsia, polyopia, second sight, scintillation, scotoma, spintherism, strabismus, vergency, visile, visual, xanthopsia.

visual (vizh'ū-āl) [L. *visio*, a seeing]. 1. Pert. to vision. 2. One whose learning and memorizing processes are largely of a visual nature.

v., **angle**. Angle bet line of sight and the extremities of object seen.

v., **axis**. The line of vision, from object seen through the pupil's center to macula lutea.

v., **cone**. The cone whose vertex is at the eye and whose generating lines touch the boundary of a visible object.

v., **field**. The area within which objects may be seen when the eye is fixed.

v., **line**. The visual axis.

v., **plane**. The plane in which both optic axes lie.

v., **point**. Center of vision.

v., **purple**. A purple pigment in retinal rods. **SYN** *rhodopsin*.

visuoauditory (vizh'ū-ō-aw'dī-tor-i) [L. *visio*, a seeing, + *auditorius*, pert. to hearing]. Relating to sight and hearing, as connecting nerve fibers bet auditory and visual centers.

visuognosis (vizh-ū-ōg-nō'sis) [v + G *gnōsis*, knowledge]. The recognition and appreciation of what is seen.

visuometer (vizh-ū-ōm'ēt-ēr) [v + G *metron*, a measure]. Device for ascertaining the range of vision.

visuopsychic (vizh'ū-ō-sī'kik) [v + G. *psychē*, soul]. Both visual and psychic noting cerebral area involved in apprehension of visual sensations.

visuosensory (vizh'ū-ō-sēn'sō-rī) [v + *sensory*, sensory]. Relating to the recognition of visual impressions.

visus (vi'sus) [L.] Vision.

vit'agens. 1 Like vitamins. They are substances essential to health, but unlike vitamins, they enter into tissue as structural building units.

vitaglass (vī'tā-glās). Window glass containing quartz for transmitting the ultraviolet antirachitic rays of sunlight.

vital (vī'tāl) [L. *vitalis*, pert. to life]. 1. Pert. to or characteristic of life. 2. Contributing to or essential for life.

v., **capacity**. Volume of air that can be expelled following full inspiration.

v., **center**. Respiratory center in medulla.

v., **signs**. Respiration, pulse, and temperature.

v., **statistics**. A record of births, marriages, disease, and deaths in an area.

vitalism (vī'tāl-izm) [L. *vitalis*, pert. to life, + G *-ismos*, condition]. The opinion that a vital force neither chemical nor mechanical is responsible for bodily functions.

vitalist (vī'tāl-ist) [L. *vitalis*, pert. to life]. One who believes in vitalism.

vitalistic (vī'tāl-is'tik) [L. *vitalis*, pert. to life]. Relating to vitalism.

vitality (vī-tāl'ti) [L. *vitalitas*]. 1. Principle of life. 2. Animation, action. **SYN** *strength*. 3. State of being alive.

vitals (vī'tāls) [L. *vita*, life]. Organs of the body, esp. the heart, liver, lungs, and brain, essential to life.

vitamers (vī'tā-mers). Compounds which differ in structure from vitamins but which exert vitaminlike function.

vitamin (vī'tā-mīn) [L. *vita*, life, + *amine*] Any of a group of accessory organic substances existing in most foods in minute amts. in their natural state, needed in the diet for metabolism, the absence of which results in malnutrition and specific deficiency diseases.

Vitamins are not sources of energy nor do they contribute significantly to the substance of the body, but they are indispensable for normal functions and the maintenance of health. They are effective in minute quantities. They act principally as regulators of metabolic processes and play a role in energy transformation, usually acting as coenzymes in enzymatic systems.

Vitamins are extremely complex chemical substance, but the nature, chemical structure, and composition of most of them are known. Most have been isolated and some have been synthesized. In general, none of the vitamins can be formed in the body but must be obtained preformed from animal or plant sources. Exceptions to the above are the formation of Vitamin A from its precursor, carotene, the formation of vitamin D by the action of ultraviolet light on the skin, and the formation of vitamin K by symbiotic bacteria of the intestines.

Vitamins are unstable being readily destroyed by oxidation; by heat, esp in an alkaline medium, strong acids, light, and aging. SEE *Vitamin Tables in Appendix*.

RS *avitaminosis, deficiency disease.*

v., antiberiberi. Thiamine (vitamin B₁)

v., antidermatitis. Vitamin B₆

v., antihemorrhagic. Vitamin K.

v., anti-infective. Vitamin A

v., antineuritic. Thiamine (B₁)

v., antipellagra. Nicotinamide (pellagra-preventing factor)

v., antirachitic. The vitamin D group.

v., antiscorbutic. Vitamin C.

v., antisterility. Vitamin E

v., antiulcer. Vitamin U, *qv*

v., antixerophthalmic. Vitamin A.

v., coagulation. Vitamin K.

v., fertility. Vitamin E

v., sunshine. Vitamin D

vitamin A. SYN *vitamin, anti-infective; v., antixerophthalmic, xerophthol*

A fat-soluble vitamin formed in the body from precursors, yellow pigments of plants (alpha, beta, and gamma carotene). It is essential for normal growth and development, the integrity of epithelial tissues, and for normal teeth and bone development. It is stored in the liver. SEE *Vitamin Tables in Appendix*.

ACTION Promotes healthy functioning of nasal cavities, eyes and ears, sinuses, the respiratory and urinary tracts, and of intestinal flora, and resistance to disease, esp anemia and xerophthalmia. * It is associated with and an aid to vit. B in the endocrine and digestive systems, and with vits C and D in the formation of bone and teeth. Its absence causes damage to the digestive glands. Yeast or lipocal necessary for full absorption of Vit. A.

STABILITY Resists boiling for some time if not exposed to oxidation. Quite stable to heat but not to continued high temperatures (above 100° C.). Vit. A is present in most canned fruits and vegetables.

VIT. A DEFICIENCY DISORDERS: Interference with growth, reduced resistance to infections, interference with calcium

metabolism and development of bone, teeth, and cartilage, and with nutrition of cornea; tendency to edema, increase of uric acid, unhealthy tissues and interference with blood building, responsible for deposit of oxalates and phosphates in urinary tract; anemia, development of respiratory infections, interference with intestinal flora, and induces infections of ear and nasal cavities.

VIT. A FOODS Butter, and butter fat in milk and cod liver oil are rich sources, as are yolk of eggs. Green leafy and yellow vegetables and some fruits, prunes, pincapples, oranges, limes, cantaloupes, liver, kidney and to a much lesser extent, muscle meat, dates, avocados, apples, figs, grapes, and bananas, then heart.

Recommended Daily Allowances for

Vitamin A

International Units	
Man (70 kg); woman (56 kg)	5000
Pregnancy, latter half	6000
Lactation	8000
Children	
Under 1 year	1500
1 to 3 years	2000
4 to 6 years	2500
7 to 9 years	3500
10 to 12 years	4500
12 to 15 years	5000
16 to 20 years	6000

vitamin A₁. Form found in the eye tissues of marine fish

vitamin A₂. A compound found in the livers of fresh-water fish. Similar in properties to vitamin A but with different absorption spectrum in the ultraviolet.

vitamin B complex. A large number of water-soluble vitamins isolated from liver, yeast, and other sources. Among vitamins included are thiamine (B₁), riboflavin (B₂), niacin (nicotinic acid), pyridoxine (B₆), biotin, inositol, p-aminobenzoic acid (PABA), cyanocobalamin (B₁₂), and folic acid.

ACTION Affects growth, appetite, lactation, gastrointestinal, nervous and endocrine systems, aids in marasmus and lymphocytosis, stimulates appetite, reduces sugar content in diabetes, stimulates biliary action, aids in tuberculosis, and is necessary for carbohydrate metabolism.

Only grain-made yeast that is at once dried preserves its potency, containing more vit. B potencies than butter contains vit. A potencies. Advertised fresh yeast does not contain enough in 60 ½ Gm tablets to be of any value. Vit. B is associated more directly with the intestinal tract absorption and growth.

B₁, thiamine, for growth and nutrition. **B₂, riboflavin,** for growth and a healthy nervous system. Relieves body swelling in disease. 750-1000 units daily aid gastrointestinal disease. *Nicotinic acid*, accompanied by diet adequate in all nutritional factors, stimulates recovery from pellagra.

Although not destroyed by ordinary cooking, it may be destroyed by excessive heating for 2-4 hours. Soda in cooking aids destruction. Riboflavin and nicotinic acid are more stable than thiamine; are not destroyed by heat or oxidation.

VIT. B DEFICIENCY DISORDERS. Beriberi, pellagra, digestive disturbances, enlargement of liver, reduction of pancreas, affects the thyroid, causes degeneration of sex glands, reduces catalysis of tissues, affects the nervous system, deranges the

endocrines; induces edema, affects the heart, liver, spleen and kidneys, enlarges the adrenals and deranges function of the pituitary and salivary glands, and cause of some disorders in diabetes.

Polynuritis, gastrointestinal disorders, achlorhydria, anorexia, and failure of lactation have been attributed to deficiency of B₁.

Sources of Vit B Factors *Thiamine*· Whole grains, wheat embryo, brewer's yeast, legumes, nuts, egg yolk, fruits and vegetables

Riboflavin· Brewer's yeast, liver, meat, especially pork, fish, poultry, eggs, and milk; green vegetables.

Nicotinic Acid· Brewer's yeast, liver, meat, poultry, and green vegetables.

Pyridoxine· Rice, bran, yeast

Folic Acid· Leafy, green vegetables, organ meats, lean beef and veal, wheat cereals.

Stability· Long-continued cooking or high temperature destroys and soda in cooking aids its destruction. Not destroyed by ordinary cooking or heat.

vitamin B₂· Folic acid, q.v.

vitamin B₃· SYN *carnitine* A vitamin found in muscle and liver

vitamin B₄· Para-aminobenzoic acid

vitamin B₅· Thiamine, or thiamine hydrochloride Also SEE Table of Vitamins in Appendix

Also called *aneurine*, *antineuritic factor* or *vitamin*, *antiberiberi vitamin*

Recommended Daily Allowances for Vitamin B₁ (Thiamine)

	Mg
Adults	1.5-3.0 (1500-3000 micrograms)
Children	0.6-1.5 (600-1500 micrograms)
Pregnant women ..	1.8-2.3 (1800-2300 micrograms)

vitamin B₆· *Riboflavin*, q.v. Also called *vitamin G*, *lactoflavin*, *oxoflavin*, *hepatoflavin*, *antipellagra factor* or *vitamin* SEE Table of Vitamins in Appendix

vitamin B₇· Also called *chick pellagra factor*

vitamin B₈· Prevents muscular weakness in rats and chicks. Thought to be a mixture of arginine, glycine, and cystine.

vitamin B₉· Necessary for growth in pigeons.

vitamin B₁₀· *Pyridoxine* Found in rice, bran, and yeast SYN *antidermatitis v*

vitamin B₁₁· A factor in rice polishings that prevents digestive disturbances in pigeons. Called *rice polish factor*.

vitamin B₁₂· Usually not classified as a vitamin.

vitamin B₁₃· *Folic acid* compounds affecting chicks.

vitamin B₁₄· SYN: *cyanocobalamine*. Also called *LLD factor*, *Lactobacillus lactis* *Dorner factor*, *extrinsic factor*, *antipernicious anemia principle*, *erythrocyte maturation factor* A red, crystalline substance extracted from liver which is essential for the formation of red blood cells Its deficiency results in pernicious anemia and possibly other macrocytic anemias It is used for prophylaxis and treatment of these and other diseases in which there is defective red cell formation.

vitamin B₁₅· *Hydroxycobalamine*.

vitamin B₁₆· *Nitrosocobalamine*.

vitamin B₁₇· A crystalline compound isolated from human urine. It has high cell-proliferating activity in bone-marrow cultures. The effect upon certain

suspensions of neoplastic cells is inhibitory

vitamin B₁₈· *Pangamic acid*.

vitamin C· SYN *cevitamic acid*, *cevitamic acid*, *antiscorbutic factor*, or *vitamin*. Ascorbic acid, a factor necessary for formation of intercellular substance of connective tissue and essential in maintenance of integrity of intercellular cement in many tissues, especially capillary walls Deficiency leads to scurvy. SEE: Table of Vitamins in Appendix.

Stability· Destroyed easily by heat in the presence of oxygen, as in open-kettle boiling. Less affected by heat in an acid medium; otherwise stable.

Necessary for pregnant and nursing women, in certain disturbances of stomach and bowel, diseases of the liver Aids in growth, weight gain, improved appetite, blood-building Essential in infant feeding. Accepted for correction and prevention of scurvy

At least 100 mg per day is the optimum requirement, and this amt given in lead poisoning improves the general health and blood picture with decrease in amt. of lead in urine

Vit. C DEFICIENCY DISORDERS· Scurvy, imperfect prenatal skeletal formation; defective teeth, pyorrhea, anorexia, anemia, undernutrition, injury to bone, cells, and blood vessels

Vit. C Foods· Raw cabbage, young carrots, orange juice, lettuce, celery, onions, tomatoes, radishes and small amts in potatoes. Citrus fruits are esp rich in this vitamin. Strawberries are about as rich a source as tomatoes, apples, pears, apricots, plums, peaches, and pineapples. Rutabagas are also rich in this vitamin

Recommended Daily Allowances for Vitamin C

	Mg.
Infants	10-50
Children	20-100
Adults	30-100

vitamin conversion tables. For vitamins A, B₁, B₂, and C:

Vitamin A:
1 international unit = 2 Sherman units
= 0.6 microgram
of carotene

Vitamin B₁:
1 international unit = 3 micrograms
= 0.003 mg.
= 2 Sherman units

Vitamin B₂:
1 mg. = 333 Sherman-Bourquin units
= 1000 micrograms

Vitamin C
1 mg. = 20 international units
= 2 Sherman units

vitamin D· One of several vitamins having antirachitic activity The *vitamin D* group includes D₂ (calciferol), D₃ (irradiated 7-dehydrocholesterol), D₄ (irradiated 22-dihydroergosterol) and D₅ (irradiated dehydroisosterol). It is essential in calcium and phosphorus metabolism, consequently it is essential for normal development of bones and teeth.

ACTION: Related to utilization of calcium and phosphorus in blood and bone building. It is called the antirachitic vitamin because deficiency of it interferes with calcium and phosphorus utilization, which in turn causes rickets * Exposure to the sun or ultraviolet ray synthesizes this vitamin in the body. Necessary for most efficient absorption of calcium and phosphorus. A specific in treatment of infantile rickets, spasmodic (infantile tetany), and softening

of bone; valuable also in prevention. Important in normal growth and mineralization of skeleton and teeth.

One large dose of 600,000 international units cures convulsions and helps cure rickets.

VIT. D DEFICIENCY DISORDERS. Imperfect skeletal formation, bone diseases, rickets, caries. Its use without vits A, B and C is harmful and it increases infection if there is a deficiency of vit A.

VIT. D FOODS. Milk, cod-liver oil, salmon and cod livers, egg yolk, butter fat, ergosterol activated by sunlight or the ultraviolet ray possesses vit D potency. A teaspoon of cod liver oil is required by the USP to contain at least 312 units of vit D, and emulsion of cod liver oil is required to contain not less than 50 per cent of cod liver oil, or 156 units of vit. D.

STABILITY. Not affected by oxidation or by heat unless over 100° C. or long-continued cooking.

Recommended Daily Allowances for Vitamin D

	International Units
Infants artificially fed	300-800
Infants breast fed	300-400
Children	300-800
Adults	300-400
Pregnant and lactating women	300-800

VITAMIN E. SYN *antisterility factor* or *vitamin*. Tocopherol, a group of three tocopherols (alpha, beta, and gamma) which prevent sterility and muscular dystrophy in experimental animals. It is essential for the development of spermatozoa and in its absence death and resorption of fetuses occur. Its role in human nutrition has not been definitely established.

ACTION. Metabolism of excess fats.
VIT. E DEFICIENCY DISORDERS. Lack of fertility or reproductive powers, habitual abortion, amenorrhea, and uterine hypoplasia, but it is associated therein with vits. A and B. Late maturity, infrequent ovulation.

VIT. E FOODS. It is found in muscle, fat, spleen, heart and pancreas, also in the seeds and leaves of plants, in nuts, yellow beef, oil, wheat-germ and lettuce leaf. It is low in corn and olive oil, flaxseed oil, but higher in cotton oil. SYN: *antisterility v.*

VITAMIN F. A formerly used term for essential fatty acids.

VITAMIN G. Obsolete name for riboflavin, *q v*.

VITAMIN H. Obsolete name for biotin, *q v*.

VITAMIN H'. *Para-aminobenzoic acid*, *q v*.

VITAMIN K. An antihemorrhagic factor whose activity is associated with compounds derived from naphthoquinone.

Vit K is from alfalfa; vit K₁ from fishmeal, vit K₂ is synthesized as menadione sodium bisulfite USP. Vit. K aids blood coagulation, and is necessary for formation of prothrombin. Its deficiency prolongs blood-clotting time and causes hemorrhages.

ACTION: Practically eliminates prolonged bleeding in operations and in biliary tract of jaundiced patients. Bile salts necessary for its absorption.

VIT. K SOURCES: Found in fats, fishmeal, oats, wheat, rye and alfalfa. Synthesized from coal tar, and is 4 times as potent as the natural. SYN: *antihemorrhagic v.*, *prothrombin factor*.

VITAMIN L. A vitamin found to be necessary for lactation in rats.

VITAMIN LOSS. Commercial canning destroys from 50 to 85 per cent of vit. C in peas,

lima beans, spinach, and asparagus. The wheat embryo is removed from wheat flour in milling. As the wheat embryo is rich in vits. B₁, E, and G, these vitamins are lost by removal. Apple pie and freshly prepared applesauce retain only from 20 to 30 per cent of the vit. C value of the apple. Pickling, salting, curing, or fermenting usually causes complete loss of vit. C. Pasteurization, unless special precautions are observed, causes a loss of from 30 to 60 per cent of vit. C.

VITAMIN M. Obsolete name for folic acid, *q v*.

VITAMIN P. SYN *citrin*, *permeability factor* or *vitamin*. A substance associated with Vit. C in citrus fruits which is essential for normal integrity of capillary membranes and normal permeability. Not considered to be a vitamin.

ACTION. Helps prevent scurvy, and is effective in diseases marked by increased capillary permeability. Helps prevent bleeding, prevents black and blue marks following blows.

VIT. P FOODS. Found in lemon and lime juice, grapefruit, oranges and red peppers. SYN *citrin*, *permeability v*.

VITAMIN P-P. Pellagra-preventing factor, or niacinamide, *q v*.

VITAMIN T. A complex of growth-promoting factors obtained from insects, yeasts, and fungi. Also called *tergotin*, *termitin*, *torutinin*.

VITAMIN U. SYN: *cabagin*, *antulcer vitamin*. A substance thought to be necessary for the growth of chicks and used in therapy of peptic ulcer.

VITAMINOID (vī'tām-in-oyd) [L. *vita*, life, + *amine*, + G. *eidos*, resemblance]. Of the nature of vitamin.

VITAMINOLOGY (vī'tām-in-ōl'ō-jī) [" + " + G. *logos*, a study]. The science dealing with vitamins.

VITA SEXUALIS (vī'tā sēks-ū-ā'lis) [L. sexual life]. The sex life.

VITELLARY (vīt'ēl-ā-rī) [L. *vitellus*, yolk of an egg]. Pert. to the vitellus. SYN: *vitelline*.

VITELLIN (vī-tēl'in) [L. *vitellus*, yolk of egg]. A protein which can be extracted from egg yolk and contains lecithin. SFX: *nucleoprotein*, *ovovitellin*.

VITELLINE (vī-tēl'ēn) [L. *vitellus*, yolk of egg]. Pert. to the yolk of an egg or the ovum.

v. circulation. The embryonic circulation of blood to the yolk sac via *vitelline arteries* and its return to general circulation through the *vitelline veins*.

v. duct. The narrow duct connecting the yolk sac with the embryonic gut.

v. membrane. 1 The membrane forming the surface layer of an ovum. 2 In a chicken egg, the membrane forming the surface layer of the *vitellus* or *yolk*.

v. veins. SYN: *omphalomesenteric veins*. Two veins conveying blood from the yolk sac.

VITELLORUBIN (vī-tēl'ō-rū'bīn). A red pigment present in yolk of an egg.

VITELLUS (vī-tēl'ūs) [L. *vitellus*, yolk of egg]. 1 The yolk of an ovum especially the yolk of a hen's egg. 2 In older terminology, the entire egg especially when yolk is not clearly differentiated.

VITATION (vish't-ā'shūn) [L. *vitāre*, to corrupt]. Injury, contamination, impairment of use.

VITILIGO (vit-il'igō) [L.]. SYN: *leukoderma*, *leukasmus*, *leukopatia*, *pigmented skin*. An acquired cutaneous affection characterized by milk-white patches, surrounded by areas of normal pig-

mentation. More common in tropics and in the colored race. Cause unknown.

TREATMENT. General treatment includes hygienic and psychotherapeutic measures. There is no specific treatment.

v. capitis. Alopecia areata, *q v*

v. perinevoid. Acquired leukoderma.

vitiligoidea (vīt-lī-g-oyd'ē-ā) [L. *vitiligo*, tetter, + G *eidos*, appearance] Disease marked by formation of tiny yellow patches or nodules on the skin, as on the eyelids. SYN *xanthoma*.

vitium (vish'ī-um) (pl. *vitia*) [L. *vitium*, fault]. A fault, defect, or vice

v. cordis. An organic heart lesion.

vitreocapsulitis (vīt'rē-ō-kāp-sū-lī'tis) [L. *vitreus*, glassy, + *capsula*, capsule, + G *-itis*, inflammation]. Inflammation of the vitreous humor. SYN *hyalitis*.

vitreous (vīt'rē-ūs) [L. *vitreus*, glassy]. 1. Glassy. 2. Pert to the vitreous body. 3. The vitreous body, *q v*

v. body. A transparent jellylike mass that fills the cavity of the eyeball, enclosed by the hyaloid membrane

v. chamber. The portion of the cavity of the eyeball behind the lens

v. degeneration. SYN *hyaline degeneration*, *q v*. Retrogressive change of a part into a translucent shining substance, esp. of a blood vessel wall

v. humor. The clear, watery fluid filling the interstices of the stroma of the vitreous body

v. membrane. 1. Inner one of the choroid. 2. SYN *hyaline layer*. The innermost layer of the connective tissue sheath surrounding a hair follicle

v. fable. The inner layer of compact tissue belonging to most of the bones of the cranium

vitrescence (vī-trēs'ēns) Becoming hard and transparent like glass

vitriol (vīt'rē-ol) [L. *vitriolum*]. A sulfate of any of various metals

v., blue. Copper sulfate, *q v*

v., green. Ferrous sulfate, *q v*

v., oil of. Sulfuric acid, *q v*

v., white. Zinc sulfate, *q v*

vitro, in. SEE: *in vitro*

vitropression (vīt'rō-prēsh'ūn) [L. *vitrum*, glass, + *pressio*, a squeezing] Method of temporarily eliminating redness of the skin caused by hyperemia by pressure with a glass slide on the skin for purpose of studying any lesions or discolorations.

Vitus' dance, St. (vīt'ūs) A functional nervous disorder causing muscular spasms. SYN *chorea*, *q v*.

vivi- [L]. Combining form meaning *alive*.

vividifusion (viv-i-dif-ū'zhūn) [L. *vivus*, alive, + *diffusio*, a pouring apart]. The process of removing diffusible substances from blood of a living animal by allowing it to flow through a system of collodion tubes immersed in saline solution.

vivification (viv-i-fī-kā'shūn) [' + *facere*, to make]. 1. Trimming of the surface layer of a wound to aid union of tissues. 2. Transformation of protein food through assimilation into the living matter of cellular organisms.

viviparous (viv-ip'ār-ūs) [' + *parere*, to bear young]. Developing young within the body, the young being expelled and born alive, the opposite of *oviparous*.

vissect (vīv'ī-sēkt) [' + *sectio*, a cutting]. To dissect a living animal for experimental purposes.

vivisection (vīv'ī-sēk'shūn) [L. *vivus*, alive, + *sectio*, a cutting]. Cutting of or

operation upon a living animal for physiological investigation and the study of disease. The operations are usually performed upon an anesthetized animal under conditions similar to those encountered in an operating room of a hospital.

vivisectionist (vīv'ī-sēk'shūn-ist) [' + *sectio*, a cutting]. One who practices or believes in vivisection.

vivisector (vīv-is-ēk'tor) [' + *sector*, a cutting]. One who practices vivisection.

Vlemmick's solution (flēm'inks). A solution of sulfured lime

Uses. In various skin diseases.

Dosage. Externally diluted with 5 to 10 volumes of water

vivo, in. SEE: *in vivo*

vocal. Pert to the voice.

v. cords, false. The ventricular folds, *q v*

v. cords, true. The vocal cords, *q v*

v. folds. The thin edges of the vocal lips, each of which encloses the vocal ligament. They form the edges of the rima glottidis, and are concerned with the production of sound

v. frem'fus. Chest-wall vibration felt on palpation while patient is speaking

v. ligament. A strong band of elastic tissue lying within vocal fold

v. lips. Two shelflike projections of lateral walls of the larynx. Their edges bear the vocal folds, *q v*

v. muscle. The inner portion of the thyroarytenoid muscle which lies in vocal lip lateral to and in contact with the vocal ligament

v. process. That of the arytenoid cartilage to which are attached the vocal cords

v. resonance. Sound heard in auscultation of lung while patient is speaking

v. signs. Indication of disease by changes in the voice

voice (voys) [L. *vox*, *voc-*, voice]. Sound uttered by human beings, produced by vibration of the vocal cords

voice, words pert. to: *amphoricity*, *amphoriloquy*, *amphorophony*, *anepia*, *ap-sithyra*, *ap-sithura*, *arytenoid*, *Bac-cell's sign*, *cacophonia*, *caverniloquy*, *heterophonia*, *hoarseness*, *megaphonia*, *paraphonia*, *phonation*, *resonance*, *rhinolalia*, *rhinophonia*, *trachyphonia*.

voices (voys'ēs). Verbal, auditory hallucinations. SYN: *phoneme*.

void (voyd) [O Fr *voider*, to empty]. To evacuate the bowels or bladder.

vol. Abbr for *volume*

vol%. Abbr for *volume per cent.*

vola (vō'lā) [L.]. The sole of foot or palm of the hand.

v. manus. Palm of hand.

v. pedis. Sole of foot.

volar (vō'lār) [L. *vola*, palm, sole]. Relating to the palm, or sole of foot.

volatile (vō'lā-tīl) [L. *volatilis*, from *volāre*, to fly]. CHEM: Easily vaporized or evaporated.

Examples of volatile liquids are ether (boiling point, 34.5° C.) and ethyl chloride (b. p. 12.2° C.).

volatilization (vō'lā-tīl-izā'shūn) [L. *volatilis*, from *volāre*, to fly]. Conversion of a solid or liquid into a vapor.

volition (vō-līsh'ūn) [L. *volitio*, will]. The act or power of willing or choosing.

Volkmann's contracture (fōlk'mahn). Degeneration, contracture, and atrophy of a muscle resulting from long-continued interference with normal circulation by bandage or elastics, or from exposure to cold or injury of an artery.

volley (vôl'ê) [L. *volare*, to fly]. The simultaneous or nearly simultaneous discharge of a number of nerve impulses from a receptor or a center within the brain or spinal cord

voisella (vôl-sêl'â) [L. *voisella*, a tweezer] Forceps with sharp pointed hooks at end of each blade

volt (vôlt) An electrical unit of pressure, the electromotive force required to produce 1 ampere of current through a resistance of 1 ohm

voltage (vôlt-âj) Electromotive force or difference in potential expressed in volts.

Volvolini's disease (vôl-tô-lê-ne) Primary labyrinthitis in children with symptoms of meningitis, and subsequently a staggering gait and deaf-mutism

volubility [L. *volubilitas*, flow of discourse] Psy Excessive fluency of speech.

volume The space occupied by a substance as measured by cubic units

v. index. Abbr *V I* The mean volume of an average erythrocyte compared with the mean volume of the normal erythrocyte Varies from 0.9 to 1.10 Indices below this indicate abnormally small red cells, above, abnormally large ones. The volume index is found by dividing the percentage of red cells into the hematocrit* percentage SEE. *color index*

v., mean corpuscular. The mean volume of an average erythrocyte Normal values range from 82 to 92 cubic microns

v., minute. The amount of blood discharged from one ventricle in one minute

v., packed cell. SYN *hematocrit* The volume of packed erythrocytes in a sample of centrifuged blood Average volume equals 47% of blood volume in men, 42% in women

v. per cent. Abbr: *vol %*. The number of cubic centimeters (cubic milliliters) of a substance (usually O₂ or CO₂) contained in 100 cc (or cu. ml) of another substance, e.g., blood

v., stroke. The amount of blood discharged by a ventricle in one contraction. Determined by dividing the minute volume by the number of heartbeats occurring in one minute

volumetric (vôl'ü-mê't'rik) [L. *volûmen*, a volume, + *G metron*, a measure]. Pert. to measurement of volume

voluntary (vôl'ün-tâ-ri) [L. *voluntas*, will]. Pert. to or under control of the will.

v. muscles. Voluntary muscles are generally attached to the skeleton, are innervated by myelinated nerves coming directly from the brain or spinal cord, and under the microscope are seen to consist of long cylindrical fibers bearing crosswise striations

Voluntary, striped, striated, cross-striated, and skeletal are practically synonymous when applied to muscle

voluptuous (vôl'üp'tü-ûs) [L. *voluptas*, pleasure]. Pert. to, arising from, or provoking consciously or otherwise, sensual desire, usually applied to the female sex. 2 Given to sensuality.

volupté (vôl'üp-ti) [O Fr. *volupté*, pleasure] Sexual pleasure

volute (vô-lüt') [L. *volutus*, rolled]. Spiral, rolled up SYN: *convoluted*.

volvulus (vôl'vû-lûs) [L. *volvare*, to roll]. A twisting of the bowel upon itself causing obstruction.

ETIOI. Prolapsed mesentery predisposing cause. Usually occurs at sigmoid flexure in men in third or fourth decade

PROG. Mortality is quite high in acute volvulus.

vomer (vô'mer) [L. *vomer*, plowshare]. The plow-shaped bone which forms the lower and post. portion of the nasal septum, articulating with the ethmoid, sphenoid, the 2 palate bones, and 2 sup. maxillary bones

vomerine (vô'mêr-in) [L. *vomer*, plowshare] Pert. to the vomer.

vomeronasal (vô'mêr-ô-nâs'âl). Pertaining to the vomer and the nasal bones

v. cartilages. Two narrow strips of cartilage lying along ant. portion of inferior border of septal cartilage of nose.

v. organ (of *Jacobson*). A small tubular epithelial sac lying on anterior inferior surface of nasal septum. Rudimentary in man

vomica (vôm'ik-â) [L. *vomica*, ulcer]. 1. A cavity in the lungs, as from suppuration 2 Sudden and profuse expectoration of putrid, purulent matter.

vomicose (vôm'ik-ôs) [L. *vomica*, ulcer]. Marked by many ulcers; ulcerous; purulent

vomit (vôm'it) [L. *vomere*, to vomit]. 1. Matter ejected from stomach through the mouth 2 To yield up gastric and intestinal contents through the mouth.

Phys. The act is usually reflex involving coordinated activity of both voluntary and involuntary muscles A certain position is assumed, the glottis is closed, the diaphragm and abdominal muscles contract, and the cardiac sphincter of the stomach relaxes while antiperistaltic waves course over the duodenum, stomach and esophagus

RS. *melenâ, nausea, vomiting.*

v., bilious. Bile forced back into the stomach and ejected with vomited matter

v., black. Vomit containing blood acted on by the gastric juice Seen in worst form of yellow fever

v., coffee-ground. Bloody vomit of gastric malignancy.

vomiting (vôm'it-ing) [L. *vomere*, to vomit] Ejection through the mouth of the gastric contents SYN: *emesis*.

Emesis may result from.
1. Toxins from ptomaines, drugs, uremia and specific fevers.

2. Centric diseases, as cerebral tumors and meningitis. This form often is unaccompanied by nausea and it does not relieve associated headache

3. Diseases of the stomach, such as ulcer, cancer, dilatation, dyspepsia, etc

4. Reflex from pregnancy, uterine or ovarian disease, irritation of the fauces, worms, biliary colic

5. Intestinal obstruction.

6. Disturbed cerebral circulation, as in swinging, car- and seasickness

7. Nervous affections, as hysteria and migraine.

8. Periodic vomiting may be in itself a neurosis or associated with the gastric crises of locomotor ataxia.

9. Esophageal vomiting results from obstruction, and the vomitus* is alkaline in reaction.

TREATMENT: The doctor may order ice, white of egg in lemon water, milk and lime water in equal parts in teaspoonful doses, champagne, brandy and soda, or effervescent drinks, such as Seidlitz powder In severe cases no liquids should be given for 24 hours.

Place small amt. of salt on tongue when nauseated. Fluids in large quantities, esp. ginger ale.

An antihistamine such as dimenhydrinate may be effective.

The intravenous administration of fluid and electrolytes may be required.

In pregnancy: The diet should be dry and high in carbohydrates and water and liquids should be taken only bet. meals and in small quantities. Do not construe this to mean that all pregnant women should be subjected to this regimen, as it is only intended for women subject to emesis.

POSTOPERATIVE: NP. At first sign restrict fluids for ½ hr., then resume in gradually increasing amts. In certain cases (gastric) record *time, color, amt.*, whether *regurgitant* or *projectile*. Save specimen for examination. Wash mouth frequently. Take specimen of urine, if vomiting is persistent. (May be due to acidosis. If so, alkalies and glucose may be given.) Magnesia, ½ oz. with 6-8 oz water; ½ teaspoonful at time may be given. Odor, *ammoniacal, fecal, garlic*, etc., should be charted. Fecal v indicates intestinal obstruction. See *hematemesis*.

Poisons: Emesis may result from taking arsenic, aconite, antimony, barium, colchicum, cantharides, copper, corrosive alkalis, acids, digitalis, iodine, mercury, phenol, phosphorus, veratrum, wood alcohol, food poisons, and zinc.

RS: anabole, *anacatharsis, anagoge, antiemetic cyclic v., emesis, emetic, hyperemesis, tyremesis, vomit, vomitus*

v., cyclic. Recurring paroxysms of vomiting.

v., dry. Nausea without vomitus.

v., incoercible. Uncontrollable vomiting.

v., pernicious. Severe vomiting of pregnancy.

v. of pregnancy. That of morning sickness.

v., projectile. Ejection of vomitus with great force.

DIAGRAM ILLUSTRATING THE MECHANISM OF VOMITING

1. Focal causes act here. 2. Toxic causes act here. 3. Nervous causes act here. A. Diaphragm and abdominal muscles. B. Efferent nerve. C. Higher centers of brain. D. Vomiting center in medulla. E. Afferent nerve. F. Stomach and other abdominal organs.

v., stercoraceous. Vomiting of fecal matter.

vomitio negro (võm't-õ nã'grõ) [Sp.] Vomiting containing blood darkened by gastric secretion. SYN *black vomit*.

vomitory (võm't-õ-rî) [L *vomitōrius*, pert. to vomit]. 1. Causing vomiting. 2. An agent inducing emesis. 3. A vessel to receive ejecta.

vomitition (võm't-tû-rîsh'ûn) [L *vomititus*, vomit]. Repeated ineffective efforts to vomit. SYN: *retching*.

vomitus (võm't-ûs) [L *vomitus*, vomit-ing]. 1. Act of ejecting matter from the stomach through the mouth. 2. Material ejected from the stomach by vomiting.

NATURE OF VOMITUS. *Bilious* Green or greenish-yellow, containing bile, appears after frequent and violent vomiting; if early in the act of vomiting, it may be grass-green; a symptom of peritonitis which also precedes fecal vomiting in intestinal obstruction.

Fecal: This is indicative of intestinal obstruction, general peritonitis, and abnormal communication bet. the intestines and stomach.

Garlic odor: Denotes phosphorous poisoning.

Hematemesis: The vomiting of blood. If bright and fluid it has not been long in the stomach; otherwise, it has the appearance of coffee-grounds, reddish-brown, or it forms in clots. This may indicate, also, rupture of aneurysms into the stomach or esophagus, or various esophageal veins; gastric ulcer, cirrhosis of liver, enlarged spleen, carcinoma of the stomach. It is not necessarily fatal.

It may result from swallowed blood, straining in vomiting, injuries in the epigastric region (rarely possible). It may occur in vicarious menstruation, gastritis, corrosive poisoning, in the presence of strong alkalies or acids, or it may result from anemia, leukemia, Hodgkin's disease and it is sometimes present in chronic nephritis, scurvy, purpura haemorrhagica, acute yellow atrophy of the liver, and in malarial fevers.

Ammoniacal odor: Indicates uremia.

Profuse: The ejection of large quantities of frothy fermented material is highly significant of gastric dilatation.

Purulent: This may result from the rupture of an abscess into the esophagus or stomach.

Watery and mucous: From an empty stomach this may denote gastric catarrh. Vomiting of excessive acid gastric juice occurs in migraine, hysteria, locomotor ataxia, gastric ulcer, movable kidney and exophthalmic goiter.

Without nausea, distress, or other phenomena: This may occur in certain neuroses of the stomach, in hysteria, uremia, brain disease, as from a tumor, or as a precursor of apoplexy. The vomitus may be colored by certain fruits, by wine, coffee, cocoa, soups and bile. SEE: *biennemesis, cholemesis*.

v. cruentus. Blood vomit.

v. matutinus. The vomiting of morning sickness.

v. niger. Black vomit.

v. marinus. Seasickness.

von Gierke's disease (fõn gër'kë). SYN: *glycogen disease, glycogenosis*. Condition in which excessive amounts of glycogen are stored in tissues and body is unable to use it. Results in excessive production of ketones.

von Graefe's sign (fõn grã'fë). Failure of lid to move downward promptly with

eyeball, the lid moving tardily and jerkily; seen in exophthalmic goiter.

von Leube motor test meal (fōn loy'be). Soup, 400 cc.; beef, 200 Gm.; water, 200 cc. If at end of 6 hours a gastric lavage fails to show a residue, the motility of the stomach is normal.

V. L.'s test meal. Clear soup, 200 cc.; beefsteak, 200 Gm. bread, 50 Gm.; water, 200 cc. The stomach contents are expressed in 6 hours. This is a gastric test meal.

Von Pirquet's test (fōn pēr'kâ). A diagnostic test for tuberculosis, in which a little tuberculin is applied to a scarified area of the skin of the arm.

A positive reaction is seen if a red papillary eruption appears at the site of inoculation.

Von Recklinghausen's disease (fōn rēk'ling-how'zēn). 1. Multiple neurofibromatosis occurring on the skin along the course of the nerves, associated with marked cutaneous pigmentation. 2. Generalized fibrocystic disease of the bones. SYN: *molluscum fibrosum*.

Voorhees' bag (vor'ez). An inflatable rubber bag for dilating the cervix uteri to induce labor.

voracious (vō-rā'shūs) [L. *vorāre*, to devour]. Having an insatiable or ravenous appetite.

Voronoff's method (vor'ōn-ōf). Attempt to rejuvenate by transplantation of the testes of a young anthropoid ape into man.

vortex (vor'tēks) (pl. *vortices*) [L. *vortex*, a whirlpool]. A structure having a spiral or whorled appearance.

v., coccyeal. SYN. *vortex coccyeus*. The region over coccyx where lanugo hairs of embryo come to a point.

v. lentis. Lens star, *q.v.*
v. of the heart. Region at apex of heart where muscle fibers of the ventricles make a tight spiral and turn inward.

vortices. Pl. of *vortex*.
v. pilerum. Hair whorls as in arrangement of hairs on the scalp.

vorticeae (vor'tik-ēz) [L. *vortex*, *vortice*, a whirlpool]. Whirling or having a whorled arrangement.

v. abscissa. Loss of voice.
v. capitis. Falsetto voice or a voice in the upper register.

v. rauca. A hoarse voice.
v. veins. Four veins (2 sup. and 2 inf.) which receive blood from all parts of the choroid of the eye. They empty into post. ciliary and sup. ophthalmic veins.

vox (vōks) (pl. *voces*) [L. *vox*]. Voice.
v. cholerica. The suppressed voice of last stages of cholera.

voyeur (voi-ūr') [Fr. one who sees]. One whose erotic stimulus is derived from looking at sexual objects or situations, such as watching others during coitus.

V.R. Abbr. for *vocal resonance, right vision, ventilation rate*.

V.R.I. Abbr. for *virus respiratory infection*.

V.S. Abbr. for *vesicular sound, vital sign, volumetric solution*.

V & T. Abbr. for *volume and tension* (of the pulse).

vril (vril) [L. *virtus*, masculine]. The initial energy with which man is supposed to be endowed from birth and which makes it possible for him to reach full maturity and to reproduce his kind; also applied to all living organisms.

vurometer (vū'ēr-ōm'ēt-ēr) [Fr. *vue*, sight, + G. *metron*, a measure]. Appa-

ratus for measuring distance bet. the eyes.

vulgaris (vūl-gā'ris) [L. *vulgaris*, common.]. Ordinary.

vulnerable (vūl'nēr-ā-bl) [L. *vulnerāre*, to wound]. Easily injured or wounded.

vulnery (vūl'nēr-ār-l) [L. *vulnerāre*, to wound]. 1. Pert. to wounds. 2. A remedy used to heal wounds.

vulnerate (vūl'nēr-āt) [L. *vulnerāre*, to wound]. To wound.

vulnus (vūl'nūs) (pl. *vulnera*) [L. *vulnus*, wound]. A wound or injury.

Vuipian-Sherington phenomenon. Contraction of denervated skeletal muscle by stimulating autonomic cholinergic fibers innervating its blood vessels. Also called *pseudomotor phenomenon*.

vulsella, vulsellum (vūl-sēl'ā, vūl-sēl'ūm) [L. *vulsella*, tweezers]. A forceps with a hook on each blade. SYN: *volcella*.

vulva (vūl'vā) (pl. *vulvae*) [L. *vulva*, a covering]. The ext. female genitalia lying beneath the mons veneris consisting of the labia majora, labia minora, clitoris, and vestibule.

v. connivens. Vulva in which the labia majora are in apposition.

v. hians. Vulva in which labia majora are gaping.

vulvar (vūl'var) [L. *vulva*, covering]. Relating to the vulva.

v. leukoplakia. Condition characterized by diffuse or focal, translucent thickening of the vulva. Often gives rise to carcinoma.

vulvectomy (vūl-vēkt'ō-mī) [v + G. *ektomē*, excision]. Excision of the vulva.

vulvismus (vūl-vīz'mūs) [v + G. *-ismus*, condition]. Painful spasm of the vagina. SYN: *vaginismus*.

vulvitis (vūl-vīt'is) [L. *vulva*, covering, + G. *-itis*, inflammation]. Inflammation of the vulva.

v., acute nongonorrheal. V. resulting from chafing of opposed lips of vulva or from accumulated sebaceous material around the clitoris.

v. follicular. Inflammation following infection (usually by *Staphylococcus aureus*) of hair follicles of vulva.

v. gangrenous. Necrosis and sloughing of areas of vulva, often a complication of infectious diseases such as diphtheria, scarlatina, typhoid fever.

v., leukoplakic. A chronic atrophic vulvitis. SEE: *kraurosis vulvae*.

v., mycotic. V. caused by various fungi, most commonly by *Candida albicans*.

vulvo- [L.] Combining form meaning *a covering, the vulva*.

vulvocutaneous (vūl'vō-kū'tā-l) [L. *vulva*, covering, + *cutaneous*, pert. to the leg]. Relating to the vulva and the thigh.

vulvopathy (vūl'vōp'ā-thī) [v + G. *pathos*, disease]. Any disorder of the vulva.

vulvouterine (vūl'vō-ū'tēr-in) [v + *uterinus*, pert. to the uterus]. Relating to the vulva and uterus.

vulvovaginal (vūl'vō-vā'j'n-āl) [v + *vagina*, a sheath]. Pert. to the vulva and vagina.

v. glands. Small glands on either side of the vulvar orifice. SEE: *Bartholin's glands*.

vulvovaginitis (vūl'vō-vā'j'n-īt'is) [v + G. *-itis*, inflammation]. Inflammation of both the vulva and vagina at the same time, or of the vulvovaginal glands.

v., diabetic. Mycotic vulvar infection commonly occurring with diabetes.

W

w. Abbr. for *watt*, a unit of electric energy, *week*, *wife*, *with*. Chemical symbol for *tungsten*.

Wachendorf's membrane (vakh'ën-dörft). 1. A thin vascular membrane occluding the pupil in the fetus. *SYN* *membrana pupillaris*. 2. The outer membrane ensheathing a cell.

wafer (wä'fer) [ME. *wafre*]. 1. A thin sheet of flour paste used to enclose a medicinal dose of powder. 2. A flat vaginal suppository.

Wagstaffe's fracture (wäg'stäff). One with separation of the internal malleolus.

waist (wäst) [ME. *wast*, growth]. Small part of body bet. thorax and hips. *SEX: cincture sensation*.

Walcheren fever (vahl'kha-ren). A severe type of malarial fever found in Holland.

Walcher's position (vahl'ker). The patient assumes the dorsal recumbent position with the legs hanging down over the end of the table from just above the knees, the legs fairly well separated.

Used to enlarge the pelvic diameters in delivery.

Wald cycle. The transformations involved in the breakdown and resynthesis of rhodopsin.

Waldayer's ring. The ring of tonsillar (lymphatic) tissue which encircles the naso- and oropharynx. Consists of the two palatine tonsils, lingual and pharyngeal tonsils.

walking (wauk'ing) [A.S. *wealcian*, to turn]. Act or manner of movement on foot without running, as for exercise.

RS: abasia, a. paralytic, a. statica, akathisia, astasia, a. abasia, atremia, basophobia, claudication, dysbasia, gait, w. typhoid. Typhoid fever in which the symptoms are mild so that the patient is ambulatory.

Wallenberg's syndrome. A complex of symptoms resulting from occlusion of posterior inferior cerebellar artery or one of its branches supplying lower portion of brain stem. Dysphagia, muscular weakness or paralysis, impairment of pain and temperature senses, and cerebellar dysfunction are characteristic.

wallerian degeneration (wöl-ër'i-än). Degeneration of a nerve fiber (axon) which has been severed from its cell body. The myelin sheath also degenerates and is transformed into a chain of lipid droplets which stains by the Marchi method, a method utilized in tracing the course of injured nerve fibers. The neurilemma does not degenerate but forms a tube which directs the growth of the regenerating axon.

walleye (wawl'i). 1. Eye in which iris is light-colored or white. 2. Leukoma or dense opacity of cornea. 3. Squint in which both visual axes diverge. *SYN: divergent strabismus*.

walnut (wawl'nüt) [A.S. *wealhnnut*, a foreign nut]. Black and English A tree and its nuts of the *Juglans* genus.

AV SERVING: 35 Gm. each. Pro. 9.7 and 6.4, Fat 19.7 and 22.5, Carbo. 3.5 and 4.1. VITAMINS: Eng., A+, B++ for both. Black, C+.

wandering. Moving about; not fixed.

w. abscess. One that burrows and

comes to the surface at a point distant from its origin.

w. cell. A leukocyte which moves about the substance of an organ.

w. kidney, w. spleen. Dislocated floating kidney or spleen.

Wangensteen's method (wäng'ën-stën). Technic for relieving postoperative distention, nausea and vomiting and certain cases of mechanical bowel obstruction.

It involves use of an intranasal catheter in combination with a suction siphonage apparatus. *SEX: decompression, distention*.

Warburg apparatus. A capillary manometer used for determining oxygen consumption and CO₂ production. Widely used in metabolism studies.

ward (ward) [A.S. *weard*, a guarding]. A large room or hall in a hospital.

w. accident. One reserved for accident cases.

w. isolation. One for isolation of those suspected of being affected with an infectious disease.

w. psychopathic. One in a general hospital for temporary reception of mental cases.

Wardrop's disease (war'dröp). Acute inflammation of matrix of the nail in scrofulous children. *SYN* *onychia maligna*.

W.'s operation. Ligation of an artery for aneurysm at a distance beyond the sac.

warehousemen's itch (wår'hows-mänz Itsh). Eczema of hands from touching irritating substances.

war gases. Any chemical substances whether solid, liquid, or vapor, used to produce poisonous or irritant effects. *SEX: gases, war*.

wart (wort) [A.S. *wearte*]. A circumscribed cutaneous elevation resulting from hypertrophy of the papillae and epidermis. It is caused by a filtrable virus.

RS: condyloma, keratosis seborrheica, sycoma, venereal, verrucose.

w. fig. *SYN: verruca acuminata, condyloma acuminatum, venereal wart*. A growth of filiform projections usually occurring on genitalia. They are frequently covered with a foul-smelling secretion.

w. planter. One on pressure-bearing areas, esp. sole of foot.

w. seborrheic. Patch of corneous hypertrophy on face of the aged.

w. senile. *SEX: seborrheic wart*.

w. venereal. Vegetating growths upon skin, esp. on the mucocutaneous juncture of the genitals, having an offensive discharge. *SYN: verruca acuminata*.

washerwoman's itch (wash'ër-wüm'än). Eczema of the hands of laundry workers.

wash-leath'er skin. A trophic change in the skin in which silver drawn across it leaves a black mark.

wasp. Term sometimes applied to all insects belonging to the suborder Apocrita, order Hymenoptera (except the Formicidae or ants), but more generally restricted to the superfamilies Scolioidea, Vespoidea, and Specioidea. Members have base of abdomen constricted and females have a piercing ovipositor.

which in many species is modified into a sting. Many are social, living in large colonies. Common representatives are yellow jackets and hornets.

w. sting. The injection of wasp venom into the skin, resulting in a painful wound and sometimes mild systemic reaction. Multiple stings may be dangerous especially to sensitized individuals.

TREATMENT: Apply bicarbonate of soda paste or household ammonia solution locally. If pain is severe, infiltrate area with 2% procaine solution. Severe allergic reaction may require injection of epinephrine.

w. waist. Condition seen in some cases of muscular dystrophy in which atrophy of trunk muscles is pronounced.

wasserhelle cell (vös'ër-hël-ë) A large vacuolated (water-clear) cell, a variant of chief cells, found in the parathyroid gland.

Wassermann-fast (wahr'ër-man) Indicating a positive reaction shown by a Wassermann test which continues after repeated antisyphilitic medication.

W. reaction. Serum complement fixation test as a diagnosis of syphilis.

The results are designated as 1, 2, 3, and 4 plus, the intensity of the reaction usually corresponding to the severity of the infection. The disease may still exist with a negative reaction. Several such reactions would indicate its absence. Several years, after treatment and after last "negative" is obtained, should pass before cure is definitely accepted.

waste (wäst) [L. *vastäre*, to devastate] 1. To shrink in physical bulk or strength, as from disease. 2. Loss by breaking down of bodily tissue. 3. Refuse material no longer useful to an organism.

w. products. Carbon dioxide, organic and inorganic salts, water, dead skin, hair, nails, undigested foods.

w. p.'s, metabolic. Soluble salts in the form of nitrogenous salts (urea) and inorganic salts (sodium chloride), gas in form of carbon dioxide, and liquid in the form of water.

They are excreta, removed by the process of elimination, *q.v.*

wasting (wäst'ing) [L. *vastäre*, to devastate] Enfeebling, causing loss of strength or size, emaciating. See *marasmus*.

w. palsy or paralysis. Chronic disease marked by gradual atrophy of muscular tissue with paralysis. SYN: *progressive muscular atrophy*.

water (waw'ter) [A.S. *waeter*] 1. A solution in water of a volatile substance. 2. The urine. 3. H₂O, hydrogen and oxygen, a tasteless, clear odorless fluid, constituting bet. 75% and 90% of all tissues. It freezes at 32° F. (0° C.) and boils at 212° F. (100° C.).

Water is the principal chemical constituent of the body comprising approx 75%, and is distributed within cells as *intracellular fluid* and outside of the cells as *extracellular fluid*. Water is indispensable for metabolic activities within cells as it is the medium in which chemical reactions can take place. Outside of cells, water is the principal transporting agent of the body. Among the properties of water which are of importance to living organisms are the following:

(a) It is the most *universal solvent*. (b) It is a medium in which acids, bases, and salts *ionize*, and the concentrations of these substances (*electrolytes*) must be regulated very exactly. (c) It possesses a *high specific heat* and has a

high latent heat of vaporization, of importance in regulation and maintenance of a constant body temperature.

(d) It possesses a *high surface tension*.

(e) It is an important *reacting agent* and essential in all *hydrolytic reactions*.

In the body, water is the principal constituent of all body fluids (blood, lymph, tissue fluid), of all secretions (salivary juice, gastric juice, bile, sweat, etc.), and all excretory fluids (urine). Intake of water is determined principally by the sense of thirst. Excessive intake may lead to *water intoxication*, excessive loss to *dehydration*.

w. balance. Condition in which intake of water equals output.

w.-bed. A rubber mattress, filled 3 parts full with warm water (temp 100° F.), must not be too full or it will be hard. Fracture boards are placed across the wire mattress to produce a firm foundation and prevent sagging, it should be refilled every fortnight.

w., bound. Water which in protoplasm is attached to protein molecules thus forming an integral part of protoplasm. It is not available for metabolic processes.

w. font. brain. Disease marked by abnormal increase in cerebral fluid. SYN: *hydrocephalus*.

w. brash. Gastric burning pain with eruptions. SYN: *heartburn*.

w.-cure. Use of water in treatment. SYN: *hydrotherapy*.

w., delonized. Water that has been passed through a substance which removes cations and anions present. Final product is equivalent to distilled water.

w.-hammer pulse. Pulse marked by quick powerful beat, collapsing suddenly. SYN *Corrigan's pulse*, *q.v.* RS: *pulse*.

w., heavy. SYN: *deuterium oxide*.

w. (for) injection. *Aqua pro injectione*. Water for parenteral use that has been distilled and sterilized within 24 hrs or water that has been distilled (sometimes redistilled), sterilized, and placed in sealed containers so that it remains free of pyrogens. SEE *water, pyrogen-free*.

w. intoxication. That resulting from ingestion of large quantities of water or in cases of kidney disorder when urinary secretion is reduced.

SYM *headache, dizziness, vomiting, convulsions, coma, and possibly death*.

w. itch. Schistosome dermatitis, *q.v.*

w., pyrogen-free. Water that has been rendered free of fever-producing proteins (bacteria and their metabolic products). SEE *water (for) injection*.

water balance diet. Water content of diet is calculated to individual prescription. The water content of foods as well as beverages is calculated as part of the fluid allowance given in the diet prescription.

water cress (waw'tër krës) AV SERVING: 20 Gm. Pro. 0.2, Fat. 0.2, Carbo. 0.8. VITAMINS: A + + +, B + +, C + + +, G + + to + + +. ASH CONST. Ca. 0.187; Mg. 0.034; K. 0.287; Na. 0.099; P. 0.005; Cl. 0.061; S. 0.107; Fe. 0.0019.

watermelon (waw'tër-mël'ôn). AV SERVING: 240 Gm. Pro 0.9, Fat 0.4, Carbo. 16.0. VITAMINS A +, B +, C + +, G +. ASH CONST. Ca 0.011, Mg 0.003, K 0.0073, Na 0.008, P 0.003, Cl 0.008, S 0.007. A base-forming fruit, alkaline potentiality 2.7 cc. per 100 Gm.; 8.9 cc. per 100 cal. SEE: *cantaloupe, melon*.

waters (waw'ters). Common term for the amniotic fluid surrounding the fetus

w., bag of. Sac enclosing liquor amnii surrounding the fetus. **SYN:** *amniotic sac.*

wave (wāv) [AS *waftan*, to wave]. 1. A disturbance of the equilibrium of a body or medium propagated from point to point with a continuous motion through a closed curve 2. An undulating or vibrating motion 3. An oscillation seen in the recording of an electrocardiogram, electroencephalogram, or other graphic record of physiological activity.

w., A. Alpha wave; rhythm, alpha, *q v.*

w., a. Atrial wave of venous pulse.
w., Berger. Alpha wave; rhythm, alpha, *q v.*

w., excitation. The excitatory impulse(s) which originate in the sinoatrial node of the heart and sweep through the musculature of the atria stimulating the atrioventricular node and then continuing through the conductile tissue of the ventricles. They bring about the contraction of the chambers of the heart

w., hertzian. Electromagnetic radiations used in radio and wireless transmission

w., pulse. 1 The pressure wave originated by the systolic discharge of blood into the aorta. It is not due to the passage of the ejected blood but is the result of the impact being transmitted through the arterial walls. Its speed of transmission varies with nature of the arterial wall increasing with age as the arteries become less resilient. Velocity in children about 5 m per sec., in adults, 8 m per sec. In arteriosclerosis, the velocity is higher

w's., sound. Vibrations of a vibrating medium which, upon stimulating sensory receptors of the cochlea, are capable of giving rise to sensations of sound. Velocity: In air 1090 ft per sec at 0° C; in water, approx 4 times faster than in air

w's., Traube-Hering. Slow rhythmical waves appearing in a blood pressure tracing as a result of interference in blood flow to the medulla. They are probably due to alterations in tone of vasomotor center.

wax (wāks) [AS *weaz*]. 1. A substance secreted by bees. **SYN:** *cera* 2 Anything having the physical properties of, or resembling beeswax. 3 Earwax. **SYN:** *cerumen*. **SEE:** *ceroplasty*.

waxy (wāks'ī) [AS *weax*, wax]. Resembling or pert to wax.

w. cast. Dense highly refractile urinary cast.

They have clean-cut contours, sometimes irregular curves and notches. Obtained in severe chronic renal disease.

w. degeneration. Amyloid degeneration seen in wasting diseases

weak (wēk) [ME *weik*, from Old Norse *veiker*]. Deficient in strength of body; infirm.

RS: *asthenia*, *atony*, *cardiasthenia*, *enervation*, *ergasthenia*, *fatigue*, *lassitude*, *lipothymia*.

wean (wēn) [AS *wenian*, to accustom]. To accustom to loss of breast milk by substitution of other nourishment.

weaning brash (wēn'ing brāsh). Severe diarrhea sometimes attacking infants just weaned.

webbed (wēbd) [AS *webb*, a fabric]. Having a membrane connecting adjacent structures, as the duck's feet.

w. fingers, w. toes. Two or more toes or fingers connected by a membrane.

Weber-Christian disease (wēb'ēr kris'-chēn). Relapsing, febrile, nodular, non-suppurative panniculitis, a generalized disorder of fat metabolism characterized by recurring episodes of fever and development of crops of subcutaneous fatty nodules

Weber's paralysis (wēb'ēr). Paralysis of oculomotor nerve on one side with contralateral spastic hemiplegia

Etrol: Lesion of the *crus cerebri*.

weeping (wēping) [AS *wēpan*, to lament]. 1. Shedding tears. 2. Moist, dripping.

w. eczema. Dermatitis with eruption of vesicles exuding serum.

w. sinew. Circumscribed cystic swelling of a tendon sheath.

Weidel's reaction (vī'dēl). Test for presence of xanthine bodies or uric acid.

Weigert's law (vī'gērt). Loss or destruction of organic elements is usually followed by excessive production during reparative process.

weight (wāt) [AS *gewiht*] 1 The property of matter which causes it to fall to the earth by gravitation 2 Amt of such a tendency.

Weight of the body progressively increases in pathological obesity, and progressively decreases in Addison's disease, cancer, chronic diarrhea, chronic suppurations, diabetes, hysteria, anorexia, fevers, lactation when prolonged, marasmus, obstruction of pylorus or thoracic duct, tuberculosis, ulcer of stomach

Weight and Height Ratio

Lbs.	H.	Lbs.	H.
115	5 ft 0 in	155	5 ft. 8 in
120	5 " 1 "	160	5 " 9 "
125	5 " 2 "	165	5 " 10 "
130	5 " 3 "	170	5 " 11 "
135	5 " 4 "	175	6 " 0 "
140	5 " 5 "	180	6 " 1 "
145	5 " 6 "	185	6 " 2 "
150	5 " 7 "	190	6 " 3 "

w., atomic. W of an atom of an element compared with that of oxygen which is taken as 16; the mean value of the isotopic weights of an element

w., molecular. **ABUR' M.** The sum of all the atomic weights of all the elements in one molecule of a compound

weights and measures. **SEE:** *appendix*.

Weil's disease. **SYN:** *jaundice, spirochetat; epidemic jaundice; leptospirosis icterohaemorrhagica; spirochetosis icterohaemorrhagica*

Etrol: *Leptospira icterohaemorrhagiae*, an organism found in rat urine and feces. Acquired by man through contaminated food or water or by contact of broken skin with rat feces or urine

It is a specific infection accompanied by muscular pains, fever, jaundice, and enlargement of liver and spleen

TREATMENT: Rest in bed, liquid diet, remedies indicated for special manifestations.

Weil-Felix reaction. The agglutination of certain *Proteus* organisms due to the development of *Proteus* antibodies in certain rickettsial diseases. Also called *Weil-Felix test*.

Weir Mitchell's treatment (wēr mīt'shēl). Rest in bed, massage, nourishing diet and isolation for hysteria and neurasthenia.

Welch's bacillus (wēlsh). *Clostridium welchii*, q v., the causative organism of gas gangrene.

wen (wēn) [A.S. *wenn*]. A cyst resulting from the retention of secretion in a sebaceous gland. SYN: *steatoma*.

SYM One or more rounded or oval elevations, varying in size from a pea to a large walnut; slowly appears on scalp, face or back, painless, rather soft; contains a yellowish-white caseous mass.

TREATMENT Sac and contents should be carefully dissected out. SEE: *sebaceous gland*.

Werdnig-Hoffmann's disease. Infantile muscular atrophy, considered by some to be identical with amyotonia congenita.

Werthof's disease (ver'hof). Form of progressive purpura marked by hemorrhages from the mucous membranes and severe prostration. SYN: *purpura, idiopathic thrombocytopenic*.

SYM Large reduction of blood platelets, spontaneous hemorrhages into and from tissues, enlargement of spleen, marked prostration.

Wernicke's syndrome (ver'nīk-ē). Condition of old age frequently seen, marked by loss of memory and disorientation with confabulation. SYN: *presbyophrenia*, q v.

Westphal-Edinger nucleus. Small group of nerve cells in rostral portion of nucleus of oculomotor nerve. Efferent fibers pass to ciliary ganglion conveying impulses destined for intrinsic muscles of the eye.

Westphal's phenomenon, **W's. sign**. Loss of the knee jerk, the patellar reflex.

wet (wēt) [A.S. *wæti*]. Soaked with moisture.

w. brain. Increased amt of cerebrospinal fluid with edema of the meninges, due to alcoholism.

w. cup. A cupping glass used after scarification.

w. dream. Nocturnal seminal emission during a sex dream.

w. nurse. A woman who breast-feeds another's child.

w. pack. A form of bath, given by wrapping patient in hot or cold wet sheets, covered with a blanket, used esp. to reduce fever.

Wharton's duct (hwar'ton). That of the submaxillary gland (2 in. long) opening into the mouth at side of the *frenum linguae*.

W's. jelly. A gelatinous basic substance in the umbilical cord.

wheel (hwēl) [A.S. *hwēle*]. More or less round and evanescent elevation of the skin, white in center with pale red periphery, accompanied by itching.

Seen in urticaria, insect bites, anaphylaxis, angioneurotic edema. SYN: *pomphus*.

wheat (hwēt) [A.S. *hwæðete*]. COMP: NUTRIENTS (entire and cracked): Pro. 13.8 and 11.1, Fat 1.9 and 1.7, Carbo. 71.9 and 75.5. VITAMINS: A+, B+++, E+, G+. ASH CONST. (whole): Ca. 0.045, Mg. 0.133, K. 0.473, Na. 0.039, P. 0.423, Cl. 0.068, S. 0.181, Fe. 0.0050.

An acid-forming food; potential acidity 12 cc. per 100 cal. Wheat flour 9 cc. per 100 Gm.

RS: bread, cereal, crackers, oatmeal, rye.

STRUCTURE OF A GRAIN OF WHEAT: 1. Husk or outer coat. Removed before grinding. 2. Bran coats removed in making white flour contains the mineral substances. 3. Gluten. Contains the fat

and protein. 4. Starch. The center of the kernel.

ACTION. See bread for a comparison of flours made from wheat and other cereals. Boiled whole wheat is a most excellent food. Time required for digestion: Cracked, 2 hours.

WHEAT PREPARATIONS AND PASTES: Macaroni, vermicelli, noodles, etc., are made from flour and water, molded, dried, and slightly baked. They are easy to digest and not over 10% of nitrogen content is lost.

Composition: In macaroni, vermicelli, spaghetti, noodles, the food value is lower than 2 cereals and breads. Their ash is acid and phosphates of soda are too high.

Action. They are easy on intestinal digestion.

whoze (hwōz) (M. E. *whesen*, to hiss). A whistling or sighing sound resulting from narrowing of the lumen of a respiratory passageway. Often only noted by use of stethoscope. Occurs in asthma, croup, hay fever, mitral stenosis, and pleural effusion. May result from presence of tumors, foreign obstructions, bronchial spasm, tuberculous, obstructive emphysema or edema.

whozeing (hwē'zing) (M. E. *whesen*, to hiss). Production of whistling sounds during difficult breathing such as occurs in asthma, coryza, croup and other respiratory disorders. SEE: *whoze*.

whelk (hwēlk) [A.S. *hnylca*, a suppuration]. A wheel, a protuberance on the face, as a nodule or tubercle.

whay (hwā) [A.S. *hwaeg*]. The liquid left after milk has been coagulated by the aid of rennet. It is diuretic, laxative, and mineralizing.

AV. SERVING 325 Gm. Pro. 2.3, Fat 0.7, Carbo. 11.4

VITAMIN. G+++

ASH CONST. Ca. 0.044, Mg. 0.008, K. 0.157, Na. 0.038, P. 0.035, Cl. 0.119, S. 0.009.

SEE: *buttermilk*, *milk*.

whiff. 1. A slight gust or puff of air, esp. one conveying an odor. 2. A quick inhalation or exhalation, as of tobacco smoke.

Whipple's disease. Intestinal lipodystrophy, characterized by fatty stools, loss of weight and strength, multiple arthritis, and numerous signs indicating a malabsorption syndrome resembling sprue.

whipworm (hwip'worm) [named from its shape]. A roundworm often parasitic in the human intestines. SYN: *Trichuris trichiuri*.

whirl (hwirl) [M. E. *whirlen*]. To revolve rapidly, to feel giddiness.

whirlbone (hwirl'bōn). 1. The kneecap. SYN: *patella*. 2. The head of the femur.

whisky, **whiskey** (hwis'kē). A distilled alcoholic liquor made from grain. SYN: *spiritus frumenti*.

whisper (hwis'per) [A.S. *hwisprian*]. 1. Speech without voice; a low, sibilant sound. 2. To utter in a low, nonvocal sound.

w., cavernous. Direct transmission of a whisper through a cavity in auscultation.

white (hwīt) [A.S. *hwīt*]. 1. The achromatic color of highest brilliance. 2. Of the color of milk.

w. cell, **w. corpuscle**. The leukocyte. SYN: *blood, corpuscle*.

w. gangrene, **G.** due to local anemia.

w. leg. Phlebitis of femoral vein marked by white swelling of the leg. SYN: *phlegmasia alba dolens*, q v.

w. line. White tendinous attachment of abdominal oblique and transverse muscles. *SYN linea* alba.*

w. precipitate. *SYN mercury, ammoniated.* A white amorphous powder used principally in ointments for external treatment of some skin diseases.

w. matter, w. substance. Any nervous structure composed of white medullated nerve fibers.

w. softening. Stage of softening of any substance in which the affected area has become white and anemic.

w. swelling. Tuberculous arthritis. *SEE gonatocoele*

whites (hwits) A thick, whitish vaginal discharge. *SYN leukorrhea, q.v.*

whitefish. *COMP NUTRIIVES* E P Pro. 22.9, Fat 6.5. *FUEL VALUE:* 100 Gm. equals 149 cal

White's operation (hwit). Castration for relief of enlarged prostate.

whitlow (hwit'lo) [origin uncertain] Suppurative inflammation at the end of a finger or toe. *SYN felon, paronychia, paronychia, q.v.*

It may be deep seated, involving the bone and its periosteum, or superficial, affecting parts of the nail.

whoop (hoop) [O Fr *houper*, to whoop]. The sonorous and convulsive inspiratory crow following a paroxysm of whooping cough.

whooping cough (hoop'ing kaw). An acute infectious disease with recurrent spasms of coughing ending in a whooping inspiration. *SYN pertussis, q.v., bez convulsiva; chin cough.*

whorl (hwurl) [M E *wharle*, whirl of a spindle] 1 Spiral arrangement of cardiac muscular fibers. *SYN vortex* 2 A type of fingerprint in which the central papillary ridges turn through at least 1 complete circle.

whortleberry (hwur'ti-bēr'ti) [A S *horte*, whortleberry] Av. *SERVING:* 100 Gm Pro 0.7, Fat 3.0, Carbo 10.3. *ASH CONST.* (whole) Ca 0.031, Mg 0.021, K 0.261, Na 0.021, P 0.042.

Widal's reaction or test (vê-dal'). An agglutination test for typhoid fever.

wild cherry (*prunus virginiana*). *USP.* The dried bark of the plant, used principally in the form of the syrup as a vehicle for cough medicine.

will (wîl) [A S. *willa*]. Power of controlling one's actions or emotions.

ES: acrasia, bulesis, volition, voluntary.

Willis' cords (wîl'is). Those crossing the sup. longitudinal sinus, transversely.

W., circle of. *SYN circulus arteriosus.* An intercommunicating set of arteries which encircle optic chiasma and hypophysis from which the principal arteries supplying the brain are derived. It receives blood from the two internal carotid arteries and the basilar artery formed by union of the two vertebrals.

Wilson's disease (wîl'sun). A rare disease of degeneration of corpus striatum and cirrhosis of the liver, characterized by tremulous distortion of the muscles (increased by activity), dysarthria, dysphagia, and emotionalism. It is thought to be the result of abnormal copper metabolism.

Winckel's disease (vin'kêl). A fatal disease of the newborn characterized by profuse hemorrhages, hematuria, jaundice, enlarged spleen, and punctiform hemorrhages upon the skin. Results from entry of colon bacilli through stump of umbilical cord (omphalitis).

window. 1 An aperture for the admission of light or air or both. 2 A small aperture into a cavity, especially that of inner ear. *SEE fenestra*

w., cochlear. The *fenestra rotunda, q.v.* *SYN.* round window, *fenestra cochlea*

w., oval. The *fenestra ovalis, q.v.* Also called *fenestra vestibuli*

w., round. The *fenestra rotunda, q.v.* Also called *fenestra cochlea*

w., vestibular. The oval window. *SYN fenestra ovalis, q.v.*

windpipe (wind'pîp). Passage for breath from the larynx to the lungs. *SYN: trachea, q.v.*

wine (win) [L *vinum*, wine]. 1 Fermented grape juice or fermented juice of any fruit. 2 Solution of a medicinal substance in wine. *SYN vinum*

ASH CONST. (average) Ca 0.009, Mg 0.010, K 0.104, Na 0.008, P 0.015, Cl 0.011, S 0.015, Fe 0.0003

w. glass. A fluid measure of approximately two fluid ounces (60 c.c.)

wing. A structure resembling the wing of a bird, especially the great and small wings of the sphenoid bone. *q.v.* *SEE ala*

winged scapula. Scapula, winged. *q.v.*

wink (wink) [A S *wincian*] 1. To close and open the eyelids quickly. 2. Act of closing and opening the eyelids quickly. *SEE mication, nictitation*

Winslow, foramen of. The epiploic foramen

W., ligament of. The oblique popliteal ligament located at back of knee.

W., pancreas of. The processus uncinatus of the pancreas

winter itch. Itching occurring only in the winter. *SYN pruritus hiemalis*

Wirsung, duct of (vêr'soong). Excretory duct of the pancreas. *SYN: pancreatic duct*

wisdom tooth (wîz'dôm). The hindmost or last molar tooth on each side of the jaw, which may appear as late as the 25th year.

witches' milk (wîts'h'es). Milk secreted by the newly born infant's breast, stimulated by the lactating hormone circulating in the mother.

Wohlfahrtia (vôl-fahr'ti-â) A genus of flesh flies belonging to the family Sarcophagidae, order Diptera

W. magnifica. Species found in SE Europe, the larvae causing myiasis.

W. opaca. Species occurring in Canada, a common parasite of wild animals. Human babies may become infested.

W. vigil. Species found in Canada and N. United States.

wolffian body (wool'fi-ân). An embryonic organ on each side of the vertebral column. *SYN mesonephros. SEE archinephron, embryo, paroophoron, paroovarium.*

w. cyst. One of the broad ligaments of the uterus

w. duct. *SYN: mesonephric duct.* Duct in embryo leading from mesonephros to cloaca. From it develop the ductus epididymis, ductus deferens, seminal vesicle, ejaculatory duct, ureter and pelvis of kidney.

w. tubules. *SYN: mesonephric tubules.* One of 30 to 34 tubules which develop within the mesonephros and empty into mesonephric duct. Most are transitional persisting for only a short time. Some persist in adult males as the *efferent ductules* of the testis, others persist only as vestigial structures. *SEE: paradidymis, epoophoron, paroophoron.*

Wolhynian fever. Trench fever, *q v*

womb (woom) [AS *wamb*]. Female organ for protection and nourishment of the fetus. SYN *uterus*, *q v*.

wood alcohol (wud af'kô-hôl). (CH₃OH) Alcohol obtained by distillation from wood.

It is a poisonous substance and frequently causes loss of sight. SEE *methyly alcohol*.

wood tick. *Dermacentor andersoni*, an important N American species of tick which causes tick-paralysis and transmits causative organisms of Rocky Mountain spotted fever and tularemia.

wool sorter's disease (wool'sor-ter). A pulmonary form of anthrax which develops in those who handle wool contaminated with *Bacillus anthracis*

wound blindness. Inability to comprehend written words; a form of aphasia, *q v*

w. salad. The use of words with no apparent meaning attached to them or to their relations one with another; usually found in schizophrenia

work (wûrk) [AS *worc*] For definition, SEE *erg* For comparison of various energy units, SEE *calorie*, *unit*.

worm (wûrm) [AS *wyrm*] 1 SYN: *helminth* An elongated invertebrate belonging to one of the following phyla: Platyhelminthes (flatworms), Nemathelminthes or Aschelminthes, round- or threadworms; Acanthocephala, spiny-headed worms; and Annelida (Annu-lata), segmented worms 2 Any small, limbless, creeping animal 3 Median portion of the cerebellum 4 Any wormlike structure

For flatworm, hookworm, pinworm, etc., SEE UNDER: name of worm

w. abscess. A resulting from lodgment of a worm in the body

w. fever. Fever due to irritation caused by worms in the intestinal canal.

wormian bones (wûr'mî-ân) Small, irregular bones in the course of the cranial sutures.

worsted test (wus'têd) Matching of the differently colored skeins of worsted yarn to detect color blindness. SYN *Holmgren's test*.

wound (wound) [AS *wund*] Break in the continuity of soft parts from violence or trauma of tissues

TREATMENT Crude cod-liver oil applied to ulcers, wounds, and burns in which there has been a loss of 1 or more layers of the skin, has proved very effective as a healing, sterile, and antiseptic remedy Cellophane* used as a wound dressing is singularly free of infection and doesn't crack. Allantoin is esp useful in nonhealing wounds and ulcers. The applications should be followed with the use of a plaster of Paris bandage to insure rest of the part Toxins are thus rendered harmless, and the growth of bacteria checked Ulcers should first be cleansed before using the oil. Felons and infections of tendons and bedsores may also be treated in this manner Sulfonamide or antibiotic therapy may be instituted as indicated

w., abdominal. Frequently sustained; ordinarily involves structure of abdominal wall

In such instances, it may be treated as ordinary wounds Where a cavity has been opened, and esp. if viscera have been exposed, they should be kept sterile and moist with a sterile normal salt solution prepared by dissolving a teaspoonful of

salt in pint of boiling water, or use the clearest water at hand, because allowing viscera to dry destroys them.

w., bullet. A puncture wound from a bullet Usually there is a small point of entrance, if the bullet left the body a larger point of exit, it is associated with injuries of bone, tendon, blood vessels, etc.

SYM. Depend on site, speed, and character of bullet.

F A TREATMENT. Antitetanic serum Antiseptic to wound and dressing. Treat complications and shock

w., cellulitis of. When wounds have been closed without drainage, esp in such cases as appendicitis, local inflammation of the wound may occur.

SYM Elevation of temperature from 4th to 7th day with tenderness. Inspect dressing and chart

TREATMENT Evacuation of the abscess, hot wet dressings

w., contused. A bruise It may be caused by a blunt instrument

The skin need not necessarily be broken, but injury of the tissues under skin, leaving skin unbroken, causes more or less change in the normal musculature The blood vessels underneath skin being ruptured cause discoloration. If extravasated blood becomes encapsulated it is termed *hematoma**; if it is diffused, an *ecchymosis** More or less shock depending on the extent of the contusion

TREATMENT Cold compresses, pressure, and rest of part with elevation When acute stage is over (6 to 24 hours) soap-suds application, massage with camphorated oil exposure to a 60 watt electric light with continued rest and elevation are prescribed Aseptic drainage may be indicated

w., crushing. If bleeding, apply cold cloths, if not, gently mold to proper shape, apply cloth dipped in warm water, and keep warm. If bone is fractured, apply splint

w., fish-hook. Imbedded fish hooks are notably difficult to remove Push the hook through, then cut off barb with an instrument These injuries frequently become infected, so carefully saturate with an antiseptic and cover with a dressing, and observe for several days.

w., gunshot. Penetrating or perforating wound which may contain a foreign body, as a bullet

F A TREATMENT. Should be conservative. Apply antiseptic, sterile dressing; treat hemorrhage If large vessels are torn, antitetanic serum to prevent lock-jaw Do not probe

w., incised. A clean-cut wound. Caused by a keen cutting instrument. There are no jagged edges. Any sharp cut in which the tissues are not severed is an incised wound. It may be either an aseptic or infected w., depending on circumstances which caused it.

An aseptic wound, or one occurring under surgical conditions, should heal if conditions are favorable and no contaminations due to pathogenic organisms or foreign material enter into it. During healing process, area of the wound must be kept aseptic. The skin must be cleansed with antiseptic solution and covered securely with sterile dressings, preventing external contact with microorganisms A clean wound should be left alone. The dressings should be changed only often enough to

keep wound clean. There should be no squeezing or pulling of its edges.

w., lacerated. A torn wound.

It provides many avenues for infection. It is not a clean wound. The edges are ragged. May be caused by many kinds of implements, and the implement may be covered with any kind of pathogenic bacteria. These may be of a violent nature causing tetanus, or only a slight abscess. The infiltration of bacteria may cause any stage of a septic condition. In dealing with such wounds, all possibilities should be taken into consideration.

TREATMENT The wound should be cleansed with antiseptic solution and ragged edges trimmed off, if too ragged. Some doctors advise that wet dressings be applied. The patient should be given tetanus antitoxin. The wound should never be sealed. It is well to hold it open with some form of drain from a piece of sterile silk worm gut or a rubber drain.

w., non-penetrating. One in which the surface of skin remains intact.

w., open. Contusion where skin is also broken, such as a gunshot w., incised w., or lacerated w.

w., penetrating. One in which the skin is broken and the agent causing the wound enters, subcutaneous tissue or a deep-lying structure or cavity.

w., perforating. One in which the vulnerating body both enters and emerges from the cavity.

w., poisoned. This may be classed as a lacerated wound, or a punctured wound, depending on tearing of tissue.

The poisoned wound may be caused by a diseased animal, as a snake or a dog, or some of the wild animals, such as the coon or the squirrel.

TREATMENT A poisoned wound should be treated the same as a punctured wound. Cauterize with silver nitrate; wet dressings should be applied. The animal, if possible, should be put under observation for rabies.

w., punctured. One made by sharp-pointed instrument, such as a dagger, an ice pick, or needle. The chief danger is from thrombosis and possible release of emboli. A puncture wound never gives access to int of wound. Tetanus germs thrive in such a wound, as they live in darkness and progress rapidly without air. Inspect instrument that caused the wound. The puncture should be found and, if possible, squeezed until the blood flows.

TREATMENT Tetanus antitoxin at once and apply moist dressings. If the patient does not recover, the punctured wound should be incised.

w., subcutaneous. Include all which are unaccompanied by break in skin. As contusions.

w., tearing off parts. If completely severed, treat same as lacerated wound. A few drops of carbolic acid should be used in water for washing wounds. Watch for shock. If parts are not completely severed, gently bring into position, apply splints where necessary, and bandage until surgical aid is obtainable. Watch for shock.

w., tunnel. One having a small entrance and exit and of uniform diameter.

W.R. Abbr. for Wassermann reaction.

wrinkle. 1. A crevice, furrow or ridge in the skin. 2. To make creases or fur-

rows as in the skin by habitual frowning.

Wrisberg's cardiac ganglion (vriz'berg)

A small ganglion sometimes found in cardiac plexus to the right of the ligamentum arteriosus.

W's, cartilages. The cuneiform cartilages of the larynx.

W's nerve. The medial brachial cutaneous nerve, a branch of the medial cord of the brachial plexus. 2. The *nervus intermedius (pars intermedia)*, a branch of the facial nerve lying between the motor root and the acoustic nerve.

wrist (rist) [A.S.]. The joint, or region, lying between the hand and the forearm.

w. bones. The carpus consisting of eight bones. For names. SEE. *ossa carpi* under *skeleton*.

w. clonus. Irregular convulsive movements of the hand due to inability to control the muscles that bend the wrist backward.

w. clonus reflex. Lateral clonic movements of hand occurring when hand is held down at arm's length in extreme extension.

w. drop. Condition in which hand is flexed at wrist and cannot be extended; due to injury of radial nerve or paralysis of extensor muscles of wrist and hand.

NP It may be avoided in fractures by exercising the hands whenever possible and by keeping them at right angles with the adjacent part.

w. joint. Joint formed by the radius and the first row of carpal bones.

writer's cramp. An occupational disability due to excessive writing.

writing. The act of placing characters, letters, or words on a surface, usually paper, for the purpose of communicating ideas.

w., defects of. SEE. *agraphia*.

w., dextrad. Writing that progresses from left to right.

w., mirror. Writing so that letters and words are reversed and appear as in a mirror.

writing hand. Position seen in paralysis agitans marked by contraction of muscle of the hand. The fingers assume the position similar to holding a pen.

wryneck (ri'nēk). Contracted state of 1 or more muscles of the neck, producing an abnormal position of the head. SYN. *lozia*, *torticollis*.

It is occasionally acute, due to cold or trauma; more commonly chronic and is then spastic in character and dependent upon nerve irritation. Has been produced by habitual malposition of the head assumed because of existing ocular defect. May be congenital.

When acute, generally passes away under influence of rest, heat, and time. Chronic may require friction, electricity, or stretching, section or removal of a portion of spinal accessory nerve. May be little benefit from any treatment.

w.s. Abbr. for *water soluble*.

wt. Abbr. for *weight*.

Wuchereria (vōō'kēr-ē'ri-ā). A genus of filarial worms belonging to the superfamily Filarioidea, Class Nematoda. Common in warm regions of the world.

W. bancrofti. SYN: *Filaria bancrofti*. The causative agent of elephantiasis. Adults live in lymph nodes and ducts

of man. Females give birth to sheathed microfilariae which remain in internal organs during the day but at night are in circulating blood where they are sucked up by night-biting mosquitoes in which they continue their development, becoming infective larvae in about two weeks.

W. malayi. Species occurring in SE Asia and largely responsible for lymphangitis and elephantiasis in that region. Closely resembles *W. bancrofti*.

wuchereriasis (vöö'kër-ë-rî'ä-sîs). Syn: *filariasis, elephantiasis, q v* Infestation with filaria worms of the genus *Wuchereria*.

Wunderlich's curve (voon'dër-lik). The fever curve typical of typhoid fever.

w/v. Abbr. for *weight in volume*. It indicates the amount (by weight) of a solid substance dissolved in a measured quantity of liquid. Per cent "weight in volume" expresses number of grams of an active constituent in 100 ml of solution.

w/w. Abbr. for *weight in weight*. It indicates the amount (by weight) of a solid substance dissolved in a known amount (by weight) of liquid. Per cent "weight in weight" expresses the number of grams of an active constituent in 100 grams of solution.

X. 1. Abbr. of *Kienböck's unit* 2 Roman numeral 10. 3 Symb. of *reactance*.

Xe. Chemical symbol for *xenon*.

xanthelasma (zăn-thêl'-ăz'mă) [*G. xanthos*, yellow, + *elasma*, plate] 1. Yellow. 2. Flat or slightly raised yellowish tumor occurring in elderly persons, found most frequently on the upper and lower lids, esp near the inner canthus SYN *xanthoma*.

xanthelasmoldea (zăn-thel'-ăz-moy'dê-ă) ["" + " + *eidōs*, resemblance] Chronic disease of childhood marked by wheals and followed by brownish-yellow patches. SYN: *urticaria pigmentosa*

xanthellin (zăn-thêl'in) An antibiotic isolated from *Bacillus subtilis* in 1951

xanthematin (zăn-thêm'-ă-tin) ["" + *haima*, *haima*-, blood]. A yellow substance derivable from hematin when treated with nitric acid.

xanthemia (zăn-thê'mi-ă) ["" + *haima*, blood]. Yellow pigment in the blood. SYN: *carotenemia*.

xanthic (zăn'thik) [*G. xanthos*, yellow]. 1 Yellow 2 Pert to xanthine

x. calculus. A urinary concretion containing xanthine.

xanthine (zăn'thin, -thên) [*G. xanthos*, yellow]. A nitrogenous extractive contained in muscle tissue, liver, spleen, pancreas, and other organs, and in the urine, formed during the metabolism of nucleoproteins

x. bases. Nitrogenous substances resulting from splitting up of nucleins. SEE: *purine bases*

xanthinuria (zăn'thin-û'ri-ă) [*G. xanthos*, yellow, + *ouron*, urine] Excretion of large amounts of xanthine in the urine

xanthochroia (zăn'thō-krō'i-ă). Yellowish discoloration of the skin

xanthochromia (zăn'thō-krō'mi-ă) ["" + *chroma*, color] Yellow discoloration, as of the skin in patches or of the cerebrospinal fluid, resembling jaundice

xanthochroous (zăn-thōk'rō-ûs) ["" + *chroa*, color] Having a yellowish or light complexion

xanthocyanopia, xanthocyanopsia (zăn'thō-si-ăn-ō'pi-ă, -ôp'si-ă) ["" + *kyanos* blue, + *opsis*, sight] A form of color blindness in which yellow and blue are distinguishable, but not red and green

xanthocyte (zăn'thō'sit) A cell containing yellow pigment

xanthoderma (zăn'thō-der'mă) ["" + *derma*, skin] Yellowness of the skin SYN: *xanthoplasty*

xanthodont, xanthodontous (zăn'thō-dōnt, zăn'thō-dōn'tus) ["" + *odous*, odont-, tooth] Having yellow teeth

xanthogranulomatosis (zăn'thō-grăn-û-lō'mă-tō'sis). SYN *Hand-Schüller-Christian disease* A disease characterized by exophthalmos, diabetes insipidus, and defects in membranous bones in which granulation tissue with cells containing cholesterol and its esters appear. It is related to eosinophilic granuloma and Letterer-Siwe disease. All three diseases are characterized by a histiocytic proliferation of unknown etiology

xanthokyanomy (zăn'thō-ki-ăn-ō-pi) ["" + *kyanos*, blue, + *opsis*, sight]. Partial

blindness for color, yellow and blue only being discerned SYN *xanthocyanopia*

xanthoma (zăn'thō'mă) [*G. xanthos*, yellow, + *ōma*, tumor]. Flat, slightly elevated, soft, rounded, chamois-covered plaque or nodule, usually on the eyelids

They may occur in patches of yellowish macule on orbital regions, confined to middle life or later, and to the female sex, consisting of a degenerative process involving fibers of the orbicularis muscle

x. diabetorum. Cutaneous disease associated with diabetes mellitus

x. dissemination. Condition characterized by presence of xanthoma throughout body especially on face, in tendon sheaths, and in mucous membranes

x. multiplex. Xanthomas all over the body

x. palpebra'rum. X affecting the eyelids

x. tuberosum. A form which may appear on the neck, shoulders, trunk, or extremities, consisting of small, elastic, and yellowish-colored nodules

xanthomatosis (zăn'thō-mă-tō'sis) [*G. xanthos*, yellow, + *ōma*, tumor] Condition in which there is a deposition of lipid in tissues usually accompanied by hyperlipemia. Cholesterol may accumulate in tumor nodules (xanthoma) or in individual cells especially histiocytes and reticuloendothelial cells Also called *cholesterol lipidosis*

xanthomelanous (zăn'thō-mêl'-ăn-ûs) ["" + *melas*, *melan*-, black]. Having black hair and an olive skin

xanthopathy (zăn'thōp'-ă-thi) ["" + *pathos*, disease] Yellowish pigmentation of the skin SYN *xanthochromia, xanthoderma*

xanthophane (zăn'thō-phăn) ["" + *phanein*-, to appear]. A yellow pigment in the retinal cones.

xanthoplasty (zăn'thō-plăst'i) ["" + *plastem*, to form]. Yellow color of the skin SYN: *xanthoderma*.

xanthoproteic (zăn'thō-prō-te'ik) ["" + *prōtos*, first] Derived from or pertaining to xanthoprotein

xanthoprotein (zăn'thō-pro'tē-in) ["" + *prōtos*, first]. Yellowish substance produced by heating proteids with nitric acid.

xanthopsia (zăn'thōp'si-ă) [*G. xanthos*, yellow, + *opsis*, sight] Condition in which objects appear yellow

xanthopsin (zăn'thōp'sin) ["" + *opsis*, sight] Visual yellow, the visual purple produced by light acting on rhodopsin

xanthopsis (zăn'thōp'sis) ["" + *opsis*, appearance]. Yellow pigmentation seen in cancers

xanthopsydralia (zăn'thōp-si-dră'shi-ă) ["" + *psydraz*, pustule] Skin disease marked by the formation of yellow pustules or pimples on the skin

xanthorrhea. Discharge of a yellow, purulent substance from the vagina

xanthosis (zăn'thō'sis) [*G. xanthos*, yellow, + *ōsis*, condition]. A yellowing of the skin seen in carotenemia resulting from ingestion of excessive quantities of carrots, squash, egg yolk and other foods containing carotenoids. Condition usually harmless but it may in-

dicade increase of lipochromes in blood due to other conditions such as hypothyroidism or diabetes.

xanthous (zân'thūs) [G. *xanthos*, yellow]. Yellow.

xanthuria (zân'thū'ri-ā) ["" + *ouron*, urine] Excretion of an excess of xanthine in the urine. SYN: *xanthinuria*

X-chromosome. The sex chromosome, of importance in the determination of sex. SEE: *chromosome*, X

Xe. Chemical symbol for xenon

xeno-. Combining form meaning *strange, foreign*

xenogenous (zēn-ōj'ēn-ūs) [G. *zenos*, strange, host, + *gennan*, to produce].

1 Caused by a foreign body 2 Originating in the host, as a toxin resulting from stimuli applied to cells of the host.

xenology (zē-nōl'ō-gī). The study of parasites and their hosts and their relationships to each other

xenomenia (zēn-ō-mē'nī-ā) [G. *zenos*, strange, + *menia*, menses.] Menstruation from a part of the body other than the normal one. SYN: *vicarious menstruation*

xenon (ze'nōn) [G. *zenos*, stranger]. A gaseous element in the atmosphere At. wt. 131.30. SYM: Xe

xenophobia (zēn'ō-fō'bī-ā) [G. *zenos*, stranger, + *phobos*, fear] Abnormal reluctance to meeting strangers

xenophonia (zēn'ō-fō'nī-ā) [G. *zenos*, strange, + *phōnē*, voice] Alteration in accent and intonation of a person's voice due to defect of speech

xenophthalmia (zēn-ōf-thāl'mī-ā) ["" + *ophthalmia*, inflammation of the eye] Inflammation of the eye caused by a foreign body

Xenopsylla (zēn-ō-sīl'ī-ā) A genus of fleas belonging to the family Pulicidae, order Siphonaptera

X. cheopis. The rat flea, but other hosts include man and other animals It is a vector and transmitter of a number of pathogens including *Hymenolepis nana*, the dwarf tapeworm, *Salmonella*, and causative organisms of bubonic and sylvatic plague, and endemic typhus

xeransis (zē-rān'sīs) [G. *xēros*, dry] Loss of moisture in tissues or drugs brought about gradually SYN: *siccation*

xerantic (zē-rān'tīk). Causing dryness. SYN: *siccant*, *siccative*.

xerasia (zē-rā'sī-ā) [G. *xēros*, dry] Disease of the hair in which there is abnormal dryness, followed by brittleness, and eventually loss

xero- (zē'rō-) [G.] Prefix meaning *dry*.

xerocheilia (zē'rō-kī'lī-ā) [G. *xēros*, dry, + *cheilos*, lip] Dryness of the lips; a type of cheilitis

xeroderma (zē'rō-der'mā) [G. *xēros*, dry, + *derma*, skin] Roughness and dryness of the skin, mild ichthyosis

x. pigmentosum. A rare disease of the skin starting in childhood marked by disseminated pigment discolorations, ulcers, cutaneous and muscular atrophy and death SYN: *Kaposi's disease*

xeroma (zē-rō-mā) ["" + *-oma*, mass] An abnormally dry state of the conjunctiva. SYN: *xerophthalmia*

xeromenia (zē-rō-mē'nī-ā) ["" + *mēniata*, menses]. The occurrence of the usual disturbances during menses without menstrual flow

xeromycteria (zē-rō-mīk-tē'ri-ā) ["" + *myktēr*, nose]. Dryness of the nasal passages.

xeronusus (zē-rōn'ō-sūs) ["" + *xosus*, disease]. Dryness of the skin.

xerophagia (zē-rō-fā'jī-ā) ["" + *phagein*, to eat]. The eating of dry food only.

xerophthalmia (zē-rōf-thāl'mī-ā) [G. *xēros*, dry, + *ophthalmos*, eye] Conjunctival dryness with keratinization of epithelium following chronic conjunctivitis and in disease due to deficiency of vitamin A.

xerosis (zē-rō'sīs) [G. *xēros*, dry, + *-osis*, condition] 1 Abnormal dryness of skin, mucous membranes, or of the conjunctiva. 2 Normal sclerosis of tissues in the aged SYN: *asteatosis*.

xerostomia (zē-rō-stō'mī-ā) ["" + *stoma*, mouth] Dryness of the mouth

It occurs in diabetes, hysteria, paralysis of facial nerve involving chorda tympani, acute infections, some types of neuroses, and is induced by certain drugs such as nicotine and atropine, all arresting salivary secretion. SEE: *ptyalism*

xerotes (zē'rō-tēz) [G. *xerōtēs*, dryness]. Dryness of the body, dryness

xerotocia (zē-rō-tō'shī-ā) [G. *xēros*, dry, + *tokos*, birth] Dry labor

xerotic (zē-rōt'īk) [G. *xēros*, dry]. Dry; characterized by dryness

xerotripsis (zē'rō-trīp'sīs) ["" + *tripsis*, a rubbing] Dry friction.

xiphi-, **xipho-** (zīf-, -ō-) [G.] Prefixes pert. to the *xiphoid cartilage*

xiphisternum (zīf-ī-ster'nūm) [G. *xiphos*, sword, + *sternon*, chest]. The pointed process of the lower end of the sternum. SYN: *xiphoid cartilage*

xiphocostal (zīf'ō-kōs'tāl) ["" + *L costa*, rib] Relating to the xiphoid cartilage and the ribs

x. ligament. One connecting the xiphoid cartilage to the cartilage of the 8th rib

xiphodynia (zīf-ō-dīn'tī-ā) ["" + *odynē*, pain] Pain in the ensiform cartilage

xiphoid (zīf'ōyd) [G. *xiphos*, sword, + *eidos*, process]. Sword-shaped, ensiform.

x. process. The lowest portion of the sternum, a sword-shaped cartilaginous process supported by bone

It has no ribs attached to it, but some of the abdominal muscles are attached to it. It ossifies in the aged

xiphoiditis (zīf-ōyd-ī'tīs) ["" + "" + *-itis*, inflammation] Inflammation of the ensiform or xiphoid cartilage

x-ray. 1 Any of the radiations of an extremely short wave length, emitted primarily as result of sudden change in velocity of a moving electric charge and as the result of atomic changes of target due to this impact. SYN: *roentgen ray* 2 A photograph obtained by use of x-rays

x. dermatitis. Cutaneous inflammation due to exposure to x-rays

x. unit. Unit of x-ray dosage equal to 1/10 the erythema dose.

X-substances. Nonspecific, mildly toxic substances extracted from cultures of certain bacteria

xylenin (zī'lē-nīn) [G. *xylon*, wood] A toxic substance extracted by xylene from tubercle bacilli.

xyl- (zī-lō-) [G.]. Prefix pert. to or derived from wood.

xylose (zī'lōs) [G. *xylon*, wood] Wood sugar, a crystalline, nonfermentable pentose

xyrospasm (zī'rō-spāzm) [G. *zyron*, razor, + *spasmos*, spasm] Occupational neurosis of the fingers seen in barbers.

xysma (zīz'mā) [G. *zysma*, flings]. In diarrhea, flocculent pseudomembranous matter sometimes seen in stools.

Y

Y. Symb. of element *yttrium*.

yaghourt (yah-ghoor't). Yoghurt; yogurt, **yard** [A.S. *gyrd*, a rod] 1 A measure of 3 feet or 36 inches. 2. The penis.

yatron (yät'rén). Commercial brand of chinolofon, *q.v.*

yava skin (yah'va skin). A form of elephantiasis due to the excessive use of kava. **See:** *elephantiasis*.

yaw. **SYN:** *maman pian*. The primary lesion of yaws.

y., mother. The primary lesion of yaws occurring at site of inoculation 3-4 weeks after infection.

yawn [A.S. *gānian*, to yawn]. 1. To open the mouth involuntarily, as in drowsiness or fatigue 2 Involuntary act of gaping, accompanied by attempts at inspiration, excited by drowsiness

yawning (yawn'ing) [A.S. *gānian*, to yawn]. Deep inspiration, gaping induced by drowsiness or fatigue **SYN:** *oscitation*

yaws (yawz) [Cariban] An infectious tropical disease. **SYN.** *frambesia*.

SYM: Febrile disturbances, rheumatism, eruption of tubercles with a caseous crust on hands, feet, face, and external genitals.

Yb. The symb for *ytterbium*.

Y bacillus. A dysentery bacillus (*Shigella flexneri*, Hiss and Russell's Y bacillus).

Y cartilage. The cartilage uniting the 3 pelvic bones at bottom of the acetabulum early in life.

Y-chromosome. One of a pair of sex chromosomes (X and Y) which play a role in the determination of sex. **See:** *chromosome, X*.

yeast (yést) [A.S. *gist*]. 1. A substance composed of aggregated cells (*Ascomycetes*) of minute unicellular sac fungi. 2. A commercial product composed of meal impregnated with living yeast.

yolk (yelk). Variant of yolk.

yellow (yél'ó) [A.S. *geolu*] 1. One of the primary colors resembling that of a ripe lemon. 2. Colored yellow, as the skin in disease.

y. body. The corpus luteum, *q.v.*

y. enzyme. **See:** *enzyme, Warburg's yellow*

y. fever. An acute infectious disease characterized by jaundice, epigastric tenderness, vomiting, hemorrhages, and a febrile course consisting of 2 paroxysms.

ETIOL: A filtrable virus transmitted by the bite of a female mosquito, *Aedes aegypti*

PERIOD OF INCUBATION: 3 to 6 days.

SYM: *Period of invasion (infection):* This stage lasts from 2 to 5 days.

PERIOD OF INTOXICATION: This period lasts from 6 to 9 days.

CONVALESCENCE: Usually begins after seventh or eighth day and progresses slowly.

TREATMENT: Water and electrolyte balance should be carefully watched and in cases of persistent vomiting, parenteral fluids containing dextrose and saline should be given.

PROPHYLAXIS: Preventive measures include mosquito control by screening, spraying with DDT, etc. and destruction of breeding areas. Preventative vaccines are available for those who plan to travel, or live in areas where the disease is endemic

SYM: First Stage Disease begins with a chill followed by pain in head, back, and limbs. Temperature rises rapidly till it reaches its maximum, 103° to 105° F. Face flushed, conjunctivae injected, pupils small, tongue coated, epigastrium tender, stomach irritable and unretentive, bowels constipated, urine scanty and albuminous. This stage lasts from a few hours to several days.

It is followed by a marked fall in temperature and an improvement in general symptoms. At this time convalescence may begin or patient may pass into second febrile paroxysm

Second Stage: Fever rises to its original height, skin becomes yellow, vomiting persistent, and ejected matter may contain dark blood (black vomit). Hemorrhages sometimes occur from other mucous membranes. Pulse rapid, but not proportionate to the fever. Urine becomes very scanty and contains albumen and casts. Death frequently results from exhaustion or uremia, though recovery may follow the gravest symptoms

DURATION. From a few hours to a week

PROC: Always grave. Mortality, 7 to 10%. In severe epidemics, 20 to 85%.

TREATMENT: Absolute rest; cool, well-ventilated room; liquid diet. Pain in back and limbs may be relieved by hot water bags, high fever by applications of cold. Internal remedies to suit individual cases.

y. softening. A stage of softening of the brain marked by fatty degeneration and yellow discoloration.

y. spot. 1. **SYN:** *macula flava*. Yellowish nodule of ant. end of vocal cord 2. Center of the retina, the point of clearest vision. **SYN** *macula lutea*

y. vision. Condition in which objects seem yellow in color. **SYN:** *xanthopsia*.

yerba (yer'ba) [Sp.]. An herb.

y. maté (mah'tá). Paraguay tea.

Yersin's serum (yer'sín). An antitoxic serum for the plague.

-yl [G.] Suffix signifying, in chemistry, a radical.

-ylene [G.]. Suffix denoting, in chemistry, a bivalent hydrocarbon radical.

Y ligament. A y-shaped band covering the upper and front portions of the hip joint **SYN.** *ligament, iliofemoral, q.v.*

yoghurt, yogurt (yôg'hert) A form of curdled milk common in Bulgaria, curdling being due to the action of *Lactobacillus bulgaricus*. Extensive claims have been made concerning the therapeutic value of yoghurt for various ailments, most of which have not been substantiated **See:** *milk*.

yolk (yôk) [M.E. *yolke*, from A.S. *geolca*]. The contents of the ovum; sometimes only the nutritive portion. **SYN:** *vitel-lus*. **See:** *zona pellucida*.

y. sac. Membranous sac surrounding food yolk in the embryo.

y. stalk. The umbilical duct connecting the yolk sac with the embryo.

Yung-Helmholtz theory (yŭng-hĕlm'hōlts). Belief that color vision depends on 3 different sets of retinal fibers responsible for perception of red, green, and violet.

The loss of either red, green, or violet as color perceptive elements in the retina causes an inability to perceive a primary color or any color of which it forms a part

Yung's rule (yŭng). A dose for children is arrived at by adding 12 to the age and dividing the result by the age, making the quotient the denominator of a fraction, the numerator of which is 1.

The proportion of the adult dose to be given the child is represented by the fraction

youth (yŭth) [AS *geoguth*]. Period bet. childhood and maturity.

ypsilliform. Y-shaped

y. s. Abbr. for *yellow spot* of the retina.

ytterbium (i-tur'bi-ŭm). A rare metallic element. SYMS: Yb At. wt 173.04, at no. 70.

yttrium (it'ri-ŭm). A metallic element. SYMS: Y. At. wt 88.92, at no. 39

Yvon's coefficient (ē'vŏn) The ratio bet. the amount of urea and phosphates in the urine.

Y's. tests. One for presence of acetanilide and the other for alkaloids in urine.

Z

Z. Abbr. for *Zuckung*, (Ger contraction), standard score (statistics), zero, zone.
2 Symbol for atomic number

Z disk. Intermediate (Ger Zwischen-scheibe) disk SEE: disk

Zaglas' ligament (zah'glahz) The part of the post sacroiliac ligament from post. sup spinous process of ilium to side of sacrum

Zahn's lines or ribs (zahn). Transverse whitish marks on the free surface of a thrombus made by the edges of the lamellae of blood platelets

Zander apparatus (zan'der). Mechanical means for massage and exercise designed by Zander about 1857

Zang's space (zang) One bet the 2 lower tendons of the sternomastoid muscle in the supraclavicular fossa

zaranthan (zar-an'than) [Hebrew]. Scirrhous hardening of the breast

zein (zē'in) [G *zea*, a kind of grain] A protein obtained from maize It is deficient in tryptophane and lysine

Zeiss' gland (zēis) One of the sebaceous glands at free edges of eyelids

zelotypia (ze-lō-tīp'ī-ā) [G *zelos*, zeal, + *typten*, to strike] 1 Morbid or monomaniacal zeal in the interest of any project or cause 2 Insane jealousy.

Zenker's degeneration, zenkerism (zēng'-kēr, -izm) A glassy or waxy, hyaline degeneration of skeletal muscles in acute infectious diseases, esp in typhoid

zeoscope (ze'o-skōp) [G *zein*, to boil, + *skopein*, to view] Device for determining the alcoholic content of a liquid by means of its boiling point

zero (zē'rō) [Italian *zero*, from Arabic *sifr*, a cipher] 1 Figure corresponding to nothing 2 The point from which the graduation of a scale commences

On the centigrade and Réaumur scales the zero (0°) is the temperature of melting ice. On the Fahrenheit it is 32° lower To obtain this fixed point the thermometer is immersed in melting ice, and when the mercury column ceases to fall, the level at which it remains is fixed as 0° on the C and R scales, and as 32° on the F scale SEE *thermometer*.

z., absolute. The temperature at which all atoms and molecules cease movement, or at which all gases liquify. Approx 273° C or 459° F

z., limes. SYMS Lo. The greatest amount of toxin which, when mixed with one unit of antitoxin and injected into a guinea pig weighing 250 gms., will cause no local edema

zestocausis (zēs'tō-kaw'sis) [G *zestos*, boiling hot, + *kausis*, a burning] Cauterization with heated steam

Ziehl-Neelsen method. One for staining *B. tuberculosis*.

zinc (zīnk) [L *zincum*] A bluish-white, crystalline, metallic element SYMS: Zn. At wt 65.38, at no 30 Sp gr 7.14. It boils at 907° C It is found as a carbonate and silicate, known as *calamine*, and as a sulfide (*blende*)

z. acetate. USP. White, pearly crystals

ACTION AND USES: Astringent and antiseptic Used chiefly in eye solutions, in 1/10 to 5/10%.

z. chloride. USP. White granular powder

ACTION AND USES: Antiseptic, astringent, and escharotic

z. ointment. An ointment consisting of 20% of zinc oxide mixed with petrolatum and white ointment, used in treating skin diseases

z. oxide. USP Very fine white powder

ACTION AND USES: Slightly antiseptic and astringent Used chiefly in the form of ointment, 20%

z. salts. A bluish-white metal used to make various containers and also to "galvanize" iron to prevent rust. The most commonly used compounds are zinc oxide as a pigment for paints, in ointments, and in chloride and sulfate which resemble epsom salts and have thus been accidentally administered. The salts are used also as a wood preservative, in soldering, and in medicine to neutralize tissue, and in dilute solutions as an astringent and emetic

POISONING SYM Metallic taste with prompt burning of mouth, throat, esophagus, and stomach, violent vomiting, often bloody, increased salivation, painful diarrhea, and coma. If patient recovers, nervous complications are frequent

F A TREATMENT Wash out stomach and treat as for sulfuric acid.

z. stearate. USP. Very fine, smooth powder

USES A nonirritating antiseptic and astringent for burns, scalds, abrasions

z. sulfate. USP. White, transparent crystals

ACTION AND USES Externally, astringent and styptic. Internally, as an emetic

DOSAGE As an emetic, 15 gr (1 Gm.).

Zinn's ligament (zīn). Connective tissue giving attachment to the rectus muscles of the eyeball.

Z., zonule of. Suspensory ligament of lens of the eye. SYN *zonula ciliaris*.

zirconium (zī-kō'n'ī-ūm). A metallic element found only in combination. SYMS: Zr At wt. 91.22, at. no. 40.

Zn. Chemical symb for zinc.

zoanthropy (zō-ān'thrō-pī) [G *zōon*, animal, + *anthropos*, man]. Delusion that one is an animal

zoetic (zō-ēt'ik) [G *zōē*, life]. Pert. to life SYN *vital*.

zona (zō'nā) [L *zona*, a girdle]. 1. A band or girdle. 2 An acute inflammatory disease, characterized by groups of small vesicles mounted on inflammatory bases, associated with neuralgic pain and following the distribution of certain nerve trunks SYN *herpes zoster*.

Commonly depends on a peripheral neuritis. Injury, exposure to cold and damp clothes predispose to it.

z. ciliaris. Ciliary processes taken together SYN *corona ciliaris*.

z. facialis. Herpes zoster of the face.

z. pelucida. Inner, thick, solid, membranous envelope of the ovum. It is pierced by many radiating canals, giving it a striated appearance.

z. radiata. See *zona pellucida*.
zonal (zō'nāl) [L. *zona*, girdle] Pert. to a zone

zonary (zō'nar-i) [L. *zona*, a girdle]. Pert. to or shaped like zone

z. placenta. One arranged in the form of a broad ring around the chorion.

Zondek-Aschheim test (zōn'dēk ash'hīm). A test for pregnancy. See *test*, *Aschheim-Zondek*

zone (zōn) [L. *zona*, a girdle]. A small zone or belt

z's., erotogenic. Areas of the body which when stimulated produce erotic desires. These areas include the *breasts, lips, genital and anal regions, the buttocks*, and sometimes the special senses which excite the libido, such as the smell of certain perfumes.

zonesthesia (zōn-ēs-thē'zī-ā) [G. *zōnē*, girdle, + *aisthēsis*, sensation] A sensation, as of a cord constricting the body. Syn. *cincture sensation*

zonifugal (zō-nīf'u-gāl) [L. *zona*, a band, + *fugere*, to flee] Passing outward from within any zone or area

zoning (zō'ning) [L. *zona*, a band] The occurrence of a stronger fixation of complement in a lesser amount of suspected serum, a phenomenon occasionally observed in diagnosing syphilis by complement fixation method

zonipetal (zō-nīp'ēt-āl) [L. *zona*, a band, + *petere*, to seek] Passing from without into a zone or area of the body

zonula (zōn'ū-lā) [L. *zonula*, a tiny zone] A small zone. Syn. *zonule*

z. ciliaris. BNA. Suspensory ligament of the crystalline lens

zonular (zōn'ū-lar) [L. *zonula*, a tiny band]. Pert. to a zonula

z. cataract. One with opacity limited to certain layers of the lens

z. fibers. Interlacing ones of the zonula ciliaris

z. spaces. Those bet. fibers of ligament of the lens.

zonule (zōn'ūl) [L. *zonula*, a tiny band]. A small band or area. Syn. *zonula*

z. of Zinn. Suspensory ligament of the crystalline lens. Syn. *zonula ciliaris*.

zonulitis (zōn-ū-lī'tis) [L. + G. -*itis*, inflammation]. Inflammation of Zinn's zonule.

zoödermic (zō'ō-der'mīk) [G. *zōon*, animal, + *derma*, skin] Performed with the skin of an animal, said of a method of skin grafting

zoögenous (zō-ōj'en-ūs) [L. + *gennan*, to produce] Derived or acquired from animals

zoöglea (zō'ō-glē'ā) [L. + *gleos*, sticky] A stage in development of certain organisms in which colonies of microbes are embedded in a gelatinous matrix.

zoo-graft (zō'ō-grāft) [G. *zōon*, animal, + L. *graphium*, a grafting knife] A graft of tissue obtained from an animal

zoo-grafting (zō'ō-grāft'ing) [L. + L. *graphium*, a grafting knife] Use of animal tissue in grafting on a human body

zoöid (zō'ōyd) [L. + *eidōs*, resemblance]. 1. Resembling an animal 2. A form resembling an animal, an organism produced by fission 3. An animal cell which can move or exist independently

zoölogist (zō-ōl'ō-jist) A person who specializes in the study of animal life.

zoölogy (zō-ōl'ō-jī) [L. + *logos*, a study]. The science of animal life

zoöparasite (zō'ō-par'ā-sīt) [L. + *parasitos*, parasite]. An animal parasite

zoöpathology (zō'ō-pāth-ōl'ō-jī) [G. *zōon*, animal, + *pathos*, disease, + *logos*, a

study] Science of the diseases of animals.

zobphagous (zō-ōf'āg-ūs) [L. + *phagein*, to eat] Living upon animal food.

zophilism (zō-ōf'il-lizm) [L. + *philein*, to love, + *-ismos*, condition]. Abnormal love of animals

zophobia (zō'ō-fō-bī-ā) [L. + *phobos*, fear] Abnormal fear of animals.

zophyte (zō'ō-fīt) [L. + *phyton*, plant] A plantlike animal; any of numerous invertebrate animals resembling plants in appearance or mode of growth

zooplasmy (zō'ō-plās-mī) [L. + *plassein*, to form] Transplantation of animal tissue to man

zoosmosis (zō'ōz-mō'sis) [L. + *ōsmos*, impulsion] Process of passage of living protoplasm into the tissues from blood vessels

zoospore (zō'ō-spōr) [L. + *sporos*, seed]. Any spore moving by means of flagella

zootoxin (zō'ō-tōks'in) [L. + *toxikon*, poison] Any toxin or poison produced by an animal, as *snake venom*

zoster (zō'ster) [G. *zōstēr*, girdle] Acute inflammatory disease with vesicles grouped in the course of cutaneous nerves. Syn. *herpes zoster*, *zona*

z. auricularis. Herpes zoster of the ear.

z. ophthalmicus. Herpes affecting the ophthalmic nerve

zosteriform (zōs-ter'f-form) [L. + L. *forma*, shape] Resembling herpes zoster. Syn. *zosteroid*.

zosteroid (zōs-ter-ōyd) [L. + *eidōs*, form]. Resembling herpes zoster. Syn. *zosteriform*.

Zr. Chemical symbol for *zirconium*, q.v.
zweiback (zswī'bāk) A kind of bread, baked, then sliced and toasted. Av. baking. 5 Gm. Pro. 0.5, Fat 0.5, Carbo. 3.7

zygapophysis (zī-gāp-ōf'is-is) [L. + *apo*, from, + *physis*, growth] One of the articular processes of the neural arch of a vertebra.

zygion (zī'jī-on) [G. *zygon*, yoke] Cranio-metrical point on the zygoma at either end of bizygomatic diameter

zygodactyly (zī'gō-dāk'tīl-i) [L. + *daktylos*, digit] Fusion of 2 or more fingers or toes. Syn. *syndactylism*

zygoma (zī-gō'mā) [G. *zygōma*, cheek-bone]. 1. BNA. The long arch that joins zygomatic processes of the temporal and malar bones on the sides of the skull. 2. The malar bone.

ZYGOMA

A. Maxillary process B. Frontal process. C. Zygomatic process.

zygomatic (zī'gō-măt'ĭk) [G. *zygōma*, cheekbone] Pert to the zygoma

z. arch. The formation on each side of the cheeks of the zygomatic process of each malar bone articulating with the zygomatic process of the temporal bone

z. bone. Bone on either side of the face below the eye **SYN** *malar bone*

z. process. 1. A thin projection from the temporal bone bounding its squamous portion 2. A part of the malar bone helping to form the zygoma.

z. reflex. Movement of lower jaw toward percussed side when zygoma is percussed

zygomaticoauricularis (zī'gō-măt'ĭk-ō-aw-rĭk'ū-lă'rĭs) [L.] Muscle which draws the pinna of the ear forward. **SEE**: *Table of Muscles in Appendix*

zygomaticum (zī'gō-măt'ĭk-ūm) [L.]. The zygomatic bone

zygomaticus (zī'gō-măt'ĭk-ūs) [L.]. A muscle which draws the upper lip upward and outward. **SEE**: *Table of Muscles in Appendix*

zygomaxillary (zī'gō-măks'ĭl-ar-ĭ) [G. *zygoma*, cheekbone, + *L. maxilla*, jaw] Pert to the cheekbone and upper jaw

z. point. A craniometrical point marked at the lower end of the zygomatic suture

zygote (zī'gōt) [G. *zygōtos*, yoked]. Cell produced by union of 2 gametes. **SYN** *zygocyte*

zymase (zī'mās) [G. *zymē*, leaven, + *ase*, enzyme]. Any of a group of enzymes* which, in the presence of oxygen, convert certain carbohydrates into carbon dioxide and water or, in absence of oxygen, into alcohol and carbon dioxide or lactic acid

They are found in yeast, bacteria, and higher plants and animals. **SEE**: *ferment*

zyme (zīm) [G. *zymē*, leaven]. A ferment; a disease-producing ferment, as the morbid principle of a zymotic disease

zymogen (zī'mō-jēn) ['' + *gennan*, to produce] A substance that develops into a chemical ferment or enzyme It exists in an inactive form antecedent to the active enzyme **SYN** *proenzyme* **SEE** *pepsinogen*, *trypsinogen*

zymogene (zī'mō-jēn) ['' + *gennan*, to produce] Microbe causing fermentation

zymogenic (zī'mō-jēn'ĭk) ['' + *gennan*, to produce] 1. Causing a fermentation 2. Pert. to or producing a zymogen

zymohydrolysis (zī'mō-hĭ-drōl'ĭ-sĭs) ['' + *hydro*, water, + *lysis*, dissolution] Decomposition brought about by a ferment. **SYN**: *zymosis*, *q.v.*

zymologic (zī'mō-lōj'ĭk) [G. *zymē*, leaven, + *logos*, a study] Relating to zymology

zymologist (zī'mō-lō-jĭst) ['' + *logos*, a study]. One who specializes in study of ferments.

zymology (zī'mō-lō-jĭ) ['' + *logos*, a study] The science of fermentation

zymolysis (zī'mō-l'ĭ-sĭs) ['' + *lysis*, a dissolution] Changes produced by an enzyme, action of enzymes. **SYN** *fermentation*, *zymosis*, *q.v.*

zymolyte (zī'mō-lĭt) ['' + *lysis*, dissolution] Substance upon which a ferment acts **SYN** *substrate*

zymolytic (zī'mō-lĭt'ĭk) ['' + *lytikos*, dissolved]. Causing fermentation; fermentative.

zymometer (zī'mōm'et-er) [G. *zymē*, leaven, + *metron*, a measure]. Device for measuring fermentation. **SYN** *zymosimeter*

Zymonema (zī'mō-nē'mā) ['' + *nēma*, thread] A genus of fungi.

zymonemiasis (zī'mō-nē-măt-ō'sĭs) ['' + '' + *-osis*, condition] Infestation with *Zymonema* **SYN** *blastomycosis*

zymophore (zī'mō-tōr) ['' + *phoros*, a bearer] Noting the atomic group bearing the ferment

zymophoric, **zymophorous** (zī'mō-for'ĭk, -mō'or-ūs) ['' + *phoros*, bearing]. Having fermentative properties.

zymophyte (zī'mō-fit) ['' + *phyton*, growth] A microorganism causing fermentation.

zymoplastic (zī'mō-plăst'ĭk) [G. *zymē*, leaven, + *plassein*, to form]. Producing a ferment

zymoscope (zī'mō-skōp) ['' + *skopein*, to examine]. Device for determining zymotic power of yeast

zymose (zī'mōs) ['' + *ose*, sugar] An enzyme that changes a disaccharide into a monosaccharide, such as cane sugar into invert sugar **SYN** *invertin*

zymosimeter (zī'mōs-ĭm'ēt-ēr) ['' + *metron*, a measure] Device for determining amount of fermentation.

zymosis (zī'mō'sĭs) [G. *zymōsis*, fermentation] 1. Fermentation 2. Process by which an infectious disease is supposed to develop 3. An infectious disease.

z. gastrica. Organic acid in the stomach

zymosthenic (zī'mōs-thēn'ĭk) [G. *zymē*, leaven, + *sthenos*, strength] Increasing the power and activity of an enzyme

zymotic (zī'mōt'ĭk) [G. *zymē*, leaven]. Relating to or produced by fermentation.

Z, Z', Z'' Symbol for increasing strengths of contraction.

Units of Measurement

Metric System

Scale	Table	Grams	Grains
Myria	1 Myriagram	= 10,000	= 154,323.5
Kilo	1 Kilogram	= 1,000	= 15,432.35
Hecto	1 Hectogram	= 100	= 1,543.23
Deca	1 Decagram	= 10	= 154.323
Unit	1 Gram	= 1	= 15.432
Deci	1 Decigram	= .1	= 1.5432
Centi	1 Centigram	= .01	= .15432
Milli	1 Milligram	= .001	= .01543

The Arabic numerals are used with the symbol after the quantity, as 10 Gm., or 3 ml., etc. Portions of a measure are always expressed decimally. Grams should always be abbreviated with a capital initial, as Gm. A drop (gtt) of water is sometimes considered equivalent to a minim (m) but should not be used without physician's instructions.

CONVERSION TABLES (for measures most commonly used in the United States)

Lengths	Cm.	Inches	Feet	Yards	Meters

RULES FOR CONVERTING ONE SYSTEM TO ANOTHER

To Convert Grains, Drams, and Ounces into Grams or CC.:

Divide the number of grains by 15.
 Multiply the number of drams by 4.
 Multiply the number of ounces by 30.
 The result = the number of grams or cc.

To Convert from the Metric System

Milligrams to grains: Multiply by 0.0154.
 Grams to grains: Multiply by 15.
 Grams to drams: Multiply by 0.257.
 Grams to ounces: Multiply by 0.0311.

To Convert into Metric Fluid Measures

Minims to cubic millimeters: Multiply by 63.
 Minims to cubic centimeters. Multiply by 0.06.

To Convert Metric Fluid Measures

Cubic millimeters to minims: Divide by 63 (or multiply by 0.016).
 Cubic centimeters to minims: Multiply by 16.
 Cubic centimeters to fluid ounces: Divide by 30 (or multiply by 0.033).
 Liters to pints (U.S.): Multiply by 2.1.
 Liters to pints (Imperial): Multiply by 1.76.

To Convert Centigrade Degrees to Fahrenheit Degrees

Multiply the number of centigrade degrees by 9/5 and add 32 to the result.
Example: 55°C. $\times 9/5 = 99 + 32 = 131^\circ \text{F.}$

To convert Fahrenheit degrees to centigrade degrees: Subtract 32 from the number of Fahrenheit degrees and multiply the difference by 5/9.
Example: 243° F. $- 32 = 211 \times 5/9 = 117.2^\circ$

TABLES OF DATA

The Arabic numerals are used with the symbol after the quantity, as 10 Gm., or 3 ml., etc. Portions of a measure are always expressed decimally. Grams should always be abbreviated with a capital initial, as Gm. A drop (gtt) of water is sometimes considered equivalent to a minim (m) but should not be used without physician's instructions.

UNITS OF LENGTH

Millimeters	Centimeters	Inches	Feet	Yards	Meters
1 mm. = 1.00	0.100	0.0394	0.00328	0.0011	0.0010
1 cm. = 10.0	1.00	0.394	0.0328	0.0109	0.0100
1 in. = 25.4	2.54	1.00	0.0833	0.0278	0.0254
1 ft. = 304.8	30.48	12.00	1.00	0.333	0.305
1 yd. = 914.	91.4	36.0	3.00	1.000	0.914
1 m. = 1000.	100.	39.4	3.28	1.094	1.00

1 μ = 1 m μ = 1 micron = 0.001 millimeter. One mm. = 1000 μ .

1 km. = 1 kilometer = 1000 meters = 0.6215 mile.

1 mile = 5280 feet = 1.609 kilometers.

UNITS OF VOLUME

Cubic Centimeters	Fluid Drams	Cubic Inches	Fluid Ounces	Quarts	Liters
1 cc. = 1.00	0.270	0.0610	0.0338	0.00106	0.00100
1 fl. $\text{\textcircled{3}}$ = 3.70	1.000	0.226	0.1250	0.00391	0.00370
1 cu. in. = 16.39	4.43	1.000	0.554	0.0173	0.01639
1 fl. $\text{\textcircled{3}}$ = 29.6	8.00	1.804	1.000	0.03125	0.0296
1 qt. = 946.	255.	57.75	32.00	1.000	0.946
1 L. = 1000.	270.	61.0	33.8	1.056	1.000

1 cubic millimeter = 0.001 cubic centimeter, 1 cc. = 1000 cu. mm.

1 gallon = 4 quarts = 8 pints = 3.78 liters.

1 pint = 473 cc.

UNITS OF WEIGHT

Grains	Grams	Apothecary Ounces	Pounds Avoirdupois	Kilograms
1 gr. = 1.000	0.0648	0.00208	0.0001429	0.000065
1 Gm. = 15.43	1.000	0.03215	0.002205	0.001000
1 $\text{\textcircled{3}}$ = 480.	31.1	1.000	0.06855	0.0311
1 lb. = 7000.	454.	14.58	1.000	0.454
1 Kg. = 15432.	1000.	32.15	2.205	1.000

1 γ = 1 gamma = 1 microgram = 0.001 milligram; 1000 γ = 1 mg.

1 mg. = 1 milligram = 0.001 Gm.; 1000 mg. = 1 Gm.

1 grain = 64.8 mg.; 1 mg. = 0.0154 grain.

Weights and Measures

ENGLISH

APOTHECARIES' WEIGHT

20 grains = 1 scruple
8 drams = 1 ounce

3 scruples = 1 dram
12 ounces = 1 pound

The ounce and pound in this are the same as in Troy Weight.

AVOIRDUPOIS WEIGHT

$27\frac{1}{4}$ grains = 1 dram
16 ounces = 1 pound
2000 pounds = 1 short ton
1 oz Troy = 480 gr
1 lb Troy = 5760 grains

16 drams = 1 ounce
100 pounds = 1 cwt.
2240 pounds = 1 long ton
1 oz. Avoirdupois = $437\frac{1}{2}$ grains
1 lb Avoirdupois = 7000 grains

CIRCULAR MEASURE

60 seconds = 1 minute
30 degrees = 1 sign

60 minutes = 1 degree
90 degrees = 1 quadrant

4 quadrants = 12 signs, or 360 degrees = circle

CUBIC MEASURE

1728 cubic inches = 1 cubic foot
2150 42 cubic inches = 1 standard bushel
1 cubic foot = about four-fifths of a bushel

27 cubic feet = 1 cubic yard
231 cubic inches = 1 standard gallon
128 cubic feet = 1 cord (wood)

40 cubic feet = 1 ton

DRY MEASURE

2 pints = 1 quart

8 quarts = 1 peck

4 pecks = 1 bushel

LIQUID MEASURE

4 gills = 1 pint
4 quarts = 1 gallon

$31\frac{1}{2}$ gallons = 1 barrel

Barrels and hogsheads vary in size.

2 pints = 1 quart
2 barrels = 1 hogshead

LONG MEASURE

12 inches = 1 foot
40 rods = 1 furlong

3 feet = 1 yard
8 furlongs = 1 stat. mile

$5\frac{1}{2}$ yards = 1 rod
3 miles = 1 league

TROY WEIGHT

24 grains = 1 pwt.

20 pwts. = 1 ounce

12 ounces = 1 pound

Used for weighing gold, silver, and jewels.

MEASURES AND WEIGHTS EQUIVALENTS

General Measures Approximate Equivalents 60 gtt. = 1 teaspoonful. = 4 cc or ml. = 60 minims,
= 60 grains. = 1 dram. = $\frac{1}{4}$ ounce

RS: avoirdupois m., apothecaries m., bushel, metric m., Troy weight, unit of measures.

HOUSEHOLD MEASURES AND WEIGHTS

1 teaspoon equals	$\frac{1}{8}$ fl. oz. or 1 dr.
4 teaspoons equal	1 tablespoon
1 dessertspoon equals	$\frac{1}{4}$ fl. oz. or $2\frac{1}{2}$ dr.
1 tablespoon equals	$\frac{1}{2}$ fl. oz. or 4 dr
4 tablespoons equal	$\frac{1}{2}$ gill or 1 wineglass
16 tablespoons (liquid) equal	1 cup
12 tablespoons (dry) equal	1 cup
1 cup (ordinary) equals	8 fl. oz
1 tumbler or glass equals	8 fl. oz. or $\frac{1}{2}$ pt.
1 wineglass equals	2 fl. oz
16 fl oz equal	1 lb.
4 gills equal	1 lb.
1 pint equals	1 lb

ARTICLES

Butter —1 pint, packed equals	1 lb
piece, size of an egg, equals	2 oz
2 cups, packed, equal	1 lb
1 tablespoon equals	$\frac{1}{2}$ oz.
Chocolate —1 square equals	1 oz.
Coffee — $4\frac{1}{2}$ cups equal	1 lb
Cornmeal — $2\frac{3}{4}$ cups equal	1 lb
Eggs (large)—9 equal	1 lb.
Flour —1 quart equals	1 lb.
4 cups equal	1 lb. or 1 qt
4 tablespoons equal	1 oz.
Graham— $4\frac{1}{2}$ cups equal	1 lb.
entire wheat— $3\frac{3}{4}$ cups equal	1 lb
pastry—4 cups equal	1 lb.
Meat —Fine chopped, 2 cups equal	1 lb.
Oatmeal — $2\frac{3}{4}$ cups equal	1 lb.
Oats , Rolled— $4\frac{1}{4}$ cups equal	1 lb.
Rice — $1\frac{1}{2}$ cups equal	1 lb.
Rye , Meal— $4\frac{1}{4}$ cups equal	1 lb
Sugar , brown— $2\frac{3}{4}$ cups equal	1 lb.
1 quart equals	1 lb. 10 oz.
confectioner's— $3\frac{1}{2}$ cups equal	1 lb.
granulated—2 cups equal	1 lb.
1 quart equals.	1 lb. 9 oz.
powdered— $2\frac{3}{4}$ cups equal	1 lb.
1 quart equals	1 lb. 7 oz.
coffee "A"—1 quart equals	1 lb. 8 oz.
Water —1 pint equals	1 lb.
1 cup equals...	8 oz.

Miscellaneous

UNITS OF TIME

1 σ = 1 sigma = 0.001 second, 1000 σ = 1 second.

UNITS OF TEMPERATURE

Given a temperature on the Fahrenheit scale, to convert it to Centigrade, subtract 32 and multiply by 5/9. Given a temperature on the Centigrade scale, to convert it to Fahrenheit, multiply by 9/5 and add 32.

UNITS OF ENERGY

1 gram-centimeter = 981 ergs.

1 foot-pound = 13,600,000 ergs = 13,800 gram-centimeters.

1 Calorie = 42,600,000 gram-centimeters = 3080 foot-pounds

TABLE OF pH

In trying to understand the following pH table, one need not be concerned about the intricate mathematical *theory* implied in the symbol "pH." If one concerns oneself with the *facts* one will find them simple and satisfying. One need only imagine oneself confronted with three beakers containing (a) a weakly acid solution, (b) pure water, (c) a weakly alkaline solution. If now one is given a fourth, unknown, solution and tests it with litmus paper, phenolphthalein, and other indicators, one finds it possible to place the unknown in one of four places in the series, thus

(1)	Un	Ac	W	—	Al
(2)		Ac	Un	W	—
(3)		Ac	—	W	Un
(4)		Ac	—	W	—

Its position will depend on whether it is (1) strongly acid, (2) weakly acid, (3) weakly alkaline, or (4) strongly alkaline.

Now the pH scale is simply a series of numbers by which one states where a given solution would stand in a series of solutions arranged according to acidity (or alkalinity). At one extreme lies an alkaline solution made by dissolving 4 Gm. of sodium hydroxide in water to make a liter of solution, at the other is a solution containing 3.65 Gm. of hydrogen chloride per liter. Half-way between lies pure water, which is neutral. All other solutions can be arranged on this scale, and their acidity or alkalinity can be stated by giving the numbers that indicate their relative positions.

Tenth-normal HCl	1.00	Litmus is red in this range
Gastric juice	•14	
Urine	•60	
Water	7.00	Litmus is blue in this range.
Blood	7.45	
Bile	7.5	
Pancreatic juice	8.5	this range.
Tenth-normal NaOH	13.00	

Thus if one is told that the pH of a certain solution is 5.3, one can tell at once that it falls between gastric juice and urine on the above scale, is moderately acid, and will turn litmus red. The body fluids marked by asterisks above vary rather widely in pH, and typical figures have been used for the sake of definiteness. Urine samples obtained from normal people may have pH's anywhere between 4.8 and 7.5.

PREPARATION OF PERCENTAGE SOLUTIONS

When the metric system is used the preparation of percentage solutions is simple. a 1 per cent solution contains 1 Gm. in 100 cc.; a 0.1 per cent solution contains 0.1 Gm. (or 100 milligrams) per 100 cc.

When the apothecaries' system is used the following are helpful:

4.6 grains to the ounce, or 2.5 drams to 32 ounces; or 3.25 drams to 40 ounces, all make a 1 per cent solution.

To Prepare a Dilute Solution From One Which is Stronger:

E. g. To make 80 per cent alcohol from 95 per cent: Dilute 80 cc. of the 95 per cent alcohol to 95 cc. with distilled water.

Rule: Dilute a volume equal to the per cent desired to a volume equal to the per cent used.

See: *Dosage*, in vocabulary.

Table of Physical Constants of the Elements

Element	Symbol	Valence	Atomic Number	Atomic Weight	Specific Gravity or Density	Melting Point °C	Boiling Point °C
Actinium	Ac		89	227

Physiological Standards, Average Normal

Blood

(Expressed in mg per 100 cc. of whole blood unless otherwise stated)

Acetone bodies, total (as acetone)	..0 5-1 0
Albumin (serum)	4-5 Gm. %.
Amylase (serum or plasma)	70-200 Somogyi units.
Ascorbic acid (reduced)	0 6-2 5.
Bilirubin (serum) ..	0 1-0 5.
Bleeding time ..	2-3 minutes
Calcium, total (serum)	9-11.
Carbon dioxide content	4 5-5.5 mEq./l.
Arterial	45-55 vol. %.
Venous	50-60 vol. %.
Chlorides (as sodium chloride) (plasma or serum)	22-27 mEq /l.
Cholesterol, total (plasma or serum)	450-520
Coagulation time	140-180
Creatinine	2-8 minutes
Creatinine	3-7.
Glucose	1-2.
Hemoglobin	70-120.
Hydrogen-ion concentration	100%
Icterus index (serum)	pH 7.3-7.5.
Iodine, total	4-6 units
Iron, inorganic (serum)	3-13 micrograms %.
Lactic acid	0 005-0.18.
Lipids, total (serum)	5-20.
Magnesium (serum)	400-800.
Nitrogen, nonprotein	1-3
Oxygen capacity	24-40
Phosphorus, inorganic (serum)	16-24 vol. %.
Platelets	2 5-4 5.
Potassium (serum)	200,000-400,000 per cu. mm.
Red cells	16-22
Average diameter	5,000,000 per cu. mm.
Reticulocytes	7 1-7 5 microns.
Sodium (serum)	Less than 1%.
Specific gravity	310-335.
Plasma	1 055.
Sugar	1 052-1 063.
Sulfates, inorganic (as sulfur) (serum)	80-110.
Urea	0 9-1.5.
Urea nitrogen	20-35.
Uric acid	10-15.
Water	2-4.
White cells	77-81%.
Neutrophil polymorphs	6000-10,000 per cu. mm.
Lymphocytes	50-70%.
Monocytes	20-40%.
Eosinophil polymorphs	2-8%.
Basophil polymorphs	1-4%.
	0 5-1%.

Cerebrospinal Fluid

Character	Clear; colorless; no coagulum.
Pressure	100-200 mm. of water.
Specific gravity	1 006-1.008.
Globulin (Pandy test)	Nil.
Total protein	15- 40 mg. per 100 cc.
Sugar	50- 60 mg per 100 cc.
Nonprotein nitrogen	20- 40 mg. per 100 cc.
Chlorides	720-750 mg per 100 cc.
Cells	0-5 (lymphocytes).
Colloidal gold reaction	Negative.

Symbols

m. Minim.	''' Line (1/12 inch); trivalent.
℥. Scruple.	μ. Micron.
℥. Dram.	μμ. Micromicron.
f ℥. Fluid dram.	+ Plus; excess; acid reaction; positive.
℥ Ounce.	- Minus; deficiency, alkaline reaction; negative.
f ℥. Fluid ounce.	± Plus or minus; either positive or negative, indefinite.
O. Pint.	#. Number; following a number; pounds.
lb. Pound.	÷ Divided by.
℞ Recipe; take.	× Multiplied by; magnification.
M. Misce, mix.	= Equals
āā, āā. Of each	> Greater than; from which is derived.
Å, Å. Angstrom unit.	< Less than, derived from.
C'. Complement.	√ Root, square root; radical.
c, c. [L. cum.]. With	√ Square root.
E ₀ . Electroaffinity	√ Cube root.
F ₁ . First filial generation	∞. Infinity.
F ₂ . Second filial generation.	∴ Ratio; "is to"
L+. Limes death.	∴ Equality between ratios; "as."
L ₀ Limes zero.	*. Birth.
mμ Millimicron, micromillimeter	†. Death.
μg. Microgram	°. Degree.
mEq. Milliequivalent	% Per cent.
mg. Milligram	σ. 1/1000 of a second.
mg. % Milligrams per cent.	π. 3 1416—ratio of circumference of a circle to its diameter.
QO ₂ . Oxygen consumption.	
m-. Meta-	□, ♂. Male.
o-. Ortho-	○, ♀. Female
p-. Para-	⇌ Denotes a reversible reaction.
ss, ss. [L. semis]. One-half	# Number.
' Foot; minute; primary accent; univalent.	
" Inch; second; secondary accent; bivalent.

and

Latin and Greek Nomenclature

Principal Medical Abbreviations

Abbreviation	Latin	English Definition
a or āā	ana (Greek)	of each
a. c.	ante cibos	before meals
ad.	ad	to, up to
ad lib.	ad libitum	as desired
alt. dieb.	alternis diebus	every other day
alt. hor.	alternis horis	every other hour
alt. noc.	alternis noctus	every other night
aq.	aqua	water
aq. com.	aqua communis	common water
aq. dest.	aqua destillata	distilled water
aq. tep.	aqua tepida	tepid water
arg.	argentum	silver
av.	(French)	a voidupois
bib.	bibe	drink
b. i. d.	bis in die	twice a day
b. i. n.	bis in noctus	twice a night
c	eum	with
C.	Centrigradus	centigrade
C.	congius	gallon
cap.	capsula	capsule
cc.	(French)	cubic centimeter
cg.	(French)	centigram
cm.	(French)	centimeter
comp.	compositus	compound
cong.	congius	gallon
def.	defaecatio	defecation
Dil., dil.	dilue	dilute
dr.	drachma	dram or drams
elix.	(Arabic)	elixir
emp.	emplastrum	a plaster
et	et	and
ext.	extractum	extract
F.		Fahrenheit (proper name)
Fid.	fluidus	fluid
fl. dr.	fluidrachma	fluid dram
fl. oz.	fluidus uncia	fluid ounce
Ft., ft.	flat	let there be made
Gm.	gramme (French)	gram
gr.	granum	grain
Gtt., gtt.	guttae	drops
H.	hora	hour
h.n.	hac nocte	tonight
hor. interm.	horis intermediis	at intermediate hours
h.s.	hora somni	at bedtime or hour of sleep
hypo	Greek under	hypodermically
inf.	infusum	infusion
l.		liter
Lb.	libra	pound
liq.	liquor	liquid; fluid
M.	(French)	meter
m.	minimum	minim
mEq.		miliequivalent
mg.		milligram
mist.	mistura	mixture
ml.	(French)	milliliter
mm.		millimeter
n.b.	nota bene	note well
no.	numero	number
non rep.	non repetatur	don't repeat
nox.	nocte; noxte	at night
O.	octarius	pint
ol.	oleum	oil
omn. hor.	omni hora	every hour
omn. noct.	omni nocte	every night
os.	os; ora	mouth
oz.	uncia	ounce
p.c.	post cibum	after food; after meals
per.		through or by
pil.	pilula	pill
p.o.	per os	by mouth
p.r.n.	pro re nata	as needed; as desired
pt.	(French; pinte)	pint
pulv.	pulvis	powder
Q.h.	quaque hora	every hour
Q.h.		every two hours

Medical Abbreviations**App. 15****Medical Abbreviations**

Abbreviation	Latin	English Definition
Q. ³ h.	quater in die	every three hours
q.i.d.	quantum sufficiat	four times a day
Q.s.	quantina	a sufficient quantity
qt.	quartina	quart
quotid.	quotidie	every day
Q.v.	quantum vis	as much as you will
℞	recipe	take
rep.	repatatur	let it be repeated
s	sans	without
S.	signa	mark
S.c.	sub cutis	subcutaneously
Sig.	signetur	let it be marked
Sol.	solutio	solution
solv.	solve	dissolve
s.o.s.	si opus sit	if occasion require, if neces- sary
spt.	spiritus	spirit
sp. gr.	gravitus-heavy	specific gravity
ss.	semis	half
stat.	statim	immediately
syr.	syrupus	syrup
T.	temperatura	temperature
tab.	tabella	tablet
t.i.d.	ter in die	three times a day
t.i.n.	ter in nocte	three times a night
tr., tinct.	tinctura	tincture
ung.	unguentum	ointment
Ur.	urina	urine
vin	vinum	wine
vol. %.		volume per cent
Wt.		weight
w/v.		weight by volume

A Glossary of Latin Medical Words

NOTE: Latin words which have become a part of the general medical vocabulary are listed in alphabetical order in the text.

abacus, -i. *m.* Shelf
abdominālis, -e. Abdominal.
abducēns, -ntis. Leading or drawing from (the median line); applied, also, to 6th pair of cranial nerves.
aberrāns, -ntis. Wandering.
abstractum, -i. *n.* Abstract.
accessorius, -a, -um. Accessory.
accidō, -ere, -cidi. Occur; happen.
acer, **ācris**, **ācre**. Sharp, severe.
acervulus, -i. *m.* (Lit., little heap), acervulus
acētābulum, -i. *n.* (Lit., vinegar cup), the bony, cuplike cavity of the hip joint, acetabulum
acētās, -ātis. *m.* Acetate.
acētum, -i. *n.* Vinegar.
acidum, -i. *n.* Acid.
acinus, -i. *m.* A terminal compartment or secreting portion of a gland, acinus.
acusticus, -a, -um. Auditory.
acūtus, -a, -um. Acute.
adeptus, **adipis**. *m.* and *f.* Fat; lard.
adiutor, -ōris. *m.* Helper; assistant.
adiuvō, -āre, -iūvi, -iūtus. Aid; assist.
adsum, -esse, -fui. Be present.
aeger, -gra, -grum. Sick.
aegrōtus, -a, -um. Sick.
āer, **āeris**. *m.* Air.
aeternus, -a, -um. Eternal.
aether, -is. *m.* Ether.
ala, -ae. *f.* Wing
ālāris, -e. Winglike; alar.
albicāns, -ntis. Whitenning; white.
albūgineus, -a, -um. White.
albulus, -a, -um. Whitish.
albus, -a, -um. White.
alcoholicus, -a, -um. Alcoholic.
aliquandō. Sometimes.
alius, -a, -ud. Other.
aloina, -ae. *f.* Aloin.
alter, -tera, -terum. Other.
altus, -a, -um. High
alūmen, -inis. *n.* Alum.
aivus, -i. *f.* Belly, or its contents.
amārus, -a, -um. Bitter.
amicus, -i. *m.* Friend
āmissiō, -ōnis. *f.* Loss.
āmissus, -ūs. *m.* Loss.
ammonium, -i. *n.* Ammonium.
amygdala, -ae. *f.* Almond
anaestheticus, -a, -um. Producing insensibility; anesthetic.
anastomoticus, -a, -um. Anastomosing.
ānellus, -i. *m.* Ring
angulus, -i. *m.* Angle.
anima, -ae. *f.* Breath, life.
anisum, -i. *n.* Anise.
ānnulāris, -e. Ringlike; annular.
ānnulus, -i. *m.* Ring
anterior, -a, -um. Anterior.
anificus, -a, -um. Foremost.
antidōtum, -i. *n.* Antidote.
antimonium, -i. *n.* Antimony.
antimonīālis, -e. Of antimony; antimonial.
antipyreticus, -a, -um. Reducing the temperature; antipyretic
antisepticus, -a, -um. Destroying germ life; antiseptic.
antitrāgus, -i. *m.* A conical eminence opposite the tragus, *q.v.*; antitragus.
antiquus, -a, -um. Ancient.
aperiēns, -ntis. Laying open; laxative; aperient.

appellō, -āre, -āvi, -ātus. Call.
aptō. Aptly.
apud. Near.
aqua, -ae. *f.* Water.
aqueductus, -ūs. *m.* A canal; aqueduct.
aquōsus, -a, -um. Watery.
arbor, -oris. *f.* Tree.
arceō, -ēre, -ui, -tus. Ward off.
arcuātus, -a, -um (arcus, a bow). Curved like a bow.
arcus, -ūs. *m.* A bow; arch.
āreola, -ae. *f.* Small area (especially around the nipple).
argentum, -i. *n.* Silver.
aromaticus, -a, -um. Aromatic.
arsenicum, -i. *n.* Arsenic
arsenis, -itis. *m.* Arsenite.
artēria, -ae. *f.* Artery.
articulāris, -e. Articular.
articulō, -āre, -āvi, -ātus. Articulate.
artus, -ūs. *m.* Joint.
ascendēns, -ntis. Ascending
asepticus, -a, -um. Free from putrefactive matter; aseptic
asper, -a, -um. Rough
astrictus, -a, -um. Bound up.
astūtus, -a, -um. Shrewd, artful.
atropina, -ae. *f.* Active principle of belladonna; atropine.
attolēns, -ntis. Raising up, elevating.
attrāhēns, -ntis. Drawing to or towards.
auditōrius, -a, -um. Auditory.
aurantium, -i. *n.* Orange
auricula, -ae. *f.* (dim., auris). Auricle.
auris, -is. *f.* Ear.
axis, -is. *m.* (Lit., that about which a body turns), 2nd cervical vertebra; axis.
azygos. (Gr.) Without a fellow.
balneum, -i. *n.* Bath.
basilāris, -e. Basilar.
basis, -is. *f.* Base.
bene. Well.
benignus, -a, -um. Mild; benign; not malignant.
berberis, -idis. *f.* Barberry.
bibō, -ere, bibi. Drink
bicarbonās, -ātis. *m.* Bicarbonate.
biceps, -cipitis. Two-headed.
bifidus, -a, -um. Cleft.
billaris, -e. Pert. to or conveying bile; biliary.
binī, -ae, -a. Two each.
bismuthum, -i. *n.* Bismuth.
bitartrās, -ātis. *m.* Bitartrate.
bonus, -a, -um. Good.
borās, -ātis. *m.* Borate.
brachiālis, -e. Of the arm; brachial.
brāchium, -i. *n.* Arm
brevis, -e. Short.
brōmidum, -i. *n.* Bromide.
būbula, -ae. *f.* Beef.
buccinātor, -ōris. *m.* The trumpeter muscle; buccinator.
bulbus, -i. *m.* Bulb
caecus, -a, -um. Blind.
calamus, -i. *m.* Reed.
calcaneum, -i. *n.* The heelbone (os calcis).
calcium, -i. *n.* Calcium
calidus, -a, -um. Hot.
callōsus, -a, -um. Hard, tough.
calor, -ōris. *m.* Heat.
calumba, -ae. *f.* Calumba
calvārium, -i. *n.* The skullcap.
calx, -cis. *f.* Lime.
calyx, -icis. *f.* Cup; calyx.
camphora, -ae. *f.* Camphor.
camphorātus, -a, -um. Camphorated.
canāliculus, -i. *m.* Small duct or canal.

canalis, -is. *m.* Canal.
 caninus, -a, -um. Of a dog, canine.
 canis, -is. *m.* and *f.* Dog.
 cānities, -ēs. *f.* A gray color, hoariness.
 cannabis, -is. *f.* Hemp.
 cantharis, -idis. *f.* Spanish fly.
 canthus, -i. *m.* The corner or angle of the eye.
 capio, -ere, cēpi, captus. Take.
 capitulum, -i. *n.* Dim. (caput), a knob or protuberance of bone received into a concavity of another bone.
 capsicum, -i. *n.* Cayenne pepper, capsicum.
 capsula, -ae. *f.* A small box, capsule.
 carbō, -ōnis. *m.* Carbon, coal, charcoal.
 carbonicus, -a, -um. Carbonic.
 carbonās, -ātis. *m.* Carbonate.
 cardamōmum, -i. *n.* Cardamom.
 carēō, -ēre, -ui, -itus. Need; want.
 carneus, -a, -um. Fleshy.
 carpus, -i. *m.* Wrist.
 cartilaginōsus, -a, -um. Cartilaginous.
 cartilago, -inis. *f.* Cartilage.
 caruncula, -ae. *f.* (Dim. carō, flesh), a little piece of flesh, caruncle.
 cataplasma, -atis. *n.* Poultice, cataplasm.
 catharticus, -a, -um. Cathartic.
 cauda, -ae. *f.* Tail.
 caudatus, -a, -um. Having a tail; caudate.
 causa, -ae. *f.* Cause.
 causō, -āre, -āvi, -ātus. Cause.
 cavernōsus, -a, -um. Hollow, cavernous.
 cavitās, -ātis. *f.* Cavity.
 cavus, -a, -um. Hollow.
 celeriter. Quickly.
 centralis, -is. *n.* Central.
 centrum, -i. *n.* Center.
 cephalalgia, -ae. *f.* Headache.
 cēstium, -i. *n.* Waxed dressing; cerate.
 cerātus, -a, -um. Waxed.
 cerevisā, -ae. *f.* Beer.
 certus, -a, -um. Sure, certain.
 cēterus, -a, -um. Other.
 charta, -ae. *f.* Medicated paper.
 chartula, -ae. *f.* Small paper (powder).
 chirāta, -ae. *f.* Chirata.
 chirurgia, -ae. *f.* Surgery.
 chirurgus, -i. *m.* Surgeon.
 chioral. *n.* Chioral.
 chiōrās, -ātis. *m.* Chlorate.
 chlōridum, -i. *n.* Chloride.
 chlōroformum, -i. *n.* Chloroform.
 choledochus, -i. *m.* Holding or receiving bile.
 chorda, -ae. *f.* Cord.
 chronicus, -a, -um. Chronic.
 chylum, -i. *n.* Chyle.
 cibus, -i. *m.* Food.
 cicātrōsus, -a, -um. Full of scars, scarred.
 cillāris, -is. *m.* Oiliary.
 cinchōna, -ae. *f.* Cinchona.
 cinchonina, -ae. *f.* Cinchonine.
 cinereus, -a, -um. Ash-colored.
 cinnamōmum, -i. *n.* Cinnamon.
 circulāris, -is. *m.* Circular.
 circulatō, -ōnis. *f.* Circulation.
 circulus, -i. *m.* Circle.
 circum. Around.
 circumdō, -dare, -dedi, -datus. Surround.
 citō. Promptly; quickly.
 citrās, -ātis. *m.* Citrate.
 clārus, -a, -um. Clear, distinguished.
 claudus, -a, -um. Lame.
 clavus, -i. *m.* A corn, usually on the toes.
 cludō, -ere, -si, -sus. Shut; close.
 cochlea, -ae. *f.* (Lit., snail shell), spiral cavity of the internal ear; cochlea.
 cochleāre, -is. *n.* Spoon.
 codeina, -ae. *f.* An alkaloid of opium; codeine.
 coelilacus, -a, -um. Relating to the stomach; celliac.
 collicus, -a, -um. Of or pert. to the colon.
 collaterālis, -is. *m.* Collateral.
 collum, -i. *n.* Neck.

colocynthis, -idis. *f.* Colocynth.
 color, -ōris. *m.* Color.
 cōlum, -i. *n.* Large intestine; colon.
 columna, -ae. *f.* Column.
 comes, -itis. *m.* Companion.
 commissūra, -as, -i. *f.* A joining; commissure.
 comunicāns, -ntis. *m.* Communicating.
 commūnis, -is. *m.* Common.
 compōnō, -ere, -posui, -positus. Compound.
 conarium, -i. *n.* (From Gr. κώνος, a cone), a synonym for the pineal gland; conarium.
 concha, -ae. *f.* (Lit., a shell), hollow part of the external ear; concha.
 confectiō, -ōnis. *f.* Confection.
 conium, -i. *n.* Poison hemlock; conium.
 conivēō, -āre, -nivi, -tentus. Close.
 conjectūra, -ae. *f.* Guess.
 confinēō, -āre, -finui, -tentus. Contain.
 contrahō, -ere, -xi, -ctus. Draw together; contract.
 contusio, -ōnis. *f.* Bruise.
 cōnus, -ūs. *m.* Cone.
 convalescō, -ere, -valui. Recover health.
 cor, cordis. *n.* Heart.
 cornicula, -ae. *f.* Dim. (cornus), little horn.
 cornu, -ūs. *n.* Horn; horn-shaped process.
 corōna, -ae. *f.* Crown.
 coronārius, -a, -um. Encircling like a crown, coronary.
 corpus, -oris. *n.* Body.
 corrosivus, -a, -um. Corrosive.
 corrugātor, -ōris. *m.* A muscle which wrinkles, corrugator.
 cortex, -icis. *m.* and *f.* Bark; rind; external layer; cortex.
 costa, -ae. *f.* Rib.
 cranialis, -is. *m.* Cranial.
 crās. *adv.* Tomorrow.
 crassus, -a, -um. Gross; large.
 creasōtum, -i. *n.* Creasote.
 crēber, -bra, -brum. Frequent.
 crēdō, -ere, -credidi, -creditus. Trust; believe.
 crēta, -ae. *f.* Chalk.
 cribriformis, -is. *m.* Sievelike; cribriform.
 cribrōsus, -a, -um. Having holes like a sieve.
 crista, -ae. *f.* Crest; comb of a cock (gallus).
 crūrālis, -is. *m.* Of the leg; crural.
 crūreus, -a, -um. Of the leg.
 crūs, crūris. *n.* The leg.
 crust, -ae. *f.* Crust.
 cubōba, -ae. *f.* Cubeb.
 cubitum, -i. *n.* Elbow.
 cuboleus, -a, -um. Cubelike; cuboid.
 cum. With.
 cuneiformis, -is. *m.* Wedge-shaped; cuneiform.
 cūra, -ae. *f.* Care.
 cūrō, -āre, -āvi, -ātus. Treat; cure.
 cutis, -is. *f.* Skin.
 decem. Ten.
 deciduus, -a, -um. That falls off.
 decoctum, -i. *n.* Decoction.
 deferēns, -ntis. Bearing away.
 defessus, -a, -um. Tired; wearied.
 deformāns, -ntis. Deforming.
 deformitās, -ātis. *f.* Deformity.
 demonstrō, -āre, -āvi, -ātus. Show; prove.
 dens, dentis. *m.* Tooth.
 dentatus, -a, -um. Toothed; dentate.
 depressor, -ōris. *m.* That which depresses; depressor.
 descendens, -ntis. Descending.
 dexter, -tra, -trum. Right.
 diabeticus, -a, -um. Diabetic (*subst.*, one having diabetes).
 diabolus, -i. *m.* Devil.
 dicō, -ere, -dixi, -dictus. Say.
 diēs, -is. *m.* Day.
 dimicilis, -is. *m.* Dimcult.
 digitus, -i. *m.* Finger (digitus pedis, a toe).
 dilator, -ōris. *m.* That which dilates; dilator.

dilutus, -a, -um. Dilute.
 dimidius, -a, -um. Half.
 discipulus, -i, m. A learner; pupil; student.
 diu. For a long time
 diureticus, -a, -um. Diuretic.
 dividō, -ere, -visi, -visus. Divide.
 dō, dare, dedi, datus. Give.
 doctus, -a, -um. Learned.
 dolōr, -ōris, m. Pain.
 dolorōsus, -a, -um. Painful.
 domicilium, -i, n. Abode.
 dorsālis, -e. Of the back; dorsal.
 dorsum, -i, n. Back.
 dosis, -is, f. Dose.
 drachma, -ae, f. Dram.
 ductus, -ūs, m. Duct.
 dulcis, -e. Sweet.
 duo, duae, du. Two.
 dūrus, -ū, -um. Hard.
 dyspepticus, -a, -um. Dyspeptic (*subst.*, a dyspeptic).
 edō, -ere, -ēdi, -ēsus. Eat.
 efferens, -ntis. Bearing out or away; efferent.
 effervescens, -ntis. Boiling up.
 elegāns, -ntis. Elegant.
 ēluviēs, -ēi, f. Discharge.
 emeticus, -a, -um. Causing vomiting, emetic.
 ēminentia, -ae, f. Eminence.
 emō, -ere, -ēmi, emptus. Buy.
 empiricus, -i, n. Quack, empiric.
 emplastrum, -i, n. Plaster.
 ensiformis, -e. Sword-shaped, ensiform.
 eō, ire, ivi, itus. Go.
 epilepsia, -ae, f. Epilepsy.
 epiploicus, -a, -um. Relating to the epiploon (omentum).
 equinus, -a, -um. Of a horse; equine.
 ergo, -ae, f. Ergot.
 errō, -āre, -āvi, -ātus. Wander; err.
 ēruditus, -a, -um. Learned, educated, erudite.
 et. And.
 et-et. Both-and.
 ethmoidālis, -e. (ἠθμοίος, a sieve), ethmoid.
 etiam. Even.
 euonymus, -i, m. Wahoo; Euonymus.
 eupatoriū, -i, n. Boneset, eupatorium.
 exarsus, -e, m. Departure.
 excidō, -ere, -idi, -isus. Cut out; excise.
 excitō, -āre, -āvi, -ātus. Excite.
 expectatiō, -ōnis, f. Expectation.
 experimentum, -i, n. Experiment.
 expressiō, -ōnis, f. Expression.
 exsiccātus, -a, -um. Dried out.
 exsudō, -āre, -āvi, -ātus. Sweat out; exude.
 externus, -a, -um. External.
 extractum, -i, n. Extract.
 faciēs, -ēi, f. Face, countenance.
 faciō, -ere, -fēci, factus. Make.
 falx, -cis, f. Sickle (a sickle-shaped process).
 familia, -ae (or -as), f. Family.
 fasciculus, -i, m. A small bundle of fibers.
 febrifuga, -ae, f. Agent that reduces fever, febrifuge.
 febris, -is, f. Fever.
 femina, -ae, f. Woman.
 femorālis, -e. Of the thigh; femoral.
 fenestra, -ae, f. Window; an opening in the wall of the tympanum.
 fers. Almost.
 ferrum, -i, n. Iron.
 fibrilla, -ae, f. Filament; fibril.
 fibrōsus, -a, -um. Fibrous.
 fides, -ei, f. Faith; trustworthiness.
 fidus, -a, -um. Faithful; trustworthy.
 filia, -ae, f. Daughter.
 filius, -i, m. Son.
 filix, -icis, f. Fern.
 ambria, -ae, f. Fringe.
 ambriātus, -a, -um. Fringed; ambriated.
 finō, -ire, -ivi, -itus. End; finish.

fīō, fieri, factus. Be made.
 fissūra, -ae, f. Cleft; fissure.
 flavus, -a, -um. Yellow.
 flexilis, -e. Flexible.
 flos, flōris, m. Flower.
 fluidus, -a, -um. Fluid.
 flūmen, -inis, n. River.
 fluō, -ere, fluxi, fluxus. Flow.
 fluor, -ōris, m. Flux; flow.
 foetidus, -a, -um. Offensive; fetid.
 folium, -i, n. Leaf.
 folliculus, -i, m. A small secretory sac; follicle.
 fons, -ntis, m. Fountain, spring.
 formō, -āre, -āvi, -ātus. Form.
 fornicātus, -a, -um. Arched.
 fornix, -icis, m. Arch, vault; fornix.
 fortis, -e. Strong, brave.
 fossa, -ae, f. Ditch, depression, fossa.
 fovea, -ae, f. Small pit, depression.
 fractus, -a, -um. Broken.
 fragilitās, -ātis, f. Brittleness.
 frēnum, -i, n. A bridle, a membranous fold, frenum.
 frigidus, -a, -um. Cold.
 fructus, -ūs, m. Fruit.
 frumentum, -i, n. Corn; grain.
 frustum, -i, n. Piece, bit.
 functiō, -ōnis, f. Execution, normal action, function.
 fuscus, -a, -um. Brown.
 fusiformis, -e. Spindle-shaped, fusiform.
 gallus, -i, m. Cock.
 ganglioniformis, -e. Ganglionlike.
 gelsemium, -i, n. Gelsemium, yellow jasmine (root).
 gemellus, -a, -um. Paired; twin.
 gena, -ae, f. The cheek.
 geniōhyoglossus, -i, m. Muscle attached to chin, hyoid bone and tongue.
 gentiana, -ae, f. Gentian.
 genu, -ūs, n. Knee.
 genus, generis, n. Kind.
 germinātivus, -a, -um. Germinative, germinal.
 glabrus, -a, -um. Smooth.
 glaciēs, -ēi, f. Ice.
 globus, -i, m. Globe.
 glomerulus, -i, m. Small ball, or tuft of vessels, glomerule.
 glūteus, -a, -um (γλοῦτερό the buttock), of the buttock; gluteal.
 glycerinum, -i, n. Glycerin.
 glyceritum, -i, m. Glycerite.
 glycyrrhiza, -ae, f. Licorice.
 gracilis, -e. Slender; graceful.
 granulosus, -a, -um. Granular.
 granum, -i, n. Grain.
 gratus, -a, -um. Agreeable, pleasing.
 gubernaculum, -i, n. (Lit., a helm), applied to fetal cord directing descent of testes; gubernaculum.
 gummi. Gum.
 gustō, -āre, -āvi, -ātus. Taste.
 gutta, -ae, f. Drop.
 gyrus, -i, m. Circle; ring; convolution (of the brain).
 habēō, -ēre, -uī, -itus. Have.
 habitō, -āre, -āvi, -ātus. Inhabit.
 hallex, -icis, or hallux, -ucis, f. The great toe.
 harmonia, -ae, f. Harmony, "suture of harmony."
 helix, -icis, f. (ἑλὺξ, a tendril), outer ring of the external ear; helix.
 hemisphericus, -a, -um. Hemispherical.
 hēpar, hepatis, n. (Gr.) Liver.
 herba, -ae, f. Herb.
 heri. Yesterday.
 hiātus, -ūs, m. Opening; aperture.
 hic, haec, hoc. This.
 hilāris, -e. Cheerful.
 hilus, -i, m. Small fissure or depression.

hippocampus, -i. *m.* (Lit., sea horse), applied to 2 convolutions of brain (major and minor); hippocampus.
homo, -inis. *m.* Man.
horribilis, -e. Horrible.
humānus, -a, -um. Human.
hūmor, -ōris. *m.* Fluid, humor.
hydrargyrum, -i. *n.* Mercury.
hydrastis, -is. *f.* Golden seal (root); hydrastis.
hyoideus, -a, -um. Hyoid.
Hyoscyamus, -i. *m.* Henbane, Hyoscyamus.
idem, eadem, idem. Same.
ignārus, -a, -um. Ignorant.
iliacus, -a, -um. Of or pert to the flanks or ilium; iliac.
ille, illa, illud. He, she, it.
immobilis, -e. Immoveable.
immobilitas, -ātis. *f.* Immobility.
impar, -is. Without a mate or fellow.
impediō, -ire, -ivi, -itus. Hinder, check; prevent.
imperitus, -a, -um. Unskilled.
impūrus, -a, -um. Impure.
imus, -a, -um. Lowest.
incisūra, -ae. *f.* Groove or notch.
Indicus, -a, -um. Indian.
infans, -ntis. *m.* and *f.* Infant.
Inflammatio, -ōnis. *f.* Inflammation.
Infraspīnātus, -a, -um. Beneath the spine (of the scapula). Infraspinate.
Infusum, -i. *m.* Infusion.
ingressus, -ūs. *m.* Entrance.
Innominātus, -a, -um. Unnamed, innominate.
intermittō, -ere, -misi, -missus. Intermit.
Internodium, -i. *n.* Space between 2 joints, internode.
Internus, -a, -um. Inner.
Interpositus, -a, -um. Placed between.
Intertragicus, -a, -um. Between the tragus and antitragus.
Intestinum, -i. *n.* Intestine.
intumescencia, -ae. *f.* An enlargement; intumescence.
Inveniō, -ire, -vēni, -ventus. Find, discover.
Inversio, -ōnis. *f.* Inversion.
Iodidum, -i. *n.* Iodide.
Ipecacuanha, -ae. *f.* Ipecac.
ipse, ipsa, ipsum. Himself; herself, itself.
iris, iridis, -i. *f.* Iris.
is, ea, id. He, she, it.
iter, itineris. *n.* Way, passageway.
lecur, fecinoris. *n.* Liver.
Iucundē, *adv.* Happily, pleasantly.
Juglans, juglandis. *f.* Walnut.
Jugulāris, -e. Jugular.
Jūniperus, -i. *f.* Juniper tree.
juvenis, -is. *m.* and *f.*, *adj.* and *subst.* Young; a youth.
labium, -i. *n.* Lip.
lacer, -a, -um. Lacerated, mutilated.
lacrima, -ae. *f.* Tear.
lacrimalis, -e. Pert to tears, lacrimal.
lactās, -ātis. *m.* A salt of lactic acid; lactate.
lactiferus, -a, -um. Milk-bearing, lactiferous.
lacus, -ūs. *m.* Lake; basin, reservoir.
lamella, -ae. *f.* Dim (lamina), layer.
lamina, -ae. *f.* Thin plate, layer.
lana, -ae. *f.* Wool.
lassus, -a, -um. Weary.
lateralis, -e. Lateral.
lātus, -a, -um. Broad.
laudō, -āre, -āvi, -ātus. Praise.
lavandula, -ae. *f.* Lavender.
lavō, -āre, -āvi, -ātus or *lavi*, *lautus*. Wash.
laxātor, -ōris. *m.* A muscle that loosens; relaxer.
legō, -ere, -lēgi, *lectus*. Bring together; collect.

leniō, -ire, -ivi, -itus. Calm; soothe; assuage.
lenticulāris, -e. Lentil-shaped (double-convex); lenticular.
lentus, -a, -um. Sticky.
letifer, -a, -um. Deadly.
levis, -e. Light.
lienālis, -e. Of the spleen.
ligamentōsus, -a, -um. Ligamentous.
ligamentum, -i. *n.* Ligament.
lignum, -i. *n.* Wood.
limbus, -i. *n.* Border, band, fringe.
limitāns, -ntis. Limiting.
limon, -ōnis. *f.* Lemon.
linea, -ae. *f.* Line.
lingua, -ae. *f.* Tongue.
lingualis, -e. Of the tongue, lingual.
linimentum, -i. *n.* Liniment.
linum, -i. *n.* Flax.
liquidus, -a, -um. Liquid.
lobulus, -i. *m.* Lobule.
lobus, -i. *m.* Lobe.
longitudinālis, -e. Longitudinal.
longus, -a, -um. Long.
lotiō, -ōnis. *f.* Wash; lotion.
lucidus, -a, -um. Clear, transparent.
lumbālis, -e. Of the loins, lumbar.
lumbus, -i. *m.* Loin.
lunula, -ae. *f.* Small crescent, lunula.
lupulina, -ae. *f.* Yellow powder from the scales of the hop, lupulin.
luteus, -a, -um. Yellow.
luxatio, -ōnis. *f.* Dislocation.
lymphā, -ae. *f.* Chyle, lymph.
macerō, -āre, -āvi, -ātus. Soak, macerate.
magister, -tri. *m.* Teacher, master.
magnus, -a, -um. Large, great.
māla, -ae. *f.* The cheekbone.
malignus, -a, -um. Malignant.
malus, -a, -um. Bad.
mandibulum, -i. *n.* A jaw.
māne. *n.* Morning.
manūbrium, -i. *n.* (Lit., a handle, hilt); upper part of sternum; manubrium.
manus, -ūs. *f.* Hand.
massa, -ae. *f.* Mass.
masticō, -āre, -āvi, -ātus. Chew.
mastoideus, -a, -um. Nipplelike; mastoid.
mater, -tris. *f.* Materials.
materia, -ae. *f.* Materials.
maternus, -a, -um. Maternal.
matrix, -icis. *f.* Source, origin.
maxilla, -ae. *f.* Jawbone, jaw.
meātus, -ūs. *m.* Opening, passage.
mediānus, -a, -um. Middle, median.
medicāmen, -inis. *n.* Drug.
medicamentārius, -a, -um. Medicated.
medicamentum, -i. *n.* Drug.
medicātus, -a, -um. Medicated.
medicina, -ae. *f.* Medicine.
medicus, -i. *m.* Physician; doctor.
medius, -a, -um. Middle.
membrāna, -ae. *f.* Membrane.
membrum, -i. *n.* Member.
memoria, -ae. *f.* Memory.
mentha, -ae. *f.* Mint.
mentum, -i. *n.* Chin.
mesentericus, -a, -um. Of the mesentery; mesenteric.
metus, -ūs. *m.* Fear.
miles, -itis. *m.* Soldier.
minerālis, -e. Mineral.
miserō, -āre, -āvi, -ātus. Mix.
miser, -a, -um. Poor, wretched.
mistūra, -ae. *f.* Mixture.
mitis, -e. Mild.
mitto, -ere, -misi, -missus. Send.
mobilis, -e. Movable.
mobilitās, -ātis. *f.* Mobility.
modiolus, -i. *m.* (Lit., a small measure), hollow cone in the cochlea of the ear; modiolus.
molāris, -e (mola, mill), a term applied to the grinder teeth; molar.
mollis, -ire, -ivi, -itus. Soften; mitigate.

mollis, -e. Soft.
mollitēs, -ēt. *f.* Softness.
mons, -ntis. *m.* Mountain.
montānus, -a, -um. Of a mountain, mountain (*adj.*).
monticulus, -i. *m.* Dim. (mons), small eminence.
morbus, -i. *m.* Disease.
mordeō, --ere, **momordi**, **morsus**. Bite.
moritūrus, -a, -um. About to die
morphina, -ae. *f.* Morphine.
morrhua, -ae. *f.* A genus of fishes, including the cod; cod.
mors, **mortis**. *f.* Death.
morsus, -ūs. *m.* Bite.
mortarium, -i. *n.* Mortar.
mōtor, -ōris. *m.* That which moves; mover.
moveō, --ere, **mōvi**, **mōtus**. Move.
moz. Presently, soon; directly.
mucilāgō, -inis. *f.* Mucilage.
mucōsus, -a, -um. Mucous.
mulceō, --ere, **mulsi**, **mulsus**. Soothe; allay.
multifidus, -a, -um. Many-clefted.
multus, -a, -um. Much, many.
murāticus, -a, -um. Muratic.
musculus, -i. *m.* Muscle.
mūtātiō, -ōnis. *f.* Change.
myristica, -ae. *f.* Nutmeg.
myrtiformis, -e. Shaped like the myrtle-leaf or berry, myrtiform.
nāris, -is. *f.* Nostril.
nāsus, -i. *m.* Nose.
natō, --ere, **navi**, **natūs**. Swim; float.
natūra, -ae. *f.* Nature.
nauta, -ae. *m.* Sailor.
naviculāris, -e. Boat-shaped, navicular.
neglectus, -a, -um. Neglected.
nēmō, -inis. *m.* and *f.* No one.
nervus, -i. *m.* Nerve.
nescio, -ire, -ivi, -itus. Not know; be ignorant of.
neurilemma, -atis. *n.* Nerve sheath.
nictitāns, -ntis. Winking.
nil. Nothing.
nimium. Too often.
nisi. Unless.
nitrās, -ātis. *m.* Nitrate.
nitricus, -a, -um. Nitric.
nitrosus, -a, -um. Nitrous.
nōmen, -inis. *m.* Name.
nōminō, --ere, **navi**, **natūs**. Name.
nōn. Not.
nondum. Not yet.
nōnus, -a, -um. Ninth.
nosco, --ere, **nōvi**, **nōtus**. Learn; know.
novem. Nine.
novus, -a, -um. New.
nox, **noctis**. *f.* Night.
nucha, -ae. *f.* Nape of neck.
nullus, -a, -um. No; none.
numerus, -i. *m.* Number.
nunc. Now.
obliquus, -a, -um. Oblique.
oblongātus, -a, -um. Oblong.
octō. Eight.
oculus, -i. *m.* Eye.
officina, -ae. *f.* Office.
officinālis, -e. Official.
oleorēsina, -ae. *f.* Oleoresin.
oleum, -i. *n.* Oil.
olfactorius, -a, -um. Olfactory.
omentum, -i. *n.* Epiploön; omentum.
omnis, -e. Every; all.
operculum, -i. *n.* (Lit., a cover or lid), applied to a group of convolutions in the cerebrum, between the 2 divisions of the fissure of Sylvius.
ophthalmicus, -a, -um. Of the eye; ophthalmic.
oppōnēs, -ntis. Opposing.
opificus, -a, -um. Optic.
opus, **operis**. *n.* Work.
orbita, -ae. *f.* (orbis, a circle), the cavity which lodges the eye, orbit.
ordō, -inis. *m.* Row.

orificium, -i. *n.* Opening.
orior, -iri, **ortus**. Arise.
os, **ōris**. *n.* Mouth.
os, **ossis**. *n.* Bone.
ossiculum, -i. *n.* Small bone.
ostium, -i. *n.* An opening.
ovālis, -e. Egg-shaped, oval.
oxalās, -ātis. *m.* A salt of oxalic acid; oxalate.
oxidum, -i. *n.* Oxide.
palātum, -i. *n.* Palate.
palpēbra, -ae. *f.* Eyelid.
pālus, -ūdis. *f.* Marsh; swamp.
pancreāticus, -a, -um. Pancreatic.
papillāris, -e. Resembling or covered with papillae; papillary.
pār, **paris**. *n.* A pair.
parasiticus, -a, -um. Parasitic.
paries, -lētis. *m.* Wall.
parō, --ere, **parvi**, **parātus**. Prepare.
pars, **partis**. *f.* Part.
partus, -ūs. *m.* Parturition; childbirth.
parvus, -a, -um. Small.
pater, -tris. *m.* Father.
patheticus, -a, -um. That which moves the passions; a name given to the 4th pair of nerves.
patria, -as. *f.* Fatherland; country.
paucus, -a, -um. Few.
pectinātus, -a, -um. Resembling the teeth of a comb; pectinate.
pectineus, -a, -um. Comblike.
pectiniformis, -e. Comblike.
pectus, **pectoris**. *n.* Breast; bosom.
pellucidus, -a, -um. Transparent.
pensō, --ere, **navi**, **natūs**. Weigh.
pepsinum, -i. *n.* Pepsin.
percolō, --ere, **navi**, **natūs**. Filter; strain.
perforō, --ere, **navi**, **natūs**. Bore through; perforate.
periculōsus, -a, -um. Dangerous.
peritus, -a, -um. Skilled.
peronēus, -a, -um. (περονία, fibula), relating to the fibula; peroneal.
persōna, -ae. *f.* Person.
perspiratōrius, -a, -um. Relating to perspiration; perspiratory.
pēs, **pedis**. *m.* Foot.
petō, --ere, -ivi, -itus. Seek.
petrolātum, -i. *n.* Petrolatum; vaseline.
petrosus, -a, -um. Rocklike; petrous.
pharmacopoeia, -ae. *f.* Pharmacopoeia.
phiala, -ae. *f.* Vial.
philosophus, -i. *m.* Philosopher.
phosphās, -ātis. *m.* A salt of phosphoric acid, phosphate.
phrenicus, -a, -um. Of the diaphragm; phrenic.
physostigma, -atis. *n.* Calabar bean; physostigma.
piger, -gra, -grum. Lazy.
pigmentum, -i. *n.* Pigment.
pilula, -ae. *f.* Pill.
pilus, -i. *m.* Hair.
pineālis, -e. Resembling a pine cone; pineal.
pinna, -ae. *f.* (Lit., feather), pavilion of the ear; pinna.
piper, **piperis**. *n.* Pepper.
piperitus, -a, -um. Pepper, peppery.
pituitum, -i. *n.* Pustle.
pituitārius, -a, -um. (pituita, phlegm or mucus), pituitary (applied to a reddish-gray body occupying the sella Turcica of the sphenoid bone, from a former erroneous belief that it discharged mucus into the nostrils).
pilus, -a, -um. Tender.
pix, **picis**. *f.* Pitch.
plantāris, -e. Relating to the sole of the foot; plantar.
plānus, -a, -um. Flat; level; smooth.
plexus, -a, -um. Network; plexus.
plica, -ae. *f.* Fold.

plumbum, -i, *n.* Lead.
 poculum, -i, *n.* Cup.
 pollex, -icis, *f.* The thumb.
 pomum, -i, *n.* Apple.
 pons, pontis, *m.* Bridge.
 poples, poplitis, *m.* Ham of the knee;
 popliteal space.
 poplitéus, -a, -um, Relating to the ham;
 popliteal.
 populus, -i, *m.* People.
 portō, -āre, -āvi, -ātus, Carry.
 portiō, -ōnis, *f.* Portion.
 porus, -i, *m.* Channel, canal.
 post, Behind; after.
 postea, Afterward.
 posticus, -a, -um, Hindmost.
 potēns, -ntis, Powerful.
 potiō, -ōnis, A drink; draught.
 potō, -āre, -āvi, -ātus, Drink.
 potus, -ūs, *m.* Drink.
 praeparō, -āre, -āvi, -ātus, Prepare.
 praeparatiō, -ōnis, *f.* Preparation.
 praeputium, -i, *n.* Foreskin; prepuce.
 praescribō, -ere, -scripsi, -scriptus, Pre-
 scribe.
 praescriptum, -i, *n.* Prescription.
 praesēns, -ntis, Present.
 praestāns, -ntis, Excellent.
 pressio, -ōnis, *f.* Pressure.
 primus, -a, -um, First.
 princeps, -ipis, The first, chief, principal.
 privō, -āre, -āvi, -ātus, Deprive.
 prō, For, in behalf of.
 processus, -ūs, *m.* A prominence, process.
 profundus, -a, -um, Deep.
 pronātor, -ōris, *m.* A muscle which turns
 the palm of the hand downward; pro-
 nator.
 properō, -āre, -āvi, -ātus, Hasten.
 proprius, -a, -um, One's own, special,
 proper.
 prudēns, -ntis, Prudent.
 pterygium, -i, *n.* An eye disease, pte-
 rygium.
 publicus, -a, -um, Public.
 puella, -ae, *f.* Girl.
 pugnō, -āre, -āvi, -ātus, Fight.
 pulcher, -chra, -chrum, Beautiful.
 pulmo, -ōnis, *m.* Lung.
 pulmonalis, -e, Of the lungs; pulmonary.
 pulverō, -āre, -āvi, -ātus, Powder; pul-
 verize.
 pulvis, pulveris, *m.* Powder.
 punctum, -i, *n.* Point.
 puniō, -ire, -ivi, -itus, Punish.
 pupilla, -ae, *f.* Pupil (of eye).
 pupillaris, -e, Pupillary; applied to a deli-
 cate membrane which covers the pupil
 of the eye in the fetus.
 purgātivus, -a, -um, Purgative.
 purificātus, -a, -um, Purified.
 purus, -a, -um, Pure.
 pyramidālis, -e, Pyramidal.
 pyramis, -idis, *f.* Pyramid.
 pyriformis, -e, Pear-shaped; pyriform.
 quadrātus, -a, -um, Four-sided; square.
 quadriceps, -cipitis, Four-headed.
 quadrigeminus, -a, -um, Fourfold; four.
 quaestio, -ōnis, *f.* Question.
 quam, Than.
 quartus, -a, -um, Fourth.
 quatuor, Four.
 quatuordecim, Fourteen.
 que, And.
 quina, -ae, *f.* Quinine.
 quis, quae, quid, Who; which; what.
 quondam, Formerly.
 quoque, Also.
 quot, How many.
 radiālis, -e, Of the radius; radial.
 radiātus, -a, -um, Radiated.
 radix, -icis, *f.* Root.
 ramus, -i, *m.* Branch.
 rārē, Rarely.

rārus, -a, -um, Rare.
 recens, Recently.
 recipiō, -ere, -cēpi, -ceptus, Take.
 recreō, -āre, -āvi, -ātus, Refresh.
 rectus, -a, -um, Straight.
 reductio, -ōnis, *f.* A bringing back.
 reflexus, -a, -um, Turned back; reflected.
 relevō, -āre, -āvi, -ātus, Relieve.
 remediū, -i, *n.* Remedy.
 removeō, -āre, -mōvi, -mōtus, Remove.
 remittō, -āre, -misi, -missus, Send back;
 remit.
 rēn, rēnis, *m.* (usually pl.), kidney.
 rēnalis, -e, Of the kidney; renal.
 reperio, -ire, -peri, -pertus, Find.
 reprimō, -āre, -pressi, -pressus, Check;
 repress.
 requiesco, -āre, -ēvi, -ētus, Rest.
 rēs, rei, *f.* Thing.
 rēsina, -ae, *f.* Resin.
 respiratiō, -ōnis, *f.* Respiration.
 rēte, -is, *n.* Net.
 reticulāris, -e, Like a net; reticular.
 retrahēns, -ntis, Drawing back, retracting.
 rheumatismus, -i, *m.* Rheumatism.
 ricinus, -i, *m.* (Lit., a tick, which the seeds
 resemble), the castor oil plant (*Ricinus
 communis*).
 rima, -ae, *f.* Slit; cleft.
 rogō, -āre, -āvi, -ātus, Ask.
 rosā, -ae, *f.* Rose.
 rostrum, -i, *n.* Beak.
 rotundus, -a, -um, Round.
 ruber, -bra, -brum, Red.
 rubor, -ōris, *m.* Redness.
 ruga, -ae, *f.* A wrinkle, fold.
 rumex, -icis, *m.* and *f.* Sorrel.
 sabulum, -i, *n.* Sand.
 saccharātus, -a, -um, Saccharated.
 saccharum, -i, *n.* Sugar.
 sacciformis, -e, Saclike.
 saccus, -i, *m.* A sack or bag.
 saepe, Often.
 sal, -is, *m.* and *f.* Salt.
 salicinum, -i, *n.* Salicin.
 salicylāt, -ātis, *m.* Salicylate.
 salix, -icis, *f.* Willow.
 sānābilis, -e, Curable.
 sanguis, -guinis, *m.* Blood.
 sānitās, -ātis, *f.* Healing.
 sānō, -āre, -āvi, -ātus, Heal; cure.
 sapientia, -ae, *f.* Wisdom.
 sapō, -ōnis, *m.* Soap.
 sartōrius, -i, *m.* The tailor's muscle; sar-
 torius.
 scāla, -ae, *f.* Ladder.
 scalēnus, -a, -um, Of unequal sides.
 scaphoideus, -a, -um, Boat-shaped; sca-
 phoid.
 schola, -ae, *f.* (Lit., leisure given to learn-
 ing), school.
 scientia, -ae, *f.* Knowledge; science.
 scilla, -ae, *f.* Squill.
 sciō, -ire, -ivi, -itus, Know.
 scribō, -ere, -scripsi, -scriptus, Write.
 scriptōrius, -a, -um, Of a writer; writer's.
 secundus, -a, -um, Second.
 sed, But.
 sēdes, -is, *f.* Seat.
 segmentum, -i, *n.* Segment.
 sella, -ae, *f.* Saddle.
 sēmicirculāris, -e, Semicircular.
 sēmiellipticus, -a, -um, Semielliptical.
 sēmilunāris, -e, Semilunar.
 sēmimembrānosus, -a, -um, Semimembra-
 nous.
 sēminālis, -e, Seminal.
 sēmis, sēmissis, *m.* Half.
 sēmitendinōsus, -a, -um, Semitendinous.
 senectus, -tutis, *f.* Old age.
 senex, senis, *m.* Old man.
 senilitās, -ātis, The feebleness of old age;
 senility.
 sentiō, -ire, -si, -sus, Feel.

septem. Seven.
sequestrum, -i. n. A portion of dead bone; sequestrum.
sermō, -ōnis. m. Conversation.
serrātus, -a, -um. Notched like a saw, serrated.
servus, -i. m. Servant; assistant.

stomachus, -i. m. Stomach.
stramonium, -i. n. Jamestown weed, stramonium.
stria, -ae. f. Stripe, stria.
striātus, -a, -um. Striped, striated.
struō, -ēre, -xi, -ctus. Arrange.
strychnina, -ae. f. Strychnine.
subacetās, -ātis. m. Subacetate.
subanconeus, -a, -um. Under the elbow.
subitō, -e. Suddenly.
subitus, -a, -um. Sudden.
sublimis, -e. Deep.
submuriās, -ātis. m. Submuriate.
subnitrās, -ātis. m. Subnitrate.
subscapularis, -e. Under the scapula; subscapular.
substantia, -ae. f. Substance.
subsultus, -ūs. m. A jumping; a twitching.
succus, -i. m. Juice.
sudor, -ōris. m. Sweat.
sulcus, -i. m. Furrow.
sulphonal, -e. Sulfonal.
sulphās, -ātis. m. Sulfate.
sulphuricus, -a, -um. Sulfuric.
sum, esse, fui. Be.
sūmō, -ēre, -psi, -ptus. Take.
supercilium, -i. n. Eyebrow.
superficialis, -e. Superficial.
superficiēs, -ēi. f. Surface.
supraspinātus, -a, -um. Above the spine (of scapula); supraspinate.
suppositōrium, -i. n. Suppository.
suspensōrium, -i. n. That which suspends.
suspensorius, -a, -um. Suspensory.
sustentaculum, -i. n. A prop; support.
sutūra, -ae. f. Seam; suture.
sympatheticus, -a, -um. Sympathetic.
sympōma, -atis. n. Symptom.
synoviālis, -e. Synovial.
tabacum, -i. n. Tobacco.
taenia, -ae. f. A band. **t. semicirculāris.**
 A layer in the cerebrum; also, a genus of intestinal worms; the tapeworm.
talus, -i. m. The heel.
tam. So.

tapētum, -i. n. (tapēte, carpet, tapestry), a lining membrane; also, the radiating fibers of the corpus *callōsum*.
taraxacum, -i. n. Dandelion (root); taraxacum.
tarsus, -i. m. Ankle.
tartaricus, -a, -um. Tartaric.
tartrās, -ātis. m. Tartrate.
tegō, -āre, -xi, -ctum. Cover; protect.
tectorium, -i. n. A covering.
tectorius, -a, -um. Protecting; covering.
temporalis, -e. Temporal.
tempus, -oris. n. Time.
tenax, -ācis. Holding fast; tenacious.
tendineus, -a, -um. Tendinous.
tendō, -ēre, tetendi, tentus. Stretch; reach.
tendō, -dinis. m. Tendon.
teneō, -ēre, -ui, -tus. Keep; hold.
tener, -a, -um. Delicate, tender.
tensor, -ōris. m. Stretcher, tensor.
tentō, -āre, -āvi, -ātus. Test; try.
tentōrium, -i. n. A tent, covering.
tenuis, -e. Thin; small.
tepidus, -a, -um. Lukewarm.
terebinthina, -ae. f. Turpentine.
teres, -etis. Rounded, smooth.
tergum, -i. n. Back.
terminus, -i. m. End.
tertius, -a, -um. Third.
theobroma, -ātis. n. Cacao (food of the gods).
thoracicus, -a, -um. Thoracic.
thyroideus, -a, -um. Having the shape of an oblong shield, thyroid.
tigillum, -i. n. The specific name of the croton oil plant.
tinctūra, -ae. f. Tincture.
tonicus, -a, -um. Tonic.
tonsilla, -ae. f. Tonsil.
torcular, -āris. n. A wine press.
tracheālis, -e. Tracheal.
tractō, -āre, -āvi, -ātus. Handle.
tragus, -i. m. (τράγος, a goat), small nippie in front of external auditory meatus, so called because sometimes covered with hair, tragus.
transversālis, -e. Transverse.
transversus, -a, -um. Transverse.
trapezoideus, -a, -um. Like a trapezium; trapezoid.
trauma, -atis. n. Injury, wound.
tres, tria. Three.
triangulāris, -e. Triangular.
triceps, -ipitis. Three-headed.
trigeminus, -a, -um. Three-fold.
triginta. Thirty.
trigōnum, -i. n. Triangle.
triquetrus, -a, -um. Three-cornered; triangular.
trochiscus, -i. m. Troche.
tuba, -ae. f. (Trumpet), tube.
tuber, -eris. n. Swelling; protuberance.
tuberculum, -i. n. A protuberance; tubercle.
tubulus, -i. m. Small tube.
tubus, -i. m. Tube.
tunica, -ae. f. Coat; covering.
tussio, -ire, -ivi, -itus. Cough.
tūtāmen, -minis. n. Means of defense; a protection.
tūtō. Safely.
tympānicus, -a, -um. Of the tympanum, tympanic.
ubi. Where.
ulna, -ae. f. Larger bone of forearm; ulna.
ulnāris, -e. Of the ulna; ulnar.
uncia, -ae. f. Ounce.
unciformis, -e. Hooked.
uncinātus, -a, -um. Hooked; unciniate.
unguentum, -i. n. Ointment.
unguis, -is. m. Nail.
ūnus, -a, -um. One.
urbānus, -a, -um. Of the city; urbane.
urina, -ae. f. Urine.

uriniferus, -a, -um. Urine-bearing; uriniferous.
usque. Continuously; constantly.
uterinus, -a, -um. Of the uterus; uterine.
uvilis, -e. Useful.
uvula, -ae. *f.* Dim. (**uva**, bunch of grapes), a small appendix or tubercle; uvula.
uxor, -ōris. *f.* Wife.
vaginālis, -e. Sheathlike; vaginal.
valerianās, -ātis. *m.* Valerianate.
valetūdō, -inis. *f.* Health.
validus, -a, -um. Strong, sturdy; healthy.
valvula, -ae. *f.* Valve.
vās, **vāsis**. *n.* Vessel.
vasculōsus, -a, -um. Vascular.
vasculum, -i. *n.* Small vessel.
vastus, -a, -um. Extensive; large.
vegetābilis, -e. Vegetable.
vehiculūm, -i. *n.* Vehicle.
vel. Either.
vēlum, -i. *n.* Veil.
vēna, -ae. *f.* Vein.
vendō, -ēre, **vendidi**. Sell.
veneficus, -i. *m.* Poisoner.
venēnum, -i. *n.* Poison.
venōsus, -a, -um. Venous.
venter, -tris. *m.* Belly.
ventriculus, -i. *m.* Dim (**venter**), ventricle.
vērātrum, -i. *n.* Hellebore; veratrum.
vermiformis, -e. Wormlike.
veru, -ūs. *n.* A spit (for roasting upon); used only in the term **verumontanum**, a longitudinal ridge in the floor of the male urethra.
verus, -a, -um. True.

vesica, -ae. *f.* Urinary bladder.
vesicatoriūm, -i. *n.* Blister.
vesicula, -ae. *f.* Vesicle.
vesiculāris, -e. Full of vesicles or cells; vesicular.
vestibulāris, -e. Relating to the vestibule of the ear. vestibular.
vetus, **veteris**. Old.
vigilō, -āre, -āvi, -ātus. Watch.
viginti. Twenty.
villus, -i. *m.* Tuft of hair; villus.
vinculūm, -i. *n.* Link; chain.
vinum, -i. *n.* Wine.
vir, **virī**. *m.* Man.
viridis, -e. Green.
vis, **vis**, pl **vires**, -ium. *f.* Force; power.
viscus, -eris. *n.* Any internal organ of the body.
visiō, -ōnis. *f.* Vision.
visus, -ūs. *m.* Vision.
vita, -ae. *f.* Life.
vitellus, -i. *m.* Yolk.
vitreus, -a, -um. Resembling glass; vitreous.
vocālis, -e. Vocal.
vocō, -āre, -āvi, -ātus. Call.
vola, -ae. *f.* Palm of the hand (sole of the foot).
vorticōsus, -a, -um. Resembling an eddy or whirlpool.
vulnerō, -āre, -āvi, -ātus. Wound.
vulnus, **vulneris**. *n.* A wound.
vultus, -ūs. *m.* Countenance.
zincum, -i. *n.* Zinc.
zingiber, -eris. *n.* Ginger.
zōna, -ae. *f.* Zone, belt.
zōnula, -ae. *f.* Little zone, or belt; zonule.

intestine. Intestinum. Gr., enteron.	pimple. Pustula.
itch. Scabies.	plaster. Emplastrum.
itching. Pruritus.	poison. Venenum.
jaw. Maxilla.	poultice. Cataplasma.
joint. Artus. Gr., arthron.	powder. Pulvis.
jugular vein. Vena jugularis.	pregnant. Gravidia.
kidney. Ren. Gr., nephros.	prepare. Paro.
knee. Genu. Gr., gonu.	prescribe. Prescribo.
kneecap. Patella.	prescription. Prescriptum.
knuckle. Condylus.	puberty. Pubertas.
labor. Partus.	pubic bone. Os pubis. Gr., pecten.
labyrinth. Labyrinthus.	pulverize. Pulvero.
lacerate. Laccero.	pupil. Pupilla.
larynx. Guttur.	purgative. Purgativus.
lateral. Lateralis.	putrid. Putris.
leech. Sanguisuga.	quinsy. Cynanche, angina.
leg. Tibia.	rash. Exanthema.
leprosy. Leprosus.	recover. Convasco.
ligament. Ligamentum. Gr., syndesmos.	recumbent. Recubans.
ligature. Ligatura.	recur. Recurro.
limb. Membrum.	redness. Rubor.
lime. Calx.	remedy. Remedium.
listen. Au-culto.	respiration. Respiratio.
liver. Jecur. Gr., hepar, epar.	rheum. Fluxio.
livid. Lividus.	rib. Costa.
loin. Lumbus. Gr., lapara.	rigid. Rigidus.
looseness. Laxitas.	ringing. Tinnitus.
lotion. Lotio.	rupture. Hernia.
lukewarm. Tepidus.	saliva. Sputum.
lung. Pulmo. Gr., pneumon.	sallow. Salix.
lymph. Lympha.	salt. Sal.
mad. Insanus.	salve. Unguentum.
malady. Morbus.	sane. Sanus.
male. Masculinus.	scab. Scabies.
malignant. Malignus.	scalp. Pericranium.
maternity. Conditio matris.	scaly. Squamosus.
medicine. (Remedy) Medicamentum.	scar. Cicatrix.
medicated. Medicatus.	sciatica. Ischias.
milk. Lac.	scruple. Scrupulum.
mind. Animus.	seed. Semen.
mix. Misceo.	senile. Senilis.
mixture. Mistura.	serum. Sanguinis pars equosa.
moist. Humidus.	sheath. Vagina.
molar. Dens molaris.	shin. Tibia.
month. Mensis.	shock. Concussio; (of electricity), ictus
monthly. Menstruus.	electricus.
morbid. Morbidus.	short. Brevis.
mouth. Os. Gr., stoma.	shoulder. Humerus. Gr., omos.
mucous. Mucosus.	shoulder blade. Scapula.
muscle. Musculus. Gr., mys.	shudder. Tremor.
mustard. Sinapis.	sick. Aegrotus.
nail. Unguis.	side. Latus.
navel. Umbilicus. Gr., omphalos.	sinew. Nervus.
neck. Cervix; collum. Gr., trachelos.	skeleton. Sceletos.
nerve. Nervus. Gr., neuron.	skin. Cutis. Gr., derma.
nipple. Papilla.	skull. Cranium. Gr., kranion.
no, none. Nullus.	sleep. Somnus.
normal. Normalis.	smallpox. Variola.
nose. Nasus. Gr., rhis, ris.	smell. Odoratus.
nostril. Naris.	soap. Sapo.
not. Non.	socket. Cavum.
nourish. Nutrio.	soft. Mollis.
nourishment. Alimentus.	solid. Solidus.
now. Nunc.	solution. Dilutum.

soporific. Sopor.	tongue. Lingua. Gr., glossa.
sore. Ulcus	tonsil. Tonsilla.
spasm. Spasmus.	tooth. Dens. Gr., odous.
spinal. Dorsalis; spinalis.	troche. Trochiscus.
spine. Spina	tube. Tuba.
spirit. Spiritus.	twin. Geminus.
spittle. Sputum.	twitching. Subsultus.
spleen. Lien.	ulcer. Ulcus.
spoon. Cochleare.	unless. Nisi.
sprain. Luxatio.	urine. Urina.
stomach. Stomachus. Gr., gaster.	uterine. Uterinus
stone. Calculus.	vaccine. Vaccinum
stricture. Stricture.	vagina. Vagina. Gr., kolpos.
sugar. Saccharum.	valve. Valvula.
suture. Sutura.	vein. Vena. Gr., phleps.
swallow. Glutio	vertebra. Vertebra. Gr., spondylos.
sweat. Sudor. Gr., idros.	vessel. Vas.
symptom. Symptoma.	wash. Lavo.
system. Systema	water. Aqua.
tail. Cauda.	wax. Cera
take. Sumo.	waxed dressing. Ceratum.
tapeworm. Taenia.	weary. Lassus
taste. Gustatus.	wet. Humidus.
tear. Lacrima.	windpipe. Arteria aspera.
teeth. Dentes	wine. Vinum
tendon. Tendo. Gr., tenon.	woman. Femina
testicle. Testis Gr., orchis.	womb. Uterus Gr., hystera; ystera.
thigh. Femur	worm. Vermis
throat. Fauces. Gr., pharynx.	wound. Vulnus.
throb. Palpito.	wrist. Carpus Gr., karpos.
thumb. Pollex.	yolk. Luteum.

Latin and Greek Medical Words

LATIN EQUIVALENTS

COLORS

blue. Caeruleus; cyaneus, lividus.
black. Niger, nigra, nigrum.
brown. Fulvus
crimson. Coccum; coccineus.
green. Viridis
gray. Cinereus.
lemon. Citreum.
pink. Rosaceus.
purple. Purpura; purpureus.
red. Ruber.
scarlet. Coccineus.
violet. Violaceus.
white. Albus.
yellow. Flavius, luteus; croceus.

QUALITIES

bitter. Acerbus
chill. Frigusculum.
cold. Frigidus.
dry. Aridus.
dull. Stupidus, hebes
faintness. Languor.
fat. obesus, pinguis.
heat. Calor, ardor, fervor.
short. Brevis.
sour. Acidus.
sweet. Dulcis.
tall. Longus; celsus; procerus.
thick. Densus.
heavy. Gravis; ponderosus.
hot. Calidus, fervens, candens.
light. Levis.
liquid. Liquidus.
moist. Humidus, uvidus.
sharp. Acutus.
thin. Tenuis, macer.
warm. Calidus.
warmth. Calor.
weary. Lassus, languidus; fatigatus.
wet. Humidus.

METALS

gold. Aurum; aureus.
silver. Argentum; argenteus.
copper. Cuprum; cuprinus
iron. Ferrum; ferreus.
tin. Stannum; plumbum album.

TIME

Words expressing periods of time.
afternoon. Post-meridiem
age. Aetas; maturas, adultus; impubis.
autumn. Autumnus
birth. Partus; natales.
breakfast. Prandium.
child. Infans; puer, filius.

day. Dies.
daily. Diurnus.
date. Status dies.
dawn. Prima lux.
death. Mors.
dinner. Cena.
evening. Vesper.
hour. Hora.
infant. Infans
maturity. Maturitas, aetas matura.
meal. Epulae.
midnight. Media nox.
midsummer. Media aestas.
moment. Punctum.
month. Mens
monthly. Menstruus.
morning. Matutinum.
night. Nox, noctis.
noon. Meridies.
old. Antiquus.
puberty. Pubertas
second. Secundum.
spring. Ver, veris.
summer. Aestas
sunrise. Solis ortus.
sunset. Solis occasus.
supper. Cena.
time. Tempus.
winter. Hiems, hiemis.
year. Annus.
young. Parvus; infans.
youth. Adolescentia.

RELATIONSHIP

aunt. Amita; matertera.
brother. Frater.
child. Infans.
cousin. Consobrinus.
father. Pater, paterfamilias.
husband. Maritus.
infant. Infans.
grandfather. Avus.
grandmother. Avia.
granddaughter. Neptis.
grandson. Nepos.
mother. Mater.
nephew. Fratris or sororis filius or sororis nepos.
niece. Fratris or sororis filia.
sister. Soror.
uncle. Patruus; avunculus.
widow. Vidua.
widower. Viduus.
wife. Uxor.

Prefixes and Suffixes

a-, an- . Negative.	homo, homeo- . Same; similar.
a-, ab-, abs- . Away from.	hydra, hydro- . Relating to water.
ad-, -ad- . Toward.	hyp, hyph, hypo- . Under.
-aemia . Blood.	hyper- . Over, above, beyond.
aer- . Air.	hypo- . Under.
-aesthesia . Sensation	-iasis . Condition, pathological state.
-algesia, algia . Suffering; pain.	idio- . Peculiar to the individual or organ.
algi- . Pain.	ileo- . Relating to the ileum.
ali- . Other.	in-, In; into, not.
amb- . Both, on both sides.	infra- . Beneath
amph- . Around, on both sides.	inter- . Between
ana-, an- . Up.	intra, intro- . Within.
angio- . Relating to blood or lymph vessels.	-ism . Condition; theory.
ante- . Before	iso- . Equal
anti- . Against	-itis . Inflammation
apo- . From, opposed.	-ize . To treat by special method.
-ase . Enzyme	luxe- . Near
aut-, auto- . Self	karyo- . Nucleus; nut.
bi, bis- . Twice, double.	kata-, kath- . Down
brachy- . Short.	ker- . Horn. Indicates hardness.
brady- . Slow	kinesi- . Movement.
cac-, caco- . Bad, evil.	-kinesis . Motion.
cat, cata, cath- . Down.	lact- . Milk
-cele . A tumor, a cyst; a hernia.	laparo- . The loin, relating to the loin or abdomen
cent- . Hundred	laryng, laryngo- . The larynx.
cephal- . Relating to a head.	latero- . Side
chrom-, chromo- . Color	lepto- . Small, soft.
-cide . Causing death.	leuco, leuko- . White.
circum- . Around	-lite, -lith . A stone, a calculus.
co, com, con- . Together.	lith- . A stone
contra- . Against.	-logia, -logy . Science of; study of.
cyst-, -cyst . Bag; bladder.	-lysis . Setting free, disintegration.
-cyte . A cell	macro- . Large, long; big.
dacry- . Tears	mal- . Bad, poor; evil
dactyl- . Fingers.	med-, medi- . Middle.
de- . From, not.	mega, megai- . Large, great
deca- . Ten	-megalia or megaly . Large, great; extreme.
decl- . Tenth.	melan-, melano- . Black.
demi- . Half	mes-, meso- . Middle.
denti- . Relating to the teeth.	meta- . Beyond; over, between, change, or transposition.
derma- . The skin.	-meter . Measure.
di- . Double, apart from.	metra, metro- . The uterus.
dia- . Through; between, asunder.	micro- . Small
diplo, diplo- . Double	mico- . Less, smaller.
dis- . Negative, double; apart; absence of.	mono- . Single.
-dynia . Pain.	multi- . Many.
dys- . Difficult; bad.	my, myo- . Muscle.
ec, ecto- . Out; on the outside.	myel, myelo- . Marrow.
-ectomy . A cutting out.	myxa, myxo- . Mucus.
ef, es, ex, exo- . Out	neo- . New.
-emesis . Vomiting.	neph-, nephra, nephro- . Kidney.
-emia . Blood.	neu, neuro- . Nerve.
en-, In, into.	nifer, nitro- . Nitrogen.
endo- . Within.	non-, not- . No
entero- . Relating to the intestine.	nucleo- . A nucleus.
ento- . Within.	ob- . Against.
epi- . Upon.	oculo- . The eye.
-esthesia . Sensation.	-ode, oid . Form, shape, resemblance.
eu- . Well.	odont- . A tooth.
ex-, exo- . Out.	-oid . Form; shape; resemblance.
extra- . On the outside; beyond.	oligo- . Few.
fore- . Before; in front of.	-oma . A tumor.
-form . Form.	omo-, Shoulder.
-fuse . To drive away.	ov- . An egg; ovum.
galact, galacto- . Milk.	oophoron- . Ovary.
gaster, gastro- . The stomach; the belly.	opith- . Backward.
-gene-, -genesis, -genetic, -genic . Production; origin, formation	orchid- . Testicle.
glosso- . Relating to the tongue.	ortho- . Straight; normal.
-gog, gogue . To make flow.	os- . A mouth; a bone.
-gram . A tracing, a mark.	-osis . Condition; disease; intensive.
-graphy . A writing; a record.	oste, osteo- . A bone.
hem, hemato- . Relating to the blood.	-ostomosis, ostomy . To furnish with a mouth or an outlet.
hemi- . Half.	-otomy . Cutting.
hepa-, hepar-, hepato- . Liver.	oxy- . Sharp; acid.
hetero- . Other; indicating dissimilarity.	
holo- . All.	

pachy-. Thick.
pan-. All; entire.
para-. Alongside of.
path-, -path, -pathy. Disease; suffering.
-penia. Lack.
per-. Excessive; through.
peri-. Around.
-phobia. Fear.
-phylaxis. Protection.
-plasm. To mold.
-plastic. Molded, indicates restoration of lost or badly formed features.
-plegia. A stroke.
plur-. More.
pneu-. Relating to the air or lungs.
poly-. Much, many.
post-. After.
pre-. Before.
pro-. Before, in behalf of.
proto-. First.
pseud, pseudo-. False.
psych-. The soul, the mind.
py-, pyo-. Pus.
re-. Back, again.
retro-. Backward.
-rhage, -rhagia. Hemorrhage, flow.
-rhaphy. A suturing or stitching.
-rhea. To flow, indicates discharge.
sacchar-. Sugar.

sacro-. Sacrum.
salping, salpingo-. A tube, relating to a fallopian tube.
sarco-. Flesh.
sclero-. Hard, relating to the sclera.
-sclerosis. Dryness, hardness.
-scopy. To see.
semi-. Half.
-stomosis, stomy. To furnish with a mouth or outlet.
sub-. Under.
super, supra-. Above.
syn-. With; together.
tele-. Distant, far.
tetra-. Four.
thio-. Sulfur.
thyro-. Thyroid gland.
-tomy. Cutting.
trans-. Across.
tri-. Three.
-trophic. Relating to nourishment.
tropho-. Relating to nutrition.
uni-. One.
-uria. Relating to the urine.
urino, uro-. Relating to the urine or urinary organs.
vaso-. A vessel.
venter, ventro-. The abdomen.
xanth-. Yellow.

Anatomy and Physiology

Muscles of the Body with Their Action, Origin, Insertion and Innervation

The muscles in the body number over 650, the totals varying according to the authority, as some list as separate muscles what others regard as portions of adjacent muscles. Most of the muscles occur in pairs; 5 are single muscles.

HEAD AND FACE

attolens aurem (at-ôl'enz aw'rēm). SAME AS: *auricularis superior*.

atrahens aurem (ât'râ-hēnz aw'rēm). SAME AS: *auricularis anterior*.

auricularis anterior (aw-rîk''û-lâ-rîs an-tê'ri-or). ACTION: Draws pinna of ear forward. ORIGIN: Superficial temporal fascia. INSERTION: Helix of ear anteriorly. INNERVATION: Facial SYN. *atrahens aurem*.

auricularis posterior (aw-rîk''û-lâ-rîs pôs-tê'ri-or). ACTION: Draws pinna of ear backward. ORIGIN: Mastoid process. INSERTION: Root of auricle INNERVATION: Facial SYN: *retrahens aurem*.

auricularis superior (aw-rîk''û-lâ-rîs sù-pê'ri-or). ACTION: Elevates pinna of ear ORIGIN: Galea aponeurotica INSERTION: Upper portion of pinna of ear. INNERVATION: Facial. SYN: *attolens aurem*.

buccinator (bûk''sîn-â'tor). ACTION: Compresses cheek, retracts angle of mouth. ORIGIN: Alveolar process of maxilla, pterygomandibular ligament, buccinator ridge of mandible INSERTION: Orbicularis oris INNERVATION: Facial.

caninus (kâ-nî'nûs). SAME AS: *levator anguli oris*

choroideus (kô-roy'dê-ûs). SAME AS: *ciliary*.

ciliaris (sîl-i-â-rîs). ACTION: Alters shape of crystalline lens in accommodation. ORIGIN: (1) Meridional Junction of cornea and sclera (2) Circular: Fibers forming a circle close to iris INSERTION: (1) External layers of choroid (2) Ciliary process INNERVATION: Short ciliary.

compressor naris (kôm-prēs'or nâ'rîs). ACTION: Narrows nostril. ORIGIN: Nasal aponeurosis, superior maxilla above incisive fossa. INSERTION: Aponeurosis of bridge of nose. INNERVATION: Facial.

corrugator supercilii (kor'û-gâ-tor sù-pêr-sîl'i-i). ACTION: Draws eyebrows down and in. ORIGIN: Inner end of superciliary arch. INSERTION: Skin above orbital arch INNERVATION: Facial.

depressor alae nasi (dê-prēs'or â-lê nâ'sî). SAME AS: *depressor septi*.

depressor anguli oris (dê-prēs'or âng'-û-lî ô'rîs). ACTION: Depresses angle of mouth. ORIGIN: External oblique line of mandible INSERTION: Angle of mouth. INNERVATION: Facial. SYN: *triangularis*.

depressor labii inferioris (dê-prēs'or lâ-bî-i in-fê'ri-ô'rîs). ACTION: Depresses lower lip. ORIGIN: External oblique line of the mandible INSERTION: Lower lip and orbicularis oris. INNERVATION: Facial. SYN: *quadratus labii inferioris*; *quadratus menti*.

depressor septi (dê-prēs'or sêp'tî). ACTION: Draws outer wall of nostril downward ORIGIN: Incisive fossa of superior maxillary bone. INSERTION: Septum and ala of nose INNERVATION: Facial SYN. *depressor alae nasi*

dilatator naris anterior (dil'â-tâ-tor nâ-rîs an-tê'ri-or). ACTION: Dilates apertures of nostril ORIGIN: Cartilage of ala of nose INSERTION: Border of ala. INNERVATION: Facial

dilatator naris posterior (dil'â-tâ-tor nâ-rîs pôs-tê'ri-or). ACTION: Dilates apertures of nostril. ORIGIN: Nasal notch of superior maxilla and the sesamoid cartilages. INSERTION: Integument of margin of nostril INNERVATION: Facial.

epicranius (êp-i-krâ'nî-ûs). Scalp muscles consisting of occipitofrontalis and temporoparietalis connected by galea aponeurotica.

frontalis (frôn-tâ'llis). SEE *occipitofrontalis*

levator anguli oris (lê-vâ'tor âng'-û-lî ô'rîs). ACTION: Elevates angle of mouth. ORIGIN: Canine fossa of maxilla INSERTION: Angle of mouth and orbicularis oris. INNERVATION: Facial. SYN *caninus*

levator labii inferioris (lê-vâ'tor lâ-bî-i in-fê'ri-ô'rîs). SAME AS: *mentalis*

levator labii superioris (lê-vâ'tor lâ-bî-i sù-pê'ri-ô'rîs). ACTION: Elevates and extends upper lip. ORIGIN: Lower margin of orbit, malar bone INSERTION: Upper lip INNERVATION: Infraorbital branch of facial

levator labii superioris alaeque nasi (lê-vâ'tor lâ-bî-i sù-pê'ri-ô'rîs â-lê-kwê nâ'sî). ACTION: Elevates upper lip, dilates nostril ORIGIN: Nasal process of maxilla INSERTION: Cartilage of ala of nose and upper lip. INNERVATION: Infraorbital branch of facial.

levator menti (lê-vâ'tor mên'tî). SAME AS *mentalis*

levator palpebrae superioris (lê-vâ'tor pâlpê-brê sù-pê'ri-ô'rîs). ACTION: Raises upper eyelid ORIGIN: Lesser wing of the sphenoid bone. INSERTION: Upper tarsal cartilage. INNERVATION: Oculomotor.

masseter (mâ-sê'têr). ACTION: Mastication. ORIGIN: Zygomatic arch and malar process of superior maxilla INSERTION: Angle, ramus, and coronoid process of mandible INNERVATION: Mandibular division of trigeminal.

mentalis (mên-tâ'llis). ACTION: Elevates and protrudes lower lip; wrinkles skin of chin. ORIGIN: Incisive fossa of mandible INSERTION: Integument of chin. INNERVATION: Facial. SYN: *levator labii inferioris*; *levator menti*.

nasalis (nâ-sâ'llis). Consists of compressor naris and depressor septi.

obliquus oculi inferior (ób-lí'kwús óc'ú-lí in-fé'ri-or) ACTION: Rotates eyeball up and out ORIGIN: Orbital plate of superior maxillary bone. INSERTION: Sclerotic coat at right angles to insertion of rectus externus just below it IN-NERVATION: Oculomotor

obliquus oculi superior (ób-lí'kwús óc'ú-lí sú-pé'ri-or). ACTION: Rotates eyeball down and out. ORIGIN: Above optic foramen INSERTION: By a tendon through trochlea to the sclerotic coat IN-NERVATION: Trochlear

occipitalis (ók-síp'í-tá'íls). SEE *occipito-frontalis*

occipitofrontalis (ók-síp'í-tó-frón-tá'íls). Consists of (1) occipitalis and (2) frontalis bellies ACTION: (1) Draws scalp back (2) Draws scalp forward, raises eyebrows ORIGIN: (1) Occipital and temporal bones (2) Procerus, corrugator, and orbicularis oris muscles INSERTION: Galea aponeurotica IN-NERVATION: Facial

orbicularis oculi (or-bík'ú-lá'ris óc'ú-lí). ACTION: Closes eyelid, wrinkles forehead vertically, compresses lacrimal sac ORIGIN: (1) (*Pars lacrimalis*) Lacrimal bone (2) (*Pars orbitalis*) Frontal processes of maxilla and frontal bone (3) (*Pars palpebralis*) Inner canthus INSERTION: (1) Joins palpebral portion (2) Encircles orbit to orbit (3) Outer canthus IN-NERVATION: Facial

orbicularis oris (or-bík'ú-lá'ris ó'ris). ACTION: Closes lips ORIGIN: Nasal septum and canine fossa of mandible by accessory fibers. INSERTION: Buccinator and adjacent muscles surrounding mouth. IN-NERVATION: Facial

orbicularis palpebrarum (or-bík'ú-lá'ris pá-pé-brá'rúm) SAME as *orbicularis oculi* (*Pars palpebralis*)

orbitalis (or-bl-tá'íls). Circular division of ciliaris

orbitalpalpebralis (or'bí-tó-pál'pé-brá'íls). SAME as *levator palpebrae superioris*.

procerus (pró-sé'rús) ACTION: Draws skin of forehead down ORIGIN: Bridge of nose INSERTION: Skin over root of nose IN-NERVATION: Facial SYN *pyramidalis nasi*

pterygoideus lateralis (tét-l-goyd'é-ús lát-ér-ál'ís) ACTION: Brings jaw forward, moves jaw from side to side; opens jaws ORIGIN: 1 Outer plate of pterygoid process 2 Great wing of sphenoid and infratemporal ridge INSERTION: Neck of condyle of mandible IN-NERVATION: Lateral pterygoid from trigeminal n

pterygoideus medialis (tét-l-goyd'é-ús mé-dí-á'íls) ACTION: Closes jaw by raising and advancing it ORIGIN: Pterygoid fossa of sphenoid bone INSERTION: Inner surface of angle of mandible. IN-NERVATION: Medial pterygoid from trigeminal n

pyramidalis nasi (pi-rám'í-dá'íls ná'sí). SAME as *procerus*

quadratus labii inferioris (kwád-rá'tús lá-bí-lí in-fé'ri-ó'ris). SAME as: *depressor labii inferioris*.

quadratus labii superioris (kwád-rá'tús lá-bí-lí sú-pér'í-ó'ris). Composed of levator labii superioris alaeque nasi, levator labii superioris, zygomaticus minor.

quadratus menti (kwád-rá'tús mén'tí). SAME as: *depressor labii inferioris*.

rectus externus or lateralis (rék'tús éks-ter'nús, lát-ér-á'íls). ACTION: Rotates

eyeball outward. ORIGIN: Margin of sphenoidal fissure and outer margin of optic foramen. INSERTION: Sclerotic coat IN-NERVATION: Abducens.

rectus inferior (rék'tús in-fé'ri-or). ACTION: Rotates eyeball downward. ORIGIN: Lower margin of optic foramen. INSERTION: Sclerotic coat. IN-NERVATION: Oculomotor

rectus internus or medialis (rék'tús Inter'nús, mé-dí-á'íls). ACTION: Rotates eyeball inward. ORIGIN: Lower margin of optic foramen INSERTION: Sclerotic coat. IN-NERVATION: Oculomotor.

rectus superior (rék'tús sú-pé'ri-or). ACTION: Rotates eyeball upward. ORIGIN: Upper margin of optic foramen. INSERTION: Sclerotic coat. IN-NERVATION: Oculomotor.

retrahens aurem (rét'rá-héns aw'rém). SAME as *auricularis posterior*.

risorius (rí-só'ri-us) (*laughing muscle*) ACTION: Draws angle of mouth outward and compresses cheek ORIGIN: Fascia over masseter muscle INSERTION: Angle of mouth IN-NERVATION: Facial, buccal branch.

temporalis (tém-pó-rá'íls) ACTION: Closes jaws ORIGIN: Temporal fossa and temporal fascia INSERTION: Coronoid process of lower jaw IN-NERVATION: Trigeminal, mandibular division SYN: *temporal*

tensor tarsi (tén'sor tar'sí) SAME as: *Pars lacrimalis of orbicularis oculi muscle*

triangularis (tri-áng'gú-lá'ris). SAME as: *depressor anguli oris*.

zygomaticus major (zí-gó-mát'í-kús má-jór). ACTION: Draws upper lip backward, upward and outward. ORIGIN: Malar bone, zygomatic arch INSERTION: Angle of mouth IN-NERVATION: Facial.

zygomaticus minor (zí-gó-mát'í-kús mí-nór). ACTION: Draws the upper lip up and out ORIGIN: Malar bone behind the maxillary arch INSERTION: Angle of mouth, orbicularis oris IN-NERVATION: Facial.

EAR

antitragicus (an-tí-trá'j-lí-kús). ORIGIN: Anterior part of antitragus INSERTION: Opposite side at larger auricular fissure IN-NERVATION: Posterior auricular branch of facial

helicis major and minor (hél'í-sís má-jór, mí-nór) ACTION: Tighten the skin of auditory canal ORIGIN: Tuberosity on helix. INSERTION: Rim of helix IN-NERVATION: Auriculotemporal and posterior auricular

obliquus auriculæ (ób-lí'kwús aw-rik'ú-lé). ORIGIN: Conch of the ear INSERTION: Fossa of antihelix IN-NERVATION: Posterior auricular branch of facial.

stapedius (stá-pé'dí-ús). ACTION: Depress base of the stapes. ORIGIN: Interior of pyramid INSERTION: Neck of stapes. IN-NERVATION: Tympanic branch of facial

tensor tympani (tén'sor tím'pán-í). ACTION: To draw the membrana tympani tense. ORIGIN: Temporal tube, eustachian tube and canal. INSERTION: Handle of malleus IN-NERVATION: Branch of mandibular through otic ganglion.

tragicus (trá'j-lí-kús). ORIGIN and INSERTION: Outer part of tragus IN-NERVATION: Temporal branch of facial.

transversus auriculæ (tráns-vér'sús aw-rik'ú-lé). ACTION: Retracts helix ORIGIN: Cranial surface of pinna. INSERTION: Circumference of pinna. INNER-

VATION: Posterior auricular branch of facial.

NECK

amygdaloglossus (ám-ig'ðá-lô-glô's'ús). **ACTION:** Lifts edge of tongue. **ORIGIN:** Pharyngeal aponeurosis over tonsil. **INSERTION:** Continuous with palatoglossus.

azygos uvulae (áz'í-gôs ú'vú-lê). **SAME AS:** uvulae.

cephalopharyngeus (sêf'á-lô-fâr-in-jê'ús). **SAME AS:** constrictor pharyngis superior.

circumflexus palati (sir-kûm-fleks'ús pâl-â'ti). **SAME AS:** tensor veli palatini.

constrictor pharyngis inferior (kôn-strîk'tor fâr-ing'is in-fêr'î-ôr). **ACTION:** Narrows the pharynx, as in swallowing. **ORIGIN:** Sides of cricoid and thyroid cartilages. **INSERTION:** Posterior raphe of pharyngeal wall. **INNERVATION:** Pharyngeal plexus **SYN:** inferior constrictor, laryngopharyngeus

constrictor pharyngis medius (kôn-strîk'tor fâr-ing'is me'di-ús). **ACTION:** Narrows pharynx, as in swallowing. **ORIGIN:** Both cornua of hyoid bone and stylohyoid ligament. **INSERTION:** Middle of posterior pharyngeal wall. **INNERVATION:** Pharyngeal plexus **SYN:** middle constrictor, hyopharyngeus

constrictor pharyngis superior (kôn-strîk'tor fâr-ing'is su-per'î-ôr). **ACTION:** Narrows pharynx, as in swallowing. **ORIGIN:** Internal pterygoid plate, pterygomandibular ligament, jaw, side of tongue. **INSERTION:** Posterior pharyngeal wall. **INNERVATION:** Pharyngeal plexus **SYN:** superior constrictor, cephalopharyngeus

digastricus (dî-gâs'trî-kûs). Consists of (1) anterior and (2) posterior bellies. **ACTION:** (1) Draws hyoid bone forward. (2) Draws hyoid bone backward. **ORIGIN:** (1) Lower border of lower jaw. (2) Mastoid groove of temporal bone. **INSERTION:** Intermediate tendon between both bellies. **INNERVATION:** (1) Mylohyoid (2) Facial

genioglossus (jê-ni'ô-glô's'ús). **ACTION:** Protrudes and retracts tongue, elevates hyoid. **ORIGIN:** Mental spine of inferior maxilla. **INSERTION:** Hyoid and bottom of tongue. **INNERVATION:** Hypoglossal

geniohyoglossus (jê-ni'ô-hi'ô-glô's'ús). **SAME AS:** genioglossus.

geniohyoideus (jê-ni'ô-hi-oyd'e-ús). **ACTION:** Elevates and advances hyoid and helps to depress jaw. **ORIGIN:** Mental spine of inferior maxilla. **INSERTION:** Hyoid. **INNERVATION:** Hypoglossal **SYN:** geniohyoid muscle

glossopalatinus (glô's'ô-pâl-â-tî'nî'ús). **ACTION:** Elevates back of tongue and constricts fauces. **ORIGIN:** Undersurface of soft palate. **INSERTION:** Side of tongue. **INNERVATION:** Pharyngeal plexus. **SYN:** palatoglossus

hyoglossus (hi'ô-glô's'ús). **ACTION:** Depresses side of tongue and retracts tongue. **ORIGIN:** Cornua and body of hyoid. **INSERTION:** Side of tongue. **INNERVATION:** Hypoglossal.

hyopharyngeus (hi'ô-fâr-in-jê-ús). **SAME AS:** constrictor pharyngis medius.

laryngopharyngeus (lâr-ing'ô-fâr-in-jê-ús). **SAME AS:** constrictor pharyngis inferior.

latissimus colli (lât-is'î-mûs kô'l'i). **SAME AS:** platysma.

levator palati (lê-vâ'tor pâl-â-tî). **SAME AS:** levator veli palatini.

levator veli palatini (lê-vâ'tor vê'lî pâl-â-tî'nî). **ACTION:** Elevates soft palate. **ORIGIN:** Petrous portion of temporal

bone and cartilaginous eustachian tube.

INSERTION: Aponeurosis of soft palate.

INNERVATION: Pharyngeal plexus.

lingualis (ling-gwâ'lis). **ACTION:** Elevates sides and center of tongue. **ORIGIN:** Undersurface of tongue. **INSERTION:** Edge of tongue. **INNERVATION:** Hypoglossal.

longus capitis (lông'ús kâp'î-tîs). **ACTION:** Flexes head. **ORIGIN:** Transverse processes of 3rd to 6th cervical vertebrae. **INSERTION:** Occipital bone, basilar process. **INNERVATION:** Branches of 1st to 3rd cervical nerves **SYN:** rectus capitis anticus major

longus cervicis (lông'ús sêr'vi-sîs). **SAME AS:** longus colli.

longus colli (lông'ús kô'l'i). Consists of three parts: (1) superior oblique, (2) inferior oblique, and (3) vertical. **ACTION:** Twists and bends neck forward. **ORIGIN:** (1) Transverse processes of 3rd to 5th cervical vertebrae. (2) Bodies of 1st to 3rd thoracic vertebrae. (3) Bodies of 3 upper thoracic and 3 lower cervical vertebrae. **INSERTION:** 1 Anterior tubercle of atlas. 2 Transverse processes of 5th and 6th cervical vertebrae. 3 Bodies of 2nd to 4th cervical vertebrae. **INNERVATION:** Branches of 2nd to 7th cervical nerves

mylohyoideus (mî'lô-hi-oyd'e-ús). **ACTION:** Elevates floor of mouth and hyoid, depresses jaw. **ORIGIN:** Mylohyoid line of mandible. **INSERTION:** Body of hyoid and median raphe. **INNERVATION:** Mylohyoid **SYN:** mylohyoid muscle

omohyoideus (ô'mô-hi-oyd'e-ús). **ACTION:** Depresses hyoid. **ORIGIN:** Upper border of scapula. **INSERTION:** Hyoid bone. **INNERVATION:** Upper cervical through ansa hypoglossi. **SYN:** omohyoid muscle.

palatoglossus (pâl'â-tô-glô's'ús). **SAME AS:** glossopalatinus

palatopharyngeus (pâl'â-tô-fâr-in-jê-ús). **SAME AS:** pharyngopalatinus.

pharyngopalatinus (fâr-ing'gô-pâl-â-tî'nî'ús). **ACTION:** Narrows fauces and shuts off nasopharynx. **ORIGIN:** Soft palate. **INSERTION:** Thyroid cartilage and aponeurosis of the pharynx. **INNERVATION:** Pharyngeal plexus

platysma (plâ-tîz'mâ). **ACTION:** Wrinkles skin of neck and chest, depresses jaw and lower lip. **ORIGIN:** Clavicle, acromion and fascia over deltoid, and pectoralis major. **INSERTION:** Lower border of mandible, risorius and opposite platysma. **INNERVATION:** Cervical branch of facial **SYN:** latissimus colli; tetragonus

rectus capitis anterior (rêk'tûs kâp'î-tîs ân-fêr'î-ôr). **ACTION:** Turns and inclines the head. **ORIGIN:** Base of atlas. **INSERTION:** Occipital bone, basilar process. **INNERVATION:** Between 1st and 2nd cervical

rectus capitis anticus major (rêk'tûs kâp'î-tîs ân-tî'kûs mâ'jor). **SAME AS:** longus capitis.

rectus capitis anticus minor (rêk'tûs kâp'î-tîs ân-tî'kûs mî'nor). **SAME AS:** rectus capitis anterior.

rectus capitis lateralis (rêk'tûs kâp'î-tîs lâ'têr-â'lis). **ACTION:** Inclines head laterally and supports it. **ORIGIN:** Transverse process of atlas. **INSERTION:** Jugular process of occipital bone. **INNERVATION:** Between 1st and 2nd cervical nerves

salpingopharyngeus sâl-pîn'gô-fâr-in-jê-ús). **ACTION:** Elevates nasopharynx. **ORIGIN:** Eustachian tube close to naso-

pharynx. INSERTION: Posterior portion of the pharyngopalatinus. INNERVATION: Pharyngeal plexus.

scalenus anterior (skā-lē'nūs ān-tē'rī-or). ACTION: Elevates 1st rib and flexes neck. ORIGIN: Transverse processes of 3rd to 6th cervical vertebrae INSERTION: Tubercle of 1st rib INNERVATION: Cervical plexus. SYN: *scalenus anticus*.

scalenus medius (skā-lē'nūs mē'dī-ūs). ACTION: Elevates 1st rib and flexes neck. ORIGIN: Transverse processes of 2nd to 6th cervical vertebrae INSERTION: First rib INNERVATION: Cervical plexus

scalenus posterior (skā-lē'nūs pōs-tērī-ōr). ACTION: Elevates 2nd rib and flexes neck. ORIGIN: Transverse processes of 4th to 6th cervical vertebrae. INSERTION: Second rib. INNERVATION: Cervical and brachial plexus. SYN: *scalenus posticus*.

sphenopalpingostaphylinus (sfē'nō-sāl-pīn-gō-stāf-i-lī'nūs). SAME AS: *tensor veli palatini*.

sternocleidomastoides (stēr'nō-klī-dō-mās-toyd'ē-ūs). ACTION: Rotates and depresses head. ORIGIN: By 2 heads, from sternum and clavicle. INSERTION: Mastoid process and outer part of superior curved line of occipital bone. INNERVATION: Spinal accessory. SYN: *sternomastoid muscle*

sternohyoideus (stēr'nō-hī-oyd'ē-ūs). ACTION: Depresses hyoid bone. ORIGIN: Manubrium sterni and 1st costal cartilage. INSERTION: Body of hyoid bone. INNERVATION: Upper cervical through ansa hypoglossi. SYN: *sternohyoid muscle*.

sternothyroideus (stēr'nō-thī-rē-oyd'ē-ūs). ACTION: Depresses thyroid cartilage. ORIGIN: Sternum and 1st costal cartilage INSERTION: Side of thyroid cartilage. INNERVATION: Upper cervical through ansa hypoglossi. SYN: *sternothyroid muscle*

styloglossus (stī'lō-glōs'ūs). ACTION: Retracts and elevates tongue. ORIGIN: Styloid process. INSERTION: Side of tongue. INNERVATION: Hypoglossal

stylohyoideus (stī'lō-hī-oyd'ē-ūs). ACTION: Fixes hyoid, drawing it up and back. ORIGIN: Styloid process. INSERTION: Body of hyoid bone. INNERVATION: Facial. SYN: *stylohyoid muscle*

stylopharyngeus (stī'lō-fār-in'jē-ūs). ACTION: Elevates and dilates pharynx. ORIGIN: Styloid process INSERTION: Thyroid cartilage and side of pharynx. INNERVATION: Glossopharyngeal

tensor palati (tēn'sōr pāl-ā'tī). SAME AS: *tensor veli palatini*.

tensor veli palatini (tēn'sōr vē'lī pāl-ā-tī-nī). ACTION: Stretches soft palate. ORIGIN: Spine of sphenoid scaphoid fossa of internal pterygoid process and eustachian tube. INSERTION: Posterior border of hard palate and aponeurosis of soft palate INNERVATION: Otic ganglion, trigeminal nerve. SYN: *tensor palati*, *circumflexus palati*; *sphenopalpingostaphylinus*

tetragonus (tēt-rā-gō'nūs). SAME AS: *platysma*.

thyreohyoideus (thī-rē-ō-hī-oyd'ē-ūs). ACTION: Depresses hyoid bone, elevates thyroid cartilage if hyoid bone is fixed. ORIGIN: Side of thyroid cartilage INSERTION: Cornu and body of hyoid bone. INNERVATION: Hypoglossal. SYN: *thyrohyoid muscle*.

uvulae (ū'vū-lē). ACTION: Elevates the

uvula. ORIGIN: Posterior nasal spine. INSERTION: Forms large part of uvula. INNERVATION: Pharyngeal plexus.

LARYNX AND EPIGLOTTIS

aryepiglotticus (ar-i-ēp-i-glōt'īk-ūs). ACTION: Closes glottis opening. ORIGIN: Arytenoid cartilage. INSERTION: Epiglottis. INNERVATION: Laryngeal, recurrent.

arytenoideus (ār-i-tē-noyd'ē-ūs). Consists of (1) *arytenoideus obliquus* and (2) *arytenoideus transversus* ACTION: Closes glottis opening. ORIGIN: Arytenoid cartilage INSERTION: (1) Aryepiglottic fold (2) Crosses between the two cartilages of the obliquus portion. INNERVATION: Laryngeal, recurrent.

cricoaarytenoideus lateralis (krī'kō-ār-i-tē-noyd'ē-ūs lāt-ēr-ā'lis) ACTION: Narrows glottis. ORIGIN: Upper border of arch of cricoid cartilage INSERTION: Muscular process of arytenoid cartilage INNERVATION: Laryngeal, recurrent

cricoaarytenoideus posterior (krī'kō-ār-i-tē-noyd'ē-ūs pōs-tē'rī-or). ACTION: Opens glottis ORIGIN: Back of cricoid cartilage INSERTION: Muscular process of arytenoid cartilage. INNERVATION: Laryngeal, recurrent

cricothyroideus (krī'kō-thī-royd'ē-ūs). ACTION: Tightens vocal cords ORIGIN: Anterior surface of cricoid cartilage. INSERTION: Thyroid cartilage. INNERVATION: Laryngeal, superior. SYN: *cricothyroid*.

thyreoarytenoideus (thī'rē-ō-ār-i-tē-noyd'ē-ūs) ACTION: Relaxes vocal cords ORIGIN: Thyroid cartilage INSERTION: Arytenoid cartilage INNERVATION: Laryngeal, recurrent SYN: *thyroarytenoid*

thyreoepiglotticus (thī'rē-ō-ēp-i-glōt'īk-ūs). ACTION: Depresses epiglottis ORIGIN: Thyroid cartilage INSERTION: Epiglottis and sacculus laryngis INNERVATION: Laryngeal, recurrent. SYN: *thyroepiglotticus*.

BACK

accessorius (āk'sēs-sō'rī-ūs). SAME AS: *iliocostalis thoracis*

bilventer cervicis (bl-vēn'tēr sēr'vī-sīs). SAME AS *spinalis capitis*

cervicalls ascendens (sēr-vī-kā'lis ā-sēn'dēns). SAME AS *iliocostalis cervicis*.

complexus (kōm-plēks'ūs). SAME AS: *semispinalis capitis*.

erector spinae (ē-rēk'tor spī'nē). SAME AS *sacrospinalis*

iliocostalis cervicis (il'ī-ō-kōs-tā'lis sēr-vī-sīs) ACTION: Extends cervical spine. ORIGIN: Angles of 3rd to 6th ribs. INSERTION: Transverse processes of 4th to 6th cervical vertebrae. INNERVATION: Branches of cervical. SYN: *cervicalls ascendens*

iliocostalis dorsi (il'ī-ō-kōs-tā'lis dor'sī). SAME AS *iliocostalis thoracis*

iliocostalis lumborum (il'ī-ō-kōs-tā'lis lūm-bō'rūm). ACTION: Extends lumbar spine. ORIGIN: With *sacrospinalis*. INSERTION: In angles of 5th to 12th ribs. INNERVATION: Branches of dorsal and lumbar SYN: *sacrolumbalis*.

iliocostalis thoracis (il'ī-ō-kōs-tā'lis thō-rās'īs). ACTION: Keeps dorsal spine erect. ORIGIN: Angles of 12th to 7th ribs. INSERTION: Sixth to 1st ribs and 7th cervical vertebra. INNERVATION:

- Branches of dorsal. SYN: *iliocostalis dorsi*; *accessorius*.
- interspinales** (in'tēr-spi-nā'lēz). A series. ACTION: Support and extend vertebral column. ORIGIN: Undersurface of spine of one vertebra. INSERTION: Spine of vertebra above. INNERVATION: Branches of spinal
- intertransversales** (in-tēr-trāns-vēr-sā'lēz). SAME AS: *intertransversarii*
- intertransversarii** (in'tēr-trāns-vēr-sā'-ri-i). ACTION: Flex vertebral column ORIGIN: Between transverse processes of contiguous vertebrae INNERVATION: Branches of ventral and dorsal divisions of spinal SYN: *intertransversales*
- latissimus dorsi** (lāt-ls't-mūs dōr'si). ACTION: Adducts, extends and rotates arm ORIGIN: Lower thoracic and lumbar vertebrae, sacrum and tip of iliac crest INSERTION: Intertubercular groove of humerus. INNERVATION: Brachial plexus
- levator scapulae** (lē-vā'tor skāp'ū-lē). ACTION: Elevates posterior angle of scapula ORIGIN: Transverse processes of four upper cervical vertebrae INSERTION: Superior edge of scapula INNERVATION: Dorsal scapular from 5th cervical, and branches of 3rd and 4th cervical. SYN: *levator anguli scapulae*.
- longissimus capitis** (lōn-jls't-mūs kāp't-tis). ACTION: Keeps head erect, draws it backward or to one side ORIGIN: Upper thoracic and lower and middle cervical vertebrae INSERTION: Mastoid process. INNERVATION: Branches of cervical. SYN: *trachelomastoid*
- longissimus cervicis** (lōn-jls't-mūs sēr'vi-sis). ACTION: Extends cervical spine. ORIGIN: Upper thoracic vertebrae. INSERTION: Ribs and upper lumbar and thoracic vertebrae INNERVATION: Branches of dorsal divisions of spinal. SYN: *transversalis colli*
- longissimus dorsi** (lōn-jls't-mūs dōr'si). SAME AS *longissimus thoracis*.
- longissimus thoracis** (lōn-jls't-mūs thōr-ā'sis). ACTION: Extends spinal column ORIGIN: Transverse processes of lumbar and dorsal vertebrae INSERTION: Lowest ribs and lumbar and dorsal vertebrae. INNERVATION: Lumbar and dorsal divisions of spinal. SYN: *longissimus dorsi*
- multifidus** (mūl-tif'id-ūs). ACTION: Rotates spinal column ORIGIN: Sacrum, iliac spine, lumbar, cervical, and dorsal vertebrae INSERTION: Laminae and spinous processes of next four vertebrae above INNERVATION: Branches of dorsal divisions of spinal.
- multifidus spinæ** (mūl-tif'id-ūs spi'nē). SAME AS: *multifidus*.
- obliquus capitis inferior** (ōb-il'kwūs kāp'i-tis in-fēr'i-or). ACTION: Rotates head. ORIGIN: Spine of axis. INSERTION: Transverse process of atlas. INNERVATION: Suboccipital.
- obliquus capitis superior** (ōb-il'kwūs kāp'i-tis sū-pēr'i-or). ACTION: Rotates head. ORIGIN: Transverse process of atlas. INSERTION: Occipital bone. INNERVATION: Suboccipital.
- rectus capitis posterior major** (rēk'tūs kāp'i-tis pōs-tēr'i-or mā'jor). ACTION: Rotates and draws head backward. ORIGIN: Spine of axis. INSERTION: Inferior curved line of occipital bone. INNERVATION: Suboccipital. SYN: *rectus capitis posticus major*.
- rectus capitis posterior minor** (rēk'tūs kāp'i-tis pōs-tēr'i-or mī'nor). ACTION: Rotates and draws head backward. ORIGIN: Posterior tubercle of atlas. INSERTION: Inferior curved line of occipital bone INNERVATION: Suboccipital. SYN: *rectus capitis posticus minor*.
- rhomboideus major** (rōm-boy'dē-ūs mā'jor). ACTION: Elevates scapula. ORIGIN: Spinous processes of 2nd to 5th thoracic vertebrae INSERTION: Vertebral border of scapula below spine. INNERVATION: Dorsal scapular from brachial plexus.
- rhomboideus minor** (rōm-boy'dē-ūs mī'nor). ACTION: Retracts and elevates scapula. ORIGIN: Spinous processes of 7th cervical vertebra and 1st thoracic vertebra INSERTION: Border of scapula above spine INNERVATION: Dorsal scapular from brachial plexus
- rotatores** (rō-tā-tō'rēz). ACTION: Extend and rotate the vertebral column ORIGIN: Transverse processes of 2nd to 12th dorsal vertebrae INSERTION: Lamina of next vertebra above INNERVATION: Branches of dorsal divisions of spinal SYN: *rotatores spinæ*.
- rotatores spinæ** (rō-tā-tō'rēz spi'nē). SAME AS: *rotatores*
- sacro-lumbalis** (sā'krō-lūm-bā'lis). SAME AS *iliocostalis lumborum*.
- sacrospinalis** (sā'krō-spi-nā'lis). ACTION: Extends vertebral column ORIGIN: Sacrum, lumbar vertebrae, iliac crest. INSERTION: Iliocostalis and longissimus dorsi INNERVATION: Posterior branches of spinal.
- semispinalis capitis** (sēm'i-spi-nā'lis kāp'i-tis). ACTION: Rotates and draws head backward ORIGIN: Transverse processes of upper six or seven thoracic and lower four cervical vertebrae INSERTION: Occipital bone, between inferior and superior curved line INNERVATION: Branches of dorsal divisions of cervical SYN: *complexus*
- semispinalis cervicis** (sēm'i-spi-nā'lis sēr'vi-sis). ACTION: Erects cervical spine ORIGIN: Transverse processes of upper five or six thoracic vertebrae. INSERTION: Spines from axis to 5th cervical vertebra INNERVATION: Branches of dorsal divisions of spinal.
- semispinalis colli** (sēm'i-spi-nā'lis kōl'i). SAME AS *semispinalis cervicis*
- semispinalis dorsi** (sēm'i-spi-nā'lis dōr'si). SAME AS *semispinalis thoracis*.
- semispinalis thoracis** (sēm'i-spi-nā'lis thō-rā'sis). ACTION: Erects vertebral column ORIGIN: Transverse processes of 6th to 10th thoracic vertebrae. INSERTION: Spines of upper four thoracic and lower two cervical vertebrae. INNERVATION: Branches of dorsal divisions of spinal SYN: *semispinalis dorsi*.
- serratus posterior inferior** (sēr-ā'tūs pōs-tēr'i-or in-fēr'i-or). ACTION: Draws ribs back and downward ORIGIN: Spines of lower two thoracic and upper two lumbar vertebrae INSERTION: Lower four ribs. INNERVATION: Branches of ventral divisions of 9th to 12th thoracic. SYN: *serratus posticus inferior*.
- serratus posterior superior** (sēr-ā'tūs pōs-tēr'i-or sū-pēr'i-or). ACTION: Elevates the ribs. ORIGIN: Spines of 7th cervical and two upper thoracic vertebrae. INSERTION: Angles of 2nd to 5th ribs. INNERVATION: Branches of ventral divi-

sions of thoracic. SYN: *serratus posticus superior*.

spinalis capitis (spī-nā'lis kăp'ī-tis). ORIGIN: Inconstant, from spines of upper dorsal and lower cervical vertebrae. INSERTION: Blends with the semi-

spinalis cervicis (spī-nā'lis sēr'vi-sis). ACTION: Extends cervical spine ORIGIN: Spines of 5th, 6th, and 7th cervical vertebrae INSERTION: Axis and, occasionally, the two vertebrae below. INNERVATION: Branches of cervical

spinalis thoracis (spī-nā'lis thō-rā'sis). ACTION: Erects spinal column ORIGIN: Spines of first two lumbar and last two thoracic vertebrae INSERTION: Spines of middle and upper thoracic vertebrae INNERVATION: Dorsal branches of spinal SYN: *spinalis dorsis*

splenius capitis (splē'nī-ūs kăp'ī-tis). ACTION: Rotates and extends head ORIGIN: Ligamentum nuchae, 7th cervical and first three thoracic vertebrae INSERTION: Mastoid process and superior curved line of occiput INNERVATION: Branches of dorsal divisions of cervical

splenius cervicis (splē'nī-ūs sēr'vi-sis). ACTION: Rotates and flexes head and neck ORIGIN: Spines of 3rd to 6th thoracic vertebrae INSERTION: Transverse processes of 1st and 2nd cervical vertebrae INNERVATION: Branches of dorsal divisions of cervical. SYN: *splenius colli*.

splenius colli (splē'nī-ūs kōl'i). SAME AS: *splenius cervicis*

supraspinatus (sū-prā-spi-nā'tūs). ACTION: Abducts arm ORIGIN: Supraspinatus fossa INSERTION: Greater tuberosity of humerus INNERVATION: Branches of suprascapular.

suspensorius duodeni (sūs-pēn-sō'rī-ūs dū'ō-dē'nī). Wide, flat band of unstriated muscle attached to the left crus of diaphragm and continuous with the muscular coat of the duodenum at its line of junction with the jejunum

trachelomastoid (tră'kē-lō-mās'toyd). SAME AS: *longissimus capitis*

transversalis colli (trāns'vēr-sā'lis kōl'i). SAME AS: *longissimus cervicis*.

trapezius (tră-pē'zi-ūs). ACTION: Draws head back and to the side, rotates scapula. ORIGIN: Superior curved line of occipital, spinous processes of 7th cervical and all thoracic vertebrae. INSERTION: Clavicle, acromion, base of spine of scapula INNERVATION: Spinal accessory and cervical plexus.

ABDOMEN

cremaster (krē-mās'tēr). ACTION: Raises testicle. ORIGIN: Midportion of inguinal ligament INSERTION: Cremasteric fascia and pubic bone. INNERVATION: Genitofemoral.

obliquus externus abdominis (ōb-il'kwūs ēks-tēr'nūs āb-dōm'i-nis). ACTION: Contracts abdomen and viscera. ORIGIN: Lower 8 ribs. INSERTION: Iliac crest, Poupart's ligament, linea alba, pubic crest. INNERVATION: Iliohypogastric, ilioinguinal, and branches of intercostal.

obliquus internus abdominis (ōb-il'kwūs in-tēr'nūs āb-dōm'i-nis). ACTION: Compresses viscera, flexes thorax forward. ORIGIN: Iliac crest, inguinal ligament, lumbar fascia. INSERTION: Few lowest ribs, linea alba, pubic crest. INNERVA-

tion: Iliohypogastric, ilioinguinal, and branches of intercostal.

pyramidalis (pi-rām-i-dā'lis). ACTION: Tightens linea alba. ORIGIN: Pubic crest. INSERTION: Linea alba INNERVATION: Branch of 12th thoracic.

quadratus lumborum (kwād-rā'tūs lūm-bō'rūm). ACTION: Flexes trunk laterally and forward. ORIGIN: Iliac crest, ilio-lumbar ligament, lower lumbar vertebrae. INSERTION: Twelfth rib and the upper lumbar vertebrae INNERVATION: Branches of 1st lumbar and 12th thoracic.

rectus abdominis (rēk'tūs āb-dōm'i-nis). ACTION: Compresses abdomen ORIGIN: Pubis. INSERTION: Cartilage of 5th to 7th ribs. INNERVATION: Branches of 7th to 12th intercostal

sphincter pylori (sfink'tēr pi-lō'rī). A thickening of middle circular layer of the gastric musculature surrounding the pylorus

transversalis abdominis (trāns'vēr-sā'lis āb-dōm'i-nis). SAME AS: *transversus abdominis*.

transversus abdominis (trāns'vēr'sūs āb-dōm'i-nis). ACTION: Compresses abdomen, flexes thorax ORIGIN: Lumbar fascia, 7th to 12th costal cartilages, inguinal ligament, iliac crest. INSERTION: Xiphoid cartilage, linea alba, pubic crest and iliopectineal line. INNERVATION: Iliohypogastric, ilioinguinal, and branches of intercostal.

PERINEUM

accelerator urinae (āk-sēl-ē-rā'tōr ū-rī-nē). SAME AS: *bulbocavernosus*.

bulbocavernosus (būl-bō-kā-vēr-nō'sūs). ACTION: Constricts bulbous urethra in male; in female constricts urethra. ORIGIN: Central point of perineum and median raphe INSERTION: Undersurface of bulb, spongy and cavernous part of penis, root of clitoris INNERVATION: Perineal branch of pudendal.

coccygeus (kōk-sij'ē-us). ACTION: Supports coccyx, closes pelvic outlet ORIGIN: Ischial spine and sacrospinous ligament INSERTION: Coccyx and lowest portion of sacrum INNERVATION: Third and 4th sacral

compressor urethrae (kōm-prēs'ōr ū-rē-thrē). SAME AS: *sphincter urethrae membranacea*

constrictor urethrae (kōn-strīk'tōr ū-rē-thrē). SAME AS: *sphincter urethrae membranacea*.

corrugator cutis ani (kor-ū-gā'tōr kūt'is ā'nī). ACTION: Wrinkles skin of anus. ORIGIN: Submucous tissue, interior of anus INSERTION: Subcutaneous tissue on opposite side of anus. INNERVATION: Sympathetic

depressor urethrae (dē-prēs'ōr ū-rē-thrē). ACTION: Depresses urethra. ORIGIN:

Ramus of ischium near the transversus perinei profundus. INSERTION: Fibers of constrictor vaginae

erector clitoridis (ē-rēk'tōr kli-tō'rī-dīs). SAME AS: *ischiocavernosus*.

erector penis (ē-rēk'tōr pē'nīs). SAME AS: *ischiocavernosus*.

ischiocavernosus (is'ki-ō-kā-vēr-nō'sūs). ACTION: Maintains erection of penis or clitoris. ORIGIN: Tuberosity of ischium and great sacrospinous ligament. INSERTION: Corpus cavernosum of clitoris or penis INNERVATION: Perineal branch of pudendal SYN: *erector clitoridis* (in female); *erector penis* (in male).

ischiococcygeus (is'ki-ō-kōk-sij'ē-ūs). SAME AS: *coccygeus*.

levator ani (lê-vâ'tôr â'nî). ACTION: Supports rectum and pelvic floor, aids in defecation. ORIGIN: Pubis, pelvic fascia, ischial spine. INSERTION: Rectum, coccyx and fibrous raphe of perineum. INNERVATION: Sacral and perineal.

sphincter ani externus (sfink'têr â'nî êks-têr'nûs). ACTION: Closes anus. ORIGIN: Ring of fibers surrounding anus. INSERTION: Coccyx and central point of perineum. INNERVATION: Hemorrhoidal branch of pudendal.

sphincter ani internus (sfink'têr â'nî in-têr'nûs). ACTION: Contracts rectum and anus, but not voluntarily. ORIGIN: Muscular ring of rectal fibers above canal.

sphincter urethrae membranaceae (sfink'têr û-rê'thrê mêm-brâ-nâ'sê-ê). ACTION: Constricts membranous urethra. ORIGIN: Ramus of pubis. INSERTION: Behind and in front of urethra. INNERVATION: Perineal branch of pudendal. SYN: *compressor urethrae*; *constrictor urethrae*.

sphincter vaginae (sfink'têr vâ-jî'nê). SAME AS *bulboacervinosus*.

sphincter vesicae (sfink'têr vês't-kê). ACTION: Shuts off internal orifice of urethra. ORIGIN: Near urethra orifice of bladder. INNERVATION: Sacral and hypogastric.

transversus perinei profundus (trâns-vêr'sûs pêr-î-nê't prô-fûndûs). ACTION: Assists compressor urethrae. ORIGIN: Ramus of ischium. INSERTION: Central tendon. INNERVATION: Perineal branch of pudendal.

transversus perinei superficialis (trâns-vêr'sûs pêr-î-nê't sù'pêr-fîsh-î-â'llis). ACTION: Tenses central tendon. ORIGIN: Ramus of ischium. INSERTION: Central point of perineum. INNERVATION: Perineal branch of pudendal.

THORAX

diaphragma (dî'â-frâg'mâ). ACTION: Increases chest capacity. ORIGIN: Ensliform cartilage, 7th to 12th ribs, arcuate ligaments and lumbar vertebrae. INSERTION: Central tendon. INNERVATION: Phrenic.

infracostales (in'frâ-kôs-tâ'lêz). SAME AS *subcostales*.

intercostales externus (in'têr-kôs-tâ'lêz êks-têr'nûs). ACTION: Draw ribs together and raise ribs. ORIGIN: Lower border of rib. INSERTION: Upper border of rib below. INNERVATION: Intercostal.

intercostales internus (in'têr-kôs-tâ'lêz in-têr'nûs). ACTION: Draw ribs together and lower ribs. ORIGIN: Lower border of rib. INSERTION: Upper border of rib below. INNERVATION: Intercostal.

levatores costarum (lê-vâ-tô'rêz kôs-tâ'rûm). ACTION: Raise ribs; flex vertebral column. ORIGIN: Transverse processes of 7th cervical and upper eleven thoracic vertebrae. INSERTION: Rib next below. INNERVATION: Branches of intercostal.

subcostales (sûb-kôs-tâ'lêz). ACTION: Draw ribs together and lower ribs. ORIGIN: Inconstant, inner surface of the ribs. INSERTION: Inner surface of one of ribs just below. INNERVATION: Intercostal.

transversus thoracis (trâns-vêr'sûs thôr-â'sis). ACTION: Narrows the chest. ORIGIN: Xiphoid cartilage and sternum. INSERTION: Costal cartilages, 2nd to 6th ribs. INNERVATION: Branches of intercostal.

triangularis sternal (trî'ân-gû-lâ'rîs stêr-nî). SAME AS: *transversus thoracis*.

SHOULDER

deltoides (dêl-toy'dê-ûs). ACTION: Raises arm and rotates it. ORIGIN: Clavicle, acromion process and spine of scapula. INSERTION: Shaft of humerus. INNERVATION: Axillary (circumflex) from brachial plexus. SYN *deltoid*.

infraspinatus (in'frâ-spi-nâ'tûs). ACTION: Rotates arm back and out. ORIGIN: Infraspinous fossa of scapula. INSERTION: Great tuberosity of humerus. INNERVATION: Suprascapular from brachial plexus.

pectoralis major (pêk-tô-râ'llis mâ'jôr). ACTION: Flexes, adducts and rotates arm. ORIGIN: Sternum, clavicle, and cartilages of 1st to 6th ribs. INSERTION: Bicipital ridge of humerus. INNERVATION: Anterior thoracic from brachial plexus.

pectoralis minor (pêk-tô-râ'llis mî'nôr). ACTION: Draws down scapula and point of shoulder, raises ribs. ORIGIN: Third to 5th ribs. INSERTION: Coracoid process of scapula. INNERVATION: Anterior thoracic from brachial plexus.

serratus anterior (sêr-â-tû, ân-têr'tôr). ACTION: Elevates ribs, rotates scapula. ORIGIN: Upper 8 or 9 ribs. INSERTION: Angles and vertebral border of scapula. INNERVATION: Long thoracic from brachial plexus.

serratus magnus (sêr-â'tûs mâg'nûs). SAME AS: *serratus anterior*.

subclavius (sûb-klâ'vî-ûs). ACTION: Draws clavicle down and forward or elevates the 1st rib. ORIGIN: First rib and its cartilage. INSERTION: Undersurface of clavicle. INNERVATION: Special nerve with fibers from 5th and 6th cervical.

subscapularis (sûb-skâp-û-lâ'rîs). ACTION: Rotates humerus inward and lowers it. ORIGIN: Subscapular fossa. INSERTION: Lesser tubercle of humerus. INNERVATION: Subscapular.

supraspinatus (sûp-râ-spi-nâ'tûs). ACTION: Abducts and raises arm. ORIGIN: Supraspinous fossa of scapula. INSERTION: Greater tubercle of humerus. INNERVATION: Branches of suprascapular.

teres major (têrêz mâ'jôr). ACTION: Rotates arm inward, draws it down and back. ORIGIN: Axillary border of scapula. INSERTION: Lesser tubercle of humerus. INNERVATION: Branch of lower subscapular.

teres minor (têrêz mî'nôr). ACTION: Rotates arm outward. ORIGIN: Axillary border of scapula. INSERTION: Greater tubercle of humerus. INNERVATION: Branch of axillary (circumflex).

ARM AND FOREARM

abductor pollicis longus (âb-dûk'tôr pôl'tî-sis lôn'gûs). ACTION: Abducts thumb and wrist. ORIGIN: Dorsal surface of radius, ulna and interosseous membrane. INSERTION: Base of 1st metacarpal. INNERVATION: Branch of radial.

anconeus (ân-kô-nê-ûs). ACTION: Extends forearm. ORIGIN: Lateral epicondyle of humerus. INSERTION: Olecranon and posterior surface of ulna. INNERVATION: Branch of radial.

biceps brachii (bî'sêps brâ'kî-î). ACTION: Flexes arm and forearm and supinates hand. ORIGIN: 1. Short head from coracoid process 2. Long head from scapula above glenoid fossa. INSERTION:

Bicipital tuberosity of radius. **INNERVATION:** Musculocutaneous.

brachialis (bră'ki-ă'lis). **ACTION:** Flexes forearm. **ORIGIN:** Lower half of anterior surface of humerus. **INSERTION:** Coronoid process of ulna. **INNERVATION:** Musculocutaneous and radial.

brachioradialis (bră'ki-ô-ră'di-ă'lis). **ACTION:** Flexes and supinates forearm. **ORIGIN:** Supracondylar ridge of humerus. **INSERTION:** Styloid process of radius. **INNERVATION:** Branch of radial. **SYN:** *supinator longus*

coracobrachialis (kor-ă-kô-bră'ki-ă'lis). **ACTION:** Raises and adducts arm. **ORIGIN:** Coracoid process of scapula. **INSERTION:** Middle of inner border of humerus. **INNERVATION:** Musculocutaneous

extensor carpi radialis brevis (eks-tên'sôr kar'pi ră'di-ă'lis brê'vis). **ACTION:** Extends and abducts wrist. **ORIGIN:** External condyloid ridge of humerus. **INSERTION:** Base of 3rd metacarpal. **INNERVATION:** Branch of radial

extensor carpi radialis longus (eks-tên'sôr kar'pi ră'di-ă'lis lôn'gûs). **ACTION:** Extends and abducts wrist. **ORIGIN:** External condyloid ridge of humerus. **INSERTION:** Base of 2nd metacarpal. **INNERVATION:** Branch of radial.

extensor carpi ulnaris (eks-tên'sôr kar'pi ûl-nă'ris). **ACTION:** Extends and abducts wrist. **ORIGIN:** Lateral epicondyle of humerus. **INSERTION:** Base of 5th metacarpal. **INNERVATION:** Branch of radial.

extensor digiti quinti proprius (eks-tên'sôr dij'i-ti kwint'i prô'p'ri-ûs). **SAME AS:** *extensor digiti minimi*.

extensor digitorum communis (eks-tên'sôr dij-i-tô'rûm kôm-mû'n'is). **ACTION:** Extends fingers and wrist. **ORIGIN:** External epicondyle of humerus. **INSERTION:** Second and 3rd phalanges. **INNERVATION:** Branch of radial.

extensor indicis (eks-tên'sôr in'di-sis). **ACTION:** Extends index finger. **ORIGIN:** Dorsal surface of ulna and interosseous membrane. **INSERTION:** First tendon of extensor digitorum communis. **INNERVATION:** Branch of radial

extensor ossis metacarpi pollicis (eks-tên'sôr ôs'is mêt'ă-kar'pi pôl'i-sis). **SAME AS:** *abductor pollicis longus*

extensor digiti minimi (eks-tên'sôr dij-i-ti' mîn'im-i). **ACTION:** Extends little finger. **ORIGIN:** External epicondyle of humerus. **INSERTION:** Dorsum of 1st phalanx of little finger. **INNERVATION:** Branch of radial. **SYN:** *extensor digiti quinti proprius*.

extensor pollicis brevis (eks-tên'sôr pôl'i-sis brê'vis). **ACTION:** Extends thumb and abducts 1st metacarpal. **ORIGIN:** Dorsal surface of radius. **INSERTION:** Base of 1st phalanx of thumb. **INNERVATION:** Branch of radial.

extensor pollicis longus (eks-tên'sôr pôl'i-sis lôn'gûs). **ACTION:** Extends terminal phalanx of thumb and abducts hand. **ORIGIN:** Dorsal surface of ulna. **INSERTION:** Base of 2nd phalanx of thumb. **INNERVATION:** Branch of radial.

extensor primi internodii pollicis (eks-tên'sôr pri'mô dij'in'têr-nô'di-i pôl'i-sis). **SAME AS:** *extensor pollicis brevis*.

extensor secundi internodii pollicis (eks-tên'sôr sê-kûn-dij'in'têr-nô'di-i pôl'i-sis). **SAME AS:** *extensor pollicis longus*.

flexor carpi radialis (flêks'or kăr'pi ră'di-ă'lis). **ACTION:** Flexes and abducts wrist. **ORIGIN:** Medial epicondyle of humerus. **INSERTION:** Base of 2nd metacarpal. **INNERVATION:** Branch of median. **SYN:** *radiocarpus*.

flexor carpi ulnaris (flêks'or kăr'pi ûl-nă'ris). Consists of (1) humeral head and (2) ulnar head. **ACTION:** Flexes and adducts wrist. **ORIGIN:** (1) Medial epicondyle of humerus. (2) Olecranon process and posterior border of ulna. **INSERTION:** Pisiform bone and 5th metacarpal. **INNERVATION:** Branch of ulnar.

flexor digitorum profundus (flêks'or dij-i-tô'rûm prô-fûn'dûs). **ACTION:** Flexes the phalanges. **ORIGIN:** Upper three-fourths of shaft of ulna. **INSERTION:** Terminal phalanges of fingers. **INNERVATION:** Branch of ulnar and branch of median.

flexor digitorum sublimis (flêks'or dij-i-tô'rûm súb-îl'm'is). **SAME AS:** *flexor digitorum superficialis*

flexor digitorum superficialis (flêks'or dij-i-tô'rûm sù'pêr-fish-ê-ă'lis). Consists of three heads: (1) humeral, (2) ulnar and (3) radial. **ACTION:** Flexes middle phalanges and hand. **ORIGIN:** (1) Medial epicondyle of humerus. (2) Medial side of coronoid process. (3) Outer border of radius. **INSERTION:** Second phalanx of each finger. **INNERVATION:** Branches of median. **SYN:** *flexor digitorum sublimis*.

flexor pollicis longus (flêks'or pôl'i-sis lôn'gûs). **ACTION:** Flexes thumb. **ORIGIN:** Anterior surface of middle 3rd of radius. **INSERTION:** Terminal phalanx of thumb. **INNERVATION:** Branch of median.

palmaris longus (păl-mă'ris lôn'gûs). **ACTION:** Tightens palmar fascia, flexes wrist. **ORIGIN:** Medial epicondyle of humerus. **INSERTION:** Transverse carpal ligament and palmar fascia. **INNERVATION:** Branch of median

pronator quadratus (prô-nă'tor kwad-ră'tûs). **ACTION:** Pronates forearm. **ORIGIN:** Lower 4th of ulna. **INSERTION:** Lower 4th of radius. **INNERVATION:** Volar interosseous.

pronator teres (prô-nă'tor têrêz). Consists of (1) humeral head and (2) ulnar head. **ACTION:** Pronates hand. **ORIGIN:** (1) Medial epicondyle of humerus. (2) Coronoid process of ulna. **INSERTION:** Lateral surface of shaft of radius. **INNERVATION:** Branch of median.

radiocarpus (ră'di-ô-kăr'pûs). **SAME AS:** *flexor carpi radialis*.

subanconeus (súb-ăn-kô'nê-ûs). **ACTION:** Tightens posterior ligament of elbow. **ORIGIN:** Lower portion of humerus. **INSERTION:** Posterior ligament of elbow joint. **INNERVATION:** Radial

supinator (sû'pî-nă'tor). **ACTION:** Supinates hand. **ORIGIN:** Lateral epicondyle of humerus; oblique line of ulna; elbow joint. **INSERTION:** Outer surface of radius. **INNERVATION:** Branch of radial. **SYN:** *supinator radii brevis*.

supinator longus (sû'pî-nă'tor lôn'gûs). **SAME AS:** *brachioradialis*.

supinator radii brevis (sû'pî-nă'tor ră'di-î brê'vis). **SAME AS:** *supinator*.

triceps brachii (tri'sêps bră'ki-i). Consists of three heads: (1) long, (2)

lateral and (3) medial. ACTION: Extends forearm and arm. ORIGIN: (1) Infraglenoid tubercle of scapula. (2) Posterior surface of humerus below great tubercle. (3) Humerus below radial groove. INSERTION: Olecranon process of ulna. INNERVATION: Branches of radial.

HAND

abductor digiti quinti (ăb-dŭk'tŏr dij'ti-kwĭn'ti). ACTION: Abducts little finger. ORIGIN: Pisiform bone and ligaments INSERTION: Inner side of 1st phalanx of little finger. INNERVATION: Ulnar, palmar branch.

abductor minimi digiti (ăb-dŭk'tŏr min'i-mi dij'ti-ti). SAME AS: *abductor digiti quinti*.

abductor pollicis brevis (ăb-dŭk'tŏr pŏl't-sis brĕ'vis). ACTION: Abducts thumb. ORIGIN: Ridge of trapezium and transverse carpal ligament INSERTION: Outer side of 1st phalanx of thumb. INNERVATION: Branch of median

abductor pollicis longus (ăb-dŭk'tŏr pŏl't-sis lŏng'gŭs). ACTION: Abducts and assists in extending thumb ORIGIN: Posterior surfaces of radius and ulna. INSERTION: Outer side of base of 1st metacarpal INNERVATION: Branch of radial.

adductor pollicis (ăd-dŭk'tŏr pŏl't-sis). ACTION: Adducts thumb. ORIGIN: Third metacarpal bone INSERTION: Inner side of base of 1st phalanx of thumb. INNERVATION: Ulnar.

flexor brevis minimi digiti (flĕks'ŏr brĕ'vis min'i-mi dij'ti-ti). SAME AS *flexor digiti quinti brevis*.

flexor digiti quinti brevis (flĕks'ŏr dij'ti-kwĭn'ti brĕ'vis). ACTION: Flexes 1st phalanx of little finger. ORIGIN: Unciform bone INSERTION: First phalanx of little finger. INNERVATION: Branch of ulnar.

flexor pollicis brevis (flĕks'ŏr pŏl't-sis brĕ'vis). ACTION: Flexes 1st phalanx of thumb ORIGIN: Transverse carpal ligament, metacarpal bone INSERTION: Base of 1st phalanx of thumb INNERVATION: Branch of median and of ulnar

interossei dorsales manus (in'tĕr-ŏs'ĕ-i dŏr-să'lĕz mă'nŭs). FOUR. ACTION: Abduct and adduct fingers ORIGIN: Sides of metacarpal bones INSERTION: First phalanges. INNERVATION: Branch of ulnar.

interossei palmares (in'tĕr-ŏs'ĕ-i pălmă'rĕz). SAME AS *interossei volares*

interossei volares (in'tĕr-ŏs'ĕ-i vŏ-lă'rĕz). THREE. ACTION: Adduct index finger, abduct ring and little fingers. ORIGIN: Metacarpal bones laterally INSERTION: Ulnar side of index finger, and radial sides of ring and little fingers. INNERVATION: Branch of ulnar.

lumbricales manus (lŭm-brĭ-kă'lĕz mă'nŭs). FOUR. ACTION: Flex 1st and extend 2nd and 3rd phalanges ORIGIN: Tendon of flexor digitorum profundus. INSERTION: First phalanx and extensor tendon. INNERVATION: Median and ulnar.

opponens digiti quinti (ŏp-pŏ'nĕns dij'ti-kwĭn'ti). ACTION: Flexes and adducts little finger. ORIGIN: Unciform bone; transverse carpal ligament INSERTION: Fifth metacarpal bone. INNERVATION: Branch of ulnar.

opponens minimi digiti (ŏp-pŏ'nĕns min'i-mi dij'ti-ti). SAME AS: *opponens digiti quinti*.

opponens pollicis (ŏp-pŏ'nĕns pŏl't-sis). ACTION: Flexes and adducts thumb. ORIGIN: Trapezium and transverse carpal ligament. INSERTION: First metacarpal bone INNERVATION: Median.

palmaris brevis (păl-mă'rĭs brĕ'vis). ACTION: Wrinkles skin on inner side of hand. ORIGIN: Central portion of palmar aponeurosis and transverse carpal ligament. INSERTION: Skin of ulnar side of hand. INNERVATION: Branch of ulnar.

HIP, THIGH, LOWER EXTREMITY

adductor brevis (ăd-dŭk'tŏr brĕ'vis). ACTION: Flexes and adducts thigh. ORIGIN: Ramus of pubis INSERTION: Upper portion of linea aspera of femur. INNERVATION: Branch of obturator.

adductor longus (ăd-dŭk'tŏr lŏng'gŭs). ACTION: Adducts and flexes thigh. ORIGIN: Pubic crest and symphysis INSERTION: Middle of linea aspera of femur INNERVATION: Branch of obturator.

adductor magnus (ăd-dŭk'tŏr măg'nŭs). ACTION: Adducts thigh and rotates it outward. ORIGIN: Ramus of ischium and pubis. INSERTION: Linea aspera of femur and medial condyle. INNERVATION: Branch of sciatic and obturator.

articularis genu (ar-tĭk'ŭ-lă'rĭs jĕ'nŭ). ACTION: Elevates capsule of knee joint. ORIGIN: Lower quarter of anterior surface of femoral shaft. INSERTION: Synovial membrane of knee joint INNERVATION: Branch of femoral. SYN: *subcrureus*.

biceps femoris (bĭ'sĕps fĕm'ŏ-rĭs). ACTION: Flexes knee and rotates it outward ORIGIN: (1) Short head from linea aspera. (2) Long head from ischial tuberosity. INSERTION: Head of fibula; lateral condyle of tibia. INNERVATION: (1) Peroneal, and (2) tibial portions of sciatic.

crureus (krŭ'rĕ-ŭs) SAME AS *vastus intermedius*.

gemellus inferior (jĕ-mĕl'ŭs in-fĕ'rĭ-ŏr). ACTION: Rotates thigh outward. ORIGIN: Ischial tuberosity INSERTION: Greater trochanter INNERVATION: Sacral

gemellus superior (jĕ-mĕl'ŭs sŭ-pĕ'rĭ-ŏr). ACTION: Rotates thigh outward ORIGIN: Spine of ischium INSERTION: Greater trochanter INNERVATION: Sacral plexus.

gluteus maximus (glŭ'tĕ-ŭs măks'i-mŭs). ACTION: Extends and rotates thigh. ORIGIN: Superior curved iliac line and crest, coccyx and sacrum INSERTION: Fascia lata and femur below greater trochanter INNERVATION: Inferior gluteal

gluteus medius (glŭ'tĕ-ŭs mĕ'dĭ-ŭs). ACTION: Abducts and rotates thigh. ORIGIN: Lateral surface of ilium. INSERTION: Greater trochanter. INNERVATION: Branches of superior gluteal.

gluteus minimus (glŭ'tĕ-ŭs min'i-mŭs). ACTION: Abducts and extends thigh ORIGIN: Lateral surface of ilium. INSERTION: Greater trochanter. INNERVATION: Branch of superior gluteal.

gracilis (grăs'i-lĭs). ACTION: Flexes and adducts leg; adducts thigh. ORIGIN: Symphysis pubis and pubic arch. INSERTION: Medial surface of shaft of tibia. INNERVATION: Branch of obturator

iliacus (i-lĭ'ă-kŭs). ACTION: Flexes and rotates thigh. ORIGIN: Margin of iliac fossa. INSERTION: Lesser trochanter. INNERVATION: Branches of femoral.

obturator externus (ôb-tû-râ'tôr êks-têr-nûs). ACTION. Rotates thigh outward. ORIGIN: Margin of thyroid foramen and obturator membrane. INSERTION: Digital fossa of greater trochanter. INNERVATION: Branch of obturator

obturator internus (ôb-tû-râ'tôr in-têr-nûs). ACTION. Rotates thigh outward. ORIGIN: Pubes, ischium, obturator foramen. INSERTION: Inner surface of great trochanter. INNERVATION: Sacral plexus

pectineus (pêk-tin'ê-ûs). ACTION. Flexes and adducts thigh. ORIGIN: Pubic spine, iliopectineal line. INSERTION: Pectineal line of femur. INNERVATION: Branch of obturator and femoral.

piriformis (pi-ri-fôr'mis). ACTION. Abducts and rotates thigh outward. ORIGIN: Margins of anterior sacral foramina and great sacrospinous notch of ilium. INSERTION: Upper margin of greater trochanter. INNERVATION: Branch of sacral

psaos major (sô'âs mǎ'jor). ACTION. Flexes thigh, adducts and rotates it medially. ORIGIN: Last thoracic and all of the lumbar vertebrae. INSERTION: Lesser trochanter of femur. INNERVATION: Lumbar plexus. SYN: *psaos magnus*

psaos minor (sô'âs mǎ'nor). ACTION. Tenses iliac fascia. ORIGIN: Twelfth thoracic and 1st lumbar vertebrae. INSERTION: Iliac fascia and iliopectineal tuberosity. INNERVATION: Branch of lumbar. SYN: *psaos parvus*

pyriformis (pi-ri-fôr'mis). SAME AS: *piriformis*.

quadratus femoris (kwǎd-ra'tûs fêm'ô-ris). ACTION. Rotates thigh outward. ORIGIN: Ischial tuberosity. INSERTION: Intertracheal ridge. INNERVATION: Sciatic

quadriceps extensor femoris (kwǎd-ris êks-tên'sor fêm'ô-ris). SAME AS: *quadriceps femoris*

quadriceps femoris (kwǎd-ris fêm'ô-ris). ACTION. Extends leg. ORIGIN: By four heads: iectus femoris, vastus medialis, vastus lateralis, and vastus intermedius. INSERTION: Patella and tibial tuberosity. INNERVATION: Branches of femoral

rectus femoris (rêk'tûs fêm'ô-ris). ACTION. Extends leg. ORIGIN: Iliac spine, upper margin of acetabulum. INSERTION: Base of patella. INNERVATION: Femoral

sartorius (sâr-tô'ri-ûs). ACTION: Flexes and rotates thigh and leg. ORIGIN: Anterior superior iliac spine. INSERTION: Tibial tuberosity. INNERVATION: Branches of femoral

semimembranosus (sêm'm-mem-brǎ-nô'sûs). ACTION. Flexes and rotates leg; extends thigh. ORIGIN: Ischial tuberosity. INSERTION: Medial condyle of tibia. INNERVATION: Tibial portion of sciatic

semitendinosus (sêm'm-tên-dî-nô'sûs). ACTION. Flexes and rotates leg, extends thigh. ORIGIN: Ischial tuberosity. INSERTION: Shaft of tibia below internal tuberosity. INNERVATION: Tibial portion of sciatic

subcutaneous (sûb-krû'rê-ûs). SAME AS: *articularis genui*.

tensor fasciae latae (tên'sor fâs'i-ê lǎ-tê). ACTION: Flexes and rotates thigh. ORIGIN: Iliac crest, iliac spine, fascia

lata. INSERTION: Iliotibial band of fascia lata. INNERVATION: Branch of superior gluteal

tensor fasciae femoris (tên'sor fâs'i-ê fêm'ô-ris). SAME AS: *tensor fasciae latae*

vastus lateralis (vâs'tûs lât-êr-â'llis). ACTION. Extends knee. ORIGIN: Linea aspera to greater trochanter. INSERTION: Common tendon of quadriceps femoris. INNERVATION: Branches of femoral. SYN: *vastus externus*

vastus intermedius (vâs'tûs in'têr-mê-di-ûs). ORIGIN: Upper part of anterior surface of shaft of femur. INSERTION: Common tendon of quadriceps femoris. INNERVATION: Branches of femoral. SYN: *crucius*

vastus medialis (vâs'tûs mǎ-di-â'llis). ACTION. Extends leg, draws patella in. ORIGIN: Linea aspera of femur. INSERTION: Common tendon of quadriceps femoris. INNERVATION: Branches of femoral. SYN: *vastus internus*

LEG

extensor digitorum longus (êks-tên'sor dij-i-tô'rûm long'gûs). ACTION. Extends toes, flexes foot. ORIGIN: External tuberosity of tibia, body of fibula. INSERTION: Second and 3rd phalanges of toes. INNERVATION: Branches of peroneal

extensor hallucis longus (êks-tên'sor hăl-û-sis long'gûs). ACTION. Extends great toe; flexes foot. ORIGIN: Front of fibula and interosseous membrane. INSERTION: Terminal phalanx of great toe. INNERVATION: Branch of peroneal

extensor proprius hallucis (êks-tên'sor prô'pri-ûs hăl-û-sis). SAME AS: *extensor hallucis longus*

flexor digitorum longus (flêks'ôr dij-i-tô'rûm long'gûs). ACTION. Flexes phalanges and extends toes. ORIGIN: Posterior surface of tibia. INSERTION: Terminal phalanges of four lesser toes. INNERVATION: Branch of tibial

flexor hallucis longus (flêks'ôr hăl-û-sis long'gûs). ACTION. Flexes great toe and extends foot. ORIGIN: Lower portion of shaft of fibula. INSERTION: Distal phalanx of great toe. INNERVATION: Posterior tibial

gastrocnemius (gâs-trôk-nê'mi-ûs). ACTION. Flexes foot and leg. ORIGIN: External and internal femoral condyles. INSERTION: By tendo calcaneus into os calcis. INNERVATION: Branches of tibial

peroneus brevis (pêr-ô-nê'ûs brê'vis). ACTION. Extends and abducts foot. ORIGIN: Midportion of shaft of fibula. INSERTION: Base of 5th metatarsal bone. INNERVATION: Branch of peroneal

peroneus longus (pêr-ô-nê'ûs long'gûs). ACTION. Extends, abducts and everts foot. ORIGIN: Upper fibula and external condyle of tibia. INSERTION: By tendon to internal cuneiform and 1st metatarsal bone. INNERVATION: Branch of peroneal

peroneus tertius (pêr-ô-nê'ûs têr'shî-ûs). ACTION: Flexes foot. ORIGIN: Lower part of fibula. INSERTION: Fifth metatarsal bone. INNERVATION: Branch of peroneal

plantaris (plân-tǎ'ris). ACTION: Extends foot. ORIGIN: External supracondylar ridge of femur. INSERTION: Inner border of tendo calcaneus. INNERVATION: Branch of tibial

popliteus (póp'lít-ē'ūs). ACTION: Flexes leg, rotates it inward. ORIGIN: External condyle of femur. INSERTION: Posterior surface of tibia. INNERVATION: Branch of tibial

soleus (sō'lē-ūs). ACTION: Extends and rotates foot. ORIGIN: Upper shaft of fibula, oblique line of tibia. INSERTION: By tendo calcaneus to os calcis INNERVATION: Tibial

tibialis anterior (tīb-i-ā'līs ān-tē'rī-ōr). ACTION: Elevates and flexes foot ORIGIN: Upper tibia, interosseous membrane and intermuscular septum INSERTION: Internal cuneiform and 1st metatarsal INNERVATION: Branch of peroneal SYN *tibialis anticus*

tibialis posterior (tīb-i-ā'līs pōs-tē'rī-ōr). ACTION: Extends tarsus and inverts foot ORIGIN: Shaft of fibula and tibia INSERTION: Tuberosity of scaphoid, 2nd to 4th metatarsal, internal cuneiform. INNERVATION: Branch of tibial. SYN: *tibialis posticus*.

FOOT

abductor digiti quinti (āb-dūk'tōr dīj'i-tī kwīn'tī). ACTION: Abducts the little toe. ORIGIN: Outer tuberosity of calcaneus, plantar fascia and intermuscular septum INSERTION: External side of 1st phalanx of little toe INNERVATION: Lateral plantar.

abductor hallucis (āb-dūk'tōr hāl-ū'sīs). ACTION: Abducts great toe ORIGIN: Inner tuberosity of os calcis, plantar fascia. INSERTION: Inner side, 1st phalanx of great toe. INNERVATION: Medial plantar

abductor minimi digiti (āb-dūk'tōr mīn'i-mī dīj'i-tī). SAME AS *abductor digiti quinti*.

adductor hallucis (ād-dūk'tōr hāl-ū'sīs). ACTION: Adducts great toe ORIGIN: Tarsal terminations of middle metatarsal bones INSERTION: Base of 1st phalanx of great toe INNERVATION: Branch of lateral plantar

adductor obliquus hallucis (ād-dūk'tōr ōb-lī'kwūs hāl-ū'sīs). SAME AS *adductor hallucis*.

adductor transversus hallucis (ād-dūk'tōr trāns-vēr'sūs hāl-ū'sīs). SAME AS *adductor hallucis*.

extensor digitorum brevis (ēks-tēn'sōr dīj-i-tō'rūm brē'vis). ACTION: Extends toes. ORIGIN: Dorsal surface of os calcis INSERTION: To 1st phalanx of great toe and the tendons of extensor digitorum longus. INNERVATION: Branch of peroneal.

flexor accessorius (flēks'ōr āk-sē-sō'rī-ūs). SAME AS *quadratus plantae*

flexor brevis minimi digiti (flēks'ōr brē'vis mīn'i-mī dīj'i-tī). SAME AS: *flexor digiti quinti brevis*.

flexor digiti quinti brevis (flēks'ōr dīj'i-tī kwīn'tī brē'vis). ACTION: Flexes the little toe. ORIGIN: Base of metatarsal of little toe and sheath of peroneus longus. INSERTION: Outer side of base of 1st phalanx of little toe. INNERVATION: External plantar.

flexor digitorum brevis (flēks'ōr dīj-i-tō'rūm brē'vis). ACTION: Flexes toe. ORIGIN: Os calcis and plantar fascia. INSERTION: Second phalanges of lesser toes. INNERVATION: Internal plantar.

flexor hallucis brevis (flēks'ōr hāl-ū'sīs brē'vis). ACTION: Flexes great toe. ORIGIN: Internal surface of cuboid and middle and external cuneiform bones INSERTION: Sides of base of 1st phalanx of great toe INNERVATION: Internal and external plantar

interosseus dorsalis pedis (īn'tēr-ōs'ē-ūs dōr-sā'līs pē'dīs). FOUR ACTION: Adduct 2nd toe, abduct 2nd, 3rd, and 4th toe. ORIGIN: Shafts of adjacent metatarsal bones INSERTION: First phalanges of lesser toes. INNERVATION: External plantar

interosseus plantaris (īn'tēr-ōs'ē-ūs plān-tā'rīs). THREE. ACTION: Adduct 3 outer toes ORIGIN: Third, 4th, and 5th metatarsal bones INSERTION: First phalanx of corresponding toe INNERVATION: External plantar.

lumbricalis (lūm-brī-kā'līs). FOUR. ACTION: Flex the 1st and extend the 2nd and 3rd phalanges. ORIGIN: Tendons of flexor digitorum longus INSERTION: First phalanx of corresponding toe INNERVATION: External and internal plantar

pronator pedis (prō-nā'tōr pē'dīs). SAME AS *quadratus plantae*.

quadratus plantae (kwād-rā'tūs plān'tē). ACTION: Assists flexing of toes ORIGIN: Inferior surface of os calcis by 2 heads from outer and inner borders INSERTION: Tendons of flexor digitorum longus INNERVATION: Branch of lateral plantar SYN *flexor accessorius*

transversus pedis (trāns-vēr'sus pē'dīs). Transverse head of adductor hallucis.

GENERAL

arrectores pilorum (ār-rēk-tō'rēz pī-lō'rūm). ACTION: Elevates hairs of skin. ORIGIN: Papillary layer of skin INSERTION: Hair follicles. INNERVATION: Sympathetic.

Principal Joints

Joints	Variety	Ligaments
Sternoclavicular	Double arthrodial	Capsular, anterior and posterior sternoclavicular, inter- and costoclavicular, articular disk
Acromioclavicular	Arthrodial	Capsular, superior and inferior acromioclavicular; articular disk; coracoclavicular (trapezoid and conoid)
Shoulder	Enarthrodial (ball-and-socket)	Capsular; coracohumeral, glenohumeral; transverse humeral; glenoidal labrum
Elbow	Ginglymus (hinge)	Capsular, ulnar and radial collateral
Radioulnar, proximal	Trochoid (pivot)	Annular
Radioulnar, middle	Trochoid	Oblique, interosseous membrane
Radioulnar, distal	Trochoid	Volar and dorsal radioulnar; articular disk
Wrist	Condylod	Volar and dorsal radiocarpal, ulnar and radial collateral
Intercarpal		
(1) Carpal bones, proximal row	Arthrodial	Dorsal, volar, interosseous
(2) Carpal bones, distal row	Arthrodial	Dorsal, volar; interosseous
(3) Carpal bones, two rows with each other		
Carpometacarpal	Arthrodial	Volar, dorsal, collateral
Intermetacarpal		Dorsal, volar, interosseous
Metacarpophalangeal	Condylod	Dorsal, volar, interosseous, transverse metacarpal
Interphalangeal	Ginglymus	Volar, collateral
Hip	Enarthrodial	Volar, collateral
Knee	Condylod and arthrodial	Capsular; iliofemoral, pubocapsular, ischiofemoral, ligamentum capitis femoris, transverse acetabular
Tibiofibular	Arthrodial	Capsular, ligamentum patellae, oblique and arcuate popliteal, tibial and fibular collateral, anterior and posterior cruciate, medial and lateral meniscus, transverse, coronary.
Tibiofibular syndesmosis	Arthrodial	Capsular; anterior, posterior
Ankle	Ginglymus	Anterior and posterior tibiofibular; inferior transverse; interosseous
Subtalar	Arthrodial	Capsular, deltoid, anterior and posterior talofibular; calcaneofibular
Talocalcaneonavicular	Arthrodial	Capsular, anterior, posterior, lateral, medial and interosseous talocalcaneal
Calcaneocuboid	Arthrodial	Capsular; dorsal talonavicular
Tarsometatarsal	Arthrodial	Capsular, dorsal calcaneocuboid; bifurcated; long plantar, plantar calcaneocuboid.
Intermetatarsal	Arthrodial	Dorsal, plantar; interosseous
Metatarsophalangeal	Condylod	Dorsal, plantar; interosseous
Interphalangeal	Ginglymus	Plantar, collateral
Vertebral bodies	Anopharthrodial	Plantar, collateral
Vertebral arches	Arthrodial	Anterior and posterior longitudinal; intervertebral fibrocartilages
Atlas	Trochoid; arthrodial	Capsular, ligamenta flava, supraspinal; ligamentum nuchae; interspinal, intertransverse
Vertebral column with cranium	Condylod	Capsular, anterior and posterior atlantoaxial; transverse
Mandible (Jaw)	Ginglymus, arthrodial	Capsular; anterior and posterior atlanto-occipital membrane; lateral; membrana tectoria; alar; apical odontoid
Ribs, heads of	Arthrodial	Capsular; temporomandibular; sphenomandibular, articular disk; stylomandibular
Ribs, tubercles and necks of	Arthrodial	Capsular, radiate; intra-articular.
Sterncostal	Arthrodial	Capsular; anterior and posterior costotransverse; neck of rib, tubercle of rib
Sacroiliac	Amphiarthrodial	Capsular; radiate and intra-articular sternocostal; costoxiphoid.
Sacrum and ischium	Amphiarthrodial	Anterior and posterior sacroiliac; interosseous.
Sacrocoxygeal	Amphiarthrodial	Sacrospinous
		Anterior, posterior and lateral sacrocoxygeal, interposed fibrocartilage; interarticular
Pubic	Amphiarthrodial	Superior and arcuate pubic; interpubic fibrocartilaginous lamina.

Table of Nerves

Name	BNA and NA Equivalents*	Origin	Function	Distribution
Abducent	N abducens	Pons	Motor	Lateral rectus muscle of eye
Auditory	N acusticus [BNA] N vestibulocochlearis [NA]	Cochlea	Special sense of hearing	Temporal lobes
Auricular, great	N auricularis magnus	Second and third cervical through cervical plexus	Sensory	Side of neck; skin of ear and cheek
Auricular, posterior	N auricularis posterior	Facial	Motor	Posterior auricular muscle
Auriculotemporal	N auriculotemporalis	Mandibular div. of trigeminal	Sensory	Side of scalp
Buccal	N buccalis	Mandibular div. of trigeminal	Sensory	Skin and mucous membrane of cheek
Calcanear, internal	N calcaneus medialis [BNA]	Posterior tibial	Sensory	Sole of foot
Cervical n., superficial (cutaneous cervical n.; transverse n. of neck)	N cutaneus colli [BNA]	Second and third cervical through cervical plexus	Sensory	Skin of front of neck
Chorda, tympani	N transversus colli [NA]	Facial	Motor	Sublingual and submandibular glands
Ciliary, long	N ciliares longi	Nasal	Sensory and motor	Cornea, iris and ciliary body
Ciliary, short	N ciliares breves	Ciliary ganglion	Sensory and motor	Cornea, iris and ciliary body
Circumflex (Axillary)	N axillaris	Posterior cord of brachial plexus	Motor and sensory	Deltoid, teres minor, shoulder joint, and overlying skin
Coccygeal	N. coccygeus	Spinal cord	Motor and sensory	Coccygeus muscle and skin over coccyx
Cochlear (See also Vestibulocochlear n.)	N cochlearis	Auditory.	Special sense of hearing	Cochlea
Corac, anterior. See Femoral n				
Cutaneous, internal	N cutaneus antibrachii medialis [BNA]	Inner cord of brachial plexus	Sensory	Skin of inner aspect of forearm.
Cutaneous, lesser internal (n. of Wrisberg)	N cutaneus brachii medialis [NA]	Inner cord of brachial plexus	Sensory	Skin of inner aspect of upper arm
Dental, inferior.	N alveolaris inferior	Mandibular div. of trigeminal	Sensory and motor	Teeth of lower jaw, mylohyoid muscle, and skin of chin.
Dental, superior	N alveolaris superior [BNA]	Maxillary div. of trigeminal	Sensory	Upper teeth and gums
Digastric	N digastricus superiores [NA]	Facial.	Motor	Stylohyoid and posterior belly of digastric muscle.

* Unless specifically designated, the nomenclature in this column is the same for BNA and NA.

TABLE OF NERVES—Continued

Name	BNA and NA Equivalents	Origin	Function	Distribution
Facial (7th cranial n.)	N facialis	Pos.	Motor	Muscles of expression
Femoral (anterior crural n.)	N femoralis	2nd, 2nd, and 4th lumbar	Motor and sensory	Muscles and skin of thigh.
Frontal	N frontalis	Onychocercal div of trigeminal	Sensory	Skin of forehead
Genitofemoral (genitoocrural n.)	N genitofemoralis	1st and 2nd lumbar	Sensory and motor	Cremaster muscle and skin of groin and upper part of thigh
Glossopharyngeal (9th cranial n.)	N glossopharyngeus	Medulla oblongata.	Motor and sensory	Muscles and mucous membrane of pharynx, larynx, and posterior third of tongue
Gluteal, inferior	N gluteus inferior	5th lumbar and 1st and 2nd sacral	Motor	Gluteus maximus.
Gluteal, superior	N gluteus superior	4th and 5th lumbar and 1st sacral	Motor	Gluteus medius and minimus; tensor fasciae latae.
Hypogastric . . .	Ramus cutaneus anterior [BNA]	Iliohypogastric	Motor and sensory	Muscles and skin of abdominal wall
	N hypogastricus [NA]			
	N hypoglossus			
Hypoglossal (12th cranial n.)	N hypoglossus	Hypoglossal nucleus in medulla oblongata	Motor	Intrinsic muscles of tongue.
Iliac.	Ramus cutaneus lateralis	Iliohypogastric	Sensory	Skin of gluteal region
Iliohypogastric	N iliohypogastricus	1st lumbar	Sensory and motor	Muscles and skin of hypogastrium
Iliolumbar	N ilioinguinalis	1st lumbar.	Sensory and motor	Muscles of abdominal wall, skin of upper thigh, skin of root of penis and scrotum (in male), and skin of mons pubis and labium majus (in female)
				Skin of cheek and all upper teeth except molars
Infraorbital .	N infraorbitalis	Maxillary div of trigeminal.	Sensory	Skin of lower eyelid and root of nose, conjunctiva, and lacrimal sac and caruncle
Infraorbicular	N infraorbicularis	Nasoethary.	Sensory and motor	Muscles and skin of back, thorax, and upper abdomen
Intercostal	Nn intercostales	Thoracic	Sensory	Skin of axilla and medial side of arm
		2nd intercostal		
Intercostobrachial	Nn intercostobrachiales	Median.	Motor	Deep flexor and pronator muscles of forearm
Interosseous, anterior (volar interosseous n.)	N interosseus volaris [BNA] N interosseus anterior [NA]			

TABLE OF NERVES—Continued

Name	BNA and NA Equivalents	Origin	Function	Distribution
Interosseous, posterior	N. interosseus dorsalis (BNA) N. interosseus posterior (NA)	Musculospiral (radial)	Motor and sensory	Muscles and skin of back of forearm and wrist
Lacrimal . .	N. lacrimalis	Ophthalmic div. of trigeminal	Sensory	Lacrimal gland, conjunctiva, and skin of upper eyelid
Laryngeal, inferior	N. laryngeus inferior	Branch of recurrent laryngeal	Motor	Muscles of larynx except cricothyroid
Laryngeal, recurrent	N. recurrens	Vagus	Motor	Muscles of larynx except cricothyroid
Laryngeal, superior	N. laryngeus superior	Vagus	Motor and sensory	Majorous membrane of larynx, arytenoid, and cricothyroid muscles
Lingual . .	N. lingualis	Mandibular div. of trigeminal	Sensory	Mucous membrane of anterior two-thirds of tongue
Lumbar . .	Nn. lumbales	Spinal cord.	Motor and sensory	and floor and outer wall of mouth
Mandibular	N. mandibularis	Trigeminal	Motor and sensory	Lips and front of lower abdomen and thigh to help in forming lumbar and sacral plexuses
Masseteric Maxillary	N. massetericus N. maxillaris	Mandibular div. of trigeminal	Motor	Teeth, gums, and skin of lower jaw and cheek, muscles of mastication, mucous membrane of anterior two-thirds of tongue
Median	N. medianus	Internal and external cords of brachial plexus	Sensory	Muscles of hand and fingers
Mental	N. mentalis	Inferior dental	Sensory	Nasal pharynx, palate, teeth of upper jaw and skin of chin
Musculocutaneous	N. musculocutaneus	External cord of brachial plexus	Motor and sensory	Pronators and flexors of forearm, two external humeral heads, biceps, skin of palm of first four fingers
Musculospiral See Radial n				Skin and mucous membrane of lower lip and chin

TABLE OF NERVES—Continued

Name	BNA and NA Equivalents	Origin	Function	Distribution
Mylohyoid	N. mylohyoideus	Inferior dental	Motor	Mylohyoid muscle and anterior belly of digastric muscle.
Nasal (nasopharyngeal n.)	N. nasopharyngeus	Ophthalmic div. of trigeminal	Sensory	Ciliary ganglion, iris, conjunctiva, ethmoid cells, mucous membrane and skin of nose
Nasopalatine	N. nasopalatinus	Meckel's ganglion (sphenopalatine ganglion)	Sensory	Mucous membrane of nose and palate
Obturator	N. obturatorius	2nd, 3rd, and 4th lumbar through lumbar plexus	Motor and sensory	Adductors of thigh, hip and knee joints, skin of inner aspect of thigh
Occipital, greater	N. occipitalis major	2nd cervical	Motor and sensory	Muscles of back of neck; skin over occiput
Occipital, lesser	N. occipitalis minor	2nd and 3rd cervical	Sensory	Skin behind ear and on back of scalp
Occipital, third	N. occipitalis tertius	3rd cervical	Sensory	Skin of back of head and nape of neck
Oculomotor (3rd cranial n.)	N. oculomotorius	Floor of aqueduct of Sylvius	Motor	All ocular muscles except lateral rectus and superior oblique.
Olfactory (1st cranial n.)	Nn. olfactorii	Olfactory lobe	Special sense of smell	Nasal mucous membranes in olfactory region
Ophthalmic	N. ophthalmicus	1st div. of trigeminal	Sensory	Lacrimal gland, conjunctiva, skin of forehead, skin and mucous membrane of nose
Optic (2nd cranial n.)	N. opticus	Corpora quadrigemina	Special sense of sight	Retina
Palatine, anterior, middle, and posterior	Nn. palatini	Meckel's ganglion	Motor and sensory	Mucous membrane of palate
Perineal	N. perinei	Pudendal	Motor and sensory	Muscles and skin of perineum.
Peroneal, common (lateral peroneal n.)	N. peroneus communis	Sciatic	Motor and sensory	Extensor muscles of lower leg and foot and overlying skin
Phrenic	N. phrenicus	3rd, 4th, and 5th cervical.	Motor and sensory	Diaphragm.
Pneumogastric See Vagus n.				
Popliteal, deep See Tibial n.				
Popliteal, lateral. See Peroneal n., common				
Pterygoid	N. pterygoideus	Mandibular div. of trigeminal	Motor	Lateral and medial pterygoid muscles
Pterygoid canal, n. of See Vidian n.				

TABLE OF NERVES—Continued

Name	BNA and NA Equivalents	Origin	Function	Distribution
Pudendal	N. pudendus	2nd, 3rd, and 4th sacral.	Sensory	Skin and muscles of perineum and genitalia
Radial (musculospiral n.)	N. radialis	Brachial plexus.	Motor and sensory	Skin of back of entire arm and hand; extensor muscles of entire arm and hand
Sacral	Nn. sacrales	Spinal cord.	Motor and sensory	Muscles and skin of loins and lower extremities.
Saphenous, external or short. See Sural n.	N. saphenus	Femoral.	Sensory	Skin of inner aspect of knee; leg, ankle and dorsum of foot.
Saphenous, internal or long	N. ischiadicus	Sacral plexus.	Motor and sensory	Muscles of calf and back of thigh; skin of lower calf and upper surface of foot.
Sciatic (great sciatic n.)	N. sphenopalatinus [BNA]	Maxillary div. of trigeminal.	Sensory	Meckel's ganglion.
Sphenopalatine	N. accessorius	Floor of 4th ventricle and cervical cord.	Motor	Sternomastoid and trapezius muscles.
Spinal accessory (accessory n.; 11th cranial n.)	N. stapedius	Facial.	Motor	Stapedius muscle.
Stapedial	N. suboccipitalis	Posterior div. of 1st cervical	Motor	Stylohyoid muscle.
Stylohyoid	Nn. subscapulares	Posterior cord of brachial plexus.	Motor	Complexus oblique and rectus muscles of back of neck.
Suboccipital	N. supraclavicularis medius [BNA]	3rd and 4th cervical	Sensory	Teres major and subscapularis muscles.
Subscapular	N. supraclavicularis medialis [NA]			Skin of fossa below collar bone.
Supraclavicular, intermediate (supraclavicular n., middle; supraclavicular n.)	N. supraclavicularis posterior [BNA]	3rd and 4th cervical	Sensory	Skin of shoulder.
Supraclavicular, lateral (supraclavicular n., posterior; supra-acromial n.)	N. supraclavicularis lateralis [NA]			
Supraclavicular, medial (supraclavicular n., anterior; suprasternal n.)	N. supraclavicularis anterior [BNA]	3rd and 4th cervical	Sensory	Skin over upper part of thorax.
Supraorbital	N. supraorbitalis	Frontal.	Sensory	Forehead, upper eyelid, scalp, and frontal sinus.

TABLE OF NERVES—Continued

Name	BNA and NA Equivalents	Origin	Function	Distribution
Suprascapular	N. suprascapularis	5th and 6th cervical	Motor	Supraspinatus and infraspinatus muscles and the shoulder joint
Supratrochlear	N. supratrochlearis	Frontal	Sensory	Skin of upper eyelid and root of nose
Sural	N. suralis	Common peroneal and tibial n's	Sensory	Skin of calf and medial side of foot to great toe
Temporal, deep	N. temporalis profundus	Mandibular div. of trigeminal	Motor	Temporal muscle
Thoracic	N. thoracales (N.A.)	Spinal cord	Motor and sensory	Muscles and skin of thorax
Thoracic, anterior	N. thoraci (N.A.)	Brachial plexus	Motor	Pectoralis minor and major muscles
Thoracic, long (posterior thoracic n.; external respiratory n. of Bell)	N. thoracalis longus (B.N.A.)	5th, 6th, and 7th cervical	Motor	Serratus anterior muscle.
Tibial	N. thoracis longus (N.A.) N. tibialis	Sciatic.	Motor and sensory	Flexor muscles of back of knee joint and calf; skin of lower leg.
Trigeminal (5th cranial n.; trifacial n.)	N. trigeminus	Midbrain and pons	Motor and sensory	Skin of face, tongue, teeth; muscles of mastication.
Trochlear (4th cranial n.; pathetic n.)	N. trochlearis	Floor of aqueduct of Sylvius	Motor	Superior oblique muscle of eye
Tympanic (Jacobson's n.)	N. tympanicus	Glossopharyngeal	Sensory	Tympanum, eustachian tube, and structures of middle ear
Ulnar	N. ulnaris	Medial cord of brachial plexus	Motor and sensory	Muscles and skin of forearm and hand
Vagus (10th cranial n.; pneumogastric n.)	N. vagus	Medulla oblongata	Motor and sensory	Pharynx, larynx, heart, lungs, stomach
Vestibulocochlear (8th cranial n.; acoustic n.; auditory n.).	N. vestibulocochlearis (N.A.)	Ganglion of Scarpa and ganglion of (orti	Sense of hearing	Internal auditory meatus.
Vidian	N. canalis pterygoidei	Parial	Sensory	Meckel's ganglion (sphenopalatine ganglion)
Zygomatic	N. zygomaticus	Maxillary div. of trigeminal	Sensory	Skin of temple and cheek bone.

Nerve Plexuses of the Sympathetic and Cerebrospinal Systems

aortic (ā-or'tīk) (*abdominal*). ORIGIN Semilunar, lumbar ganglia, renal and solar plexuses. LOCATION Sides and front of aorta. DISTRIBUTION Inferior mesenteric, spermatic and hypogastric plexus. Filaments to inferior vena cava. (*thoracic*). ORIGIN Thoracic ganglia of sympathetic nerve, cardiac plexus. LOCATION Surrounding the thoracic aorta. DISTRIBUTION Solar plexus, aorta.

***brachial** (brā'ki-āl). ORIGIN Anterior branches of 5th, 6th, 7th, 8th, cervical, and greater part of 1st dorsal nerves. LOCATION Lower part of neck to axilla. DISTRIBUTION Sixteen branches of supra-scapular, subscapular, rhomboid, median, ulnar, musculospiral, posterior thoracic, musculothoracic, circumflex, musculocutaneous nerves.

cardiac (kār'di-āk) (*great or deep*). ORIGIN Cardiac nerves of cervical ganglion of sympathetic and vagus. LOCATION In front of bifurcation of trachea. DISTRIBUTION Pulmonary, coronary and cardiac plexuses (*superficial or anterior*). ORIGIN Left superior cardiac nerve, branch of vagus and filaments of deep cardiac plexus. LOCATION Beneath arch of aorta. Front of right pulmonary artery. DISTRIBUTION Coronary and pulmonary plexuses.

carotid (kār-tō'id) (*external*). ORIGIN Pharyngeal plexus, superior cardiac nerve and superior cervical ganglion. LOCATION Around external carotid artery. DISTRIBUTION External carotid artery and its branches (*internal*). ORIGIN Asympathetic plexus. LOCATION Surrounding internal carotid artery. DISTRIBUTION Tympanic plexus, sphenopalatine ganglion, abducens and oculomotor nerves, the cerebral vessels and the ciliary ganglion.

cavernous (kāv'ēr-nūs). ORIGIN 3rd to 6th cranial nerves and ophthalmic ganglion. LOCATION Cavernous sinus. DISTRIBUTION Wall of internal carotid artery.

celiac (sē'lī-āk). ORIGIN Solar plexus, branches from lesser splanchnic and vagus nerves. LOCATION Behind stomach, in front of aorta at level of origin of celiac artery. DISTRIBUTION Coronary, hepatic, pyloric, gastroduodenal, gastropiploic and splenic plexuses. SYN solar plexus.

***cervical** (ser'vi-kāl). ORIGIN Anterior branches of first 4 cervical nerves. LOCATION Beneath sternocleidomastoid muscle opposite first 4 cervical vertebrae. DISTRIBUTION Cutaneous, muscular and communicating rami.

***coccygeal** (kōk-sī'ē-āl). ORIGIN Fourth and 5th sacral and the coccygeal nerves. LOCATION Dorsal surface of coccyx and caudal end of sacrum. DISTRIBUTION Anococcygeal nerves.

cystic (sī'stīk). ORIGIN Hepatic plexus. LOCATION At gallbladder. DISTRIBUTION Gallbladder.

esophageal (ē-sō-fāj'ē-āl). ORIGIN Vagus nerve, thoracic sympathetic ganglia. Lo-

cation Around the esophagus. DISTRIBUTION Esophagus.

gastric (gās'trīk). ORIGIN Celiac plexus and continuations of esophageal plexuses. LOCATION Gastric artery. DISTRIBUTION Abdominal viscera.

hemorrhoidal (hēm'ō-roy'dāl). ORIGIN Pelvic and inferior mesenteric plexuses. LOCATION Rectum and sides of rectum. DISTRIBUTION Rectum.

hepatic (hē-pāt'īk). ORIGIN Celiac plexus, left vagus, right phrenic. LOCATION Accompanies hepatic artery. DISTRIBUTION Liver.

hypogastric (hī'pō-gās'trīk). ORIGIN Aortic plexus and lumbar ganglia. LOCATION Promontory of sacrum. DISTRIBUTION Pelvic plexus.

***lumbar** (lūm'bar). ORIGIN First 4 lumbar nerves. LOCATION Psoas muscle. DISTRIBUTION Iliohypogastric, ilioinguinal, genitocrural, external cutaneous, obturator, accessory, and anterior crural nerves.

Meissner's (mīs'nērs). ORIGIN Superior mesenteric plexus (controls secretions of the bowels). LOCATION Submucous coat of small intestines. DISTRIBUTION Intestinal walls.

mesenteric (mēs-ēn-tēr'īk). ORIGIN Celiac plexus and left side of aortic plexus. LOCATION Surrounding the inferior and superior mesenteric arteries. DISTRIBUTION Descending colon, sigmoid, rectum, intestines.

myenteric (mī-ēn-tēr'īk). ORIGIN Sympathetic system (controls peristalsis). LOCATION Between the circular and longitudinal coats of small intestines. DISTRIBUTION Intestinal walls.

ophthalmic (ōf-thāl'mīk). ORIGIN Internal carotid plexus. LOCATION Around ophthalmic artery and optic nerve. DISTRIBUTION Optic region.

pancreatic (pān-ki-ē-āt'īk). ORIGIN Splenic plexus. LOCATION Near pancreas. DISTRIBUTION Filaments to pancreas.

pancreaticoduodenal (pān-krē-āt'ī-kō-dū'ō-dē'nāl). ORIGIN Hepatic plexus. LOCATION Near head of pancreas. DISTRIBUTION Filaments to pancreas and duodenum.

pelvic (pēl'vīk). ORIGIN Hypogastric plexus, 2nd to 4th sacral nerves, 1st and 2nd sacral ganglia (pelvic brain). LOCATION Side of rectum and bladder. DISTRIBUTION Viscera of pelvis, pelvic plexus.

phrenic (frēn'īk). ORIGIN Solar plexus, semilunar ganglia. LOCATION Accompanies phrenic artery to diaphragm. DISTRIBUTION Diaphragm and suprarenal capsules.

prostatic (prōs-tāt'īk). ORIGIN Hypogastric plexus. LOCATION Vesical arteries. DISTRIBUTION Bladder.

pulmonary (pūl'mō-nā'ri). ORIGIN Anterior and posterior pulmonary branches of vagus and sympathetic nerves. LOCATION Root of lungs, front and back. DISTRIBUTION Root of lungs.

pyloric (pī-lor'īk). ORIGIN Hepatic plexus.

* Plexuses of central nervous system

LOCATION: Near pylorus. **DISTRIBUTION:** Filaments to pylorus.

renal (rě'nāl). **ORIGIN:** Solar and aortic plexuses and semilunar ganglia. **LOCATION:** Renal artery. **DISTRIBUTION:** Kidneys, posterior vena cava, spermatic plexus.

***sacral** (să'krāl). **ORIGIN:** Anterior branch of 4th and 5th lumbar and 1st, 2nd, 3rd, and 4th sacral nerves. **LOCATION:** Front of sacrum on piriformis muscle. **DISTRIBUTION:** Muscular, pudic, superior gluteal, great and small sciatic nerves.

solar (sō'lar) (*epigastric*). **ORIGIN:** Splanchnics and right vagus. **LOCATION:** Back of stomach. **DISTRIBUTION:** Semilunar ganglia, phrenic, suprarenal, renal, spermatic, celiac, superior mesenteric, and aortic plexuses. Called *abdominal brain*. **SYN** *celiac plexus*.

spermatic (spēr-măt'ik) (*ovarian*). **ORIGIN:** Aortic plexus. **LOCATION:** Accompanies spermatic vessels to testes or ovaries. **DISTRIBUTION:** Testes or ovaries.

splenic (splē'nik). **ORIGIN:** Celiac plexus, left semilunar ganglion, right vagus nerve. **LOCATION:** Accompanies splenic artery. **DISTRIBUTION:** Spleen, pancreatic plexus, left gastroepiploic plexus.

• Plexuses of central nervous system.

suprarenal (sū-pră-rě'nāl). **ORIGIN:** Diaphragmatic, solar and renal plexuses. **LOCATION:** Around suprarenal capsules. **DISTRIBUTION:** Filaments to medulla of suprarenal capsules.

thyroid (thí'royd) (*inferior*). **ORIGIN:** Middle cervical ganglion. **LOCATION:** Around external carotid and inferior thyroid arteries. **DISTRIBUTION:** Larynx, pharynx, thyroid gland. (*superior*). **ORIGIN:** Superior laryngeal and cardiac nerves. **LOCATION:** Around the thyroid gland. **DISTRIBUTION:** Thyroid region.

uterine (ù'tér-in). **ORIGIN:** Pelvic plexus. **LOCATION:** Accompanies uterine arteries. **DISTRIBUTION:** Cervix and lower part of uterus.

vaginal (váj'í-nāl). **ORIGIN:** Pelvic plexus. **LOCATION:** Vaginal walls. **DISTRIBUTION:** Vagina.

vertebral (vért'ě-brāl). **ORIGIN:** First part thoracic ganglion, upper cervical nerves. **LOCATION:** Surrounding basilar and vertebral arteries. **DISTRIBUTION:** Vertebral and cerebellar regions.

vesical (vės'í-kāl). **ORIGIN:** Pelvic plexus. **LOCATION:** Accompanies vesical arteries. **DISTRIBUTION:** Vesicula seminalis, vas deferens.

B. The Twelve Pairs of Cranial Nerves

No.	Name	Div.	Branches	Function and Distribution*	Remarks
1	Olfactory . . .		20 . . .	M . . .	Its bulb is a lobe of the Cerebrum
2	Optic		None	B	Great motor nerve of 5 of 7 muscles of eye
3	Oculomotor . . .		Filaments	B1-B5	Smallest cranial nerve
4	Trochlear or Patheticus . . .		None	B2	
5	Trigeminus or Trifacial (Three Twins) Trigeminus or Trifacial (Three Twins) Trigeminus or Trifacial (Three Twins).	1st 2nd 3rd	Ophthalmic Superior Maxillary . . . Inferior Maxillary . . .	B3-B5-F-M1 A-G-N1-R-S1 A1-C2-G1-R1-T	The great Sensory nerve of the head and face
6	Abducent		Filaments	B4	(Leading from)
7	Facial or Portio Dura (Hard Portion)			C1-D-M2-N-F1-F4-B3	Great motor nerve of Facial Muscles
8	Auditory or Portio Molle. of 7 (Soft Portion)			C5	
9	Glossopharyngeal			C-C4-O1-S-T2	Tongue and throat nerve
10	Pneumogastric (Vagus or Par Vagus)			C3-E-H-I-J-K-L-O-P-Q	Wandering nerve
11	Accessory Spinal	1 Ext. { (2 Int	12 Spinal portion . . Accessory portion	K1-O2	Accessory to the Pneumogastric
12	Hypoglossal			T3	Hypoglossal (Under the tongue)

*To find the Function and Distribution of the Cranial Nerves, reference is given to Table "A" and "B"

B. CRANIAL NERVES (Continued)

No.	Function	Origin	Exit
1	Special Sense Smell	Frontal lobe, optic thalamus deeply and Island of Reil, by three roots	Exit by 20 branches through the cribriform plate to the Schneiderian membrane of nose
2	Special Sense Sight	Optic thalamus, corpora geniculata and corpora quadrigemina or optic lobes, which communicate with cerebellum and cerebrum	Through optic foramen to retina
3	Motor	Floor of aqueduct of Sylvius and inner surface of crus cerebri	Sphenoidal fissure to eye muscles
4	Motor of superior oblique muscle of eye	Valve of Vieussens, a thin plate of nervous matter above the fourth ventricle	Sphenoidal fissure to sup oblique muscle of eye
5	Sensory	Superficial origin in side of pons Varoli by two roots	1st. Br sphenoidal fissure and supraorbital foramen
	Sensory, Motor, Taste	Deep origin cerebellum and medulla oblongata and floor of fourth ventricle	2nd Br foramen rotundum and intraorbital foramen
6	Motor of external rectus of eye	Fourth ventricle, deep origin posterior part of medulla oblongata	3rd Br. foramen ovale and mental foramen
7	Motor	Floor of fourth ventricle	Sphenoidal fissure, between the two heads of the external rectus muscle
8	Special Sense Hearing	Restiform body of 4th ventricle	Internal auditory meatus through aqueductus Fallopi and stylomastoid foramen
9	Mixed, Sensory, Motor, Taste	Medulla oblongata. Deeply from floor of fourth ventricle	Internal auditory meatus through the internal auditory canal
10	Mixed, Sensory and Motor	Medulla oblongata. Deeply from floor of fourth ventricle	Jugular foramen to back of tongue, middle ear, tonsils, pharynx and meninges
11	Motor	Without cavity of cranium, lateral tract of spinal cord as far as the sixth cervical nerve	Jugular foramen
	Motor	Within the cavity of the cranium, medulla oblongata deeply, near floor of 4th ventricle	Enters cranium through the foramen magnum, uniting with the accessory portion which originates within the cranium and both make their exit through jugular foramen
12	Motor	Medulla oblongata deeply from floor of 4th ventricle	Anterior condyloid foramen

EXPLANATION TABLES A AND B. CRANIAL NERVES

- 1st Pair—Olfactory, Special Sense of Smell.
- 2d " Optic, Special Sense of Sight.
- 3rd " Oculomotor, Great Motor of Eye, supplies five of the seven eye muscles.
- 4th " Trochlear or Patheticus, motor of superior oblique muscle of eye.
- 5th " Trigeminal or Trifacial, great sensory nerve of head and face; divides into three portions, viz.: 1st Ophthalmic Sensory; 2nd Supr. Max. Sensory; 3rd Inf. Sensory. Max. Motor and a lingual nerve of the sense of taste.
Most difficult of all the cranial nerves to trace.
- 6th Pair—Abducent, Motor of External Rectus of Eye.
- 7th " Facial or Porto Dura, great motor nerve of face muscles, exclusively motor at its origin, but it subsequently receives fibers from the (5th) Trigeminal, which give it some sensory function.
- §Same anatomists claim that the Chorda Tympani nerve is a branch of the Sympathetic system.
- 8th Pair—Auditory, or Portio Mollis of 7th, Special Sense of Hearing.
- 9th " Glossopharyngeal, in part a special nerve of taste, nerve of sensation, and also contains motor fibers.
- 10th " Pneumogastric, Vagus or Par Vagus, (a mixed nerve) at its origin it is exclusively sensory, but lower down it is also motor and capable of providing both for sensation and motion in organs to which distributed.
- 11th " Accessory Spinal, considered to be exclusively motor, but some authorities claim for it sensory fibers.
Accessory portion joins the vagus, to which it supplies its motor and some of its cardioinhibitory fibers.
Spinal portion supplies the trapezius and sternomastoid muscles.
- 12th " Hypoglossal, exclusively motor.
- *Branches of the aorta. †Branches of branches of the aorta. ‡Branches of branches of branches of branches of the aorta

Table of Arteries¹

Name of Artery	Origin	Distribution	Branches
Acromial	Acromi thoracic.	Deltoid muscle	Acromial, clavicular, pectoral.
Acromi thoracic	Axillary	Side of thorax and part of arm	
Adipose	Capillary arteries, small branches of thoracic aorta	Adipose tissue of heart	
Afferent	Interlobular of kidneys.	Glomeruli	
Alar thoracic	Axillary	Glacids and tissue of the axilla	Anterior and posterior
Alveolar	Inferior maxillary.	Lower jaw and incisor teeth	Branches of gingival artery
Anastomotic, of the arm	Brachial.	Elbow	Superficial and deep
Anastomotic, of the sciotic	Sciatic	External rotator muscles of thigh	
Anastomotic, of the thigh	Femoral.	Knee	
Angular	Facial.	Lacrimal sac.	Infraorbital.
Aorta. See: aorta, in vocabulary			
Appendicular.	Iliocolic.	Mesentery of the vermiform appendix	
Articular, middle, of knee	Popliteal.	Crucial ligaments and joint.	
Articular, superior, external of knee	Popliteal.	Femur and knee joint	
Articular, superior, internal	Popliteal.	Knee joint	
Ascending	External circumflex.	Gluteal muscles and hip joint.	
Ascending, external	Internal maxillary.	Tympanic	
Auditory, internal	Basilar.	Internal ear.	
Auricular	Ceipital	Auricle.	
Auricular, anterior, inferior	Temporal	Auricle.	
Auricular, deep	Internal maxillary	Tympanicum and external auditory meatus	
Auricular, left	Left coronary artery.	Left auricle, pulmonary artery.	Parotid, muscular, stylo mastoid, auricular, and mastoid.
Auricular, posterior	Fifth branch of external carotid	Back of auricle and part of neck.	
Auricular, right	Right coronary artery.	Right auricle, septum, and aorta	Superior thoracic, acromi thoracic, long thoracic, alar thoracic, subscapular, ant. and post. circumflex.
Axillary	Subclavian.	Brachial and seven branches.	
Basalgos (of knee)	Popliteal	Crucial ligament, knee joint	
Basalgos	External plantar.	Articulations of tarsus	
Basalgos	Internal plantar.	Joints on inner side of foot	
Basalgos (of elbow)	Superior profunda.	Posterior part of elbow joint.	
Basalgos (of shoulder)	Suprascapular.	Shoulder joint.	
Basilar	Right and left vertebral.	Brain.	Transverse internal auditory, anterior cerebellar, superior cerebellar, posterior cerebellar.

TABLE OF ARTERIES—Continued

Name of Artery	Origin	Distribution	Branches
Brachial.....	Anterior circumflex.	Long tendon of biceps and shoulder joint	Superior and inferior profunda, anastomotica magna, nutrient, muscular, radial, and ulnar
Brachial.....	Axillary.	Arm and forearm.	
Brachiocephalic	See <i>Innominate a</i>	Bronch and lungs.	
Bronchial, inferior	Thoracic aorta.	Bronchi.	
Bronchial, superior	Arch of aorta.	Muscles and integument of the cheek.	
Buccal	Internal maxillary.	Erectile tissue of the corpus spongiosum.	
Bulb, artery of ...	Internal pudic.	Outer side of foot and heel.	Anastomosing with external mallcolar, external plantar and tarsal arteries.
Calcanean, external	Posterior peroneal.	External plantar muscles	
Calcanean, inferior	External plantar	Inner side of heel and sole	
Calcanean, internal	Posterior tibial and peroneal.	Outer and back surface of os calcis.	
Calcanean, middle	Posterior tibial	External and internal carotid	
Capular	See <i>Suprarenal</i>	Front and back of neck, face, side of head, meninges, middle ear, thyroid, tongue, tonsils	Internal maxillary, superior thyroid, lingual, facial, occipital, posterior auricular, superficial temporal.
Carotid, common	Innominate (right), arch of aorta (left).	Brain, nose, orbit, internal ear, and forehead.	Anterior and middle cerebral, ophthalmic, hypophyseal, anterior, posterior, middle, posterior communicating, anterior choroid.
Carotid, external	Common carotid.		Anterior carpal rete.
Carotid, internal	Common carotid.		Posterior carpal rete.
Carpal	Radial.	Lower radius and wrist.	
Carpal	Ulnar.	Carpus	
Cecal, anterior	Inferior mesenteric.	Front part of cecum	
Cecal, posterior	Posterior mesenteric.	Back part of cecum	
Celiac axis ...	Abdominal aorta	Esophagus, stomach, duodenum, gallbladder, liver, pancreas, spleen	Gastric, hepatic, splenic.
Cerebellar (three) ...	Basilar and vertebral.	Cerebellum.	Inferior and superior vermiciform and hemispherical.
Cerebral, anterior and middle	Internal carotid.	Cerebrum.	
Cerebral, posterior	Basilar.	Cerebrum	
Cervical, ascending	Inferior thyroid.	Neck.	Muscular, spinal.
Cervical, deep.	Superior intercostal.	Muscles of back of neck.	Muscular, spinal.
Cervical, superficial	Transverse cervical.	Posterior cervical and scapular regions	
Cervical, transverse.....	Thyroid axis.		

TABLE OF ARTERIES—Continued

Name of Artery	Origin	Distribution	Branches
Circumflex, anterior	Axillary.	Pectoralis major, biceps, shoulder joint.	Bicipital and pectoral.
Circumflex, posterior	Axillary.	Deltoid, teres minor, triceps, shoulder joint.	Acromial, articular, muscular, nutrient.
Coronary, left	Left anterior sinus of Valsalva.	Heart.	Left auricular, anterior interventricular, left marginal, terminal.
Coronary, right	Right anterior sinus of Valsalva	Heart.	Right auricular, preventricular, right marginal, posterior interventricular, transverse.
Digital	External plantar	Outer side second to fifth toes.	
Digital, palmar	Superficial palmar arch	Sides of fingers.	
Dorsalis pedis	Anterior tibial.	Foot.	
Epigastric	External iliac.	Abdominal wall, femoral ring and cremaster	Tarsal, metatarsal, dorsalis hallucis, communicating.
Facial	External carotid.	Pharynx and face.	Cremasteric, pubic, muscular, and terminal branches.
Femoral	External iliac.	Lower part of abdominal wall, genitals, upper thigh.	Inferior palatine, tonsillar, glandular, muscular, submental, mesenteric, buccal, inferior labial, coronary of lips, lateralis nasi, angular.
Gastro	Celiac axis.	Liver, esophagus, stomach.	
Gastrooduodenal	Hepatic.		Cardiac, esophageal, gastric and hepatic.
Gluteal	Internal iliac.	Gluteal muscles.	Gastroepiploic, pancreaticoduodenal, pyloric.
Hepatic	Celiac axis.	Duodenum, liver, pancreas, stomach.	Deep and superficial gluteal.
Iliac, common	Abdominal aorta.	Pertoneum.	Gastrooduodenal, pancreatic, subpyloric, terminal.
Iliac, external	Common iliac.	Lower limb.	Bertoneal, ureteric, external and internal iliac.
Iliac, internal	Internal iliac.	Pelvic and generative organs, inner thigh.	Deep epigastric, circumflex, femoral.
Iliac, interior (anterior trunk)	Internal iliac.	Pelvic and generative organs and thigh.	Anterior and posterior trunk.
Iliac, interior (posterior trunk)	Internal iliac.	Muscles of hip and sacrum.	Vesical, uterine, vaginal, obturator, sciatic, internal pudic, middle hemorroidal.
Innominate	Arch of aorta.	Right side of head and right arm	Gluteal, ilioumbar and lateral sacral.
Intercostal, superior	Subclavian.	Neck and upper thorax.	Right common carotid, right subclavian.
Interoscapular	Ulnar.	Deep muscles of the forearm.	Deep cervical, first intercostal, arteria aberrans.
Laryngeal, superior	Superior thyroid.	Muscles and mucous membrane of larynx.	Anterior and posterior interosseous.
Lingual	External carotid.	Tongue.	
Mammary, internal	Subclavian.	Thorax.	Hyoid, dorsalis linguae, sublingual, ranine.

TABLE OF ARTERIES—Continued

Name of Artery	Origin	Distribution	Branches
Maxillary, internal.....	External carotid.	Structures indicated in names of branches.	Middle and small meningeal, inferior dental, deep temporal, tympanic, pterygoid, masseteric, buccal, posterior palatine, vidian, pterygopalatine, sphenopalatine, alveolar, infraorbital.
Mediastinal, anterior.....	Internal mammary.	Superior and anterior mediastinum, thymus gland.	
Meningeal (four).....	Ascending pharyngeal and posterior ethmoid.	Dura mater.	
Meenteric, inferior.....	Abdominal aorta.	Descending colon, sigmoid flexure, rectum.	
Meenteric, superior.....	Abdominal aorta.	Small intestine, colon, cecum, ileum.	
Musculophrenic.....	Internal mammary.	Diaphragm, 5th and 6th intercostal spaces, muscles of abdomen.	Colica sinistra, sigmoid, superior hemorhoidal.
Nasal.....	Ophthalmic.	Lacrimal sac, integuments of nose.	Inferior pancreaticoduodenal, colica media, colica dextra, ileocolic, vasa intestinae tenues.
Obturator.....	Internal iliac.	Pelvis and thigh.	Phrenic, anterior intercostals, muscular.
Oc cipital.....	External carotid.	Muscles of neck and scalp, meninges.	Lacrimal and transverse nasal.
Ophthalmic.....	Internal carotid.	Eye, adjacent structures, part of face.	Iliac, vesical, pubic, external and internal pelvic.
Palmar arch (deep).....	Radial.	Palm and fingers.	Muscular, auricular, meningeal, cranial branches, princeps cervicis.
Palmar arch (superficial).....	Ulnar.	Palm and fingers.	Lacrimal, supraorbital, central of retina, ciliary, muscular, posterior and anterior ethmoid, palpebral, nasal, frontal.
Phrenic, superior.....	External carotid.	Pharynx soft palate, tympanum, meninges.	Perforating, palmar interosseous, recurrent.
Plantar arch.....	Internal mammary.	Diaphragm, pericardium pleura.	Digital, cutaneous, muscular.
Plantar, external.....	External plantar.	Anterior part of foot and toes.	Meningeal, palatine, pharyngeal, prevertebral, tympanic.
Plantar, internal.....	Posterior tibial.	Inner side of foot.	Anastomotic, calcaneal, cutaneous, posterior perforating, plantar arch.
Popliteal.....	Femoral.	Knee and leg.	Anastomotic, articular, cutaneous, muscular, superficial digital.
Profunda (deep femoral).....	Femoral.	Thigh.	Cutaneous, superior and inferior muscular, superior external and inferior articular, inferior external and inferior articular, anterior and posterior tibial.
			External and internal circumflex, three perforating

TABLE OF ARTERIES—Continued

Name of Artery	Origin	Distribution	Branches
Profunda, inferior	Brachial	Triceps, elbow joint	Articular, ascending, cutaneous, muscular, nutrient
Profunda, superior	Brachial	Humerus, muscles and skin of arm	Eustachian, pharyngeal, sphenoid.
Pterygopalatine	Internal maxillary	Pharynx, eustachian tubes, sphenoidal cells	
Pudic, external	Common femoral.	Skin and integument above pubes and external genitalia	
Pudic, internal	Internal iliac, anterior trunk.	Generative organs.	
Pulmonary	Right ventricle.	Lungs.	Inferior hemorhoidal, superficial and transverse peritoneal muscular, artery of the bulb, of the corpus cavernosum, dorsalis penis.
Pyloric, superior	Hepatic.	Pyloric end of stomach.	Right and left pulmonary.
Radial	Brachial.	Forearm, wrist, hand.	Radial recurrent, muscular, anterior and posterior carpal, superficial volar, metacarpal, dorsalis pollicis, dorsalis indicis, deep palmar arch.
Renal	Abdominal aorta.	Kidney	Inferior suprarenal, capsular, ureteral.
Scapular, dorsal	Subscapular.	Muscles of infraspinous fossa	Infrascapular
Scapular, posterior	Transverse cervical	Muscles of scapular region.	Supraspinous and infraspinous, muscular, subscapular.
Sciatic	Internal iliac, anterior trunk.	Muscles and viscera of pelvis	Coccygeal, inferior gluteal, muscular, anastomotic, articular cutaneous, vesical, rectal, etc.
Spermatic	Abdominal aorta.	Scrotum and testis	Nasal, pharyngeal, ascending septal, sphenoid.
Sphenopalatine	Internal maxillary.	Pharynx, nose and sphenoid cells	
Spinal, anterior	Vertebral	Spinal cord	Cremasteric, epididymal, testicular, ureteral.
Spinal, lateral	Vertebral	Vertebrae and spinal canal.	
Spinal, posterior	Vertebral	Spine	
Splenic	Celiac axis	Pancreas, great curvature of stomach, spleen	
Subclavian	Right—Innominate } Left—Arch of aorta. }	Neck, thorax, arms, brain, meninges	Gastric, left gastroepiploic, splenic branches, small and large pancreatic
Subscapular	Axillary.	Subscapularis, teres major, latissimus dorsi, serratus magnus, axillary glands	Vertebral, internal, mammary, superior intercostal, thoracic axis
Suprarenal, inferior	Renal.	Suprarenal body	Dorsal and infrascapular.
Suprarenal, middle	Aorta.	Suprarenal bodies	
Suprarenal, superior	Phrenic.	Suprarenal bodies	
Suprascapular	Thyroid axis.	Muscles of shoulder.	Inferior sternomastoid, nutrient, suprasternal, acromial, articular, supraspinous, and infraspinous

TABLE OF ARTERIES—Continued

Name of Artery	Origin	Distribution	Branches
Temporal	External carotid	Forehead, parotid gland, masseter muscle, ear	Anterior auricular, middle, anterior and posterior temporal, transverse facial
Thoracic, acromial	Axillary.	Muscles of shoulder, chest and arm	Acromial, clavicular, humeral, pectoral.
Thoracic, alar	Axillary.	Axillary glands	
Thoracic, long	Axillary.	Pectoral muscles, mammary and axillary glands	
Thyroid axis	Subclavian.	Shoulder, neck, thorax, spine, cord	
Thyroid, inferior	Thyroid axis.	Esophagus, larynx, muscles of neck	Inferior thyroid, suprascapular, transverse cervical
Thyroid, superior	External carotid	Omohyoid, sternohyoid, sternothyroid, thyroid gland.	Ascending cervical, esophageal, inferior laryngeal, muscular, tracheal
Tibial, anterior	Popliteal.	Leg	Hicoid, sternomastoid, superior laryngeal, cricothyroid
Tibial, posterior	Popliteal.	Leg, heel and foot.	Posterior and anterior tibial, recurrent, muscular, internal and external malleolar.
Ulnar	Brachial.	Forearm, wrist and hand.	Communicating, cutaneous, calcanean, internal and external plantar, malleolar, medullary, muscular, peroneal.
Uterine	Branch of internal iliac	Uterus	Anterior and posterior ulnar, recurrent, common interosseous, muscular, nutrient, carpal, palmar arch
Vertebral	Subclavian.	Neck and cerebrum.	Azygos, cervical, vaginal.
Vesical, inferior	Internal iliac, anterior trunk	Bladder, prostate, seminal vesicles, vagina.	Anastomotic, lateral spinal, muscular, posterior cerebellar, posterior meningeal, posterior and anterior spinal.
Vesical, superior	Internal iliac, anterior trunk.	Bladder.	
Vidian	Internal maxillary.	Root of pharynx, eustachian tube, tympanum	Deferentia, ureteric
			Eustachian, pharyngeal, tympanic.

Table of Veins

Name	Description	Origin	Distribution
Alveolares superior and inferior (superior and inferior dental veins)	Veins supplying teeth and jaws. Anastomose with pterygoid plexuses.	Capillaries of teeth canals and gums.	Through jaws to structures of teeth. Between surfaces of maxillae below alveolar processes to v. facialis anterior at angle of jaw.
Angularis (angular vein)	Short superficial vein in nasal region.	Union of vv. nasofrontalis, frontalis, and supraorbitalis at root of nose.	From root of nose laterally to below eye.
Anonyma (innominate veins)	Paired veins without valves. Flow together to form vena cava superior.	Union of vv. jugularis interna and subclavia.	From sternoclavicular articulation to 1st right costal cartilage where they flow together to form vena cava superior.
Articulares genu (articular veins of knee)	Vein of knee	Tissues of region of knee and m. articularis genu	Tissues of region of knee to v. poplitea.
Articulares mandibulae (articular veins of mandible).	Deep veins of region of jaw, form large plexus lateral to ear. Anastomose with pterygoid plexus.	Plexus surrounding joint of jaw and tissues of external auditory canal region	Region of jaw and adjacent structures diagonally downward to v. facialis posterior.
Auditivae internae (internal auditory)	Paired 2 from each ear. Arise in internal ear, pass through meatus acusticus internus. Drain blood from labyrinth.	From internal ear through meatus acusticus internus to sinus transversus or sinus petrosus inferior	Empty into sinus transversus or sinus petrosus inferior.
Auriculares anteriores (anterior auricular veins)	Small veins of external ear structures.	Capillaries of tissues of external ear.	From tissues of external ear to v. facialis posterior in front of ear.
Auricularis posterior (posterior auricular vein)	Superficial vein of posterior skull region.	Capillaries of tissues of posterior portion of skull and mastoid emissarium	From tissues of occipital region behind ear diagonally downward below ear to v. jugularis externa
Axillaris (axillary vein)	Portion of large venous trunk from upper extremity in axillary region. Receives veins from arms and adjacent structures	Union of deep brachial veins at lower margin of m. pectoralis major.	Region of axilla to clavicle.
Azygos (azygos vein)	Single vein draining blood from intercostal spaces, esophagus, bronchi, and mediastinal structures. Anastomoses freely with v. hemiazygos which flows into it	Continuation of v. lumbalis ascendens dextra at diaphragm.	From level of diaphragm up posterior thoracic wall on right of vertebral bodies to v. cava superior.
Basilica (basilic vein)	Large superficial vein on medial and lateral aspect of arm and forearm. Anastomoses freely with v. cephalica.	Dorsum of hand at ulnar end of arcus venosus dorsalis.	Tissues of hand diagonally across back of hand to anterior surface of arm above elbow to upper 3rd of arm to flow into vv. brachiales.
Basivertebrales (basivertebral veins)	Veins of bodies of vertebrae.	Capillaries of vertebral bodies.	From body of each vertebra to venous plexuses of spinal column.
Brachiales (brachial veins)	Two large deep veins of upper arm.	Union of vv. ulnares and radialis at elbow.	From elbow on each side of forearm in deep tissues to unite to form v. axillaris.

Name	Description	Origin	Distribution
Bronchiales anteriores (anterior bronchiole veins)	Veins of bronchi.	Capillaries of bronchi.	From bronchi to anonyma separately or in common with other thoracic viscera
Bronchiales posteriores (posterior bronchial veins)	Veins of posterior bronchial walls.	Capillaries of bronchial walls.	From tissues of bronchi to v. azygos at level of 4th to 8th thoracic vertebrae.
Bulbi urethrae (artery of bulb)	Corresponds to v. bulbi vestibuli in female.	Tissues of bulbus urethrae and muscels in region of trigone.	From tissues above rectum to trigone diagonally lateral to v. pudenda interna
Canaliculi cochleae (vein of cochlear canal)	Vein of inner ear structures.	From capillaries of cochlea.	From cochlea through the canaliculus cochleae to bulbus v. jugularis superiores and jugularis interna.
Cava inferior (inferior vena cava)	Large venous trunk carrying blood from lower extremities, abdomen and trunk to right atrium. Branches from abdominal viscera flow into it.	Union of vv. iliacae communes in front of 4th or 5th lumbar vertebra.	Along posterior abdominal wall through liver and diaphragm diagonally upward in thorax to right atrium.
Cava superior (superior vena cava)	Large single venous trunk without valves, draining blood from upper part of body.	Union of two v. anonyma.	From first right costal cartilage downward to right atrium.
Cephalica (cephalic vein)	Superficial vein of arm and forearm. Anastomoses freely with v. basilica	Dorsum of hand at radial end of arcus venosus dorsalis.	Tissues of hand, arm and forearm. Extends up lateral region of arm and forearm to v. axillaris at level of clavicle.
Cerebri externae and internae (superficial and inferior cerebral or Galen veins)	Have no valves. Collect blood from cerebral tissue.	From superficial tissues of cerebral surface and inferior substance of cerebrum.	From cerebrum through subarachnoid connective tissue of third ventricle to point where they flow together near the interventricular foramen.
Cerebri magna (magnus Galeni)	Large vein formed by union of vv. cerebri internae.	Capillaries of cerebrum.	From region of splenium corporis callosi forward to vena rectus.
Cervicalis profunda (deep cervical vein)	Deep vein of neck. Corresponds to arteria cervicalis profunda.	Plexus vertebralis posterior.	Posterior to v. jugularis interna to level of 7th cervical vertebra where it flows into vertebralis.
Circularis (circular sinus)	A blood channel in the region of the sella turcica.	Border of sella turcica.	Between 2 venae cavernosae.
Circumflexae femoris laterales (lateral circumflex femoral veins)	Veins of deep tissues of lateral aspect of thigh.	Capillaries of muscles in lateral region of thigh.	Laterally between m. rectus femoris and vastus intermedia diagonally upward to v. profunda femoris.
Circumflexae femoris mediales (internal circumflex veins)	Veins of medial and dorsal aspect of thigh and hip. Anastomose with v. glutaea.	Capillaries of tissues of knee joint and muscles of thigh.	From muscles of medial region of thigh upward beneath m. quadratus femoris to v. profunda femoris at its union with v. femoralis.
Circumflexa ilium profunda (deep circumflex iliac vein)	Vein of deep structures in iliac region.	Capillaries of deep muscles of upper portion of thigh and lower portion of abdomen.	From deep tissues from anterior superior spine of ileum along inner surface of pelvic brim to v. iliac externa.
Circumflexa ilium superficialis (superficial circumflex iliac vein)	Superficial vein in lateral iliac region.	Capillaries of superficial tissues of lateral aspect of region of hip joint.	From superficial tissues from anterior iliac crest diagonally downward to flow into v. femoralis just before it enters external femoral ring.
Colica dextra (right colic vein)	Vein of ascending colon. Usually two.	Capillaries of walls of ascending colon.	From tissues of ascending colon through mesentery to v. mesenterica superior.

Name	Description	Origin	Distribution
<i>Colica media</i> (middle colic vein)	Vein of transverse colon.	Capillaries of walls of transverse colon	From tissues of transverse colon through mesentery to v. mesenterica superior
<i>Colica sinistra</i> (left colic vein)	Vein of descending colon. Anastomoses freely with vv sigmoidae	Capillaries of wall of descending colon	From tissues of descending colon through mesentery laterally upward to v. mesenterica inferior
<i>Comitans lateralis</i>	Vein of region of knee.	Capillaries of region of knee.	From tissues of leg and knee upward on either side of v poplitea to flow into it
<i>Comitans medialis</i>	Vein of region of knee	Capillaries of region of knee.	From tissues of knee and leg upward to v poplitea.
<i>Cordis anteriores</i> (anterior coronary veins)	Small veins of right ventricle	Tissues of right ventricle	From right ventricles near apex upward to flow directly into right atrium
<i>Cordis magna</i> (coronary or great cardiac vein)	Large vein of anterior portion of ventricles	Tissues of ventricles in region of apex	From apex in anterior longitudinal sulcus upward to coronary sulcus left to right atrium through coronary sinus
<i>Cordis media</i> (middle coronary vein)	Large vein of posterior portion of ventricles	Capillaries of ventricles and ventricular septum	From apex of heart along ventricles in longitudinal sulcus upward from apex to right atrium through coronary sinus
<i>Cordis parva</i> (small or rt. cardiac vein)	Small vein of right atrium and ventricle	Capillaries of right auricle and ventricle	From branches in right auricle and ventricle along coronary sulcus to right atrium through coronary sinus
<i>Coronaria ventriculi</i> (coronary vein of stomach)	Vein of stomach. Anastomoses with vv gastro-epiploica and pylorica	Capillaries of upper portion of stomach	From right or left along lesser curvature of stomach to vv. portae or hepatics near pylorus
<i>Costoxillaris</i> (costo-axillary vein)	Vein draining blood from middle portion of first 6th or 7th intercostal spaces	Capillaries of upper intercostal spaces and veins	From middle portion of upper 6 vv. intercostals to v. thoracoepigastrica
<i>Cutaneae abdominis et pectoris</i> (subcutaneous abdominal and thoracic veins)	Veins in subcutaneous tissues of abdomen and thorax wall.	Capillaries of superficial tissues of body wall	Throughout subcutaneous tissue of body wall by anastomoses to veins of neck, axilla and anterior abdominal wall
<i>Cystica</i> (cystic vein)	Vein of gallbladder.	Capillaries of gallbladder.	From tissues of gallbladder downward to v. portae just below its entrance into liver.
<i>Deferentiales</i>	Veins of testes.	Capillaries of testes	From testes along ductus deferens to plexus vesicalis
<i>Digitales communes pedis</i> (common digital veins of foot)	Short veins on back of foot	Union of vv digitalis pedis dorsalis and intercapitulares	From base of toes to venous arches of back of foot.
<i>Digitales dorsales propriae</i> (dorsal digital veins of hand)	Superficial veins of back of fingers. Anastomose freely with each other.	Capillaries of superficial tissues of fingers	From tissues of fingers proximally along fingers dorsally to hand, uniting to form vv digitales volares communes.
<i>Digitales pedis dorsales</i> (dorsal digital veins of foot)	Veins of toes on dorsal surface.	Capillaries of toes	From tissues of toes to vv digitales communes pedis at base of toes.
<i>Digitales plantares</i> (plantar digital veins)	Veins of toes on plantar surface.	From capillaries of toes	Along plantar surface of toes to foot to become vv. metatarsae plantares
<i>Digitales volares communes</i> (common digital vein of palm)	Superficial veins of palm of hand.	Capillaries of tissues of palm of hand.	From base of fingers to superficial venous arches of palm.

Name	Description	Origin	Distribution
Digitales volares propriæ (palmar digital veins of hand)	Superficial veins of palmar surface of fingers. Anastomose freely with each other and dorsal veins	Capillaries of superficial tissues of palmar surface of fingers	Tissues of fingers along fingers to dorsal veins by vv. intercapitulares
Diploicæ (diploic veins)	Thin walled tubes in canals between the inner and outer skull surface. They have no valves except at mouth of vessels, form a network through the skull and are variable in distribution. Named from regions they drain	Bony tissue between internal and external skull surfaces	From bones of skull to venæ duræ mætræ and external veins of skull
Dorsalis penis (dorsal vein of penis)	Large vein of penis along midline of dorsum	Tissue of penis	Along dorsum of penis upward to pelvis between symphysis pubis and urogenital trigon into plexus pudendalis in front of bladder
Dorsales penis cutaneæ (superficial veins of penis)	Small veins of skin of penis	Capillaries of skin of penis	From superficial tissues of penis laterally upward to v. pudendis externa
Ductus venosus	Vein in liver functioning in fetal circulation, connecting v. umbilicalis and v. cava inferior	V. umbilicalis	From v. umbilicalis transversely through liver to v. cava inferior
Duodenales (duodenal veins)	Veins of duodenum	Walls of duodenum	From duodenum by anastomoses to vv. iliocecolicæ, colicæ media, and mesentericæ superior
Epigastricæ superiores (superior epigastric veins)	Double veins of upper anterior abdominal wall. Anastomose freely with v. epigastrica inferior	Capillaries of upper anterior abdominal wall	From tissues of anterior abdominal wall along inner surface of m. rectus abdominus upward through diaphragm to form v. mammaria interna with v. musculophrenica
Epigastrica inferior (inferior epigastric vein)	Vein of lower anterior abdominal wall. Tributaries drain blood from paraumbilical veins and superficial tissues of testes	Capillaries of internal surface of lower anterior abdominal wall	From internal surface of lower abdominal wall along m. rectus abdominus diagonally across abdominal wall to flow into v. iliaca externa
Epigastrica superficialis (superficial epigastric veins)	Veins draining blood from superficial regions of lower half of anterior abdominal wall	Superficial tissues of lower portion of anterior abdominal wall	From superficial tissues of abdominal wall, downward with many anastomoses diagonally to v. femoralis just outside entrance to external femoral ring
Facialis anterior (anterior facial)	Superficial vein of face. Corresponds to arteria maxillaris externa. Drains blood from most of smaller superficial facial veins	From union of vv. angularis and nasales externæ at medial angle of eye	Beneath superficial muscles of face. Diagonally across face from nose to angle to jaw where it flows into v. facialis communis
Facialis communis (common facial vein)	Large vein of face beneath platysma	Union of vv. facialis anterior and posterior	From convergence of vv. faciales at angle of jaw to v. jugularis interna at level of hyoid bone
Facialis posterior (posterior facial vein)	Deep vein of face. Branches drain deep structures of face	Union of vv. temporalis superficialis and media	From origin in front of ear downward through parotid gland behind ramus of mandible to angle of jaw where it forms v. jugularis interna
Femoralis (femoral vein)	Large vein of thigh.	Continuation of v. poplitea.	From posterior region of knee through m. abductor magna upward beneath m. sartorius across thigh through femoral ring to become v. iliaca externa.

Name	Description	Origin	Distribution
Femoropoplitea (femoropopliteal vein)	Small superficial vein of dorsum of thigh and knee. Anastomoses with v. saphena magna.	Capillaries of superficial tissues in posterior region of knee.	From laterodorsal superficial tissues of knee transversely across and above knee through muscles to flow into v. poplitea
Frontalis (frontal veins)	Superficial vein of skull, anastomosing with temporalis.	Capillaries of anterior region of scalp.	Anterior region of scalp down anterior midline diagonally across forehead to left of root of nose where it forms v. angularis.
Gastricae breves (short gastric veins)	Short veins of fundus of stomach, usually 3 to 5	Capillaries of fundus of stomach.	From capillaries of fundus of stomach in gastrosplenic ligament to v. lienalis
Gastroepiploica dextra (right gastroepiploic vein)	Vein of lower portion of stomach.	Capillaries of stomach.	Along lower portion of greater curvature of stomach to unite with v. gastroepiploica sinistra. Flows into v. mesenterica superior.
Gastroepiploica sinistra (left gastroepiploic vein)	Large vein of upper portion of stomach	Capillaries of stomach.	Along greater curvature of stomach between it and spleen, unites with v. gastroepiploica dextra. Flows into v. lienalis.
Glutaea inferior (inferior gluteal vein)	Vein of lower region of hip. Anastomoses freely with v. glutaea superior.	Capillaries, gluteal and adjacent muscles	From tissues of hip through pelvic wall to inner surface, to flow into v. hypogastrica.
Glutaea superior (superior gluteal vein)	Vein of upper region of hip. Anastomoses freely with v. glutaea inferior.	Capillaries of gluteal and adjacent muscles	From tissues of hip through pelvic wall to inner surface to flow into v. hypogastrica.
Haemorrhoidales externae (external hemorrhoidal veins)	A plexus of veins on outer surface of rectum.	From internal plexus of rectum and veins of adjacent structures.	From outer surface of rectum to vv. pudendae internae, hypogastrica and mesenterica inferior by numerous branches
Haemorrhoidales inferiores (inferior hemorrhoidal veins)	Veins of lower region of rectum and anus.	From plexus haemorrhoidalis externus of outer wall of rectum.	From region of anus diagonally lateral beneath m. glutaea to v. pudendae internae.
Haemorrhoidales internae (internal hemorrhoidal veins)	A plexus of veins in submucosa of rectum	Tissues of rectum.	From inner wall of rectum through tissues of rectum by numerous branches to external plexus.
Haemorrhoidales mediae (middle hemorrhoidal veins)	Veins of middle region of plexus haemorrhoidalis externa	Plexus haemorrhoidalis externa and tissues of bladder, prostate and seminal vesicles.	From plexus of outer rectal wall laterally to v. hypogastrica.
Haemorrhoidalis superior (superior hemorrhoidal vein)	Largest vein of region of rectum.	Capillaries of rectum and plexus on lower anterior/lateral surface of rectum.	Posterior to rectum upward through mesorectum to flow into v. mesenterica inferior.
Hemiazygos (hemiazygos vein)	Single vein of lower left thoracic wall. Drains blood from intercostal veins. Anastomoses with v. azygos.	Continuation of v. lumbalis ascendens sinistra above diaphragm.	From diaphragm along left of vertebral bodies to v. azygos at 6th to 7th intercostal space.
Hemiazygos accessoria (accessory hemiazygos vein)	Drains blood from intercostal spaces above level of 6th to 7th intercostal space.	Capillaries of upper intercostal spaces.	From upper intercostal spaces along left margin of bodies of vertebrae to level of 6th to 7th intercostal space where it enters v. hemiazygos.
Hepaticae (hepatic veins)	Short, large veins from liver to v. cava inferior. Vary in number from 2 to 4.	Tissues of liver.	From lobes of liver to v. cava inferior, just below inferior surface of diaphragm.

Name	Description	Origin	Distribution
Hypogastrica (internal iliac or hypogastric vein)	Large, short vein draining blood from pelvis.	Convergence of veins of internal pelvic organs and structures.	From posterior pelvic wall upward and anterior to v. iliaca externa at brim of pelvis.
Ileocolica (ileocolic vein)	Vein of mesentery of ascending colon.	Capillaries of intestine in region of union of ileum and colon.	From region of lower portion of ascending colon and ileum through mesentery to unite with vv. colicae dextrae to flow into v. mesenterica superior.
Iliaca communis (common iliac vein)	Large vein draining blood from pelvis and leg. Flow together to form v. cava inferior.	Union of vv. hypogastrica and iliaca externa.	Diagonally across pelvis from lateral region to meet in posterior midline.
Iliaca externa (external iliac vein)	Large vein from leg along anterior portion of rim of true pelvis. A continuation of v. femoralis	V. femoralis, at its entrance to pelvis	From v. femoralis behind inguinal ligament diagonally upward and backward to unite with v. hypogastrica to form v. iliaca communis.
Iliaca interna (see v. hypogastrica)			
Iliolumbalis (iliolumbar vein)	Vein of lower abdominal wall. Anastomoses to form collateral circulation with v. lumbalis ascendens	Capillaries of tissues of body wall in lumbar regions.	From walls of false pelvis diagonally across inner surface of ilium to flow into v. hypogastrica or v. iliaca communis.
Inter capitulares (intercapitular veins)	Veins of hand in tissues between fingers	Veins of fingers and tissues between fingers	Connect between bases of fingers volar and dorsal veins of hand
Intercavernous anterior and posterior (anterior and posterior intercavernous sinuses)	Unpaired blood channels connecting two cavernous sinuses, forming with them the circular sinus.	Layers of dura mater in region of hypophysis.	Anterior is in front and beneath hypophysis. Posterior is behind and beneath hypophysis.
Intercostales (intercostal veins)	Veins of intercostal spaces.	Capillaries of intercostal spaces.	From intercostal spaces to region along lower margin of ribs to vv. mammae interna, azygos and costoxillaris.
Intervertebrales (intervertebral veins)	Veins accompanying spinal nerves. Permit collateral circulation of venous plexuses of spinal cord	From plexuses of spinal column.	Between vertebrae and between internal and external venous plexuses of spinal column.
Jugularis anterior (anterior jugular vein)	Superficial vein of anterior region of neck. Pair anastomose freely with other and adjacent veins.		From chin upon superficial muscles laterally downward across neck to v. jugularis externa or subclavia.
Jugularis externa (external jugular vein)	Large superficial vein in lateral region of neck. Main branches are vv. capitales and jugularis anterior.	From union of facialis posterior and auricularis posterior.	Below ear across sternocleidomastoid muscle beneath platysma down neck to v. subclavia.
Jugularis interna (internal jugular vein)	Largest vein of head and neck. Receives veins from face, neck, thyroid and larynx. With jugularis externa and anterior corresponds to arteria carotis communis.	Arises from capillaries of brain and regions of pharynx and neck, as direct continuation of v. transversus.	From foramen jugulare, where it connects with bulbus v. jugularis superioris downward on lateral wall of pharynx to junction with v. subclavia to form v. anonyma.
Labiales posteriores (labial veins)	Correspond to vv. scrotales posteriores.	Tissues of labia.	From labia to v. pudenda interna.

Name	Description	Origin	Distribution
Labiales (superior and inferior) (superior and inferior labial veins)	Superficial veins of the lips. Anastomose with each other.	Capillaries of lips.	Tissues of lip to facialis anterior.
Lienalis (splenic vein)	Large vein draining blood from spleen and part of stomach.	Capillaries of spleen.	From spleen transversely across abdomen to head of pancreas where it forms v. portae with v. mesenterica.
Lingualis (lingual vein)	Vein of tongue corresponding to arteria lingualis. Anastomoses with vv. pharyngeae and thyroidea superior.	From tongue along lower jaw to facialis. Capillaries of tongue and sublingual regions.	From tongue along lower jaw to vv. facialis or thyroidea superiores.
Lumbales (lumbar veins)	Four or five veins of abdominal walls. Anastomose freely with each other.	Capillaries of walls of abdominal cavity.	From somatic tissues of abdomen posteriorly to v. cava inferior at various levels.
Lumbalis ascendens (ascending lumbar vein)	Vein parallel to v. cava inferior connecting lumbar veins.	Vv. Lumbales.	Along lateral border of spinal column through abdomen flowing into v. iliac communis and continuing in thorax on right as v. azygos and on left as v. hemiazygos.
Mammaria interna (internal mammary)	Deep vein of chest draining blood from intercostal spaces. Double in the region in transversus covered by m. transversus thoracis and single above it.	Union of vv. epigastricae superiores and musculophrenicae.	Between 7th and 10th ribs, lateral margin of inner aspect of sternum, beneath pleura, behind cartilages of the 1st to 7th rib to v. anonyma dextra at its junction with anonyma sinistra.
Mediana antebraehii (median antebraehial vein)	Superficial vein of forearm running between vv. cephalica and basilica. Anastomoses with them.	Tissues of hand and forearm.	From superficial veins of hand up forearm to v. basilica below elbow.
Mediana cubiti	Short vein of forearm for collateral circulation between vv. basilica and cephalica.	Tissues of forearm.	From v. cephalica below elbow diagonally across forearm to v. basilica at elbow.
Mediastinales anteriores (anterior mediastinal veins)	Veins of mediastinal region. May flow together or flow into veins of other viscera.	Capillaries of mediastinal viscera.	From mediastinal region to v. anonyma.
Mediastinales posteriores (posterior mediastinal veins)	Drain blood from posterior mediastinal structures.	Capillaries of mediastinal structures.	From posterior mediastinal structures to v. azygos at level of 9th to 11th thoracic vertebrae.
Meningeae (meningeal veins)	Multiple veins. Numerous in the dura mater of brain, anastomosing freely with each other. Usually accompany arteries with 2 veins for each artery.	Meninges of brain.	From meninges to sagittalis superior, sinus cavernosus and internal maxillary vein.
Mesenterica inferior (inferior mesenteric vein)	Large vein from mesentery of colon. Receives veins from region of rectum.	Capillaries of colon and rectum.	Through mesentery of colon upward to v. lienalis or v. mesenterica superior.
Mesenterica superior (superior mesenteric vein)	Large vein from small intestine which flows into v. portae.	Capillaries of mesentery of small intestines.	From mesentery of small intestines upward to head of pancreas to unite with v. lienalis to form v. portae.
Metacarpeae dorsales (dorsal metacarpal veins)	Superficial veins of back of hand. Anastomose freely with each other.	Capillaries of hand.	Superficial tissues of hand along metacarpal bones to venous arches of back of hand.

Name	Description	Origin	Distribution
Metacarpæe volares (palmar metacarpal veins)	Deep veins on both sides of hand. Anastomose with each other.	Capillaries of hand.	Deep tissues of palm of hand along metacarpal bone to palmar arches.
Metatarsæe dorsales pedis (dorsal metatarsal veins)	Deep veins of back of foot.	Capillaries of deep structures of foot.	Along metatarsal bones toward ankle, uniting to form vv. tibiales anteriores.
Metatarsæe plantares (plantar metatarsal veins)	Deep veins of solar aspect of foot.	Deep tissues of foot and vv. digitales plantares.	Along metatarsal bones to ankles and plantar venous arches.
Musculophrenicæ (musculophrenic veins)	Veins of thoracic surface of diaphragm and lower thoracic wall.	Capillaries of thoracic surface of diaphragm and lower intercostal veins.	Along thoracic surface of diaphragm upward lateral to sternum to unite with vv. epigastricæ superiores to form v. mammaria interna.
Nasales externæ (external nasal veins)	Superficial veins of lower portion of nose.	Capillaries of lower portion of nose.	From tissue of nose to v. anterior facialis which they enter just below the eye.
Nasofrontalis (nasofrontal vein)	Short vein on each side of bridge of nose.	Capillaries in anterior of orbital cavity and region of frontal bone.	Between vv. supraorbitalis and angularis.
Obturatoria (obturator vein)	Vein draining blood from region of acetabulum and obturator foramen.	Capillaries of region of articulation of femur into pelvis.	Tissues of region of acetabulum and obturator foramen. Diagonally upward through tissues of region to enter pelvis on lateral aspect, diagonally backward and upward across pelvic wall to v. hypogastricæ or iliaca externa.
Occipitalis (occipital vein)	Superficial vein of occipital region. Anastomoses with posterior vertebral plexus.	Capillaries of occipital region.	From superficial tissue of occipital region, and posterior vertebral plexus downward behind ear to v. jugularis externa below ear.
Oesophageæ (esophageal veins)	Veins of esophagus.	Capillaries of esophagus.	From esophagus to v. azygos at level of 8th to 10th thoracic vertebrae.
Ophthalmica inferior (inferior ophthalmic vein)	Paired veins of floor of orbital cavity. Anastomose with superior ophthalmic veins.	Capillaries of lacrimal sac and eyelids.	From anterior of orbit between medial and inferior wall of orbit to cavernous sinus.
Ophthalmica superior (superior ophthalmic vein)	Paired veins of orbital cavity. Have no valves. Anastomose with facial vein and inferior ophthalmic vein.	Capillaries of region of ethmoid and lacrimal bones, eyelids and ocular bulb.	From medial palpebral commissure of eye to cavernous sinus.
Ovarica (ovarian vein)	Vein of ovary.	Capillaries of ovaries and uterine tube and adjacent structures which form plexus around artery.	From plexus around artery upward from ovary across pelvic brim to become v. spermatica interna.
Palatina (palatine vein)	Deep vein of face corresponding to arteria palatina ascendens.	Capillaries of deep tissues of neck.	Deep tissues along ramus of jaw to v. facialis anterior at angle of jaw.
Palpebrales inferiores (inferior palpebral veins)	Veins of region of lower eyelid.	Capillaries of region of lower eyelid.	From region of lower eyelid to v. facialis anterior.
Palpebrales superiores (superior palpebral veins)	Veins of region of upper eyelid.	Capillaries of region of upper eyelid.	From region of upper eyelid to v. facialis anterior.
Pancreaticæ (pancreatic veins)	Veins of pancreas.	Capillaries of pancreas.	From capillaries of tissues of pancreas by short veins which flow into v. lienalis at intervals.

Name	Description	Origin	Distribution
Pancreaticoduodenalis (pancreaticoduodenal vein)	Vein from duodenum and head of pancreas. Anastomoses freely with gastric veins	Capillaries of duodenum and portions of pancreas.	Along duodenum between it and pancreas, upward to v. mesenterica superior just below its union with v. lienalis.
Parotidea anterior (anterior parotid vein)	Vein of parotid gland.	Capillaries of parotid gland.	From tissues of parotid gland to v. facialis anterior which it enters above angle of jaw.
Parotidea posterior (posterior parotid vein)	Vein of posterior portion of parotid gland.	Capillaries of posterior portion of parotid gland.	Posterior portion of parotid gland, inferior to ear upward to union of v. temporalis superficialis with v. facialis posterior.
Parumbilicales (paraumbilical veins)	Small veins in region of umbilicus connecting superficial and deep veins.	Superficial tissues of region of umbilicus	From superficial veins in umbilical region by anastomoses with vv. epigastricae to liver substance
Pericardiacae (pericardial veins)	Veins of pericardium.	From capillaries of pericardium.	From pericardium to v. anonyma or to other veins of viscera which empty into it.
Peronaea (peroneal vein)	Deep vein of leg.	Veins of ankle and capillaries of tissues of leg.	From venous plexus in region of heel upward along lateral region of deep tissue to flow into v. tibialis posterior below knee.
Petrosus inferior (inferior petrosal sinus)	Paired blood channels in dura mater in temporal region	Groove between petrous portion of temporal bone and basilar portion of occipital	From petrous portion of temporal bone to superior jugular vein at its bulb.
Petrosus superior (superior petrosal sinus)	Paired blood channels in dura mater in temporal regions.	From region of petrous portion of temporal bone in the attached margin of tentorium cerebelli	Between vena cavernosus and vena transversus.
Pharyngeae (pharyngeal veins)	Veins of pharyngeal region. Vary in number, from the plexus pharyngeus. Anastomose with veins of external ear, deep muscles of pharynx, palate and dura mater.	From plexus on outer pharyngeal surface	From capillaries of pharyngeal region to v. jugularis interna or its adjacent branches at various levels.
Phrenica inferior (inferior phrenic)	Vein of abdominal surface of diaphragm.	Tissues of diaphragm.	Throughout abdominal surface of diaphragm to v. cava superior just below cava hiatus of diaphragm.
Phrenicae superiores (superior phrenic veins)	Paired veins of anterior wall of thorax, corresponding to arteriae pericardiophrenicae.	Capillaries of pericardium.	From diaphragm through thoracic cavity in front of root of lung on pericardium to v. anonyma.
Plantares laterales (lateral plantar veins)	Veins of sole of foot.	Venous arches of sole of foot.	Along lateral margin of sole of foot upward to form vv. tibiales posteriores with vv. plantares mediales.
Plantares mediales (medial plantar veins)	Veins of sole of foot.	Venous arches of sole of foot.	Along medial aspect of sole of foot upward to form vv. tibiales posteriores with vv. plantares laterales.
Poplitea (popliteal vein)	Large vein in posterior region of knee. Has parallel median and lateral concomitants.	Union of vv. tibiales.	From vv. tibiales below knee in middorsal line upward to become femoral vein as it enters m. adductor.
Portae (portal vein)	Collects blood from digestive tract and conveys it to the liver. Terminates in capillary formation in liver	Union of vv. mesenterica superior and lienalis.	From head of pancreas upward posterior to bile ducts to hilum of liver to divide into right and left branch to liver.

Name	Description	Origin	Distribution
Profundae clitoridis (deep veins of clitoris)	Vein of clitoris.	Tissues of clitoris.	From clitoris to v. pudenda interna
Profundae penis (deep veins of penis)	Vein of corpora cavernosa of penis. Branches anastomose freely with each other.	Capillaries of penis.	Above penis in crus penis. Flows into v. dorsalis penis at root of penis.
Profunda femoris (deep femoral vein)	Deep vein of thigh.	Capillaries of muscles of thigh.	From midregion of thigh upward beneath anterior muscles to v. femoralis
Pudendae externae (external pudic veins)	Veins draining blood from superficial regions of medial aspect of upper thigh	Capillaries of superficial tissues of lower abdomen, scrotum or labia	Superficial tissues of lower abdomen and scrotum or labia, transversely across upper region of thigh to v. femoralis.
Pudenda interna (internal pudic vein)	Vein of pelvic floor draining blood from pelvic walls and penis or clitoris.	From anastomoses with v. dorsalis penis or clitoridis below symphysis pubis.	From trigonum urogenitale along pelvic wall backwards and upwards to flow into v. hypogastrica.
Pylorica (pyloric vein)	Small vein of pyloric region of stomach. Anastomoses with other gastric veins	Capillaries of pyloric portion of stomach.	Along lesser curvature of stomach to v. portae near pylorus.
Radialis (radial vein)	Large deep vein on radial side of forearm.	Palmar arches of hand.	Palmar arches of hand along lateral side of forearm in deep tissues to unite with v. ulnaris at elbow to form vv. brachiales.
Rectus (straight sinus)	Single blood channel in layers of dura mater connecting superior and inferior sagittal sinuses.	At point of attachment of falx cerebri to tentorium cerebelli.	Between superior and inferior venous channel at base of skull.
Renales (renal veins)	Veins of kidney. Receive blood from veins of ureter. The v. spermatica interna flows into v. renalis on left.	From capillaries of kidneys by fusion of small vessels near hilum of kidney.	From hilus of kidney transversely across posterior abdominal wall to v. cava inferior.
Rete dorsale manus (dorsal venous rete of hand)	A network of veins on dorsal surface of hand at wrist.	Veins of dorsal surface of hands.	From vv. metacarpae dorsales, flowing together and multiple anastomoses at wrist, becoming vv. basilica and cephalica.
Rete dorsale pedis (dorsal venous rete of foot)	A network of veins on back of foot at ankle.	Veins of dorsal surface of foot.	From vv. digitales pedis dorsales by multiple anastomoses to network of veins of ankle.
Sacralis lateralis (lateral sacral vein)	Vein of posterior pelvic wall. Forms plexus with v. sacralis media.	Capillaries of tissues of posterior pelvic wall.	From tissues of posterior wall upward laterally on pelvic surface of sacrum to flow into v. hypogastrica or iliaca communis.
Sacralis medus (middle sacral vein)	Large vein of posterior pelvic wall. Forms plexus with v. sacralis lateralis.	Capillaries of tissues of posterior wall.	From tissues of pelvic wall in sacral region upward along sacrum in middle line to flow into v. hypogastrica or iliaca communis.
Sagittalis inferior (inferior longitudinal sinus)	Single blood channel between layers of dura mater at the base of the falx cerebri.	From regions of superior dura mater and skull.	Entire length of inferior free margin of falx cerebri.
Sagittalis superior (superior longitudinal sinus)	Single blood channel between layers of dura mater in sagittal plane. Triangular in shape.	Region of falx cerebri and anterior portion of skull cavity.	From crista galli of ethmoid bone along sagittal sulcus of frontal, parietal, and occipital bones into transverse sinus.

Table of Veins

Table of Veins

Name	Description	Origin	Distribution
Saphena magna	Large superficial vein of leg and thigh. Longest in body	Capillaries of superficial tissues of leg and thigh and veins of foot	Along medial aspect of leg from ankle upward across knee and thigh to enter femoral ring to flow into v femoris
Saphena parva (short saphenous vein)	Large superficial vein of back of leg	Superficial veins of foot and capillaries of tissues of leg	From ankle upward in middorsal line to above knee. Flows into v saphena magna
Serotales anteriores (anterior serotal veins)	Superficial veins of anterior region of serotum	Capillaries of superficial tissues of serotum	From anterior of serotum transversely across thigh to v pudenda externa.
Serotales posteriores (posterior serotal veins)	Veins of serotum. Correspond to vv labiales in female.	Capillaries of serotum, posterior portion.	From serotum upward laterally in perineum to pudenda interna in pelvic floor
Sigmoideae (sigmoid veins)	Small veins of region of sigmoid flexure of colon	Capillaries in region of sigmoid flexure	Tissues of sigmoid colon through mesentery to v mesenterica inferior
Spermatica interna (spermatic vein)	Consists of 2 or 3 anastomosing vessels surrounding a spermatica. Receives veins from ureters, peritoneum and kidney capsule	From testicular vein in male and ovarian vein in female	From brim of pelvis upward along posterior abdominal wall to v cava inferior on right and v renalis on left
Sphenopalatina (sphenopalatine vein)	Vein draining deep structures of face and skull in nasal region	Capillaries of deep nasal regions	From nasal cavity through sphenopalatine foramen to pterygoid plexus in front of ear
Sphenoparietalis (sphenoparietal sinus)	Paired blood channels of dura mater, from sphenoparietal region	Capillaries of anterior temporal vein of diploe, middle meningeal and ophthalmomeningeal vein	Each side of skull, behind coronal suture, to anterior end of sinus cavernosus.
Stylomastoidea (stylomastoid vein)	Corresponds to arteria stylomastoidea from middle and inner ear	Capillaries of mastoid region and middle ear structures	From mastoid and middle ear through stylomastoid foramen into facial canal behind ear to v facialis posterior
Subclavia (subclavian vein)	Large venous trunk to upper extremity. A continuation of v axillaris in region of clavicle. Main tributaries are vv transversa scapulae and colli	V axillaris and veins flowing into it from adjacent regions	Beneath clavicle across first rib, to form v anonyma with v jugularis interna.
Submentalis (submental vein)	Superficial vein of under portion of chin. Anastomoses with v linguales and palatina	Capillaries of region of chin	From tissues of chin diagonally across chin to flow into v. facialis anterior or facialis communis below angle of jaw.
Supraorbitalis (supraorbital vein)	Vein of upper portion of orbital cavity.	Capillaries and superficial tissues in region of eye	From superficial tissues of region of eye through supraorbital foramen along lateral wall of orbital cavity to nose where it joins v nasofrontalis
Suprarenalis (suprarenal vein).	Vein of adrenal glands	Capillaries of adrenal glands	From tissues of adrenal glands to v cava inferior on right and vv renales on left.
Temporalis media (median temporal vein)	Superficial vein of lateral portion of skull. Anastomoses with vv temporalis superficialis and supraorbitalis	Lateral superficial plexus of skull.	From lateral superficial tissues of skull transversely downward from level of lateral canthus of eye through temporal muscle to join v. temporalis superficialis in front of ear
Temporalis superficialis (superficial temporal vein)	Vein of superficial tissues of skull. Anastomoses freely with v. frontalis.	Superficial plexus of roof of skull.	Tissues of roof of skull diagonally downward to join vv. temporalis media in front of ear.

Name	Description	Origin	Distribution
Testicularis (testicular vein)	Vein of testes.	Capillaries of testes and epididymis which form close plexus around artery.	From tissues of testes and epididymis and plexus from veins of these organs through inguinal canal to become v. spermatica interna.
Thoracalis lateralis (long thoracic vein)	Long vein of lateral and anterior chest wall.	Capillaries of muscles in anterior chest and mammary glands.	Tissues of anterior chest muscles to v. axillaris with v. transversa colli.
Thoracoepigastrica (thoracoepigastric vein)	Superficial vein of trunk to permit collateral circulation between veins of arms and legs and trunk.	V. femoralis in inguinal region, and capillaries of superficial tissues of trunk.	Lateral wall of body from v. femoralis to v. thoracalis lateralis in axillary region below its union with v. axillaris.
Thymicae (veins of thymus)	Veins of thymus gland.	From capillaries of thymus gland.	From thymus gland to v. anonyma.
Thyreodea ima (thyroid ima)	Large, short vein from plexus thyreoidicus.	Plexus of thyroid.	From middle portion of plexus thyreoidicus downward anterior to trachea to v. anonyma sinistra.
Thyreodeae inferiores (inferior thyroid veins)	Paired veins from plexus thyreoidicus. Anastomose freely with thyreodeae superiores.	Plexus thyreoidicus and regions of trachea, esophagus and larynx.	From thyroid plexus to v. jugularis interna at junction with subclavia.
Thyreodeae superiores (superior thyroid veins)	Two veins from superior portion of thyroid. Receive blood from vv. sternocleidomastoidea and laryngea.	Capillaries of thyroid.	From tissues of thyroid to v. jugularis interna at level of larynx, or to v. facialis communis.
Tibiales anteriores (anterior tibial veins)	Deep veins of anterior aspect of leg.	From union of vv. metatarsae dorsales pedis and capillaries of tissues of leg.	From dorsum of foot upward beneath in tibialis anterior upward to knee, passing backward to flow into v. poplitea.
Tibiales posteriores (posterior tibial veins)	Deep veins of back of leg.	Union of vv. plantares and laterales and mediales in region of heel and capillaries of deep tissues of leg.	From ankle upward in median portion of deep tissues of posterior aspect of leg to flow into v. poplitea below knee.
Transversa colli (transverse cervical vein)	Drains blood from supraspinous region of scapula and neck.	Capillaries of supraspinous region of scapula and neck.	From supraspinous region of scapula diagonally across shoulder to v. axillaris with transversa scapulae.
Transversa faciei (transverse facial vein)	Superficial facial vein running directly upon masseter muscle and behind parotid gland.	Capillaries of middle portion of face.	From tissues of middle portion of face, transversely across face to v. facialis posterior in front of ear.
Transversa scapulae (transverse scapular vein)	Large vein of dorsal surface of scapula.	Capillaries of tissues of dorsal surface of scapula.	From tissues of dorsal scapular surface, two trunks on each side of scapular spine across shoulder to v. subclavia.
Transversus (lateral sinus)	Paired blood channels between layers of dura mater of base of skull. Cylindrical in shape.	Posterior region of skull cavity.	From internal occipital protuberance medially and inferiorly into internal jugular vein at jugular foramen.
Ulnaris (ulnar vein)	Large deep vein of medial side of forearm.	From palmar arches of hand.	From palmar arches of hand upward in deep tissues along ulnar side of forearm to form v. brachialis with v. radialis at elbow.
Umbilicalis (umbilical vein)	Vein carrying arterial blood from placenta to fetus.	Placental tissues.	Along umbilical cord through umbilicus to liver and ductus venosus.

Name	Description	Origin	Distribution
Urethrales (urethral veins)	Veins of corpus cavernosum urethrae.	Capillaries of urethra and adjacent regions	From structures of urethra to plexus pudendalis behind symphysis pubis to v. pudenda interna.
Uterinae (uterine veins)	Veins carrying blood from uterus.	From tissues of uterus through plexus uterovaginalis.	From lateral margin of uterus in plexus uterovaginalis laterally to v. hypogastrica.
Uterovaginales (uterovaginal veins)	Plexus of veins around vagina at lateral margin of uterus.	Tissues of vagina and uterus.	From lower regions of uterus and vagina by multiple anastomoses to plexus pudendalis and v. ovarica
Vertebrales externi anteriores and posteriores (anterior and posterior external vertebral plexuses)	Plexuses on external surfaces of spinal column.	From tissues of vertebrae from vv. intercostales and intervertebrales along anterior and posterior aspects of spinal column. Branches flow into vv. vertebrales interni.	From branches from tissues of spinal column and cord longitudinally in canal.
Vertebrales interni (internal vertebral veins)	Plexuses of veins running within spinal canal, the length of the canal.	Capillaries of vertebrae and tissues of spinal cord.	From foramen magnum. Empty into v. occipitalis and plexus basilaris superiorly and vv. sacrales inferiorly.
Vertebral (vertebral vein)	Vein draining blood from plexus venosi vertebrales, v. occipitalis, deep muscles of neck and plexus vertebralis externi. Corresponds to cervical portion of arteria vertebralis.	From vena occipitalis and capillaries of veins of spinal canal and deep muscles of neck.	Foramen magnum downward lateral to arteria vertebralis through foramina transversaria of 1st, 6th or 7th cervical vertebra to external jugularis externa.
Vesicales (vesicular veins)	Veins of urinary bladder.	Tissues of bladder and plexus vesicalis	From plexus vesicalis at base of bladder to v. pudenda interna.

CHART OF RECOMMENDED DAILY ALLOWANCES FOR SPECIFIC NUTRIENTS¹

References to Table on Page App. 85

These are tentative allowances toward which to aim in planning practical diets. They can be met by a good diet of natural foods, this will also provide other minerals and vitamins, the requirements for which are less well known.

* Per Kg.

- ① 1 mg. thiamine = 333 I.U.; 1 mg. ascorbic acid = 20 I.U. (1 I.U. = 1 U.S.P. unit).
- ② Less may be required if provided as vitamin A; greater if obtained as provitamin carotene.
- ③ Infant needs increase from month to month. Amounts given are for approx 6-18 mos. Amounts protein and calcium needed are less if from breast milk.
- ④ Vitamin D undoubtedly necessary for older children and adults. If not available from sunshine, should be provided probably up to minimal amounts recommended for infants.
- ⑤ Allowances based on middle age for each group (as 2, 5, 8, etc.) and for moderate activity.

¹ Committee on Foods and Nutrition of the National Research Council.

Chart of Recommended Daily Allowances for Specific Nutrients **COMMITTEE ON FOODS AND NUTRITION OF THE NATIONAL RESEARCH COUNCIL**

	Calories	Protein	Calcium	Iron	Vitamin A (²)	Thiamine (B ₁) (¹)	Ascorbic Acid (C) (¹)	Ribo- flavin	Neotinic Acid	Vitamin D

Vitamin Tables

(Summary of Vitamins Significant in Human Diet)

Vitamin	Chief Functions	Results of Deficiency	Characteristics	Good Sources	Daily Allowances Recommended
VITAMIN A Antixerophthalmia vitamin Provitamin, carotene	Promotes growth Maintains normal infection-resistance of tissues Proper functioning of visual purple	<i>Mild.</i> Retarded growth Respiratory infections of several types Disturbed gastro-intestinal tract Skin dries, shrivels, thickens, sometimes pustule formation Night blindness <i>Severe</i> Xerophthalmia, a characteristic eye disease, and other local infections	Fat soluble Not destroyed by ordinary cooking temperatures Is destroyed by high temperatures when oxygen is present Marked capacity for storage in the liver	Animal fats butter cheese cream egg yolk whole milk. Fish liver oil Liver Vegetables 1 green leafy, esp. escarole, kale, parsley 2 yellow esp. carrots. <i>Artificial</i> Concentrates in several forms Irradiated fish oils.	<i>Adults:</i> 5000 I U. <i>In pregnancy:</i> 6000 I U. <i>In lactation:</i> 8000 I U. <i>Children:</i> 2000 to 5000 I U. <i>Infants:</i> 1500 I U.
THIAMINE HYDROCHLORIDE Vitamin B ₁ Antineuritic vitamin	Important role in carbohydrate metabolism. Promotes tonicity of digestive tract Promotes appetite. Helps maintain healthy nerves	<i>Mild:</i> Loss of appetite Impaired digestion of starches and sugars Colitis Constipation or diarrhea Emaciation. <i>Severe:</i> Nervous disorders of various types. Loss of co-ordinating power of muscles Beriberi Paralysis in man. Polyneuritis in pigeons	Water soluble. Not readily destroyed by ordinary cooking temperature Destroyed by long exposure to heat and oxidation Sensitive to alkali Limited capacity for storage in the body.	Widely distributed in plant and animal tissues but seldom occurs in high concentration, exception in brewer's yeast. Other good sources are: Whole grain cereals Peas, Beans Oranges Glandular—heart, liver, kidney Many vegetables and fruits Nuts. <i>Artificial:</i> Concentrates from yeast Rice polishings Wheat germ.	<i>Adults:</i> 10-1.6 mg. <i>In pregnancy:</i> 1.3 mg. <i>In lactation:</i> 1.7 mg. <i>Children:</i> 0.7 to 1.8 mg. <i>Infants:</i> 0.4 to 0.5 mg.

Vitamin	Chief Functions	Results of Deficiency	Characteristics	Good Sources	Daily Allowances Recommended
RIBOFLAVIN Vitamin B ₂ Vitamin G	Normal growth Prevention of cheilosis	Impaired growth Lassitude and weakness Cheilosis Glossitis	Water soluble Alcohol soluble Not destroyed by heat in cooking unless with alkali. Unstable to light	Eggs Green vegetables Liver Kidney Meat Milk Wheat germ Yeast, dried Enriched foods	<i>Adults:</i> 1.4 to 2.5 mg. <i>In pregnancy:</i> 2.0 mg <i>In lactation:</i> 2.5 mg <i>Children:</i> 1 to 2 mg. <i>Infants:</i> 0.4 to 0.9 mg.
NIACIN Nicotinic acid Nicotinamide Antipellagra vitamin	Normal functioning of gastro-intestinal tract Growth promotion Prevents skin lesions Prevents pellagra	Pellagra Gastro-intestinal disturbances Mental disturbances Black tongue (in dogs)	Water soluble Not destroyed by heat, light, air or alkali	Yeast Glandular meats Fish Legumes Whole grains Enriched foods	<i>Adults:</i> 17 to 21 mg <i>In pregnancy:</i> 15 mg <i>In lactation:</i> 15 mg <i>Children:</i> 8 to 21 mg. <i>Infants:</i> 6 to 7 mg.
VITAMIN B₁₂ Cyanocobalamin	Produces remission in pernicious anemia	Anemia.	Soluble in water or alcohol.	Liver Kidney Dairy products.	
VITAMIN C Ascorbic acid Cevitic acid Antiscorbutic vitamin	Essential for normal growth for nutrition of bone, teeth, gums. Increased resistance to infections. Antiscurvy Promotes healing of wounds	<i>Mild:</i> Lowered vitality, resistance to infections, affects structure of fibrous tissues Joint tenderness Susceptibility to dental caries, pyorrhea and bleeding gums. <i>Severe:</i> Hemorrhage Anemia Scurvy	Soluble in water, glycerine, or alcohol Easily destroyed by oxidation, heat hastens the process Lost in cookery unless container is airtight, more readily affected in alkaline than in acid medium Lost in storage if exposed to air, less lost at low temperature Retained in canning if process excludes air (as commercial canning), in quick freezing process. Stored in the body to a limited extent.	Abundant in most fresh fruits and vegetables, especially citrus fruit and juices, tomato and orange. <i>Artificial:</i> Ascorbic acid Cevitic acid	<i>Adults:</i> 70 to 75 mg <i>In pregnancy:</i> 100 mg <i>In lactation:</i> 150 mg <i>Children:</i> 35 to 100 mg <i>Infants:</i> 30 mg. The infant diet is likely to be deficient in vitamin C unless orange or tomato juice or other form is added.

Vitamin	Chief Functions	Result of Deficiency	Characteristics	Good Sources	Daily Allowance Recommended
VITAMIN D Irradiated ergosterol Calciferol	Regulates the utilization of calcium and phosphorus in the development of bones and teeth Normalizes blood. Antirachitic. Some authorities think its greatest benefits are in the first 21 years of life.	<i>Mild:</i> Interferes with utilization of calcium and phosphorus in bone and teeth formation. Irritability Weakness <i>Severe:</i> Rickets, may be common in young children Osteomalacia in adults.	Soluble in organic solvents Relatively stable under refrigeration. Stored in liver. Often associated with vitamin A.	Butter Egg yolk Fish liver oils Fish having fat distributed through the flesh, salmon, tuna fish, herring, sardines Liver Oysters Yeast and foods irradiated with ultraviolet light. Formed in the skin by exposure to sunlight. Artificially prepared forms	<i>Adults:</i> None except in pregnancy. <i>In pregnancy:</i> 400 I.U. <i>In lactation:</i> 400 I.U. <i>Children:</i> 400 I.U. <i>Infants:</i> 400 I.U.
VITAMIN E Alpha tocopherol Antisterility vitamin	Normal reproduction in rats Prevention of muscular dystrophy in rats	Sterility in rats Placental failures Muscular atrophy in experimental animals	Fat soluble. Stable to heat.	Lettuce and other green, leafy vegetables	Not known
VITAMIN K Menadione Antihemorrhagic vitamin Blood-coagulation vitamin	Normal clotting of blood Aids in prothrombin production	Anemia Hemorrhage Prolonged coagulation of blood.	Fat soluble. Not destroyed by heat, air or moisture	Alfalfa Green, leafy vegetables. Liver Associated with vitamin C in foods.	Not known except for infants. 1 mcg

Anatomical and Physiological Emergencies

Convulsions

Type	History	Clonic or Tonic	Pulse	Breathing	Color	Muscles	Pupils	Pathology	Treatment
1. Epilepsy.	Previous history of "fits" occurring principally at night. Patient gets an "aura."	Generalized tonic type	Pulse is rapid	Respirations are rapid, deep and stertorous	Blue. Patient may become very cyanotic.	Rigid in tonic and in clonic origin	Pupils are contracted and occur so early of unequal size.	Deficient oxygenation of brain areas. Increased cerebral circulation. Increased intracranial pressure. Great accumulation of lactic acid within tissues	Prevent the patient from injuring himself or from falling. Place on floor with pillow, etc. Use no stimulant.
2. Eclampsia	Occurs in toxemia of pregnancy in ante partum and post partum stages	Prolonged tonic convulsions are characteristic with the whole body in a state of rigidity. Both tonic and clonic types may occur.	Pulse is rapid and becomes thrifty	Respirations are rapid and shallow	Blue. Patient may become very cyanotic.	Rigidity of the body sets in. Extremities are fixed. General tonic spasm of body may be followed by clonic spasms for approximately 4 minutes	Pupils may be dilated and may be of unequal size	Hypertension. Degeneration of kidneys and liver. Rapid gain of weight.	Control convulsions. Give proper antenatal care for toxemia of pregnancy. Control of diet elimination and prevention of hypertension
3. Apoplexy.	Usually sequel to cerebral hemorrhage. May be result of vascular disease. Occurs usually after age of 40 years	Usually tonic. May be limited to different areas, or to one side of the body.	Pulse is strong and of a bounding quality	Respirations are deep and stertorous	Red. Skin has a florid and flushed appearance.	Spastic in tonic usage with hemiplegia. One side of body shows paralysis. Other is normal.	Pupils are unequal in size	Hemorrhage in intracranial areas. Arteriosclerosis	Keep the patient absolutely quiet with an icecap to head. No stimulants
4. Hysteria.	Usually onset is not sudden. Is accompanied by laughter and crying. Secure may be more prolonged than epilepsies.	May be of the stimulation types and take on those of epilepsy. Usually are of the tonic nature.	Pulse is normal. Shows no definite changes unless slightly rapid due to excitement.	Respirations may become rapid	No change in color of skin	Rigidity or relaxed as the victim wishes to demonstrate	Pupils are normal and react to light. Muscles of eye resist when forced opening is attempted.	Patient seldom loses consciousness but not in an area where an injury may follow. Highly reactive to suggestion.	Inhalation of NH ₄ OH. Ice water dashed upon the face. Secure is over usually when the audience disappears.

CONVULSIONS—Continued

Type	History	Clonic or Tonic	Pulse	Breathing	Color	Muscles	Pupils	Pathology	Treatment
5. Cerebro-spinal Meningitis	May be primary condition or may be some complicated disease.	Spasm of Opisthotonic character (body in arched position). Extremities continually rigid.	Characteristic very slow pulse.	Respirations rare of Cheyne-Stokes nature.	Pupils constricted. Face is flushed with elevated temperature. Skin hot and dry.	Extremities and arching of body. Legs and arms are too rigid to return to normal position.	Photophobia or supersensitive to light, with strabismus of simple or complicated forms.	Inflammation of the spinal cord. Opisthotonos.	Spinal tap. Specific treatment. Keep quiet.
6 Tetanus	After injury—deep wound and entrance of tetanus bacillus. Gunshot wound.	Tonic convulsions to coma. Clonic.	Rapid pulse to weak (from the level of bacteriæ).	Rapid, labored to irregular.	Clonic convulsions.	Constant rigidity. Cramps may not appear for 24 hrs after symptoms.	Pupils may be unequal. Eyes are fixed.	Tetanus unites with cells and nerve fibers to the point of degeneration in brain, and the medulla.	Antitoxin.
7. Catalepsy.	Tendency to hold any position by maintaining flexibility of mobility in definite period. Form of muscular anesthesia in which position of part of body is apparently unknown or inflexible.	Tonic with a prolonged stage of sustained immobility in muscles after muscles are placed.	Pulse is weak but perceptible.	Respirations shallow. Labored.	No definite change in color.	Fixed and rigid. Muscles will maintain any position for an indefinite period.	No dilatation. Eyes stare. Nervousness to light.	Catalepsy manifested from convulsions.	Provide rest. Careful observation of patient to see that no convulsions effect may come from prolonged fixity.
8. Uræmic Convulsions.	Condition usually accompanied by chronic nephritis or chronic cardiac conditions. Marked edema noted.	Clonic (bold) to severe forms of muscle jerking.	Pulse rapid weak. Muscles are rigid (tends to unperceptibility).	Respirations are slow and stertorous.	Skin is pale dry, scaly and has a waxy appearance.	Tonic and clonic.	Pupils may be "pin point."	Arterial hypertension. Albuminuria suppression of urine. Visual disturbance. Detached retina.	Measures to reduce high blood pressure. Diaphoretic and diuretic remedies. Bed rest.
9. Diabetic Coma	Diabetes mellitus hyperphosphoric acidosis.	Clonic and Tonic.	Pulse rapid weak to irregular.	Deep breathing, rapid with extreme effort.	Dry skin. Very soft. Cyanosis in convulsion.	Tonic and clonic.	Eyes balls soft. Clonic attacks are frequent.	Generalized stupor. Salivary glands secreting in bed. Discoloration of fingers.	Use of insulin. Bed rest. Care of skin. Bed rest.

Dislocations

Type	History	Pathology	Muscles	Complications	Treatment	Strapping and Support	Differentiation
1. Neck.	Caused by violent twist or fall upon the head or driving into pool.	Bilateral dislocation. Severe spinal cord. Death follows. Nerve injury caused by tension or displacement. Permanent. Torticollis and limited neck motion.	Torticollis. Muscles spastic on uninjured side. Injured side are relaxed.	Severance of cord causing paresis. Pressure on cord causing paresis. Recurrence of dislocation, permanent torticollis, paralysis death.	Keep patient in recumbent position in hyperextension of the neck. Reduction by leverage and not by manual traction. Keep traction by collar or plaster cast.	Reduction done by leverage. Application of plaster or rigid collar which must be worn until recovery of the ligaments to prevent recurrence.	Unilateral dislocation produces torticollis with head tilted on side and chin tilted away from displaced vertebrae. Reduction aids in complete disappearance of torticollis.
2. Back.	Sudden and violent twisting of the back—thrown from a horse or from lifting too great a load.	Cervical dislocation—Paraplegia may occur. Respiratory failure or ascending myelitis. Dorsal dislocation. Urinary infection.	Affected side relaxed, uninjured side spastic. Muscle spasm holds back in rigidity with severe pain when any movement is made.	Damage to cord. Incomplete paraplegia. Failure to replace results in kyphosis deformity. Weakness and arthritis.	Do not allow patient to sit up or to be turned. Prepare patient for cast and brace. Control the pain. Watch for deformities.	Treat as for fracture. Transport in prone position on rigid stretcher. Keep the body in hyperextension with cast or brace.	Compression fracture of first lumbar vertebrae is the most common injury of the spine. Decided excursion of the ilium (noted when the back is extended or flexed) is corrected. No crepitus. Discoloration, swelling and persistent pain in muscle.
3. Shoulder	Avulsion force was from behind—head of the humerus lies just below the coracoid process. Direct force upon the flexed elbow. Head of humerus is placed in front and lower than the axilla.	Rupture of tendon. Injury to circumflex nerve or brachial plexus. Disability. Injury to axillary vessels. Greater tuberosity (coracoid). Acromion processes fractured.	Muscle tension in the biceps muscle. Triceps muscle immobilized, may be slightly rigid.	Chronic arthritis. Cartilage displacement. Complete loss of function. Recurrences if a repeated injury or improper or inadequate mobilization after the first injury.	Kocher method of Replacement. 1. Flex elbow to a right angle and against body with elbow against body. Rotate arm outward until forearm points away from body. 2. Keep elbow and arm (lower arm) flexed on a right angle position to the long axis (or horizontal) of the body. 3. Arm is directed obliquely inward and the hand placed on the opposite shoulder so that reduction or replacement is complete. Immobilize by sling. X-ray is necessary.	Kept in sling. Rotated arm outward until forearm points away from body. Repeated recurrence of dislocation of the shoulder may be common.	Dislocation of shoulder is corrected when the hand (unassisted) can be placed upon the opposite shoulder. Repeated recurrence of dislocation of the shoulder may be common.
4. Elbow.	In childhood between ages 8 to 12 years Child falls upon the outstretched hand. Produces hyperextension of the elbow.	Elbow swollen. Held midway between flexion and extension. Head of radius is felt rotating behind humerus.	Tension in biceps muscle. Muscle ossification at the elbow.	Arthritis in joint. Muscle tissue ossification. Recurrence of dislocation.	Apply splint. Immobilize elbow until replacement can be made. Treat symptomatically.	Supinate the forearm. Make traction forward and downward on the forearm until radius and ulna slip back into position.	The ability to actively flex the elbow when dislocation is satisfactorily reduced.

DISLOCATIONS—Continued

Type	History	Pathology	Muscles	Complications	Treatment	Strapping and Support	Differentiation
5. Wrist.	Caused by the hyperextended hand or by severe blows upon the dorsal portion of the wrist.	Dislocation of Semilunar bone. Flexion of wrist is blocked by displaced bone. Usually results in a permanently weak wrist.	Muscles of back of hand tense. Usually marked swelling in area of the sprain.	Permanent pain, weakness and limitation of motion. Flexion limited. Displaced bones may have to be removed by surgical methods.	Surgical removal of displaced bone if unable to replace it. Support by splint or strapping.	Apply traction upon hand. Put firm pressure of the thumb upon the displaced bone.	Flexion of the wrist with slight limitations of motion and manifestation of weakness will indicate satisfactory reduction of the wrist.
6. Hand	Most frequent in thumb due to forced hyperextension of the thumb or finger	Head of metacarpal bone is wedged between flexor tendons (may necessitate an operation).	Marked muscle tension	Deformity and permanent disability unless successful reduction is made	If persistent the phalanx or thumb and then flex it. Use adhesive strapping.	Hyperextension of thumb as local pressure is made—thereby re- placement is effected. Very early reduction is necessary.	Displacement of the thumb is the most frequent injury of the hand. Swelling, discoloration, and deformity (without joint tenderness) are present
7. Hip.	If posterior by indirect violence upon head of femur. If anterior by violent hyperabduction.	Injury to capsular and surrounding tissues of capsule of the acetabulum.	Posterior dislocation—hip is held rigidly flexed. Adduction, inward rotation and flexion of the thigh. Anterior dislocation—hip is immovable in abduction and external rotation. Knee flexed.	Torn tendons and ligaments. Fracture of the neck of femur	1 Symptomatic for discomfort. 2 Spinning—since fracture is frequently a sequel. 3 Shock treatment. 4 Preparation for reduction of the dislocation	Board or rigid splint. Keep limb in slight elevation unless fracture is imminent	Reduction will be complete when flexion with extension and adduction of the thigh are possible.
8. Knee.	After violent fall or force upon knee.	Torn ligaments. Traumatized muscles of patellar and popliteal area. Loss of synovial fluid after rupture of bursa.	Rigid with pain. May include slight to marked swelling. Echinosis—slight or marked.	Disability and deformity. Permanently stiffened knee when synovial fluid is lost.	Splint as for fracture of femur and lower leg. Symptomatic to relieve discomfort. Treat for shock.	Board or rigid splint. Keep knee and limb in slight elevation unless fracture is present.	The depression adjacent to the patella is diminished and complete flexion of the knee is restored.

DISLOCATIONS—Continued

Type	History	Pathology	Muscles	Complications	Treatment	Strappings and Support	Differentiation
9 Ankle.	From violence of undue weight or twisting upon the knee	Production of scar tissue and contractures, which produce prolonged restriction of motion Usually a short period of disability and then satisfactory recovery	Rigid with pain May include swelling and discoloration (may be delayed).	Fractures—Minor or Major as determined by accident Temporary or permanent disability.	Hot and cold compresses Gentle massage on adjoining area.	Allow no use (fracture may be present) X-ray for fracture Immobilize the foot on a pillow or a rigid splint	Satisfactory reduction is made when the ankle can be displaced within a right angle.
10 Foot.	Force of violent nature upon plantar flexor of foot. Misstepping.	May include a compound dislocation of the ankle Slight to increased amount of trauma and strain upon all soft tissue of foot.	Tense, and including marked swelling and discoloration.	Fracture of ankle Weakness of metatarsal arch.	Hot and cold applications and reduction of swelling Slight massage. Watch for ecchymosis.	Pillow splint or rigid splint as for fractures Watch for swelling and cyanosis in part.	Satisfactory reduction is made when the displaced astragalus (projecting on the back of the foot) has been leveled.
11 Clavicle.	May be due to a heavy blow or fall upon the side of the shoulder.	Posterior dislocation causes pressure on structures at base of neck. Rupture of sternoclavicular ligament.	Muscles are hyperextended Fatigue results if prolonged	Increased deformity and vascularity of movement of shoulder Prolonged disability	Symptomatic Slight massage Adhesive strapping Sling for four weeks	In recumbent position with small narrow sand bag between scapulae Posterior Dislocation—press shoulders backward Make traction on arm as it is held abducted at right angle—Clavical returns to position.	Complete reduction corrects the deformity at the sternoclavicular joint, no crepitus is present Stretched ligaments and torn muscles are manifested by swelling, discoloration, and generalized pain Shoulder has secure movement.
12 Jaw.	The too wide opening of the mouth, for example yawning, laughing or eating.	Capsule of Glenoid fossa is too loose. Muscles are soft. Tissues and chronic displacement. Jaw becomes locked beneath maxillary prominence.	Muscles spastic Later become fatigued	Embarrassment in the unexpected occurrence of trauma and infection. Pre-disposes infection.	Symptomatic treatment Replacement by pressure of operators thumbs upon molars until normal placement in the mandibular cavity	Replacement Jaw bandage (supporting)	Anterior dislocation manifests partly opened and locked jaws with the teeth projecting forward Complete reduction will restore the jaw for normal occlusion.

Fractures

Type	History	Pathology	Complications	Hemorrhage	Color of Area	Treatment	Transportation
1. Simple	Fall or accident.	A complete fracture with no fragments comminuting.	Pressure on the blood supply Malunion. Osteomyelitis	Subcutaneous or capillary.	Slight to marked increase in edema.	Spint before preparation for transportation. Reduction (depending upon skill of operator).	In spint.
2. Compound	Fall or accident	Injury where either one or both fragments are through the skin.	Infection. Hemorrhage. Shock.	May or may not include hemorrhage.	Slight to marked increase in edema.	Immediate debridement in case of further treatment is elective.	Cover with sterile dressing. Maintain traction. (Thomas spint.)
3. Greenstick	Fall or accident (In children)	Fracture is incomplete but there is bowing of the bone	Complete fracture Deformity	Probably no hemorrhage will occur	Discoloration may be slight. It may be marked	Spint for preparation for transportation. Location of the fracture and place in cast.	Spint.
4. Comminuted	Injury due to crushing blow.	Bone is broken into two or more fragments	Malunion Unstability Infection.	Hemorrhage will occur in area of injury.	In area of deeper penetration is delayed.	Spint before transportation. Reduction and proper fixation requires open reduction.	Spint and traction.
5. Impacted	Crushing force causing fracture. Fragments telescoped	One fragment is jammed into another	Deformity. Loss of function Pain. Osteomyelitis	Hemorrhage will occur in area of injury.	Discoloration according to extent of hemorrhage may be delayed	Traction must be made after reduction and proper fixation is tried to hold extremity in place	Spint and traction.
6. Transverse and 7. Spiral	Sudden twisting violence exerted upon extremity	Fracture line across the bone Fracture through the bone or around it	Malunion Loss of function Pain. Osteomyelitis Infection of bone	Hemorrhage free around area of fracture	Same as compound fracture.	According to the site Spint and traction	Traction and immobilization
a. Fracture of Skull	From a fall or blow upon the skull.	In Vertex with little or no intracranial damage. Linear fracture may be overlooked. In Base serious compression in brain. Concussion may result in vital cranial nerves	Paralysis of limbs of the body. Infection of brain. Contusion of brain	Cuts on the scalp. Extent of injury determined by location of incision of pressure upon the brain.	Linear Fractures may be slight and not marked. Blood in the mouth and ears	Place in dorsal recumbent position. Watch for infection. Allow skull base fractures to bleed. Limit fluids	Place on rigid stretcher. Keep flat. Keep patient quiet.
b. Fracture of Neck	Diving into pools. Wrecking. Accidents.	Break extends through body of vertebrae or the laminae.	Death Paralysis (total or partial).	No hemorrhage noted in the tissues	No change in color of the skin	Keep neck in hyperextension. Place rolled blanket under shoulders. Minor fracture needs traction for 5-6 weeks. Major (with cord injury) cast or necessary. Rigid immobilization. Improvement for 10-12 months	Patient must not move. No consideration. Keep neck and head hyperextended. Restraint if necessary. Rigid immobilization for rigidity.

FRACTURES—Continued

Type	History	Pathology	Complications	Hemorrhage	Color of Area	Treatment	Transportation
c. Fracture of Neck of Femur	Occurs after accident, knife fall and other accidents	Usually crushing body of vertebrae.	Paralysis and shock depending upon the location of the fracture).	No hemorrhage in surrounding tissues.	No change in color of the skin.	Extreme care in preparation and transportation. Rigid support. Place in hyperextension. Rigid stretcher or improvisation.	Place and secure in prone position. Keep patient in hyperextension. Rigid stretcher or improvisation.
d. Fracture of Coccyx	Falling into sitting position.	Fracture may be from coccyx.	Coccyx pain. Abscesses. Osteomyelitis.	No hemorrhage in surrounding tissues.	No change in color of the skin.	Hot sits bath. Rest in bed if not cured then operate (coccygectomy).	Carry patient on rigid stretcher. Keep in dorsal recumbent position.
e. Fracture of Pelvis	From a blow or crushing force	Bone impairment. Involvement of sacral plexus. Paralysis of iliac and ischiatic muscles.	Rupture of bladder and rectum. Deformity and permanent disability. Sprain of pelvic joints.	Same as in compound fracture. Discoloration may be delayed.	Same as in compound fracture. Discoloration may be delayed.	Keep in dorsal recumbent position. Rigid support. Keep prone. Reduction of fragments. Symptomatic treatment.	On rigid stretcher in dorsal recumbent position. Keep body extended.
f. Fracture of Femur or Thigh	Epiphyseal separation in endosteal fracture subjects to paralysis and loss of function in lower parts.	Bone and nerve injury. Paralysis and permanent disability.	Deformity and shortening of the limb, where an epiphyseal fracture is present. Severe pain. Swelling of nerves and blood vessels. Paralysis and gangrene.	Same as in compound fracture. Discoloration may be delayed.	Same as in fracture of femur.	Spint to leg and body. Rigid support. Watch for shock.	Use rigid stretcher. Keep leg in dorsal recumbent position. Rigid support. Watch for reduction.
g. Fracture of Hip	Usually found in elderly people	Fracture through neck or through trochanter or both.	Loss of function. Deformity and shortening.	Hemorrhage but not in large amounts.	Echymosis but it may be delayed.	Traction (Russell). Smith Peterson Nail.	Place in Thomas Splint as improvised.
h. Fracture of Ankle (Pott's Fracture)	From a sudden or forceful wrenching of the lower end of the tibia and fibula.	Fracture of the lower ends of the fibula and tibia. Foot is displaced outward. Impairment of blood vessels, etc., from trauma.	Dislocation and sprains may occur simultaneously.	Same as in compound fracture. Discoloration.	Slight or marked areas of ecchymosis.	Immobilize immediately by pillow splint or rigid splint.	Keep limb well supported with slight elevation.
i. Fracture of Humerus	Result of a twisting force or blow upon upper arm.	Injury to the osseous structures. Trauma and lacerations of tissues, etc., if compound fracture.	Severance of nerves and blood vessels. Temporary deformity.	Slight increased area of compound fracture.	Slight or marked areas of discoloration.	Immobilize immediately by splint or sling (weight of arm and shoulder the necessary traction).	Keep arm in sling or splint.
j. Fracture of Forearm and Collar Fracture	Result of a twisting force upon the lower arm or wrist or forearm or elbow. Result of a blow or fall. Result of a fall.	Fracture and displacement of distal end of the radius. Tip of styloid process of ulna broken off. Bone displaced from radius.	Dislocation and sprains may be included. Trauma and swelling of tissues.	Slight increased area of compound fracture. Not immediately immobilized.	Slight to marked.	Rigid splint, arm support with a sling.	Place in a sling after splinting.

Poisons and Poisoning

Drug or Poison	"Lethal Dose" (Minimal)*	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Acetanilid.	5-10 gr.	1. Skin cold and clammy and temperature subnormal. Cyanosis noted.	1 Empty stomach by a gastric lavage.	1. Keep patient in recumbent position.	Affects heat center. Temperature sub-normal. Formation of methemoglobin which depresses the cerebral and medullary centers. Mental sluggishness.
Acetone.	6 oz.	2. Pupils contracted.	2 Artificial respiration.	2 External heat.	
Alum.	6 drams.	3. Respirations shallow, slow dyspnoea.	3 Oxygen by respiration.	3 Stimulants as needed.	
Antipyrine.	15-30 gr.	4. Heart weaker with collapse and death.	4 Stimulants: Coffain; digitalis ammonia.	4 Blood transfusion as emergency, or as is necessary.	
Acids			Antidote—Oxygen.		
Acetic (Corrosive).	•	1. Mouth and throat whitish, swollen and burning with pain.	1 Counteragents or use antacids such as magnesia, milk of magnesia, lime water, soda bicarbonate, soap solution.	1. Keep the patient at rest. Apply external heat.	Lips and tongue are soft and corroded. Tissues will tear under gentle manipulation. Ulcers and contractions of the gastroenteric areas.
Hydrochloric.	1 dr to 4 dr.	2. Dysphagia, nausea and increased thirst. "Coffee ground" vomitus.	2 Demulcents and vegetable matter (soft food). Albumin; White of egg.	2 Morphine for discomfort.	
Nitric.	2 drams.	3. Pupils contracted.		4. Avoid the use of alkaline carbonates and acids which liberate CO ₂ and produce marked distension.	
Phosphoric.	1 dram.	4. Swallow weak, rapid and shallow.		5 When poisonous corrosive avoid stomach tube treatments. Caustics—use acetic acid with equal parts of water.	
Sulphuric.	•	5. Pharynx with increased edema and closure.	Antidote—Alkalies and sodium or potassium carbonate.	No emetics—no lavages.	
Acids, Cont'd				Provide therapy for the symptoms as they develop.	Excessive damage to kidney tissues.
Boric (Boracic Acid).	•	1. Patient complains of headache with nausea, vomiting, diarrhea.	Gastric lavage.	Treat for shock.	
		2. Skin is cold, clammy, diaphoresis.			
		3. Fine bright red rash.			
		4. Intestinal tenderness, cardiac failure and collapse.			
Acids, Cont'd					
Carbolic.	1 dram to 4 drams.	1. Mouth and upper respiratory tract are corroded.	1 Gastric lavage with caution.	1. Keep patient quiet and in recumbent position.	1 Shrunken patches about the mouth.
Cresol.	•	2. Dysphagia.	2. Magnesium or sodium sulphate.	2. Apply external heat and keep cold compresses.	2. Destruction of lining of gastro-intestinal tract.
Cresote.	•	3. Coffee ground vomitus.	3 Milk, white of egg, soap solution, lime water. Avoid alcohol and glycerine.	3 Treat for shock.	3. Paralysis of respiratory tract.
Hydrocyanic.	•	3. Pulse is rapid, weak, respirations are shallow and labored.	4 Artificial respiration to supply oxygen if necessary.	4 Morphine for pain.	
Phenol.	1 dram.		Antidote—Sodium or magnesium sulphate as gastric lavage and instillation.	5 Stimulants—Caffein, strychnine.	
				6 Treat edema with atropine sulfate.	

*Not determined.
†"Lethal Dose," from De Re Medicina, pages 280 to 291, Eli Lilly Co., Indianapolis, Indiana.

POISONS AND POISONING—Continued

Drug or Poison	*Lethal Dose (Minimal)†	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Acids, Cont'd. Carbonic Acid.	•		1 Artificial respiration 2 Introduction of oxygen by respirator. Antidote—Oxygen	1 Continue giving oxygen. Keep patient in fresh air if weather permits. 2 Treat for shock—external heat and massage of limbs. 3 Stimulants—Caféin, ammonia.	Overshakes respiratory center.
Acids, Cont'd. Hydrocyanic (Prussic Acid).	1 grain to 2 grains	1 Poison in smaller amounts 2 Headache, mental confusion and weakness. Pulse weak, slow and uninterpretable 3 Respiration forced, labored. 4 Pupils dilated. Eyes glassy and bulging. Larer amount of poison. Patient has convulsions and death follows due to paralysis of heart and respiratory center.	Rapid team work 1 Empty stomach by lavage immediately with hydrogen peroxide 3% or potassium permanganate 1 to 500 2 Antidote—Hydrogen peroxide 3 Lavage of potassium permanganate Inhalation amyl nitrite.	1 Artificial respiration started immediately. 2 Give artificial stimulants. 3 Keep patient in recumbent position and apply external heat. Shock treatment 4 Very careful supervision for recurrence of stupors 5 Treatment Repeated if necessary if patient shows signs of collapse.	Depressant action upon the protoplasm of the respiratory center. In the fatal case bright arterial color in the veins.
Acids, Cont'd. Oxalic Acid.	1/4 dram to 3 grains.	1 Severe gastro-intestinal irritation and intense pain in upper gastrointestinal tract. Intense thirst and vomiting 2 Pulse weak, thready. Pupils dilated and opaque 3 Stiff and rigid cadaveric 4 Muscles of face twitching 5 Convulsions, coma and collapse and death	Avoid lavage. Induce vomiting. Give lime in any form immediately. In ravenous doses of calcium chloride. Antidote—Magnesia or chalk.	1 Keep patient quiet and in recumbent position 2 Give salts of sodium and avoid potassium since soluble oxalates are formed 3 Avoid all acids and alkali carbonates or bicarbonates because soluble poisons will be formed.	Stomach tissues blacken, after extensive necrosis and sloughing. Peritonitis. Pleuritis.
Aconite, / Aconitine.	4 grains. 1/10 grain.	1 Tingling sensation in the mouth and upper gastro-intestinal tract with excessive flow of saliva 2 Patient is very restless, dizzy 3 Pulse is slow, and later irregular, very rapid. 4 Resorptions are slow, shallow, irregular. 5 Skin is cold and cyanotic. 6 Pupils contracted, and then dilated—eyes staring 7. Patient is syncope and lies in prostration, coma until death	1 Wash stomach with tannic acid taken by mouth 2 No emetics or lavages unless specified. Antidote—Tannic acid or 10 to 30 put in water or charcoal.	1 Keep patient flat in bed 2 Artificial respiration and oxygen if necessary 3 External heat to body and ice compresses to head 4 Give plaster for acute pain in epigastrium 5 Continue stimulants as directed. 6 Catarrhs of Mg SO ₄ —to drastic purging 7. Close observation.	Depresses respiratory center. Respiratory failure.

* Not determined.

† *Lethal Dose, from De Ra Medicina, pages 280 to 291, Eli Lilly Co., Indianapolis, Indiana.

POISONS AND POISONING—Continued

Drug or Poison	"Lethal Dose" (Minimal)†	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Alcohol. Ethyl. Acetic.	3¼ ounces to 7 ounces	Face is red, bloated, lips are swollen. Skin becomes red and bloated. Skin veins enlarged. Pupils dilated. High excitement. Rapid pulse.—Symptoms of alcoholism. Subnormal temperature. Coma and convulsive seizures.	Antidote — Apomorphine if patient is irritable. Gastric lavage. Stimulating enema. Rectal saline. Syringe of ammonia. Coffee enema.	1 "Moderate drinking is the nursery of inebriety." 2. Sobering up patient. Keep the patient in bed. Artificial respiration.	Depression of the respiratory and circulatory system.
Chronic in Delirium Tremens.		Complications are: Gastritis, chronic nephritis; erisipias of liver arteriosclerosis; coma of alcoholism differentiated from others by history, absence of paralysis, subnormal temperature. Patient can be aroused. Outer of liquor.	Carbon dioxide and oxygen to stimulate respiration and hasten elimination of alcoholic products from lungs. Reuse the patient. Caffein and strychnine. Antidote—Apomorphine	Bed rest after alcohol is removed.	Acute hepatic necrosis leading to lethal effect (after drunken bout).
Alcohol. Methyl.	1 ounce to 2 ounces.	Exhalation accompanied by headache, muscular weakness, nausea, vomiting and abdominal pain. Pupils dilated. Patient unable to breathe. Pulse is weak and rapid. Respirations slow and dyspneic, unconsciousness, coma with cyanosis. Death from respiratory paralysis.	Gastric lavage. Alkalies by mouth and intravenously. Oxygen inhalations. Keep the body warm. Treat for shock. Antidote — Sodium bicarbonate.	Bed rest. Treat for shock (external heat). Stimulants as necessary.	Partial to complete blindness (if patient survives poison effect) due to atrophy of the optic nerve.
Aldehydes. Formalin. Formaldehyde.	1 ounce.	Pain in epigastrium, nausea, and vomiting, intense anxiety. Pulse: Weak and rapid, coma to collapse.	Gastric lavage. R. Ammon acetate sol. 2 tablespoons, aromatic spirits of ammonia 1 teaspoon, house-hold ammonia (1%) 10 to 20 drops. Dilute with cold water. Egg white—stimulants. Antidote—Ammon. acetate sol 2 tablespoons	Bed rest. Shock treatment. Stimulants as needed.	Irritating to eyes. Destroys outer skin layers.
Alkalies. Potash. Caustic Soda. Ammonia. Lime.	¼ dram to 4 drams.	Severe pain in mouth, difficulty in swallowing, gastro-intestinal symptoms. Shock. Shock symptoms—apprehensive. Pulse is rapid and weak.	Diluted vinegar and lemon juice. Avoid gastric lavage. Dilute with cold water. Milk and egg white. Stimulants to prevent shock. Antidote—Weak acetic acid.	Morphine as analgesic. Fluids by hypodermoclysis. Tannin bougies to prevent esophageal stricture. If in eye, wash with boric acid.	Corrosive effect upon tissues of upper respiratory tract. Destroys esophagus; produces stricture.

‡ "Lethal Dose" from Dr. R. M. Medicine, Eli Lilly and Co., Indianapolis, Indiana.
† Merck Manual of Therapeutics and Materia Medica, Rahway, New Jersey.

POISONS AND POISONING—Continued

Drug or Poison	"Lethal Dose" (Minimal)†	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Animal poisons Venom.	*	Vary in terms of type, or snake bite. On area where bite occurs, redness, swelling and sloughing of skin. Symptoms of uremia may be delayed.	Keep patient quiet. Tourniquet applied above the bite. Suction and suction for absorption of venom, from the muscles. Antidote—Aspiration of venom.	Constant watching for areas increasing in swelling. Continue with incision and aspiration of venom.	Poisonous substance. Hemorrhage—Causes red blood cells. 2. Sloughing of the tissue. Neurotoxic—Causes paralysis of vital centers in the brain. Respiratory paralysis produces death.
Anesthetics. Chloroform. Ether.	*	Stertorous to rapid and shallow respirations. Pulse weak, slow and feeble. Skin: Cold, pale and clammy if chloroform; cyanotic caputs levati (Chloroform) and respiratory failure (pulse is weak and very rapid).	Evacuate stomach (if swallowed). Demulcents and sodium bicarbonate solution. Ammonia by inhalation (if gases were inhaled). Antidote—Demulcents and sodium bicarbonate.	Lower head, pull tongue forward. Stimulants for prostration. Alternate hot and cold water douches upon the face.	Blood pressure is lowered. Respiratory center is depressed. Congestion of lungs, bronchi and kidney. Delayed jaundice and degeneration of the heart.
Antimony.	$\frac{1}{4}$ grain to $\frac{1}{2}$ grain.	Burning heat—constriction in throat. Pain, belching with rumbling. Skin: Cold and clammy with rash resembling the lesions of eczema. Suppression of urine, pulse feeble, rapid, irregular to imperceptible. Respirations slow and shallow.	Solution of warm tannic acid (strong tea and tannin). Egg white, milk. Magnesium oxide. Antidote—Tannic acid (warm, weak).	Artificial respiration. Stimulants, saline cathartics, emetics. Respiratory and circulatory stimulants. External heat for shock.	Inflammation of gastric tract. Destruction of liver and kidney. Chronic poisoning—Inflammation of liver and kidneys.
Arsenic: Arsenious acid. Fowler's solution. "Paris Green." Green on Black.	1 grain to $\frac{1}{2}$ grains	Burning pain in esophagus. Abdominal pain, nausea, vomiting, diarrhea. Skin: Cold and clammy. Pains around the joints of the extremities. Redness of eyes with edema of eyelids, cornea. Supersensitiveness of the extremities to nerve stimulus.	Sodium thiosulfate. Gastric lavage for the complete removal of arsenic from the stomach (milk, eggs, olive oil in water (1 to 4)). Ferrie hydroxide and magnesium. Sodium thiosulfate by intravenous or by mouth. Morphine after severe symptoms have subsided. Antidote—Ferrie hydroxide.	Supportive and symptomatic. Keep patient in recumbent position. Flush body with saline solution. Give strychnine, caffeine, etc. Give bismuth, chalk or opium for the severe diarrhea. For paralysis of the extremities—give deep massage by electric vibrator.	Lessens combination of body tissues with oxygen... the patient becomes stouter. The paralysis of the skeletal muscles of the extremities. Hence—drop foot and drop hands.

* Not determined.
† "Lethal Dose" from Dr. Bo Medicine, Eli Lilly and Co., Indianapolis, Indiana.

POISONS AND POISONING—Continued

Drug or Poison	"Lethal Dose" (Minimum)	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Benzol.		See Solvents			
Belladonna		See Atropine.			
Botulinum.		See Food Poisoning.			
Bromides.	•	Sudden eruption of reddish blotches over body. Loss of appetite. Constipation. Drowsiness with slow and stammering speech. Very marked mental depression. Memory is poor. Slow, uncertain gait.	Sodium chloride—by gavage Cathartics of saline to purge thoroughly Antihistate—Sodium chloride	Continued reduction of bromides from body by perspiration. Force fluids. Warm continuous baths	Acne, eruption, bullae, and pustules. Mucous membranes inflamed, swollen and bloated. Depresses entire nervous system. Exhaustion and heart failure
Cannabis. American Indian Hemp Marihuana	•	Euphorization or a pleasurable intoxication to drowsiness and incontinence. The legs are stiff and are dilated. Pulse is rapid. Respirations slow	Atropine by hypodermic. Ammonium nitrite if necessary. Treat for shock Antidote—Tannic acid	Cold compresses to head. Continue artificial respiration. External heat as is necessary	Opiates stimulate the nervous system to dilate with inability to suppress mental desire for drug. Stridulous breath. Respiratory depressant. Produces heart failure
Cathartics.	$\frac{1}{4}$ ounce.	Burning pain increases to blisters, swelling in tongue, throat and intense thirst. Vomiting, rumbling, uneasily stretched, tenesmus. Pain in back with pain in bladder, urethra and stranguary. Heart stimulated to depressed. Patient convulsed. Muscles rigid. Convulsions may develop. Collapse to comatose and collapse.	Gastric lavage. Dismulcents (except oil). Morphine or chloroform. Treat for shock Antidote—Dismulcents.	External heat continuously. Anesthetics if convulsive. Treat conditions of acute asphyxia and cystitis.	Softens and destroys mucous of gastroenteric areas. Irritates kidney tissues. Produces severe gastroenteritis, nephritis, cystitis, urethritis.
Carbon Tetrachloride.		See Solvents			
Chloral Hydrate, Chloralamide	20 grains	Nausea, vomiting and headache with relaxation of muscles. Temperature lowered with cyanosis and cold, clayey extremities. Pulse slower and weak. Respirations slow and irregular. Asphyxia to comatose and collapse. Pupils may become "pin point."	Gastric lavage solution of potassium permanganate. Give every hour to decompose the chloral hydrate in the blood Purodoru intravenously. Antidote—Tannic acid.	Lavage of stomachs or coffee. Agitation (or shaking to arouse the patient).	"Whals" (mental depression). Very marked weakness of the heart, causing death.

• Not determined

† "Lethal Dose" from the De Re Medicina, Eli Lilly and Company, Indianapolis, Indiana.

POISONS AND POISONING—Continued

Drug or Poison	"Lethal Dose" (Minimal)†	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Chloroform.	1 ounce.	Pulse slow and weak. Respirations stertorous, shallow and irregular. Pupils are dilated. Skin cold, clammy and pale. Blood pressure lowers to cardiac failure.	If swallowed—gastric lavage. Lower the head and open mouth (pull tongue forward to allow air passage). Artificial respiration.	Douche the face with alternating hot and cold sponges or towels. Artificial respiration.	Paralytic sensations. Produces nephritis, hepatitis. Depresses respiratory center. Heart failure.
Cocaine and its substitutes.	¼ grain to 15 grains.	Stimulation followed by depression. Nausea, vomiting and dizziness. Tremulousness of throat. Loss of ability to swallow. Respirations become labored with clonic and tonic convulsions. Pulse slow to rapid. Blood pressure lowers. Patient becomes cyanotic, delirious and comatose. Sudden collapse.	Oxygen—Artificial respiration. Morphine as necessary. Sponges to be given. For collapse use caffeine, strychnine. Antidote—Tannic acid.	Ice cap to head. Keep patient quiet (flat on back) to control nervous tension. External heat. Artificial respiration.	Medulla is temporarily stimulated to depressed. Heart muscle is depressed to extent of heart failure.
Codena.		See Opium.			
Cocaine.	± 2 grains.	Very definite weakness of the legs with slight increase in pulse and ability. Pulse slow, rapid and feeble. Respiration first rapid and deep to slow and labored. Convulsions to coma and paralysis.	Artificial respirations. Potassium iodide grains x preceding gastric lavage. Demulcents. Shock treatment. Antidote—Tannic acid.	Dorsal recumbent position. External heat. Deep massage to lumbar.	Brain meninges and lungs show congestion. Hyperemia of mucous membrane esophagus and stomach.
Copper Sulphate (Blue Vitrol). Strychnine (Veratrine). Arsenous acid. Para-Urean.	5 drams.	Nausea, vomiting and diarrhea accompanied by severe abdominal pain with bloody stools. Pulse weak and soft. Respirations shallow and irregular. Skin cold and clammy. Delirium to unconsciousness. Coma and death.	Solution—Potassium ferri-cyanide (5 grain doses as a gastric lavage). Demulcents—Milk, egg-whisk. Phosphoric acid 1/4 for pain. Treat for shock. Antidote—Potassium ferri-cyanide.	Artificial respiration if necessary. Strong coffee. External heat.	Congestion, swelling and softening of mucosa membrane of stomach and bowels. Ulceration of colon. Kidneys are swollen, liver soft and fatty.
Cresolite.		See Mercury.			
Cresolite.		See Acids, Carbolic.			

† "Lethal Dose" from Dr. R. S. Medicines, Eli Lilly and Company, Indianapolis, Indiana.

POISONS AND POISONING—Continued

Drug or Poison	"Lethal Dose" (Minimal)†	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Croton Oil.	20 gti.	Patient complains of severe abdominal pain—vomiting, diarrhoea, profuse sweating, thirst, rapid, Respiration shallow and rapid. Burning in mouth, throat and stomach more intense.	Lavage freely with water, milk. Use emetics. Demulcents as desired. Treat for shock. Antidote—Demulcents.	Force fluids Application of heat to the abdomen External heat. Shock treatment	Mucous membrane of the stomach and intestines is swollen, reddened and partially detached.
Cyanide.		Use Hydrocyanic Acid, etc.			
Digitalin.	40 grains.	Headache, dizziness, nausea, vomiting, with abdominal pain and diarrhoea. Excessive muscular weakness. Vision disturbed with halos. Erections to congested penis. Eyeballs protruding. Pulse slow and regular (at rest) pulse changes to rapid and weak (on rising). Skin pale and cold, extremities clammy. Lethargy, delirium and coma.	Gastric lavage of tannic acid Saline catharsis Tincture of aconite Artificial respiration Treat for shock. Antidote—Tannic acid.	Keep patient flat in bed Artificial respiration as is needed. Symptomatic treatments Keep body warm.	Stimulation of the medullary—cardio-inhibitory center slows the heart action, passes into fibrillary contractions and ceases to beat (culminating effect upon the heart).
Ergot.	12 grains	Vomiting, diarrhoea, thirst, tingling in the feet and cramps in extremities. Skin—burning, itching and tingling as well as cold. Pupils—unequal, small, fixed. Headache, nasal visual disturbance and dilated pupils Hemorrhage (pregnancy), weakness to convulsions.	Treat for shock Emetics—gastric lavage purges with castor oil or magnesium sulfate Also Intrite (by inhalation) Hydrocyanic (by hypodermic) caffeine and strychnine as stimulants Antidote—Tannic acid.	Keep patient warm and quiet Massage extremities. External heat. Treat for shock	Persistent contraction of small blood vessels (in chronic ergot poisoning). Acute ergot poisoning very rare
Esmeron.		See Physostigmine			
Food Poisoning (botulism). Botulism.	*	Symptoms appear 18 to 36 hours after ingestion of food. Headache, dizziness and inhibition of reflexes. Spasms of the throat. Abdominal pain, diarrhoea and great prostration.	Emetics and gastric lavage until stomach is emptied of all poison. Purgine with magnesium sulfate Strychnine or digitalis given as stimulants Antidote—Specific antitoxin (if early).	Preventive treatment (cook all preserved food just before eating) Proper sealing of canned food. Symptomatic treatment Artificial respiration if necessary	Acts upon central nervous system Hemorrhages in the spinal cord and ganglia. Paralysis of muscles of the eyes. Progressive paralysis of muscles of the chest. Cardiac failure.

* Not determined.

† "Lethal Dose" from Do Ro Medicina, Eli Lilly and Company, Indianapolis, Indiana.

POISONS AND POISONING—Continued

Drug or Poison	"Lethal Dose" (Minimal)†	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Food Poisoning, Salmonella Group.	•	Rise in temperature with symptoms as given above.	Gastric lavage. Purging use of magnesium sulfate and castor oil. Antidote—Gastric lavage.	Symptomatic treatment.	May produce an acute appendicitis.
Staphylococcus group.		Symptoms as above. Additional rise in temperature.	Same as above.	Symptomatic treatment.	Death is usually due to cardiac failure.
Gas Carbon Monoxide Illuminating Gas. Automobile Gas. Cyanide Gas.	•	Symptoms vary 1. Time exposure. 2. Concentration—death immediately. Low concentration—headache (throbbing of temples), dizziness, nausea, vomiting, weakness and staggering. Pulse weak and irregular. Skin dusky, lips cyanotic or cherry red.	Get patient into fresh air. Artificial respiration. Oxygen inhalators + CO ₂ Stimulants. Cardiac respiration. Normal saline infusions. Shock treatment. Antidote—Oxygen.	Plentiful supply of O ₂ . Keep patient in open air. Artificial respiration. Transfusion in 1 hour for best effect.	Respiratory paralysis. Lungs, brain and abdominal viscera deeply congested.
Hydrocyanic Acid. Prussic Acid. Cyanides Fungating Gas. Blister Gas. Mustard Gas. Almonds. Choke Berries.	1 gram to 2 grains.	Large doses immediate death. Smaller doses headache, mental confusion. Pulse slow and not perceptible. Respiration very dyspneic. Eyes dilated, pupils be protruding balls, glassy with yellowish-brown odor. Anhydria to convulsions, unconsciousness, coma, paralysis stupor to respiratory failure and death.	Rapid work. Keep patient in fresh air. Artificial respiration immediately. Gastric lavage. Hydrogen peroxide. Give amyl nitrite as inhalation every 2 to 3 min for 15 seconds to 20 seconds. Antidote—Oxygen.	Artificial respiration and oxygen, recumbent position. External heat.	Interference with the oxidative processes within the body. (Inability of cells of body to use the O ₂ necessary for maintenance of life.)
Hyocyanamus. Iodine.	1 dram.	See Atropine. Patient describes burning pain in throat and stomach. Acute gastritis. Vomiting, diarrhea (may be blood streaked), anuria or oliguria. Abdominal tenderness. Skin—cold, clammy, cyanotic. Pulse—rapid, feeble. Respirations—dyspneic and shallow. Convulsive manifestations. Twitchings, collapse.	Solution of starch prompt and frequent administration of demulcents—starch, barley water, gruel. Gastric lavage and emetics. Stimulants are necessary. Morphine gr. ¼ for pain. Antidote—Starch solution, or barley water.	Counteract with starch—and emptying stomach of poison. Force fluids. Saline hypodermoclysis. Inclusion of alkalies to antagonize renal suppression and dehydration. Keep patient quiet.	Irritation and swelling within throat—esophagus and stomach. Loss of electrolytes by vomiting, tends to support dehydration and suppression of urine.

• Not determined.

† "Lethal Dose" from De Re Medicina, Eli Lilly and Co, Indianapolis, Indiana.

POISONS AND POISONING—Continued

Drug or Poison	"Lethal Dose" (Minimum)†	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Lead Salts. Lead Acetate. White Lead.	300 grs.	Dryness in throat with burning pain in stomach. Severe pain in abdomen. Muscular twitches, convulsions. Muscular weakness and paralysis of the limbs. Skin cyanotic (face) and cold. (Blue line on the gums). Delayed severe anemia.	Gastric lavage and emetics. Purgation, morphine, atropine, and digitalis. Stimulants. Diphosphates. Milk and egg white. Chloral hydrate for relaxation of muscles during convulsions. Antidote—Magnesium or sodium sulfate.	Keep patient quiet. Flush system of the poisons by large ingestions of water. Treat for shock.	Gastrointestinal inflammation. Liver and kidney damage when lead has not been removed early by the gastric lavage. If allowed to remain, the kidneys have become atrophied and contracted.
Mercury. Corrosive Sublimates. Bichloride.	3 grains to 5 grains.	Patient complains of metallic taste in mouth and burning of mouth and throat. Abdominal pain and cramps with nausea, vomiting, and diarrhea. Shock and collapse ensue with aluminum. Collapse after severe pain and effect of diarrhea. Pulse Rapid weak. Respirations slow and shallow. Skin cold and clammy. Face is pinched and apprehensive.	Lavage (egg white, milk, flour). Lavage of 3% sodium formaldehyde. Salicylate. Stimulants (caffeine, strychnine, atropine). Morphine for pain. Shock treatment.	Rapid treatment. Colonic irrigation for colitis. Repeat hypodermic and continue with gastric lavage to release all of poisonous metal. Keep patient warm. Treat for shock.	Ulcerations of gums, mouth and loosening of teeth. Paralysis of extremities. "Hand drop"—"Foot drop" produces a progressive peripheral neuritis. Nerve lesion. Destruction of the myelin.
Mushroom Muscovine.	*	Patient vomits violently, severe diarrhea. Very apprehensive, severe abdominal pain. Pulse weak and slow. Resp labored and shallow. Delirium, stupor and coma.	Antidote—Dumuleants. Tincture Belladonna min xx Gastric lavage and emetic Artificial respiration if necessary. Atropine gr 1/120 Antidote—Tannic acid in lavage.	Evacuation of stomach. Stimulants as necessary. External heat O ₂ as inhalations if necessary.	Stenosis of bronchial tubes. Produces pulmonary edema. Congestion and hemorrhage in stomach and the intestines.
Morphine.	See Opium.	"Patient becomes excited is convulsed, tremors, delirium, vomiting with nausea, salivation, and diarrhea to prostration. Skin pale, cold, clammy. Pulse slow to rapid. Respirations rapid and deepened. Larger pupils than normal. Tension. Palpitation of heart. Pupils contracted and then dilated. Headache, vertigo, collapse, coma." From the Merck Manual of Materia Medica and Therapeutics.	Gastric lavage and emetics. Strychnine 1/120 Nitrous Ether 1 tsp to 2 tsp Treat for shock. Antidote—Tannic acid and lavage.	Artificial respiration if necessary. Cold applications to the head. Symptomatic treatment. Keep patient warm.	Paralysis of respiratory center. Paralysis of the central nervous system.
Nicotine. Black Leaf 40.	1 minum to 4 minum.				

*Not determined.

†"Lethal Dose" From Dr. R. Medicine, Eli Lilly and Company, Indianapolis, Indiana.

POISONS AND POISONING—Continued

Drug or Poison	"Lethal Dose" (Minimal)†	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Nitrites. Amyl Nitrite. Nitro- glycerine. Syringic Nitro-	•	Face is flushed then diminished Intense throbbing of the head. Dizziness and faintness and ex- cessive muscular relaxation and respiration are slowed. Pulse weak and rapid. Sluror follows the period of excitement.	Stimulants if necessary. Apo- morphine chloride gr. 1/10 Alternate hot and cold douches upon the chest. Antidote—Cocaine and re- spiratory stimulants.	Keep patient in recumbent position.	Paralysis of respiratory and circulatory centers.
Nux Vomica.		See Strychnine.			
Opium and Codeine. Heroin. Laudanum. Morphine. Fargore.	3 grains to 6 grains. 1 grain to 2 grains.	Mental excitement to weakness, sleepiness. Respirations slow and shallow. Pulse rapid and forceful to slower as in comatose condi- tion can be aroused with much difficulty. Pupils dilate and rapid and feeble. Pupils are in- point. Skin is pale, cold and clammy with cyanosis. Convul- sions to coma and collapse.	Tannic acid and emetics Atropine sulfate gr. 1/150 Stimulants. Strychnine gr. 1/30-1/20 Caffeine if neces- sary. Oxygen inhalations. Antidote—Potassium perman- ganate 5% to 1%.	Keep the patient awake by walking when condition is permissible. Alternate hot and cold douches to the chest for arousing the patient. Hot drinks. Catheterize bladder. Keep the patient warm.	Depresses the nervous system and re- laxes the coördinative state in such con- ditions as tetanus. Produces lung con- gestion.
Paris Green.		See Arsenic.			
Petroleum. Kerosene. Gasoline. Benzene.	•	Suggestive of mild alcoholic poison- ing. Depression, headache, nau- sea, feeling of constriction in throat, watery, extreme thirst if not relieved, convulsions and some- times death.	Gastric lavage. Emetic. Re- move to fresh air if fumes are inhaled. Remove clothing, if contaminated. Frequent Antidote—Emetics and lavage	Symptomatic stimulation, oxygen, external heat, artificial respiration.	Small hemorrhages in G. I. tract and lung. Some hemolysis has been found.
Phosphorus. Rat and snake poisons. Matches	1 to 3 grains.	Usually appear after several hours Shivering, coldness on breath which is tumorous in the dark.	Gastric lavage with 3% copper sulfate. Potassium perman- ganate sol. 1-1000 or dilute hydrogen peroxide. Repeat lavage frequently. Magnesium sulfate, oil of tur- pentine: 1 tsp. in 1 pt. water Antidote—Lavage of stomach with potassium permanganate solution 1%.	Intravenous dextrose and calcium salts will also be of benefit from damage to pro- phine and sympathetic system. Turpentine and caffeine, oxygen if necessary. Turpentine as cathartic given for several days.	Fatty degeneration of liver, kidney and heart.

• Not determined.

† "Lethal Dose" from Dr. B. Medicine, Eli Lilly and Company, Indianapolis, Indiana.

POISONS AND POISONING—Continued

Drug or Poison	"Lethal Dose" (Minimum) †	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Phenothiazine Cocaine Eserine Ordeal bean.	2 to 3 grains. 6 beans.	Contracted pupils. Salivation and perspiration. Muscular weakness, muscular twitching. Vomiting, pain in stomach, dyspnea, pulse slow.	Gastric lavage. Atropine 1/40 to 1/60 gr. Morphine subcutaneous. Antidote—Gastric lavage and atropine sulfate gr. 1/40 to 1/60 gr. (as antagonist).	Keep body warm. Stimulate with strychnine, digitalis and ammonia.	Lungs distended and edematous. Hyperemia of brain. Mucous membranes of tongue, pharynx, stomach, lower portion of trachea swollen.
Picrotoxin. Cocculus. Iodine.	•	Weakness, confusion, increased salivation, nausea, vomiting and diarrhea, drowsiness, cold, profuse diaphoresis and unconsciousness.	Gastric lavage, emetics chloroform. Intravenous barbiturates to control convulsions.	Symptomatic stimulation, artificial respiration. Inhalations of CO ₂ and O ₂ . Hot mustard baths.	No characteristic lesions have been found in man.
Pilocarpine. Jaborandi.	2 grains.	Great weakness, profuse salivation, diaphoresis, and lacrimation. Involuntary tremors and convulsions. Contracted pupils. Danger symptoms, slow, irregular, weak pulse, rapid, difficult breathing accompanied by rales.	Lavage, tannic acid. Heart stimulants, caffeine. Antidote—Tannic acid, atropine as antagonist.	External heat to body. Artificial respiration.	Increase secretion of secretory glands, except breasts, liver and kidneys, edema of lungs. Excreted rapidly within 24 hours by kidneys.
Potassium.		See Food Poisoning.			
Silver Salts. Lunar. Mercuric. Nitric.	30 grains.	Pain in throat and stomach. Bloody stools. Vertigo disturbance, respiration and coma.	Gastric lavage or emetic with large quantities of table salt and water. Antidote—Sodium chloride.	Eggs and milk for demulcent effect. Morphine, stimulants if necessary.	Deposits of metallic silver under the skin in chronic poisoning, white stains, turning dark on exposure on lips, mouth and nostrils. Gastric contents black. Gastric mucosa inflamed. Gastric and intestinal inflammation present.
Solomon's Seal. Resol. Tolu. Xylol.	•	In mild cases resembles early alcoholism. In severe cases, delirium followed by loss of consciousness, convulsions and death.	Remove patient to fresh air, if possible. Give large quantities of solvent. If ingested, gastric lavage with warm water. Artificial respiration. O ₂ + CO ₂ inhalations. Antidote—Artificial respiration and O ₂ .	Recumbent posture, stimulate with caffeine, digitalis, strychnine, give liver extract parenterally. Frequent blood counts.	Leukocytes destroyed. Damages to bone marrow. Paralysis of respiratory center.

• Doses undetermined.
† "Lethal Dose" from Do Ro Medicina, Eli Lilly and Company, Indianapolis, Indiana.

POISONS AND POISONING—Continued

Drug or Poison	"Lethal Dose" (Minimal)†	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Carbon tetrachloride.	1 dram.	Nausea, unconsciousness, convulsions.	Remove patient to fresh air. If inhaled, wash stomach with warm water. Artificial respiration, O ₂ + CO ₂ inhalation. Antidote—Artificial respiration and O ₂ .	Stimulate symptomatically, maintain free circulation of fluids, high carbohydrate diet, dextrose and calcium salts intravenously.	Damage to heart, liver necrosis.
Stramonium.		See Atropine.			
Strophanthus. Ouabain.	*	Vomiting, double vision, headache, irregular pulse, convulsions.	Gastric lavage of tannic acid solution. Magnesium sulfate. Control convulsions with sedatives intravenously. Antidote—Tannic acid.	Horizontal position, artificial respiration, sedatives.	Increases contraction of heart muscle has no cumulative effect.
Stychnine. Nux Vomica. Brucine.	$\frac{1}{4}$ to 1 grain.	Stiffness of muscles, twitching of face and arms, sudden tetanic convulsions of entire body, face, lips, cyanotic, pulse slow and irregular, death in a few minutes. Death in 1 to 2 hours.	Gastric lavage with potassium permanganate, iodine, tannic acid, apomorphine by hypodermic injection. Control of convulsions with sedatives, ether, inhalation, barbiturates, intravenously. Antidote—Lavage of potassium permanganate solution.	Quiet, dark room, no drafts. Artificial respiration if indicated. Ringer's solution intravenously. Dextrose intravenously. Frequent catheterization.	Stimulation of spinal cord, congestion of brain, upper part of spinal cord and enclosing membranes. Congestion frequently found in liver, kidney and mucous membrane of stomach.
Sulfonal.	30 grains.	See Barbiturates.			
Tobacco.		See Nicotine.			
Turpentine.	2 ounces.	Sensation of warmth in throat and stomach followed by abdominal pain, vomiting and diarrhea. Pulse weak, respiration slow and irregular, nervous irritation suggestive of alcohol intoxication, convulsions, coma and death.	Gastric lavage and demulcents. Antidote—Tannic acid demulcents.	Morphine if large dose taken. Symptomatic stimulation.	Irritation of kidneys with benzturins and albumuria and sometimes complete suppression of urine.

* Doses undetermined.
† "Lethal Dose" from Dr. De Re Medicine, Eli Lilly and Company, Indianapolis, Indiana.

POISONS AND POISONING—Continued

Drug or Poison	"Lethal Dose" (Minimal) †	Symptoms of Poisoning	Emergency Measures	Supportive and Follow Up Treatment	Pathology
Veratrum, Veratrum, V. Viride.	1 dram. (fluid extract).	Prickling and burning in mouth, throat and stomach, extreme thirst followed by saliv- ation, marked nausea, severe, persistent vomiting and violent purging, and extreme abdominal colic. Respiration, gasping stag- nate. Blood pressure falls. Death due to respiratory failure or cardiac failure.	Gastric lavage with warm water or tannic acid. Antidote—Tannic acid.	Flat on back, head lower than feet. External friction on limbs. for respiratory and cardiac failure.	Paralysis of vagus nerve.
Zinc Sulfate, Chloride, Sulfate.	90 grains. ± 4 drams.	Violent vomiting, purging followed by prostration, increased saliva- tion.	Large quantities of warm water, tannic acid solution to evacuate stomach. Lavage with soda bicarbonate solu- tion. Follow with lime water, acup, milk or mucilaginous drinks.	Recumbent position, external heat to body. Morphine for pain, treat shock, stimulate with caffeine, strychnine, atropine.	Stricture of esophagus, pylorus destruc- tion of glandular structure of stomach. Ulceration and perforation of stomach.

* Doseage undetermined

† "Lethal Dose" from Dr. Re Medicina, Eli Lilly and Company, Indianapolis, Indiana.

Suffocations

Type	History	Pathology	Symptoms and Color	Pulse	Respiration	Muscles	Pupils	Complications	Treatment
1. Drowning	Victim removed from body of water.	Waterlogging of lungs, and asphyxia are present.	Patient is unconscious. Color is gray and changing to blue (cyanosis).	When pulse is perceptible it is rapid and may be shallow.	If respirations are present the patient may gasp occasionally or very irregularly.	Muscles will be relaxed and body is very limp.	Pupils are dilated.	Fracture of neck. Heart failure. Suffocation, shock and collapse.	Artificial respiration. Oxygen—Treat for shock. Heart stimulants.
2. Gas Poisoning	Victim rescued from room with escaping gas from open jet or—victim overcome in closed garage.	Changes in the blood chemistry and then asphyxia is present. Respiratory paralysis which leads to death.	Patient unconscious. Color of the typical cherry red or pallor and cyanosis (carbon monoxide).	Pulse is rapid and may be irregular.	Respirations are usually slow but may be rapid and shallow very early after the exposure to gas.	Muscles are relaxed. Body is limp.	This varies with the type of gas poisoning.	Respiratory failure. Depletion of O ₂ supply in the blood.	Artificial respiration. Oxygen. Shock treatment.
3. Choking	Edema of larynx. Dissection of the larynx. Foreign bodies are aspirated into the larynx.	Trauma of larynx.	Patient in a state of apprehension. Color—cyanotic.	Pulse is rapid due to exertion.	Respirations are very rapid or patient may gasp occasionally.	Muscles may be voluntarily contracted.	Pupils are dilated.	Pneumonia. Silicosis. Complete obstruction of the bronchi. Lung abscess.	Manual removal or encourage coughing by slap on back.
4. Strangulation and Hanging	Patient usually found during or after the act. Very definite signs of violence will be noted.	Fracture of cervical vertebrae. Suffocation. Trauma of Medulla is by odontoid process of axis.	Unconscious or dead. Living patient is in a state of excitation or desperation. Color—cyanotic if body is long deceased.	Pulse may be perceptible. Pulse may be absent.	No respirations or respirations are very rapid or patient may gasp occasionally.	Muscles may be voluntarily contracted.	Pupils are dilated. Unequal if there is cerebral injury.	Fracture of neck. Suffocation. Contusion on neck.	Release pull of rope by placing chair under patient's feet, cut rope. Oxygen therapy. Artificial respiration. Treat for shock.

Unconsciousness

Type	History	Color	Pupils	Muscles	Pulse	Breathing	Reflexes	Complications	Treatment
1. Shock	This condition is a result of a blow or damage to the nervous system.	Skin cold temperature. Skin is ashen gray to cyanotic color.	Pupils are dilated.	Muscles are relaxed.	Pulse is rapid and becomes thready and feeble.	Respirations are rapid and shallow.	Reflexes diminished (not significant).	Respiratory and circulatory collapse and death.	Elevate foot of bed. Keep body warm. Treat for shock. Indicated for depression of vascular system.
2. Bleeding	Victim of a trauma causing bright red spurting or welling bleeding. Bleeding after an operation.	Skin shows pallor which gradually passes to a yellow or greenish tinge.	Pupils are dilated.	Muscles are relaxed.	Pulse is rapid and becomes thready.	Respirations are rapid and shallow. Air hunger is evident.	Reflexes diminished.	Shock. Anemia. Heart failure. Death.	Digital pressure. Pad and splint wound. Keep patient quiet. Treat for shock. Transfusion if necessary.
3. Drowning	Victim is found unconscious in body of water. May have a fractured neck or skull.	Skin is cold and clammy and cyanotic.	Pupils are dilated.	Muscles are relaxed, unless death, then rigidity of rigor mortis.	If pulse is perceptible it will be rapid, weak or very irregular.	No respirations if alive.	Reflexes abolished.	Heart failure. Shock — Pneumonia — aspiration of foreign material.	Resuscitation. Schafer (or prone pressure). Keep body warm. Stimulating drinks when conscious.
4. Gases	Victim rescued from a mine, a burning building, or room with open gas jet. Victim comes in gasping or gas.	Skin is cyanotic and changing to the characteristic cherry red. (Carbon monoxide.)	Eyes fixed usually dilated. Pupils are fixed. Victim has a frothy foam with type of gas.	If alive, muscles are relaxed. If dead, rigor mortis.	Pulse is weak, slow and irregular.	Respirations irregular and jerky to only an occasional gasp.	Reflex abolished.	Respiratory failure. Asphyxia. Collapse.	Place the patient in the open air. Give oxygen and resuscitation. (Prone pressure) Treat for shock.
5. Hanging	Victim is found hanging from the neck.	Skin is pale and face is cyanotic.	Pupils are dilated and cerebral injury.	Muscles are relaxed. Rigor of tenure.	If strangulation is incomplete pulse is weak and irregular. If complete, pulse is absent.	Respirations have ceased or are occasional gasps.	Reflexes are abolished.	Respiratory and circulatory failure. Fracture of neck.	Release the patient — cut the rope. Artificial respiration. Treat for shock. Fracture of neck.
6. Obstruction in throat	Victim has asphyxiated a foreign body or respiratory tract is obstructed by edema or disease.	Skin is cyanotic.	Pupils are dilated.	Sternal retraction. Muscles are tense with effort in trying to breathe and to remove obstruction.	Pulse is rapid and very weak.	Respirations are deep and labored.	Reflexes are increased.	Asphyxia, pulmonary infection; shock.	Remove obstruction. Foreign body or give artificial respiration. Treat for shock. Tracheotomy if indicated.

UNCONSCIOUSNESS—Continued

Type	History	Color	Pupils	Muscles	Pulse	Breathing	Reflexes	Complications	Treatment
7 Electric Shock	Victim is found after having "fizz wine."	Skin is pale, cold and clammy.	Pupils unequal, fixed, very shock.	Muscles are tense.	Weak and imperceptible pulse.	Respirations cease suddenly.	Muscle reflex is increased.	Low voltage affects heart action, makes respiration shallow. High voltage affects the resp center in medulla and patient may be paralyzed.	Release the patient from current with care. Artificial respiration by prone pressure.
8 Convulsion	Head injury caused by fall or blow upon the head.	Skin pale, cold and clammy. Vessels under green of palpebræ.	Pupils are dilated, unequal, fixed, deep and area of injury.	Muscles may be spastic.	Pulse rate usually shows a slight increase. Blood weak and rapid.	Respirations are usually deep.	Muscle reflex is increased.	Shock in severe cases Paralysis of limbs may occur.	Bed rest. Keep patient flat and warm.
9 Epilepsy	History reveals the occurrence of "fits" or spells with or without aura.	Face to flush followed by pallor. Slight and gradually increased to marked cyanosis.	Pupils are unequal, fixed, dilated, fixed following.	Muscles may be spastic tonic contractions followed by the clonic type.	Pulse is usually rapid.	Respirations are deep and stertorous.	Reflex is increased.	Injures in falling or biting the tongue. Patient may react violently (fighting others).	Bed rest. Prevent falling or biting tongue. Sedative—luminal.
10 Drunkenness	History of fondness of alcohol; victim is unable to cope with the amount of intoxicants taken.	Color varies. Face may be flushed, skin is moist, relaxed and cool.	Pupils are usually dilated, but are equal.	Muscles are relaxed, body and limbs are limp.	Pulse is strong and slow.	Respirations are slow deep stertorous, accompanied by characteristic "lip blowing" strokes and type of breathing.	Reflex is increased.	Cerebral hemorrhages. Violent contractions of Nigro tend to reduce the demand throughout the body.	Keep the body warm. If conscious give emetics. Give hot coffee or anesthetic spirits of ammonia.
11 Stroke (apoplectic)	Patient has history of disease usually past 40 years of age.	Skin is injected. Face is flushed and cyanotic. Hot and dry to touch. Flushed (elevation of temperature).	Pupils vary. One side is dilated, the other is contracted. In deep coma are inactive.	Muscles of the involved side are usually spastic with a facial palsy.	Pulse is slow, full with increased tension.	Respirations are usually deep.	Reflexes are diminished on one side.	Pneumonia—Injury from falling.	Rest and absolute quiet with head of bed elevated and feet lowered. Ice cap to head. Chastity is needed. No stimulants.
12 Narcotic Poisoning	History of addiction or idiosyncrasy for the drug.	Skin is ashen gray, cyanotic and cold.	Pupils are contracted to "pin point."	Muscles are relaxed.	Pulse usually slow but varies with type of drug poisoning.	Respirations are stertorous.	Reflex is diminished.	Addiction to drug or poisoning of narcotic sensitively to a drug.	Removal of the drug by emesis. Average dose of antidotes. Specific countermeasures.

UNCONSCIOUSNESS—Continued

Type	History	Color	Pupils	Muscles	Pulse	Breathing	Reflexes	Complications	Treatment
13. Acid and Alkali Poisoning	History of accidental or intentional poisoning.	Clammy skin Skin pale, face cyanotic.	Eyesunken, staring Pupils are dilated.	Tense Patient in convulsion.	Rapid, feeble pulse.	Shallow, rapid, labored, irregular.	Reflexes are increased.	Contraction of muscular membranes. Ulcers of stomach. Gastritis jaundice.	For acids—Milk of magnesia, egg albumin, lime water, no alkali or alkaline carbonate. For Alkalies—Neutralize with acetic acid (vinegar).
14. Mineral Poisoning	History of accidental or suicidal poisoning.	Skin is cold and clammy, pallor	Eyes fixed, staring Pupils are dilated.	Tense, convulsive when in asphyxia	Rapid, feeble to unperceptible	Respirations are shallow, rapid, labored.	Reflexes are increased.	Nephritis. Liver degeneration. Colitis.	Gastric lavage—Emetics.
15. Heat Exhaustion	Victim is overcome by the degree of heat in surrounding field of work and loss of sodium chloride through perspiration.	Skin is pale and cool with a subnormal temperature.	Pupils are moderately contracted.	Muscles are tense. Muscle cramps.	Pulse is rapid and may become weak.	Respirations are shallow with rigidity of the chest muscles.	Reflexes are increased.	Shock.	Treat for shock (keep body warm) Give salt by mouth, and intravenous injections.
16. Sun Stroke	Victim has been exposed to intense degree or a prolonged period of heat from sun.	Skin is flushed (red) and hot when touched.	Pupils are dilated.	Muscles are relaxed.	Rapid and weak	Respirations may be shallow and gasping or deep and slow	Reflexes increased.	Suppressed diaphoresis and prolonged unconsciousness. Signs of asphyxia. Temperature. No stimulants.	Remove patient to cool area. Cold application to head and body. Keep patient quiet. Continue to lower body temperature. No stimulants.
17. Freezing	Victim is found after period of exposure to intense cold or prolonged period of exposure to the cold	Frostbite—Skins cold, pale and blanched. Frost—Skin is livid and numb. When touched, then turns to purplish or greenish black.	Pupils are dilated.	Muscles are tense and become very rigid	Pulse is rapid and weak	Breathing is slower and deeper. Patient falls into very deep slumber.	Reflexes are not discernible	Pneumonia—certain damage due to mechanical destruction of alveoli. Stomach and intestines are frozen. The gangrene of the dry gangrene.	Gradual warming of the parts. Slight massage of extremities for better circulation. Evacuation of the contents of the dry gangrene.
18. Fainting	History of fainting or shock or horrible sight or "light headedness."	Skin of face and the lips are blanched. Body is cold and clammy.	Pupils are regular.	Muscles are completely relaxed	Pulse is rapid and thready.	Respirations are rapid and shallow.	Reflexes are slightly increased.	Shock is usually a serious complication. Body injury and fracture if patient faints.	Apply cold water to face, head and chest. Lower patient's head. Left body by heels (to control brain anemias). Give aromatic spirits of ammonia.

Wounds

Type	History	Pathology	Symptoms and Color	Complications	Treatment	Transportation	Points of Identification
1. Contusions.	History of blow or fall.	A bruise (hematoma) or petechial area with underlying injury.	Skin surface is rough, the area includes a large or small hematoma depending upon the extent of injury.	Destruction of underlying tissue if hematoma is not aspirated early. Infection if skin is punctured or probed.	Alternate ice and warm applications to area of injury. Gentle massage of surrounding tissues not involved in injury.	Cover area with loose fitting triangle. Keep the part well elevated if possible.	Skin is not broken. Tissues underlying skin may be slightly or very markedly crushed.
2. "Brush Burns" or Abrasions	Area of injury has been subjected to rapid passing object or body thrown against rough surface. Ex.—skidding on wet grass.	Skin, mucous membranes show niches in skin. Top surface effaced with remaining surface dotted with small drops of blood.	Skin discolored. Top surface peeled off with fine beads like dots of blood. Skin may also be loaded with dirt and refuse.	Complications include infection developments. Recovery may show very rough unsightly scars.	Carefully brush away all loose dirt and debris. Cleanse the wound with soap and water. Use antiseptic solutions, ointment, and apply dressings.	Use loose applications of sterile dressings held in place by loose fitting triangle.	Top surface of the skin is brushed completely away, or remains very highly attached to the area.
3. Lacerations.	History of an accident wherein sharp instruments have cut (lacerated) the area of the body.	Jagged or torn and roughened edges of tissues. May include evulsion of certain parts.	Injury has produced area of deep or shallow degree with opening from between two raw or bleeding surfaces of the skin.	Infection may develop. Septicemia may follow. Wound usually heals with very unsightly scar.	Remove the large debris and dirt. Clean the wound by water dripping from sterile cloth or use soap and warm water. Antiseptics and sterile dressings. Use mild antiseptics.	Cover the area of injury with loose application of dressings held by triangle or cravat bandage. Edges of wound may be united with flamed strip of adhesive tape.	Wound edges are jagged and irregular. Wound may contain amount of debris or dirt, and usually is infected.
4. Puncture.	Object may be still probing tissues, or patient may have been lifted from a rusty nail or thorn.	Tissues are pierced, small opening through the tissues (excellent course or inlet for infection).	Area usually manifests no bleeding. Trauma of tissues is usually evident.	Infection of the anaerobic type (Tetanus bacillus) infection—and septicemia.	Early indications of the wound very carefully to enlarge bore for irrigation with antiseptic solutions.	Cover the area with sterile dressings and triangle or cravat bandage.	Puncture site is very small. Object is usually withdrawn with fair amount of ease.

WOUNDS—Continued

Type	History	Pathology	Symptoms and Color	Complications	Treatment	Transportation	Points of Identification
Stab.	History of injury during a brawl or duel. Accident of fall or thrust upon blunt or heavy pointed object.	Size of hole in the tissues varies with the size of the instrument. Foreign material and pathogenic bacteria of anaerobic nature are introduced.	Evidence of the instrument that was used—such as knife, ice pick, etc. Victim shows pallor, syncope and later collapse.	Internal hemorrhage collapse of the lung. Pulmonary hemorrhage. Infection of body by anaerobic organisms—(Tetanus bacillus).	Cleanse and irrigate the wound when possible. Irrigation and inclusion of antiseptic drain or wet dressings. Early use of antitoxin sera.	Keep patient very quiet with head and chest slightly elevated. Treat for shock. If chest is involved then watch T.P.R. and blood pressure.	Large puncture site and very deep. Victim may still be punned by the force of the blow.
5. Gun Shot.	History of an accident in care of a gun or pistol, etc. Victim of aimed shot or assailant.	Wound of single outer puncture site with deep injury (twisting and tearing of tissue) by buck shot, etc.	Aperture is small. Powder burns are occasionally found.	Shock, internal hemorrhage. Tetanus bacillus infection.	Early use of antitoxin sera. Cleanse and irrigate when possible. Wet antiseptic dressings. Debridement when necessary.	Keep patient very quiet. Head slightly lower than body. Treat for shock. Watch T.P.R. and blood pressure when hemorrhaging.	Puncture site. Deep wound shows characteristic twisting of the deeper tissues.
6. Poisoned.	History of bite of a rabid human, animal or reptile. Or the sting or bite of the sting or bite of a poisonous insect. Occasionally no history.	Tissue degeneration at site of wound. Muscular paralysis. Venom has a very drastic effect upon respiratory nerve centers.	Human—shape of denture, change of disposition. Dog—lacerated wound. Rabbit disposition. Snake—two fang wound. Insect—elevated wheal with itching or burning sensation and pain or angle or double red dot.	Infection introduced pathogenic organisms. Venom of toxic nature depresses victim. Death if too long delay in treatment.	1. Observe the victim. 2. Enclose the dog. 3. Pasteur treatment if deemed necessary. 4. Apply tourniquet. Incision and suction as swelling rises. 5. Neutralize acid of "sting" with alkalis. 6. Treat for shock, respiratory stimulants for snake or insect venom.	Avert apprehension. Keep patient quiet. Keep muscles of the area elevated and at rest.	1. Shape of denture. 2. Odor of colon bacillus about the wound (human bite). 3. Two fang puncture. Small red dot or presence of stinger.

1. **Good morning.**
Bonjour.
Guten Morgen.
Buon giorno.
Buenos días.
2. **How do you feel?**
Comment vous sentez-vous?
Wie geht es Ihnen?
Come state?
¿Como se siente Vd.?
3. **Well?**
Bien?
Gut?
Bene?
¿Bien?
4. **Badly?**
Mal?
Schlecht?
Male?
¿Mal?
5. **Let me feel your pulse.**
Laissez-moi tâter le pouls
Lassen Sie mich Ihren Puls
fühlen
Lasciatemi sentire il polso.
Dejeme tomar el pulso
6. **Have you taken the medicine?**
Avez-vous pris la médecine?
Haben Sie die Medizin genom-
men?
Avete preso la medicina?
¿Ha tomado Vd. la medicina?
7. **Do you understand me?**
Comprenez vous?
Verstehen Sie mich?
Mi capisce?
¿Me entiendo Vd.?
8. **Answer only. Yes or No.**
Ne répondez que, Oui ou Non
Antworten Sie nur Ja oder Nein.
Rispondete solamente, Sì o No.
No me conteste Vd. más que sí ó
no.
9. **Have you slept well?**
Avez-vous bien dormi?
Haben Sie gut geschlafen?
Avete ben dormito?
¿Ha dormido Vd. bien?
10. **Have you slept badly?**
Avez-vous mal dormi?
Haben Sie schlecht geschlafen?
Avete mal dormito?
¿Ha dormido Vd. mal?
11. **How does your head feel?**
Comment va la tête?
Wie geht es Ihrem Kopf?
Come vi sentite il capo?
¿Como se siente la cabeza?
12. **Does it still pain you?**
Vous fait-elle encore mal?
Schmerzt er doch-
Fa male ancora?
¿Le duele todavía?
13. **Can you eat?**
Pouvez-vous manger?
Können Sie essen?
Potete mangiare?
¿Puede Vd. comer?
14. **Not much?**
Pas beaucoup?
Nicht viel?
Non molto?
¿No mucho?
15. **Do you still feel very weak?**
Vous sentez-vous encore très
faible?
Fühlen Sie sich noch sehr
schwach?
Vi sentite ancora molto débole?
¿Se siente Vd. muy débil todavía?
16. **Yes?**
Oui?
Ja?
Sì?
¿Sí?
17. **No?**
Non?
Nein?
No?
¿No?
18. **What do you say?**
Que dites vous?
Was sagen Sie?
Che cosa dite?
¿Qué dice Vd.?
19. **Show me your tongue.**
Montrez-moi votre langue.
Zeigen Sie mir Ihre Zunge.
Mostratemi la lingua
Enseñame Vd. la lengua.
20. **Have you any pain?**
Avez-vous des douleurs?
Haben Sie Schmerzen?
Avete dolore?
¿Tiene Vd. dolor?
21. **Where have you pain?**
Où avez-vous des douleurs?
Wo haben Sie Schmerzen?
Dove avete dolore?
¿Dónde tiene Vd. dolor?
22. **In the head?**
A la tête?
Im Kopf?
Nella testa?
¿En la cabeza?
23. **In the abdomen?**
Au ventre?
Im Leib?
Nel ventre?
¿En el vientre?
24. **In the chest?**
A la poitrine?
In der Brust?
Nel petto?
¿En el pecho?
25. **Show me where.**
Montrez-moi où.
Zeigen Sie mir wo.
Mostratemi dove.
Enseñe me donde.
26. **Did you take cold?**
Avez-vous pris froid?
Haben Sie sich erkältet?
Avete preso un colpo d'aria?
¿Se ha resfriado Vd.?
27. **Have you still that heavy pain?**
Avez-vous encore cette douleur pe-
sante?
Haben Sie noch den drückenden
Schmerz?
Avete ancora quel dolore pesante?
¿Tiene Vd. todavía este dolor pe-
sado?
28. **Did you sleep a few hours?**
Avez-vous dormi quelques heures?
Haben Sie einige Stunden ge-
schlafen?
Avete dormito qualche ora?
¿Ha dormido Vd. algunas horas?
29. **Say it once again.**
Dites cela encore une fois.
